

DUVETS

DUVET COVERS AND INSERTS

Reinvent your guestrooms with the deep, luxurious comfort of Duvet Covers and Inserts. Choose from down or synthetic filled inserts with varying levels of fill tailored to compliment any hospitality luxury model.

Easily removed and laundered along with the bedclothes, Duvet Covers allow a greater range of flexibility in design and style than any other bed covering. Available with zippered closures, flap tops, and corner ties, Duvet Covers are easily and quickly changed for laundering.

Choose from the Fabtex Quartet and Element fabric collections containing fabric specifically designed to accent the wonderful overflow effect created by a thick Duvet bed covering.

DUVET COVERS AND INSERTS

SPECIFICATIONS

STYLES:

A duvet cover is unquilted and utilizes a down filled insert or synthetic down-like polyester fill insert with loft to be specified. Request information on these products from our Sales department.

DUV-1

Duvet Cover with Zipper or Velcro Closure, with welt (1/4" self-welt standard, other sizes available)

DUV-3

Button Closure Duvet Cover

SEAMS:

126" wide fabric or fabrics over 110" will be seamless on both the face and the underside. 54" fabrics when joined should utilize a felled (rolled) seam so as to have a flat appearance at the joins.

CLOSURE:

Duvets can have zippers at the bottom or Velcro closures. Options include Button closures and flap tops.

TRIM:

Duvets may have corded or un-corded edges

YARDAGE:

12.6 yards is required for Duvet Covers using 54" fabric

FACE FABRIC:

Several considerations are required in the selection of a face fabric other than pattern and color. Fiber content will determine the "feel" and "look." Avora, Avora hybrids and unbranded polyester have reached wide acceptability in the marketplace and offer many practical considerations such as washability and color retention. Other attributes of various base cloths, such as weight, texture, construction, etc. all contribute to the cost of fabric as well as the suitability for bedcovering application. Some fabrics may not be appropriate for duvet covers. Consult your Fabtex representative for details.

SPECIFICATIONS (CONTINUED)

THREAD:

#23 nylon multi-filament is recommended. The Fabtex standard is to coordinate thread color with primary colors in the face fabric. Monofilament thread is generally used for Outline Quilting.

INSERTS:

Year-Round White Down Duvet Insert

Filled with Hypoallergenic 550 fill power White Down, this 230 thread count 100% leak-proof cambric cotton comforter offers year-round comfort. The Sewn-Thru-Box construction will prevent the Down from shifting. White with matching piping. With attachment loops. Machine-washable and made in the USA.

Double:	83" x 95" with 24 oz. fill
Queen:	90" x 95" with 26 oz. fill
King:	102" x 95" with 31 oz. fill

Warmer White Goose Down Duvet Insert

230 thread count 100% cambric cotton. White with matching piping. Filled with Hypoallergenic 600 fill power White Goose Down. Sewn-thru-box construction will prevent the Down from shifting. With attachment loops. Machine-washable and made in the USA.

King:	102" x 95" with 40 oz. fill

STANDARD MEASUREMENTS:

FULL XL	83" x 95"
QUEEN	90" x 95"
EASTERN KING	102" x 95"

DUVET COVER FABRIC

WARRANTY AND CARE

Limited Warranty

Fabrics supplied by Fabtex, Inc. used in manufacture of decorative bed coverings, drapery, and guestroom accessories are guaranteed against any defects for a period of one (1) year from receipt of delivery. Any alterations (i.e. chemical treatments topical applications, laminating, etc.) will void the warranty. Fabric warranty does not apply to snagging. Replacement or refund will be prorated based on date goods are received and will apply to cost of fabric only. Fabtex is not responsible for fabrics supplied by other sources.

Successful Fabric Care

Hotels that wash duvet covers successfully do so using cold water, mild detergent and cold tumble dry. Heat shrinks some fabric and fades colors in some fabrics. More important, heat flattens polyester fill and has been known to shrink it as well.

Hotel laundries should test wash a unit or two under strict controls when new duvet covers arrive. If the laundry feels that the cold wash, and, or, cold dry takes too long, they can try the permanent press settings. However, if any more heat is used, it can be destructive.

Once the treatments are successfully test washed, the laundry must be instructed as to their responsibility. No matter how many times the duvet covers are washed successfully, it only takes one washing or drying with too much heat to permanently change the appearance or size of a bedspread. Cotton fabrics become narrower, Polyester fabrics become wider.

Caution! If there is any possibility bleaches were used in a previous wash, laundry machines should be scoured before washing duvet covers. Washing machines and dryers should be checked for burrs that may snag fabrics or sewing threads.

If hotels are dry cleaning duvet covers, on or off property, they should take care to have a unit or two of a newly cleaned shipment tested on arrival, checking appearance and size.

WARRANTY AND CARE (CONTINUED)

Laundry Instructions

Bed throws, scarves, duvet covers, top sheets, and pillow covers can be laundered as described below. Make sure that laundry machinery and housekeeping carts are free of burrs and sharp edges. Most of the fabrics used for these items are manufactured with polyester yarns which are very sensitive to heat, strong detergents, and harsh chemicals.

Washing:

Wash in warm water, never exceeding 120° F. Use mild detergent, no bleach/chlorine, no fabric softeners. Do not use caustic soap or bleach. Do not overload or underload machines. Do not mix with other textiles or fabrics that may “bleed” colors.

Drying:

Tumble dry at lowest heat setting, never exceeding 120° F. Do not use mangler! Do not use fabric softeners. Do not overload or underload machines. Remove from dryer immediately to avoid wrinkling.

Ironing:

Iron only if necessary. Use “warm” setting. Temperature not to exceed 120° F.

Cigarette Burns

The most universal complaint from hotels on polyester bed coverings is small cigarette holes. They are not actual burns, but holes where cigarette ashes have melted the yarns. To date no one has come up with an acceptable way to repair this type of damage. Many hotels with smoking and non-smoking rooms tag the bed covers with small holes and use them in their smoking rooms. A smoker would not be offended with a small hole caused by a cigarette ash as a non-smoker would.
