"Notes on the List of Verified Devices"

UQ mobile has verified the operation of the above devices.

All the information above is the results of our independent examination, and we do not guarantee or support the content. In addition, you may not be able to use UQ mobile's SIM card with devices or OS versions that are not listed above, so use such devices or OS versions at your own risk.

To perform data communication using UQ mobile's SIM card, you need an au device that is compatible with 4G LTE. In addition, you must unlock the SIM card to use au's VoLTE compatible device. For more information, click here.

The mail service using ezweb.ne.jp address for au devices is not available.

In general, you cannot use NTT DoCoMo and Soft Bank devices as well as other devices sold overseas, except the devices listed above.

Click here if you are purchasing a device as well.

Be careful when purchasing a second-hand device. Make sure that the device was not forcibly suspended by a carrier due to non-payment by the previous owner or that the device is not a stolen article. In addition, even if there is no problem at the time of purchase, the device may be suspended for use when the installment payments for it is stopped halfway. For safety, reset all the settings to delete apps and services that have been used by the previous owner before using a second-hand device.

You may not be able to perform data communication after upgrading the OS. If this is the case, reconfigure the APN settings or turn off and then turn on the device again, and retry the communication.

Click here for information on how to configure the APN settings

It is necessary to configure the APN settings to perform data communication on Android™ devices. APN Settings

To use the mail service, you must configure the following settings:

(1) Setting an MMS compatible application

CosmoSia from ACCESS Co., Ltd. is available. Click here for more information on CosmoSia.

(2) MMS initial settings
