

Design-Build

REINFORCED EARTH®

# THE MSE LEADER IN DESIGN-BUILD

The Reinforced Earth Company has completed over 45,000 structures in the US, building a reputation for engineering excellence, architectural creativity, and an unyielding focus on quality and customer support. With over 45 years of experience, RECo brings structural, geotechnical and economic value to projects of all types, sizes and complexities. Our experienced team of regional managers, engineers, and project managers is committed to finding the most practical and economical solutions for your projects large and small, simple and complex.

## Design-Build Services

We work with owners, consultants and contractors to provide a full range of professional services at every stage of your project:

### Conception and Feasibility

We'll meet to discuss concepts, options and budget. Our extensive experience and creativity takes us beyond the obvious answers to find the best solutions for each situation. We can also suggest specifications, construction methodologies and aesthetic treatments to help you achieve your project goals.

### Procurement

During the procurement phase we can produce a preliminary design that provides more detail on how RECo's solution will be applied. Drawings, quantity estimates and firm pricing can also be provided.

### Design

Professional engineering is our strength and your benefit. Upon contract award, you will see the value of our experience as we prepare appropriately detailed and professionally sealed drawings, calculations and, if needed, specifications. These documents will not only help you to obtain pre-construction approvals, but also will guide you in the construction process.

### Material Fabrication

Once we have client approval, the manufacture of specialized Reinforced Earth materials can begin. Materials are fabricated at manufacturing facilities that are approved and monitored by RECo and, in many cases, have years of experience producing RECo products. This work is performed under quality-controlled conditions to ensure conformance to project specifications.

### Construction

Manufactured materials are scheduled to arrive at the jobsite either just in time for installation or on a convenient schedule for onsite storage. A RECo project manager coordinates these material deliveries and assists with on-site construction advice. You will also receive our Construction and Quality Control Procedures Manual and our construction procedures video, *Constructing Strength*, for reference throughout the project.
