TUCKER BUSH™

Edible Australian Tucker Bush

Acronychia acidula **LEMON ASPEN**

Lemon Aspen is an attractive tree with dense, dark green foliage and leaves up to 250mm long. It is a type of citrus often referred to as 'rainforest lemon'. They have an intense lemony flavour with slight eucalyptus and honey tones. They can be eaten raw or cooked pairing nicely with seafood or poultry. The fruit is full of antioxidants and are a great source of folate, zinc and iron.

It grows best in a sheltered area free from strong winds and frosts in a moist, well drained, sunny position.

H 6-7m W 4-6m 175mm

Alpinia Atherton Form

RED BACK AUSSIE GINGER

Red Back Australian ginger is a shade loving plant with attractive green foliage with red backs. It has fragrant white flowers that appear from Spring to Summer followed by blue berries that can be eaten straight from the plant.

The ginger scented rhizome can also be eaten. This requires cooking and can be used to make savory dishes, desserts and jams.

It prefers moist soils, fertilizing in Spring and being well mulched before Summer.

A great plant for pots, borders and mass plantings.

-  Suitable for hedging.

Antidesma bunius
BIGNAY

Bignay is a medium tree growing to 8m. It has glossy, dark green, alternate leaves making an attractive plant. It has grape-like clusters of fruits that ripen unevenly resulting in a very colourful display. These fruit have a mildly sour taste when immature and white in colour, when left to ripen to a red/black colour it has a pleasant tart taste. Fruits can be eaten raw or used in jams. Bignay will perform in a variety of soils, benefitting from a feed 2-3 times a year with pruning carried out in Spring.

While young it will require protection from drying winds and frost.

The logo for Tucker Bush, featuring the words "TUCKER BUSH" in a bold, white, sans-serif font with a black outline, set against a red background with a pattern of yellow dots.

Edible Australian Tucker Bush

Apium prostratum var. *prostratum*

SEA PARSLEY

Sea Parsley is a coastal native resembling Italian parsley. It is a hardy little grower tolerant to drought, frost, salinity and sandy soils.

Plant in a full sun to lightly dappled area. Ensuring it is watered well and fertilized regularly until established it can provide a year round supply of fresh stems.

Use similarly to parsley by adding chopped sprigs to flavour dishes and salads. It can be eaten fresh or blanch the stems and eat separately.

Edible Australian Tucker Bush

Atriplex nummularia

OLD MAN SALT BUSH

Old Man Saltbush is a fast-growing shrub previously used mostly as a grazing plant for stock. It has grey-green irregular shaped foliage 2-3cm in size that are edible and salty in flavor but rich in protein, antioxidants and minerals.

The edible leaves can be used in salads, sautéed, or dried and used as a herb.

For best results, plant in full sun to part shade in rich, free draining soil and water well until established.

Once established it is hardy plant tolerating long periods of drought.

Planted in ideal conditions it can reach 3m, but is also suited to pots and with regular pruning, makes a great edible hedge/screening plant.

TUCKER BUSH™

Edible Australian Tucker Bush

Atractocarpus fitzalanii NATIVE GARDENIA

The Native Gardenia is a large shrub to small tree with large, glossy, green leaves. Spring time see fragrant blossoms of white star-shaped flowers. These develop into small brown fruits which turn yellow with maturity during Winter. The fruit is soft and sweet and can be eaten raw in salads or cooked in cakes and deserts. It prefers a sunny to lightly shaded position in moist, well drained soils. It requires protection from strong winds and harsh afternoon sun until established.

TUCKER BUSH™

Edible Australian Tucker Bush

Austromyrtus dulcis MIDYIM BERRIES

This versatile small shrub is one of the best tasting of all the bush tucker plants. The new leaves are burgundy coloured, whilst the spring flowers appear as small white stars in early Summer. These are followed by small but sweet berries in late Summer and early Autumn.

A light trim after harvest will see you rewarded with another crop the following season. The fruit of the Midyim Berry is the native equivalent to a blueberry. This small shrub is perfect for filling in gaps and is ideal to grow in full sun or part shade. A must for any edible landscape, this is the new age box hedge.

TUCKER BUSH™

Edible Australian Tucker Bush

Backhousia citriodora

LEMON MYRTLE

Lemon Myrtle is a popular Australian herb with its intense citrus flavour and fragrance.

It is an attractive ornamental tree with glossy oval, green foliage and creamy/white flowers.

The leaves can be plucked as needed and used in teas, cakes, biscuits and dips.

It prefers a sunny to partly shaded, moist, well drained position with protection from cold winds and frosts.

Great for hedging and screening.

TUCKER BUSH™

Edible Australian Tucker Bush

Citrus australasica **FINGER LIME**

Finger limes are prized for their unique caviar like pulp. White flowers are followed by finger like fruit in Winter/Spring that is usually green/yellow in colour. The fruit is used in refreshing drinks and desserts. Also useful in chutneys, jams and marmalades. It goes well as an accompaniment to seafood. Finger Limes are slow growing and make a thorny shrub or small tree. They make excellent pot specimens for a courtyard or balcony. They require well-draining soil and protection from frost and drying winds.

TUCKER BUSH™

Edible Australian Tucker Bush

Davidsonia jerseyana

DAVIDSON'S PLUM

Davidson's plum has large, purple fruit that are plum-like and form in clusters on the trunk between November and February. Each tree has the potential to produce a few kilos of fruit.

The red fleshed plums are pleasantly sour and very high in antioxidants and vitamins. They are delicious and are perfect for both sweet and savoury jams and meat sauces. Davidson Plum is a tall and slender tree and can be planted in the narrowest of places preferring moist soils and good soil nutrition. The new growth is attractive and tinged red.

TUCKER BUSH™

Edible Australian Tucker Bush

Diospyros australis

NATIVE BLACK PLUM

Is an attractive small/medium tree with glossy green leaves,. It has yellow/green underneath and a prominent yellow mid vein.

Black Plum is a rainforest tree enjoying moist soil, but can tolerate heavy shade. It performs best with protection from both wind and afternoon sun.

October sees small cream/yellow flowers borne on masse right through to December. These are followed by black shiny fruits which are most edible when soft and perfect for making Jams.

The fruit is 10-15mm and ripens in Autumn.

TUCKER BUSH™

Edible Australian Tucker Bush

Diploglottis australis

LARGE LEAF TAMARIND

The large leaf Tamarind is a tall tree. In ideal conditions it can reach between 8-12m.

It is a slender palm-like tree which has creamy brown flowers in Spring. Throughout Summer these mature into fleshy yellow-orange rounded fruits that drop to the ground when ripe. They have a sour taste and can be eaten raw or cooked into jams and sauces. It requires shelter from strong winds and frosts, preferring a moist position in full sun-part shade when young.

Diploglottis campbellii

SMALL LEAVED TAMARIND

The small leaved Tamarind is a beautiful, dense, ornamental tree.

It has small creamy coloured flowers in Summer developing into large yellow-brown bulbs in Autumn. Once ripe the bulbs split open revealing the bright red flesh underneath. These fruits can be eaten raw or cooked to make condiments.

Each tree has the potential to produce many kilos of fruit.

It prefers a moist, well drained, slightly shaded position when young.

TUCKER BUSH™

Edible Australian Tucker Bush

Enchylaena tomentosa

RUBY SALTBUSH

Ruby Saltbush is a succulent type plant with fleshy green leaves that are covered in fine white hairs. It has small berries that range in colour from yellow to ruby red. These berries are edible and can be eaten raw or soaked to make a tea. The leaves are also edible but should be cooked and consumed sparingly.

It is a hardy, low growing shrub that prefers full sun and well drained soils.

Ruby Saltbush is a woody plant but trimmed regularly makes an ideal hedging and screening plant.

TUCKER BUSH™

Edible Australian Tucker Bush

Eupomatia laurina

NATIVE GUAVA

Native Guava has pale, perfumed flowers without petals in Summer followed by urn shaped fruit. The fruit ripens in winter and are ready to eat straight from the plant when they turn from green to brown and are soft to squeeze. The pulp is a creamy colour with many small seeds, similar to other guavas.

The Native Guava grows into a large shrub or small tree. The foliage turns attractive coppery tones in the cooler weather. It benefits from mulching and additional watering in dry periods.

Protect from hot dry winds.

TUCKER BUSH™

Edible Australian Tucker Bush

Haemodorum spicatum

BLOODROOT

Bloodroot is a drought tolerant plant able to survive in even the poorest of soils. It is summer dormant and quite slow growing, so patience is required to achieve a bulb of decent size.

It is a small clumping plant of tough green strappy foliage, with leaves turning darker with age.

The flavoursome bulb is the prize with this plant, its flavours are similar to that of radish and chilli.

The bulbs are best baked and roasted.

TUCKER BUSH™

Edible Australian Tucker Bush

Hibiscus sabdariffa **ROSELLA**

Rosella is a hardy plant with deeply lobed green foliage and red stems. Flowering in Autumn sees pale yellow flowers followed by bright red edible seed pods. The seeds can be roasted and ground into flour, while the young leaves can be stir-fried or steamed. The calyx as pictured above are high in Vitamin C and have a pleasant tart flavour ideal for salads, syrups and wine.

It prefers fertile, well drained soil and requires regular watering until established. Once established it can survive the occasional dry spell.

-  Provides shade

TUCKER BUSH™

Edible Australian Tucker Bush

Podocarpus elatus NATIVE PLUM PINE

Plum Pine is also known as the Illawarra plum.

While it is a slow growing tree to 8m, it produces rich plum-like fruits perfect for cooking, jams, jellies and equally as good eaten raw.

The unusual fruit has two segments; a hard dark seed, and a large edible, fleshy, purple-black, seedless, grape-like "modified stalk".

Plum pines make a compliment for chilli and garlic, as well as being popular in sauces, preserves and muffins.

TUCKER BUSH™

Edible Australian Tucker Bush

Santalum spicatum

SANDALWOOD NUT

Sandalwood is well known for its incense and perfume properties but it also produces deliciously edible fruit and nuts.

The plant itself is 'root hemi-parasitic'. This means it attaches to the roots of nearby plants to extract water and nutrients.

Sandalwood trees grow best in loamy, well-drained soils preferring full sun to lightly dappled shade.

Small fragrant flowers in late summer are followed by fruits in the cooler months. These can be harvested directly or collected from the base of the tree.
