THE GALLERY COLLECTION

WELCOME TO THE GALLERY COLLECTION

The Gallery Collection presents an extensive range of traditional and contemporary fireplaces, combining supreme craftsmanship, quality materials and elegance in design.

Our desire is to provide you with a superb choice of fireplaces skillfully made with high quality materials, all fitted in your home by reputable retailers so you can enjoy the experience of buying and owning your individual fireplace.

Within this **FIREPLACES** brochure there is a unique selection of mantels and cast iron inserts. The chapters are arranged by the different types of cast iron inserts, with mantel surround and hearth options named in the text below each fireplace pictured. The complete range of Firestone mantels is illustrated on page 28.

Whether you would like to burn coal and wood, gas or install an electric fire then there will undoubtedly be something suitable within the pages of this brochure. Please check the selection grid at the back of the brochure or ask your retailer to help determine what products suit your particular circumstances. If your preferred combination of products is not shown, it does not mean they do not work together. There are many thousands of permutations and we are sure one of these will suit your taste.

CAST IRON QUALITY

TRADITIONAL FINISH

BLACK FINISH

HIGHLIGHTED FINISH

FULL POLISHED

All our cast iron products are manufactured to the highest standards in ISO 2002 accredited facilities. The quality and detail shown here is second to none. Not only is the casting quality first class, the finishing processes are carried out by highly trained craftsmen. This helps us to achieve a consistent and unrivalled offering to our valued customers.

It is this application of skill and process that creates the high value products shown in **THE GALLERY COLLECTION** brochures.

Shown above are the four principal finishes that are available. From left to right:

- **TRADITIONAL FINISH** is a painted and buffed graphite finish that emulates the traditional black lead polish.
- **BLACK FINISH** is a painted matt black finish. Both the traditional and the black finishes are most appropriate for solid fuel applications as polished finishes can tarnish with high temperatures.

- **HIGHLIGHTED FINISH** is where certain elements of the attractive details of the casting are polished on a black painted background.
- **FULL POLISHED** is, as the name suggests, where the entire product is polished.

Of course, cast iron needs care and maintenance, please refer to the details at the back of the brochure and the care and maintenance leaflet that is included with your fireplace.

CHIMNEY TYPES & INSERT SPECIFICATIONS

CHIMNEY TYPES

CLASS 1

Commonly in older houses, earlier than 1960. The Class 1 chimney is identifiable by 7" (180mm) or greater diameter flue. The existing chimney must be structurally sound, please check before the installation of a new fireplace.

CLASS 2

Either an older house where the existing chimney has been lined by a proprietary steel flue or a newer house with a steel flue built in. This chimney type is identifiable by a 5" (130 mm) diameter flue and a steel flue terminal.

PRE-CAST FLUE

Modern houses generally later than 1960 often have a pre-cast concrete chimney system, identifiable by a rectangular box section flue and a terminal, as illustrated in the picture.

NO CHIMNEY

Modern houses often have no chimney. You can use a modern decorative electric fire with up to 2kW heat output, or a gas powerflue fire.

NOTES:

- * Available with deeper back for larger burning area
- All products are suitable for burning solid fuel, however polished and highlighted products may tarnish. Only burn small fires to start with in order to temper the cast iron.
- Before committing to a fireplace, please discuss your particular installation with your retailer who will provide expert advice and carry out a survey.
- All dimensions are provided as a guide only and are subject to a tolerance of ± 12 mm.
- Most fires have a remote control option, please ask your retailer.

Understanding your new gallery fireplace.

CAST IRON

All the cast iron products are delivered with a protective, oil-based coating on polished surfaces. This should be cleaned off during installation. It

is recommended that a spray-type oil is applied from time to time in order to avoid surface rust appearing. Ensure that the room in which the cast iron product is being installed is thoroughly dry. For example recently plastered walls cause high levels of moisture in the atmosphere and, as a result, rust is likely to occur.

Under no circumstances should a water-based cleaner or polish be used to clean cast iron products.

When using ceramic fuel, ensure that these do not touch any of the polished surfaces as this will help to minimise the possibility of thermal discolouration.

High temperature paint is used on the black and graphite products where fires will burn. This paint will eventually burn off. A proprietary, high temperature paint can be used to recoat your fireplace. Such paint is available from your retailer. It's your responsibility to burn smoke free fuels if you live in a smoke free zone.

There are some very high temperature burning fuels which can cause damage to any fireplace. Please refer to the Solid Fuel Association (www.solidfuel.co.uk) recommendations and use an approved coal merchant as your supplier. No responsibility can be accepted if high temperature fuels have been used or if there is excessive draft. If in doubt we recommend the use of a clay fire back.

Clean ash away regularly as a build up beneath the fire will cause the grate to burn out quickly. The grate is a consumable part of your fire and will need replacement from time to time, depending on the frequency and burning temperature of your fires.

GAS FIRES

A gas fire is a technical piece of equipment and, just like a gas boiler needs regular servicing. Please ensure that you have your gas fire serviced regularly by a

CORGI (Board Gais in ROI) registered installer.

LIMESTONE

Limestone products, once installed and dry should be cleaned and re-sealed where necessary using Gallery Collection aftercare

products. All our limestone products are delivered pre-sealed in order to minimise any marks created during fitting. Your installer should carry out the initial sealing where applicable. Further sealing should not be necessary.

The stone mantels pictured are manufactured from 100% natural material. As such the mantel you will purchase will be unique due to the inevitable variations in fossil formation, veining and colour. This is one of the great attractions of 100% pure natural products. Please be aware that small fossils and variations in the limestone are part and parcel of this wonderful natural product.

MARBLE

Marble products may have small amounts of colour-matched filler to give the impression of a continuous surface.

The nature of marble is such that when it is formed in the earth, some small cracks are created too. The marble that is selected for the mantels shown in this brochure has been chosen to provide affordable quality, thus some minor cracks have been permitted. To achieve a perfect piece of marble with no imperfections at all means a huge amount of wastage. This has two principal effects, the product becomes prohibitively expensive and the natural resources are depleted too quickly - a much more harmful approach to the world's environment.

General information

- The colours shown in the brochures are as accurate as possible, but if the colour you require is critical then please consult your retailer before basing all your decisions on the colours shown here.
- Please also note that shading and crazing are characteristics of the glazed tiles used in tiled inserts and tiled hearths.
- There are occasions when designs, or products are altered or discontinued without prior notice (a reserved right), so if you are about to set your heart on a particular fireplace, please consult your retailer before making that final commitment
- All installations must be carried out in accordance with the requirements set out in the Building Regulation documents, in particular, Approved Document J. There are independent bodies which have been approved to carry out installations in accordance with these regulations.

For gas installations the most recognised independent body is CORGI (Board Gais in ROI) and for solid fuel installations it is HETAS.

Please confirm with your retailer that your new fireplace will be installed appropriately. If you have your new fireplace fitted by a CORGI (Board Gais in ROI) or HETAS registered fitter you will be given a certificate stating that your installation has been carried out in accordance with the Building Regulations. If you do not have one of these certificates then you will have to arrange for your local Building Control Officer to inspect your installation and approve it.

PLEASE NOTE

- Your Gallery fireplace is made up of a number of different components and it is important to ensure that your installer has the necessary qualifications and experience to fit ALL the components of a fireplace.

- Variations in colour, veining and fossil formation in natural products are not considered defects, however in the unlikely event that there is a defect in any of the products shown in this brochure, then a replacement will be supplied without hesitation. Of course, this requires the products to be fully inspected prior to installation

as no responsibility for re-fitting or redecoration can be accepted if defective products have been installed. In this case and in the case of accidental damage after installation, in-situ repairs can be made by specialists, subject to prior agreement of terms with your retailer.

Real stone has long been a distinctive material for fireplace mantels. As these are natural products each one will be unique, please visit your local Gallery retailer to see samples of the real thing. For dimensions please refer to the table below.
