Enterprise Policy

Clinical Guidelines are written when necessary to provide guidance to providers and members in order to outline and clarify coverage criteria in accordance with the terms of the Member's policy. This Clinical Guideline only applies to PacificSource Health Plans, PacificSource Community Health Plans, and PacificSource Community Solutions in Idaho, Montana, Oregon, and Washington. Because of the changing nature of medicine, this list is subject to revision and update without notice. This document is designed for informational purposes only and is not an authorization or contract. Coverage determination are made on a case-by-case basis and subject to the terms, conditions, limitations, and exclusions of the Member's policy. Member policies differ in benefits and to the extent a conflict exists between the Clinical Guideline and the Member's policy, the Member's policy language shall control. Clinical Guidelines do not constitute medical advice nor guarantee coverage.

Background

Specialized nutritional support is often required for patients who have chronic disease or for those undergoing long-term rehabilitation who are at risk for malnutrition. Nutritional support can be provided orally, enterally and intravenously.

For the purpose of this policy enteral nutritional support is defined as nutritional support administered through a feeding tube (e.g. nasogastric, jejunostomy, PEG tube, etc.)

Enteral nutrition and medical foods **do not** accumulate to the DME calendar/benefit year maximum. Enteral feeding supply kits **do** accumulate to the calendar/benefit year DME maximum.

This policy does **not** cover Total Parenteral Nutrition (TPN). Please see the policy "Total Parenteral Nutrition (TPN) in the Home Setting" for guidance on TPN.

Criteria

Commercial

I. No Preauthorization Required

A. Inborn Errors of Metabolism: Inborn errors of metabolism (IEM) are a group of rare disorders that are caused by an inherited genetic defect and alter the body's ability to derive energy from nutrients.

- No preauthorization is required
- Covered per contract language

Common examples of inborn errors of metabolism include: Maple syrup urine disease type Ib and II, Phenylketonuria (PKU),Homocystinuria, Tyrosinemia types I, II and III, Glutaric aciduria/glutaric academia type I and II,Methylmalonic academia, Glycogen storage disease, Organic acid metabolism disorders

II. Preauthorization is required

A. Severe Intestinal Malabsorption: Severe intestinal malabsorption is the disordered or inadequate absorption of nutrients from the intestinal tract, especially the small intestine

Coverage criteria: clinical documentation must meet the following:

- Diagnosis of severe intestinal malabsorption diagnosis due to one of the following: cholestatic liver disease, Crohn's disease, eosinophilic gastrointestinal disorders, lymphangiectasia, parenchymal liver disease, post-gastrectomy malabsorption and post-intestinal resection malabsorption (*post-bariatric surgery malabsorption is excluded*), radiation enteritis, short-bowel syndrome, tropical sprue, ulcerative colitis (when there are documented objective signs and symptoms of malabsorption such as serum albumin levels), Whipple's disease
- Examples of conditions that **do not** cause severe intestinal malabsorption: food allergies, cow's milk allergies, lactose intolerance, sensitivities to intact protein, protein or fat maldigestion, multiple protein intolerances

B. Anatomic Abnormalities or Motility Disorders: an anatomic abnormality (e.g. obstruction due to head and neck cancer or reconstructive surgery, etc.) or a motility disorder (e.g., severe dysphagia following a stroke, cerebral palsy, neuromuscular, CNS disease) interfering with the ability to adequately chew or swallow increasing the risk of malnutrition.

Coverage Criteria: clinical documentation must meet **ALL** of the following:

- The enteral nutrition comprises the sole source, or an essential and predominant source, of nutrition (i.e., 60% or more of required caloric nutritional intake).
- A physician has issued a written order for the enteral nutrition and documents the impairment is expected to exceed 90 days.

C. Behavioral Health Eating Disorders : Enteral feeding may be medically necessary for treatment of patients unable to maintain an ideal body weight through oral feeding ****Behavioral Health Medical Director review is required for **ALL** requests***

Coverage Criteria: the following must be met

- Member is currently participating in a comprehensive eating disorder treatment program
- Behavioral Health Medical Director approves the request and determines the authorization time period

D. Enteral Infusion Pumps: Enteral feedings are delivered by syringe, gravity, or via an electric infusion pump. Feedings can be delivered on an intermittent or continuous basis.

Coverage Criteria for an enteral infusion Pump: ONE of the following criteria must be met

- The individual has severe diarrhea, dumping syndrome, fluctuating blood glucose levels, or a condition that results in circulatory overload
- The individual's medical condition is such that gravity or syringe feeding is not clinically appropriate (e.g., there is a risk of aspiration or reflux).
- The individual's medical condition requires that the nutritional formula administration rate is such that a pump is required to titrate infusion for patient safety (e.g., less than 100 cc per hour).

NOTE: Supplies for gravity feedings do not require preauthorization if under $1000.

Policy Exclusions

PacificSource does not cover ANY of the following items for any condition or indication:

- standardized or specialized infant formula *unless member meets this policy's criteria (see above)*
- normal grocery items (including over-the-counter infant formulas such as Similac, Nutramigen and Enfamil) *unless member meets this policy's criteria (see above)*
- food thickeners
- dietary and food supplements
- lactose-free products; products to aid in lactose digestion
- gluten-free food products
- weight-loss foods and formula; products to aid weight loss
- low carbohydrate diets
- baby food
- banked breast milk breast milk supplements and fortifiers (Prolacta is covered for Billings Clinic Employee Plan, effective 8/1/2019)
- grocery items that can be blenderized and used with an enteral feeding system
- nutritional supplement puddings
- high protein powders and mixes
- oral vitamins and minerals
- Enteral nutrition products (and related supplies) that are administered orally

Medicaid

PacificSource Medicaid Physical Health follows Oregon Health Plan (OHP) per Oregon Administrative Rules (OAR) 410-140-0000 to 0320 for coverage of Enteral Nutrition and Pumps.

PacificSource Medicaid Pharmacy reviews CPT codes B4150 thru B4161.

HCPCS code B4149 Blenderized Foods is not a covered benefit under the OHP.

Medicare

PacificSource Medicare uses Local Coverage Determination L33783 for Enteral Nutrition and National Coverage Determination 180.2 for Enteral Nutritional Therapy.

Experimental/Investigational/Unproven

Digestive enzyme cartridge that connects in-line with existing enteral feeding pump tubing sets and patient extension sets or enteral feeding tubes are considered experimental/ investigational and not covered.

Definitions

Medical food - Foods that are formulated to be consumed or administered enterally under the supervision of a physician, that are specifically formulated to be deficient in one or more of the nutrients present in typical nutritional counterparts, that are for the medical and nutritional management of patients with [metabolic disorders] and that are essential to optimize growth, health and metabolic homeostasis.

Coding Information

This following list of codes are for informational purposes only and may not be all-inclusive.
Deleted codes and codes which are not effective at the time the service is rendered may not be eligible for reimbursement.

HCPCS #	Description	Type of Expense	Comments
B4149, B4154, B4157, B4162, S9434, S9435	Metabolic Food	DME/Supply TOS 3618*	No PA required. *PacificSource is required by law to provide coverage for B4157.
B4150, B4152, B4153, B4155, B4158, B4159, B4160, B4161,	Enteral Formula	DME/Supply TOS 6386*	Preauthorization required.

B4034, B4035, B4036	Enteral Feeding supply kit;	DME/Supply TOS 6386*	Preauthorization required
B4105	In-line cartridge containing digestive enzyme(s) for enteral feeding	DME/Supply	Not covered

- TOS 6318 = DME with no maximum (no PA requirement)
- TOS 6386 =DME enteral supplies and formula
