

# Digitalization Platform for Electronic and Industrial Market

# Agenda

- 9.30 Registrazione & Welcome Coffee
- 10:00 Welcome a cura di Ducati
- 10:10 Digital Twin di prodotto e processo:
- Dalla progettazione del prodotto e del processo produttivo alla simulazione e validazione
  - Additive: un nuovo modo di progettare e realizzare i componenti
  - La gestione integrata meccanica/elettronica/software
- 11.50 Success Story: Gruppo De' Longhi
- 12.10 Il valore dell'IOT per il settore high tech e dell'elettronica
- 12:30 Q&A
- 13:00 Pranzo
- 14.00 Visita al museo e alla fabbrica Ducati

**Twitter: @SiemensPLM\_IT**

# Trends in the Electronics Industry

**Disruptive pull of electronics in mature industries.**

**Customer Diversification is on the rise.**

**Devices are getting smaller and smarter.**

**Customer Experience is essential to growth.**

# Impacts for the Electronics Industry

**Shorter technology  
Innovation Adoption  
Time Becomes Shorter.**

**More difficult to enable  
collaboration across and  
through the Supply  
Chain.**

**Inability to achieve zero  
defect will cause loss of  
revenue/market share.**

**Manufacturing  
environment needs to be  
closed loop, intelligent  
and integrated.**

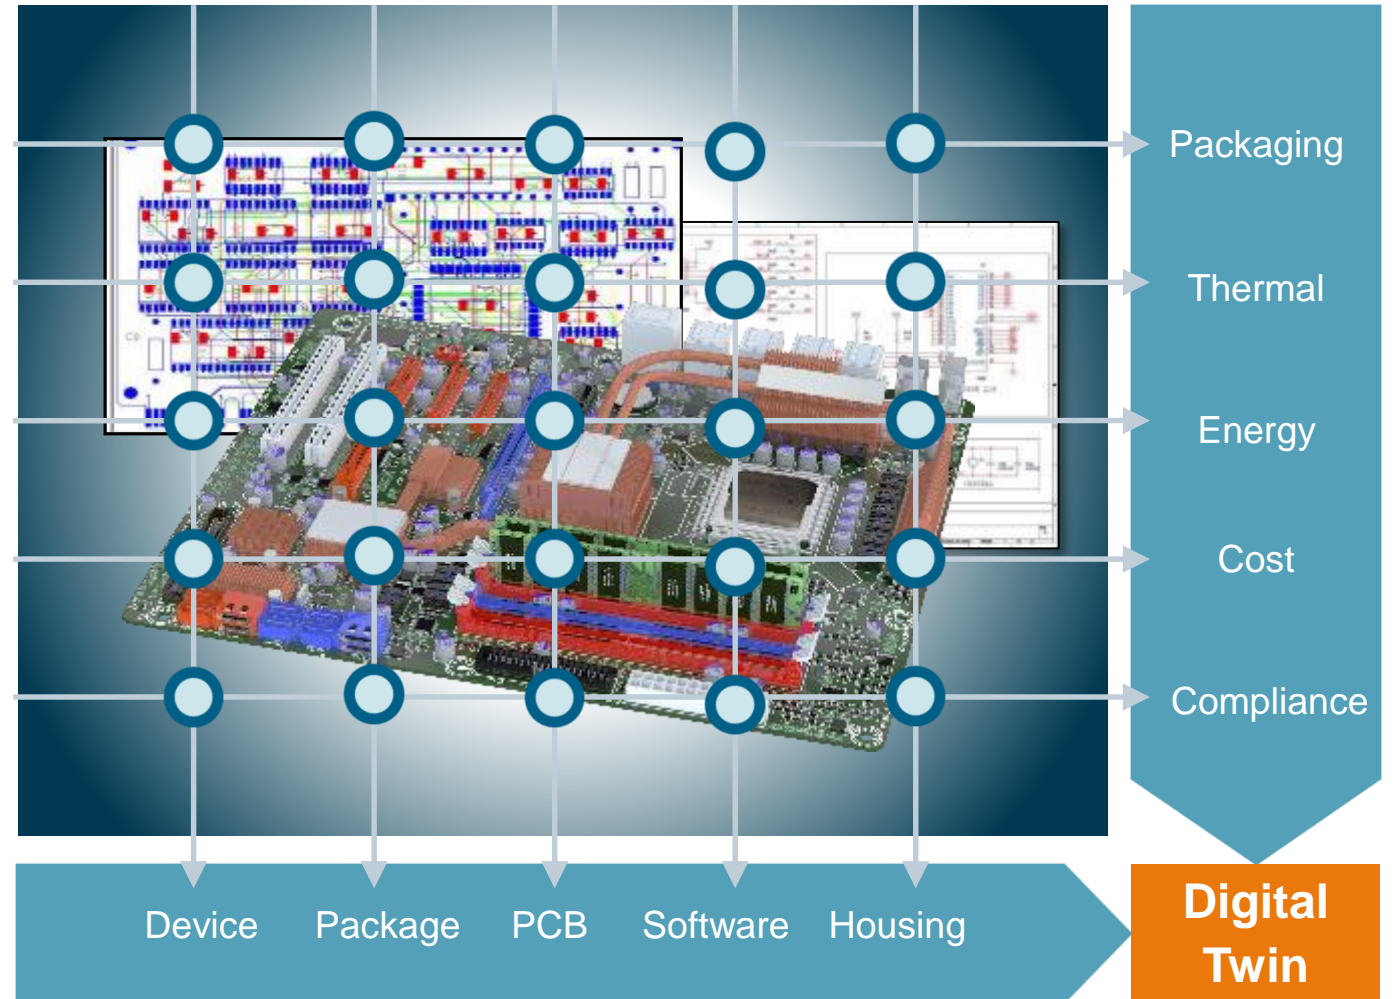

Siemens Vision:

**Deliver Holistic Software Solutions  
to Digitalize the Enterprise,  
enabling NPDI Excellence.**

# Digital Twin of Product Ideation

- Manage Product Complexity
- Optimize competing targets
- Enable modularity and reuse
- Balance performance, cost, compliance
- Integrate disciplines

# Digital Twin of Production Realization

## Accurately represent what is real and simulate what is possible

Digital Twin

Physical production system

Manufacturing Planning + Manufacturing Engineering + Manufacturing Execution

# Digital Twin of Performance Utilization

## Plant and Machine Analytics

Optimizing asset performance, energy and resource consumption, maintenance, services...

Improve customer experience and supplier quality  
Contextualize data and discover trends

## Product Analytics

# The Siemens Digitalization strategy

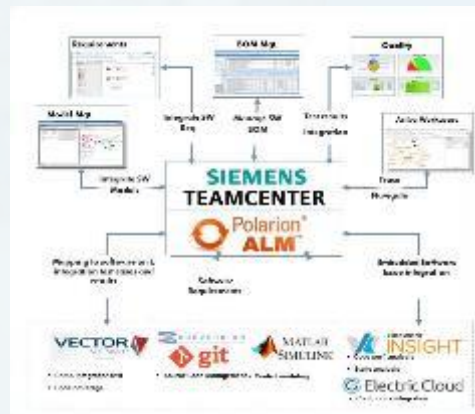

# Make Strategic Acquisitions

## ALM

Polarion Acquisition  
 PLM – ALM integration  
 Continuous Delivery

## MES

Camstar Acquisition  
 PLM – MES Integration

## Product Analytics

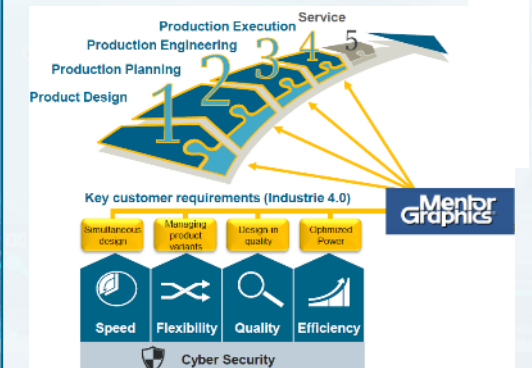

Cloud Based Solutions  
 Product Performance  
 Intelligence

## Electronic Design Automation

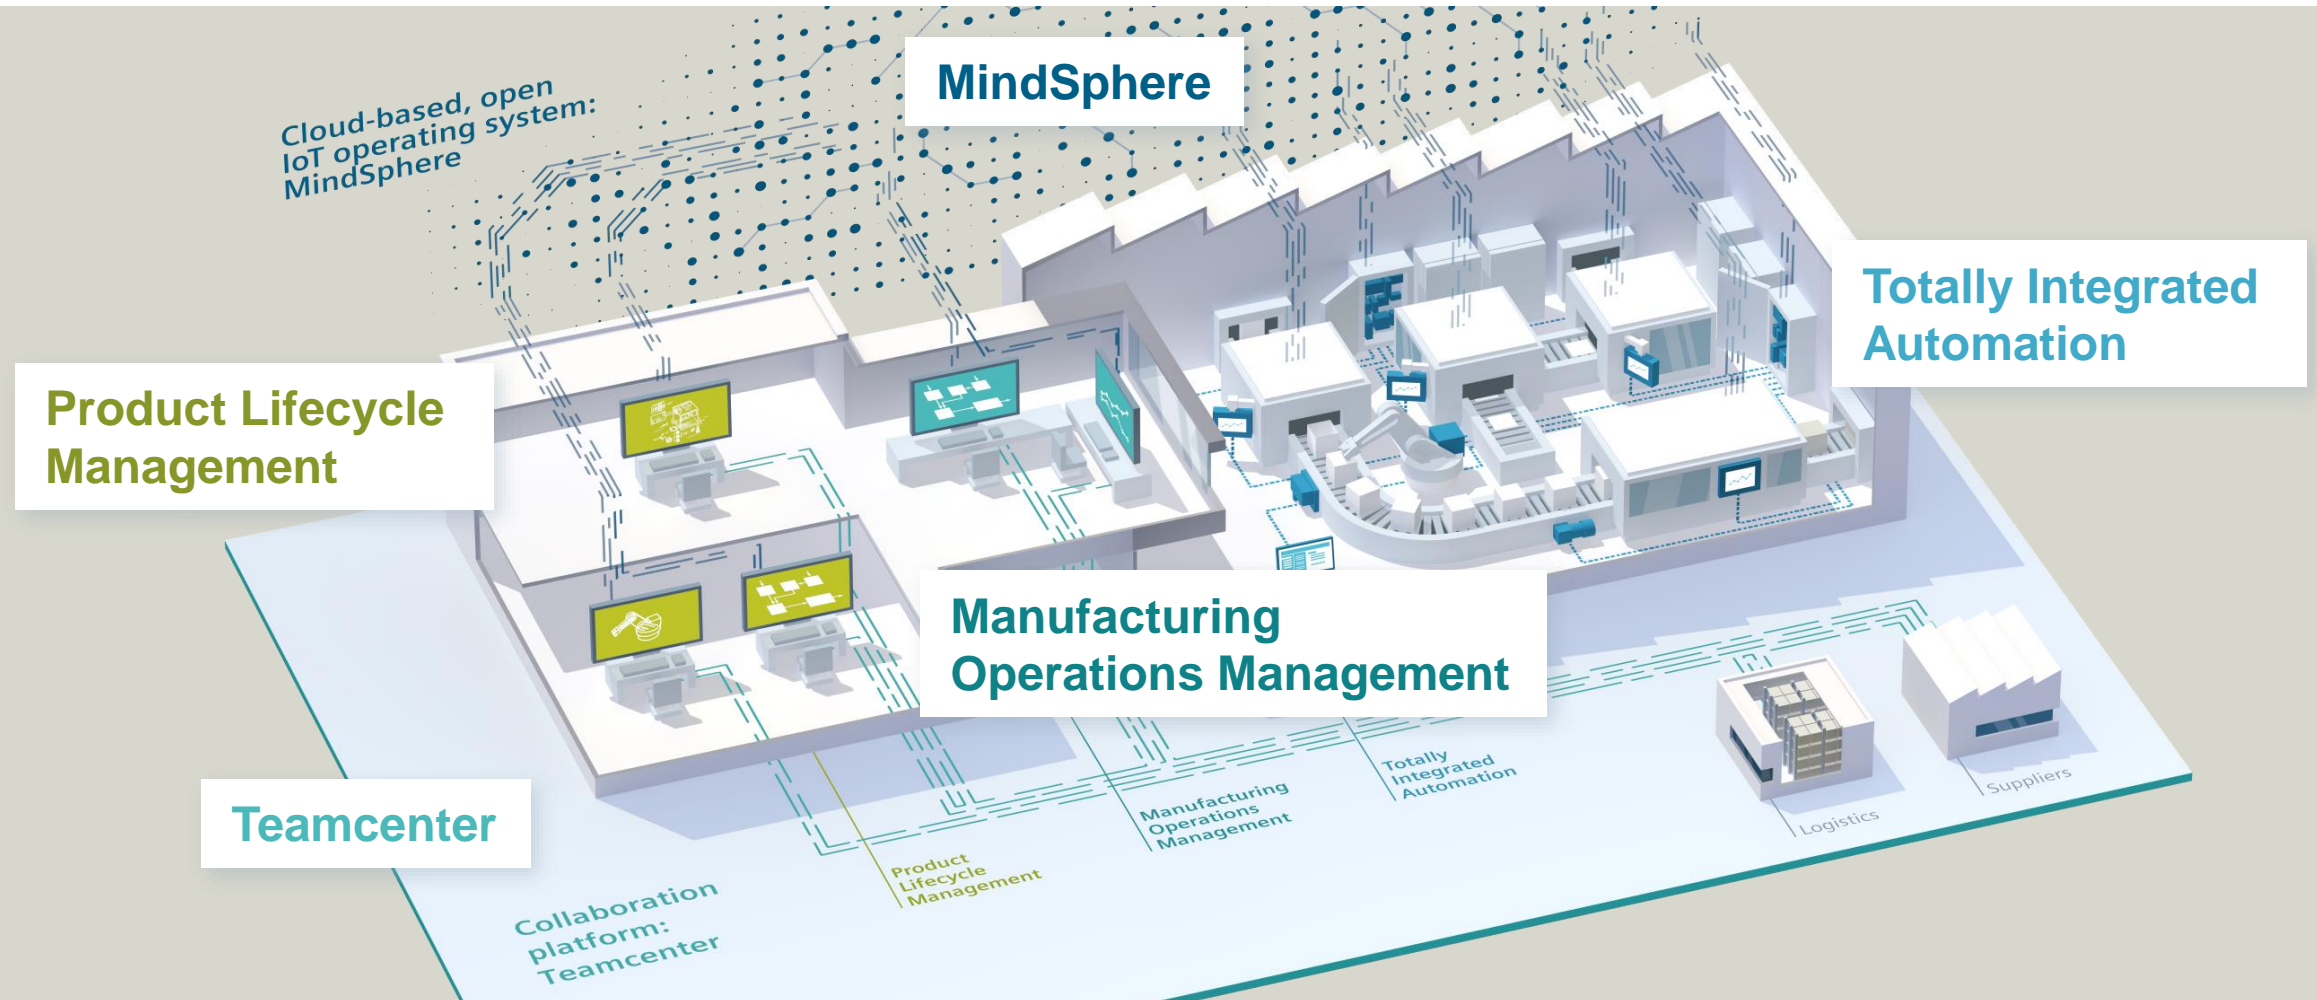

Mentor Graphics Acquisition  
 PLM – EDA integration

# Digital Enterprise Suite

## Siemens holistic approach to IoT

## Find what you need faster

Increase productivity by reducing time wasted searching for information

shopping cart-like filtering

The screenshot shows the Siemens search interface with a search for "shock". On the left, there are filter categories: Category (Items: 5, Parts: 5, Datasets: 4), Type (Item Revision: 17, Requirement Revision: 13, Design Revision: 5, System Block Revision: 5, Function Revision: 5), Owner (Vaniar, Santosh: 26, Engineer, Ed: 11, info@ba: 5, AW, Automation: 2, Devekar, Yuvraj: 2), and Group ID (October 2016 calendar). The main area shows search results by category: Items (5), Parts (5), and Datasets (4). A bar chart visualizes these counts.

| Category | Count |
|----------|-------|
| Items    | 5     |
| Parts    | 5     |
| Datasets | 4     |

intelligent charts

easy access to relevant information

The screenshot shows the Siemens search interface with a search for "qj32". The results list includes items like Landing Gear, Linkage\_AS, 356093, 0123456, 776521, wheel\_AS, 987234, 666785, axle\_support-PT, 222557, 222458, 7765101, and 666787. A 3D model of a landing gear assembly is displayed in the center, with various components highlighted in different colors.

## Electronic Work Instructions: On-Line Digital Assembly Sequence

### Shop Floor Level - Leveraging Manufacturing Engineering Data

Textual information

Assembly process navigation

Assembly animation or lightweight visualization

The screenshot displays the 'WHEEL HEAD' workspace. On the left, the 'Instructions' panel shows a table with assembly steps:

| Step | Content                         | Date Collection |
|------|---------------------------------|-----------------|
| 1    | Obtain part/s from bin          |                 |
| 2    | Loose install part/s with bolts |                 |
| 3    | Using power tool, adjust bolts  |                 |
| 4    | Record Torque                   | Torque=...      |

Below the instructions is a 'Parts' list table:

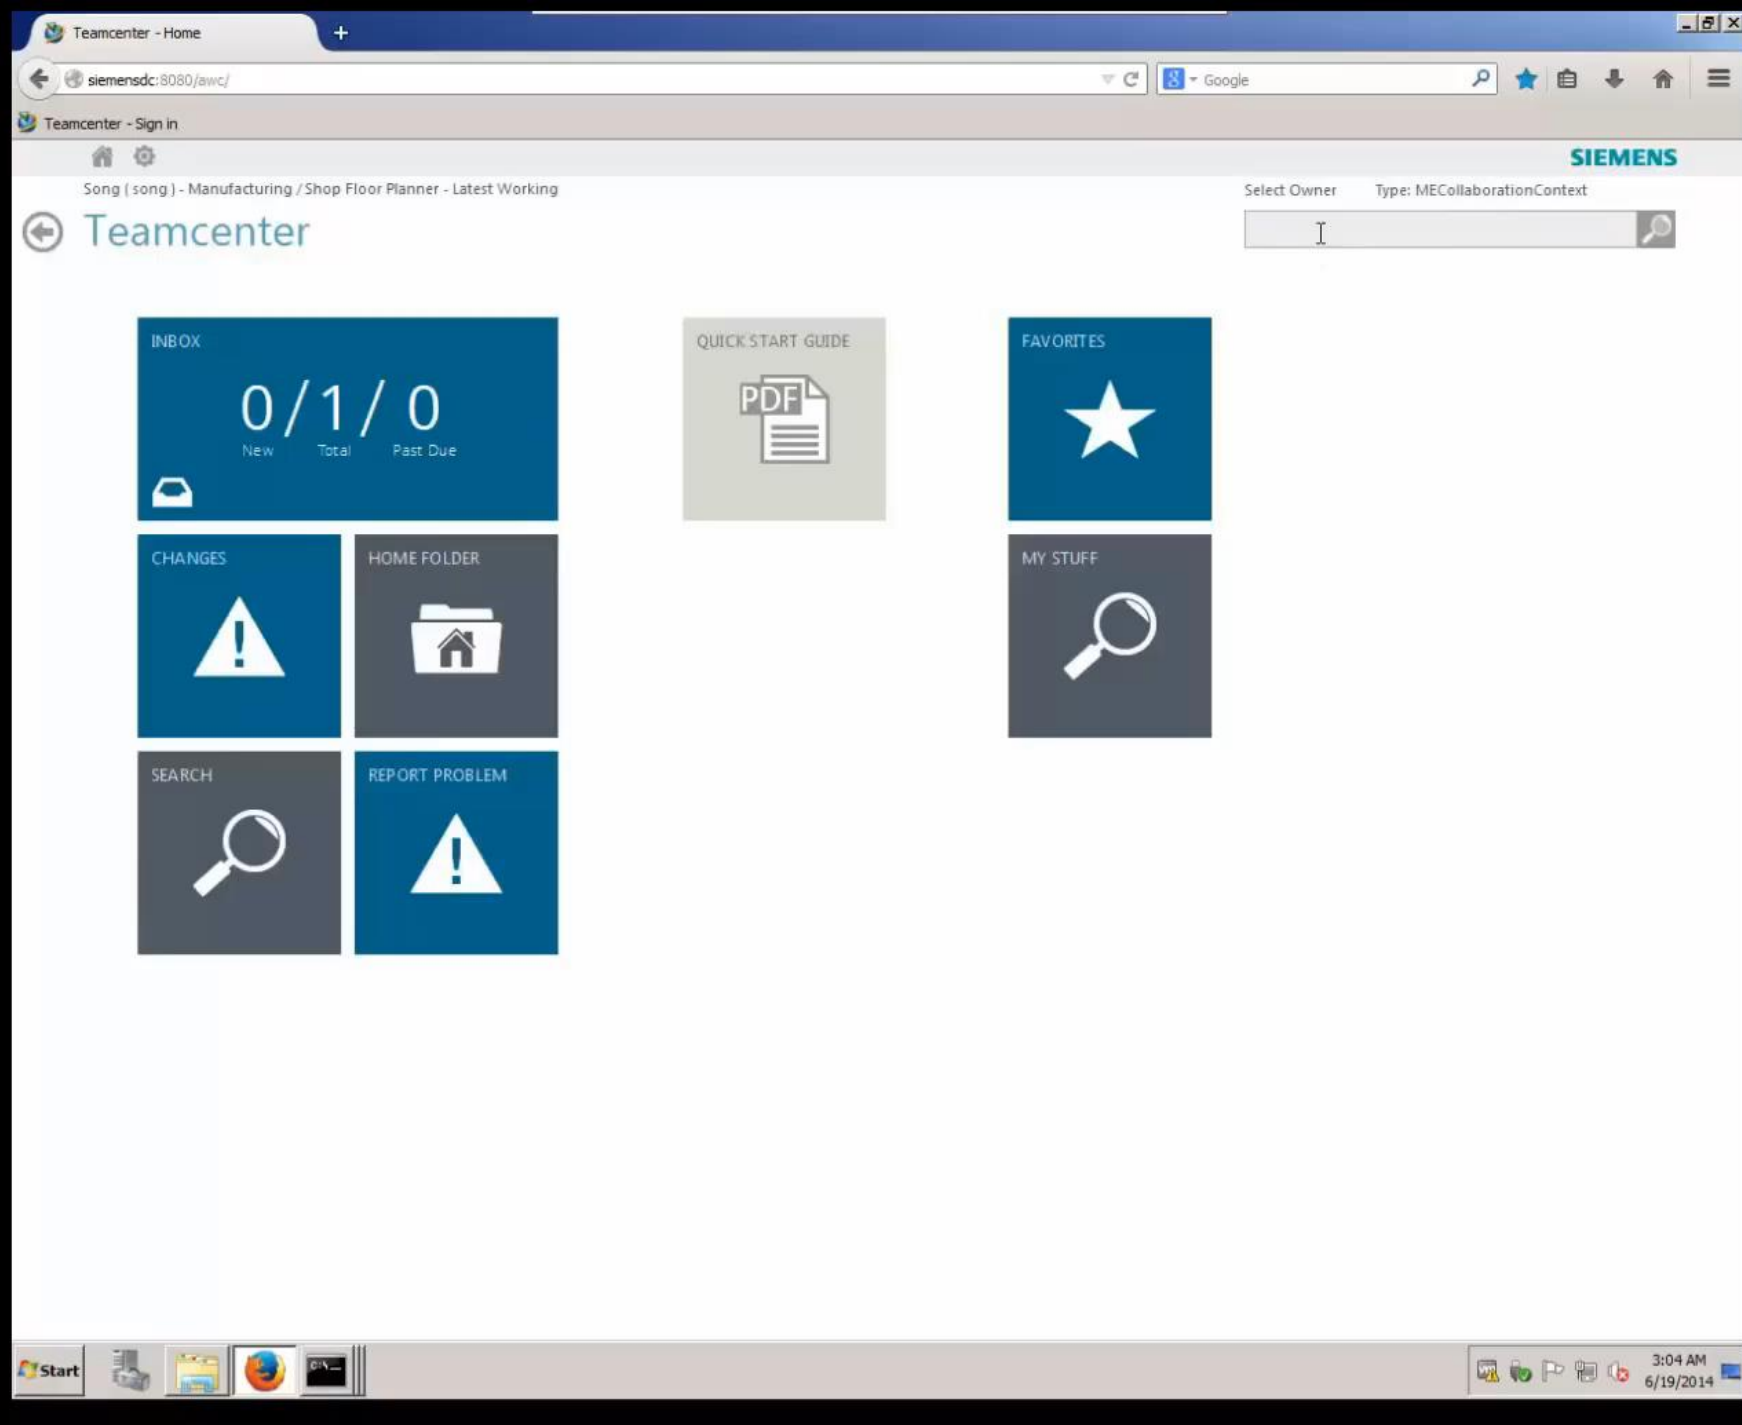

| REV NAME              | REVISION | ITEM ID     |
|-----------------------|----------|-------------|
| 1FK7080-SAF71-1D80... | A        | IMS-0000094 |
| Hex Bolt: AMM12x1...  | A        | 019393      |

The main view shows a 3D model of the wheel head assembly with a green grinding wheel. Navigation buttons for 'Prev Step' and 'Next Step' are visible at the bottom.

Parts list

Assembly sequence navigation

The screenshot displays the 'WHEEL HEAD' workspace with a detailed assembly sequence flowchart. The flowchart consists of several steps represented by boxes, including 'TCN-180002/A', 'TCN-180003/A', 'TCN-180004/A', 'TCN-180005/A', 'TCN-180006/A', 'TCN-180007/A', 'TCN-180008/A', 'TCN-180009/A', 'TCN-180010/A', 'TCN-180011/A', 'TCN-180012/A', and 'TCN-180013/A'. The main view shows a 3D model of the wheel head assembly with a green grinding wheel. Navigation buttons for 'Prev Step' and 'Next Step' are visible at the bottom.

# MCAD product development

## NX data management

### Capture, manage and share NX data

- On-demand access to Teamcenter from inside NX: navigate, search, view data, check-in/check-out
- Vault, manage and control multiple revisions of component and product designs
- Support for all advanced Teamcenter security designations and data access controls
- Ability to create new product revisions or version updates for work in progress
- Ability to create, configure and edit a product structure in either Teamcenter or NX
- Consistent visualization of assemblies and their constructs in NX and Teamcenter
- Ability to load product structure by applying configuration rules, i.e. revision rules, precise, baseline, effectivity
- Selective/partial load of product structure for efficient management of assembly design
- Where-used/referenced queries on interpart relations in either NX or Teamcenter

# eCAD and mCAD collaboration

## Facilitate multidisciplinary collaboration

- Enable eCAD and mCAD data exchange from logical to schematic to PCB board layout and mechanical representation
- Provide a common BOM structure to manage and visualize eCAD and mCAD data
- SDPD approach to design and verification, eliminates rework across disciplines
- Improves part/component re-use
- Reduces cycle time for change

# Integrated PLM-ALM Solution

## Comprehensive ALM and PLM solution

### Manage software requirements

- Increased visibility and confidence of test results, test coverage and schedule
- Reduced number of design iterations and verification process
- Trace Requirements to Software for Create/Update and to Test Cases for Traceability
- Identify and Execute the Test cases for Quality
- Track Test Results for Compliance/Regulations
- Record Build Information and Software Artifacts as Part of the Integrated BOM

# Siemens Teamcenter-Polarion

# Simulation Data Management

## Multidisciplinary Simulation

- Predict/simulate issues based on varying data conditions
- Store and manage 1D behavioral models and CAE models, simulation data and processes
- Store and trace analyzed parts
- Improve quality with simulation tools early in design cycle
- Reduce physical prototypes by leveraging the digital twin
- Accelerate early discovery of design issues

**SIEMENS**

## Welcome to Simcenter!

Simcenter unifies a range of simulation disciplines and solutions in a rich, open, extensible environment. Designed exclusively for advanced analysts, Simcenter delivers high fidelity performance insights in time to drive product decisions.

You can realize sizeable reductions in preprocessing time through intuitive, direct geometry editing and robust analysis modeling commands. In addition, you can perform detailed analysis with advanced meshing, boundary conditions, and solver interfaces, and evaluate and publish results through powerful post-processing and report-generation tools.

Simcenter enables you to create analysis models for structures, composites, acoustics, thermal, flow, motion, multiphysics, and optimization. It also supports a number of well-known solvers such as NX Nastran, Samcef, Abaqus, ANSYS, LS-DYNA, and MSC Nastran.

For tips and handy information, click **Templates** and other links on the left.

# Cost & Compliance Risk Management

## Cost Management

### Deliver profitable price

- Process-based bottom-up calculation and cost models
- Integrated cycle time calculators for selected technologies
- Flexible simulations of what-if scenarios
- Cost-relevant knowledge database
- Delivers standardized costing methodology and a consistent database
- Enables the company-wide exchange of cost information for all involved business functions
- Ensures cost-effective return on capital over the product lifecycle
- Delivers optimized purchase prices through knowledgebased cost analysis

## Capturing the process knowledge and global standardization

### Integrated environment for Mfg BOM and Bill of Process Definition

- **Templates** based structures
- Graphical Mfg BOM definition and update guidance
- Bill of (Assembly) Process based on Mfg BOM and **best practices** for operations and sequences
- Complete description of the process phases with duration, workareas, tooling and required **process documentation**
- Integrated **change management**

The screenshot displays the Siemens PLM software interface. At the top, it shows the user 'Delnada,Vijay (delnada)', the date modified '07 Apr 2017 10:36', and the release status. The main view is a Gantt chart for a 'Schedule' type project, showing a timeline from February 14 to February 24, 2017. The chart includes a table with columns for NAME, START DATE, FINISH DATE, and WORK ESTIMATE. The tasks listed are: 53 - Motor Product Design (5) (2017-02-13 to 2017-02-24, 64h), 53 - Product Design (Start) (2017-02-13 to 2017-02-13, 0h), Quote customer (2017-02-13 to 2017-02-15, 8h), Design Stator (2017-02-16 to 2017-02-16, 8h), Design Rotor (2017-02-17 to 2017-02-17, 8h), Design Mount (2017-02-20 to 2017-02-20, 8h), Design Windings (2017-02-21 to 2017-02-21, 8h), 53.1 - Motor Product Design (2017-02-22 to 2017-02-24, 24h), Design Cover (2017-02-22 to 2017-02-22, 8h), Design Housing (2017-02-23 to 2017-02-23, 8h), Motor Assembly (2017-02-24 to 2017-02-24, 8h), and 53 - product Design (En) (2017-02-24 to 2017-02-24, 0h). Below the Gantt chart, there is a 'Viewer' section showing a 3D model of a Siemens motor. To the right, a 'Create Change' interface is visible, including a 'Problem Report' section with fields for PR Number (PR-00009), Revision (A), and Synopsis (1FK7080 DRIVE SHAFT IS TOO LONG TO FIT). The Attachments section lists 'WHEEL HEAD', 'Assemble Motor to Pl...', and 'siemens\_motor'.

# Environmental Compliance and Product Sustainability

## Keeping Up With Environmental Regulations

### Substance Compliance Key Pillars

#### Material and Substance Management

- Manage materials and substances along with the product structure lifecycle
- Integrate with third party material sources

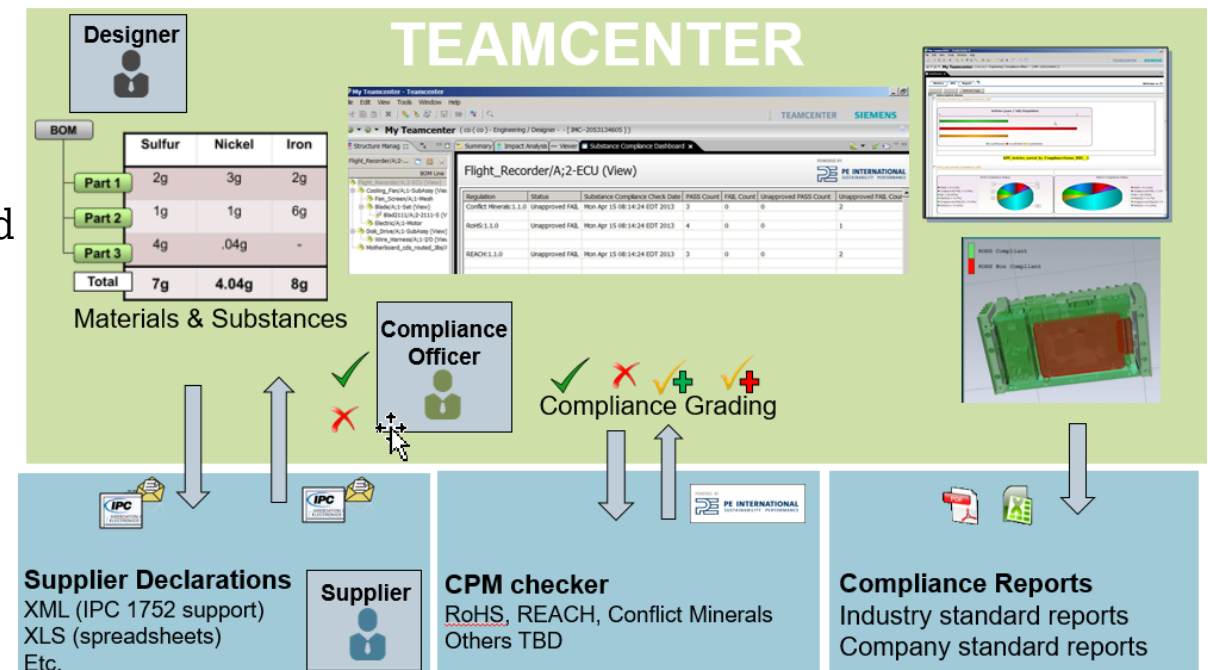

#### Supplier Declaration Automation

- Automated process to gather supplier material and substance declarations
- Supplier data managed along with product structure
- Industry standard support (IPC-175x, CMRT) BOMcheck and IMDS integration

#### Compliance Grading and Reporting

- Compliance grading
- Pre-configured rule sets
- Rules editor for custom regulations
- Dashboard views

# Supplier collaboration

Support a complex supply chain and multiple use cases

## Fully leveraging the supply chain to increase productivity and shorten time-to-market

- Strategically manage suppliers, supplier data and supplied parts
- **Aggregate supplied parts** in your company product structure
- Perform configurable search and **reports on all supplier information** in Teamcenter
- Automatically **notify the correct people** when supplier content information is changed or an issue is raised
- Suppliers can manage their information with a **standard internet browser**
- Aggregate **supplier KPI** information for scorecard reporting

# Program and Project Management

## Integrated planning & execution

Plan, manage and execute complex processes simply and efficiently

- **Planning framework** for long-term programs
- Realize program objectives with a top-down approach to the coordination of product development initiatives across domains
- Create **high level program plan hierarchy** (program, project, and subprojects with key events/milestones)
- Define criteria for **program events/milestones**
- Use in combination with schedule manager to provide a bottoms-up approach to program execution to enable stakeholders to efficiently **monitor the status of key deliverables**

Manage detailed project planning

## Dashboards and reports

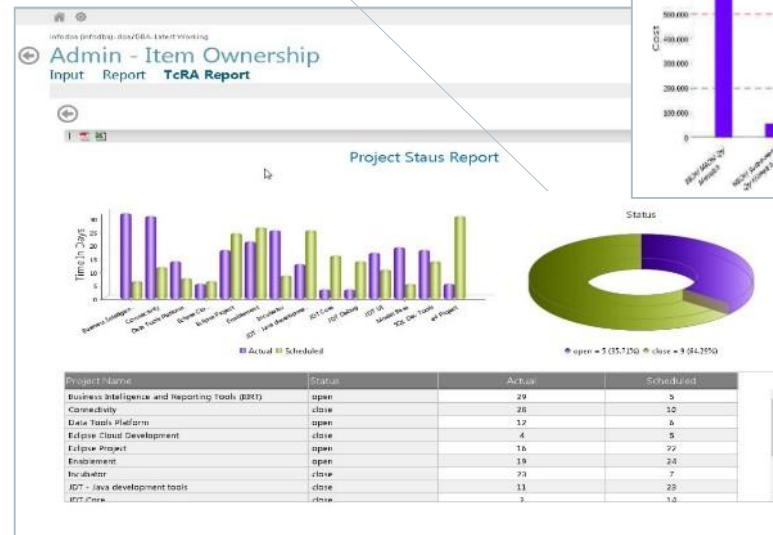

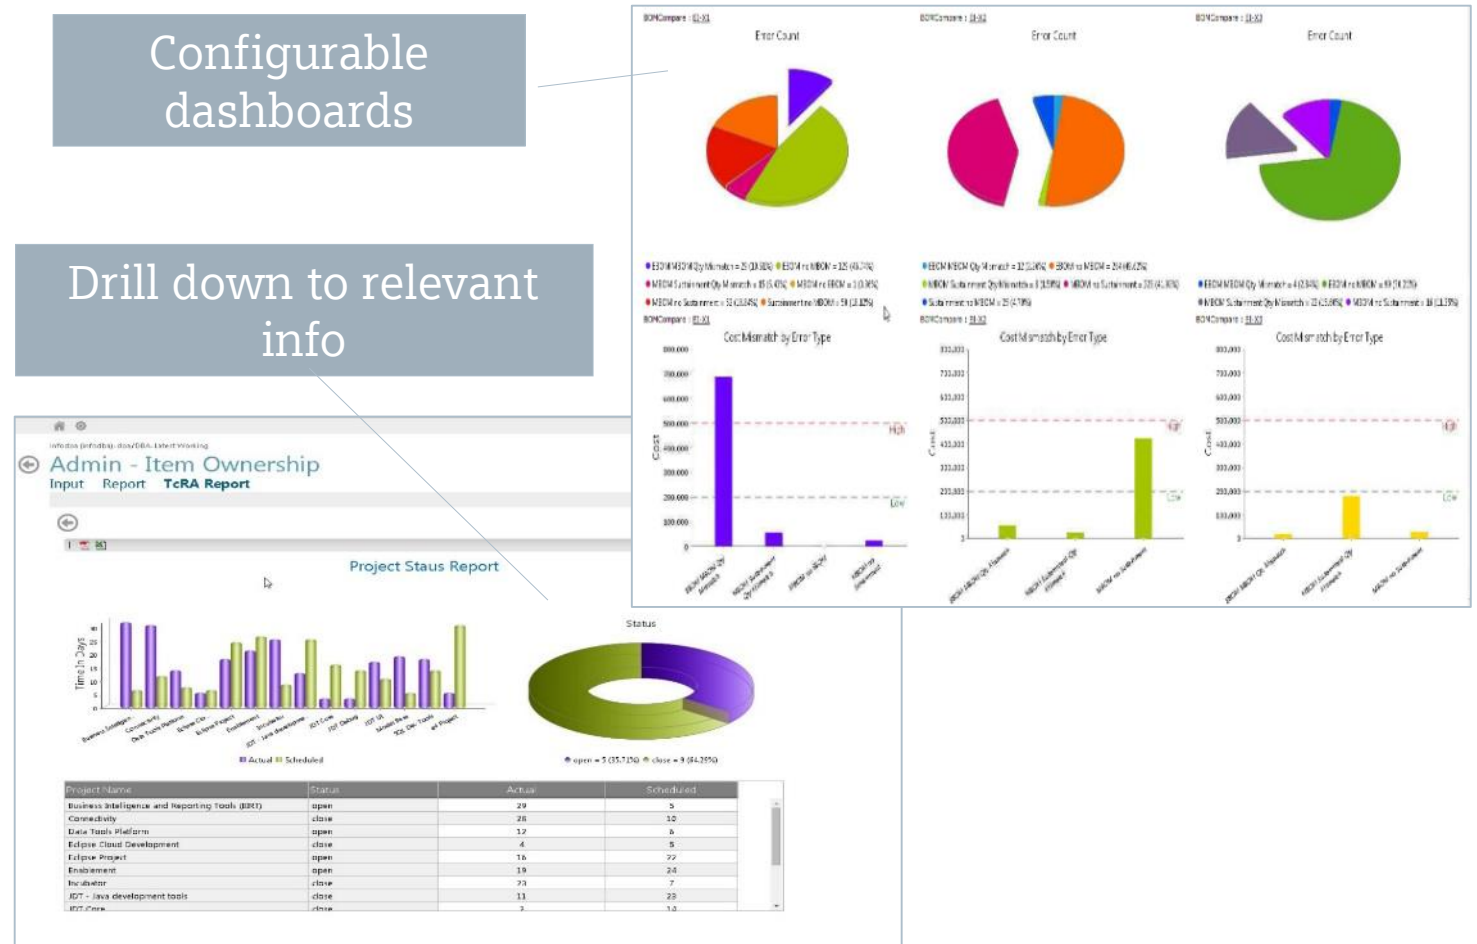

Avoid costly mistakes by seeing the big picture in greater clarity

Self-service reports, dashboards and analytics which leverages your PLM and multi-source information to improve products and processes

- **Explore data** in Teamcenter
- Consolidate data from **multiple sources** into a single view
- Visualizing data with industry **leading graphics**
- **Analyze data** for process and product improvements
- **Track trends** and changes over time

Configurable dashboards
