# Word Within the Word Lesson 1

Language is defined as, “the human use of spoken or written words as a communication system.”

The smallest units of meaning in the English language are letter sounds. There are 44 sounds in the English language, but only 26 letters. Some letters combine to make one sound. (diagraphs, blends etc.)

Letters are combined to make the next unit of meaning: whole words or word parts (stems, prefixes, affixes, suffixes, infixes). While the letters represent sounds, words or word parts represent something like a person, place, thing, idea, or action.

Word parts can have meaning too, **but they only make sense when they are used with other word parts**. For example the word biology has two word parts put together. Bio means life and logy means science. When put together the word roughly means “life science.” A common mistake when students are first learning word stems is that they replace a word with the word part. You would never write a sentence that said, “He lived a long bio.” The stem, or word part, bio cannot replace the word life. **Bio means life when used with other stems.**

Root—the basic, or original part of a word. It is the part that remains when all affixes are removed.

Stem—synonym of root (the main part of the word)

Affix—word part that changes the root in some way. It can be placed anywhere in a word.

Prefix—an affix that is placed at the beginning of a word.

Suffix—an affix that is placed at the end of the word.

Infix—a whole word, letter, or part of a word that is inserted into another in order to link affixes together OR an affix inserted into the middle of a word. (i.e acidophilus (acid “o” philus) OR Fan-fab-tastic)

Bimonthly

Bi means two

Month means a lunar cycle of 28-31 days

ly is a suffix used to change the word from a noun to an adjective or an adverb.

Greek and Latin Stems/Roots have meaning. Knowing what they mean can help you do many things.

You can use stems to take words that you do not know apart. Every stem you learn opens the door to the meaning of hundreds of words. Stems give you word power. If you don’t understand a word, you can figure it out by using its stems.

You can put words together. Knowing stems can help your spelling. You can create words, too. Some authors create their own words instead of using random sounds. They use stems to help clue their readers into what they mean. Sometimes these words are adopted into everyday use. Some famous wordsmiths are: William Shakespeare, Edgar Allan Poe, Charles Dickens, and Ben Franklin.

## Word Within the Word Activity 1

Use this space to copy your notes on Stems: Some important things to know about Greek and Latin stems.

Where do you find stems in the word?

How do you study for this?

Why do you need to know this?

**Connections to my writing.** List at least five words that contain these stems. Use them in when you write.

**Connections to my reading:** as you read be aware of the words in your book. Write down at least three words that have these stems in them and define them?
