## 1. Introduction

---

### Status

MESSAGE TYPE	:INVOIC
REFERENCE DIRECTORY	:D.01B
EANCOM® SUBSET VERSION	:011

### Definition

A message claiming payment for goods or services supplied under conditions agreed between the seller and the buyer.

The United Nations Standard Invoice Message, with correct data qualification, serves also as the specification for Debit Note and Credit Note messages.

Throughout this document, the reference to 'Invoice' may be interpreted as conveying the wider meaning of 'Invoice/Credit Note/Debit Note'.

### Principles

A seller may invoice for one or more transactions

An invoice may refer to goods, items or services related to one or more orders, delivery instructions, call-offs, etc...

An invoice may contain references to payment terms

An invoice for cross border transactions may contain additional information for customs and/or statistical purposes/services

An invoice may contain transport details.

## 4. Segments Description

---

- UNA - C 1 - Service string advice  
The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below. The same character shall not be used in more than one position of the UNA.
- UNB - M 1 - Interchange header  
This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.

### Invoice Heading Section

- UNH - M 1 - Message header  
This segment is used to head, identify and specify a message.
- BGM - M 1 - Beginning of message  
This segment is used to indicate the type and function of a message and to transmit the identifying number.
- DTM - M 35 - Date/time/period  
This segment is used to specify the date or period of the invoice. It may also be used to specify the date on which the goods were despatched, delivered, or received.
- PAI - C 1 - Payment instructions  
This segment allows the party issuing the Invoice to specify how they would like payment to be made.
- ALI - C 5 - Additional information  
This segment is used to specify any special conditions which apply to the goods being invoiced. The country of origin of all the products (if it is the same) may be specified here in the header section.
- FTX - C 99 - Free text  
This segment is used to provide free form or coded text information which applies to the complete invoice message.
- SG1** - C 99999 - **RFF-DTM**  
A group of segments for giving references and where necessary, their dates, relating to the whole message, e.g. contract number, import/export license number, despatch advice number.
- RFF - M 1 - Reference  
This segment is used to specify references which relate to the whole invoice, for example, Purchase Order Numbers, Delivery Numbers, etc.
- DTM - C 5 - Date/time/period  
This segment is used to specify any dates related to the references given in the previous RFF segment.
- SG2** - C 99 - **NAD-FII-SG3-SG5**  
A group of segments identifying the parties with associated information.
- NAD - M 1 - Name and address  
This segment is used to identify the trading parties involved in the invoice process. Identification of the buyer and supplier of goods and services is mandatory in the Invoice. Additionally, the issuer of the invoice and the invoicee must be identified if different from the buying and supplying parties. The consignee or delivery party needs to be specified if different to the buyer's address.

#### 4. Segments Description

---

ALC - M 1	- Allowance or charge This segment is used to specify per allowance or charge type totals for each allowances and charges. Allowances and charges detailed both at the header level and on individual product lines are summarized here.
ALI - C 1	- Additional information This segment is used to indicate any special conditions applicable to the allowances or charges at summary level.
MOA - C 2	- Monetary amount This segment is used to specify the total monetary value per allowance or charge type.
UNT - M 1	- Message trailer This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.
UNZ - M 1	- Interchange trailer This segment is used to provide the trailer of an interchange.

## 5. Segments Layout

---

This section describes each segment used in the EANCOM® Invoice message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

### Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	<b>R</b>	Indicates that the entity is required and must be sent.
- ADVISED	<b>A</b>	Indicates that the entity is advised or recommended.
- DEPENDENT	<b>D</b>	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	<b>O</b>	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	<b>N</b>	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

UNA - C 1 - Service string advice					
Function:					
To define the characters selected for use as delimiters and indicators in the rest of the interchange that follows.					
		EDIFACT	GS1	*	Description
UNA1	Component data element separator	M an1	<b>M</b>	*	Used as a separator between component data elements contained within a composite data element (default value: ".")
UNA2	Data element separator	M an1	<b>M</b>	*	Used to separate two simple or composite data elements (default value: "+" )
UNA3	Decimal notation	M an1	<b>M</b>	*	Used to indicate the character used for decimal notation (default value: ".")
UNA4	Release indicator	M an1	<b>M</b>	*	Used to restore any service character to its original specification (value: "?").
UNA5	Reserved for future use	M an1	<b>M</b>	*	(default value: space )
UNA6	Segment terminator	M an1	<b>M</b>	*	Used to indicate the end of segment data (default value: "' '")

Segment Notes:

The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below. The same character shall not be used in more than one position of the UNA.

This segment is used to inform the receiver of the interchange that a set of service string characters which are different to the default characters are being used.

When using the default set of service characters, the UNA segment need not be sent. If it is sent, it must immediately precede the UNB segment and contain the four service string characters (positions UNA1, UNA2, UNA4 and UNA6) selected by the interchange sender.

Regardless of whether or not all of the service string characters are being changed every data element within this segment must be filled, (i.e., if some default values are being used with user defined ones, both the default and user defined values must be specified).

When expressing the service string characters in the UNA segment, it is not necessary to include any element separators.

The use of the UNA segment is required when using a character set other than level A.

UNA:+.? '

0032	Communications agreement ID	C an..35	O	*	EANCOM.....
0035	Test indicator	C n1	O		1 = Interchange is a test
Segment Notes:					
This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.					

## 5. Segments Layout

Segment number: 2

S001: The character encoding specified in basic code table of ISO/IEC 646 (7-bit coded character set for information interchange) shall be used for the interchange service string advice (if used) and up to and including the composite data element S001 'Syntax identifier' in the interchange header. The character repertoire used for the characters in an interchange shall be identified from the code value of data element 0001 in S001 'Syntax identifier' in the interchange header. The character repertoire identified does not apply to objects and/or encrypted data.

The default encoding technique for a particular repertoire shall be the encoding technique defined by its associated character set specification.

DE 0001: The recommended (default) character set for use in EANCOM® for international exchanges is character set A (UNOA). Should users wish to use character sets other than A, an agreement on which set to use should be reached on a bilateral basis before communications begin.

DE 0004, 0008, 0010, 0014, 0042 and 0046: Within EANCOM® the use of the Global Location Number (GLN) is recommended for the identification of the interchange sender and recipient.

DE 0008: Identification (e.g. a division) specified by the sender of the interchange, to be included if agreed, by the recipient in response interchanges, to facilitate internal routing.

DE 0042: Sub-level of sender internal identification, when further sub-level identification is required.

DE 0014: The address for routing, provided beforehand by the interchange recipient, is used by the interchange sender to inform the recipient of the internal address, within the latter's systems, to which the interchange should be routed. It is recommended that the GLN be used for this purpose.

DE 0007: Identification (e.g. a division) specified by the recipient of the interchange, to be included if agreed, by the sender in response interchanges, to facilitate internal routing.

DE 0046: Sub-level of recipient internal identification, when further sub-level identification is required.

DE S004: The date and time specified in this composite should be the date and time at which the interchange sender prepared the interchange. This date and time may not necessarily be the same as the date and time of contained messages.

DE 0020: The interchange control reference number is generated by the interchange sender and is used to identify uniquely each interchange. Should the interchange sender wish to re-use interchange control reference numbers, it is recommended that each number be preserved for at least a period of three months before being re-used. In order to guarantee uniqueness, the interchange control reference number should always be linked to the interchange sender's identification (DE 0004).

DE S005: The use of passwords must first be agreed bilaterally by the parties exchanging the interchange.

DE 0026: This data element is used to identify the application, on the interchange recipient's system, to which the interchange is directed. This data element may only be used if the interchange contains only one type of message, (e.g. only invoices). The reference used in this data element is assigned by the interchange sender.

DE 0031: This data element is used to indicate whether an acknowledgement to the interchange is required. The EANCOM® APERAK or CONTRL message should be used to provide acknowledgement of interchange receipt. In addition, the EANCOM® CONTRL message may be used to indicate when an interchange has been rejected due to syntax errors.

DE 0032: This data element is used to identify any underlying agreements which control the exchange of data. Within EANCOM®, the identity of such agreements must start with the letters 'EANCOM', the remaining characters within the data element being filled according to bilateral agreements.

	EDIFACT	GS1	*	Description
				<p><b>55 = Notification only</b></p> <p>The message function, coded is a critical data element in this segment. It applies to all data indicated in the message. Consequently, one separate message has to be provided per type of function required. The following definitions apply for the restricted codes:</p> <p>1 = Cancellation - The current invoice is being cancelled. A new invoice with its own invoice number will be raised to take its place. It is recommended that if an invoice is incorrect it must be cancelled and a new one issued or a correcting credit/debit note issued referencing the incorrect invoice.</p> <p>5 = Replace - To cancel and replace a previously sent message identified in the RFF segment. When a buyer issues a pro-forma invoice to cover a transaction the supplier on receipt of this pro-forma issues a replacement to take its place.</p> <p>7 = Duplicate - Re-transmission involving the same parties, on the specific request of the receiver.</p> <p>9 = Original - An indication to the receiver that this invoice is an original invoice, i.e., not a replacement or duplicate.</p> <p>31 = Copy - A copy of an invoice for a third party for information purposes.</p> <p>43 = Additional transmission - Message already transmitted via another communication channel. This transmission is to provide electronically processable data only.</p>

### Segment Notes:

This segment is used to indicate the type and function of a message and to transmit the identifying number.

#### Example:

BGM+380+432097+9'

This example identifies the document as being an original commercial invoice using the code value 380. The document has the reference number 432097.

BGM+82+MSI5422'

This example identifies the document as being a metered services invoice using the code value 82. The document has the reference number MSI5422.

<p>This segment is used to specify currency information for the complete invoice.                  The CUX Segment is mandatory for international exchanges.                  When specifying Reference and Target Currencies for international trade, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402.                  The general rule for calculating the rate of exchange is as follows :                  Reference Currency multiplied by Rate = Target Currency.</p> <p>Example:                  Where only the invoicing currency needs to be identified for national trade. The following is an example of an Invoice message sent from the supplier identified by GLN 4012345500004 with a VAT registration number VR12345 to a buyer identified by GLN 5412345000013 with a VAT registration number 4146023.

The Commercial Invoice with reference IN432097 is sent the 8 March 2002. It is invoicing goods ordered the 12 February 2002 according to the purchase order with reference ORD9523 and the price list PL99523 of 1 January 2002. The ordered goods were shipped by the supplier on 15 February 2002 to the delivery point identified by the location number 5412345678908. The reference number for the delivery was 53662.

The invoicing currency is Euros. The basic payment terms are two months net with a 2.5% discount if payment is received within 10 days of the invoice date. Payment is to be made directly to the supplier's bank account.

Additionally, for the whole invoice there is a freight charge of 120 EUR plus a standard 19% VAT rate.

The invoice consists of two line items:

- The first item is identified by GTIN 4000862141404. 40 units at a **gross unit price** (catalogue price) of 60 EUR are being invoiced. There is a 10% discount on the gross unit price and a standard VAT rate of 21% is applicable. The net line item amount is 2160 EUR. Allowances or charges **must** be specified for calculation.
- The second item is identified by GTIN 5412345111115. 5 units were delivered at a **net unit price** per kilogram of 200 EUR. The quantity being invoiced is the total weight of the 5 units, 12.65 KGs, for a net line item amount of 2530 EUR. A standard VAT rate of 19% is applicable. Allowances or charges may be specified here for information not calculation purposes.

The Invoice provides message amount totals and tax subtotals for the two line items, as follows,

Net line amounts	=	2160+2530	=	4690	(Qualifier 79 MOA (Vat Exclusive))
Additional amounts			=	<u>120</u>	(Qualifier 131 MOA after ALC)
Amount Subject to tax			=	4810	(Qualifier 125 MOA)
VAT 19%	=	2530 x 0.19	=	480.70	
		120 x 0.19	=	<u>22.80</u>	
				503.50	(Qualifier 124 MOA after TAX)
VAT 21%	=	2160 x 0.21	=	<u>453.60</u>	(Qualifier 124 MOA after TAX)
Total tax amount			=	957.10	(Qualifier 176 MOA)
Message monetary amount	=	4810 + 957.10	=	5767.10	(Qualifier 86 MOA)
Amount subject to payment discount			=	5767.10	(Qualifier 129 MOA)
