

**DORMA Hüppe
Movable Walls.**

**We design space
and function.**

More space for a better quality of life.

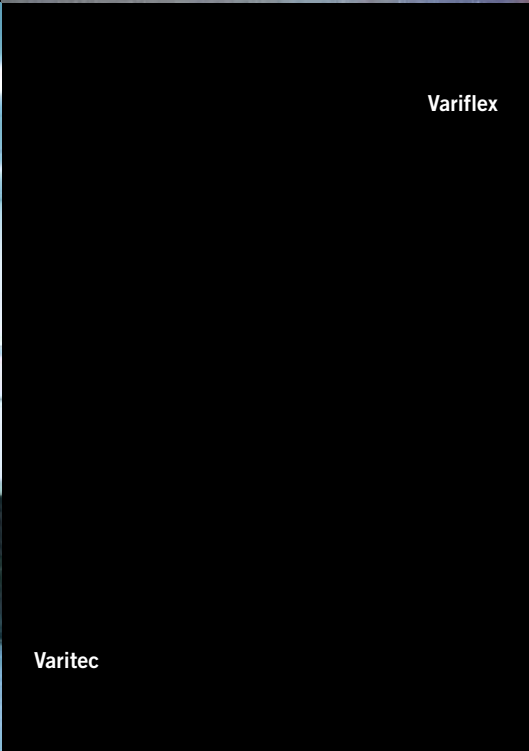

When it comes to adding a touch of individuality to the design of modern living space, the range of solution possibilities available has never been wider – and it is still expanding. Today, it is possible to adapt rooms of widely differing proportions to a much broader range of requirements. This flexible approach to partitioning generates a number of attractive options for creating ideal surroundings. And DORMA Hüppe movable wall systems with their wealth of intelligent solutions provide the perfect framework wherever the focus is on togetherness and communication within a conducive atmosphere.

Living space with a future.

Backed up by years of accumulated know-how and considerable development expertise, DORMA Hüppe movable wall systems offer a high degree of quality, functionality and diversity for the partitioning and interior design sector. Its first product solutions were introduced into the German market back in 1955. Now DORMA Hüppe's movable walls are established throughout the world. With their aesthetic appeal and reliable operating technology, they create a variety of useful areas and enhance the available space by maximising both its attractive-

ness and its efficiency. With this unbounded flexibility, DORMA Hüppe has a solution for virtually every requirement: from movable, sound-insulated partitions for auditoriums and halls within large buildings, e.g. for conference, meeting, training and office facilities, to sliding glass panel frontages and divider systems for shopping malls, showrooms and bank concourses – products that offer new dimensions in living space for today and tomorrow.

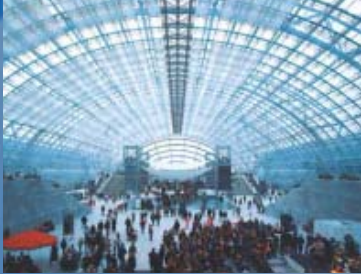

A global player ahead of the field.

The DORMA Group is endeavouring to get closer to its customers all around the globe enabling it to handle upcoming projects directly on site together with them and to cater for their requirements to maximum effect. This approach is already being successfully

implemented in more than 50 countries in conjunction with distribution agents and representatives abroad. As a result, DORMA Hüppe partition systems hold market leading positions in every major region and the most important markets.

DORMA thrives on its international challenges, regarding them both as an incentive and an obligation to create world-class movable walls by applying standards offering the highest quality in engineering, design and

functional efficiency. The company is heavily involved in major projects in regions near and far, initiating innovative architectural solutions that serve as a platform for further developments.

Variflex as a moving experience.

The DORMA Hüppe Variflex range with its high sound-insulation ratings provides plenty of scope for creating multi-functional spatial layouts. Its partitions can even be used to accommodate more unusual design aspirations. Operation may be automatic, semiautomatic or manual as required.

Extending the envelope with Variflex.

Each room has its own characteristics and every user has their own ideas. The Variflex series from DORMA Hüppe takes both of these factors into account, offering an ideal solution for virtually any application, including custom-build and special designs. This approach is facilitated by an extensive range of different panels and elements featuring all the surface finishes necessary to blend into a specified interior design. Where required, sound insulation can be further optimised by the use of special acoustic panels. And when closed, the DORMA Hüppe Variflex F30 system also complies with UK class 0 and class 1 fire regulations.

**The creative aesthetics
of Variflex.**

In the more sophisticated interior designs, the space partitioning system is often required to create a “choreography” of light and shadow. Tactile characteristics and haptic contrasts may also be part of the required overall

effect generated by the dividing panels. DORMA Hüppe Variflex offers surface finishes and integrated features – stainless steel inserts, window units or brushed and waxed sucupira wood, to name but a few – that will

ensure a particular appeal and add further scope to your creativity. The resulting visual effect is particularly impressive in modern large-scale projects, such as hotel complexes and congress centres, and even ocean-going liners.

Transparency, openness and the impression of space on a grand scale through the use of translucent glass surfaces characterise the elegant appeal of DORMA Hüppe glass sliding walls. The movable glass panels ensure a perfect overall visual effect to enhance any layout. The system can be individually tailored to create rooms that

are meant to be open and inviting. In the banking sector, for instance, in shopping malls, in showrooms and galleries as well as in museums and churches. With its classic profiles and a choice of clear or patterned safety glass, DORMA Hüppe glass sliding walls integrate perfectly with any interior design or decoration.

Whether manually operated or with a automatic programming and control system, the individual panels are user-friendly and can be easily slid into position. And the automatic version of the DORMA Hüppe glass sliding walls can also be integrated within complex building management and control systems.

**Varitrans. Automatic and manual.
Boundless freedom.**

The unimpeded view of the room as a whole gives a sense of fluid transition from the exterior to the interior. An open area flooded with light meets the eye which, rather than building barriers, extends a welcome to the visitor by virtue of its transparency. This specific spatial effect is made possible by the DORMA Hüppe glass panels. Unobtrusive in design, they nevertheless fulfil a functional role in terms of defining the limits of a large-scale room layout. The possibilities for application are numerous and diverse and the effect produced by the glass is one of permanent fascination.

**Varitrans. Openly inviting,
generous in style.**

With DORMA Hüppe Varitec, open design and reliable protection come together to create a functional, integrated whole. This vertical-operation partition system is characterised primarily by the fact that it is parked above the suspended ceiling, something that makes it both invisible and space-saving. It is thus highly suit-

able for narrow entrance areas in which it is not possible to slide a wall into position horizontally. Ideal for financial institutions, it could be used, for example, to provide a functional divider between the main concourse and the self-service area that is usually open 24/7. The impression of space is thus maintained

even outside opening hours. Display rooms, shopping malls, foyers, railway stations and airports all provide scope for further applications. If desired, the individual units may be fabricated from intruder-inhibiting laminated glass or aluminium sections. So as to specifically prevent break-ins or vandalism, both versions are

equipped with security features so that they cannot be pushed up or levered open. Naturally, the entire system has passed all the official tests (e.g. TÜV in Germany) to ensure safety in operation, whilst electronic system monitoring ensures automatic, fault-free operation.

Varitec.
Security at the highest level.

Variplan. Fully evolved functionality.

Just a few simple manual operations and the DORMA Hüppe Variplan concertina-style partition moves smoothly into position to convert space to new requirements. At the same time it offers all the advantages of a superior quality fixed wall because its double-skin construction features good sound and heat insulation characteristics. As a folding timber based panel system it takes up only a

minimum amount of space when folded away. The system can be retrofitted at any time and a floor-mounted guide rail is not required. A technically proven system that is equally suited to the private domain and innovative, varied living space design concepts, DORMA Hüppe Variplan offers a wide range of different surface finishes as well as excellent value.

Multiroll. The intelligent divider.

Flexible and TÜV-tested for safety, the DORMA Hüppe Multiroll is the ideal solution for dividing large sports and multi-purpose halls into a number of defined areas for

concurrent activities. At the press of a button a powerful electric drive unrolls a durable, easy-care artificial leather wall to create individual courts or pitches. To

protect the spectators and for rapid ball retrieval, nets can also be supplied to ensure maximum visibility.

**Leading in quality
from design to manufacturing.**

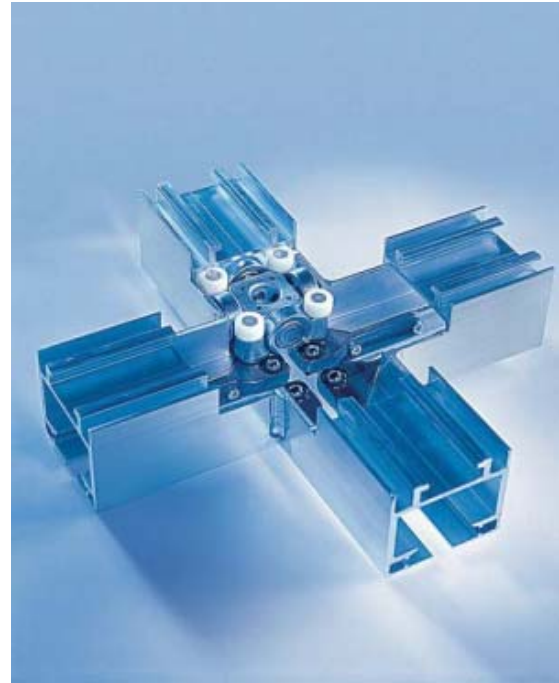

Maximum functionality and flexibility, advanced design, outstanding workmanship, extensive customisation options and a high level of innovation are the factors that define the quality inherent in DORMA Hüppe movable partitioning systems. Within the framework of an on-going development process, products are created that provide architects, planners and users more conceptual scope in designing living space. At DORMA Hüppe, the sum of these many details really does

make an impressive whole: TÜV-tested for safety with fire protection alternatives, these products offer everything from maximum reliability for use on ships to a sound security concept for the banking sector. DORMA Hüppe is also a leader when it comes to product diversity and surface finishes. Unique to our portfolio is a patented telescopic element that terminates flush with the end section of a wall. This is an extra that no other competitor is able to offer to such a high level of perfection. In addition to their supe-

rior acoustic ratings, DORMA Hüppe systems also offer individually replaceable face panels that enable modification of the surface finish of the panels whenever this may be required. And the low-noise rail and track roller systems combine with innovative drive technology to ensure exceptionally smooth panel mobility up to automatic variants on push of a button. All part of the superb performance capability that is synonymous with the DORMA Hüppe marque.

Outstanding service right from the start.

One characteristic of the service provided by DORMA Hüppe is the fact that everything comes from a single source. Starting with the advisory stage, through the planning phase right up to a technical design

service that we provide at no extra charge. Working in close co-operation with architects, specifiers and clients, we jointly devise tailored, task-orientated solutions taking into consideration individual user require-

ments as well as special requests. At the planning stage, we will also gladly provide assistance to the structural engineer responsible for the static analysis and CAD work. And DORMA Hüppe's involvement

continues through all the subsequent stages of the project right up to final installation and commissioning, with our after-sales service capability then coming into play.

All maintenance work is carried out by our own service professionals. As the world's largest supplier of movable walls and partition systems, DORMA Hüppe also provides in-house information and

training courses to prospective customers whose eyes are on the future. These deal with the most up-to-date developments in interior design and the use of electronic control systems as

an integral part of modern building management technology. Because the philosophy at DORMA Hüppe reads: first-class products need first-class support.

Solutions that work.

With its highly diversified range and the capacity to accommodate individual requirements with proven products, DORMA Hüppe is tackling the tasks of the future with drive and opti-

mism. The emphasis on variability in spatial design is increasing all the time, as are the associated quality demands. Yet DORMA Hüppe is well equipped to meet these challenges. As

the global market leader, DORMA Hüppe can point to numerous advanced applications for its products, with relevant projects having been implemented in markets all around the world.
