# **E Track Installation**

Whether you are working with vertical e-track of horizontal e-track, our hardware manufacturer, PCC, recommends that you catch all the cross members with grade 8 bolts, and then wood screws (or self tappers) into every other hole, alternating.. so that if there is an empty hole on one side, there is a screw on the other.

**First, let's talk about what gets bolted to the floor of your trailer, the e-track itself.** If you have a choice, it's our opinion that vertical e-track is the best way to go for auto tie-down. The reason for this is the hardware we have to put on the wheel straps. If you put down vertical e-track, then we can build your wheel straps using the lowest profile hardware. What that means to you is a auto tie-down solution that gets you down as low to the floor as is humanly possible. If there is a lower profile solution than our vertical e-track wheel strap with flat-top d-ring idler, we haven't seen it!

Now, if you're going to put in vertical e-track, one way we've seen it done that makes a lot of sense to us is to put one row on one side of the trailer, and two rows on the other side. The idea behind this is to solve the "min-max" problem of differing wheelbase widths. Some companies will actually put in two rows on both side. (See picture below)

E Track Car Hauler Guide Summer, 2018 Page: 5 of 15

#### This trailer has double rows of vertical e-track on both sides!

Take a look at the types of cars you anticipate transporting and lay down your track accordingly. From What we've seen, 57 inches to 63 inches will be the majority of what you see, with 60 inches pretty much the "sweet spot". Here are some sample wheel base track widths to get you thinking:

- 50 inch: Morris Minor (ok, you probably won't have to transport too many of these, but we're treating this like a min-max problem, right?)
- 54 inch: Chevy S-10
- 57 inch: Mini Cooper, 1966 Ford Mustang
- 60 inch: Toyota Prius, Corvette, Pontiac GTO
- 63 inch: Chevelle 1968-1972
- 64 inch: Chevy Suburban

E Track Car Hauler Guide Summer, 2018 Page: 6 of 15

Wheelbase track width measures center of tire to center of tire.

OK, so let's say you've figured out whether or not to put double rows or a single row of vertical e track on the floor of your trailer. Or maybe you're going to just go with a horizontal e-track right under the wheels. Now you need to pick out some nice sturdy wheel straps to secure your automobiles to the e-track that's (hopefully) well-secured to your trailer floor and/or frame members.
