ACOUSTICAL, TECHNOLOGY, AND LIGHTING DESIGN

THORBURN ASSOCIATES

ACOUSTICAL, TECHNOLOGY, AND LIGHTING DESIGN

An Architecture/Engineering Consulting firm specializing in Acoustics, Technology and Lighting Design for the Commercial, Corporate, Leisure, Public, Residential, and Healthcare Industries.

Raleigh Durham, North Carolina
Charlotte, North Carolina
San Francisco, California
Los Angeles, California
Orlando, Florida

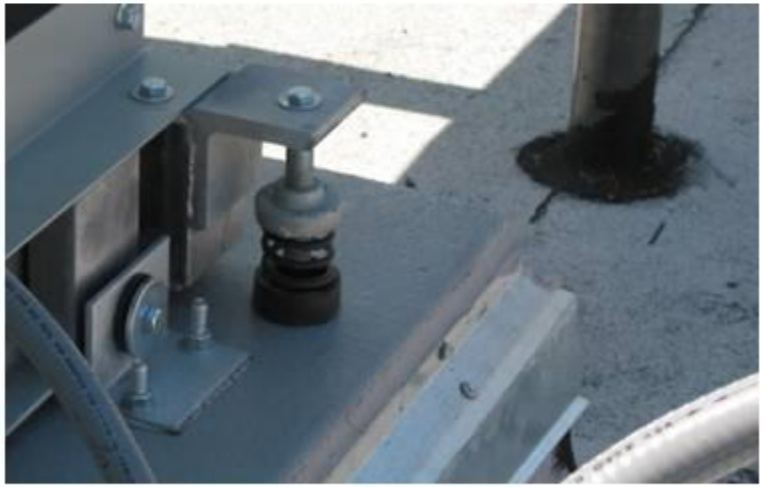
What do we do?

Room Acoustics

Sound Isolation

Traffic Noise Control

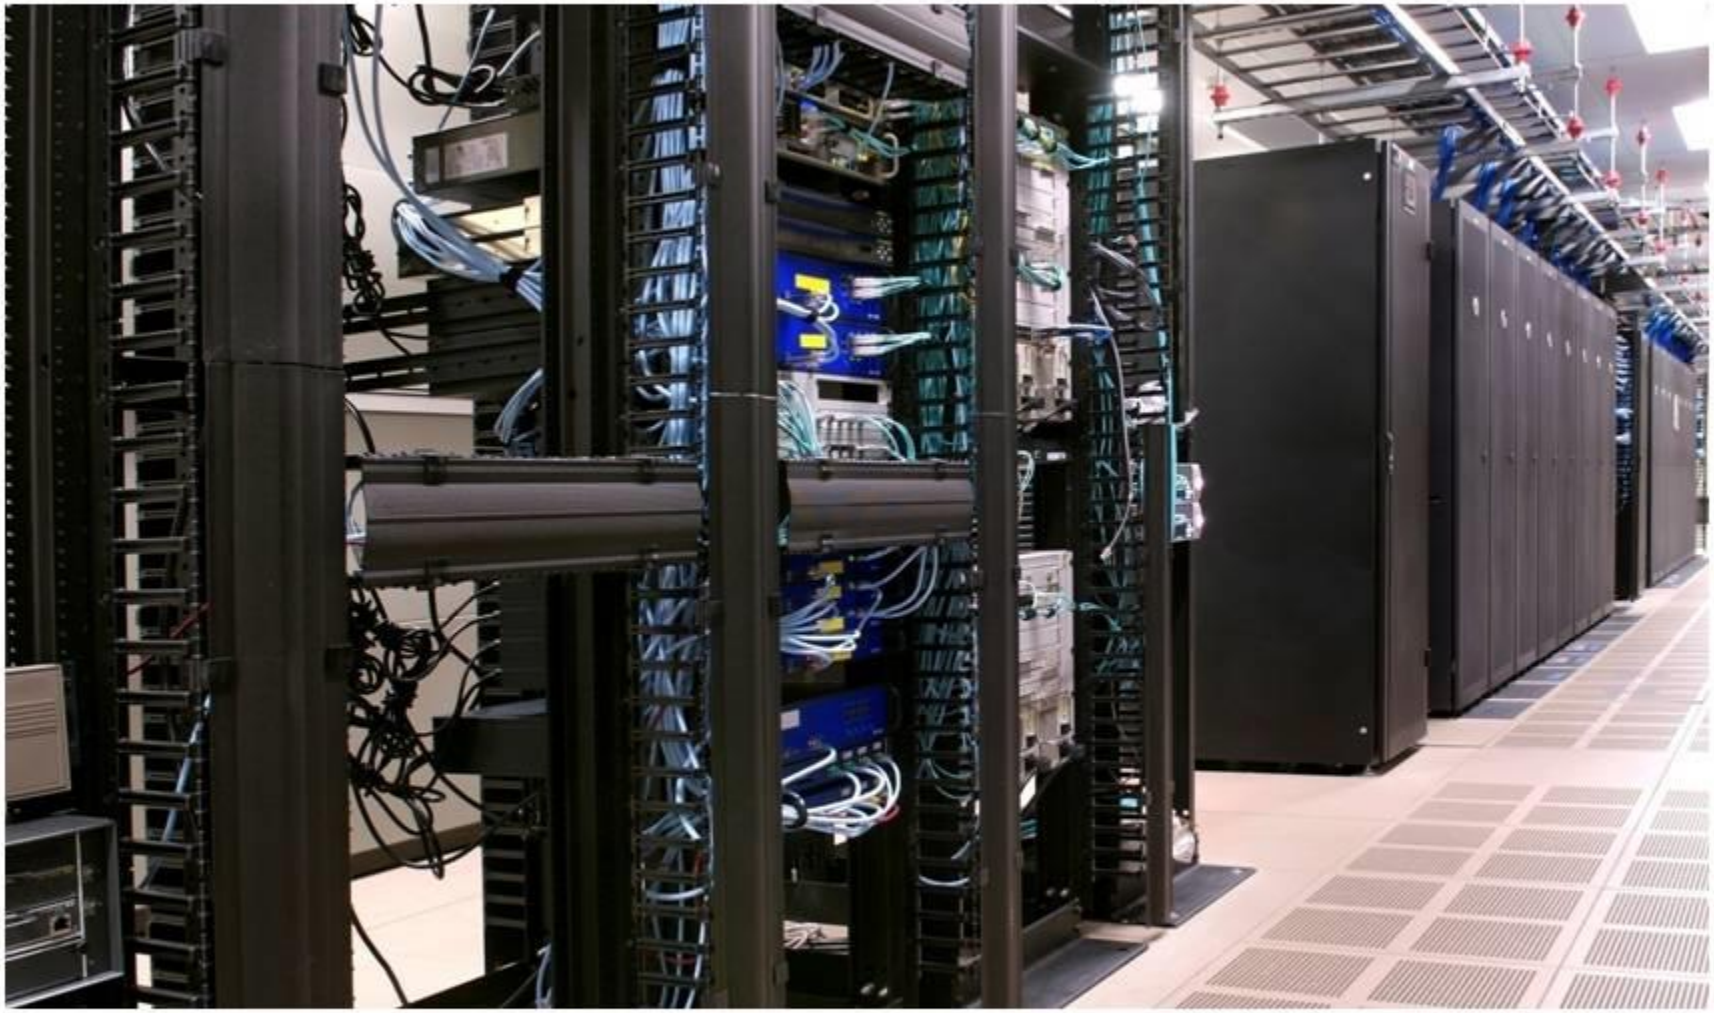
Mechanical Noise Control



Vibration Isolation

Lighting Design

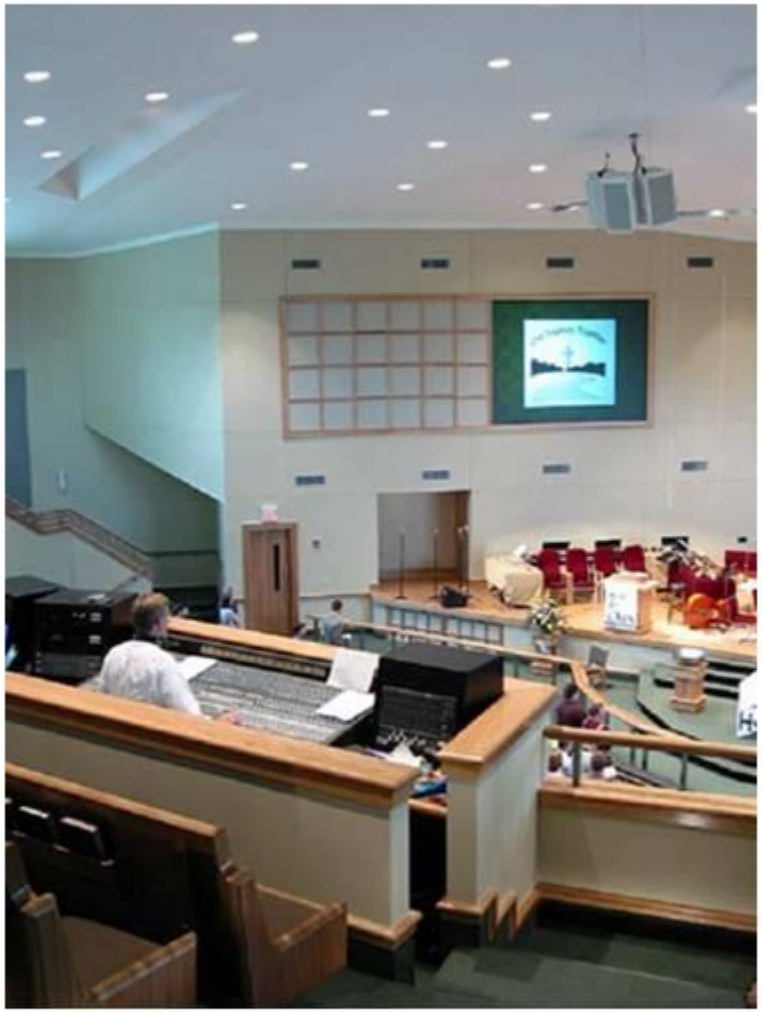
Security Design



Structured Cabling

Video System Design

HEALTHCAREDESIGN



Audio System Design

Houses of Worship

Auditoriums

Commercial

FGI / HIPAA / LEED / HCAHPS impact on

Acoustically Friendly Buildings

AIA Registered Provider

Thorburn Associates Inc. is a registered provider with the American Institute of Architects Continuing Education Systems. Credit earned on completion of this program will be reported to CES Records for AIA members. Certificates of Completion for non-AIA members are available on request.

This program is registered with AIA/CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product. Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

Acoustically Friendly Buildings

- **This session explores how Health care / FGI / HIPAA / LEED / HCAHPS codes, regulations, and design guidelines impact the acoustical comfort of patients, their families, and building occupants. Participants will learn how acoustics has a positive impact on the design of healthcare facilities including hospitals and trauma centers, laboratories, and assistive living facilities.**

- **Objectives:**
  - **Review the codes, regulations, and design guidelines impacted by acoustical issues.**
  - **Learn solutions for making a building friendly for the occupants.**
  - **Learn solutions for making a building friendly for the environment.**
  - **Explore case studies**

- **AIA /CEU = one HSW/SD**

Housekeeping

- ADA Issues
- Questions
- AIA Credit

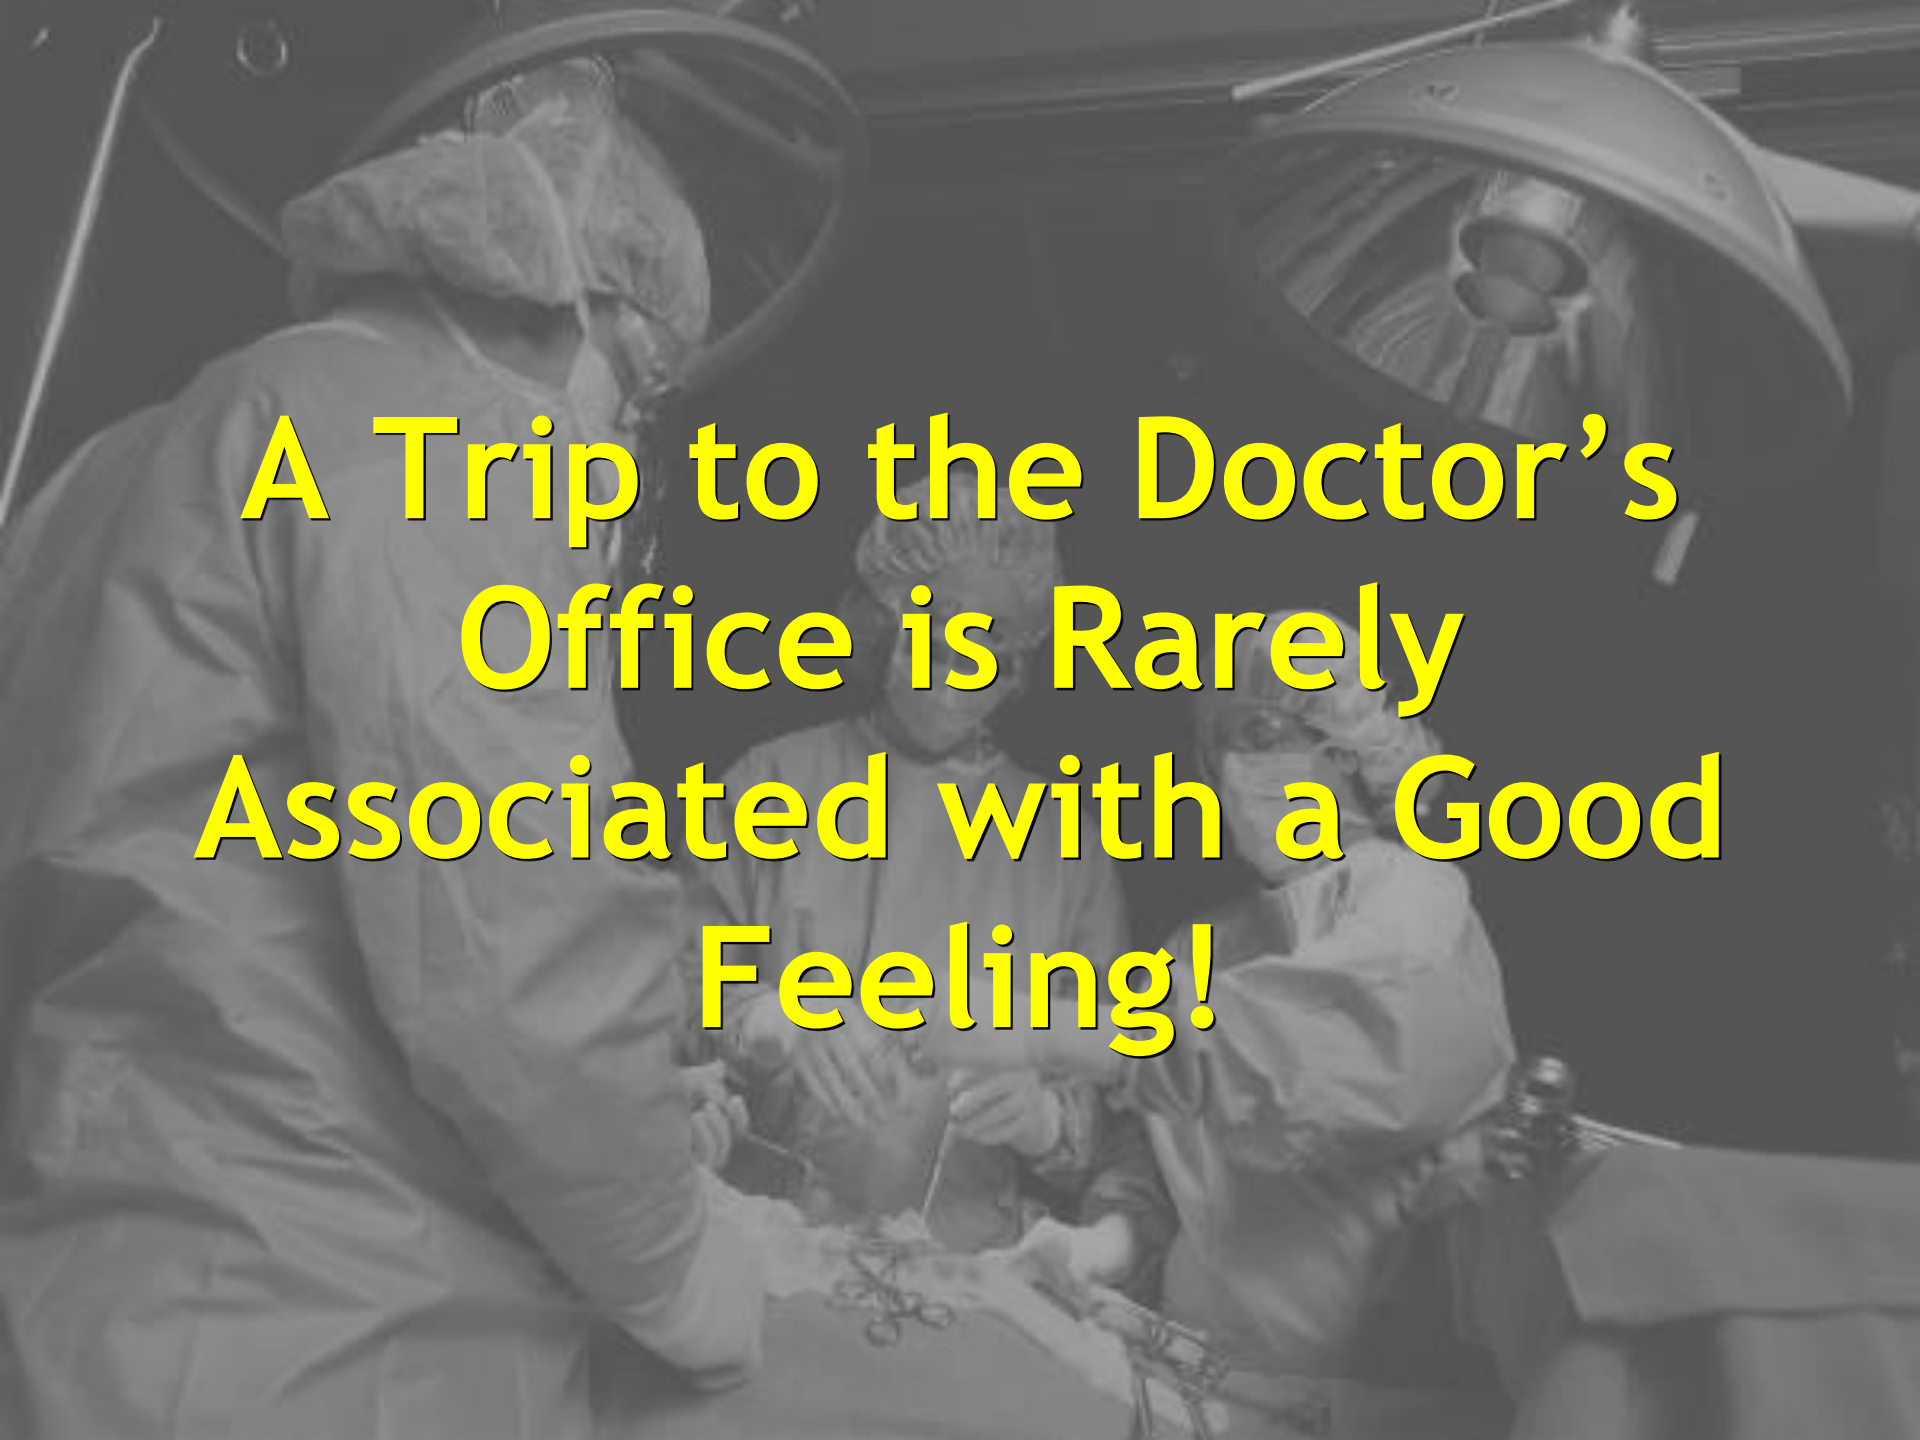
So why does it all matter?



A Trip to the Doctor's Office is Rarely Associated with a Good Feeling!

Top 10 Complaints

1. It's To Cool
2. It's To Hot
3. It's Dirty
4. No Meeting Space
5. No Storage Space
6. Bad Air Quality
7. No Privacy
8. Parking Issues
9. Computer Issues
10. Noise Level / Too Noisy

IFMA: 1991, 1997, 2004

Top 10 Complaints

1. It’s To Cool
2. It’s To Hot
3. Noise Level / Too Noisy

IFMA: 2013

What is The Goal

- *Environmental complaints* – People complain about noise and odors or being too hot or too cold.

Healthfulness

Clean and healthy work environments with access to air, light, and water— and free of contaminants and excessive noise.

- **Integrated design process** – focused on adaptability and mobility, environmental issues, ergonomics, collaboration, privacy, and noise control.

Major Impact

- *Technology* – providing the right technological tools and support to work effectively.
- *Storage space* – supplying ample storage within close proximity to their desk.
- *Climate control* – allowing employees to control the workplace climate to provide comfort.
- *Quiet space* – minimizing noise that causes distractions and disruptions.

- Address staff requests for more privacy, less noise, more adaptability, and better environmental conditions.

Sustainable (or Healthfulness): Create workplaces using environmentally sustainable ("green") products and processes that provide a clean, healthy workplace environment, free of harmful contaminants and excessive noise, with access to quality air, light, and water. Specific recommendations include:

Preventing Falls for Patient and Resident Safety

Sue Ann Guildermann, RN, BA, MA

Empira

Internal Evidence & Clues:

- Mood status & cognitive changes, frequent napping, ↑ falls, ↑ agitation

=

<u>sleep deprivation #1</u>

Lesson learned:

if we can stop the noise, then we can reduce the falls.

LEED v4 for Healthcare

- **Developed to meet the unique needs of the healthcare market, including inpatient and outpatient care facilities and licensed long term care facilities.**
- **May also be used for**
  - **medical offices**
  - **assisted living facilities**
  - **medical education & research centers**

LEED v4 for Healthcare

- **Based on 2010 FGI Guidelines – Health Care Facilities**
- **No Prerequisites for Acoustics**
- **2 Credits possible EQ points**
  - **Option 1 Speech Privacy, Sound Isolation and Background Noise**
  - **Option 2 Acoustical Finishes, and Exterior Noise Levels**
  - **2010 SV Guidelines for Heath Care Facilities**

LEED v4 – FGI / ASHE for Healthcare

- **Reverberation**

Table 1.2-1

Design Room Sound Absorption Coefficients ($\bar{\alpha}$)

Space[1]	Design Coefficient[2]	Subjective Description
Private patient room	0.15	"Average" room
Multi-bed patient room	0.15	"Average" room
Corridor	0.15	"Average" room
Waiting area room	0.25	"Medium-dry"
Atrium	0.10	"Medium live" room
Physician's office	0.15	"Average" room
Treatment room	0.15	"Average" room

$.038^{\alpha} - RT_{60}(3\text{-}6)$

APPENDIX

Table A1.2-a

Categorization of Health Care Facility Sites by Exterior Ambient Sound

Exterior Site Noise Exposure Category	A	B	C	D
General description	Minimal	Moderate	Significant	Extreme
Day–night average sound level (Ldn) (dB)	< 65	65–70	70–75	> 75
Average hourly nominal maximum sound level (L01) (dBA)	< 75	75–80	80–85	> 85
Distance from nearest highway (ft)	1000	250–1000	60–250	< 60
Slant distance from nearest aircraft flight track 1 (ft)	> 7000	3500–7000	1800–3500	< 1800
	4000	2000–4000	1000–2000	1000
Distance from nearest rail line (ft)	1500	500–1500	100–500	< 100
Exterior shell composite STC rating (STC_c)[1]	35	40	45	50
Design goal for facility nighttime exterior equipment sound (dBA)[2]	45	50	55	60
Exterior patient seating areas	Generally acceptable noise level	Some shielding of principal	Generally not acceptable without special acoustical consideration	Generally not acceptable noise required

CASE STUDIES

Acoustical Criteria

- **Room Acoustics**
  - Promote Early Reflections
  - Eliminate Echoes
- **Sound Isolation**
  - Reduce Intrusion from Exterior Noise
  - Contain Noise Created in Loud Spaces
- **Mechanical Noise & Vibration Control**
  - Evaluate Mechanical Systems
  - Control System Noise and Vibration
- **Site Noise**
  - Traffic
  - Central Plant
  - Helicopter

The Language: Reverberation Time

- **The length of time it takes sound to decay 60 decibels, or to one millionth (1/1,000,000), of its peak sound level!**
  - **Relationship between Volume and Absorption surface area.**
  - **Higher volume = longer reverberation time**

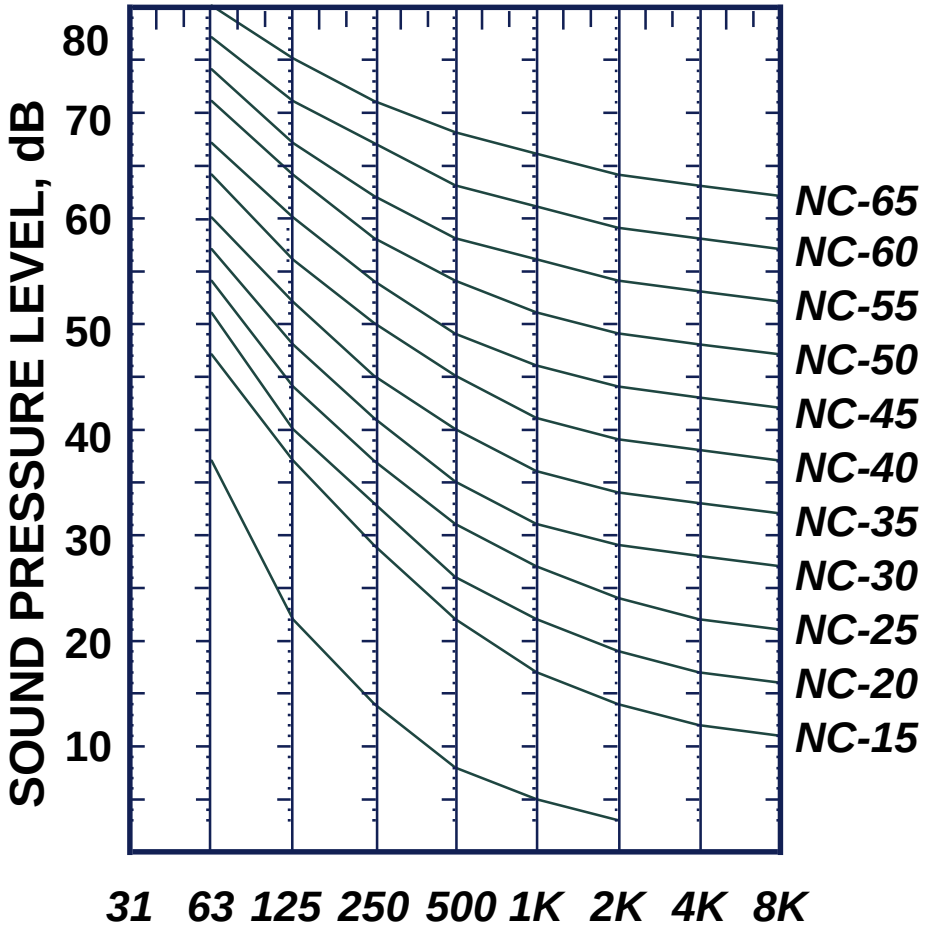
$$RT60 = .05V/A$$

The Language: Sound Transmission Class (STC)

- **Sound is blocked by partitions with mass**
- **Sound can also be blocked by two lightweight partitions separated by a large air space**

The Language: Background Noise

Noise Criteria (NC) Ratings



Amount of noise mechanical system makes in a room

Moderately fair listening conditions

Lobbies, Labs, Open Plan Offices

Large Offices, Reception Areas,
-For moderately good listening conditions

Private Offices, Classrooms, Libraries
-For good listening conditions

Auditoriums, Conference Rooms
-For very good listening conditions
Concert Halls, Churches
-For excellent listening conditions
