DECLARATION

I certify that all the material in this thesis that is not my own work has been identified and that no material is included for which a degree has previously been conferred on me.

The contents of this thesis reflect my own personal views and are not necessarily endorsed by the University.

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

"... قَالَ رَبِّ أَوْزِعْنِي أَنْ أَشْكُرَ نِعْمَتَكَ الَّتِي أَنْعَمْتَ عَلَيَّ وَعَلَىٰ وَالِدَيَّ وَأَنْ أَعْمَلَ صَالِحًا تَرْضَاهُ..."
(الأحقاف: 15)

In the name of Allah, the Beneficent, the Merciful

"...he says: My Lord! Grant me that I may give thanks for Thy favor which Thou hast bestowed on me and on my parents, and that I may do good which pleases Thee..." (The sandhills: 15)

ACKNOWLEDGEMENTS

I am very grateful to **ALLAH** Subhanahu Wa Ta'ala who gave me an excellent family to live with and provided me the environment where I could finish my M.Sc. Without whose will it would have been impossible to complete my degree.

Second only to **ALLAH**, thanks to my parents for what they have contributed towards my education. Their unconditional love, constant support, great advice and prayers over the years are something that I cannot thank them for enough. Additionally, knowing that my success in completing my M.Sc. would be a source of happiness for them, I was further motivated to work hard.

I must also thank my supervisors **Prof. Dr. Moustafa Hussein** and **Dr. Mohammed Mahmoud Ali** for their continuous guidance and support.

My deepest appreciation goes to my advisor **Prof. Dr. Moustafa** for his active contribution to refining my research work and in filling the gaps. At times, when things looked difficult, he was the one who gave me hope. Whether it was studying existing research or writing articles he was there to listen to my concerns, review the material, provide feedback and show direction.

Similarly, I thank **Dr. Mohammed Mahmoud** for his support in improving my understanding of the free-space optical communications background and his suggestions during the research.

I would like to express my heartily thanks to my friends. They always encouraged me in this challenge. This goes especially for **Ahmad Odeh, Marwan Odeh** and **Sajed Odeh** for their support and friendship that we have through many years.

I gratefully acknowledge the staff of the Electronics and Communications Engineering Department for providing me with support and convenience during my studies at the Arab Academy for Science, Technology and Maritime Transport.

ABSTRACT

A burst overlapping in core router is one of the biggest problems that face OBS network. The Fiber Delay Line (FDL_{max}) has been used to avoid burst overlapping in the egress router of OBS network considering a Tell and Go (TAG) protocol at low and high traffic loads, in an intermediate node having three incoming links and one outgoing link in an egress node of optical domain. We found the conditions for the burst controls, either passing of all bursts or blocking of some bursts in the egress nodes of optical domain.

It is shown that in low traffic loads, burst blocking can be made zero but in higher traffic loads there is burst blocking, which can be reduced using different sets of FDLs for which minimum usage of wavelengths can be achieved. This thesis has described a proposed burst scheduling algorithm to avoid burst overlapping in the egress router of Optical Burst Switching (OBS) network, and hence to improve the quality of service (QoS) in developing several optical networks to fulfill the increasing demand of Internet facilities.

We used time-based assembly algorithm in an assembly node to build the burst at low and high traffic loads. The performance of an OBS network is investigated the performance measure in terms of Throughput (Th) is evaluated.

The impact of the Burst Size (B) and Inter-Arrival Time (t) on the throughput, and a relation for the Th and FDL_{max} depending on B , t , Minimum Time Gap (d) and Burst Loss Rate (BLR) was studied.

LIST OF SYMBOLS

B	Burst Size
B_{\min}	Minimum Burst Length Requirement
C	Capacity
D	Buffer Granularity
F	Delay Factor
G	Gain Factor
L_{i-1}	Service Time of Class
N	Delay Values
N_L	Number of Burst Lost at the Output Path O
N_R	Number of Nodes
N_T	Total Number of Input Bursts
P	Packet Size
Pd	Path Difference
P_r	Distribution of Burst Size
R	Round Trip Time
$R_{i,j}$	Offset Time Difference
T	Effective absolute temperature of the receiver
T'	Higher Values of Assemble Times
T_{Hi}	Burst Assembling in the Higher Range of Traffic Load
T_{Li}	Burst Assembling in the Lower Range of Traffic Load
$3n$	Number of Bursts in the Output Channel
be	Input Electrical
d	Time Gap
n	Total Number of Bursts in Each Input Channels
n_p	Number of Packets Contained in Burst
t	time
$t_{i,j}$	Offset Time Difference
t_p	Pre-Transmission Delay
t_w	Wavelength Holding Time
α	Time Units
ι	Burst length
λ	Wavelength
λ_p	Average Packet Arrival Rate to The Assembly Queue
ρ	Traffic Load
ρ_H	Higher Traffic Load
ρ_L	Lower Traffic Load

LIST OF ABBREVIATIONS

ABT	ATM Block Transfer
ABT-IT	ATM Block Transfer with Immediate Transmission
