I. Introduction

The Product and Service Codes (PSC) Manual provides codes to describe products, services, and research and development (R&D) purchased by the federal government. These codes indicate "WHAT" was bought for each contract action reported in the Federal Procurement Data System (FPDS).

The PSC Manual has been updated to reflect the changes made to the PSC codes via FPDS V1.5 Service Pack 4. In addition, text regarding the PSC Management Process (p. 4) and Category Management (p. 8) were added to the manual.

For more information on the PSC Management Process and the roles and responsibilities of managing the PSC, please reference the PSC Standard Operating Procedures at www.acquisition.gov/PSC_Manual.

II. Guidelines/Policy

Please reference the link https://www.acquisition.gov/PSC Manual to obtain the following:

- Product Service Codes (PSCs) Management Standard Operating Procedures (SOP) which documents the process for the administration and management of the Product Service Codes (PSCs);
- Spreadsheet detailing the Governmentwide Category Management alignment of the PSC; and
- Spreadsheet with the PSC data codes' activation and end dates.

Two FPDS data elements are the primary focus of the changes in this manual. The PSC is entered in FPDS in data element 8A, "Product or Service Code." Environmental attributes are entered in data element 8L, "Recovered Materials/Environmental Attributes."

These product/service codes are used to record the products and services being purchased by the Federal Government. In many cases, a given contract/task order/purchase order will include more than one product and/or service. In such cases, the "Product or Service Code" data element code should be selected based on the predominant product or service that is being purchased. For example, a contract for \$1000 of lumber and \$500 of pipe would be coded under 5510, "Lumber & Related Wood Materials."

Similarly, a given contract/task order/purchase order may include products/services with and without environmental attributes. In such cases, data element 8L, "Recovered Materials/Environmental Attributes," should be filled in based on the predominant product or service that is being purchased. For example, a contract for \$1000 of energy star refrigerators and \$500 of standard refrigerators would be coded under 4110, "Refrigeration Equipment" with the "Recovered Materials/Environmental Attributes" data element 8L selected as "energy efficient."

Determining the environmental attributes associated with acquisition of services presents challenges. Many service acquisitions tend to be predominantly labor-based, which in itself does not have environmental attributes. However, in accomplishing the objectives of the services contract, environmental attributes may apply and it is important to provide agencies both the flexibility and information to make such decisions. GSA will update this manual with additional guidance as soon as it becomes available.

III. Environmental Reporting Requirements

Statutory requirements and Executive Order 13514 direct the Office of Management and Budget (OMB) Office of Federal Procurement Policy (OFPP) to report on procurement of products and services with environmental attributes including recycled content, biobased, and energy efficient.

FPDS will be used to collect data on the procurement of products and services with these environmental attributes. The initial phase of implementation allows for the collection of the three attributes listed above plus an

"environmentally preferable" attribute which includes other attributes. The following definitions apply to data collected in FPDS.

ENERGY EFFICIENT

Per FAR 2.101, "Energy efficient-product" means a product that—

- Meets Department of Energy and Environmental Protection Agency criteria for use of the Energy Star trademark label; or
- o Is in the upper 25 percent of efficiency for all similar products as designated by the Department of Energy's Federal Energy Management Program (FEMP).

As used in this definition, the term "product" does not include any energy-consuming product or system designed or procured for combat-related missions (42 U.S.C. 8259b).

Per FAR 2.101, "Energy-efficient standby power devices" means products that use-

- o External standby power devices, or that contain an internal standby power function; and
- No more than one watt of electricity in their standby power consuming mode or meet recommended low standby levels as designated by the Department of Energy Federal Energy Management Program.

BIOBASED

Per FAR 2.101, "biobased product" means a product determined by the U.S. Department of Agriculture to be a commercial or industrial product (other than food or feed) that is composed, in whole or in significant part, of biological products, including renewable domestic agricultural materials (including plant, animal, and marine materials) or forestry materials.

ENVIRONMENTALLY PREFERABLE

Per FAR 2.101, "environmentally preferable" means products or services that have a lesser or reduced effect on human health and the environment when compared with competing products or services that serve the same purpose. This comparison may consider raw materials acquisition, production, manufacturing, packaging, distribution, reuse, operation, maintenance, or disposal of the product or service.

For the Product Services Code Manual, this <u>includes</u> categories such as EPEAT registered, water efficient, Significant New Alternatives Program (SNAP)/non-ozone depleting, recovered content, and environmentally preferable products/services (EPA designated).

For the Product Services Code Manual, environmentally preferable <u>also includes</u> building-related or facilities-related services which are associated with "green" industry standards and certifications, such as the US Green Building Council's (USGBC) Leadership in Energy and Environmental Design (LEED) certification.

Environmentally preferable <u>excludes</u> products or services that are predominately bio-based or energy-efficient as these two categories are defined in the Products and Services Code Manual.

IV. Reporting of Environmental Attributes in FPDS

The tracking of environmental purchases is going to be accomplished through data element 8L, the "Recovered Materials/Environmental Attributes" data element in FPDS. The "Recovered Materials/Environmental Attributes" data element is an existing field in FPDS which has been modified to allow expanded environmental reporting. The field now includes a dropdown box with the following options:

- RCRA FAR 52.223-4
- RCRA FAR 52.223-4 and 52.223-9
- No clauses included and no environmental included
- Energy efficient
- Biobased
- Environmentally preferable
- RCRA FAR 52.223-4 and energy efficient
- RCRA FAR 52.223-4 and biobased
- RCRA FAR 52.223-4 and environmentally preferable
- RCRA FAR 52.223-4 and biobased & energy efficient
- RCRA FAR 52.223-4 and biobased & environmentally preferable
- RCRA FAR 52.223-4 and biobased & energy efficient & environmentally preferable

There will not be a validation rule associated with this data element. It will be possible to select an environmental attribute that does not apply to the given product or service. For example, one could designate PSC 7350 Tableware as "Energy Efficient." Therefore, please use caution and select the appropriate field based upon the contract requirements.

V. Changes Included in this PSC Manual Update

This section describes the changes that were incorporated in this PSC Manual update. A summary table and detailed comments for each type of code are provided.

B. General Comments

- 1. Code Structure: The PSCs will continue to be 4-position codes, with products having a digit in the first position and services and R&D having a character in the first position. The only significant change to the content of the codes involves the multi-use facility codes. They have been changed from 3 digits to 2 characters to make more efficient use of the available positions.
- 2. Product Codes: For more information on the PSC Management Process and the roles and responsibilities of managing the PSC, please reference the PSC Standard Operating Procedures at www.acquisition.gov/PSC_Manual.
- 3. Abbreviations and Formatting. Abbreviations were made consistent. Where code names included the hierarchy, the delimiters between levels were made to be consistent (e.g., the dash and colon in "Architect and Engineering Services- Construction: Office Buildings").
- 4. Terminology. The terminology used in the service code names was updated to use modern terms. For example, "Automated Data Processing" (ADP) was updated to "Information Technology" (IT).
- 5. PSC Category Management Alignment: Governmentwide Category Management optimized category taxonomy for the 10 "Common Spend" categories has been developed, researched, analyzed, and negotiated through the Category Management team, and OMB/OFPP approved the application to Governmentwide Category Management (GWCM). The GWCM

category taxonomy should be applied when calculating fulfillment of FPDS-NG based targets for the Presidents' Management Agenda. Please refer to the Government-Wide Category Management Taxonomy for application to the Government-Wide Category Management Program, https://hallways.cap.gsa.gov/app/#/gateway/category-management/10892/product-service-code-psc-rebaseline.

C. Research and Development Code Summary

- 1. See "Section A Research and Development Codes" below for the new definitions for the stages attributed to R&D codes.
- 2. One Hundred Fifty-Five (155) Product Service Codes (PSCs) were added. These new R&D codes have a scheme aligned to OMB Budget Function, and will be activated October 30, 2020.
- 3. Seven Hundred twenty-One (721) R&D PSCs are being end-dated on October 29, 2020 by new R&D codes starting with "A".
- 4. R&D services may or may not have environmental attributes.

D. Services Code Summary

- 1. End-dated PSC Q901 Aseptic Housekeeping Services, which was renamed to PSC Q901 Healthcare Environmental Cleaning.
- 2. Activated 23 new IT service PSCs (codes) and 17 new IT product PSCs (codes). These new IT codes have a new schema. End-dated 40 IT service PSCs (codes) and 30 IT product PSCs (codes), which are being replaced by new codes. The new schema for the IT PSCs supports OMB Circular A-11 Section 55 IT Investments by creating a methodology that allows agencies to capture and report more granular cost data, in alignment with the IT Capital Planning Guidance document as specified with the A-11.

As mentioned above, it can be difficult to determine whether a service has environmental attributes. GSA will update this manual with additional guidance as soon as it becomes available. The reference tables of multi-use codes for product-based and facility-based codes have been eliminated. Instead, the complete list of 4-digit codes is provided in the manual.

E. Product Code Summary

- 1. One PSC was end-dated--PSC 6830 which was revised.
- 2. Two PCSs were activated-- new PSC 6835 and revised PSC 6830.

VI. Reports

Ad hoc reports may be created for any FPDS data. The Ad Hoc Reports Manual is available at **https://www.fpds.gov**. The Ad Hoc Reports Manual is listed under the Training Tab on the site.

The ezSearch tool provides the ability to search for contracts based on free text. All contracts searched are in Final status. Any DoD contract that is less than 90 days old will not be included in the search. For specific directions on the use of ezSearch, see the help material at the following link: https://www.fpds.gov/help/index.jsp.

VII. Change Control Procedures for Product and Service Codes

Please reference the Product Service Codes (PSCs) Management Standard Operating Procedures (SOP) at https://www.acquisition.gov/PSC Manual to obtain the information on the administration and management of the Product Service Codes (PSCs) to ensure the accurate reporting of Federal spending data related to procurements. If you have any questions on the PSC change management process, please email PSC-Codes@gsa.gov.

VIII. Frequently Asked Questions

• What changed?

The PSC Manual has been updated as of to reflect the following changes:

- 1. End-dated Seven Hundred twenty-One (721). PSCs that start with "A" are being end-dated on October 29, 2020. These existing R&D codes are being replaced by new R&D PSCs that start with "A".
- 2. End-dated PSC 6830, which was revised, on October 29, 2020.
- 3. End-dated 40 IT service PSCs (codes) and 30 IT product PSCs (codes), which are being replaced by new codes.
- 4. Activated 155 Product Service Codes (PSCs). These new R&D codes that start with "A" will be activated on October 30, 2020.
- 5. Activated 23 new IT service PSCs (codes) and 17 new IT product PSCs (codes).
- 6. Activated new PSC 6835 and revised PSC 6830 which both activate on October 30, 2020.
- 7. No other PSCs changes were made.

• How do I select product/service codes?

For a given contract action, the product or service code should be selected based on the predominant product or service that is being purchased.

• Why is it important to collect codes accurately?

These codes are used to gather data that forms the basis of legally-mandated reports. Policy and acquisition decisions made by Government and private sector executives may be informed by the data captured in and reported from FPDS.

Why are we collecting environmental attributes?

The purchase of certain environmentally friendly products and services must be reported per statute and executive order. The central collection of certain data through FPDS will minimize reporting burden on agencies.

• How do I determine if a service has environmental attributes

Determining the environmental attributes associated with acquisition of services presents challenges. Many service acquisitions tend to be predominantly labor-based, which in itself does not have environmental attributes. However, in accomplishing the objectives of the services contract, environmental attributes may apply and it is important to provide agencies both the flexibility and information to make such decisions. GSA will update this manual with additional guidance as soon as it becomes available.

How are environmental attributes captured in FPDS?

Environmental attributes are entered in data element 8L, "Recovered Materials/Environmental Attributes." The element can capture various combinations of RCRA, energy efficient, biobased, and environmentally preferable attributes.

Section A

Research and Development Codes

Research and Development

- If the contract action is for research and experimental development (R&D) services, report an R&D code.
- The Office of Management and Budget defines R&D as (see Circular A-11, Section 84, Schedule C):
 - Research and experimental development activities are defined as creative and systematic work
 undertaken in order to increase the stock of knowledge —including knowledge of people, culture,
 and society—and to devise new applications using available knowledge.
 - R&D must have each of 5 characteristics: novel; creative; uncertain; systematic; and transferable and/or reproducible.
- Do not assign an R&D code to products purchased in support of research and development work; such products shall be coded using the appropriate PSC product code.
- The R&D code is composed of two alphabetic and two numeric digits. The first digit is always the letter "A" to identify R&D, the second digit is alphabetic "A to Z" to identify the major area, the third digit is numeric 1 to 6 to identify a sub-area within a major area, and the fourth digit is numeric 1 to 5, to identify the appropriate stage of R&D shown below.

Codes for Stages of R&D (4th Position)—Code Meaning

- (1) Basic Research
- (2) Applied Research
- (3) Experimental Development
- (4) Administrative Expenses for R&D
- (5) Expenses for R&D Facilities and Major Equipment

Procurement personnel responsible for R&D actions shall obtain sufficient information from requisitioning personnel to permit accurate classification. When completing this item, the precise R&D Service being purchased shall be coded.

Example: A contract for research on air pollution by aircraft shall be shown under "Natural Resources and Environment (AH4*)" for "Pollution control and abatement," and not under Aerospace Research.

Definitions of stages of R&D

- 1. <u>Basic research</u>. Experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts. Basic research may include activities with broad or general applications in mind, such as the study of how plant genomes change, but should exclude research directed towards a specific application or requirement, such as the optimization of the genome of a specific crop species.
- 2. <u>Applied research</u>. Original investigation undertaken in order to acquire knowledge. Applied research is, however, directed primarily towards a specific practical aim or objective.
- 3. **Experimental development**. Creative and systematic work, drawing on knowledge gained from research and practical experience, which is directed at producing new products or processes or improving existing products or processes. Like research, experimental development will result in gaining additional knowledge.

For reporting experimental development activities include the following:

- The production of materials, devices, and systems or methods, including the design, construction and testing of experimental prototypes.
- Technology demonstration, in cases where a system of components is being demonstrated at scale for the first time, and it is realistic to expect additional refinements to the design (feedback R&D) following the demonstration. However, not all activities that are defined as "technology demonstrations" are R&D.

Exclude:

- User demonstrations where the costs and benefits of a system are being validated for a specific use case. This includes low-rate initial production activities.
- Pre-production development, which is defined as non-experimental work on a product or system before
 it goes into full production, including activities such as tooling, and development of production
 facilities. For example, exclude activities and programs that are categorized as "Operational Systems
 Development" in the Department of Defense's budget activity structure. Activities and programs of
 this type should generally be reported as investments in other major equipment.
- 4. <u>Administrative expenses for R&D</u>. Expenses for R&D, such as the operating costs of research facilities and equipment and other overhead costs.
- 5. Expenses for R&D Facilities and Major Equipment: Expenses for the purchase, construction, manufacture, rehabilitation, or major improvement of physical assets that are necessary for the execution of an R&D program. Expenses for major moveable R&D equipment include acquisition, design, or production of major movable equipment for use in R&D activities.

Obligations for R&D facilities and major equipment are treated as a stage of R&D. For reporting R&D Facilities and Major Equipment, include the following:

- Construction of facilities that are necessary for the execution of an R&D program. This may
 include land, major fixed equipment, and supporting infrastructure such as a sewer line, or housing
 at a remote location. Many laboratory buildings will include a mixture of R&D facilities and office
 space. The fraction of the building directly related to the conduct of R&D may be calculated as a
 percentage of the building's total square footage.
- Acquisition, design, or production of major movable equipment, such as mass spectrometers, research vessels, DNA sequencers, and other movable major instruments for use in R&D activities. Programs of \$1 million or more that are devoted to the purchase or construction of R&D major equipment (see OMB Circular A-11, Section 84.3(a)).

Exclude:

- Construction of other facilities, such as office space
- Minor Equipment purchases, such as personal computers, standard microscopes, and simple spectrometers. This should be reported using a product PSC code.

Section B

Service Codes

Information Technology Codes

There are 40 new IT PSCs to replace 68 existing IT PSCs. The proposed structure is modeled after industry best practices for IT Financial Management and IT Spending Transparency standards, including the Technology Business Management (TBM) Framework, but tailored for Federal Government acquisition needs.

The new schema for the IT PSCs supports OMB Circular A-11 Section 55 IT Investments by creating a methodology that allows agencies to capture and report more granular cost data, in alignment with the IT Capital Planning Guidance document as specified with the A-11. The 2021 Guidance document implements the final phase of adopting IT Financial Management standards requiring cost reporting by pre-defined groups of underlying technologies, referred to as "IT Towers" (Capital Planning and Guidance Document, page 8, line 132, and section 7.5 - IT Towers, page 27, lines 371-376). This proposal leverages the use of those IT Towers, which is designed to be inclusive of all IT services and products; there should be no use cases (with existing technologies) that fall outside the scope of the current standard. However, there is flexibility in the coding scheme to accommodate emerging technologies as they arrive and retire old ones as they become obsolete.

The Category 1 scheme reuses the first digit "D" to indicate IT Service Categories, and "7-" to indicate IT Product Groups.

The second digit represents the Major Area (Technology Resource/IT Tower), with digits 3 and 4 to indicate the Sub-Major area. The second digit for both D and 7 is letter-based so that it can represent each of the 10 Major Technology Resources/IT Towers; letters A through K. Note that the letter "I" is not used to avoid confusion with the number "1". This ensures that there is no possibility of conflicting with any existing "D" or "7" series number scheme as they all have numbers as their second digit. This also allows for growth in that there are another 15 letters available for new categories or new groups.

The 3rd and 4th digits allow for up to 99 Sub-Major elements using just numerals, or up to 1,296 using alphanumeric $(36^{^2})$, to be added as new technologies emerge, which provides for a flexible and dynamic numbering system.

The coding scheme represents a compromise between acknowledging legacy systems that still need to be tracked, while embracing newer technologies like Cloud-based services.

The structure is depicted below. In this example, DA10 represents the PSC for acquiring Business Software as a Service (SaaS) via a cloud service contract (term, subscription), while the second represents a PSC for purchasing Business Software via a license agreement (perpetual).

DA10 - Application: Business Application/Application Development Software As a Service

Technology Resource/Tower: A = Application

Sub-Resource: 10 = Business Application/Application

Development Software As a Service

7A21 - Application: Business Application Software (Perpetual License Software)

Technology Resource/Tower: A = Application

Sub-Resource: 21 = Business Application Software (Perpetual License Software)

Group 58 Communication, Detection, and Coherent Radiation Equipment

Note-Excludes oscillator items which should be classified in FSC 5955 or 5963; fiber optic items which should be classified in Group 60; electronic modules as defined under Class 5963; and electrical cable, cord and wire assemblies, harnesses and sets, related to FSG 58 equipment (see FSC 5995). In Group 58, more than in any other group, it frequently happens that the same name is listed as an index entry in each of several classes. In addition, that name may also appear as an entry in groups other than 58. Each such entry refers to a distinctly different part or assembly, even though the different items have the same name. The listing of the same names in two or more classes indicates that, in one form, the part or assembly

covered by the name is applicable to the equipment covered by one class, and in another form is applicable to the equipment covered by another class. For example, the item name CODER, AUDIO FREQUENCY is applicable to two distinctly different assemblies, one of which has an application in cryptologic equipment, covered by Class 5810, and the other in radar equipment covered by Class 5840. Consequently the name CODER, AUDIO FREQUENCY is an entry under each of the two classes. When an item identification bears a name which is indexed under more than one class of Group 58, or in Group 58 and in some other group, the item will be classified in the same class as its next higher assembly in the manner described in the Federal Logistics Information System (FLIS) Procedures Manual, DoD 4100.39-M. Also excluded from this group are data transmission and communications equipment such as terminals, sensors and other devices designed for use with a configuration of ADPE.

Appendix 6 - PSCs Renumbered

Renumbering. Based upon feedback and recommendations from the blog, the multi-use facility type codes have been changed from a 3-digit scheme to a more efficient 2-character scheme. The renumbering process involved end dating some service codes and adding new codes to replace them. The services themselves did not change, except in the case of the C1 "Architect and Engineering" codes, which expanded to capture the detailed facility types—not just the facility category.

Codes ADDED because of Renumbering
