# WHAT'S new in EFFECTIVE PROTECTION

## Introducing the NEW VaporTowel™ Chef's Towel Item #88900

Finally, the convenience of a side towel that also provides foodservice professionals protection against dangerous steam, hot liquids, and grease. Unlike cotton side towels (a kitchen mainstay) which do not insulate against heat properly when they become wet, the NEW VaporTowel™ Chef's Towel features a liquid/vapor barrier so it keeps protecting even when wet!

- ▶ **Safety** – The first of its kind, the *SteamGuard™* barrier effectively protects against common but annoying and costly burns associated with liquid, grease and steam.
- ▶ **Sanitation** – The protective VaporTowel™ Chef's Towel uses the power of an antimicrobial agent incorporated into the terry cloth yarns, providing intelligent protection and an additional level of sanitation.
- ▶ **Service** – Tucker Safety Products continues to use advancements in technology to develop solutions for the ever changing demands in commercial foodservice operations. Old habits of using commodity side towels are not only costly, but also create sanitation challenges for your customers and culinary team. Now the VaporTowel™ Chef's Towel will give you a tool that offers true protection and will help you do what is right for your business!
- ▶ **Savings** – 80% REDUCTION in the number of towels used on the cooking line as a direct result of the unique construction. Save on purchase volumes, laundry, rental, and injury costs. Even after 100 commercial launderings the VaporTowel™ Chef's Towel did not lose any of its protective qualities. Inexpensive commodity towels turn out to be very expensive when all factors are considered!

## Are you avoiding burn and cut injuries by luck? Take the luck out of safety and do what is right for your business!

*"As technology advances, we must understand those advancements and how we can use them to improve our daily lives. Suddenly, old concepts about traditional products no longer apply."*

*- Vincent Tucker, President and CEO, Tucker Safety Products, Inc.*

Injuries are not accidents. They are predictable and preventable. Hazards exist in every workplace and protecting workers is essential. In the demanding and fast-paced environment of commercial foodservice, ensuring workers are able to perform their job safely, quickly and accurately is an ever-present challenge. Industry statistics reveal nearly one-third of occupational burns occur in restaurants<sup>1</sup> and there are 439,000 disabling hand and finger injuries each year according to OSHA<sup>2</sup>.

With the cost of attracting and keeping your valuable employees (not to mention insurance and Workers' Compensation claims) climbing every year, wouldn't you want to do whatever it takes to protect them and your business? Understanding the emotional, physical and economic toll of injuries is critical to promoting a safe working environment, however, the most important point to remember when choosing personal protective equipment (PPE) and apparel is that PPE is intended to save lives and protect against serious injury.

For nearly three decades, we have been manufacturing "Best In Class" personal protective equipment and apparel for commercial foodservice operations around the world with exclusive features you'll only get from Tucker Safety. Our success is driven by our people and their dedication to excellence – in our products, in our expertise, and in working shoulder-to-shoulder with customers and end users. As a company and as individuals, we take great pride in producing effective protection designed to help you run a safe and sanitary operation, reduce injury and worker's compensation claims, and increase productivity.

Our four key foundational elements – **Safety, Sanitation, Savings, and Service** add up to the highest level of protection possible for every aspect of your operation. When your protective apparel carries the Tucker Safety Products' label, you're investing in true protection and guaranteed performance. We stand behind all of our products and back each product with a 100% satisfaction guarantee. Always look for the label!

# THE EXPERTS IN FOODSERVICE PROTECTION

## It's About Safety...

### Protect your staff

The safety of your team is critical to the success of your business and protecting them from injury must come first. With Tucker Safety Products and programs at work in your operation, your employees will feel valued, protected and confident, leading to improved performance and safety compliance. Enjoy the benefit of employee confidence, loyalty and productivity when you invest in effective protective apparel from Tucker Safety Products.

## It's About Sanitation...

### Protect your customers

At some point, everybody working in a commercial kitchen has seen the quilted cotton oven mitt that's charred, worn through and flaking away with every use. There's no way to clean it and no way to make it safe! Washing and sanitizing is critical to maintaining a clean and safe environment. Every product we sell is designed to inhibit the growth of bacteria and can be repeatedly washed and sanitized without losing protective qualities.

## It's About Service...

### Protect your investment

As your partner in safety, we customize our relationship with each client and address every burn and cut safety risk in the operation. We focus our unique brand and expertise on the foodservice industry. Our services and processes determine which products are the best fit, literally and figuratively. We pride ourselves on being accessible, responsive and connected to the markets we serve and our customers; we will customize solutions for your operation if needed.

## It's About Savings...

### Protect your profits

When it comes to personal protection, there is a price for ineffective products. Low priced products often fail to deliver or perform as expected (there's a reason the price is low), and have to be replaced more frequently.

Every Tucker Safety Product is guaranteed to last a minimum of 10 times longer than commodity products.

Tucker Safety Products offer the best value, low total cost of ownership, and true protection.

# Product Selection and Care

## The “Tucker Difference”

Enjoy features and benefits not available anywhere else with Tucker Safety Products. We are the only manufacturer in the industry to offer oven mitts and gloves in small, medium and large sizes. Our standard size is medium; however, if you need a smaller or larger size mitt or glove, simply request the same style number in small or large.

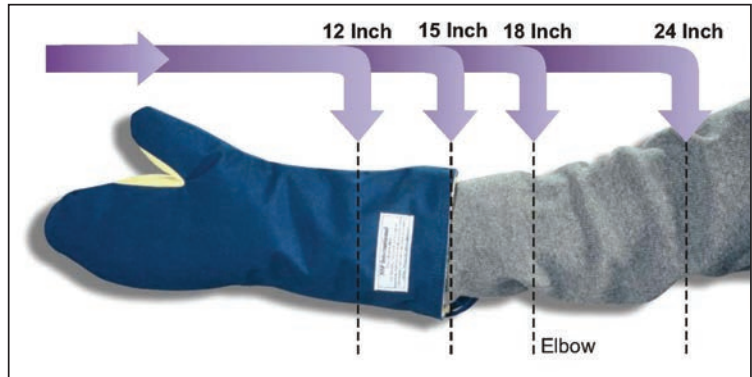

Different from cheap commodity products, every Tucker Safety Product can be effectively washed and sanitized without losing any protective qualities. Our mitts or gloves can be put back into service immediately after washing because every *BurnGuard*® Product equipped with our proprietary *VaporGuard*® barrier keeps working whether the mitt or glove is wet or dry. No more waiting until the end of the day to clean your protective apparel. “Clean-as-you-go” throughout the day for maximum sanitation and to save time.

## Mitt and Glove Sizing: Getting the Proper Fit

Protective apparel and equipment that fits properly is absolutely vital to the safety of the wearer. Knowing how to measure and choose mitt or glove sizes can increase safety and productivity. To avoid injury and promote use/compliance, choose more than one size to accommodate different wearers. **A one-size-fits-all approach is simply ineffective.**

When mitts or gloves do not fit properly, it can delay work or result in hand injuries. If hand protection is too small, it may cause hand fatigue or decrease dexterity. Mitts or gloves that are too large can get caught on jagged edges or moving parts of equipment. Loose gloves or mitts can be easily pulled off the hand or even pull the wearer’s hand into moving equipment.

The length of a mitt or glove should be chosen based on the application, job task or equipment type. Typically, 15 or 18 inch lengths will meet the majority of your needs.

## Caring For Your Mitts And Gloves

All of our protective apparel is completely washable and dryable. For operations where commercial laundering equipment is not available, our innovative and “game-changing” *QuicKlean*™ Protective Apparel is designed to be washed, rinsed, and sanitized as often as necessary by hand at the sink.

Our protective apparel with a poly-cotton or *Nomex*® fiber outer shell is ideally maintained with the use of commercial laundering equipment. While this apparel can be spot cleaned at the sink, machine washing is recommended for best results.

### Cleaning Tips:

- Clean daily using warm soapy water for hand washing or normal setting for machine washing.
  - If hand washing, thoroughly rinse before sanitizing with an approved foodservice sanitizing agent.
  - Always clean both the exterior and interior of your Tucker Safety Products mitt or glove; interior liners are often forgotten and can be a significant source of cross-contamination if they are not washed and sanitized daily.
  - Use a soft scrub brush to remove excess soil.
  - For oven mitts with sewn in liners, turn the mitt inside out for faster drying.
  - For oven mitts with removable liners, remove liner to wash; machine dry or hang on a Safety Station to air dry.
- IMPORTANT: Once dry, reinsert liner into outer shell. Do NOT use outer shell or liner alone.**

# TUCKER

SAFETY PRODUCTS INC.

## Cut Protection Products

Tucker Safety Products uses the latest technology to provide the highest level of cut protection while providing the thinnest most comfortable (best “HAND”) glove available today. The comfort of the glove addresses end user concerns about losing dexterity due to the bulkiness of competitive products. Designed for food safety and wearer safety, our **KutGlove™** Cut Resistant Gloves do not use steel threads that can oxidize, break-off and fall into food, or poke the wearer. Instead, we use **Spectra® / Dyneema®** fibers which provide supreme strength but minimal weight for a more comfortable and safer product.

## KutGlove™ Cut Resistant Glove from Tucker Safety Products

- Highest level of comfort and protection in its class.
- Superb fit, dexterity and touch sensitivity for food preparation.

### GIVE HANDS THE BEST CUT PROTECTION

When you need to work with sharp tools and objects, hands need protection. *KutGlove™* Cut Resistant Gloves give hands the best protection from direct contact with sharp edges such as knives and slicer blades.

The cost of investing in effective cut protection will be quickly paid back in employee compliance, increased productivity, longer glove life, and most importantly, a reduction in hand-related injuries.

### CUT PROTECTION FOR FOODSERVICE

A cut protection program in foodservice differs from all other industries. Beyond cut resistance, foodservice operators must also be concerned with comfort, touch sensitivity, dexterity, proper fit, and sanitation in an environment where PPE is shared with others.

#### KUTGLOVE™ CUT RESISTANT GLOVES

Item Numbers/Colors, 10 gauge, Level 5

	White	Tan	Red	Green	Blue	Yellow

X-Large	94515	94525	94535	94545	94555	94565

\**KutGlove™* Cut Resistant Gloves are color-coded to aid in identifying size (i.e., red band = small), application, kitchen zone, or support HACCP programs. These five preferred products are available for quick ship.

#### Safety Stations

Wall mounted equipment station to hang safety items. Mounting hardware included.

5-Clip Safety Station (11.5" x 6") 99953

4-Hook Safety Station (14" x 6") 99954

### BENEFITS/ATTRIBUTES OF KutGlove™ Cut Resistant Gloves

- Glove design and knit unique to Tucker Safety Products
- Superb fit
- Wire-free
- Designed to ensure fingers go all the way to the tip of the glove for touch sensitivity and dexterity
- Constructed of Spectra® fibers / Dyneema® fibers to provide higher levels of protection and unparalleled comfort in a glove appropriate for direct food contact
- Only non-absorbent food/medical grade materials used
- Yarn/fibers feature inherent anti-microbial protection that will never wash or wear out of glove
- Anti-microbial protection is NSF-certified under Standard 51 for food equipment and materials
- CE tested and certified level 4 and level 5 cut resistance
- Can be effectively washed and sanitized multiple times
- Bleach and sanitizer safe

#### Available in seven sizes:

X-small, Small, Medium, Large, X-Large  
(XX-Small and XX-Large available as special order request)

#### Available in six colors:

White, Tan, Red, Green, Blue and Yellow

X-Small (yellow band), Small (red band), Medium (green band), Large (white band), X-Large (tan band)  
(Band color indicates size)

Pack Size: 1 each, Ambidextrous

**TIP:**  
"Color-By-Size" color-coding system can be application specific, area/zone specific, product specific (HACCP), or indicate glove size.

5-Clip Safety Station (11.5" x 6")  
Item# 99953 (Gloves sold separately)

# Sizing Guide for KutGlove™ Cut Resistant Gloves

Download this chart by visiting:  
[www.tuckersafetyproducts.com/sizing\\_instructions.htm](http://www.tuckersafetyproducts.com/sizing_instructions.htm)

**NOTE:** Drawing is to scale.

Hands come in all shapes and sizes. A one-size-fits-all approach is simply ineffective. **Correct fit is very important!** It not only reduces risk of injury, but also ensures a longer product life cycle. Workers are also more likely to wear a glove that fits properly and doesn't slow them down.

Gloves should be cleaned and sanitized daily. Download washing instructions by following the link at the bottom of the page or scan the QR code.

**STEP ONE:** With fingers together, place hand so left side of hand and bottom of palm rests on black line.

**STEP TWO:** Your glove size is determined by the color bar where the right side of your hand rests. If the side of your hand falls between bars, select smaller size.

- Glove should be snug, not tight.
- Fingers should reach completely to the end.

[www.tuckersafetyproducts.com/washing\\_instructions.htm](http://www.tuckersafetyproducts.com/washing_instructions.htm)

Tucker Safety Products *KutGlove™* Cut Resistant Gloves are cut and puncture-resistant. NOT CUT AND PUNCTURE PROOF. Do NOT use with moving or serrated blades or tools. This chart is for general information purposes only and is not a substitute for review of the applicable government regulations and standards or individual application or use. It should not be construed as legal advice or opinion.

## THE THREE MAJOR COMPONENTS OF ALL THERMAL PROTECTIVE APPAREL (IN ORDER OF IMPORTANCE)

#1 - EFFECTIVE LIQUID/VAPOR BARRIER	#2 - INSULATION	#3 - OUTER SHELL FABRIC
Most important component of burn injury prevention because the majority of commercial foodservice burns are caused by hot liquids, grease and/or steam.	Burns from contact with hot surfaces are the second leading cause of injury in commercial foodservice.	Helps determine durability and longevity of the protective apparel when used

**TUCKER REGISTERED TRADEMARKS, TRADEMARKS AND LOGOS:** We identify and promote our products, manufacturing processes and services with our trademarks, which consist of names, logos, words, characters and colors, a number of which are identified below. We consider these marks to be valuable assets. To protect our interests in these marks, we have a legal obligation to ensure they are used properly by us and by others in the industry.

BurnGuard® Protective Apparel	VaporGuard® Barrier	Blue & Yellow® Color Combination	QuickClean™ Finish
The name under which we market all products equipped with our proprietary VaporGuard® Liquid and Vapor Barrier.	Our registered federal trademark for our proprietary liquid and vapor barrier that prevents hot liquids (boiling water, hot oil, or hot grease) from reaching the skin. It will not burn, melt, crack or turn brittle or otherwise breakdown when exposed to 500°F for extended periods of time.	Our exclusive color combination for oven mitts, gloves and protective apparel, which protect against heat, flame, steam and hot liquids. This assures when you purchase protective apparel with <b>Blue &amp; Yellow®</b> colors, you can be confident you are buying authentic Tucker Safety Products' effective protective apparel.	An industry first, and our one-of-a-kind process that can be applied to any BurnGuard® product. The resulting QuickClean™ finish makes the product easy to clean. Just rinse the exterior or interior at the sink and use again immediately. <b>No need for on-site laundry facilities.</b>
VaporTowel™ Chef's Towel			
The only side towel with an effective liquid and vapor barrier that is safe to use wet or dry by culinary professionals.			
GussetGuard™ Protection	SteamGuard™ Barrier	KutGlove™ Cut Resistant Glove	SafeStep™ Program
Our trademark for the insert placed between the thumb and index finger on all of our Conventional style oven mitts for added durability and dexterity.	Our trademark for our effective liquid and vapor barrier that protects against liquids, grease, and steam at lower temperatures.	Our trademark for our cut resistant glove family that possess characteristics and features that are specifically designed for Foodservice.	Our Safety Training, Burn and Cut Injury Prevention program that we offer to clients as a front-line defense against burn and cut injuries. Under this program, Tucker Safety Products' representatives visit the client site and analyze burn/cut injury history, facility layout, traffic patterns and "hot spots" as well as equipment and protective apparel in use. The team then formulates recommendations concerning facility design, equipment in use and protective apparel in use in order to minimize the risk of future burn or cut injuries. The team also instructs managers and staff in burn and cut injury dangers and safety practices. Tucker Safety Products will continue monitoring injuries on an ongoing basis, and make further recommendations as needed.

## Product Icons

		
<b>FLAME SAFE</b> outer shell fabric or material	<b>INSULATION VALUE</b> when held for 15 seconds or less using proper liner and outer shell	<b>HOT LIQUIDS/GREASE</b> protection
		
<b>STEAM/CHEMICAL</b> vapor protection	<b>CUT RESISTANT</b> product	<b>MACHINE WASH</b> for best results
		
		<b>RINSE CLEAN</b> at sink and put back into service immediately
	<b>GUARANTEED DURABILITY COMPARISON</b> to commodity products (oven mitts and hot pads to cotton quilted products; Apron, ShinGuard™ Protectors and sleeve to vinyl products; Seam-sealed gloves to latex products)	

## INDUSTRY LOGOS, MARKS AND TRADEMARKS

**NSF** **NSF INTERNATIONAL**  
An independent certifying agency that sets standards, tests products and authorizes use of the NSF mark to indicate compliance with the standards as verified by the certifying agency.

**CE** **CE: CONFORMITE EUROPEENNE**  
Product complies with all relevant essential requirements (e.g., health, safety or environmental requirements).

# Effective Protective Apparel Product Selection Guide

**IMPORTANT NOTICE:** This Product Selection Guide has been developed by Tucker Safety Products to assist in selecting the most appropriate personal protective equipment (PPE) for the specific application/job task, equipment type, potential hazards and/or risks that may require protective apparel, and method of cleaning. This guide is for general information purposes only and is not a substitute for review of the applicable government regulations and standards or individual application or use. It should not be construed as legal advice or opinion.

Depending on the wearer, application, type of equipment, or specific job task, the number of components, style, shape, size and length will vary. Oven mitts and gloves come in different styles (conventional, puppet, three-finger, or five-finger), different lengths (some starting as short as 12" or some as long as 24"), or different sizes (standard is medium, but can come in small, large or extra-large depending on the product). This guide is a great tool for narrowing down your choice(s); we have listed our top picks for each equipment type based on the potential hazard(s) a wearer may be exposed to while performing normal work duties. Consult with your local Tucker Safety Products' representative for more details or other solutions that may better fit your needs.

1. Identify equipment type (if not listed please contact your Tucker Safety Products' representative).
2. Match potential hazards/risks listed in this guide for each piece of equipment with the hazard assessment you performed for your specific equipment / environment.
3. View our Top Picks / Solutions and select protective apparel that will meet your needs. Many of our products can be ordered with either our standard finish (machine washable and dryable), or our *QuickClean™* finish (rinses clean at the sink). If commercial laundering equipment is not practical or available, choose products with a *QuickClean™* finish for ease of cleaning and maximum sanitation.
4. Learn more about the product you've selected by finding it in our catalog or visiting [www.tuckersafety.com](http://www.tuckersafety.com).

## Hazard / Risk Product Matchback

### OPEN FLAME

*BurnGuard®* Protective Apparel with Nomex® Fiber / Kevlar® Fiber outer shell (hot pads, sleeves, mitts, gloves, aprons)

### HOT LIQUIDS

All *BurnGuard®* Protective Apparel with *VaporGuard®* Barrier or *SteamGuard®* Barrier (hot pads, sleeves, mitts, gloves, aprons, leg protection, *VaporTowel™* Chef's Towel)

### HOT SURFACES / ITEMS

Any style of *BurnGuard®* Protective Apparel for hand protection (mitts, gloves, *VaporTowel™* Chef's Towel); Choose insulation value appropriate for application or job task.

### STEAM / VAPORS

All *BurnGuard®* Protective Apparel with *VaporGuard®* Barrier or *SteamGuard®* Barrier (hot pads, sleeves, mitts, gloves, aprons, leg protection, *VaporTowel™* Chef's Towel)

### CUT / LACERATION

*KutGlove™* Cut Resistant Gloves in 10-gauge / Level 5 or 13-gauge / Level 4; Color-coded for size or for specific equipment or prep areas.
