

FACULTY BIBLIOGRAPHY

July 1995 - June 1996

INTRODUCTION

The New York Medical College Faculty Bibliography, July 1995-June 1996, is the second annual compilation of faculty scholarship that has been published during the past academic year. It is produced by the staff of the Medical Sciences Library. It is available in print and in electronic form, and is accessible on the campus network as an option on the Library Database and Services screen, or the New York Medical College WWW homepage.

This bibliography is an outgrowth of the Medical Sciences Library's first Author Recognition Celebration that took place on September 22, 1993. The success of that event coupled with enthusiastic support for a more comprehensive event and production of a substantive bibliography resulted in this publication.

Citations are listed from 399 books, chapters of books, journal articles, editorials, reviews and notes, representing the publishing efforts of 325 faculty members. Only authors who cited their New York Medical College affiliations and who were identified in the scientific literature between July 1, 1995 and June 30, 1996 have been included in the bibliography.

Sources

Journal Articles, Editorials, Reviews and Notes.

Listings are as accurate as possible based on information available. The following indexing/abstracting sources were searched: Science Citation Index, MEDLINE, HealthPLAN, PsycLIT. The search methodology combined the designated field containing the author affiliation address with the publication years and types of publications. In addition, letters were sent to chairs of departments soliciting lists of current publications of their faculty. The appropriate deans were also consulted.

A citation limit must be noted in some databases, such as MEDLINE, that include only the address of the first author. There is, therefore, an inherent limitation when searching the institutional field in a database.

Books, chapters of books.

The selection of books or chapters of books was made through the library acquisition lists. For the most part, books or chapters of books are not readily identifiable in electronic databases. Therefore, authors are continually encouraged to alert the library about newly published books or chapters.

Arrangement

The arrangement of the bibliography is in two parts: by author and by department. Citations are formatted in accordance with the National Library of Medicine *Index Medicus*, which conforms to American National Standard for Bibliographic References ANSI Z39.29-1977. The first part contains a listing of bibliographic citations alphabetized by first authors. Each college author who is not a first author is cross-referenced to the full citation under the name of the first author. The second part contains a listing of all College authors by departments and/or schools.

The Medical Sciences Library is pleased to acknowledge and promote the scholarly contributions of the faculty. This work is compiled by Luiza Balthazar, Assistant Professor, Associate Director and Head of Information Processing at the Medical Sciences Library. The Library invites comments and suggestions at any time.

Diana Cunningham, Assistant Professor
Director
