Full Download: https://alibabadownload.com/product/essentials-of-life-span-development-1st-edition-santrock-test-bank/

Chapter 1

Student:			

- 1. Development is BEST defined as a pattern of growth that
 - A. begins at birth and continues throughout childhood.
 - B. begins at conception and continues until the person is fully grown.
 - C. begins at birth and ends when the person begins to decline due to age.
 - D. begins at conception and continues throughout the human life span.
- 2. Development includes
 - A. stability and growth.
 - B. growth and decline.
 - C. stability and decline.
 - D. growth and change.
- Two developmental psychologists are having a conversation. One believes in the traditional view of developmental change; the other believes in the life-span view. Most likely, they would DISAGREE about
 - A. the scientific methods used to study development.
 - B. whether the tabula rasa or innate goodness positions were correct.
 - C. whether most developmental change occurs in infancy and early childhood or in later phases of development.
 - D. whether the earlier theorists, such as Freud and Jung, were correct or whether the later theorists such as Piaget and Skinner were correct.

	A. during infancy and early childhood
	B. during adolescence and early adulthood
	C. during middle and late adulthood
	D. throughout the entire life cycle
5.	A life-span theorist believes that
	A. developmental changes occur in the child and adolescent years of life.
	B. the most important developmental changes occur during the first 10 years of life.
	C. developmental changes occur in the early, middle, and late years of life.
	D. the most important developmental changes occur in the middle of life.
6.	What does the traditional view of human development state about developmental change in
	adulthood?
	A. There are few or no changes that occur during adulthood.
	A. There are few or no changes that occur during adulthood.
	A. There are few or no changes that occur during adulthood.B. There are extreme changes that occur during adulthood.
	A. There are few or no changes that occur during adulthood.B. There are extreme changes that occur during adulthood.C. There are constant changes that occur during adulthood.
	A. There are few or no changes that occur during adulthood.B. There are extreme changes that occur during adulthood.C. There are constant changes that occur during adulthood.
	A. There are few or no changes that occur during adulthood.B. There are extreme changes that occur during adulthood.C. There are constant changes that occur during adulthood.

4. The traditional and life-span perspectives are contrasting views of developmental change.

According to the life-span perspective, when do developmental changes occur?

7. On your first day of class, the Professor Red-Elk claims that for too long we have foc	
	development of only young children. She argues that the development of adults and elderly
	people is just as important. This professor is articulating a view.
	A. contemporary
	B. tabula rasa
	C. traditional
	D. life-span
8.	Life expectancy increased during the 20th century because of improvements in
	A. sanitation.
	B. nutrition.
	C. medicine.
	D. all of these.
9.	Life expectancy refers to
	A. the average number of years a person can expect to live.
	B. the maximum number of years a species can live.
	C. the number of years lived by most people.
	D. the oldest age of any person in recorded history.

10.	The idea that no age period dominates development highlights the life-span perspective that
	development is
	A. plastic.
	B. contextual.
	C. multidimensional.
	D. lifelong.
11.	Dr. Tepper-Harmon believes that life-span development cannot be studied without considering biological, socioemotional, and cognitive dimensions. Dr. Tepper-Harmon believes that development is
	A. lifelong.
	B. multidirectional.
	C. multidimensional.
	D. plastic.
12.	Many older adults become wiser by being able to call on experience, yet they perform poorly on cognitive speed tests. This can be explained by which of the following life-span characteristics?
	A. plasticity
	B. contextualism
	C. multidimensionality
	D. multidirectionality

13.	Tzu-Chiang is 55 years old, is currently "going back to college," and is enrolled in a college algebra course. Tzu-Chiang is surprised that he is performing well in the course despite not		
	having a formal math class for over 30 years. Researchers would not be surprised by his		
	performance because it has been shown that development is		
	A. plastic.		
	B. multidimensional.		
	C. lifelong.		
	D. contextual.		
14.	Researchers from many disciplines study human development in an effort to better understand		
	how humans develop. This makes human development a field of study.		
	A. multidirectional		
	B. cultural		
	C. multidisciplinary		
	D. multidimensional		
15.	By age 50, many people need reading glasses or bifocals to improve their vision. This		
	physiological change is a good example of a		
	A. nonnormative life event.		
	B. multidirectional influence on development.		
	C. normative age-graded influence on development.		
	D. nonnormative age-graded influence on development.		

16.	Tyler is 5 years old and has just entered kindergarten. This is an example of
	A. a nonnormative influence on development.
	B. a normative history-graded influence on development.
	C. a normative age-graded influence on development.
	D. a nonnormative age-graded influence on development.
17.	People today are waiting longer to marry and raise children. In the 1950s, it was more common
	for people to marry and start a family before they were 20 years old. This difference is an example of a
	A. normative age-graded influence on development.
	B. normative history-graded influence on development.
	C. multidimensional change in the context of development.
	D. nonnormative life event that has changed across development.
18.	Levi was in New York on the day that the World Trade Center was destroyed by terrorists. He is
	now afraid to fly. This is an example of how a event can influence a person's development.
	A. normative history-graded
	B. normative age-graded
	C. normative life
	D. nonnormative stressful

19.	When she was a teenager, two members of Anna's family were killed by a tornado. More than 30
	years later, she is still terrified by storms. This is an example of how a(n) event can
	influence a person's development.
	A. age-graded
	B. normative-graded
	C. nonnormative life
	D. normative history-graded
20.	Paul Baltes claimed that nonnormative life events could provide an important context for life-span
	development. With this concept, the term "nonnormative" refers to an event that
	A. is not likely to happen to very many people.
	B. happens to younger children but not to older adults.
	C. used to happen to everyone but no longer occurs very much today.
	D. happens to almost everyone regardless of when or where they live.
21.	Aimee is now 83 years old. Much of her future development will focus on and
	A. growth; maintenance
	B. maintenance; regulation of loss
	C. regulation of loss; change
	D. growth; regulation

22.	Constance is 75 years old and still very active. She gardens, hikes, plays chess, and is learning
	to play the piano. She exercises daily to stay fit. She loves reading, listening to music, and
	playing with her grandchildren. Her hearing and eyesight are not what they used to be, and she is
	not as steady on her feet as when she was younger. She wears a hearing aid, eyeglasses, and
	sensible shoes to minimize these losses. Researchers would say that Constance is a good
	example of how development includes
	A. varying contexts.
	B. growth, maintenance, and regulation of loss.
	C. plasticity.
	D. multidisciplinary influences.
23.	Culture is based on the
	A. nationality characteristics, race, religion, and language of a people.
	B. practices of a large number of people living in the same geographic area.
	C. exchange of ideas between groups of people who live in the same location.
	D. behaviors, beliefs, and products of a particular group of people.
24.	Dr. Widaman is researching the cultural differences in school performance between Japanese
	and American children. He is comparing math scores between two groups of fifth graders. One of
	his groups is from Japan and the other group is from the United States. Dr. Widaman is
	conducting a study.
	A. longitudinal
	B. correlational
	C. cross-cultural

D. sequential

25. Euro-Americans

- A. are not an ethnic group in the United States; they are the majority culture.
- B. form an ethnic group in the world but not in the United States.
- C. do not form an ethnic group, because there is a lack of diversity within this group.
- D. belong to an ethnic group just like any other ethnic group in the United States or the world.
- 26. Hannah and George disagree. Hannah argues that people within an ethnic group all share the same culture. George, by contrast, argues that people of the same ethnic group may or may not share the same culture. Who is right?
 - A. Hannah, because sharing the same culture defines ethnicity.
 - B. George, because diversity and differences exist among people within an ethnic group.
 - C. Hannah is correct when referring to ethnic groups within the United States; George is right when referring to ethnic groups in the entire world.
 - D. Hannah is correct when the persons in the ethnic group all share the same socioeconomic status; George is correct when the persons in the ethnic group do not share the same socioeconomic status.

27. Ethnicity refers to

- A. the behavior patterns, beliefs, and all other products of a particular group of people that are passed on from generation to generation.
- B. a person's position within society based on occupational, educational, and economic characteristics.
- C. a controversial classification of people according to real or imagined biological characteristics such as skin color and blood group.
- D. a social status placed on a similar group of people based on their heritage, nationality, race, religion, and language.

28.	People with similar occupational, educational, and economic characteristics are said to share the same
	A. ethnic group.
	B. poverty rate.
	C. socioeconomic status.
	D. subculture group.
29.	Which of the following is an example of social policy?
	A. A volunteer coordinating an after-school program.
	B. A mother disciplining her son.
	C. A government lowering federal taxes.
	D. A college student protesting a tuition increase.
30.	Kyesha is 80 years old and is typical of a growing number of older adults. Kyesha MOST LIKELY lives
	A. with a spouse.
	B. with children.
	C. alone.
	D. in a nursing home.

	A. older adults are living longer.
	B. older adults are more likely to be childless.
	C. older adults are less likely to live alone.
	D. older adults are more likely to be married.
32.	The key developmental processes in life-span development include all of the following EXCEPT
	A. cognitive processes.
	B. biological processes.
	C. socioemotional processes.
	D. physical/sensory processes.
33.	Which of the following statements best describes the relationship among biological development,
	cognitive development, and social development?
	A. The three are independent processes.
	B. The three are interdependent processes throughout the life span.
	C. The three are less important aspects to consider than one's culture when studying development.
	D. The three differ in their importance at different points in the life cycle with one aspect coming to
	the forefront during certain periods while the others play only a minor role.

31. All of the following trends in older adulthood can be seen in recent decades, EXCEPT

34.	Dante is 2 years old. His mother took him to the doctor and discovered that he had gained 5
	pounds and had grown 2 inches since his last physical exam. This is an example of the role of
	processes in development.
	A. cognitive
	B. biological
	C. socioemotional
	D. physical
35.	Our relationships with others, changes in emotions, and changes in personality are all examples
	of processes.
	A. cognitive
	B. biological
	C. socioemotional
	D. physical
36.	. Johnathan is almost completely dependent on his parents. He is just learning to recognize things
	that he wants and how to get them. Johnathan is in the period of development called
	A. late childhood.
	B. middle childhood.
	C. early childhood.
	D. infancy.

37.	Joshua spends all of his free time doing homework and studying so that he will get good grades
	and his parents will be proud of his achievements. Joshua is most likely in the period of
	development called
	A. early childhood.
	B. middle childhood.
	C. adolescence.
	D. early adulthood.
38.	Travis spends a great deal of time working and trying to establish his career. He also has been
	thinking about how his personal relationship is going and considering whether it could be long
	term and lead to establishing a family. Travis is most likely in
	A. late adolescence.
	B. early adulthood.
	C. middle adulthood.
	D. late adulthood.
39.	The developmental period that runs from approximately 40 years of age to about 60 years of age
	is
	A. early adulthood.
	B. the nesting years.
	C. middle adulthood.
	D. the crooning years.

40.	Jessica spends a lot of time thinking about the choices she has made in her life and the events
	she has witnessed. She is adjusting to decreasing strength and health, and she has made
	several lifestyle changes as a result. Jessica is most likely in
	A. adolescence.
	B. early adulthood.
	C. middle adulthood.
	D. late adulthood.
41.	Which of the following life-span phases lasts the longest?
	A. middle and late childhood
	B. adolescence
	C. middle adulthood
	D. late adulthood
42.	Development in the young-old and old-old is characterized by considerable, but
	development in the oldest-old is characterized by
	A. cognitive gains; cognitive losses
	B. functional gains; functional losses
	C. adaptability; inflexibility
	D. plasticity; frailty

2	13.	The onset of puberty and the onset of menopause are examples of age.
		A. social
		B. chronological
		C. biological
		D. psychological
2	14.	Biology is to as environment is to
		A. nature; nurture
		B. nurture; nature
		C. maturation; nature
		D. nature; maturation
2	1 5.	Dr. Borthwick-Duffy believes people are primarily influenced by the environment and learned
		experiences, so she believes plays a more powerful role in human development.
		A. nurture
		B. maturation
		C. change
		D. nature

46.	Tingfeng We was a victim of child abuse as a young boy, but he did not grow up to become an
	abuser. Instead, he leads a fulfilling family life. This is an example of which characteristic of
	development?
	A. change
	B. stability
	C. maturation
	D. continuity
47.	Winnonna was found to have childhood depression; she goes on to have depression for the rest
	of her adult life. This is an example of which characteristic of development?
	A. change
	B. stability
	C. maturation
	D. discontinuity
48.	Continuity is to as discontinuity is to
	A. fluid; rigid
	B. gradual; abrupt
	C. maturation; nurture
	D. adulthood; childhood
	D. additiood, officiation

49. The concept of discontinuity is characterized by all of the following, EXCEPT
A. qualitative change.
B. quantitative development.
C. sequence of stages.
D. distinct change.
50. Life-span psychologists generally agree that
A. continuity correctly characterizes development; discontinuity does not.
B. discontinuity correctly characterizes development; continuity does not.
C. development cannot be characterized as either continuous or discontinuous.
D. developmental change can be both continuous and discontinuous.
51. Life-span psychologists generally agree that
A. stability correctly characterizes development; change does not.
B. change correctly characterizes development; stability does not.
C. neither stability nor change correctly characterizes development.
D. developmental includes both stability and change.
52. A set of ideas that helps us to explain our data and make further predictions is known as a(n)
A. idea.
B. scientific method.
C. theory.
D. hypothesis.

53.	3. Martin believes that the length of	of a person's foot is directly correlated with his or h	ner intelligence
	level. To test his, he	should follow the steps of the scientific method.	
	A. hypothesis		
	B. theory		
	C. paradigm		
	D. reasoning		
54.	4. A is an integrated se	et of ideas that helps to explain, and a	is a set of
	specific assumptions that can be	e tested to determine their accuracy.	
	A. theory; hypothesis		
	B. generalization; theory		
	C. hypothesis; theory		
	D. theory; generalization		
55.	5. Roberta is 45 years old and has	s always had a hard time speaking her opinion. A	psychoanalytic
	psychologist would explain that s	she has developed this way because	
	A. her parents would not listen to	o or value her opinion when she was a child.	
	B. she has yet to articulate her o	own set of beliefs and therefore could not have an	opinion.
	C. through a series of rewards a	and punishments, she has learned not to speak he	er opinion.
	•	gness and love is interfering with her ability to opp	•

56.	The theory that was created by Erik Erikson is known as the theory of development.
	A. psychobiological
	B. psychoeducational
	C. psychosocial
	D. psychoanatomical
57.	One of the differences between Sigmund Freud and Erik Erikson is that
	A. Erik Erikson saw that development occurred throughout the life span.
	B. Erik Erikson believed that development lasted only until the age of 10.
	C. Erik Erikson built his theory from his own philosophy and not from case studies.
	D. Erik Erikson said that sexuality played a key role in the life-span development of the individual.
58.	As defined by Erik Erikson, a is not a catastrophe but a turning point of increased
	vulnerability and potential.
	A communication
	A. complex
	B. conflict
	C. calamity
	D. crisis
59.	The first stage in Erickson's theory is
	A. trust versus mistrust.
	B. naïveté versus cynicism.
	C. belief versus unbelief.
	D. kindness versus callousness.

- 60. Marie-Ann is 6 months old. When her mother hears her cries of hunger, she comes and feeds her; and when Marie-Ann is uncomfortable, her mother comes and moves her around until she is comfortable. Through these actions, Marie-Ann is learning that the world is a good place. What stage of psychosocial development is Marie-Ann currently in?
 - A. initiative versus guilt
 - B. independence versus dependence
 - C. trust versus mistrust
 - D. hope versus despair
- 61. The second stage of Erik Erikson's psychosocial development theory is
 - A. independence versus dependence.
 - B. autonomy versus shame and doubt.
 - C. initiative versus guilt and shame.
 - D. creativity versus unproductiveness.
- 62. Julia is currently 2 years old. She is learning how to talk, and her parents would say that her favorite word is "no." This would be considered normal for a child in Erik Erikson's stage of
 - A. initiative versus guilt.
 - B. freedom versus servitude.
 - C. autonomy versus shame and doubt.
 - D. individuality versus identification.

	phase of a preschooler?
	A. trust versus mistrust
	B. initiative versus guilt
	C. industry versus inferiority
	D. identity versus identity confusion
64.	The stage of industry versus inferiority in Erik Erikson's developmental theory occurs
	approximately during which period?
	A. preschool
	B. elementary school
	C. junior high school
	D. high school
65.	"Students at this age are full of surprises," comments the high school teacher. "They come in looking and acting like punk rockers one day, then like nuns and monks the next!" Erik Erikson would say these students are
	A. acting out repressed conflicts.
	B. actively exploring different roles.
	C. trying to evaluate the usefulness of their lives.
	D. trying to establish intimate relationships with others.

63. Which of the following of Erik Erikson's stages would most accurately describe the developmental

66.	George thinks he has a good life. He just graduated from college, has many close friends, and is
	engaged to be married. According to Erik Erikson's theory, George would be developing a sense
	of
	A. generativity.
	B. intimacy.
	C. humility.
	D. importance.
67.	The main concern of Erik Erikson's stage of generativity versus stagnation is to
	A. help the younger generation to develop and lead useful lives.
	B. to keep improving oneself.
	C. to develop healthy ego boundaries.
	D. to make one feel secure in her or his job.
68.	Ahkilia is bitter and resentful. She looks back on her life and realizes that she has made many
	mistakes and was too fearful to reach her goals. At 82 years old, she knows it is too late to make
	any significant changes. Ahkilia is living in
	A. inferiority.
	B. shame.
	C. despair.
	D. guilt.

	A. all of perspectives include child, adolescent, and adult developmental stages.
	B. family relationships are a central aspect of development.
	C. early experiences play an important role in development.
	D. the unconscious mind is a powerful influence on child development.
70.	Dr. Wong is a cognitive theorist, so we know that he will stress the importance of for understanding development.
	A. conscious thoughts
	B. repressed memories
	C. reciprocal interactions
	D. the effects of genes and evolution on the development of intelligence
71.	Ling-Chi is trying to make sense of her world. The two processes she uses to do this are
	and
	A. assimilation; organization
	B. adaptation; cognition
	C. memory; accommodation
	D. organization; adaptation

69. All of the following are contributions of the psychoanalytic perspective, EXCEPT

	A. quantitatively the same as the previous stage.
	B. qualitatively the same as the previous stage.
	C. quantitatively different from the previous stage.
	D. qualitatively different from the previous stage.
73.	In this stage of Piagetian development, infants learn about their environment by coordinating their
	sensory experiences with their motor activity.
	A. preoperational
	B. sensorimotor
	C. premotor
	D. sensoriphysical
74.	Children in the preoperational stage of development lack the ability to
	A. perform operations (internalized mental actions).
	B. understand the symbolic nature of speech.
	C. distinguish between self and others.
	D. coordinate their sensory experiences and their physical actions.

72. According to Jean Piaget, each stage is

75.	Hidalgo is very good at simple addition and subtraction, but he has a hard time understanding the
	abstract algebraic problems that his sister does in high school. Hidalgo is currently in which of
	Jean Piaget's stages of development?
	A. preoperational
	B. concrete operational
	C. formal operational
	D. conceptual operational
76.	According to Jean Piaget, this stage is marked by the development of logical, organized
	reasoning skills.
	A. preoperational
	B. concrete operational
	C. formal operational
	D. conceptual operational
77.	Gustav spends a lot of time thinking about the world as it is now and as it could be if everyone
	took more personal responsibility for environmental and social conditions. Jean Piaget would say
	that Gustav is probably in the stage of development.
	A. sensorimotor
	B. preoperational
	C. concrete operational
	D. formal operational

78.	Whereas Jean Piaget emphasized the biological processes of cognitive development, Lev
	Vygotsky emphasized the effects of on development.
	A. social interaction and culture
	B. learned behaviors
	C. the unconscious
	D. operations (internalized mental actions)
79.	The structure of Miss Darby's elementary classroom in New York City is based on sociocultural
	theory. Her classroom would likely be characterized by all of the following, EXCEPT
	A. she has the children work at their own pace.
	B. she has children work in groups to solve problems.
	C. she spends a great deal of time working with individual children.
	D. she is teaching students to use the computer and the Internet.
80.	The information-processing approach to development is concerned mainly with
	A. the influence of culture on development.
	B. the manipulation, monitoring, and strategizing of information.
	C. the influence of age on learning.
	D. the influence of biology and evolution on an individual's development.

- 81. Which of the following is NOT one of the contributions of the cognitive theories?
 - A. They emphasize the individual's active construction of understanding.
 - B. They examine the importance of developments in children's thinking.
 - C. They separate thought into clear pieces.
 - D. They give detailed descriptions of cognitive processes.
- 82. Which of the following statements reflects a criticism of cognitive theories?
 - A. Piaget underestimated the cognitive skills of infants and overestimated the cognitive skills of adolescents.
 - B. The theoretical precepts of the cognitive developmental theory and the sociocultural theory are virtually identical.
 - C. Psychoanalytic theorists argue that the cognitive theories do not give enough credit to conscious thought.
 - D. Piaget overestimated the cognitive skills of school-age children and underestimated the cognitive skill of adolescents.
- 83. When studying development, behavioral theorists believe that only behavior must be observed because it
 - A. allows inferences about underlying cognitive processes.
 - B. is the only direct and measurable indication we have of development.
 - C. allows us to better understand the biology that causes our development.
 - D. indicates the way in which we have resolved prior crises during development.

	A. behavior
	B. conscious motives
	C. the "black box"
	D. intelligence
85.	Nellie bangs her head against the wall repeatedly throughout the day. B. F. Skinner would say that the BEST way to solve this problem is to
	A. explore experiences from Nellie's early childhood and see how they have affected her current behavior.
	B. interview Nellie to determine her current level of cognitive functioning.
	C. determine how Nellie's expectations about success have led her to develop this behavior.
	D. reward Nellie when she does not bang her head, and punish the head-banging behavior.
86.	Jasmine sees a student in her class raise his hand to ask a question. The teacher sharply criticizes him for asking such a "ridiculous" question. According to Albert Bandura, Jasmine will most likely respond to this event by
	A. continuing to ask questions in class.B. not asking questions even if she wants to.C. ridiculing the teacher.D. ignoring the criticized student.

84. According to behaviorists, what is the correct entity that should be included in research?

87.	Michelle yells at Sally. Sally hits Michelle. Michelle thinks about how big Sally is and says, "Let's
	not fight anymore." Sally says, "Okay," and they go off to ride their bikes in the park. This
	sequence is an example of:
	A. formal operational thinking.
	B. learning through observation and imitation.
	C. imprinting during critical periods of development.
	D. reciprocal influences of behavior, cognition, and environment.
88.	Which of the following is a criticism of behavioral theory?
	A. It is too scientific.
	B. It is not empirically supported.
	C. It places too much emphasis on the environment.
	D. It places too much emphasis on personal factors.
89.	A recent television news report concluded that, from birth, boys are more aggressive than are
	girls. You agree with this because you believe aggression is an evolutionary trait passed on
	through the generations, because males needed to be more aggressive to aid the survival of the
	species. Your view reflects the perspective of development.
	A othological
	A. ethological
	B. ecological
	C. eclectic
	D. exological

90.	In ethological theory, the term is defined as innate learning within a short period of
	time that involves a newborn's becoming attached to the first moving thing the newborn sees.
	A. impressing
	B. imprinting
	C. imparting
	D. immobilizing
	D. IIIIIIODIIIZIIIg
91.	John Bowlby's work in attachment showed that an infant's attachment to a caregiver has
	important influence over the life span. According to John Bowlby, attachment should take place
	A. within the first 2 years.
	B. immediately after birth.
	C. over the first 6 months.
	D. over the first year.
92.	"Development is best thought of as being strongly influenced by the environment, especially the
	various social and cultural contexts with which one interacts. To understand development,
	psychologists must analyze an individual's interactions within and between these different
	contexts." This statement would MOST likely come from
	A Joan Diagot
	A. Jean Piaget.
	B. Konrad Lorenz.
	C. B. F. Skinner.
	D. Urie Bronfenbrenner.

93.	Mary's parents fight quite often over money. In an attempt to stop the fighting and to save the
	family money, Mary decides that she will not ask for anything for her birthday or any holiday.
	Mary's actions are being expressed in which of Urie Bronfenbrenner's systems?
	A. mesosystem
	B. microsystem
	C. macrosystem
	·
	D. mexosystem
94.	According to Urie Bronfenbrenner, this aspect of the environment refers to the person's
	immediate environment.
	A. microsystem
	B. mesosytem
	C. chronosystem
	D. macrosystem
0.E	According to Urio Pronforbronner, this contaxtual environment consists of the everall laws
95.	According to Urie Bronfenbrenner, this contextual environment consists of the overall laws, customs, and values of a culture.
	customs, and values of a culture.
	A. microsystem
	B. mesosystem
	C. macrosystem
	D. chronosystem

96.	A criticism of ecological theory is that it underemphasizes and
	A. biology; cognitive influences
	B. connections between environmental settings; cognitive processes
	C. cognition; critical periods
	D. modeling; consequences of behavior
97.	An eclectic theory of development assumes that
	A. development is a dynamic and variable process.
	B. no single theory can account for all of human development.
	C. the different developmental theories are all correct and complete within their own contexts.
	D. the more contemporary theories are more accurate than those created before 1950.
98.	These theorists suggested that behavior is learned in the environment either through paired
	associations, punishments and reinforcements, or modeling.
	A. Ivan Pavlov, B. F. Skinner, Albert Bandura
	B. Sigmund Freud, Erik Erikson
	C. John Bowlby, Konrad Lorenz
	D. Jean Piaget, Lev Vygotsky

99.	Felipe is curious about the tipping behavior of patrons at a local restaurant. Occasionally, he sits
	in the restaurant and watches some of the people around him. He is not able to observe all of the
	tables in the place, so he formulates his opinions about tipping behavior by the few patrons he
	can see. What is wrong with Felipe's research?

- A. It is not random.
- B. It is not correlative.
- C. It is not systematic.
- D. It is not ethical.
- 100.Laboratory observations can be less effective than naturalistic observations because laboratory observations
 - A. require unnatural environments.
 - B. do not entail the use of the scientific method.
 - C. present ethical dilemmas.
 - D. do not allow for researcher interaction.
- 101.Dr. Baird collects data on approach behaviors between strangers at the mall on weekend afternoons. A strength of this naturalistic observational approach is that it
 - A. occurs in a real-world setting.
 - B. involves a structured set of interview questions.
 - C. allows for more control over the observational setting.
 - D. gives Dr. Baird the best idea of how people behave under stress.

102.Which of the following is the quickest way to gain information from a large amount of people?
A. experiment
B. survey
C. test
D. observation
103.Which of the following is a weakness of the survey method of research?
A. It uses open- and closed-ended questions.
B. They have the ability to sample a large number of people.
C. They are used for a wide number of topics.
D. People are more likely to answer with the view toward social desirability.
104.Most students take the ACT or the SAT before they enter college. These tests are examples of
measures.
A. case study
B. naturalistic
C. physiological
D. standardized
105.Which of the following is NOT a criticism of standardized tests?
A. They do not always predict nontest behaviors.
B. They are administered the same way to everybody.
C. They are racially and culturally biased.
D. They are based on the belief that behavior is stable.

106.Which of the following research methods looks at one person in depth and generally over a long period of time?
A. interview
B. survey
C. case study
D. experiment
107.Studies show that there is a positive correlation between the number of cute names (e.g., "Snookums" and "Pookie") couples have for each other and their self-reported feelings of love. This research tells me that

- A. if I give my sweetheart more cute names, it will cause my sweetheart to love me more.
- B. if I give my sweetheart more cute names, it will cause my sweetheart to love me less.
- C. if my sweetheart has a lot of cute names for me, my sweetheart also tells researchers that he/she loves me a lot.
- D. if my sweetheart has a lot of cute names for me, my sweetheart tells researchers that he/she does not love me very much.

108. Which of the following statements is true?

- A. Correlation equals causation.
- B. Correlation does not equal causation.
- C. Correlation sometimes equals causation.
- D. Correlation is one kind of causation.

	A. control group
	B. experimental group
	C. dependent group
	D. independent group
110	O.In an experiment, the researcher manipulates the variable and measures its effects
	on the variable.
	A. dependent; independent
	B. independent; dependent
	C. operational; dependent
	D. independent; operational
111	1.In an experimental design, the dependent variable
	A. can change only in response to a change in the independent variable.
	B. can change on its own without change to the independent variable.
	C. can change the way in which the independent variable changes.
	D. can change the independent variable.
112	2.Which of the following methods is the best method to determine cause and effect?
	A. naturalistic observation in the "everyday world"
	B. naturalistic observation in the laboratory
	C. experimental method
	D. correlational method

109.In an experimental study, this group receives the treatment (independent variable).

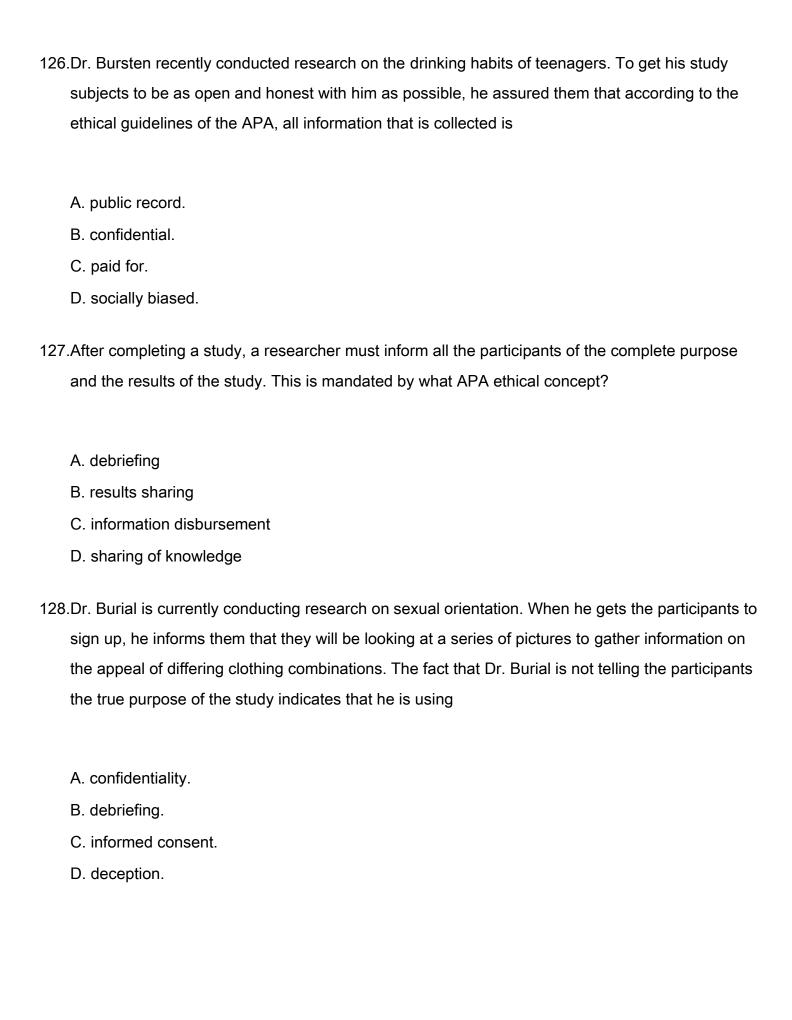

113. The difference between a control group and an experimental group is that the
A. control group lacks the independent variable.
B. control group is nothing like the experimental group.
C. experimental group is dependent on the control group.
D. control group is not dependent on the experimental group.
114.A researcher is interested in the effect of exercise on stamina in elderly patients. The patients are
randomly assigned to be in a high-exercise or low-exercise training program for 8 weeks. At the
end of the program, their stamina is measured by seeing how long they can walk comfortably on
a treadmill. In this study, the dependent variable is
A. number of minutes on the treadmill.
B. the exercise program (high versus low).
C. heart rate during the exercise program.
D. the 8-week duration of the exercise program.
115.Professor Offord wants to assign subjects to experimental groups in such a way that each
subject has an equal chance of being in any group. The best way to assign subjects is
A. subjectively.
B. randomly.
C. systematically.
D. independently.

116.I	n a cross-sectional study, individuals of age groups are compared at one time.
A	A. different
E	3. similar
(C. odd-numbered
[D. even-numbered
117.7	Fravis has designed a study to compare the muscle coordination of 60-year-olds, 70-year-olds,
a	and 80-year-olds. What research design did he use?
A	A. longitudinal study
E	3. cross-sectional study
(C. sequential study
[D. cohort study
118.7	The longitudinal method of research consists of
A	A. studying the same individuals over a long period of time.
E	3. an experimental variable with long-standing effects.
(C. a dependent variable that takes a long time to manifest.
[D. a snapshot of functioning at one point in time.
119.\	Which of the following is NOT a drawback to longitudinal research?
Å	A. subject dropout
E	3. stability over time
(C. cost-effectiveness
[D. subject bias

120.To chart the development of intelligence over the life span, researchers spent 1 year testing the
intelligence of individuals ranging in age period from childhood to old age. Which approach to the
time span of inquiry would they be taking?
A. cross-sectional
B. longitudinal
C. sequential
D. cohort
121.A(n) is a group of people who are born at a similar time in history and share similar experiences.
A. independent group
B. dependent group
C. cohort group
D. experimental group
122.If you studied the attitudes of elderly people today, you might find that most believe it is better for women to stay at home than to work. This is their attitude, probably because these people grew up during the early and middle part of the twentieth century rather than because they are elderly per se. This is an example of a(n) effect.
A. etic
B. emic
C. cohort
D. correlational

,	A. be mistaken for age effects.
I	B. cause an experimenter to influence the results of an experiment.
(C. bias results when subjects are not randomly assigned to conditions.
I	D. be taken for true findings, even though they do not exist.
124 ⁻	The American Psychological Association (APA) has developed a code of ethics governing
	research procedures. The guidelines address all of the following issues, EXCEPT
•	
,	A. debriefing.
ļ	B. manipulation.
(C. informed consent.
I	D. confidentiality.
125.	Informed consent in research contains all of the following, EXCEPT
,	A. risks.
I	B. right to withdraw.
(C. detailed hypothesis.
I	D. description of what is involved.

123.It is important to be aware of the concept of cohort effects because cohort effects can

129.Professor Clifton has designed an experiment to study the effects of caffeine on memory.
However, she has informed her participants that she is investigating the taste preferences of
caffeine drinks. Professor Clifton has
A. used deception, but this is ethically acceptable if it does not harm the participants.
B. used deception, but this is ethically acceptable as long as the participants are over the age of 18 years.
C. lied to participants which is considered ethically unacceptable.
D. distorted the truth, but this is ethically acceptable because she will gather information about
their taste preferences.
400 Ti. II
130. This theorist proposed that development occurred in the following sequence: oral stage, anal
stage, phallic stage, latent stage, and genital stage.
131. This theorist emphasized the need for a child/adult to have his or her social needs to be met in
his or her environment. His/her theory suggested that a psychosocial crisis had to be resolved at
various stages of development.

132. This theorist believed that cognitive development proceeded in a series of qualitatively unique
stages that were universal.
133. This cognitive theorist focused on the role of culture in the development of mind and thinking.
134. This theorist developed the theory of operant conditioning.

135. This theorist demonstrated that people could learn by observing the rewards and punishments
that other people receive.
136. This theorist used evolutionary principles to account for the presence of human social behaviors.
137. This theorist created an ecological systems model of human development. This model suggests
that the environment influences the developing person within a series of nested systems.

138.The capacity for change in either children or adults.
139.A setting in which development occurs, such as a school or neighborhood.
140.A way in which a context influences development that is characterized by events that are similar for individuals in a particular age group.

141.A way in which a context influences development that is characterized by events that are common to people of a particular generation because of historical circumstances.
142.A way in which a context influences development that is characterized by unusual occurrences that have a major impact on an individual's life.
143.This sociocultural context consists of the behavior patterns, beliefs, and all other products of a particular group of people that are passed on from generation to generation.

144.Studies that compare aspects of two or more cultures.
145.A person's position within society based on occupational, educational, and economic
characteristics.
146.A government's course of action designed to promote the welfare of its citizens.

147.The developmental period from conception to birth.
148.The developmental period from birth to about 2 years.
149.The developmental period of transition from childhood to early adulthood characterized by rapic physical changes and the development of primary and secondary sexual characteristics.

150. The developmental period from about 40 years to about 60 years. It is generally characterized by
concern for the next generation and reaching career goals.
151.A way of measuring age that is defined as the number of years that have elapsed since birth.
152.A way of conceptualizing age by which age is characterized by physical health and the functional
capacities of a person's vital organs.

153.A way of conceptualizing age in which an individual's adaptive capacities compared to other
individuals of the same chronological age.
154. The issue or controversy over whether development is influenced by biology or environment.
155.The developmental issue (controversy) over whether development is quantitative (fluid) or
qualitative (stagelike).

156.An interrelated coherent set of ideas that helps to explain behavior and make predictions.
157.According to Jean Piaget, this is the stage of cognitive development when children are between the ages of birth and 2 years old. Infants/children at this age "think" by coordinating sensory experiences with physical and motor actions.
158.According to Jean Piaget, this is the stage of cognitive development when children are between the ages of about 7 to 11 years old. Children at this age think with logic.

159.According to Jean Piaget, this is the stage of cognitive development during adolescence and
continues into adulthood; abstract thinking is now possible.
160.A cognitive theory that uses the computer as an analogy to explain the workings of the mind.
161.A theoretical perspective that maintains that we can study scientifically only what can be directly
observed and measured.

162.Learning that results from experiencing one's own reinforcements and punishments in the
environment.
163.A method of gathering data where one person (usually someone unique such as a serial killer or
a genius) is studied extensively.
164 A receased design that allows one to describe the strongth of relationship between two variables
164.A research design that allows one to describe the strength of relationship between two variables however, cause and effect cannot be determined.
nowever, cause and effect cannot be determined.

165.A research design that allows one to confidently make statements regarding cause and effect
166.A developmental design where people of different ages are studied at the same time.
167.A developmental design where the same people are studied over time.

168.A group of people born in a specified, limited span of years (e.g., the 1960s) who experien	се
historical and cultural events at similar points during their lifespan.	
169.List five of the seven characteristics of the life-span perspective discussed by Paul Baltes.	
170 Printly define higherical processes, cognitive processes, and accidemational processes	
170.Briefly define biological processes, cognitive processes, and socioemotional processes.	

171.List the eight life-span developmental periods (in chronological order).
172.Identify and describe the three ways that age has been conceptualized by life-span researchers
173.List (in order) the five stages of psychosexual development that were proposed by Sigmund Freud.

174.List (in order) the eight stages of psychosocial development that were proposed by Erik Erikson
175.Name the four stages of cognitive development that were proposed by Jean Piaget, and list the key features of the thinking process associated with each.
176.List (in order) the five environmental systems in ecological theory that were proposed by Urie Bronfenbrenner. Provide a short definition/description of each system.

177.Explain the goals of descriptive, correlational, and experimental research.
178.List seven ways of collecting information when one conducts descriptive research.
179.List the four primary ethical guidelines that the APA has developed for researchers, and briefly define/describe each of these guidelines.

180.Describe how the traditional approach to development differs from the life-span approach.
181.In additional to chronological age, list and briefly describe the three other ways that "age" has been conceptualized.
182.Briefly discuss the nature–nurture controversy.

183.Briefly discuss the continuity–discontinuity controversy.
184.Define theory and hypothesis. Describe the relationship between the two.
185.Compare and contrast behaviorism and social cognitive theory (describe the similarities and the differences between the two approaches).

186.Explain ethology and the concept of critical periods.
187.Explain the eclectic theoretical orientation.
188.Briefly explain the independent variable and the dependent variable in an experiment. Describe the relationship between them.

Chapter 1 Key

1. (p. 2)	Development is BEST defined as a pattern of growth that	
	A. begins at birth and continues throughout childhood.	
	B. begins at conception and continues until the person is fully grown.	
	C. begins at birth and ends when the person begins to decline due to age.	
	<u>D.</u> begins at conception and continues throughout the human life span.	
		Level: Knowledg
		Santrock - Chapter 01 #
2. (p. 3)	Development includes	
	A. stability and growth.	
	B. growth and decline.	
	C. stability and decline.	
	D. growth and change.	
		Level: Knowledg

Santrock - Chapter 01 #2

- 3. Two developmental psychologists are having a conversation. One believes in the traditional
- view of developmental change; the other believes in the life-span view. Most likely, they would DISAGREE about
 - A. the scientific methods used to study development.
 - B. whether the tabula rasa or innate goodness positions were correct.
 - <u>C.</u> whether most developmental change occurs in infancy and early childhood or in later phases of development.
 - D. whether the earlier theorists, such as Freud and Jung, were correct or whether the later theorists such as Piaget and Skinner were correct.

Level: Conceptual
Santrock - Chapter 01 #3

- 4. The traditional and life-span perspectives are contrasting views of developmental change.
- (p. 3) According to the life-span perspective, when do developmental changes occur?
 - A. during infancy and early childhood
 - B. during adolescence and early adulthood
 - C. during middle and late adulthood
 - $\underline{\textbf{D.}}$ throughout the entire life cycle

Level: Knowledge Santrock - Chapter 01 #4

(p. 3)	
	A. developmental changes occur in the child and adolescent years of life.
	B. the most important developmental changes occur during the first 10 years of life.
	<u>C.</u> developmental changes occur in the early, middle, and late years of life.
	D. the most important developmental changes occur in the middle of life.
	Level: Knowledge Santrock - Chapter 01 #
6. (p. 3)	What does the traditional view of human development state about developmental change in adulthood?
	A. There are few or no changes that occur during adulthood.
	B. There are extreme changes that occur during adulthood.
	C. There are constant changes that occur during adulthood.
	D. There are more changes in earlier adulthood than in later adulthood.
	Level: Knowledge Santrock - Chapter 01 #6
7.	On your first day of class, the Professor Red-Elk claims that for too long we have focused on
(p. 3)	the development of only young children. She argues that the development of adults and
	elderly people is just as important. This professor is articulating a view.
	A. contemporary
	B. tabula rasa
	C. traditional
	<u>D.</u> life-span

5.

A life-span theorist believes that

3. (p. 3)	Life expectancy increased during the 20th century because of improvements in	
	A. sanitation.	
	B. nutrition.	
	C. medicine.	
	<u>D.</u> all of these.	
	Level: Knov Santrock - Chapter	
9. (p. 3)	Life expectancy refers to	
	A. the average number of years a person can expect to live.	
	B. the maximum number of years a species can live.	
	C. the number of years lived by most people.	
	D. the oldest age of any person in recorded history.	
	Level: Knov Santrock - Chapter	
10. (p. 4)	The idea that no age period dominates development highlights the life-span perspective the development is	at
	A. plastic.	
	B. contextual.	
	C. multidimensional.	
	<u>D.</u> lifelong.	
	Level: Cond	eptua

11.	Dr. Tepper-Harmon believes that life-span development cannot be studied without considering
W)	biological, socioemotional, and cognitive dimensions. Dr. Tepper-Harmon believes that development is
	A. lifelong.
	B. multidirectional.
	C. multidimensional.
	D. plastic.
	Level: Applie Santrock - Chapter 01 #1
12.	Many older adults become wiser by being able to call on experience, yet they perform poorly
(p. 4)	on cognitive speed tests. This can be explained by which of the following life-span
	characteristics?
	A. plasticity
	B. contextualism
	C. multidimensionality
	<u>D.</u> multidirectionality
	Level: Conceptua
	Santrock - Chapter 01 #1

13.	Tzu-Chiang is 55 years old, is currently "going back to college," and is enrolled in a college
(p. 5)	algebra course. Tzu-Chiang is surprised that he is performing well in the course despite not
	having a formal math class for over 30 years. Researchers would not be surprised by his
	performance because it has been shown that development is
	A. plastic.
	B. multidimensional.
	C. lifelong.
	D. contextual.
	Level: Appliea
	Santrock - Chapter 01 #13
14.	Researchers from many disciplines study human development in an effort to better understand
(p. 5)	how humans develop. This makes human development a field of study.
	A. multidirectional
	B. cultural
	C. multidisciplinary
	D. multidimensional
	D. Multidimensional
	Level: Conceptual
	Santrock - Chapter 01 #14

15.	By age 50, many people need reading glasses or bifocals to improve their vision. This
(p. 5)	physiological change is a good example of a
	A. nonnormative life event.
	B. multidirectional influence on development.
	C. normative age-graded influence on development.
	D. nonnormative age-graded influence on development.
	Level: Conceptual
	Santrock - Chapter 01 #15
16. (p. 5)	Tyler is 5 years old and has just entered kindergarten. This is an example of
	A. a nonnormative influence on development.
	B. a normative history-graded influence on development.
	C. a normative age-graded influence on development.
	D. a nonnormative age-graded influence on development.
	Level: Appliea Santrock - Chapter 01 #16
17.	People today are waiting longer to marry and raise children. In the 1950s, it was more
(p. 5)	common for people to marry and start a family before they were 20 years old. This difference
	is an example of a
	A. normative age-graded influence on development.
	B. normative history-graded influence on development.
	C. multidimensional change in the context of development.
	D. nonnormative life event that has changed across development.

18.	Levi was in New York on the day that the World Trade Center was destroyed by terro	orists. He
(p. 5)	is now afraid to fly. This is an example of how a event can influence a pe	rson's
	development.	
	A. normative history-graded	
	B. normative age-graded	
	C. normative life	
	D. nonnormative stressful	
	Santrock -	Level: Appliea Chapter 01 #18
19.	When she was a teenager, two members of Anna's family were killed by a tornado.	Nore than
(p. 6)	30 years later, she is still terrified by storms. This is an example of how a(n)	event
	can influence a person's development.	
	A. age-graded	
	B. normative-graded	
	C. nonnormative life	
	D. normative history-graded	
		Level: Appliea
	Santrock -	Chapter 01 #19

20.	20. Paul Baltes claimed that nonnormative life events could provide an important context for		
(p. 6)	span development. With this concept, the term "nonnormative" refers to an	event that	
	A. is not likely to happen to very many people.		
	B. happens to younger children but not to older adults.		
	C. used to happen to everyone but no longer occurs very much today.		
	D. happens to almost everyone regardless of when or where they live.		
		Level: Conceptua Santrock - Chapter 01 #20	
21. (p. 6)	Aimee is now 83 years old. Much of her future development will focus on	and	
	A. growth; maintenance		
	B. maintenance; regulation of loss		
	C. regulation of loss; change		
	D. growth; regulation		
		Level: Applied	
		Santrock - Chapter 01 #21	

- 22. Constance is 75 years old and still very active. She gardens, hikes, plays chess, and is learning to play the piano. She exercises daily to stay fit. She loves reading, listening to music, and playing with her grandchildren. Her hearing and eyesight are not what they used to be, and she is not as steady on her feet as when she was younger. She wears a hearing aid, eyeglasses, and sensible shoes to minimize these losses. Researchers would say that Constance is a good example of how development includes
 - A. varying contexts.
 - **B.** growth, maintenance, and regulation of loss.
 - C. plasticity.
 - D. multidisciplinary influences.

Level: Applied Santrock - Chapter 01 #22

- 23. Culture is based on the
- (p. 8)
- A. nationality characteristics, race, religion, and language of a people.
- B. practices of a large number of people living in the same geographic area.
- C. exchange of ideas between groups of people who live in the same location.
- **D.** behaviors, beliefs, and products of a particular group of people.

Level: Knowledge Santrock - Chapter 01 #23

24. (p. 8)	Dr. Widaman is researching the cultural differences in school performance between and American children. He is comparing math scores between two groups of fifth groups is from Japan and the other group is from the United States. Dr. Widaman distribution as a study.	raders. One
	conducting a study.	
	A. longitudinal	
	B. correlational	
	C. cross-cultural	
	D. sequential	
	Santrock	Level: Applied c - Chapter 01 #24
		•
25. (p. 8)	Euro-Americans	

- A. are not an ethnic group in the United States; they are the majority culture.
- B. form an ethnic group in the world but not in the United States.
- C. do not form an ethnic group, because there is a lack of diversity within this group.
- **D.** belong to an ethnic group just like any other ethnic group in the United States or the world.

Level: Conceptual Santrock - Chapter 01 #25

- Hannah and George disagree. Hannah argues that people within an ethnic group all share the same culture. George, by contrast, argues that people of the same ethnic group may or may not share the same culture. Who is right?
 - A. Hannah, because sharing the same culture defines ethnicity.
 - **B.** George, because diversity and differences exist among people within an ethnic group.
 - C. Hannah is correct when referring to ethnic groups within the United States; George is right when referring to ethnic groups in the entire world.
 - D. Hannah is correct when the persons in the ethnic group all share the same socioeconomic status; George is correct when the persons in the ethnic group do not share the same socioeconomic status.

Level: Conceptual Santrock - Chapter 01 #26

27. Ethnicity refers to

(p. 8)

- A. the behavior patterns, beliefs, and all other products of a particular group of people that are passed on from generation to generation.
- B. a person's position within society based on occupational, educational, and economic characteristics.
- C. a controversial classification of people according to real or imagined biological characteristics such as skin color and blood group.
- <u>D.</u> a social status placed on a similar group of people based on their heritage, nationality, race, religion, and language.

Level: Knowledge Santrock - Chapter 01 #27

28. (p. 8)	People with similar occupational, educational, and economic characteristics are said to share the same
	A. ethnic group.
	B. poverty rate.
	C. socioeconomic status.
	D. subculture group.
	Level: Knowledge Santrock - Chapter 01 #28
29 . <i>(p. 9)</i>	Which of the following is an example of social policy?
	A. A volunteer coordinating an after-school program.
	B. A mother disciplining her son.
	C. A government lowering federal taxes.
	D. A college student protesting a tuition increase.
	Level: Conceptual Santrock - Chapter 01 #29
30. (p. 10)	Kyesha is 80 years old and is typical of a growing number of older adults. Kyesha MOST LIKELY lives
	A. with a spouse.
	B. with children.
	<u>C.</u> alone.
	D. in a nursing home.

(p. 10)	
	A. older adults are living longer.
	B. older adults are more likely to be childless.
	C. older adults are less likely to live alone.
	<u>D.</u> older adults are more likely to be married.
	Level: Conceptual Santrock - Chapter 01 #31
32 . <i>(p. 10)</i>	The key developmental processes in life-span development include all of the following EXCEPT
	A. cognitive processes.
	B. biological processes.
	C. socioemotional processes.
	<u>D.</u> physical/sensory processes.
	Level: Conceptual Santrock - Chapter 01 #32
33.	Which of the following statements best describes the relationship among biological
(p. 11)	development, cognitive development, and social development?
	A. The three are independent processes.
	B. The three are interdependent processes throughout the life span.
	C. The three are less important aspects to consider than one's culture when studying development.

D. The three differ in their importance at different points in the life cycle with one aspect

coming to the forefront during certain periods while the others play only a minor role.

All of the following trends in older adulthood can be seen in recent decades, EXCEPT

31.

34.	Dante is 2 years old. His mother took him to the doctor and discovered that he had gained 5		
(p. 11)	pounds and had grown 2 inches since his last physical exam. This is an example of the role of		
	processes in development.		
	A. cognitive		
	B. biological		
	C. socioemotional		
	D. physical		
	Level: Appliea		
	Santrock - Chapter 01 #34		
35.	Our relationships with others, changes in emotions, and changes in personality are all		
(p. 11)	examples of processes.		
	A. cognitive		
	B. biological		
	C. socioemotional		
	D. physical		
	Level: Conceptual		
	Santrock - Chapter 01 #35		

36.	Johnathan is almost completely dependent on his parents. He is just learning to recognize	
(p. 11)	things that he wants and how to get them. Johnathan is in the period of development called	
	A. late childhood.	
	B. middle childhood.	
	C. early childhood.	
	D. infancy.	
	Level: Appliea Santrock - Chapter 01 #36	
37.	Joshua spends all of his free time doing homework and studying so that he will get good	
(p. 12)	grades and his parents will be proud of his achievements. Joshua is most likely in the period of	
	development called	
	A. early childhood.	
	B. middle childhood.	
	C. adolescence.	
	D. early adulthood.	
	Level: Appliea	
	Santrock - Chapter 01 #37	

38. (p. 12)	Travis spends a great deal of time working and trying to establish his career. He also has been thinking about how his personal relationship is going and considering whether it could be long term and lead to establishing a family. Travis is most likely in
	A. late adolescence.
	B. early adulthood.
	C. middle adulthood.
	D. late adulthood.
	Level: Applieo Santrock - Chapter 01 #38
39. (p. 12)	The developmental period that runs from approximately 40 years of age to about 60 years of age is
	A. early adulthood.
	B. the nesting years.
	C. middle adulthood.
	D. the crooning years.
	Level: Knowledge
	Santrock - Chapter 01 #39

40.	Jessica spends a lot of time thinking about the choices she has made in her	life and the	
(p. 12)	events she has witnessed. She is adjusting to decreasing strength and health, and she has		
	made several lifestyle changes as a result. Jessica is most likely in		
	A. adolescence.		
	B. early adulthood.		
	C. middle adulthood.		
	<u>D.</u> late adulthood.		
		Level: Applied	
		Santrock - Chapter 01 #4	
41.	Which of the following life-span phases lasts the longest?		
(p. 12)			
	A. middle and late childhood		
	B. adolescence		
	C. middle adulthood		
	<u>D.</u> late adulthood		
		Level: Knowledge	
		Santrock - Chapter 01 #4	
42.	Development in the young-old and old-old is characterized by considerable _	, but	
(p. 13)	development in the oldest-old is characterized by		
	A. cognitive gains; cognitive losses		
	B. functional gains; functional losses		
	C. adaptability; inflexibility		
	<u>D.</u> plasticity; frailty		

43. (p. 13)	The offset of puberty and the offset of meriopause are examples of age.
	A. social
	B. chronological
	C. biological
	D. psychological
	Level: Conceptual Santrock - Chapter 01 #43
44. (p. 14)	Biology is to as environment is to
	A. nature; nurture
	B. nurture; nature
	C. maturation; nature
	D. nature; maturation
	Level: Conceptual Santrock - Chapter 01 #44
45.	Dr. Borthwick-Duffy believes people are primarily influenced by the environment and learned
(p. 14)	experiences, so she believes plays a more powerful role in human development.
	A. nurture
	B. maturation
	C. change
	D. nature

46.	Tingfeng We was a victim of child abuse as a young boy, but he did not grow up to become an
(p. 15)	abuser. Instead, he leads a fulfilling family life. This is an example of which characteristic of
	development?
	A. change
	B. stability
	C. maturation
	D. continuity
	D. Continuity
	Level: Conceptual
	Santrock - Chapter 01 #46
47.	Winnonna was found to have childhood depression; she goes on to have depression for the
(p. 16)	rest of her adult life. This is an example of which characteristic of development?
	A shange
	A. change
	B. stability
	C. maturation
	D. discontinuity
	Level: Conceptual
	Santrock - Chapter 01 #47
48.	Continuity is to as discontinuity is to
(p. 16)	, <u> </u>
	A. fluid; rigid
	B. gradual; abrupt
	C. maturation; nurture
	D. adulthood; childhood

49. (p. 15)	The concept of discontinuity is characterized by all of the following, EXCEPT	Г
	A. qualitative change.	
	B. quantitative development.	
	C. sequence of stages.	
	D. distinct change.	
		Level: Conceptual Santrock - Chapter 01 #49
50. (p. 16)	Life-span psychologists generally agree that	
	A. continuity correctly characterizes development; discontinuity does not.	
	B. discontinuity correctly characterizes development; continuity does not.	
	C. development cannot be characterized as either continuous or discontinuous	ous.
	<u>D.</u> developmental change can be both continuous and discontinuous.	
		Level: Conceptual Santrock - Chapter 01 #50
51. (p. 16)	Life-span psychologists generally agree that	
	A. stability correctly characterizes development; change does not.	
	B. change correctly characterizes development; stability does not.	
	C. neither stability nor change correctly characterizes development.	
	<u>D.</u> developmental includes both stability and change.	
		Level: Conceptual
		Santrock - Chapter 01 #51

52. (p. 16)	A set of ideas that helps us to explain our data and make further predictions is known as a(n)		
	A. idea.		
	B. scientific method.		
	<u>C.</u> theory.		
	D. hypothesis.		
	Level: Knowledge Santrock - Chapter 01 #52		
53.	Martin believes that the length of a person's foot is directly correlated with his or her		
(p. 16)	intelligence level. To test his, he should follow the steps of the scientific method.		
	A. hypothesis		
	B. theory		
	C. paradigm		
	D. reasoning		
	Level: Appliea		
	Santrock - Chapter 01 #53		
54.	A is an integrated set of ideas that helps to explain, and a is a set of		
(p. 16)	specific assumptions that can be tested to determine their accuracy.		
	A. theory; hypothesis		
	B. generalization; theory		
	C. hypothesis; theory		
	D. theory; generalization		

55.	Roberta is 45 years old and has always had a hard time speaking her opinion. A
(p. 16)	psychoanalytic psychologist would explain that she has developed this way because
	<u>A.</u> her parents would not listen to or value her opinion when she was a child.
	B. she has yet to articulate her own set of beliefs and therefore could not have an opinion.
	C. through a series of rewards and punishments, she has learned not to speak her opinion.
	D. her unmet need for belongingness and love is interfering with her ability to oppose others.
	Level: Applied Santrock - Chapter 01 #55
56.	The theory that was created by Erik Erikson is known as the theory of
(p. 17)	development.
	A. psychobiological
	B. psychoeducational
	C. psychosocial
	D. psychoanatomical
	Level: Knowledge
	Santrock - Chapter 01 #56
57. (p. 17)	One of the differences between Sigmund Freud and Erik Erikson is that
	A. Erik Erikson saw that development occurred throughout the life span.
	B. Erik Erikson believed that development lasted only until the age of 10.
	C. Erik Erikson built his theory from his own philosophy and not from case studies.
	D. Erik Erikson said that sexuality played a key role in the life-span development of the
	individual.

58.	As defined by Erik Erikson, a	_ is not a catastrophe but a turning point of increased
(p. 17)	vulnerability and potential.	
	A. complex	
	B. conflict	
	C. calamity	
	<u>D.</u> crisis	
		Level: Knowledge
		Santrock - Chapter 01 #58
59.	The first stage in Erickson's theory is	
	A. trust versus mistrust.	
	B. naïveté versus cynicism.	
	C. belief versus unbelief.	
	D. kindness versus callousness.	
		Level: Knowledge Santrock - Chapter 01 #59
60.	Marie-Ann is 6 months old. When her m	other hears her cries of hunger, she comes and feeds
(p. 18)	her; and when Marie-Ann is uncomforta	ble, her mother comes and moves her around until she
	is comfortable. Through these actions, N	Marie-Ann is learning that the world is a good place.
	What stage of psychosocial development	nt is Marie-Ann currently in?
	A. initiative versus guilt	
	B. independence versus dependence	
	C. trust versus mistrust	
	D. hope versus despair	

61. (p. 18)	The second stage of Erik Erikson's psychosocial development theory is
	A. independence versus dependence.
	B. autonomy versus shame and doubt.
	C. initiative versus guilt and shame.
	D. creativity versus unproductiveness.
	Level: Knowledge Santrock - Chapter 01 #61
62.	Julia is currently 2 years old. She is learning how to talk, and her parents would say that her
(p. 18)	favorite word is "no." This would be considered normal for a child in Erik Erikson's stage of
	A. initiative versus guilt.
	B. freedom versus servitude.
	C. autonomy versus shame and doubt.
	D. individuality versus identification.
	Level: Applied Santrock - Chapter 01 #62
63.	Which of the following of Erik Erikson's stages would most accurately describe the
(p. 18)	developmental phase of a preschooler?
	A. trust versus mistrust
	B. initiative versus guilt
	C. industry versus inferiority
	D. identity versus identity confusion

(p. 18)	approximately during which period?
	A. preschool
	B. elementary school
	C. junior high school
	D. high school
	Level: Knowledge Santrock - Chapter 01 #64
65.	"Students at this age are full of surprises," comments the high school teacher. "They come in
(p. 18)	looking and acting like punk rockers one day, then like nuns and monks the next!" Erik Erikson
	would say these students are
	A. acting out repressed conflicts.
	B. actively exploring different roles.
	C. trying to evaluate the usefulness of their lives.
	D. trying to establish intimate relationships with others.
	Level: Applied Santrock - Chapter 01 #65

The stage of industry versus inferiority in Erik Erikson's developmental theory occurs

64.

66.	George thinks he has a good life. He just graduated from college, has many close friends, and
(p. 18)	is engaged to be married. According to Erik Erikson's theory, George would be developing a
	sense of
	A. generativity.
	B. intimacy.
	C. humility.
	D. importance.
	Level: Applied
	Santrock - Chapter 01 #66
67. (p. 18)	The main concern of Erik Erikson's stage of generativity versus stagnation is to
	A. help the younger generation to develop and lead useful lives.
	B. to keep improving oneself.
	C. to develop healthy ego boundaries.
	D. to make one feel secure in her or his job.
	Level: Knowledge Santrock - Chapter 01 #67
68.	Ahkilia is bitter and resentful. She looks back on her life and realizes that she has made many
(p. 19)	mistakes and was too fearful to reach her goals. At 82 years old, she knows it is too late to
	make any significant changes. Ahkilia is living in
	A. inferiority.
	B. shame.
	<u>C.</u> despair.
	D. guilt.

69.	All of the following are contributions of the psychoanalytic perspective, EXCEPT
(p. 18-19	
	A. all of perspectives include child, adolescent, and adult developmental stages.
	B. family relationships are a central aspect of development.
	C. early experiences play an important role in development.
	D. the unconscious mind is a powerful influence on child development.
	Level: Knowledge Santrock - Chapter 01 #69
70.	Dr. Wong is a cognitive theorist, so we know that he will stress the importance of
(p. 19)	for understanding development.
	A. conscious thoughts
	B. repressed memories
	C. reciprocal interactions
	D. the effects of genes and evolution on the development of intelligence
	Level: Applied Santrock - Chapter 01 #70
71 . <i>(p. 19)</i>	Ling-Chi is trying to make sense of her world. The two processes she uses to do this are and
	A. assimilation; organization
	B. adaptation; cognition
	C. memory; accommodation
	<u>D.</u> organization; adaptation

72 . <i>(p. 19)</i>	According to Jean Piaget, each stage is
	A. quantitatively the same as the previous stage.
	B. qualitatively the same as the previous stage.
	C. quantitatively different from the previous stage.
	<u>D.</u> qualitatively different from the previous stage.
	Level: Knowledge Santrock - Chapter 01 #72
73.	In this stage of Piagetian development, infants learn about their environment by coordinating
(p. 19)	their sensory experiences with their motor activity.
	A. preoperational
	B. sensorimotor
	C. premotor
	D. sensoriphysical
	Level: Knowledge
	Santrock - Chapter 01 #73
74. (p. 19)	Children in the preoperational stage of development lack the ability to
	A. perform operations (internalized mental actions).
	B. understand the symbolic nature of speech.
	C. distinguish between self and others.
	D. coordinate their sensory experiences and their physical actions.
	Local Konstatus

75.	Hidalgo is very good at simple addition and subtraction, but he has a hard tin	ne understanding
(p. 19-20)	the abstract algebraic problems that his sister does in high school. Hidalgo is	currently in
	which of Jean Piaget's stages of development?	
	A. preoperational	
	B. concrete operational	
	C. formal operational	
	D. conceptual operational	
		Level: Appliea
		Santrock - Chapter 01 #75
76	Asserting to Joan Diagot this stage is marked by the development of legical	organizad
76.	According to Jean Piaget, this stage is marked by the development of logical reasoning skills.	, organized
,	reasoning skills.	
	A. preoperational	
	B. concrete operational	
	C. formal operational	
	D. conceptual operational	
		Level: Knowledge Santrock - Chapter 01 #76
		Santrock - Chapter of #70

77.	Gustav spends a lot of time thinking about the world as it is now and as it could be if everyone
(p. 19-20	took more personal responsibility for environmental and social conditions. Jean Piaget would
	say that Gustav is probably in the stage of development.
	A. sensorimotor
	B. preoperational
	C. concrete operational
	<u>D.</u> formal operational
	Loyal: Applica
	Level: Appliea Santrock - Chapter 01 #77
78.	Whereas Jean Piaget emphasized the biological processes of cognitive development, Lev
(p. 20)	Vygotsky emphasized the effects of on development.
	<u>A.</u> social interaction and culture
	B. learned behaviors
	C. the unconscious
	D. operations (internalized mental actions)
	Level: Knowledge Santrock - Chapter 01 #78
	Cantosh Chapter of The

79.	The structure of Miss Darby's elementary classroom in New York City is based on
(p. 20-21	sociocultural theory. Her classroom would likely be characterized by all of the following,
	EXCEPT
	A. she has the children work at their own pace.
	B. she has children work in groups to solve problems.
	C. she spends a great deal of time working with individual children.
	D. she is teaching students to use the computer and the Internet.
	Level: Applied Santrock - Chapter 01 #79
80.	The information-processing approach to development is concerned mainly with
(p. 21)	
	A. the influence of culture on development.
	B. the manipulation, monitoring, and strategizing of information.
	C. the influence of age on learning.
	D. the influence of biology and evolution on an individual's development.
	Level: Knowledge
	Santrock - Chapter 01 #80
01	Which of the following is NOT are of the contributions of the cognitive theories?
81. (p. 19-21	Which of the following is NOT one of the contributions of the cognitive theories?
	A. They emphasize the individual's active construction of understanding.
	B. They examine the importance of developments in children's thinking.
	<u>C.</u> They separate thought into clear pieces.
	D. They give detailed descriptions of cognitive processes.

- 82. Which of the following statements reflects a criticism of cognitive theories?
 - <u>A.</u> Piaget underestimated the cognitive skills of infants and overestimated the cognitive skills of adolescents.
 - B. The theoretical precepts of the cognitive developmental theory and the sociocultural theory are virtually identical.
 - C. Psychoanalytic theorists argue that the cognitive theories do not give enough credit to conscious thought.
 - D. Piaget overestimated the cognitive skills of school-age children and underestimated the cognitive skill of adolescents.

Level: Knowledge Santrock - Chapter 01 #82

- 83. When studying development, behavioral theorists believe that only behavior must be observed because it
 - A. allows inferences about underlying cognitive processes.
 - **B.** is the only direct and measurable indication we have of development.
 - C. allows us to better understand the biology that causes our development.
 - D. indicates the way in which we have resolved prior crises during development.

Level: Conceptual Santrock - Chapter 01 #83

84. (p. 21)	According to behaviorists, what is the correct entity that should be included in research?
	A. behavior
	B. conscious motives
	C. the "black box"
	D. intelligence
	Level: Knowledge Santrock - Chapter 01 #84
85.	Nellie bangs her head against the wall repeatedly throughout the day. B. F. Skinner would say
(p. 21)	that the BEST way to solve this problem is to
	A. explore experiences from Nellie's early childhood and see how they have affected her current behavior.
	B. interview Nellie to determine her current level of cognitive functioning.
	C. determine how Nellie's expectations about success have led her to develop this behavior.
	<u>D.</u> reward Nellie when she does not bang her head, and punish the head-banging behavior.
	Level: Appliea Santrock - Chapter 01 #85
86.	Jasmine sees a student in her class raise his hand to ask a question. The teacher sharply
(p. 22)	criticizes him for asking such a "ridiculous" question. According to Albert Bandura, Jasmine will
	most likely respond to this event by
	A. continuing to ask questions in class.
	B. not asking questions even if she wants to.
	C. ridiculing the teacher.
	D. ignoring the criticized student.

Level: Knowledge

Santrock - Chapter 01 #88

87. (p. 22)	Michelle yells at Sally. Sally hits Michelle. Michelle thinks about how big Sally is and says, "Let's not fight anymore." Sally says, "Okay," and they go off to ride their bikes in the park. This sequence is an example of:
	A. formal operational thinking.
	B. learning through observation and imitation.
	C. imprinting during critical periods of development.
	<u>D.</u> reciprocal influences of behavior, cognition, and environment.
	Level: Applied Santrock - Chapter 01 #87
88. (p. 22)	Which of the following is a criticism of behavioral theory?

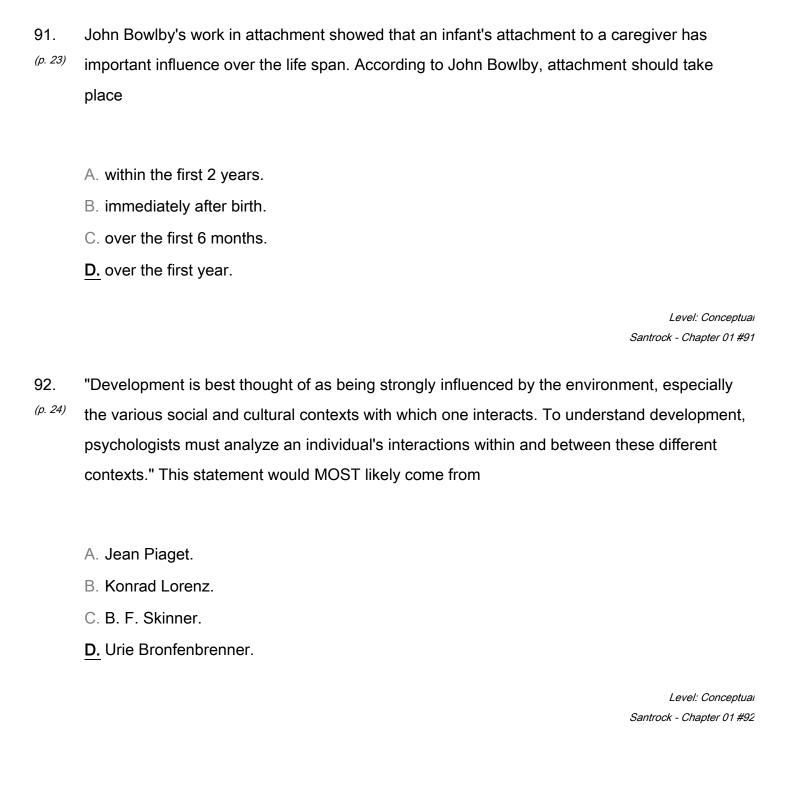

A. It is too scientific.

B. It is not empirically supported.

 $\underline{\textbf{C.}}$ It places too much emphasis on the environment.

D. It places too much emphasis on personal factors.

89.	A recent television news report concluded that, from birth, boys are more aggressive than are
(p. 23)	girls. You agree with this because you believe aggression is an evolutionary trait passed on
	through the generations, because males needed to be more aggressive to aid the survival of
	the species. Your view reflects the perspective of development.
	A. ethological
	B. ecological
	C. eclectic
	D. exological
	Level: Conceptual Santrock - Chapter 01 #89
90.	In ethological theory, the term is defined as innate learning within a short period of
(p. 23)	time that involves a newborn's becoming attached to the first moving thing the newborn sees.
	A. impressing
	B. imprinting
	C. imparting
	D. immobilizing
	Level: Knowledge
	Santrock - Chapter 01 #90

93.	Mary's parents fight quite often over money. In an attempt to stop the fighting and to save the
(p. 24)	family money, Mary decides that she will not ask for anything for her birthday or any holiday.
	Mary's actions are being expressed in which of Urie Bronfenbrenner's systems?
	A. mesosystem
	B. microsystem
	C. macrosystem
	D. mexosystem
	Level: Applieo Santrock - Chapter 01 #93
94. (p. 24)	According to Urie Bronfenbrenner, this aspect of the environment refers to the person's immediate environment.
	A. microsystem
	B. mesosytem
	C. chronosystem
	D. macrosystem
	Level: Knowledge Santrock - Chapter 01 #94
95. (p. 24)	According to Urie Bronfenbrenner, this contextual environment consists of the overall laws, customs, and values of a culture.
	A. microsystem
	B. mesosystem
	C. macrosystem
	D. chronosystem

96. (p. 25)	A criticism of ecological theory is that it underemphasizes and
	A. biology; cognitive influences
	B. connections between environmental settings; cognitive processes
	C. cognition; critical periods
	D. modeling; consequences of behavior
	Level: Conceptua Santrock - Chapter 01 #96
97. (p. 25)	An eclectic theory of development assumes that
	A. development is a dynamic and variable process.
	<u>B.</u> no single theory can account for all of human development.
	C. the different developmental theories are all correct and complete within their own contexts.
	D. the more contemporary theories are more accurate than those created before 1950.
	Level: Knowledge Santrock - Chapter 01 #97
98. (p. 17-25	These theorists suggested that behavior is learned in the environment either through paired associations, punishments and reinforcements, or modeling.
	A. Ivan Pavlov, B. F. Skinner, Albert Bandura
	B. Sigmund Freud, Erik Erikson
	C. John Bowlby, Konrad Lorenz
	D. Jean Piaget, Lev Vygotsky

99. (p. 26)	Felipe is curious about the tipping behavior of patrons at a local restaurant. Occasionally, he sits in the restaurant and watches some of the people around him. He is not able to observe all of the tables in the place, so he formulates his opinions about tipping behavior by the few patrons he can see. What is wrong with Felipe's research?
	A. It is not random.
	B. It is not correlative.
	C. It is not systematic.
	D. It is not ethical.
	Level: Appliea
	Santrock - Chapter 01 #99
100.	Laboratory observations can be less effective than naturalistic observations because
(p. 26)	laboratory observations
	A. require unnatural environments.
	B. do not entail the use of the scientific method.
	C. present ethical dilemmas.
	D. do not allow for researcher interaction.
	Level: Conceptual

Santrock - Chapter 01 #100

101.	Dr. Baird collects data on approach behaviors between strangers at the ma	ll on weekend
(p. 26)	afternoons. A strength of this naturalistic observational approach is that it	
	A. occurs in a real-world setting.	
	B. involves a structured set of interview questions.	
	C. allows for more control over the observational setting.	
	D. gives Dr. Baird the best idea of how people behave under stress.	
		Level: Appliea Santrock - Chapter 01 #101

112. (p. 30)	Which of the following me	ethods is the best method to determi	ne cause and effect?	
	A. naturalistic observatio	n in the "everyday world"		
	B. naturalistic observatio	n in the laboratory		
	<u>C.</u> experimental method			
	D. correlational method			

113. (p. 30)	The difference between a control group and an experimental group is that the
	A. control group lacks the independent variable.
	B. control group is nothing like the experimental group.
	C. experimental group is dependent on the control group.
	D. control group is not dependent on the experimental group.
	Level: Knowledge Santrock - Chapter 01 #113
114.	A researcher is interested in the effect of exercise on stamina in elderly patients. The patients
(p. 30)	are randomly assigned to be in a high-exercise or low-exercise training program for 8 weeks.
	At the end of the program, their stamina is measured by seeing how long they can walk
	comfortably on a treadmill. In this study, the dependent variable is
	A. number of minutes on the treadmill.
	B. the exercise program (high versus low).
	C. heart rate during the exercise program.
	D. the 8-week duration of the exercise program.
	Level: Appliea Santrock - Chapter 01 #114
115.	Professor Offord wants to assign subjects to experimental groups in such a way that each
(p. 30)	subject has an equal chance of being in any group. The best way to assign subjects is
	A. subjectively.
	B. randomly.
	C. systematically.
	D. independently.

116. (p. 31)	In a cross-sectional study, individuals of	age groups are compared at one time.
	A. different	
	B. similar	
	C. odd-numbered	
	D. even-numbered	
		Level: Knowledge Santrock - Chapter 01 #116
117.	Travis has designed a study to compare the muscle	coordination of 60-year-olds, 70-year-
(p. 31)	olds, and 80-year-olds. What research design did he	use?
	A. longitudinal study	
	B. cross-sectional study	
	C. sequential study	
	D. cohort study	
		Level: Applied Santrock - Chapter 01 #117
		Запігоск - Спарієї 01 #117
118. (p. 31)	The longitudinal method of research consists of	
	A. studying the same individuals over a long period of	of time.
	B. an experimental variable with long-standing effect	ts.
	C. a dependent variable that takes a long time to ma	nifest.
	D. a snapshot of functioning at one point in time.	
		Lavali Kanulada

119. (p. 31)	Which of the following is NOT a drawback to longitudinal research?
	A. subject dropout
	B. stability over time
	C. cost-effectiveness
	D. subject bias
	Level: Conceptual Santrock - Chapter 01 #119
120.	To chart the development of intelligence over the life span, researchers spent 1 year testing
(p. 31)	the intelligence of individuals ranging in age period from childhood to old age. Which approach
	to the time span of inquiry would they be taking?
	A. cross-sectional
	B. longitudinal
	C. sequential
	D. cohort
	Level: Conceptual Santrock - Chapter 01 #120
121. (p. 31-32)	A(n) is a group of people who are born at a similar time in history and share similar experiences.
	A. independent group
	B. dependent group
	C. cohort group
	D. experimental group

122.	If you studied the attitudes of elderly people today, you might find that most believe it is better
(p. 31-32)	for women to stay at home than to work. This is their attitude, probably because these people
	grew up during the early and middle part of the twentieth century rather than because they are
	elderly per se. This is an example of a(n) effect.
	A. etic
	B. emic
	C. cohort
	D. correlational
	Level: Conceptua Santrock - Chapter 01 #122
100	
123. <i>(p. 31-32)</i>	It is important to be aware of the concept of cohort effects because cohort effects can
	A. be mistaken for age effects.
	B. cause an experimenter to influence the results of an experiment.
	C. bias results when subjects are not randomly assigned to conditions.
	D. be taken for true findings, even though they do not exist.
	Level: Conceptua
	Santrock - Chapter 01 #123
124.	The American Psychological Association (APA) has developed a code of ethics governing
(p. 32)	research procedures. The guidelines address all of the following issues, EXCEPT
	A. debriefing.
	B. manipulation.
	C. informed consent.
	D. confidentiality.

125. (p. 32)	Informed consent in research contains all of the following, EXCEPT
	A. risks.
	B. right to withdraw.
	C. detailed hypothesis.
	D. description of what is involved.
	Level: Conceptua Santrock - Chapter 01 #125
126.	Dr. Bursten recently conducted research on the drinking habits of teenagers. To get his study
(p. 32)	subjects to be as open and honest with him as possible, he assured them that according to the
	ethical guidelines of the APA, all information that is collected is
	A. public record.
	B. confidential.
	C. paid for.
	D. socially biased.
	Level: Applied Santrock - Chapter 01 #126
127.	After completing a study, a researcher must inform all the participants of the complete purpose
(p. 32)	and the results of the study. This is mandated by what APA ethical concept?
	A. debriefing
	B. results sharing
	C. information disbursement
	D. sharing of knowledge

- Dr. Burial is currently conducting research on sexual orientation. When he gets the participants to sign up, he informs them that they will be looking at a series of pictures to gather information on the appeal of differing clothing combinations. The fact that Dr. Burial is not telling the participants the true purpose of the study indicates that he is using
 - A. confidentiality.
 - B. debriefing.
 - C. informed consent.
 - D. deception.

Level: Appliea
Santrock - Chapter 01 #128

- 129. Professor Clifton has designed an experiment to study the effects of caffeine on memory.
- (p. 32) However, she has informed her participants that she is investigating the taste preferences of caffeine drinks. Professor Clifton has
 - A. used deception, but this is ethically acceptable if it does not harm the participants.
 - B. used deception, but this is ethically acceptable as long as the participants are over the age of 18 years.
 - C. lied to participants which is considered ethically unacceptable.
 - D. distorted the truth, but this is ethically acceptable because she will gather information about their taste preferences.

Level: Appliea

Santrock - Chapter 01 #129

130.	This theorist proposed that development occurred in the following sequence: oral stage, anal
(p. 17)	stage, phallic stage, latent stage, and genital stage.
	Sigmund Freud
	Level: Knowledge
	Santrock - Chapter 01 #130
404	
131. (p. 18)	This theorist emphasized the need for a child/adult to have his or her social needs to be met in
(p0)	his or her environment. His/her theory suggested that a psychosocial crisis had to be resolved
	at various stages of development.
	Erik Erikson
	Level: Knowledge
	Santrock - Chapter 01 #131
132.	This theorist believed that cognitive development proceeded in a series of qualitatively unique
(p. 19)	stages that were universal.
	Jean Piaget
	ocarr raget
	Level: Knowledge Santrock - Chapter 01 #132

133. (p. 20)	This cognitive theorist focused on the role of culture in the development of	mind and thinking.
	Lev Vygotsky	
		Level: Knowledge Santrock - Chapter 01 #133
134. (p. 21)	This theorist developed the theory of operant conditioning.	
	B. F. Skinner	
		Level: Knowledge Santrock - Chapter 01 #134
135. (p. 22)	This theorist demonstrated that people could learn by observing the reward that other people receive.	s and punishments
	Albert Bandura	
		Level: Knowledge Santrock - Chapter 01 #135

136. (p. 23)	This theorist used evolutionary principles to account for the presence of hunbehaviors.	nan social
	John Bowlby	Level: Knowledge
		Santrock - Chapter 01 #136
137.	This theorist created an ecological systems model of human development.	
(μ. 24)	suggests that the environment influences the developing person within a set systems.	ries of nested
	Urie Bronfenbrenner	
		Level: Knowledge Santrock - Chapter 01 #137
138. (p. 4)	The capacity for change in either children or adults.	
	plasticity	
		Level: Knowledge Santrock - Chapter 01 #138

139. (p. 5)	A setting in which development occurs, such as a school or neighborhood.	
	context	
		Level: Knowledge Santrock - Chapter 01 #139
140. (p. 5)	A way in which a context influences development that is characterized by e similar for individuals in a particular age group.	vents that are
	normative age-graded influences	
		Level: Knowledge Santrock - Chapter 01 #140
141. (p. 5)	A way in which a context influences development that is characterized by e common to people of a particular generation because of historical circumsta	
	normative history-graded influences	
	normative meter, graded initiaenese	

142.	A way in which a context influences development that is characterized by unu	usual occurrences
(p. 5)	that have a major impact on an individual's life.	
	nonnormative life events	
		Level: Knowledge
	·	Santrock - Chapter 01 #142
143.	This sociocultural context consists of the behavior patterns, beliefs, and all ot	ther products of a
(p. 8)	particular group of people that are passed on from generation to generation.	
	o ultura	
	culture	
		Level: Knowledge
	·	Santrock - Chapter 01 #143
144.	Studies that compare aspects of two or more cultures.	
(p. 8)		
	cross-cultural studies	
	Cross-cultural studies	
		Level: Knowledge
	·	Santrock - Chapter 01 #144

145. (p. 8)	A person's position within society based on occupational, educational, and characteristics.	economic
	socioeconomic status	
		Level: Knowledge Santrock - Chapter 01 #145
146. (p. 9)	A government's course of action designed to promote the welfare of its citiz	ens.
	social policy	
		Level: Knowledge Santrock - Chapter 01 #146
147. (p. 11)	The developmental period from conception to birth.	
	prenatal period	
		Level: Knowledge Santrock - Chapter 01 #147
148. (p. 11)	The developmental period from birth to about 2 years.	
	infancy	

149.	The developmental period of transition from childhood to early adulthood characterized by
(p. 12)	rapid physical changes and the development of primary and secondary sexual characteristics.
	adolescence
	adolescence
	Level: Knowledge Santrock - Chapter 01 #149
150.	The developmental period from about 40 years to about 60 years. It is generally characterized
(p. 12)	by concern for the next generation and reaching career goals.
	middle adulthood
	Level: Knowledge Santrock - Chapter 01 #150
454	
151. (p. 13)	A way of measuring age that is defined as the number of years that have elapsed since birth.
	chronological age
	Level: Knowledge
	Santrock - Chapter 01 #151

152. (p. 13)	A way of conceptualizing age by which age is characterized by physical heal functional capacities of a person's vital organs.	th and the
	biological age	
		Level: Knowledge Santrock - Chapter 01 #152
153. (p. 13)	A way of conceptualizing age in which an individual's adaptive capacities con individuals of the same chronological age.	mpared to other
	psychological age	
		Level: Knowledge Santrock - Chapter 01 #153
154. (p. 14)	The issue or controversy over whether development is influenced by biology	or environment.
	nature-nurture issue	
		Level: Knowledge Santrock - Chapter 01 #154

155.	The developmental issue (controversy) over whether development is quantitative (fluid) or
(p. 15)	qualitative (stagelike).
	continuity-discontinuity issue
	Level: Knowledg
	Santrock - Chapter 01 #15
156.	An interrelated coherent set of ideas that helps to explain behavior and make predictions.
(p. 16)	
	theory
	Level: Knowledg
	Santrock - Chapter 01 #15
157.	According to Jean Piaget, this is the stage of cognitive development when children are
(p. 19)	between the ages of birth and 2 years old. Infants/children at this age "think" by coordinating
	sensory experiences with physical and motor actions.
	sensorimotor
	Level: Knowledg
	Santrock - Chapter 01 #15

158.	According to Jean Piaget, this is the stage of cognitive development when children are
(p. 19)	between the ages of about 7 to 11 years old. Children at this age think with logic.
	concrete operations
	Laval-Kasudadaa
	Level: Knowledge Santrock - Chapter 01 #158
159.	According to Jean Piaget, this is the stage of cognitive development during adolescence and
(p. 19)	continues into adulthood; abstract thinking is now possible.
	formal operational
	Level: Knowledge
	Santrock - Chapter 01 #159
160.	A cognitive theory that uses the computer as an analogy to explain the workings of the mind.
(p. 21)	
	information processing theory
	Level: Knowledge
	Santrock - Chapter 01 #160

161.	A theoretical perspective that maintains that we can study scientifically only what can be
(p. 21)	directly observed and measured.
	behaviorism
	Deliaviorism
	Level: Knowledge
	Santrock - Chapter 01 #161
162.	Learning that results from experiencing one's own reinforcements and punishments in the
(p. 21)	environment.
	operant conditioning
	Level: Knowledge
	Santrock - Chapter 01 #162
163.	A method of gathering data where one person (usually someone unique such as a serial killer
(p. 27)	or a genius) is studied extensively.
	case study
	Level: Knowledge
	Santrock - Chapter 01 #163

164. (p. 28)	A research design that allows one to describe the strength of relationship between two variables; however, cause and effect cannot be determined.		
	correlational design		
		Level: Knowledge Santrock - Chapter 01 #164	
165. (p. 29-30)	A research design that allows one to confidently make statements regarding	g cause and effect.	
	experimental design		
		Level: Knowledge Santrock - Chapter 01 #165	
166. (p. 31)	A developmental design where people of different ages are studied at the sa	ame time.	
	cross-sectional		
		Level: Knowledge Santrock - Chapter 01 #166	
167. (p. 31)	A developmental design where the same people are studied over time.		
	longitudinal		

168. (p. 31)	A group of people born in a specified, limited span of years (e.g., the 1960s) who experience historical and cultural events at similar points during their lifespan.
	cohort
	Level: Knowledge Santrock - Chapter 01 #168
169. (p. 3-6)	List five of the seven characteristics of the life-span perspective discussed by Paul Baltes.
	Lifelong
	Multidimensional
	Multidirectional
	Plastic
	Multidisciplinary
	Contextual
	Involves growth, maintenance, and regulation
	Development is a co-construction of biology, culture, and the individual.
	Level: Knowledge Santrock - Chapter 01 #169

170. Briefly define biological processes, cognitive processes, and socioemotional processes. *(p. 10-11)*

Biological processes produce changes in an individual's physical nature. Cognitive processes refer to changes in the individual's thought, intelligence, and language. Socioemotional processes involve changes in the individual's relationships with other people, changes in emotions, and changes in personality.

Level: Knowledge Santrock - Chapter 01 #170

171. List the eight life-span developmental periods (in chronological order). (p. 11-13)

prenatal, infancy, early childhood, middle and late childhood, adolescence, early adulthood, middle adulthood, late adulthood

Level: Knowledge
Santrock - Chapter 01 #171

172. Identify and describe the three ways that age has been conceptualized by life-span (p. 13-14) researchers.

Chronological age: the number of years that have elapsed since a person's birth Biological age: a person's age in terms of biological health

Psychological age: an individual's adaptive capacities compared with those of other individuals of the same chronological age.

173. <i>(p. 17)</i>	List (in order) the five stages of psychosexual development that were proposed by Sigmund Freud.
	oral, anal, phallic, latency, genital
	Level: Knowledge Santrock - Chapter 01 #173
174. (p. 18)	List (in order) the eight stages of psychosocial development that were proposed by Erik Erikson.
	trust versus mistrust; autonomy versus shame and doubt; initiative versus guilt; industry versus inferiority; identity versus identity confusion; intimacy versus isolation; generativity versus stagnation; (ego) integrity versus despair
	Level: Knowledge Santrock - Chapter 01 #174

175. Name the four stages of cognitive development that were proposed by Jean Piaget, and list (p. 19) the key features of the thinking process associated with each.

BIRTH TO AGE 2: Sensorimotor, coordinating sensory experiences with physical actions (AROUND) PRESCHOOL AGE: Preoperational, representing the world with words, images, and drawings

(AROUND) SCHOOL AGE: Concrete operational, operations are performed, logical thinking applied to concrete or physical examples

(AROUND) ADOLESCENCE THROUGH ADULTHOOD: Formal operational, abstract thinking

Level: Knowledge Santrock - Chapter 01 #175

176. List (in order) the five environmental systems in ecological theory that were proposed by Urie

(p. 25) Bronfenbrenner. Provide a short definition/description of each system.

Microsystem: the setting in which the individual lives

Mesosystem: relationships between microsystems or connections between contexts

Exosystem: Connections between experiences in another social settingl in which the individual does not have an active role and the individual's immediate context

Macrosystem: the culture in which individuals live

Chronosystem: the patterning of environmental events and transitions over the life course, as well as sociohistorical circumstances

177. Explain the goals of descriptive, correlational, and experimental research.

(p. 28-30)

Descriptive: observe and record behavior

Correlational: measure the relationship between two or more variables

Experimental: determine cause and effect

Level: Conceptual
Santrock - Chapter 01 #177

178. List seven ways of collecting information when one conducts descriptive research. *(p. 26-30)*

naturalistic observations, surveys, interviews, standardized tests, case studies, life-history records, physiological measures

Level: Knowledge
Santrock - Chapter 01 #178

179. List the four primary ethical guidelines that the APA has developed for researchers, and briefly define/describe each of these guidelines.

Informed consent: Participants must know what their participation will involve, and what risks might develop.

Confidentiality: Researchers are responsible for keeping all data they gather completely confidential.

Debriefing: Participants must be informed after the study about its true intentions.

Deception: Researchers can deceive participants only when the deception does not harm the participants and the participants will be debriefed afterward.

Level: Knowledge Santrock - Chapter 01 #179

180. Describe how the traditional approach to development differs from the life-span approach. (p. 3-4)

In the traditional approach, dramatic change occurs in infancy and early childhood, whereas little or no change takes place in adult development. In the life-span approach, developmental change takes place throughout the human life span.

Level: Conceptual
Santrock - Chapter 01 #180

181. In additional to chronological age, list and briefly describe the three other ways that "age" has (p. 10-11) been conceptualized.

Biological age refers to a person's age in terms of biological health. Psychological age refers to an individual's adaptive capacities compared with others of the same chronological age. Social age refers to the social roles and expectations related to a person's age.

Level: Knowledge Santrock - Chapter 01 #181

182. Briefly discuss the nature–nurture controversy.

(p. 14)

The nature–nurture controversy involves the debate about whether development is influenced primarily by the genetic blueprint, biological inheritance (nature), or by environmental experiences (nurture). Most life-span developmentalists acknowledge that development is not all nature or all nurture, but a combination of both.

Level: Conceptual
Santrock - Chapter 01 #182

183. Briefly discuss the continuity–discontinuity controversy.

(p. 15)

The focus of this issue is on whether development involves gradual, cumulative change from conception to death (continuity) or whether development occurs in distinct stages or phases across the life span. Most life-span developmentalists acknowledge that development is not all continuity or all discontinuity, but a combination of both.

184. Define theory and hypothesis. Describe the relationship between the two.

(p. 16)

A theory is an interrelated coherent set of ideas that help to explain and to make predictions. A hypothesis is a specific assumption and prediction that can be tested and determined for accuracy. Hypotheses are formulated in order to test the assumptions of a theory. Results from research (based on these hypotheses) may, in turn, be used to revise the theory.

Level: Knowledge Santrock - Chapter 01 #184

185. Compare and contrast behaviorism and social cognitive theory (describe the similarities and (p. 21-22) the differences between the two approaches).

Both behaviorism and social cognitive theory state that development is observable behavior learned through experience with the environment. Both also emphasize empirical research in studying development. In behaviorism, the mind is not needed to explain behavior and development. Social cognitive theorists, unlike behaviorists, also believe that humans can regulate and control their behavior.

Level: Conceptual
Santrock - Chapter 01 #185

186. Explain ethology and the concept of critical periods.

(p. 23-24)

Ethology stresses that behavior is strongly influenced by biology, is tied to evolution, and is characterized by critical or sensitive periods. Critical periods are fixed periods very early in development during which certain behaviors optimally emerge.

Level: Knowledge Santrock - Chapter 01 #186

187. Explain the eclectic theoretical orientation.

(p. 25)

The eclectic theoretical orientation does not follow any one theoretical approach but rather selects and uses from each theory whatever is considered the best in it.

Level: Knowledge Santrock - Chapter 01 #187

188. Briefly explain the independent variable and the dependent variable in an experiment.

(p. 30) Describe the relationship between them.

The independent variable is the manipulated, influential, experimental factor. The dependent variable is the factor that is measured in an experiment. The dependent variable can change as the independent variable is manipulated.
