The Key to Theosophy

Dedicated by "H. P. B. " To all her Pupils,
That They may Learn and Teach in their turn.

The Key to Theosophy
A Clear Exposition
in the Form of Question and Answer
of the Ethics, Science, and Philosophy
for the Study of Which
The Theosophical Society has been Founded.

H. P. Blavatsky

Preface

The purpose of this book is exactly expressed in its title, The Key to Theosophy, and needs but few words of explanation. It is not a complete or exhaustive textbook of Theosophy, but only a key to unlock the door that leads to the deeper study. It traces the broad outlines of the Wisdom-Religion, and explains its fundamental principles; meeting, at the same time, the various objections raised by the average Western inquirer, and endeavoring to present unfamiliar concepts in a form as simple and in language as clear as possible. That it should succeed in making Theosophy intelligible without mental effort on the part of the reader, would be too much to expect; but it is hoped that the obscurity still left is of the thought and not of the language, is due to depth and not to confusion. To the mentally lazy or obtuse, Theosophy must remain a riddle; for in the world mental as in the world spiritual each man must progress by his own efforts. The writer cannot do the reader's thinking for him, nor would the latter be any the better off if such vicarious thought were possible. The need for such an exposition as the present has long been felt among those interested in the Theosophical Society and its work, and it is hoped that it will supply information, as free as possible from technicalities, to many whose attention has been awakened, but who, as yet, are merely puzzled and not convinced.

Some care has been taken in disentangling some part of what is true from what is false in Spiritualistic teachings as to the postmortem life, and to showing the true nature of Spiritualistic phenomena. Previous explanations of a similar kind have drawn much wrath upon the writer's devoted head; the Spiritualists, like too many others, preferring to believe what is pleasant rather than what is true, and becoming very angry with anyone who destroys an agreeable delusion. For the past year Theosophy has been the target for every poisoned arrow of Spiritualism, as though the possessors of a half truth felt more antagonism to the possessors of the whole truth than those who had no share to boast of.

Very hearty thanks are due from the author to many Theosophists who have sent suggestions and questions, or have otherwise contributed help during the writing of this book. The work will be the more useful for their aid, and that will be their best reward.

-H. P. Blavatsky

Theosophy and The Theosophical Society

The Meaning of the Name

Q. Theosophy and its doctrines are often referred to as a newfangled religion. Is it a religion?

A. It is not. Theosophy is Divine Knowledge or Science.

Q. What is the real meaning of the term?

A. "Divine Wisdom," (Theosophia) or Wisdom of the gods, as (theogonia), genealogy of the gods. The word 'theos' means a god in Greek, one of the divine beings, certainly not "God" in the sense attached in our day to the term. Therefore, it is not "Wisdom of God," as translated by some, but Divine Wisdom such as that possessed by the gods. The term is many thousand years old.

Q. What is the origin of the name?

A. It comes to us from the Alexandrian philosophers, called lovers of truth, Philaletheians, from (phil) "loving," and (aletheia) "truth." The name

The Key To Theosophy - HP Blavatsky.txt

Theosophy dates from the third century of our era, and began with Ammonius Saccas and his disciples, also called Analogeticists, who started the Eclectic Theosophical system.

As explained by Professor Wilder, they were called so because of their practice of interpreting all sacred legends and narratives, myths and mysteries, by a rule or principle of analogy and correspondence: so that events which were related as having occurred in the external world were regarded as expressing operations and experiences of the human soul. They were also denominated Neo-Platonists. Though Theosophy, or the Eclectic Theosophical system, is generally attributed to the third century, yet, if Diogenes Laërtius is to be credited, its origin is much earlier, as he attributed the system to an Egyptian priest, Pot-Amun, who lived in the early days of the Ptolemaic dynasty. The same author tells us that the name is Coptic, and signifies one consecrated to Amun, the God of Wisdom. Theosophy is the equivalent of Brahma-Vidya, divine knowledge.

Q. What was the object of this system?

A. First of all to inculcate certain great moral truths upon its disciples, and all those who were "lovers of the truth." Hence the motto adopted by the Theosophical Society: "There is no religion higher than truth."

Eclectic Theosophy was divided under three heads:

1. Belief in one absolute, incomprehensible and supreme Deity, or infinite essence, which is the root of all nature, and of all that is, visible and invisible.
2. Belief in man's eternal immortal nature, because, being a radiation of the Universal Soul, it is of an identical essence with it.
3. Theurgy, or "divine work," or producing a work of gods; from theoi, "gods," and ergein, "to work."

The term is very old, but, as it belongs to the vocabulary of the mysteries, was not in popular use. It was a mystic belief-practically proven by initiated adepts and priests-that, by making oneself as pure as the incorporeal beings-i. e., by returning to one's pristine purity of nature-man could move the gods to impart to him Divine mysteries, and even cause them to become occasionally visible, either subjectively or objectively. It was the transcendental aspect of what is now called Spiritualism; but having been abused and misconceived by the populace, it had come to be regarded by some as necromancy, and was generally forbidden. A travestied practice of the theurgy of Iamblichus lingers still in the ceremonial magic of some modern Cabalists. Modern Theosophy avoids and rejects both these kinds of magic and "necromancy" as being very dangerous. Real divine theurgy requires an almost superhuman purity and holiness of life; otherwise it degenerates into mediumship or black magic. The immediate disciples of Ammonius Saccas, who was called Theodidaktos, "god-taught"-such as Plotinus and his follower Porphyry-rejected theurgy at first, but were finally reconciled to it through Iamblichus, who wrote a work to that effect entitled De Mysteriis, under the name of his own master, a famous Egyptian priest called Abammon. Ammonius Saccas was the son of Christian parents, and, having been repelled by dogmatic Spiritualistic Christianity from his childhood, became a Neo-Platonist, and like J. Boëhme and other great seers and mystics, is said to have had divine wisdom revealed to him in dreams and visions. Hence his name of Theodidaktos. He resolved to reconcile every system of religion, and by demonstrating their identical origin to establish one universal creed based on ethics. His life was so blameless and pure, his learning so profound and vast, that several Church Fathers were his secret disciples. Clemens Alexandrinus speaks very highly of him. Plotinus, the "St. John" of Ammonius, was also a man universally respected and esteemed, and of the most profound learning and integrity. When thirty-nine years of age he

The Key To Theosophy - HP Blavatsky.txt

accompanied the Roman Emperor Gordian and his army to the East, to be instructed by the sages of Bactria and India. He had a School of Philosophy in Rome. Porphyry, his disciple, whose real name was Malek (a Hellenized Jew), collected all the writings of his master. Porphyry was himself a great author, and gave an allegorical interpretation to some parts of Homer's writings. The system of meditation the Philaletheians resorted to was ecstasy, a system akin to Indian Yoga practice. What is known of the Eclectic School is due to Origen, Longinus, and Plotinus, the immediate disciples of Ammonius.

The chief aim of the Founders of the Eclectic Theosophical School was one of the three objects of its modern successor, the Theosophical Society, namely, to reconcile all religions, sects, and nations under a common system of ethics, based on eternal verities.

Q. What have you to show that this is not an impossible dream; and that all the world's religions are based on the one and the same truth?

A. Their comparative study and analysis. The "Wisdom-Religion" was one in antiquity; and the sameness of primitive religious philosophy is proven to us by the identical doctrines taught to the Initiates during the mysteries, an institution once universally diffused.

All the old worships indicate the existence of a single Theosophy anterior to them. The key that is to open one must open all; otherwise it cannot be the right key.

- o0o-

The Policy of the Theosophical Society

Q. In the days of Ammonius there were several ancient great religions, and numerous were the sects in Egypt and Palestine alone. How could he reconcile them?

A. By doing that which we again try to do now. The Neo-Platonists were a large body, and belonged to various religious philosophies; so do our Theosophists.

It was under Philadelphus that Judaism established itself in Alexandria, and forthwith the Hellenic teachers became the dangerous rivals of the College of Rabbis of Babylon. As the author of The Eclectic Philosophy very pertinently remarks:

The Buddhist, Vedantic, and Magian systems were expounded along with the philosophies of Greece at that period. It was not wonderful that thoughtful men supposed that the strife of words ought to cease, and considered it possible to extract one harmonious system from these various teachings ... Panaetius, Athenagoras, and Clement were thoroughly instructed in Platonic philosophy, and comprehended its essential unity with the Oriental systems.

In those days, the Jew Aristobulus affirmed that the ethics of Aristotle represented the esoteric teachings of the Law of Moses; Philo Judaeus endeavored to reconcile the Pentateuch with the Pythagorean and Platonic philosophy; and Josephus proved that the Essenes of Carmel were simply the copyists and followers of the Egyptian Therapeutae (the healers). So it is in our day. We can show the line of descent of every Christian religion, as of every, even the smallest, sect. The latter are the minor twigs or shoots grown on the larger branches; but shoots and branches spring from the same trunk-the wisdom-religion. To prove this was the aim of Ammonius, who endeavored to induce Gentiles and Christians, Jews and Idolaters, to lay aside their contention and strife, remembering only that they were all in possession of the same truth under various vestments, and were all the children of a common mother. This is the aim of Theosophy likewise.

The Key To Theosophy - HP Blavatsky.txt

Says Mosheim of Ammonius:

Conceiving that not only the philosophers of Greece, but also all those of the different barbarian nations, were perfectly in unison with each other with regard to every essential point, he made it his business so to expound the thousand tenets of all these various sects as to show they had all originated from one and the same source, and tended all to one and the same end.

If the writer on Ammonius in the Edinburgh Encyclopedia knows what he is talking about, then he describes the modern Theosophists, their beliefs, and their work, for he says, speaking of the Theodidaktos:

He adopted the doctrines which were received in Egypt (the esoteric were those of India) concerning the Universe and the Deity, considered as constituting one great whole; concerning the eternity of the world ... and established a system of moral discipline which allowed the people in general to live according to the laws of their country and the dictates of nature, but required the wise to exalt their mind by contemplation.

Q. What is your authority for saying this of the ancient Theosophists of Alexandria?

A. An almost countless number of well-known writers. Mosheim, one of them, says that:

Ammonius taught that the religion of the multitude went hand-in-hand with philosophy, and with her had shared the fate of being by degrees corrupted and obscured with mere human conceits, superstitions, and lies; that it ought, therefore, to be brought back to its original purity by purging it of this dross and expounding it upon philosophical principles; and the whole Christ had in view was to reinstate and restore to its primitive integrity the wisdom of the ancients; to reduce within bounds the universally-prevailing dominion of superstition; and in part to correct, and in part to exterminate the various errors that had found their way into the different popular religions.

This, again, is precisely what the modern Theosophists say. Only while the great Philaletheian was supported and helped in the policy he pursued by two Church Fathers, Clement and Athenagoras, by all the learned Rabbis of the Synagogue, the Academy and the Groves, and while he taught a common doctrine for all, we, his followers on the same line, receive no recognition, but, on the contrary, are abused and persecuted. People 1,500 years ago are thus shown to have been more tolerant than they are in this enlightened century.

Q. Was he encouraged and supported by the Church because, notwithstanding his heresies, Ammonius taught Christianity and was a Christian?

A. Not at all. He was born a Christian, but never accepted Church Christianity. As said of him by the same writer:

He had but to propound his instructions according to the ancient pillars of Hermes, which Plato and Pythagoras knew before, and from them constituted their philosophy. Finding the same in the prologue of the Gospel according to St. John, he very properly supposed that the purpose of Jesus was to restore the great doctrine of wisdom in its primitive integrity. The narratives of the Bible and the stories of the gods he considered to be allegories illustrative of the truth, or else fables to be rejected. As says the Edinburgh Encyclopedia:

Moreover, he acknowledged that Jesus Christ was an excellent man and the "friend of God," but alleged that it was not his design entirely to abolish the worship of demons (gods), and that his only intention was to purify the

ancient religion.

- o0o-

The Wisdom-Religion, Esoteric in All Ages

Q. Since Ammonius never committed anything to writing, how can one feel sure that such were his teachings?

A. Neither did Buddha, Pythagoras, Confucius, Orpheus, Socrates, or even Jesus, leave behind them any writings. Yet most of these are historical personages, and their teachings have all survived. The disciples of Ammonius (among whom Origen and Herennius) wrote treatises and explained his ethics. Certainly the latter are as historical, if not more so, than the Apostolic writings. Moreover, his pupils-Origen, Plotinus, and Longinus (counselor of the famous Queen Zenobia)-have all left voluminous records of the Philaletheian System-so far, at all events, as their public profession of faith was known, for the school was divided into exoteric and esoteric teachings.

Q. How have the latter tenets reached our day, since you hold that what is properly called the wisdom-religion was esoteric?

A. The wisdom-religion was ever one, and being the last word of possible human knowledge, was, therefore, carefully preserved. It preceded by long ages the Alexandrian Theosophists, reached the modern, and will survive every other religion and philosophy.

Q. Where and by whom was it so preserved?

A. Among Initiates of every country; among profound seekers after truth-their disciples; and in those parts of the world where such topics have always been most valued and pursued: in India, Central Asia, and Persia.

Q. Can you give me some proofs of its esotericism?

A. The best proof you can have of the fact is that every ancient religious, or rather philosophical, cult consisted of an esoteric or secret teaching, and an exoteric (outward public) worship. Furthermore, it is a well-known fact that the mysteries of the ancients comprised with every nation the "greater" (secret) and "Lesser" (public) mysteries-e.g., in the celebrated solemnities called the Eleusinia, in Greece. From the Hierophants of Samothrace, Egypt, and the initiated Brahmins of the India of old, down to the later Hebrew Rabbis, all preserved, for fear of profanation, their real bona fide beliefs secret. The Jewish Rabbis called their secular religious series the Merkabah (the exterior body), "the vehicle," or, the covering which contains the hidden soul-i.e., their highest secret knowledge. Not one of the ancient nations ever imparted through its priests its real philosophical secrets to the masses, but allotted to the latter only the husks. Northern Buddhism has its "greater" and its "lesser" vehicle, known as the Mahayana, the esoteric, and the Hinayana, the exoteric, Schools. Nor can you blame them for such secrecy; for surely you would not think of feeding your flock of sheep on learned dissertations on botany instead of on grass? Pythagoras called his Gnosis "the knowledge of things that are," or [translit. Greek] "he gnosis ton onton" and preserved that knowledge for his pledged disciples only: for those who could digest such mental food and feel satisfied; and he pledged them to silence and secrecy. Occult alphabets and secret ciphers are the development of the old Egyptian hieratic writings, the secret of which was, in the days of old, in the possession only of the Hierogrammatists, or initiated Egyptian priests. Ammonius Saccas, as his biographers tell us, bound his pupils by oath not to divulge his higher doctrines except to those who had already been instructed in preliminary knowledge, and who were also bound by a pledge. Finally, do we not find the

same even in early Christianity, among the Gnostics, and even in the teachings of Christ? Did he not speak to the multitudes in parables which had a two-fold meaning, and explain his reasons only to his disciples? He says:

To you it is given to know the mysteries of the kingdom of heaven; but unto them that are without, all these things are done in parables

The Essenes of Judea and Carmel made similar distinctions, dividing their adherents into neophytes, brethren, and the perfect, or those initiated.

Examples might be brought from every country to this effect.

Q. Can you attain the "Secret Wisdom" simply by study? Encyclopedias define Theosophy pretty much as Webster's Dictionary does, i. e., as

... supposed intercourse with God and superior spirits, and consequent attainment of superhuman knowledge by physical means and chemical processes.

Is this so?

A. I think not. Nor is there any lexicographer capable of explaining, whether to himself or others, how superhuman knowledge can be attained by physical or chemical processes. Had Webster said "by metaphysical and alchemical processes," the definition would be approximately correct: as it is, it is absurd. Ancient Theosophists claimed, and so do the modern, that the infinite cannot be known by the finite-i. e., sensed by the finite Self-but that the divine essence could be communicated to the higher Spiritual Self in a state of ecstasy. This condition can hardly be attained, like hypnotism, by "physical and chemical means."

Q. What is your explanation of it?

A. Real ecstasy was defined by Plotinus as "the liberation of the mind from its finite consciousness, becoming one and identified with the infinite." This is the highest condition, says Professor Wilder, but not one of permanent duration, and it is reached only by the very, very few. It is, indeed, identical with that state which is known in India as Samadhi. The latter is practiced by the Yogis, who facilitate it physically by the greatest abstinence in food and drink, and mentally by an incessant endeavor to purify and elevate the mind. Meditation is silent and unuttered prayer, or, as Plato expressed it,

... the ardent turning of the soul toward the divine; not to ask any particular good (as in the common meaning of prayer), but for good itself-for the universal Supreme Good ...

-of which we are a part on earth, and out of the essence of which we have all emerged. Therefore, adds Plato,

Remain silent in the presence of the divine ones, till they remove the clouds from thy eyes and enable thee to see by the light which issues from themselves, not what appears as good to thee, but what is intrinsically good.

This is what the scholarly author of The Eclectic Philosophy, Professor Alexander Wilder, F. T. S., describes as "spiritual photography":

The soul is the camera in which facts and events, future, past, and present, are alike fixed; and the mind becomes conscious of them. Beyond our everyday world of limits all is one day or state-the past and future comprised in the present. ... Death is the last ecstasis on earth. Then the soul is freed from the constraint of the body, and its nobler part is united to higher nature and becomes partaker in the wisdom and foreknowledge of the higher beings.

The Key To Theosophy - HP Blavatsky.txt

Real Theosophy is, for the mystics, that state which Apollonius of Tyana was made to describe thus:

I can see the present and the future as in a clear mirror. The sage need not wait for the vapors of the earth and the corruption of the air to foresee events ... The theoi, or gods, see the future; common men the present, sages that which is about to take place.

"The Theosophy of the Sages" he speaks of is well expressed in the assertion, "The Kingdom of God is within us."

Q. Theosophy, then, is not, as held by some, a newly devised scheme?

A. Only ignorant people can thus refer to it. It is as old as the world, in its teachings and ethics, if not in name, as it is also the broadest and most catholic system among all.

Q. How comes it, then, that Theosophy has remained so unknown to the nations of the Western Hemisphere? Why should it have been a sealed book to races confessedly the most cultured and advanced?

A. We believe there were nations as cultured in days of old and certainly more spiritually "advanced" than we are. But there are several reasons for this willing ignorance. One of them was given by St. Paul to the cultured Athenians—a loss, for long centuries, of real spiritual insight, and even interest, owing to their too great devotion to things of sense and their long slavery to the dead letter of dogma and ritualism. But the strongest reason for it lies in the fact that real Theosophy has ever been kept secret.

Q. You have brought forward proofs that such secrecy has existed; but what was the real cause for it?

A. The causes for it were:

1. The perversity of average human nature and its selfishness, always tending to the gratification of personal desires to the detriment of neighbors and next of kin. Such people could never be entrusted with divine secrets.

2. Their unreliability to keep the sacred and divine knowledge from desecration. It is the latter that led to the perversion of the most sublime truths and symbols, and to the gradual transformation of things spiritual into anthropomorphic, concrete, and gross imagery—in other words, to the dwarfing of the god-idea and to idolatry.

- oOo-

Theosophy is Not Buddhism

Q. You are often spoken of as "Esoteric Buddhists." Are you then all followers of Gautama Buddha?

A. No more than musicians are all followers of Wagner. Some of us are Buddhists by religion; yet there are far more Hindus and Brahmins than Buddhists among us, and more Christian-born Europeans and Americans than converted Buddhists. The mistake has arisen from a misunderstanding of the real meaning of the title of Mr. Sinnett's excellent work, Esoteric Buddhism, which last word ought to have been spelt with one, instead of two, d's, as then Buddhism would have meant what it was intended for, merely "Wisdom-ism" (Bodha, bodhi, "intelligence," "wisdom") instead of Buddhism, Gautama's religious philosophy. Theosophy, as already said, is the wisdom-religion.

The Key To Theosophy - HP Blavatsky.txt

Q. What is the difference between Buddhism, the religion founded by the Prince of Kapilavastu, and Buddhism, the "Wisdomism" which you say is synonymous with Theosophy?

A. Just the same difference as there is between the secret teachings of Christ, which are called "the mysteries of the Kingdom of Heaven," and the later ritualism and dogmatic theology of the Churches and Sects. Buddha means the "Enlightened" by Bodha, or understanding, Wisdom. This has passed root and branch into the esoteric teachings that Gautama imparted to his chosen Arhats only.

Q. But some Orientalists deny that Buddha ever taught any esoteric doctrine at all?

A. They may as well deny that Nature has any hidden secrets for the men of science. Further on I will prove it by Buddha's conversation with his disciple Ananda. His esoteric teachings were simply the Gupta-Vidya (secret knowledge) of the ancient Brahmans, the key to which their modern successors have, with few exceptions, completely lost. And this Vidya has passed into what is now known as the inner teachings of the Mahayana school of Northern Buddhism. Those who deny it are simply ignorant pretenders to Orientalism. I advise you to read the Rev. Mr. Edkin's Chinese Buddhism-especially the chapters on the Exoteric and Esoteric schools and teachings-and then compare the testimony of the whole ancient world upon the subject.

Q. But are not the ethics of Theosophy identical with those taught by Buddha?

A. Certainly, because these ethics are the soul of the Wisdom-Religion, and were once the common property of the initiates of all nations. But Buddha was the first to embody these lofty ethics in his public teachings, and to make them the foundation and the very essence of his public system. It is herein that lies the immense difference between exoteric Buddhism and every other religion. For while in other religions ritualism and dogma hold the first and most important place, in Buddhism it is the ethics which have always been the most insisted upon. This accounts for the resemblance, amounting almost to identity, between the ethics of Theosophy and those of the religion of Buddha.

Q. Are there any great points of difference?

A. One great distinction between Theosophy and exoteric Buddhism is that the latter, represented by the Southern Church, entirely denies (a) the existence of any Deity, and (b) any conscious postmortem life, or even any self-conscious surviving individuality in man. Such at least is the teaching of the Siamese sect, now considered as the purest form of exoteric Buddhism. And it is so, if we refer only to Buddha's public teachings; the reason for such reticence on his part I will give further on. But the schools of the Northern Buddhist Church, established in those countries to which his initiated Arhats retired after the Master's death, teach all that is now called Theosophical doctrines, because they form part of the knowledge of the initiates-thus proving how the truth has been sacrificed to the dead-letter by the too-zealous orthodoxy of Southern Buddhism. But how much grander and more noble, more philosophical and scientific, even in its dead-letter, is this teaching than that of any other Church or religion. Yet Theosophy is not Buddhism.

Exoteric and Esoteric Theosophy

What the Modern Theosophical Society is Not

Q. Your doctrines, then, are not a revival of Buddhism, nor are they entirely copied from the Neo-Platonic Theosophy?

The Key To Theosophy - HP Blavatsky.txt

A. They are not. But to these questions I cannot give you a better answer than by quoting from a paper read on "Theosophy" by Dr. J. D. Buck, F. T. S., No living Theosophist has better expressed and understood the real essence of Theosophy than our honored friend Dr. Buck:

The Theosophical Society was organized for the purpose of promulgating the Theosophical doctrines, and for the promotion of the Theosophic life. The present Theosophical Society is not the first of its kind. I have a volume entitled: Theosophical Transactions of the Philadelphian Society, published in London in 1697; and another with the following title:

Introduction to Theosophy, or the Science of the Mystery of Christ; that is, of Deity, Nature, and Creature, embracing the philosophy of all the working powers of life, magical and spiritual, and forming a practical guide to the most sublime purity, sanctity, and evangelical perfection; also to the attainment of divine vision, and the holy angelic arts, potencies, and other prerogatives of the regeneration.

-published in London in 1855. The following is the dedication of this volume:

To the students of Universities, Colleges, and schools of Christendom: To Professors of Metaphysical, Mechanical, and Natural Science in all its forms: To men and women of Education generally, of fundamental orthodox faith: To Deists, Arians, Unitarians, Swedenborgians, and other defective and ungrounded creeds, rationalists, and skeptics of every kind: To just-minded and enlightened Mohammedans, Jews, and oriental Patriarch-religionists: but especially to the gospel minister and missionary, whether to the barbaric or intellectual peoples, this introduction to Theosophy, or the science of the ground and mystery of all things, is most humbly and affectionately dedicated.

In the following year (1856) another volume was issued, royal octavo, of 600 pages, diamond type, of Theosophical Miscellanies. Of the last-named work 500 copies only were issued, for gratuitous distribution to Libraries and Universities. These earlier movements, of which there were many, originated within the Church, with persons of great piety and earnestness, and of unblemished character; and all of these writings were in orthodox form, using

the Christian expressions, and, like the writings of the eminent Churchman

William Law, would only be distinguished by the ordinary reader for their great earnestness and piety. These were one and all but attempts to derive and explain the deeper meanings and original import of the Christian Scriptures, and to illustrate and unfold the Theosophic life. These works were soon forgotten, and are now generally unknown. They sought to reform the clergy and revive genuine piety, and were never welcomed. That one word, Heresy, was sufficient to bury them in the limbo of all such Utopias. At the time of the Reformation John Reuchlin made a similar attempt with the same result, though he was the intimate and trusted friend of Luther. Orthodoxy never desired to be informed and enlightened. These reformers were informed, as was Paul by Festus, that too much learning had made them mad, and that it would be dangerous to go farther. Passing by the verbiage, which was partly a matter of habit and education with these writers, and partly due to religious restraint through secular power, and coming to the core of the matter, these writings were Theosophical in the strictest sense, and pertain solely to man's knowledge of his own nature and the higher life of the soul. The present Theosophical Movement has sometimes been declared to be an

The Key To Theosophy - HP Blavatsky.txt

attempt to convert Christendom to Buddhism, which means simply that the word Heresy has lost its terrors and relinquished its power. Individuals in every age have more or less clearly apprehended the Theosophical doctrines and wrought them into the fabric of their lives. These doctrines belong exclusively to no religion, and are confined to no society or time. They are the birthright of every human soul. Such a thing as orthodoxy must be wrought out by each individual according to his nature and his needs, and according to his varying experience. This may explain why those who have imagined Theosophy to be a new religion have hunted in vain for its creed and its ritual. Its creed is Loyalty to Truth, and its ritual "To honor every truth by use."

How little this principle of Universal Brotherhood is understood by the masses of mankind, how seldom its transcendent importance is recognized, may be seen in the diversity of opinion and fictitious interpretations regarding the Theosophical Society. This Society was organized on this one principle, the essential Brotherhood of Man, as herein briefly outlined and imperfectly set forth. It has been assailed as Buddhist and anti-Christian, as though it could be both these together, when both Buddhism and Christianity, as set forth by their inspired founders, make brotherhood the one essential of doctrine and of life. Theosophy has been also regarded as something new under the sun, or, at best as old mysticism masquerading under a new name. While it is true that many Societies founded upon, and united to support, the principles of altruism, or essential brotherhood, have borne various names, it is also true that many have also been called Theosophic, and with principles and aims as the present society bearing that name. With these societies, one and all, the essential doctrine has been the same, and all else has been incidental, though this does not obviate the fact that many persons are attracted to the incidentals who overlook or ignore the essentials.

No better or more explicit answer-by a man who is one of our most esteemed and earnest Theosophists-could be given to your questions.

Q. Which system do you prefer or follow, in that case, besides Buddhist ethics?

A. None, and all. We hold to no religion, as to no philosophy in particular: we cull the good we find in each. But here, again, it must be stated that, like all other ancient systems, Theosophy is divided into Exoteric and Esoteric Sections.

Q. What is the difference?

A. The members of the Theosophical Society at large are free to profess whatever religion or philosophy they like, or none if they so prefer, provided they are in sympathy with, and ready to carry out one or more of the three objects of the Association. The Society is a philanthropic and scientific body for the propagation of the idea of brotherhood on practical instead of theoretical lines. The Fellows may be Christians or Muslims, Jews or Parsees, Buddhists or Brahmins, Spiritualists or Materialists, it does not matter; but every member must be either a philanthropist, or a scholar, a searcher into ryan and other old literature, or a psychic student. In short, he has to help, if he can, in the carrying out of at least one of the objects of the program. Otherwise he has no reason for becoming a "Fellow." Such are the majority of the exoteric Society, composed of "attached" and "unattached" members. These may, or may not, become Theosophists de facto. Members they are, by virtue of their having joined the Society; but the latter cannot make a Theosophist of one who has no sense for the divine fitness of things, or of him who understands Theosophy in his own-if the expression may be used-sectarian and egotistic way. "Handsome is, as handsome does" could be paraphrased in this case and be made to run: "Theosophist is, who Theosophy does."

Theosophists and Members of the T. S.

Q. This applies to lay members, as I understand. And what of those who pursue the esoteric study of Theosophy; are they the real Theosophists?

A. Not necessarily, until they have proven themselves to be such. They have entered the inner group and pledged themselves to carry out, as strictly as they can, the rules of the occult body. This is a difficult undertaking, as the foremost rule of all is the entire renunciation of one's personality-i. e., a pledged member has to become a thorough altruist, never to think of himself, and to forget his own vanity and pride in the thought of the good of his fellow-creatures, besides that of his fellow-brothers in the esoteric circle. He has to live, if the esoteric instructions shall profit him, a life of abstinence in everything, of self-denial and strict morality, doing his duty by all men. The few real Theosophists in the T. S. are among these members.

A. This does not imply that outside of the T. S. and the inner circle, there are no Theosophists; for there are, and more than people know of; certainly far more than are found among the lay members of the T. S.

Q. Then what is the good of joining the so-called Theosophical Society in that case? Where is the incentive?

A. None, except the advantage of getting esoteric instructions, the genuine doctrines of the "Wisdom-Religion," and if the real program is carried out, deriving much help from mutual aid and sympathy. Union is strength and harmony, and well-regulated simultaneous efforts produce wonders. This has been the secret of all associations and communities since mankind existed.

Q. But why could not a man of well-balanced mind and singleness of purpose, one, say, of indomitable energy and perseverance, become an Occultist and even an Adept if he works alone?

A. He may; but there are ten thousand chances against one that he will fail. For one reason out of many others, no books on Occultism or Theurgy exist in our day which give out the secrets of alchemy or medieval Theosophy in plain language. All are symbolical or in parables; and as the key to these has been lost for ages in the West, how can a man learn the correct meaning of what he is reading and studying? Therein lies the greatest danger, one that leads to unconscious black magic or the most helpless mediumship. He who has not an Initiate for a master had better leave the dangerous study alone. Look around you and observe. While two-thirds of civilized society ridicule the mere notion that there is anything in Theosophy, Occultism, Spiritualism, or in the Cabala, the other third is composed of the most heterogeneous and opposite elements. Some believe in the mystical, and even in the supernatural (!), but each believes in his own way. Others will rush single-handed into the study of the Cabala, Psychism, Mesmerism, Spiritualism, or some form or another of Mysticism. Result: no two men think alike, no two are agreed upon any fundamental occult principles, though many are those who claim for themselves the ultima thule of knowledge, and would make outsiders believe that they are full-blown adepts. Not only is there no scientific and accurate knowledge of Occultism accessible in the West-not even of true astrology, the only branch of Occultism which, in its exoteric teachings, has definite laws and a definite system-but no one has any idea of what real Occultism means. Some limit ancient wisdom to the Cabala and the Jewish Zohar, which each interprets in his own way according to the dead-letter of the Rabbinical methods. Others regard Swedenborg or Boëhne as the ultimate expressions of the highest wisdom; while others again see in mesmerism the great secret of ancient magic. One and all of those who put their theory into practice are rapidly drifting, through ignorance, into black magic. Happy are those who escape from it, as they have neither test

nor criterion by which they can distinguish between the true and the false.

Q. Are we to understand that the inner group of the T.S. claims to learn what it does from real initiates or masters of esoteric wisdom?

A. Not directly. The personal presence of such masters is not required. Suffice it if they give instructions to some of those who have studied under their guidance for years, and devoted their whole lives to their service. Then, in turn, these can give out the knowledge so imparted to others, who had no such opportunity. A portion of the true sciences is better than a mass of undigested and misunderstood learning. An ounce of gold is worth a ton of dust.

Q. But how is one to know whether the ounce is real gold or only a counterfeit?

A. A tree is known by its fruit, a system by its results. When our opponents are able to prove to us that any solitary student of Occultism throughout the ages has become a saintly adept like Ammonius Saccas, or even a Plotinus, or a Theurgist like Iamblichus, or achieved feats such as are claimed to have been done by St. Germain, without any master to guide him, and all this without being a medium, a self-deluded psychic, or a charlatan-then shall we confess ourselves mistaken. But till then, Theosophists prefer to follow the proven natural law of the tradition of the Sacred Science. There are mystics who have made great discoveries in chemistry and physical sciences, almost bordering on alchemy and Occultism; others who, by the sole aid of their genius, have rediscovered portions, if not the whole, of the lost alphabets of the "Mystery language," and are, therefore, able to read correctly Hebrew scrolls; others still, who, being seers, have caught wonderful glimpses of the hidden secrets of Nature. But all these are specialists. One is a theoretical inventor, another a Hebrew, i. e., a Sectarian Cabalist, a third a Swedenborg of modern times, denying all and everything outside of his own particular science or religion. Not one of them can boast of having produced a universal or even a national benefit thereby, not even to himself. With the exception of a few healers-of that class which the Royal College of Physicians or Surgeons would call quacks-none have helped with their science Humanity, nor even a number of men of the same community. Where are the Chaldeans of old, those who wrought marvelous cures, "not by charms but by simples"? Where is an Apollonius of Tyana, who healed the sick and raised the dead under any climate and circumstances? We know some specialists of the former class in Europe, but none of the latter-except in Asia, where the secret of the Yogi, "to live in death," is still preserved.

Q. Is the production of such healing adepts the aim of Theosophy?

A. Its aims are several; but the most important of all are those which are likely to lead to the relief of human suffering under any or every form, moral as well as physical. And we believe the former to be far more important than the latter. Theosophy has to inculcate ethics; it has to purify the soul, if it would relieve the physical body, whose ailments, save cases of accidents, are all hereditary. It is not by studying Occultism for selfish ends, for the gratification of one's personal ambition, pride, or vanity, that one can ever reach the true goal: that of helping suffering mankind. Nor is it by studying one single branch of the esoteric philosophy that a man becomes an Occultist, but by studying, if not mastering, them all.

Q. Is help, then, to reach this most important aim, given only to those who study the esoteric sciences?

A. Not at all. Every lay member is entitled to general instruction if he only wants it; but few are willing to become what is called "working members," and most prefer to remain the drones of Theosophy. Let it be

understood that private research is encouraged in the T.S., provided it does not infringe the limit which separates the exoteric from the esoteric, the blind from the conscious magic.

- o0o-

The Difference Between Theosophy and Occultism

Q. You speak of Theosophy and Occultism; are they identical?

A. By no means. A man may be a very good Theosophist indeed, whether in or outside of the Society, without being in any way an Occultist. But no one can be a true Occultist without being a real Theosophist; otherwise he is simply a black magician, whether conscious or unconscious.

Q. What do you mean?

A. I have said already that a true Theosophist must put in practice the loftiest moral ideal, must strive to realize his unity with the whole of humanity, and work ceaselessly for others. Now, if an Occultist does not do all this, he must act selfishly for his own personal benefit; and if he has acquired more practical power than other ordinary men, he becomes forthwith a far more dangerous enemy to the world and those around him than the average mortal. This is clear.

Q. Then is an Occultist simply a man who possesses more power than other people?

A. Far more-if he is a practical and really learned Occultist, and not one only in name. Occult sciences are not, as described in Encyclopedias,

... those imaginary sciences of the Middle Ages which related to the supposed action or influence of Occult qualities or supernatural powers, as alchemy, magic, necromancy, and astrology ...

-for they are real, actual, and very dangerous sciences. They teach the secret potency of things in Nature, developing and cultivating the hidden powers "latent in man," thus giving him tremendous advantages over more ignorant mortals. Hypnotism, now become so common and a subject of serious scientific inquiry, is a good instance in point. Hypnotic power has been discovered almost by accident, the way to it having been prepared by mesmerism; and now an able hypnotist can do almost anything with it, from forcing a man, unconsciously to himself, to play the fool, to making him commit a crime-often by proxy for the hypnotist, and for the benefit of the latter. Is not this a terrible power if left in the hands of unscrupulous persons? And please to remember that this is only one of the minor branches of Occultism.

Q. But are not all these Occult sciences, magic, and sorcery, considered by the most cultured and learned people as relics of ancient ignorance and superstition?

A. Let me remind you that this remark of yours cuts both ways. The "most cultured and learned" among you regard also Christianity and every other religion as a relic of ignorance and superstition. People begin to believe now, at any rate, in hypnotism, and some-even of the most cultured-in Theosophy and phenomena. But who among them, except preachers and blind fanatics, will confess to a belief in Biblical miracles? And this is where the point of difference comes in. There are very good and pure Theosophists who may believe in the supernatural, divine miracles included, but no Occultist will do so. For an Occultist practices scientific Theosophy, based on accurate knowledge of Nature's secret workings; but a Theosophist, practicing the powers called abnormal, minus the light of Occultism, will simply tend toward a dangerous form of mediumship, because, although holding

to Theosophy and its highest conceivable code of ethics, he practices it in the dark, on sincere but blind faith. Anyone, Theosophist or Spiritualist, who attempts to cultivate one of the branches of Occult science-e.g., Hypnotism, Mesmerism, or even the secrets of producing physical phenomena, etc.-without the knowledge of the philosophic rationale of those powers, is like a rudderless boat launched on a stormy ocean.

- o0o-

The Difference Between Theosophy and Spiritualism

Q. But do you not believe in Spiritualism?

A. If by "Spiritualism" you mean the explanation which Spiritualists give of some abnormal phenomena, then decidedly we do not. They maintain that these manifestations are all produced by the "spirits" of departed mortals, generally their relatives, who return to earth, they say, to communicate with those they have loved or to whom they are attached. We deny this point blank. We assert that the spirits of the dead cannot return to earth-save in rare and exceptional cases, of which I may speak later; nor do they communicate with men except by entirely subjective means. That which does appear objectively, is only the phantom of the ex-physical man. But in psychic, and so to say, "Spiritual" Spiritualism, we do believe, most decidedly.

Q. Do you reject the phenomena also?

A. Assuredly not-save cases of conscious fraud.

Q. How do you account for them, then?

A. In many ways. The causes of such manifestations are by no means so simple as the Spiritualists would like to believe. Foremost of all, the *deus ex machina* of the so-called "materializations" is usually the astral body or "double" of the medium or of someone present. This astral body is also the producer or operating force in the manifestations of slate-writing, "Davenport"-like manifestations, and so on.

Q. You say usually-then what is it that produces the rest?

A. That depends on the nature of the manifestations. Sometimes the astral remains, the Kamalokic "shells" of the vanished personalities that were; at other times, Elementals. Spirit is a word of manifold and wide significance. I really do not know what Spiritualists mean by the term; but what we understand them to claim is that the physical phenomena are produced by the reincarnating Ego, the Spiritual and immortal "individuality." And this hypothesis we entirely reject. The Conscious Individuality of the disembodied cannot materialize, nor can it return from its own mental Devachanic sphere to the plane of terrestrial objectivity.

Q. But many of the communications received from the "spirits" show not only intelligence, but a knowledge of facts not known to the medium, and sometimes even not consciously present to the mind of the investigator, or any of those who compose the audience.

A. This does not necessarily prove that the intelligence and knowledge you speak of belong to spirits, or emanate from disembodied souls. Somnambulists have been known to compose music and poetry and to solve mathematical problems while in their trance state, without having ever learnt music or mathematics. Others, answered intelligently to questions put to them, and even, in several cases, spoke languages, such as Hebrew and Latin, of which they were entirely ignorant when awake-all this in a state of profound sleep. Will you, then, maintain that this was caused by "spirits"?

Q. But how would you explain it?

A. We assert that the divine spark in man being one and identical in its essence with the Universal Spirit, our "spiritual Self" is practically omniscient, but that it cannot manifest its knowledge owing to the impediments of matter. Now the more these impediments are removed, in other words, the more the physical body is paralyzed, as to its own independent activity and consciousness, as in deep sleep or deep trance, or, again, in illness, the more fully can the inner Self manifest on this plane. This is our explanation of those truly wonderful phenomena of a higher order, in which undeniable intelligence and knowledge are exhibited. As to the lower order of manifestations, such as physical phenomena and the platitudes and common talk of the general "spirit," to explain even the most important of the teachings we hold upon the subject would take up more space and time than can be allotted to it at present. We have no desire to interfere with the belief of the Spiritualists any more than with any other belief. The responsibility must fall on the believers in "spirits." And at the present moment, while still convinced that the higher sort of manifestations occur through the disembodied souls, their leaders and the most learned and intelligent among the Spiritualists are the first to confess that not all the phenomena are produced by spirits. Gradually they will come to recognize the whole truth; but meanwhile we have no right nor desire to proselytize them to our views. The less so, as in the cases of purely psychic and spiritual manifestations we believe in the intercommunication of the spirit of the living man with that of disembodied personalities.

We say that in such cases it is not the spirits of the dead who descend on earth, but the spirits of the living that ascend to the pure spiritual Souls. In truth there is neither ascending nor descending, but a change of state or condition for the medium. The body of the latter becoming paralyzed, or "entranced," the spiritual Ego is free from its trammels, and finds itself on the same plane of consciousness with the disembodied spirits. Hence, if there is any spiritual attraction between the two they can communicate, as often occurs in dreams. The difference between a mediumistic and a non-sensitive nature is this: the liberated spirit of a medium has the opportunity and facility of influencing the passive organs of its entranced physical body, to make them act, speak, and write at its will. The Ego can make it repeat, echo-like, and in the human language, the thoughts and ideas of the disembodied entity, as well as its own. But the non-receptive or non-sensitive organism of one who is very positive cannot be so influenced. Hence, although there is hardly a human being whose Ego does not hold free intercourse, during the sleep of his body, with those whom it loved and lost, yet, on account of the positiveness and non-receptivity of its physical envelope and brain, no recollection, or a very dim, dream-like remembrance, lingers in the memory of the person once awake.

Q. This means that you reject the philosophy of Spiritualism in toto?

A. If by "philosophy" you mean their crude theories, we do. But they have no philosophy, in truth. Their best, their most intellectual and earnest defenders say so. Their fundamental and only unimpeachable truth, namely, that phenomena occur through mediums controlled by invisible forces and intelligences-no one, except a blind materialist of the "Huxley big toe" school, will or can deny. With regard to their philosophy, however, let me read to you what the able editor of Light, than whom the Spiritualists will find no wiser nor more devoted champion, says of them and their philosophy.

This is what "M.A. Oxon," one of the very few philosophical Spiritualists, writes, with respect to their lack of organization and blind bigotry:

It is worthwhile to look steadily at this point, for it is of vital moment. We have an experience and a knowledge beside which all other knowledge is comparatively insignificant. The ordinary Spiritualist waxes wroth if anyone

The Key To Theosophy - HP Blavatsky.txt

ventures to impugn his assured knowledge of the future and his absolute certainty of the life to come. Where other men have stretched forth feeble hands groping into the dark future, he walks boldly as one who has a chart and knows his way. Where other men have stopped short at a pious aspiration or have been content with a hereditary faith, it is his boast that he knows what they only believe, and that out of his rich stores he can supplement the fading faiths built only upon hope. He is magnificent in his dealings with man's most cherished expectations. He seems to say:

You hope for that which I can demonstrate. You have accepted a traditional belief in what I can experimentally prove according to the strictest scientific method. The old beliefs are fading; come out from them and be separate. They contain as much falsehood as truth. Only by building on a sure foundation of demonstrated fact can your superstructure be stable. All round you old faiths are toppling. Avoid the crash and get you out.

When one comes to deal with this magnificent person in a practical way, what is the result? Very curious and very disappointing. He is so sure of his ground that he takes no trouble to ascertain the interpretation which others put upon his facts. The wisdom of the ages has concerned itself with the explanation of what he rightly regards as proven; but he does not turn a passing glance on its researches. He does not even agree altogether with his brother Spiritualist. It is the story over again of the old Scotch body who, together with her husband, formed a "kirk." They had exclusive keys to Heaven, or, rather, she had, for she was "na certain about Jamie." So the infinitely divided and subdivided and re-subdivided sects of Spiritualists shake their heads, and are "na certain about" one another. Again, the collective experience of mankind is solid and unvarying on this point that union is strength, and disunion a source of weakness and failure. Shoulder to shoulder, drilled and disciplined, a rabble becomes an army, each man a match for a hundred of the untrained men that may be brought against it. Organization in every department of man's work means success, saving of time and labor, profit and development. Want of method, want of plan, haphazard work, fitful energy, undisciplined effort—these mean bungling failure. The voice of humanity attests the truth. Does the Spiritualist accept the verdict and act on the conclusion? Verily, no. He refuses to organize. He is a law unto himself, and a thorn in the side of his neighbors.

Q. I was told that the Theosophical Society was originally founded to crush Spiritualism and belief in the survival of the individuality in man?

A. You are misinformed. Our beliefs are all founded on that immortal individuality. But then, like so many others, you confuse personality with individuality. Your Western psychologists do not seem to have established any clear distinction between the two. Yet it is precisely that difference which gives the keynote to the understanding of Eastern philosophy, and which lies at the root of the divergence between the Theosophical and Spiritualistic teachings. And though it may draw upon us still more the hostility of some Spiritualists, yet I must state here that it is Theosophy which is the true and unalloyed Spiritualism, while the modern scheme of that name is, as now practiced by the masses, simply transcendental materialism.

Q. Please explain your idea more clearly.

A. What I mean is that though our teachings insist upon the identity of spirit and matter, and though we say that spirit is potential matter, and matter simply crystallized spirit (e.g., as ice is solidified steam), yet since the original and eternal condition of all is not spirit but meta-spirit, so to speak, we maintain that the term spirit can only be applied to the true individuality.

Q. But what is the distinction between this "true individuality" and the "I" or "Ego" of which we are all conscious?

The Key To Theosophy - HP Blavatsky.txt

A. Before I can answer you, we must argue upon what you mean by "I" or "Ego." We distinguish between the simple fact of self-consciousness, the simple feeling that "I am I," and the complex thought that "I am Mr. Smith" or "Mrs. Brown." Believing as we do in a series of births for the same Ego, or reincarnation, this distinction is the fundamental pivot of the whole idea. You see "Mr. Smith" really means a long series of daily experiences strung together by the thread of memory, and forming what Mr. Smith calls "himself." But none of these "experiences" are really the "I" or the Ego, nor do they give "Mr. Smith" the feeling that he is himself, for he forgets the greater part of his daily experiences, and they produce the feeling of Egoity in him only while they last. We Theosophists, therefore, distinguish between this bundle of "experiences," which we call the false (because so finite and evanescent) personality, and that element in man to which the feeling of "I am I" is due. It is this "I am I" which we call the true individuality; and we say that this "Ego" or individuality plays, like an actor, many parts on the stage of life. Let us call every new life on earth of the same Ego a night on the stage of a theater. One night the actor, or "Ego," appears as "Macbeth," the next as "Shylock," the third as "Romeo," the fourth as "Hamlet" or "King Lear," and so on, until he has run through the whole cycle of incarnations. The Ego begins his life-pilgrimage as a sprite, an "Ariel," or a "Puck"; he plays the part of a super, is a soldier, a servant, one of the chorus; rises then to "speaking parts," plays leading roles, interspersed with insignificant parts, till he finally retires from the stage as "Prospero," the magician.

Q. I understand. You say, then, that this true Ego cannot return to earth after death. But surely the actor is at liberty, if he has preserved the sense of his individuality, to return if he likes to the scene of his former actions?

A. We say not, simply because such a return to earth would be incompatible with any state of unalloyed bliss after death, as I am prepared to prove. We say that man suffers so much unmerited misery during his life, through the fault of others with whom he is associated, or because of his environment, that he is surely entitled to perfect rest and quiet, if not bliss, before taking up again the burden of life. However, we can discuss this in detail later.

- oOo-

Why is Theosophy Accepted?

Q. I understand to a certain extent; but I see that your teachings are far more complicated and metaphysical than either Spiritualism or current religious thought. Can you tell me, then, what has caused this system of Theosophy which you support to arouse so much interest and so much animosity at the same time?

A. There are several reasons for it, I believe; among other causes that may be mentioned is:

1. The great reaction from the crassly materialistic theories now prevalent among scientific teachers.
2. General dissatisfaction with the artificial theology of the various Christian Churches, and the number of daily increasing and conflicting sects.
3. An ever-growing perception of the fact that the creeds which are so obviously self- and mutually-contradictory cannot be true, and that claims which are unverified cannot be real. This natural distrust of conventional religions is only strengthened by their complete failure to preserve morals and to purify society and the masses.

The Key To Theosophy - HP Blavatsky.txt

4. A conviction on the part of many, and knowledge by a few, that there must be somewhere a philosophical and religious system which shall be scientific and not merely speculative.

5. A belief, perhaps, that such a system must be sought for in teachings far antedating any modern faith.

Q. But how did this system come to be put forward just now?

A. Just because the time was found to be ripe, which fact is shown by the determined effort of so many earnest students to reach the truth, at whatever cost and wherever it may be concealed. Seeing this, its custodians permitted that some portions at least of that truth should be proclaimed. Had the formation of the Theosophical Society been postponed a few years longer, one half of the civilized nations would have become by this time rank materialists, and the other half anthropomorphists and phenomenologists.

Q. Are we to regard Theosophy in any way as a revelation?

A. In no way whatever—not even in the sense of a new and direct disclosure from some higher, supernatural, or, at least, superhuman beings; but only in the sense of an "unveiling" of old, very old, truths to minds hitherto ignorant of them, ignorant even of the existence and preservation of any such archaic knowledge.

It has become "fashionable," especially of late, to deride the notion that there ever was, in the mysteries of great and civilized peoples, such as the Egyptians, Greeks, or Romans, anything but priestly imposture. Even the Rosicrucians were no better than half lunatics, half knaves. Numerous books have been written on them; and tyros, who had hardly heard the name a few years before, sallied out as profound critics and Gnostics on the subject of alchemy, the fire-philosophers, and mysticism in general. Yet a long series of the Hierophants of Egypt, India, Chaldea, and Arabia are known, along with the greatest philosophers and sages of Greece and the West, to have included under the designation of wisdom and divine science all knowledge, for they considered the base and origin of every art and science as essentially divine. Plato regarded the mysteries as most sacred, and Clemens Alexandrinus, who had been himself initiated into the Eleusinian mysteries, has declared "that the doctrines taught therein contained in them the end of all human knowledge." Were Plato and Clemens two knaves or two fools, we wonder, or-both?

Q. You spoke of "Persecution." If truth is as represented by Theosophy, why has it met with such opposition, and with no general acceptance?

A. For many and various reasons again, one of which is the hatred felt by men for "innovations," as they call them. Selfishness is essentially conservative, and hates being disturbed. It prefers an easy-going, unexacting lie to the greatest truth, if the latter requires the sacrifice of one's smallest comfort. The power of mental inertia is great in anything that does not promise immediate benefit and reward. Our age is preeminently unspiritual and matter of fact. Moreover, there is the unfamiliar character of Theosophic teachings; the highly abstruse nature of the doctrines, some of which contradict flatly many of the human vagaries cherished by sectarians, which have eaten into the very core of popular beliefs. If we add to this the personal efforts and great purity of life exacted of those who would become the disciples of the inner circle, and the very limited class to which an entirely unselfish code appeals, it will be easy to perceive the reason why Theosophy is doomed to such slow, uphill work. It is essentially the philosophy of those who suffer, and have lost all hope of being helped out of the mire of life by any other means. Moreover, the history of any system of belief or morals, newly introduced into a foreign soil, shows that its beginnings were impeded by every obstacle that

The Key To Theosophy - HP Blavatsky.txt
obscurantism and selfishness could suggest. "The crown of the innovator is a crown of thorns" indeed! No pulling down of old, worm-eaten buildings can be accomplished without some danger.

Q. All this refers rather to the ethics and philosophy of the T.S. Can you give me a general idea of the Society itself, its objects and statutes?

A. This was never made secret. Ask, and you shall receive accurate answers.

Q. But I heard that you were bound by pledges?

A. Only in the Arcane or "Esoteric" Section.

Q. And also, that some members after leaving did not regard themselves bound by them. Are they right?

A. This shows that their idea of honor is an imperfect one. How can they be right? As well said in The Path, our theosophical organ at New York, treating of such a case:

Suppose that a soldier is tried for infringement of oath and discipline, and is dismissed from the service. In his rage at the justice he has called down, and of whose penalties he was distinctly forewarned, the soldier turns to the enemy with false information-a spy and traitor-as a revenge upon his former Chief, and claims that his punishment has released him from his oath of loyalty to a cause.

Is he justified, think you? Don't you think he deserves being called a dishonorable man, a coward?

Q. I believe so; but some think otherwise.

A. So much the worse for them. But we will talk on this subject later, if you please.

The Working System of the T.S. *1)

The Objects of the Society

Q. What are the objects of the "Theosophical Society"?

A. They are three, and have been so from the beginning.

1. To form the nucleus of a Universal Brotherhood of Humanity without distinction of race, color, or creed.

2. To promote the study of Aryan *2) and other Scriptures, of the World's religions and sciences, and to vindicate the importance of old Asiatic literature, namely, of the Brahmanical, Buddhist, and Zoroastrian philosophies.

3. To investigate the hidden mysteries of Nature under every aspect possible, and the psychic and spiritual powers latent in man especially.

These are, broadly stated, the three chief objects of the Theosophical Society.

*1) See also appendix at the end of this file

*2) H. P. B. means the original Indo-Germanic race from Northern India (see H. P. B., The Theosophical Glossary, London, 1892

and also the glossary at the end of this file)

Q. Can you give me some more detailed information upon these?

A. We may divide each of the three objects into as many explanatory clauses as may be found necessary.

Q. Then let us begin with the first. What means would you resort to, in order to promote such a feeling of brotherhood among races that are known to be of the most diversified religions, customs, beliefs, and modes of thought?

A. Allow me to add that which you seem unwilling to express. Of course we know that with the exception of two remnants of races-the Parsees and the Jews-every nation is divided, not merely against all other nations, but even against itself. This is found most prominently among the so-called civilized Christian nations. Hence your wonder, and the reason why our first object appears to you a Utopia. Is it not so?

Q. Well, yes; but what have you to say against it?

A. Nothing against the fact; but much about the necessity of removing the causes which make Universal Brotherhood a Utopia at present.

Q. What are, in your view, these causes?

A. First and foremost, the natural selfishness of human nature. This selfishness, instead of being eradicated, is daily strengthened and stimulated into a ferocious and irresistible feeling by the present religious education, which tends not only to encourage, but positively to justify it. People's ideas about right and wrong have been entirely perverted by the literal acceptance of the Jewish Bible. All the unselfishness of the altruistic teachings of Jesus has become merely a theoretical subject for pulpit oratory; while the precepts of practical selfishness taught in the Mosaic Bible, against which Christ so vainly preached, have become ingrained into the innermost life of the Western nations. "An eye for an eye and a tooth for a tooth" has come to be the first maxim of your law. Now, I state openly and fearlessly, that the perversity of this doctrine and of so many others Theosophy alone can eradicate.

- oOo-

The Common Origin of Man

Q. How?

A. Simply by demonstrating on logical, philosophical, metaphysical, and even scientific grounds that: (a) All men have spiritually and physically the same origin, which is the fundamental teaching of Theosophy. (b) As mankind is essentially of one and the same essence, and that essence is one-infinite, uncreate, and eternal, whether we call it God or Nature-nothing, therefore, can affect one nation or one man without affecting all other nations and all other men. This is as certain and as obvious as that a stone thrown into a pond will, sooner or later, set in motion every single drop of water therein.

Q. But this is not the teaching of Christ, but rather a pantheistic notion.

A. That is where your mistake lies. It is purely Christian, although not Judaic, and therefore, perhaps, your Biblical nations prefer to ignore it.

Q. This is a wholesale and unjust accusation. Where are your proofs for such a statement?

A. They are ready at hand. Christ is alleged to have said: "Love each other"

The Key To Theosophy - HP Blavatsky.txt
and "Love your enemies;" for

... if ye love them (only) which love you, what reward (or merit) have ye? Do not even the publicans the same? And if you salute your brethren only, what do ye more than others? Do not even publicans so?

These are Christ's words. But Genesis says "Cursed be Canaan, a servant of servants shall he be unto his brethren." And, therefore, Christian but Biblical people prefer the law of Moses to Christ's law of love. They base upon the Old Testament, which panders to all their passions, their laws of conquest, annexation, and tyranny over races which they call inferior. What crimes have been committed on the strength of this infernal (if taken in its dead letter) passage in Genesis, history alone gives us an idea, however inadequate.

At the close of the Middle Ages slavery, under the power of moral forces, had mainly disappeared from Europe; but two momentous events occurred which overbore the moral power working in European society and let loose a swarm of curses upon the earth such as mankind had scarcely ever known. One of these events was the first voyaging to a populated and barbarous coast where human beings were a familiar article of traffic; and the other the discovery of a new world, where mines of glittering wealth were open, provided labor could be imported to work them. For four hundred years men and women and children were torn from all whom they knew and loved, and were sold on the coast of Africa to foreign traders; they were chained below decks-the dead often with the living-during the horrible "middle passage," and, according to Bancroft, an impartial historian, two hundred and fifty thousand out of three and a quarter millions were thrown into the sea on that fatal passage, while the remainder were consigned to nameless misery in the mines, or under the lash in the cane and rice fields. The guilt of this great crime rests on the Christian Church. "In the name of the most Holy Trinity" the Spanish Government (Roman Catholic) concluded more than ten treaties authorizing the sale of five hundred thousand human beings; in 1562 Sir John Hawkins sailed on his diabolical errand of buying slaves in Africa and selling them in the West Indies in a ship which bore the sacred name of Jesus; while Elizabeth, the Protestant Queen, rewarded him for his success in this first adventure of Englishmen in that inhuman traffic by allowing him to wear as his crest "a demi-Moor in his proper color, bound with a cord, or, in other words, a manacled negro slave."

Q. I have heard you say that the identity of our physical origin is proved by science, that of our spiritual origin by the Wisdom-Religion. Yet we do not find Darwinists exhibiting great fraternal affection.

A. Just so. This is what shows the deficiency of the materialistic systems, and proves that we Theosophists are in the right. The identity of our physical origin makes no appeal to our higher and deeper feelings. Matter, deprived of its soul and spirit, or its divine essence, cannot speak to the human heart. But the identity of the soul and spirit, of real, immortal man, as Theosophy teaches us, once proven and deep-rooted in our hearts, would lead us far on the road of real charity and brotherly goodwill.

Q. But how does Theosophy explain the common origin of man?

1. By teaching that the root of all nature, objective and subjective, and everything else in the universe, visible and invisible, is, was, and ever will be one absolute essence, from which all starts, and into which everything returns. This is Aryan *) philosophy, fully represented only by the Vedantins, and the Buddhist system. With this object in view, it is the duty of all Theosophists to promote in every practical way, and in all countries, the spread of non-sectarian education.

*) See remark on the use of the word Aryan a couple of pages back

The Key To Theosophy - HP Blavatsky.txt

Q. What do the written statutes of your Society advise its members to do besides this? On the physical plane, I mean?

A. In order to awaken brotherly feeling among nations we have to assist in the international exchange of useful arts and products, by advice, information, and cooperation with all worthy individuals and associations (provided, however, add the statutes, "that no benefit or percentage shall be taken by the Society or the 'Fellows' for its or their corporate services"). For instance, to take a practical illustration. The organization of Society, depicted by Edward Bellamy, in his magnificent work Looking Backwards, admirably represents the Theosophical idea of what should be the first great step towards the full realization of universal brotherhood. The state of things he depicts falls short of perfection, because selfishness still exists and operates in the hearts of men. But in the main, selfishness and individualism have been overcome by the feeling of solidarity and mutual brotherhood; and the scheme of life there described reduces the causes tending to create and foster selfishness to a minimum.

Q. Then as a Theosophist you will take part in an effort to realize such an ideal?

A. Certainly; and we have proved it by action. Have not you heard of the Nationalist clubs and party which have sprung up in America since the publication of Bellamy's book? They are now coming prominently to the front, and will do so more and more as time goes on. Well, these clubs and this party were started in the first instance by Theosophists. One of the first, the Nationalist Club of Boston, Massachusetts, has Theosophists for President and Secretary, and the majority of its executive belong to the T.S. In the constitution of all their clubs, and of the party they are forming, the influence of Theosophy and of the Society is plain, for they all take as their basis, their first and fundamental principle, the Brotherhood of Humanity as taught by Theosophy. In their declaration of Principles they state:

The principle of the Brotherhood of Humanity is one of the eternal truths that govern the world's progress on lines which distinguish human nature from brute nature.

What can be more Theosophical than this? But it is not enough. What is also needed is to impress men with the idea that, if the root of mankind is one, then there must also be one truth which finds expression in all the various religions-except in the Jewish, as you do not find it expressed even in the Cabala.

Q. This refers to the common origin of religions, and you may be right there. But how does it apply to practical brotherhood on the physical plane?

A. First, because that which is true on the metaphysical plane must be also true on the physical. Secondly, because there is no more fertile source of hatred and strife than religious differences. When one party or another thinks himself the sole possessor of absolute truth, it becomes only natural that he should think his neighbor absolutely in the clutches of Error or the Devil. But once get a man to see that none of them has the whole truth, but that they are mutually complementary, that the complete truth can be found only in the combined views of all, after that which is false in each of them has been sifted out-then true brotherhood in religion will be established. The same applies in the physical world.

Q. Please explain further.

A. Take an instance. A plant consists of a root, a stem, and many shoots and leaves. As humanity, as a whole, is the stem which grows from the spiritual root, so is the stem the unity of the plant. Hurt the stem and it is obvious

The Key To Theosophy - HP Blavatsky.txt
that every shoot and leaf will suffer. So it is with mankind.

Q. Yes, but if you injure a leaf or a shoot, you do not injure the whole plant.

A. And therefore you think that by injuring one man you do not injure humanity? But how do you know? Are you aware that even materialistic science teaches that any injury, however, slight, to a plant will affect the whole course of its future growth and development? Therefore, you are mistaken, and the analogy is perfect. If, however, you overlook the fact that a cut in the finger may often make the whole body suffer, and react on the whole nervous system, I must all the more remind you that there may well be other spiritual laws, operating on plants and animals as well as on mankind, although, as you do not recognize their action on plants and animals, you may deny their existence.

Q. What laws do you mean?

A. We call them Karmic laws; but you will not understand the full meaning of the term unless you study Occultism. However, my argument did not rest on the assumption of these laws, but really on the analogy of the plant. Expand the idea, carry it out to a universal application, and you will soon find that in true philosophy every physical action has its moral and everlasting effect. Hurt a man by doing him bodily harm; you may think that his pain and suffering cannot spread by any means to his neighbors, least of all to men of other nations. We affirm that it will, in good time. Therefore, we say, that unless every man is brought to understand and accept as an axiomatic truth that by having wronged one man we wrong not only ourselves but the whole of humanity in the long run, no brotherly feelings such as preached by all the great Reformers, preeminently by Buddha and Jesus, are possible on earth.

- o0o-

Our Other Objects

Q. Will you now explain the methods by which you propose to carry out the second object?

A. To collect for the library at our headquarters of Adyar, Madras and by the Fellows of their Branches for their local libraries-all the good works upon the world's religions that we can. To put into written form correct information upon the various ancient philosophies, traditions, and legends, and disseminate the same in such practicable ways as the translation and publication of original works of value, and extracts from and commentaries upon the same, or the oral instructions of persons learned in their respective departments.

Q. And what about the third object, to develop in man his latent spiritual or psychic powers?

A. This has to be achieved also by means of publications, in those places where no lectures and personal teachings are possible. Our duty is to keep alive in man his spiritual intuitions. To oppose and counteract-after due investigation and proof of its irrational nature-bigotry in every form, religious, scientific, or social, and cant above all, whether as religious sectarianism or as belief in miracles or anything supernatural. What we have to do is to seek to obtain knowledge of all the laws of nature, and to diffuse it. To encourage the study of those laws least understood by modern people, the so-called Occult Sciences, based on the true knowledge of nature, instead of, as at present, on superstitious beliefs based on blind faith and authority. Popular folklore and traditions, however fanciful at times, when sifted may lead to the discovery of long-lost, but important, secrets of nature. The Society, therefore, aims at pursuing this line of

inquiry, in the hope of widening the field of scientific and philosophical observation.

- o0o-

On the Sacredness of the Pledge

Q. Have you any ethical system that you carry out in the Society?

A. The ethics are there, ready and clear enough for whomsoever would follow them. They are the essence and cream of the world's ethics, gathered from the teachings of all the world's great reformers. Therefore, you will find represented therein Confucius and Zoroaster, Lao-tzu and the Bhagavad-Gita, the precepts of Gautama Buddha and Jesus of Nazareth, of Hillel and his school, as of Pythagoras, Socrates, Plato, and their schools.

Q. Do the members of your Society carry out these precepts? I have heard of great dissensions and quarrels among them.

A. Very naturally, since although the reform (in its present shape) may be called new, the men and women to be reformed are the same human, sinning natures as of old. As already said, the earnest working members are few; but many are the sincere and well-disposed persons, who try their best to live up to the Society's and their own ideals. Our duty is to encourage and assist individual fellows in self-improvement, intellectual, moral, and spiritual; not to blame or condemn those who fail. We have, strictly speaking, no right to refuse admission to anyone-especially in the Esoteric Section of the Society, wherein "he who enters is as one newly born." But if any member, his sacred pledges on his word of honor and immortal Self notwithstanding, chooses to continue, after that "new birth," with the new man, the vices or defects of his old life, and to indulge in them still in the Society, then, of course, he is more than likely to be asked to resign and withdraw; or, in case of his refusal, to be expelled. We have the strictest rules for such emergencies.

Q. Can some of them be mentioned?

A. They can. To begin with, no Fellow in the Society, whether exoteric or esoteric, has a right to force his personal opinions upon another Fellow.

It is not lawful for any officer of the Parent Society to express in public, by word or act, any hostility to, or preference for, any one section, religious or philosophical, more than another. All have an equal right to have the essential features of their religious belief laid before the tribunal of an impartial world. And no officer of the Society, in his capacity as an officer, has the right to preach his own sectarian views and beliefs to members assembled, except when the meeting consists of his co-religionists. After due warning, violation of this rule shall be punished by suspension or expulsion.

This is one of the offenses in the Society at large. As regards the inner section, now called the Esoteric, the following rules have been laid down and adopted, so far back as 1880.

No Fellow shall put to his selfish use any knowledge communicated to him by any member of the first section (now a higher "degree"); violation of the rule being punished by expulsion.

Now, however, before any such knowledge can be imparted, the applicant has to bind himself by a solemn oath not to use it for selfish purposes, nor to reveal anything said except by permission.

Q. But is a man expelled, or resigning, from the section free to reveal anything he may have learned, or to break any clause of the pledge he has

taken?

A. Certainly not. His expulsion or resignation only relieves him from the obligation of obedience to the teacher, and from that of taking an active part in the work of the Society, but surely not from the sacred pledge of secrecy.

Q. But is this reasonable and just?

A. Most assuredly. To any man or woman with the slightest honorable feeling a pledge of secrecy taken even on one's word of honor, much more to one's Higher Self-the God within-is binding till death. And though he may leave the Section and the Society, no man or woman of honor will think of attacking or injuring a body to which he or she has been so pledged.

Q. But is not this going rather far?

A. Perhaps so, according to the low standard of the present time and morality. But if it does not bind as far as this, what use is a pledge at all? How can anyone expect to be taught secret knowledge, if he is to be at liberty to free himself from all the obligations he had taken, whenever he pleases? What security, confidence, or trust would ever exist among men, if pledges such as this were to have no really binding force at all? Believe me, the law of retribution (Karma) would very soon overtake one who so broke his pledge, and perhaps as soon as the contempt of every honorable man would, even on this physical plane. As well expressed in the New York Path just cited on this subject,

A pledge once taken, is forever binding in both the moral and the occult worlds. If we break it once and are punished, that does not justify us in breaking it again, and so long as we do, so long will the mighty lever of the Law (of Karma) react upon us.

The Relations of the T.S. to Theosophy

On Self-Improvement

Q. Is moral elevation, then, the principal thing insisted upon in your Society?

A. Undoubtedly! He who would be a true Theosophist must bring himself to live as one.

Q. If so, then, as I remarked before, the behavior of some members strangely belies this fundamental rule.

A. Indeed it does. But this cannot be helped among us, any more than amongst those who call themselves Christians and act like fiends. This is no fault of our statutes and rules, but that of human nature. Even in some exoteric public branches, the members pledge themselves on their "Higher Self" to live the life prescribed by Theosophy. They have to bring their Divine Self to guide their every thought and action, every day and at every moment of their lives. A true Theosophist ought "to deal justly and walk humbly."

Q. What do you mean by this?

A. Simply this: the one self has to forget itself for the many selves. Let me answer you in the words of a true Philaletheian, an F.T.S., who has beautifully expressed it in The Theosophist:

What every man needs first is to find himself, and then take an honest inventory of his subjective possessions, and, bad or bankrupt as it may be, it is not beyond redemption if we set about it in earnest.

But how many do? All are willing to work for their own development and progress; very few for those of others. To quote the same writer again:

Men have been deceived and deluded long enough; they must break their idols, put away their shams, and go to work for themselves-nay, there is one little word too much or too many, for he who works for himself had better not work at all; rather let him work himself for others, for all. For every flower of love and charity he plants in his neighbor's garden, a loathsome weed will disappear from his own, and so this garden of the gods-Humanity-shall blossom as a rose. In all Bibles, all religions, this is plainly set forth-but designing men have at first misinterpreted and finally emasculated, materialized, besotted them. It does not require a new revelation. Let every man be a revelation unto himself. Let once man's immortal spirit take possession of the temple of his body, drive out the money-changers and every unclean thing, and his own divine humanity will redeem him, for when he is thus at one with himself he will know the "builder of the Temple."

Q. This is pure Altruism, I confess.

A. It is. And if only one Fellow of the T.S. out of ten would practice it ours would be a body of elect indeed. But there are those among the outsiders who will always refuse to see the essential difference between Theosophy and the Theosophical Society, the idea and its imperfect embodiment. Such would visit every sin and shortcoming of the vehicle, the human body, on the pure spirit which sheds thereon its divine light. Is this just to either? They throw stones at an association that tries to work up to, and for the propagation of, its ideal with most tremendous odds against it. Some vilify the Theosophical Society only because it presumes to attempt to do that in which other systems-Church and State Christianity preeminently-have failed most egregiously; others because they would fain preserve the existing state of things: Pharisees and Sadducees in the seat of Moses, and publicans and sinners revelling in high places, as under the Roman Empire during its decadence. Fair-minded people, at any rate, ought to remember that the man who does all he can, does as much as he who has achieved the most, in this world of relative possibilities. This is a simple truism, an axiom supported for believers in the Gospels by the parable of the talents given by their Master: the servant who doubled his two talents was rewarded as much as that other fellow-servant who had received five. To every man it is given "according to his several ability."

Q. Yet it is rather difficult to draw the line of demarcation between the abstract and the concrete in this case, as we have only the latter to form our judgment by.

A. Then why make an exception for the T.S.? Justice, like charity, ought to begin at home. Will you revile and scoff at the "Sermon on the Mount" because your social, political and even religious laws have, so far, not only failed to carry out its precepts in their spirit, but even in their dead letter? Abolish the oath in Courts, Parliament, Army and everywhere, and do as the Quakers do, if you will call yourselves Christians. Abolish the Courts themselves, for if you would follow the Commandments of Christ, you have to give away your coat to him who deprives you of your cloak, and turn your left cheek to the bully who smites you on the right. "Resist not evil, love your enemies, bless them that curse you, do good to them that hate you," for "whosoever shall break one of the least of these Commandments and shall teach men so, he shall be called the least in the Kingdom of Heaven," and "whosoever shall say 'Thou fool' shall be in danger of hell fire." And why should you judge, if you would not be judged in your turn? Insist that between Theosophy and the Theosophical Society there is no difference, and forthwith you lay the system of Christianity and its very essence open to the same charges, only in a more serious form.

Q. Why more serious?

The Key To Theosophy - HP Blavatsky.txt

A. Because, while the leaders of the Theosophical Movement, recognizing fully their shortcomings, try all they can do to amend their ways and uproot the evil existing in the Society; and while their rules and bylaws are framed in the spirit of Theosophy, the Legislators and the Churches of nations and countries which call themselves Christian do the reverse. Our members, even the worst among them, are no worse than the average Christian. Moreover, if the Western Theosophists experience so much difficulty in leading the true Theosophical life, it is because they are all the children of their generation. Every one of them was a Christian, bred and brought up in the sophistry of his Church, his social customs, and even his paradoxical laws. He was this before he became a Theosophist, or rather, a member of the Society of that name, as it cannot be too often repeated that between the abstract ideal and its vehicle there is a most important difference.

- o0o-

The Abstract and the Concrete

Q. Please elucidate this difference a little more.

A. The Society is a great body of men and women, composed of the most heterogeneous elements. Theosophy, in its abstract meaning, is Divine Wisdom, or the aggregate of the knowledge and wisdom that underlie the Universe-the homogeneity of eternal good; and in its concrete sense it is the sumtotal of the same as allotted to man by nature, on this earth, and no more. Some members earnestly endeavor to realize and, so to speak, to objectivize Theosophy in their lives; while others desire only to know of, not to practice it; and others still may have joined the Society merely out of curiosity, or a passing interest, or perhaps, again, because some of their friends belong to it. How, then, can the system be judged by the standard of those who would assume the name without any right to it? Is poetry or its muse to be measured only by those would-be poets who afflict our ears? The Society can be regarded as the embodiment of Theosophy only in its abstract motives; it can never presume to call itself its concrete vehicle so long as human imperfections and weaknesses are all represented in its body; otherwise the Society would be only repeating the great error and the outflowing sacrilege of the so-called Churches of Christ. If Eastern comparisons may be permitted, Theosophy is the shoreless ocean of universal truth, love, and wisdom, reflecting its radiance on the earth, while the Theosophical Society is only a visible bubble on that reflection. Theosophy is divine nature, visible and invisible, and its Society human nature trying to ascend to its divine parent. Theosophy, finally, is the fixed eternal sun, and its Society the evanescent comet trying to settle in an orbit to become a planet, ever revolving within the attraction of the sun of truth. It was formed to assist in showing to men that such a thing as Theosophy exists, and to help them to ascend towards it by studying and assimilating its eternal verities.

Q. I thought you said you had no tenets or doctrines of your own?

A. No more we have. The Society has no wisdom of its own to support or teach. It is simply the storehouse of all the truths uttered by the great seers, initiates, and prophets of historic and even prehistoric ages; at least, as many as it can get. Therefore, it is merely the channel through which more or less of truth, found in the accumulated utterances of humanity's great teachers, is poured out into the world.

Q. But is such truth unreachable outside of the society? Does not every Church claim the same?

A. Not at all. The undeniable existence of great initiates-true "Sons of God"-shows that such wisdom was often reached by isolated individuals, never, however, without the guidance of a master at first. But most of the

The Key To Theosophy - HP Blavatsky.txt

followers of such, when they became masters in their turn, have dwarfed the Catholicism of these teachings into the narrow groove of their own sectarian dogmas. The commandments of a chosen master alone were then adopted and followed, to the exclusion of all others-if followed at all, note well, as in the case of the Sermon on the Mount. Each religion is thus a bit of the divine truth, made to focus a vast panorama of human fancy which claimed to represent and replace that truth.

Q. But Theosophy, you say, is not a religion?

A. Most assuredly it is not, since it is the essence of all religion and of absolute truth, a drop of which only underlies every creed. To resort once more to metaphor. Theosophy, on earth, is like the white ray of the spectrum, and every religion only one of the seven prismatic colors. Ignoring all the others, and cursing them as false, every special colored ray claims not only priority, but to be that white ray itself, and anathematizes even its own tints from light to dark, as heresies. Yet, as the sun of truth rises higher and higher on the horizon of man's perception, and each colored ray gradually fades out until it is finally reabsorbed in its turn, humanity will at last be cured no longer with artificial polarizations, but will find itself bathing in the pure colorless sunlight of eternal truth. And this will be Theosophia.

Q. Your claim is, then, that all the great religions are derived from Theosophy, and that it is by assimilating it that the world will be finally saved from the curse of its great illusions and errors?

A. Precisely so. And we add that our Theosophical Society is the humble seed which, if watered and left to live, will finally produce the Tree of Knowledge of Good and Evil which is grafted on the Tree of Life Eternal. For it is only by studying the various great religions and philosophies of humanity, by comparing them dispassionately and with an unbiased mind, that men can hope to arrive at the truth. It is especially by finding out and noting their various points of agreement that we may achieve this result. For no sooner do we arrive-either by study, or by being taught by someone who knows-at their inner meaning, than we find, almost in every case, that it expresses some great truth in Nature.

Q. We have heard of a Golden Age that was, and what you describe would be a Golden Age to be realized at some future day. When shall it be?

A. Not before humanity, as a whole, feels the need of it. A maxim in the Persian Javidan Khirad says:

Truth is of two kinds-one manifest and self-evident; the other demanding incessantly new demonstrations and proofs.

It is only when this latter kind of truth becomes as universally obvious as it is now dim, and therefore liable to be distorted by sophistry and casuistry; it is only when the two kinds will have become once more one, that all people will be brought to see alike.

Q. But surely those few who have felt the need of such truths must have made up their minds to believe in something definite? You tell me that, the Society having no doctrines of its own, every member may believe as he chooses and accept what he pleases. This looks as if the Theosophical Society was bent upon reviving the confusion of languages and beliefs of the Tower of Babel of old. Have you no beliefs in common?

A. What is meant by the Society having no tenets or doctrines of its own is, that no special doctrines or beliefs are obligatory on its members; but, of course, this applies only to the body as a whole. The Society, as you were told, is divided into an outer and an inner body. Those who belong to the latter have, of course, a philosophy, or-if you so prefer it-a religious

system of their own.

Q. May we be told what it is?

A. We make no secret of it. It was outlined a few years ago in The Theosophist and Esoteric Buddhism, and may be found still more elaborated in The Secret Doctrine. It is based on the oldest philosophy of the world, called the Wisdom-Religion or the Archaic Doctrine. If you like, you may ask questions and have them explained.

The Fundamental Teachings of Theosophy

On God and Prayer

Q. Do you believe in God?

A. That depends what you mean by the term.

Q. I mean the God of the Christians, the Father of Jesus, and the Creator: the Biblical God of Moses, in short.

A. In such a God we do not believe. We reject the idea of a personal, or an extra-cosmic and anthropomorphic God, who is but the gigantic shadow of man, and not of man at his best, either. The God of theology, we say-and prove it-is a bundle of contradictions and a logical impossibility. Therefore, we will have nothing to do with him.

Q. State your reasons, if you please.

A. They are many, and cannot all receive attention. But here are a few. This God is called by his devotees infinite and absolute, is he not?

Q. I believe he is.

A. Then, if infinite-i.e., limitless-and especially if absolute, how can he have a form, and be a creator of anything? Form implies limitation, and a beginning as well as an end; and, in order to create, a Being must think and plan. How can the absolute be supposed to think-i.e., to have any relation whatever to that which is limited, finite, and conditioned? This is a philosophical, and a logical absurdity. Even the Hebrew Cabala rejects such an idea, and therefore, makes of the one and the Absolute Deific

Principle an infinite Unity called Ain-Soph *)

*) Ain-Soph (Greek: toh pan, epeiros), the boundless or limitless, in and of nature, the non-existing that IS, but that is not a Being.

In order to create, the Creator has to become active; and as this is impossible for absoluteness, the infinite principle had to be shown becoming the cause of evolution (not creation) in an indirect way-i.e., through the emanation from itself (another absurdity, due this time to the translators of the Cabala) of the Sephiroth.

How can the non-active eternal principle emanate or emit? The Parabrahman of the Vedantins does nothing of the kind; nor does the Ain-Soph of the Chaldean Cabala. It is an eternal and periodical law which causes an active and creative force (the logos) to emanate from the ever-concealed and incomprehensible one principle at the beginning of every Mah -Manvantara, or new cycle of life.

Q. How about those Cabalists, who, while being such, still believe in Jehovah, or the Tetragrammaton?

A. They are at liberty to believe in what they please, as their belief or

disbelief can hardly affect a self-evident fact. The Jesuits tell us that two and two are not always four to a certainty, since it depends on the will of God to make $2 \times 2 = 5$. Shall we accept their sophistry for all that?

Q. Then you are Atheists?

A. Not that we know of, and not unless the epithet of "Atheist" is to be applied to those who disbelieve in an anthropomorphic God. We believe in a Universal Divine Principle, the root of all, from which all proceeds, and within which all shall be absorbed at the end of the great cycle of Being.

Q. This is the old, old claim of Pantheism. If you are Pantheists, you cannot be Deists; and if you are not Deists, then you have to answer to the name of Atheists.

A. Not necessarily so. The term Pantheism is again one of the many abused terms, whose real and primitive meaning has been distorted by blind prejudice and a one-sided view of it. If you accept the Christian etymology of this compound word, and form it of pan, "all," and theos, "god," and then imagine and teach that this means that every stone and every tree in Nature is a God or the one God, then, of course, you will be right, and make of Pantheists fetish-worshippers, in addition to their legitimate name. But you will hardly be as successful if you etymologize the word Pantheism esoterically, and as we do.

Q. What is, then, your definition of it?

A. Let me ask you a question in my turn. What do you understand by Pan, or Nature?

Q. Nature is, I suppose, the sumtotal of things existing around us; the aggregate of causes and effects in the world of matter, the creation or universe.

A. Hence the personified sum and order of known causes and effects; the total of all finite agencies and forces, as utterly disconnected from an intelligent Creator or Creators, and perhaps "conceived of as a single and separate force"-as in your encyclopedias?

Q. Yes, I believe so.

A. Well, we neither take into consideration this objective and material nature, which we call an evanescent illusion, nor do we mean by Nature, in the sense of its accepted derivation from the Latin Natura (becoming, from nasci, to be born). When we speak of the Deity and make it identical, hence coeval, with Nature, the eternal and uncreate nature is meant, and not your aggregate of flitting shadows and finite unrealities. We leave it to the hymn-makers to call the visible sky or heaven, God's Throne, and our earth of mud His footstool. Our deity is neither in a paradise, nor in a particular tree, building, or mountain: it is everywhere, in every atom of the visible as of the invisible Cosmos, in, over, and around every invisible atom and divisible molecule; for it is the mysterious power of evolution and involution, the omnipresent, omnipotent, and even omniscient creative potentiality.

Q. Stop! Omniscience is the prerogative of something that thinks, and you deny to your Absoluteness the power of thought.

A. We deny it to the absolute, since thought is something limited and conditioned. But you evidently forget that in philosophy absolute unconsciousness is also absolute consciousness, as otherwise it would not be absolute.

Q. Then your Absolute thinks?

The Key To Theosophy - HP Blavatsky.txt

A. No, it does not; for the simple reason that it is Absolute Thought itself. Nor does it exist, for the same reason, as it is absolute existence, and Be-ness, not a Being. Read the superb Cabalistic poem by Solomon Ben Jehudah Gabirol, in the Kether-Malchut, and you will understand:

Thou art one, the root of all numbers, but not as an element of numeration; for unity admits not of multiplication, change, or form.

Thou art one, and in the secret of Thy unity the wisest of men are lost, because they know it not.

Thou art one, and Thy unity is never diminished, never extended, and cannot be changed.

Thou art one, and no thought of mine can fix for Thee a limit, or define Thee.

Thou art, but not as one existent, for the understanding and vision of mortals cannot attain to Thy existence, nor determine for Thee the where, the how and the why ...

In short, our Deity is the eternal, incessantly evolving, not creating, builder of the universe; that universe itself unfolding out of its own essence, not being made. It is a sphere, without circumference, in its symbolism, which has but one ever-acting attribute embracing all other existing or thinkable attributes-itself. It is the one law, giving the impulse to manifested, eternal, and immutable laws, within that never-manifesting, because absolute law, which in its manifesting periods is The ever-Becoming.

Q. I once heard one of your members remarking that Universal Deity, being everywhere, was in vessels of dishonor, as in those of honor, and, therefore, was present in every atom of my cigar ash! Is this not rank blasphemy?

A. I do not think so, as simple logic can hardly be regarded as blasphemy. Were we to exclude the Omnipresent Principle from one single mathematical point of the universe, or from a particle of matter occupying any conceivable space, could we still regard it as infinite?

- oOo-

Is it Necessary to Pray?

Q. Do you believe in prayer, and do you ever pray?

A. We do not. We act, instead of talking.

Q. You do not offer prayers even to the Absolute Principle?

A. Why should we? Being well-occupied people, we can hardly afford to lose time in addressing verbal prayers to a pure abstraction. The Unknowable is capable of relations only in its parts to each other, but is non-existent as regards any finite relations. The visible universe depends for its existence and phenomena on its mutually acting forms and their laws, not on prayer or prayers.

Q. Do you not believe at all in the efficacy of prayer?

A. Not in prayer taught in so many words and repeated externally, if by prayer you mean the outward petition to an unknown God as the addressee, which was inaugurated by the Jews and popularized by the Pharisees.

Q. Is there any other kind of prayer?

A. Most decidedly; we call it will-prayer, and it is rather an internal command than a petition.

Q. To whom, then, do you pray when you do so?

A. To "our Father in heaven"-in its esoteric meaning.

Q. Is that different from the one given to it in theology?

A. Entirely so. An Occultist or a Theosophist addresses his prayer to his Father which is in secret, not to an extra-cosmic and therefore finite God; and that "Father" is in man himself.

Q. Then you make of man a God?

A. Please say "God" and not a God. In our sense, the inner man is the only God we can have cognizance of. And how can this be otherwise? Grant us our postulate that God is a universally diffused, infinite principle, and how can man alone escape from being soaked through by, and in, the Deity? We call our "Father in heaven" that deific essence of which we are cognizant within us, in our heart and spiritual consciousness, and which has nothing to do with the anthropomorphic conception we may form of it in our physical brain or its fancy: "Know ye not that ye are the temple of God, and that the spirit of (the absolute) God dwelleth in you?"

One often finds in Theosophical writings conflicting statements about the Christos principle in man. Some call it the sixth principle (Buddhi), others the seventh (Atma). If Christian Theosophists wish to make use of such expressions, let them be made philosophically correct by following the analogy of the old Wisdom-Religion symbols. We say that Christos is not only one of the three higher principles, but all the three regarded as a Trinity. This Trinity represents the Holy Ghost, the Father, and the Son, as it answers to abstract spirit, differentiated spirit, and embodied spirit. Krishna and Christ are philosophically the same principle under its triple aspect of manifestation. In the Bhagavad-Gita we find Krishna calling himself indifferently Atma, the abstract Spirit, Kshetrajña, the Higher or reincarnating Ego, and the Universal Self, all names which, when transferred from the Universe to man, answer to Atma, Buddhi, and Manas. The Anugita is full of the same doctrine.

Yet, let no man anthropomorphize that essence in us. Let no Theosophist, if he would hold to divine, not human truth, say that this "God in secret" listens to, or is distinct from, either finite man or the infinite essence-for all are one. Nor, as just remarked, that a prayer is a petition. It is a mystery rather; an occult process by which finite and conditioned thoughts and desires, unable to be assimilated by the absolute spirit which is unconditioned, are translated into spiritual wills and the will; such process being called "spiritual transmutation." The intensity of our ardent aspirations changes prayer into the "philosopher's stone," or that which transmutes lead into pure gold. The only homogeneous essence, our "will-prayer" becomes the active or creative force, producing effects according to our desire.

Q. Do you mean to say that prayer is an occult process bringing about physical results?

A. I do. Will-Power becomes a living power. But woe unto those Occultists and Theosophists, who, instead of crushing out the desires of the lower personal ego or physical man, and saying, addressing their Higher Spiritual Ego immersed in Atma-Buddhic light, "Thy will be done, not mine," etc., send up waves of will-power for selfish or unholy purposes! For this is black magic, abomination, and spiritual sorcery. Unfortunately, all this is the

The Key To Theosophy - HP Blavatsky.txt

favorite occupation of our Christian statesmen and generals, especially when the latter are sending two armies to murder each other. Both indulge before action in a bit of such sorcery, by offering respectively prayers to the same God of Hosts, each entreating his help to cut its enemies' throats.

Q. David prayed to the Lord of Hosts to help him smite the Philistines and slay the Syrians and the Moabites, and "the Lord preserved David whithersoever he went." In that we only follow what we find in the Bible.

A. Of course you do. But since you delight in calling yourselves Christians, not Israelites or Jews, as far as we know, why do you not rather follow that which Christ says? And he distinctly commands you not to follow "them of old times," or the Mosaic law, but bids you do as he tells you, and warns those who would kill by the sword, that they, too, will perish by the sword. Christ has given you one prayer of which you have made a lip prayer and a boast, and which none but the true Occultist understands. In it you say, in your dead-sense meaning: "Forgive us our debts, as we forgive our debtors," which you never do. Again, he told you to love your enemies and do good to them that hate you. It is surely not the "meek prophet of Nazareth" who taught you to pray to your "Father" to slay, and give you victory over your enemies! This is why we reject what you call "prayers."

Q. But how do you explain the universal fact that all nations and peoples have prayed to, and worshiped a God or Gods? Some have adored and propitiated devils and harmful spirits, but this only proves the universality of the belief in the efficacy of prayer.

A. It is explained by that other fact that prayer has several other meanings besides that given it by the Christians. It means not only a pleading or petition, but meant, in days of old, far more an invocation and incantation. The mantra, or the rhythmically chanted prayer of the Hindus, has precisely such a meaning, as the Brahmins hold themselves higher than the common devas or "Gods." A prayer may be an appeal or an incantation for malediction, and a curse (as in the case of two armies praying simultaneously for mutual destruction) as much as for blessing. And as the great majority of people are intensely selfish, and pray only for themselves, asking to be given their "daily bread" instead of working for it, and begging God not to lead them "into temptation" but to deliver them (the memorialists only) from evil, the result is, that prayer, as now understood, is doubly pernicious: (a) It kills in man self-reliance; (b) It develops in him a still more ferocious selfishness and egotism than he is already endowed with by nature. I repeat, that we believe in "communion" and simultaneous action in unison with our "Father in secret"; and in rare moments of ecstatic bliss, in the mingling of our higher soul with the universal essence, attracted as it is towards its origin and center, a state, called during life Samadhi, and after death, Nirvana. We refuse to pray to created finite beings-i. e., gods, saints, angels, etc., because we regard it as idolatry. We cannot pray to the absolute for reasons explained before; therefore, we try to replace fruitless and useless prayer by meritorious and good-producing actions.

Q. Christians would call it pride and blasphemy. Are they wrong?

A. Entirely so. It is they, on the contrary, who show Satanic pride in their belief that the Absolute or the Infinite, even if there was such a thing as the possibility of any relation between the unconditioned and the conditioned-will stoop to listen to every foolish or egotistical prayer. And it is they again, who virtually blaspheme, in teaching that an Omniscient and Omnipotent God needs uttered prayers to know what he has to do! This-understood esoterically-is corroborated by both Buddha and Jesus. The one says:

Seek nought from the helpless Gods-pray not! but rather act; for darkness will not brighten. Ask nought from silence, for it can neither speak nor hear.

And the other-Jesus-recommends: "Whatsoever ye shall ask in my name (that of Christos) that will I do." Of course, this quotation, if taken in its literal sense, goes against our argument. But if we accept it esoterically, with the full knowledge of the meaning of the term Christos which to us represents Atma-Buddhi-Manas, the "self," it comes to this: the only God we must recognize and pray to, or rather act in unison with, is that spirit of God of which our body is the temple, and in which it dwelleth.

- o0o-

Prayer Kills Self-Reliance

Q. But did not Christ himself pray and recommend prayer?

A. It is so recorded, but those "prayers" are precisely of that kind of communion just mentioned with one's "Father in secret." Otherwise, and if we identify Jesus with the universal deity, there would be something too absurdly illogical in the inevitable conclusion that he, the "very God himself" prayed to himself, and separated the will of that God from his own!

Q. One argument more; an argument, moreover, much used by some Christians. They say,

I feel that I am not able to conquer any passions and weaknesses in my own strength. But when I pray to Jesus Christ I feel that he gives me strength and that in His power I am able to conquer.

A. No wonder. If "Christ Jesus" is God, and one independent and separate from him who prays, of course everything is, and must be possible to "a mighty God." But, then, where's the merit, or justice either, of such a conquest? Why should the pseudo-conqueror be rewarded for something done which has cost him only prayers? Would you, even a simple mortal man, pay your laborer a full day's wage if you did most of his work for him, he sitting under an apple tree, and praying to you to do so, all the while? This idea of passing one's whole life in moral idleness, and having one's hardest work and duty done by another-whether God or man-is most revolting to us, as it is most degrading to human dignity.

Q. Perhaps so, yet it is the idea of trusting in a personal Savior to help and strengthen in the battle of life, which is the fundamental idea of modern Christianity. And there is no doubt that, subjectively, such belief is efficacious; i.e., that those who believe do feel themselves helped and strengthened.

A. Nor is there any more doubt, that some patients of "Christian" and "Mental Scientists"-the great "Deniers"-are also sometimes cured; nor that hypnotism, and suggestion, psychology, and even mediumship, will produce such results, as often, if not oftener. You take into consideration, and string on the thread of your argument, successes alone. And how about ten times the number of failures? Surely you will not presume to say that failure is unknown even with a sufficiency of blind faith, among fanatical Christians?

Q. But how can you explain those cases which are followed by full success? Where does a Theosophist look to for power to subdue his passions and selfishness?

A. To his Higher Self, the divine spirit, or the God in him, and to his Karma. How long shall we have to repeat over and over again that the tree is known by its fruit, the nature of the cause by its effects? You speak of subduing passions, and becoming good through and with the help of God or Christ. We ask, where do you find more virtuous, guiltless people, abstaining from sin and crime, in Christendom or Buddhism-in Christian

countries or in heathen lands? Statistics are there to give the answer and corroborate our claims. According to the last census in Ceylon and India, in the comparative table of crimes committed by Christians, Muslims, Hindus, Eurasians, Buddhists, etc., etc., on two millions of population taken at random from each, and covering the misdemeanors of several years, the proportion of crimes committed by the Christian stands as 15 to 4 as against those committed by the Buddhist population. No Orientalist, no historian of any note, or traveler in Buddhist lands, from Bishop Bigandet and Abbé Huc, to Sir William Hunter and every fair-minded official, will fail to give the palm of virtue to Buddhists before Christians. Yet the former (not the true Buddhist Siamese sect, at all events) do not believe in either God or a future reward, outside of this earth. They do not pray, neither priests nor laymen. "Pray!" they would exclaim in wonder, "to whom, or what?"

Q. Then they are truly Atheists.

A. Most undeniably, but they are also the most virtue-loving and virtue-keeping men in the whole world. Buddhism says: Respect the religions of other men and remain true to your own; but Church Christianity, denouncing all the gods of other nations as devils, would doom every non-Christian to eternal perdition.

Q. Does not the Buddhist priesthood do the same?

A. Never. They hold too much to the wise precept found in the Dhammapada to do so, for they know that,

If any man, whether he be learned or not, consider himself so great as to despise other men, he is like a blind man holding a candle-blind himself, he illumines others.

- oOo-

On the Source of the Human Soul

Q. How, then, do you account for man being endowed with a Spirit and Soul? Whence these?

A. From the Universal Soul. Certainly not bestowed by a personal God. Whence the moist element in the jelly-fish? From the Ocean which surrounds it, in which it lives and breathes and has its being, and whither it returns when dissolved.

Q. So you reject the teaching that Soul is given, or breathed into man, by God?

A. We are obliged to. The "Soul" spoken of in Genesis is, as therein stated, the "living Soul" or Nephesh (the vital, animal soul) with which God (we say "nature" and immutable law) endows man like every animal. Is not at all the thinking soul or mind; least of all is it the immortal Spirit.

Q. Well, let us put it otherwise: is it God who endows man with a human rational Soul and immortal Spirit?

A. Again, in the way you put the question, we must object to it. Since we believe in no personal God, how can we believe that he endows man with anything? But granting, for the sake of argument, a God who takes upon himself the risk of creating a new Soul for every new-born baby, all that can be said is that such a God can hardly be regarded as himself endowed with any wisdom or prevision. Certain other difficulties and the impossibility of reconciling this with the claims made for the mercy, justice, equity and omniscience of that God, are so many deadly reefs on which this theological dogma is daily and hourly broken.

Q. What do you mean? What difficulties?

A. I am thinking of an unanswerable argument offered once in my presence by a Singhalese Buddhist priest, a famous preacher, to a Christian missionary-one in no way ignorant or unprepared for the public discussion during which it was advanced. It was near Colombo, and the Missionary had challenged the priest Megattivati to give his reasons why the Christian God should not be accepted by the "heathen." Well, the Missionary came out of that forever memorable discussion second best, as usual.

Q. I should be glad to learn in what way.

A. Simply this: the Buddhist priest premised by asking the padre whether his God had given commandments to Moses only for men to keep, but to be broken by God himself. The missionary denied the supposition indignantly. Well, said his opponent,

... you tell us that God makes no exceptions to this rule, and that no Soul can be born without his will. Now God forbids adultery, among other things, and yet you say in the same breath that it is he who creates every baby born, and he who endows it with a Soul. Are we then to understand that the millions of children born in crime and adultery are your God's work? That your God forbids and punishes the breaking of his laws; and that, nevertheless, he creates daily and hourly souls for just such children? According to the simplest logic, your God is an accomplice in the crime; since, but for his help and interference, no such children of lust could be born. Where is the justice of punishing not only the guilty parents but even the innocent babe for that which is done by that very God, whom yet you exonerate from any guilt himself?

The missionary looked at his watch and suddenly found it was getting too late for further discussion.

Q. You forget that all such inexplicable cases are mysteries, and that we are forbidden by our religion to pry into the mysteries of God.

A. No, we do not forget, but simply reject such impossibilities. Nor do we want you to believe as we do. We only answer the questions you ask. We have, however, another name for your "mysteries."

- o0o-

The Buddhist Teachings on the Above

Q. What does Buddhism teach with regard to the Soul?

A. It depends whether you mean exoteric, popular Buddhism, or its esoteric teachings. The former explains itself in The Buddhist Catechism in this wise:

Soul it considers a word used by the ignorant to express a false idea. If everything is subject to change, then man is included, and every material part of him must change. That which is subject to change is not permanent, so there can be no immortal survival of a changeful thing.

This seems plain and definite. But when we come to the question that the new personality in each succeeding rebirth is the aggregate of "Skandhas," or the attributes, of the old personality, and ask whether this new aggregation of Skandhas is a new being likewise, in which nothing has remained of the last, we read that:

In one sense it is a new being, in another it is not. During this life the Skandhas are continually changing, while the man A. B. of forty is identical as regards personality with the youth A. B. of eighteen, yet by the continual

The Key To Theosophy - HP Blavatsky.txt

waste and reparation of his body and change of mind and character, he is a different being. Nevertheless, the man in his old age justly reaps the reward or suffering consequent upon his thoughts and actions at every previous stage of his life. So the new being of the rebirth, being the same individuality as before (but not the same personality), with but a changed form, or new aggregation of Skandhas, justly reaps the consequences of his actions and thoughts in the previous existence.

This is abstruse metaphysics, and plainly does not express disbelief in Soul by any means.

Q. Is not something like this spoken of in Esoteric Buddhism?

A. It is, for this teaching belongs both to Esoteric Buddhism or Secret Wisdom, and to the exoteric Buddhism, or the religious philosophy of Gautama Buddha.

Q. But we are distinctly told that most of the Buddhists do not believe in the Soul's immortality?

A. No more do we, if you mean by Soul the personal Ego, or life-Soul-Nephesh. But every learned Buddhist believes in the individual or divine Ego. Those who do not, err in their judgment. They are as mistaken on this point, as those Christians who mistake the theological interpolations of the later editors of the Gospels about damnation and hellfire, for verbatim utterances of Jesus. Neither Buddha nor "Christ" ever wrote anything themselves, but both spoke in allegories and used "dark sayings," as all true Initiates did, and will do for a long time yet to come. Both Scriptures treat of all such metaphysical questions very cautiously, and both, Buddhist and Christian records, sin by that excess of exotericism; the dead letter meaning far overshooting the mark in both cases.

Q. Do you mean to suggest that neither the teachings of Buddha nor those of Christ have been heretofore rightly understood?

A. What I mean is just as you say. Both Gospels, the Buddhist and the Christian, were preached with the same object in view. Both reformers were ardent philanthropists and practical altruists—preaching most unmistakably Socialism of the noblest and highest type, self-sacrifice to the bitter end. "Let the sins of the whole world fall upon me that I may relieve man's misery and suffering!" cries Buddha. "I would not let one cry whom I could save!" exclaims the Prince-beggar, clad in the refuse rags of the burial-grounds. "Come unto me all ye that labor and are heavy laden and I will give you rest," is the appeal to the poor and the disinherited made by the "Man of Sorrows," who hath not where to lay his head. The teachings of both are boundless love for humanity, charity, forgiveness of injury, forgetfulness of self, and pity for the deluded masses; both show the same contempt for riches, and make no difference between meum and tuum. Their desire was, without revealing to all the sacred mysteries of initiation, to give the ignorant and the misled, whose burden in life was too heavy for them, hope enough and an inkling into the truth sufficient to support them in their heaviest hours. But the object of both Reformers was frustrated, owing to excess of zeal of their later followers. The words of the Masters having been misunderstood and misinterpreted, behold the consequences!

Q. But surely Buddha must have repudiated the soul's immortality, if all the Orientalists and his own Priests say so!

A. The Arhats began by following the policy of their Master and the majority of the subsequent priests were not initiated, just as in Christianity; and so, little by little, the great esoteric truths became almost lost. A proof in point is, that, out of the two existing sects in Ceylon, the Siamese believes death to be the absolute annihilation of individuality and personality, and the other explains Nirvana, as we Theosophists do.

The Key To Theosophy - HP Blavatsky.txt

Q. But why, in that case, do Buddhism and Christianity represent the two opposite poles of such belief?

A. Because the conditions under which they were preached were not the same. In India the Brahmins, jealous of their superior knowledge, and excluding from it every caste save their own, had driven millions of men into idolatry and almost fetishism. Buddha had to give the death-blow to an exuberance of unhealthy fancy and fanatical superstition resulting from ignorance, such as has rarely been known before or after. Better a philosophical atheism than such ignorant worship for those:

Who cry upon their gods and are not heard,

Or are not heeded ...

-and who live and die in mental despair. He had to arrest first of all this muddy torrent of superstition, to uproot errors before he gave out the truth. And as he could not give out all, for the same good reason as Jesus, who reminds his disciples that the Mysteries of Heaven are not for the unintelligent masses, but for the elect alone, and therefore "spake he to them in parables"-so his caution led Buddha to conceal too much. He even refused to say to the monk Vacchagotta whether there was, or was not an Ego in man. When pressed to answer, "the Exalted one maintained silence."

Buddha gives to Ananda, his initiated disciple, who inquires for the reason of this silence, a plain and unequivocal answer in the dialogue translated by Oldenburg from the Samyutta-Nikaya:

If I, Ananda, when the wandering monk Vacchagotta asked me: "Is there the Ego?" had answered "The Ego is," then that, Ananda, would have confirmed the doctrine of the Samanas and Brahmans, who believed in permanence. If I, Ananda, when the wandering monk Vacchagotta asked me, "Is there not the Ego?" had answered, "The Ego is not," then that, Ananda, would have confirmed the doctrine of those who believed in annihilation. If I, Ananda, when the wandering monk Vacchagotta asked me, "Is there the Ego?" had answered, "The Ego is," would that have served my end, Ananda, by producing in him the knowledge: all existences (dhamma) are non-ego? But if I, Ananda, had answered, "The Ego is not," then that, Ananda, would only have caused the wandering monk Vacchagotta to be thrown from one bewilderment to another: "My Ego, did it not exist before? But now it exists no longer!"

This shows, better than anything, that Gautama Buddha withheld such difficult metaphysical doctrines from the masses in order not to perplex them more. What he meant was the difference between the personal temporary Ego and the Higher Self, which sheds its light on the imperishable Ego, the spiritual "I" of man.

Q. This refers to Gautama, but in what way does it touch the Gospels?

A. Read history and think over it. At the time the events narrated in the Gospels are alleged to have happened, there was a similar intellectual fermentation taking place in the whole civilized world, only with opposite results in the East and the West. The old gods were dying out. While the civilized classes drifted in the train of the unbelieving Sadducees into materialistic negations and mere dead-letter Mosaic form in Palestine, and into moral dissolution in Rome, the lowest and poorer classes ran after sorcery and strange gods, or became hypocrites and Pharisees. Once more the time for a spiritual reform had arrived. The cruel, anthropomorphic and jealous God of the Jews, with his sanguinary laws of "an eye for eye and tooth for tooth," of the shedding of blood and animal sacrifice, had to be relegated to a secondary place and replaced by the merciful "Father in Secret." The latter had to be shown, not as an extra-Cosmic God, but as a divine Savior of the man of flesh, enshrined in his own heart and soul, in

The Key To Theosophy - HP Blavatsky.txt

the poor as in the rich. No more here than in India, could the secrets of initiation be divulged, lest by giving that which is holy to the dogs, and casting pearls before swine, both the Revealer and the things revealed should be trodden under foot. Thus, the reticence of both Buddha and Jesus-whether the latter lived out the historic period allotted to him or not, and who equally abstained from revealing plainly the Mysteries of Life and Death-led in the one case to the blank negations of Southern Buddhism, and in the other, to the three clashing forms of the Christian Church and the 300 sects in Protestant England alone.

Theosophical Teachings as to Nature and Man

The Unity of All in All

Q. Having told me what God, the Soul and Man are not, in your views, can you inform me what they are, according to your teachings?

A. In their origin and in eternity the three, like the universe and all therein, are one with the absolute Unity, the unknowable deific essence I spoke about some time back. We believe in no creation, but in the periodical and consecutive appearances of the universe from the subjective onto the objective plane of being, at regular intervals of time, covering periods of immense duration.

Q. Can you elaborate the subject?

A. Take as a first comparison and a help towards a more correct conception, the solar year, and as a second, the two halves of that year, producing each a day and a night of six months' duration at the North Pole. Now imagine, if you can, instead of a Solar year of 365 days, eternity. Let the sun represent the universe, and the polar days and nights of six months each-days and nights lasting each 182 trillions and quadrillions of years, instead of 182 days each. As the sun arises every morning on our objective horizon out of its (to us) subjective and antipodal space, so does the Universe emerge periodically on the plane of objectivity, issuing from that of subjectivity-the antipodes of the former. This is the "Cycle of Life." And as the sun disappears from our horizon, so does the Universe disappear at regular periods, when the "Universal night" sets in. The Hindus call such alternations the "Days and Nights of Brahm," or the time of Manvantara and that of Pralaya (dissolution). The Westerns may call them Universal Days and Nights if they prefer. During the latter (the nights) All is in All; every atom is resolved into one Homogeneity.

- o0o-

Evolution and Illusion

Q. But who is it that creates each time the Universe?

A. No one creates it. Science would call the process evolution; the pre-Christian philosophers and the Orientalists called it emanation: we, Occultists and Theosophists, see in it the only universal and eternal reality casting a periodical reflection of itself on the infinite Spatial depths. This reflection, which you regard as the objective material universe, we consider as a temporary illusion and nothing else. That alone which is eternal is real.

Q. At that rate, you and I are also illusions.

A. As flitting personalities, today one person, tomorrow another-we are. Would you call the sudden flashes of the aurora borealis, the Northern lights, a "reality," though it is as real as can be while you look at it? Certainly not; it is the cause that produces it, if permanent and eternal, which is the only reality, while the other is but a passing illusion.

The Key To Theosophy - HP Blavatsky.txt

Q. All this does not explain to me how this illusion called the universe originates; how the conscious to be, proceeds to manifest itself from the unconsciousness that is.

A. It is unconsciousness only to our finite consciousness. Verily may we paraphrase St. John and say:

... and (Absolute) light (which is darkness) shineth in darkness (which is illusionary material light); and the darkness comprehendeth it not.

This absolute light is also absolute and immutable law. Whether by radiation or emanation-we need not quarrel over terms-the universe passes out of its homogeneous subjectivity onto the first plane of manifestation, of which planes there are seven, we are taught. With each plane it becomes more dense and material until it reaches this, our plane, on which the only world approximately known and understood in its physical composition by Science, is the planetary or Solar system-one sui generis, we are told.

Q. What do you mean by sui generis?

A. I mean that, though the fundamental law and the universal working of laws of Nature are uniform, still our Solar system (like every other such system in the millions of others in Cosmos) and even our Earth, has its own program of manifestations differing from the respective programs of all others. We speak of the inhabitants of other planets and imagine that if they are men, i. e., thinking entities, they must be as we are. The fancy of poets and painters and sculptors never fails to represent even the angels as a beautiful copy of man-plus wings. We say that all this is an error and a delusion; because, if on this little earth alone one finds such a diversity in its flora, fauna, and mankind-from the seaweed to the cedar of Lebanon, from the jellyfish to the elephant, from the Bushman and negro to the Apollo Belvedere-alter the conditions cosmic and planetary, and there must be as a result quite a different flora, fauna, and mankind. The same laws will fashion quite a different set of things and beings even on this our plane, including in it all our planets. How much more different then must be external nature in other Solar systems, and how foolish is it to judge of other stars and worlds and human beings by our own, as physical science does!

Q. But what are your data for this assertion?

A. What science in general will never accept as proof-the cumulative testimony of an endless series of Seers who have testified to this fact. Their spiritual visions, real explorations by, and through, physical and spiritual senses untrammelled by blind flesh, were systematically checked and compared one with the other, and their nature sifted. All that was not corroborated by unanimous and collective experience was rejected, while that only was recorded as established truth which, in various ages, under different climes, and throughout an untold series of incessant observations, was found to agree and receive constantly further corroboration. The methods used by our scholars and students of the psycho-spiritual sciences do not differ from those of students of the natural and physical sciences, as you may see. Only our fields of research are on two different planes, and our instruments are made by no human hands, for which reason perchance they are only the more reliable. The retorts, accumulators, and microscopes of the chemist and naturalist may get out of order; the telescope and the astronomer's horological instruments may get spoiled; our recording instruments are beyond the influence of weather or the elements.

Q. And therefore you have implicit faith in them?

A. Faith is a word not to be found in theosophical dictionaries: we say knowledge based, on observation and experience. There is this difference,

however, that while the observation and experience of physical science lead the Scientists to about as many "working" hypotheses as there are minds to evolve them, our knowledge consents to add to its lore only those facts which have become undeniable, and which are fully and absolutely demonstrated. We have no two beliefs or hypotheses on the same subject.

Q. Is it on such data that you came to accept the strange theories we find in Esoteric Buddhism?

A. Just so. These theories may be slightly incorrect in their minor details, and even faulty in their exposition by lay students; they are facts in nature, nevertheless, and come nearer the truth than any scientific hypothesis.

- o0o-

On The Septenary Constitution of Our Planet

Q. I understand that you describe our earth as forming part of a chain of earths?

A. We do. But the other six "earths" or globes, are not on the same plane of objectivity as our earth is; therefore we cannot see them.

Q. Is that on account of the great distance?

A. Not at all, for we see with our naked eye planets and even stars at immeasurably greater distances; but it is owing to those six globes being outside our physical means of perception, or plane of being. It is not only that their material density, weight, or fabric are entirely different from those of our earth and the other known planets; but they are (to us) on an entirely different layer of space, so to speak; a layer not to be perceived or felt by our physical senses. And when I say "layer," please do not allow your fancy to suggest to you layers like strata or beds laid one over the other, for this would only lead to another absurd misconception. What I mean by "layer" is that plane of infinite space which by its nature cannot fall under our ordinary waking perceptions, whether mental or physical; but which exists in nature outside of our normal mentality or consciousness, outside of our three-dimensional space, and outside of our division of time. Each of the seven fundamental planes (or layers) in space-of course as a whole, as the pure space of Locke's definition, not as our finite space-has its own objectivity and subjectivity, its own space and time, its own consciousness and set of senses. But all this will be hardly comprehensible to one trained in the modern ways of thought.

Q. What do you mean by a different set of senses? Is there anything on our human plane that you could bring as an illustration of what you say, just to give a clearer idea of what you may mean by this variety of senses, spaces, and respective perceptions?

A. None; except, perhaps, that which for Science would be rather a handy peg on which to hang a counter argument. We have a different set of senses in dreamlife, have we not? We feel, talk, hear, see, taste and function in general on a different plane; the change of state of our consciousness being evidenced by the fact that a series of acts and events embracing years, as we think, pass ideally through our mind in one instant. Well, that extreme rapidity of our mental operations in dreams, and the perfect naturalness, for the time being, of all the other functions, show us that we are on quite another plane. Our philosophy teaches us that, as there are seven fundamental forces in nature, and seven planes of being, so there are seven states of consciousness in which man can live, think, remember and have his being. To enumerate these here is impossible, and for this one has to turn to the study of Eastern metaphysics. But in these two states-the waking and the dreaming-every ordinary mortal, from a learned philosopher down to a

The Key To Theosophy - HP Blavatsky.txt
poor untutored savage, has a good proof that such states differ.

Q. You do not accept, then, the well-known explanations of biology and physiology to account for the dream state?

A. We do not. We reject even the hypotheses of your psychologists, preferring the teachings of Eastern Wisdom. Believing in seven planes of Kosmic being and states of Consciousness, with regard to the Universe or the Macrocosm, we stop at the fourth plane, finding it impossible to go with any degree of certainty beyond. But with respect to the Microcosm, or man, we speculate freely on his seven states and principles.

Q. How do you explain these?

A. We find, first of all, two distinct beings in man; the spiritual and the physical, the man who thinks, and the man who records as much of these thoughts as he is able to assimilate. Therefore we divide him into two distinct natures; the upper or the spiritual being, composed of three principles or aspects; and the lower or the physical quaternary, composed of four-in all seven.

- oOo-

The Septenary Nature of Man

Q. Is it what we call Spirit and Soul, and the man of flesh?

A. It is not. That is the old Platonic division. Plato was an Initiate, and therefore could not go into forbidden details; but he who is acquainted with the archaic doctrine finds the seven in Plato's various combinations of Soul and Spirit. He regarded man as constituted of two parts-one eternal, formed of the same essence as the Absoluteness, the other mortal and corruptible, deriving its constituent parts from the minor "created" Gods. Man is composed, he shows, of (1) A mortal body, (2) An immortal principle, and (3) A "separate mortal kind of Soul." It is that which we respectively call the physical man, the Spiritual Soul or Spirit, and the animal Soul (the Nous and psuche). This is the division adopted by Paul, another Initiate, who maintains that there is a psychical body which is sown in the corruptible (astral soul or body), and a spiritual body that is raised in incorruptible substance. Even James corroborates the same by saying that the "wisdom" (of our lower soul) descendeth not from the above, but is terrestrial ("psychical," "demoniacal," see the Greek text) while the other is heavenly wisdom. Now so plain is it that Plato and even Pythagoras, while speaking but of three principles, give them seven separate functions, in their various combinations, that if we contrast our teachings this will become quite plain. Let us take a cursory view of these seven aspects by drawing two tables.

Theosophical Division of the Lower Quaternary

Sanskrit Term Exoteric Meaning Explanation

1. Rupa, or Sthula-sarira Physical body Is the vehicle of all the other principles during life.

1. Prana Life, or Vital principle Necessary only to a, c, d, and the functions of the lower Manas, which embrace all those limited to the (physical) brain.

(c) Linga- sarira Astral Body The Double, the phantom body.

(d) **Kamarupa** The seat of animal desires and passions This is the center of the animal man, where lies the line of demarcation which separates the mortal man from the immortal entity.

Theosophical Division of the Upper Imperishable Triad

Sanskrit Term Exoteric Meaning Explanation

(e) **Manas**-a dual principle in its functions. Mind, Intelligence: which is the higher human mind, whose light, or radiation links the **Monad**, for the lifetime, to the mortal man. The future state and the **Karmic** destiny of man depend on whether **Manas** gravitates more downward to **Kamarupa**, the seat of the animal passions, or upwards to **Buddhi**, the **Spiritual Ego**. In the later case, the higher consciousness of the individual **Spiritual aspirations** of mind (**Manas**), assimilating **Buddhi**, are absorbed by it and form the **Ego**, which goes into **Devachanic bliss**.

(f) **Buddhi** The **Spiritual Soul** The vehicle of pure universal spirit.

(g) **Atma** Spirit One with the Absolute, as its radiation.

In Mr. Sinnett's **Esoteric Buddhism** d, e, and f, are respectively called the **Animal**, the **Human**, and the **Spiritual Souls**, which answers as well. Though the principles in **Esoteric Buddhism** are numbered, this is, strictly speaking, useless. The dual **Monad** alone (**Atma-Buddhi**) is susceptible of being thought of as the two highest numbers (the sixth and seventh). As to all others, since that principle only which is predominant in man has to be considered as the first and foremost, no numeration is possible as a general rule. In some men it is the higher **Intelligence** (**Manas** or the fifth) which dominates the rest; in others the **Animal Soul** (**Kamarupa**) that reigns supreme, exhibiting the most bestial instincts, etc.

- o0o-

Now what does **Plato** teach? He speaks of the interior man as constituted of two parts-one immutable and always the same, formed of the same substance as **Deity**, and the other mortal and corruptible. These "two parts" are found in our upper **Triad**, and the lower **Quaternary** (see table above,). He explains that when the **Soul**, **psuche**, "allies herself to the **Nous** (divine spirit or substance *)), she does everything aright and felicitously;" but the case is otherwise when she attaches herself to **Anoia**, (folly, or the irrational animal **Soul**). Here, then, we have **Manas** (or the **Soul** in general) in its two aspects: when attaching itself to **Anoia** (our **Kamarupa**, or the "**Animal Soul**" in **Esoteric Buddhism**) it runs towards entire annihilation, as far as the personal **Ego** is concerned; when allying itself to the **Nous** (**Atma-Buddhi**) it merges into the immortal, imperishable **Ego**, and then its spiritual consciousness of the personal that was, becomes immortal.

*) St. Paul calls **Plato's nous** 'spirit'; but since this spirit is 'substance', **Buddhi** is meant then and not **Atma**; philosophically speaking this (**Atma**) cannot be called 'substance'. We count **Atma** as a human 'principle' in order to not create yet more confusion. In reality it is not a 'human' but the universal absolute principle of which **buddhi**, the soul-spirit, is the vehicle. [reversely translated

note from Dutch translation - editor]

The Distinction Between Soul and Spirit

Q. Do you really teach, as you are accused of doing by some **Spiritualists** and **French Spiritists**, the annihilation of every personality?

The Key To Theosophy - HP Blavatsky.txt

A. We do not. But as this question of the duality-the individuality of the Divine Ego, and the personality of the human animal-involves that of the possibility of the real immortal Ego appearing in Seance rooms as a "materialized spirit," which we deny as already explained, our opponents have started the nonsensical charge.

Q. You have just spoken of psuche running towards its entire annihilation if it attaches itself to Anoiia. What did Plato, and do you mean by this?

A. The entire annihilation of the personal consciousness, as an exceptional and rare case, I think. The general and almost invariable rule is the merging of the personal into the individual or immortal consciousness of the Ego, a transformation or a divine transfiguration, and the entire annihilation only of the lower quaternary. Would you expect the man of flesh, or the temporary personality, his shadow, the "astral," his animal instincts and even physical life, to survive with the "spiritual Ego" and become everlasting, eternal? Naturally all this ceases to exist, either at, or soon after corporeal death. It becomes in time entirely disintegrated and disappears from view, being annihilated as a whole.

Q. Then you also reject resurrection in the flesh?

A. Most decidedly we do! Why should we, who believe in the archaic esoteric philosophy of the Ancients, accept the unphilosophical speculations of the later Christian theology, borrowed from the Egyptian and Greek exoteric Systems of the Gnostics?

Q. The Egyptians revered Nature-Spirits, and deified even onions: your Hindus are idolaters, to this day; the Zoroastrians worshiped, and do still worship, the Sun; and the best Greek philosophers were either dreamers or materialists-witness Plato and Democritus. How can you compare!

A. It may be so in your modern Christian and even Scientific catechism; it is not so for unbiased minds. The Egyptians revered the "One-Only-One," as Nout; and it is from this word that Anaxagoras got his denomination Nous, or as he calls it, nous autokrates, "the Mind or Spirit Self-potent", the archetes kinedeos, the leading motor, or primum-mobile of all. With him the Nous was God, and the logos was man, his emanation. The Nous is the spirit (whether in Kosmos or in man), and the logos, whether Universe or astral body, the emanation of the former, the physical body being merely the animal. Our external powers perceive phenomena; our Nous alone is able to recognize their noumena. It is the logos alone, or the noumenon, that survives, because it is immortal in its very nature and essence, and the logos in man is the Eternal Ego, that which reincarnates and lasts forever. But how can the evanescent or external shadow, the temporary clothing of that divine Emanation which returns to the source whence it proceeded, be that which is raised in incorruptibility?

Q. Still you can hardly escape the charge of having invented a new division of man's spiritual and psychic constituents; for no philosopher speaks of them, though you believe that Plato does.

A. And I support the view. Besides Plato, there is Pythagoras, who also followed the same idea.

Says Plutarch:

Plato and Pythagoras distribute the soul into two parts, the rational (noetic) and irrational (agnoia); that part of the soul of man which is rational is eternal; for though it be not God, yet it is the product of an eternal deity, but that part of the soul which is divested of reason (agnoia) dies.

The modern term Agnostic comes from Agnosis, a cognate word. We wonder why

Mr. Huxley, the author of the word, should have connected his great intellect with "the soul divested of reason" which dies? Is it the exaggerated humility of the modern materialist?

Pythagoras described the Soul as a self-moving Unit (monad) composed of three elements, the Nous (Spirit), the phren (mind), and the thumos (life, breath or the Nephesh of the Cabalists) which three correspond to our "Atma-buddhi," (higher Spirit-Soul), to Manas (the Ego), and to Kamarupa in conjunction with the lower reflection of Manas. That which the Ancient Greek philosophers termed Soul, in general, we call Spirit, or Spiritual Soul, Buddhi, as the vehicle of Atma (the Agathon, or Plato's Supreme Deity). The fact that Pythagoras and others state that phren and thumos are shared by us with the brutes, proves that in this case the lower Manasic reflection (instinct) and Kamarupa (animal living passions) are meant. And as Socrates and Plato accepted the clue and followed it, if to these five, namely, Agathon (Deity or Atma), Psuche (Soul in its collective sense), Nous (Spirit or Mind), Phren (physical mind), and Thumos (Kamarupa or passions) we add the eidolon of the Mysteries, the shadowy form or the human double, and the physical body, it will be easy to demonstrate that the ideas of both Pythagoras and Plato were identical with ours. Even the Egyptians held to the Septenary division. In its exit, they taught, the Soul (Ego) had to pass through its seven chambers, or principles, those it left behind, and those it took along with itself. The only difference is that, ever bearing in mind the penalty of revealing Mystery-doctrines, which was death, they gave out the teaching in a broad outline, while we elaborate it and explain it in its details. But though we do give out to the world as much as is lawful, even in our doctrine more than one important detail is withheld, which those who study the esoteric philosophy and are pledged to silence, are alone entitled to know.

- o0o-

The Greek Teachings

Q. We have magnificent Greek and Latin, Sanskrit and Hebrew scholars. How is it that we find nothing in their translations that would afford us a clue to what you say?

A. Because your translators, their great learning notwithstanding, have made of the philosophers, the Greeks especially, misty instead of mystic writers. Take as an instance Plutarch, and read what he says of "the principles" of man. That which he describes was accepted literally and attributed to metaphysical superstition and ignorance. Let me give you an illustration in point. Says Plutarch:

Man is compound; and they are mistaken who think him to be compounded of two parts only. For they imagine that the understanding (brain intellect) is a part of the soul (the upper Triad), but they err in this no less than those who make the soul to be a part of the body, i. e., those who make of the Triad part of the corruptible mortal quaternary. For the understanding (nous) as far exceeds the soul, as the soul is better and diviner than the body. Now this composition of the soul (psuche) with the understanding (nous) makes reason; and with the body (or thumos, the animal soul) passion; of which the one is the beginning or principle of pleasure and pain, and the other of virtue and vice. Of these three parts conjoined and compacted together, the earth has given the body, the moon the soul, and the sun the understanding to the generation of man.

This last sentence is purely allegorical, and will be comprehended only by those who are versed in the esoteric science of correspondences and know which planet is related to every principle. Plutarch divides the latter into three groups, and makes of the body a compound of physical frame, astral shadow, and breath, or the triple lower part, which "from earth was taken and to earth returns"; of the middle principle and the instinctual soul, the

second part, derived from and through and ever influenced by the moon; and only of the higher part or the Spiritual Soul, with the tmi c and Manasic elements in it does he make a direct emanation of the Sun, who stands here for Agathon the Supreme Deity. This is proven by what he says further as follows:

Now of the deaths we die, the one makes man two of three and the other one of (out of) two. The former is in the region and jurisdiction of Demeter, whence the name given to the Mysteries, telein , resembled that given to death, teleutan. The Athenians also heretofore called the deceased sacred to Demeter. As for the other death, it is in the moon or region of Persephone.

Here you have our doctrine, which shows man a septenary during life; a quintile just after death, in Kamaloka; and a threefold Ego, Spirit-Soul, and consciousness in Devachan. This separation, first in "the Meadows of Hades," as Plutarch calls the Kamaloka, then in Devachan, was part and parcel of the performances during the sacred Mysteries, when the candidates for initiation enacted the whole drama of death, and the resurrection as a glorified spirit, by which name we mean Consciousness. This is what Plutarch means when he says:

And as with the one, the terrestrial, so with the other celestial Hermes doth dwell. This suddenly and with violence plucks the soul from the body; but Proserpina mildly and in a long time disjoins the understanding from the soul.

(Proserpina, or Persephone, stands here for postmortem Karma, which is said to regulate the separation of the lower from the higher principles: the Soul, as Nephesh, the breath of animal life, which remains for a time in Kamaloka, from the higher compound Ego, which goes into the state of Devachan, or bliss.)

For this reason she is called Monogenes, only begotten, or rather begetting one alone; for the better part of man becomes alone when it is separated by her. Now both the one and the other happens thus according to nature. It is ordained by Fate (Fatum or Karma) that every soul, whether with or without understanding (mind), when gone out of the body, should wander for a time, though not all for the same, in the region lying between the earth and moon (Kamaloka). For those that have been unjust and dissolute suffer then the punishment due to their offenses; but the good and virtuous are there detained till they are purified, and have, by expiation, purged out of them all the infections they might have contracted from the contagion of the body, as if from foul health, living in the mildest part of the air, called the Meadows of Hades, where they must remain for a certain prefixed and appointed time. And then, as if they were returning from a wandering pilgrimage or long exile into their country, they have a taste of joy, such as they principally receive who are initiated into Sacred Mysteries, mixed with trouble, admiration, and each one's proper and peculiar hope.

This is Nirvanic bliss, and no Theosophist could describe in plainer though esoteric language the mental joys of Devachan, where every man has his paradise around him, erected by his consciousness. But you must beware of the general error into which too many even of our Theosophists fall. Do not imagine that because man is called septenary, then quintuple and a triad, he is a compound of seven, five, or three entities; or, as well expressed by a Theosophical writer, of skins to be peeled off like the skins of an onion. The principles, as already said, save the body, the life, and the astral eidolon, all of which disperse at death, are simply aspects and states of consciousness. There is but one real man, enduring through the cycle of life and immortal in essence, if not in form, and this is Manas, the Mind-man or embodied Consciousness. The objection made by the materialists, who deny the possibility of mind and consciousness acting without matter is worthless in our case. We do not deny the soundness of their argument; but we simply ask our opponents,

The Key To Theosophy - HP Blavatsky.txt

Are you acquainted with all the states of matter, you who knew hitherto but of three? And how do you know whether that which we refer to as absolute consciousness or Deity forever invisible and unknowable, be not that which, though it eludes forever our human finite conception, is still universal Spirit-matter or matter-Spirit in its absolute infinitude?

It is then one of the lowest, and in its manvantaric manifestations fractioned-aspects of this Spirit-matter, which is the conscious Ego that creates its own paradise, a fool's paradise, it may be, still a state of bliss.

Q. But what is Devachan?

A. The "land of gods" literally; a condition, a state of mental bliss. Philosophically a mental condition analogous to, but far more vivid and real than, the most vivid dream. It is the state after death of most mortals.

On the Various Postmortem States

The Physical and the Spiritual Man

Q. I am glad to hear you believe in the immortality of the Soul.

A. Not of "the Soul," but of the divine Spirit; or rather in the immortality of the reincarnating Ego.

Q. What is the difference?

A. A very great one in our philosophy, but this is too abstruse and difficult a question to touch lightly upon. We shall have to analyze them separately, and then in conjunction. We may begin with Spirit.

We say that the Spirit (the "Father in secret" of Jesus), or Atma, is no individual property of any man, but is the Divine essence which has no body, no form, which is imponderable, invisible and indivisible, that which does not exist and yet is, as the Buddhists say of Nirvana. It only overshadows the mortal; that which enters into him and pervades the whole body being only its omnipresent rays, or light, radiated through Buddhi, its vehicle and direct emanation. This is the secret meaning of the assertions of almost all the ancient philosophers, when they said that "the rational part of man's soul" never entered wholly into the man, but only overshadowed him more or less through the irrational spiritual Soul or Buddhi.

Buddhi is irrational in the sense that as a pure emanation of the Universal mind it can have no individual reason of its own on this plane of matter, but like the Moon, who borrows her light from the Sun and her life from the Earth, so Buddhi, receiving its light of Wisdom from Atma, gets its rational qualities from Manas. Per se, as something homogeneous, it is devoid of attributes.

Q. I labored under the impression that the "Animal Soul" alone was irrational, not the Divine.

A. You have to learn the difference between that which is negatively, or passively "irrational," because undifferentiated, and that which is irrational because too active and positive. Man is a correlation of spiritual powers, as well as a correlation of chemical and physical forces, brought into function by what we call principles.

I have read a good deal upon the subject, and it seems to me that the notions of the older philosophers differed a great deal from those of the medieval Cabalists, though they do agree in some particulars.

The Key To Theosophy - HP Blavatsky.txt

A. The most substantial difference between them and us is this. While we believe with the Neo-Platonists and the Eastern teachings that the spirit (Atma) never descends hypostatically into the living man, but only showers more or less its radiance on the inner man (the psychic and spiritual compound of the astral principles), the Cabalists maintain that the human Spirit, detaching itself from the ocean of light and Universal Spirit, enters man's Soul, where it remains throughout life imprisoned in the astral capsule. All Christian Cabalists still maintain the same, as they are unable to break quite loose from their anthropomorphic and Biblical doctrines.

Q. And what do you say?

A. We say that we only allow the presence of the radiation of Spirit (or Atma) in the astral capsule, and so far only as that spiritual radiance is concerned. We say that man and Soul have to conquer their immortality by ascending towards the unity with which, if successful, they will be finally linked and into which they are finally, so to speak, absorbed. The individualization of man after death depends on the spirit, not on his soul and body. Although the word personality, in the sense in which it is usually understood, is an absurdity if applied literally to our immortal essence, still the latter is, as our individual Ego, a distinct entity, immortal and eternal, per se. It is only in the case of black magicians or of criminals beyond redemption, criminals who have been such during a long series of lives—that the shining thread, which links the spirit to the personal soul from the moment of the birth of the child, is violently snapped, and the disembodied entity becomes divorced from the personal soul, the latter being annihilated without leaving the smallest impression of itself on the former. If that union between the lower, or personal Manas, and the individual reincarnating Ego, has not been effected during life, then the former is left to share the fate of the lower animals, to gradually dissolve into ether, and have its personality annihilated. But even then the Ego remains a distinct being. It (the spiritual Ego) only loses one Devachanic state—after that special, and in that case indeed useless, life—as that idealized Personality, and is reincarnated, after enjoying for a short time its freedom as a planetary spirit almost immediately.

Q. It is stated in Isis Unveiled that such planetary Spirits or Angels, "the gods of the Pagans or the Archangels of the Christians," will never be men on our planet.

A. Quite right. Not "such," but some classes of higher Planetary Spirits. They will never be men on this planet, because they are liberated Spirits from a previous, earlier world, and as such they cannot rebecome men on this one. Yet all these will live again in the next and far higher Maha-Manvantara, after this "great Age," and "Brahma pralaya," (a little period of 16 figures or so) is over. For you must have heard, of course, that Eastern philosophy teaches us that mankind consists of such "Spirits" imprisoned in human bodies? The difference between animals and men is this: the former are ensouled by the principles potentially, the latter actually. Do you understand now the difference?

Q. Yes; but this specialization has been in all ages the stumbling-block of metaphysicians.

A. It was. The whole esotericism of the Buddhist philosophy is based on this mysterious teaching, understood by so few persons, and so totally misrepresented by many of the most learned modern scholars. Even metaphysicians are too inclined to confound the effect with the cause. An Ego who has won his immortal life as spirit will remain the same inner self throughout all his rebirths on earth; but this does not imply necessarily that he must either remain the Mr. Smith or Mr. Brown he was on earth, or lose his individuality. Therefore, the astral soul and the terrestrial body of man may, in the dark hereafter, be absorbed into the cosmical ocean of sublimated elements, and cease to feel his last personal Ego (if it did not

deserve to soar higher), and the divine Ego still remain the same unchanged entity, though this terrestrial experience of his emanation may be totally obliterated at the instant of separation from the unworthy vehicle.

Q. If the "Spirit," or the divine portion of the soul, is preexistent as a distinct being from all eternity, as Origen, Synesius, and other semi-Christians and semi-Platonic philosophers taught, and if it is the same, and nothing more than the metaphysically-objective soul, how can it be otherwise than eternal? And what matters it in such a case, whether man leads a pure life or an animal, if, do what he may, he can never lose his individuality?

A. This doctrine, as you have stated it, is just as pernicious in its consequences as that of vicarious atonement. Had the latter dogma, in company with the false idea that we are all immortal, been demonstrated to the world in its true light, humanity would have been bettered by its propagation.

Let me repeat to you again. Pythagoras, Plato, Timæus of Locris, and the old Alexandrian School, derived the Soul of man (or his higher principles and attributes) from the Universal World Soul, the latter being, according to their teachings, Aether (Pater-Zeus). Therefore, neither of these principles can be unalloyed essence of the Pythagorean Monas, or our Atma-Buddhi, because the Anima Mundi is but the effect, the subjective emanation or rather radiation of the former. Both the human Spirit (or the individuality), the reincarnating Spiritual Ego, and Buddhi, the Spiritual soul, are preexistent. But, while the former exists as a distinct entity, an individualization, the soul exists as preexisting breath, an unscient [lacking in knowledge] portion of an intelligent whole. Both were originally formed from the Eternal Ocean of light; but as the Fire-Philosophers, the medieval Theosophists, expressed it, there is a visible as well as invisible spirit in fire. They made a difference between the anima bruta and the anima divina. Empedocles firmly believed all men and animals to possess two souls; and in Aristotle we find that he calls one the reasoning soul, nous, and the other, the animal soul, psuche. According to these philosophers, the reasoning soul comes from within the universal soul, and the other from without.

Q. Would you call the Soul, i. e., the human thinking Soul, or what you call the Ego-matter?

A. Not matter, but substance assuredly; nor would the word matter, if prefixed with the adjective, primordial, be a word to avoid. That matter, we say, is coeternal with Spirit, and is not our visible, tangible, and divisible matter, but its extreme sublimation. Pure Spirit is but one remove from the no-Spirit, or the absolute all. Unless you admit that man was evolved out of this primordial Spirit-matter, and represents a regular progressive scale of principles from meta-Spirit down to the grossest matter, how can we ever come to regard the inner man as immortal, and at the same time as a spiritual Entity and a mortal man?

Q. Then why should you not believe in God as such an Entity?

A. Because that which is infinite and unconditioned can have no form, and cannot be a being, not in any Eastern philosophy worthy of the name, at any rate. An "entity" is immortal, but is so only in its ultimate essence, not in its individual form. When at the last point of its cycle, it is absorbed into its primordial nature; and it becomes spirit, when it loses its name of Entity.

Its immortality as a form is limited only to its life cycle or the Maha-Manvantara; after which it is one and identical with the Universal Spirit, and no longer a separate Entity. As to the personal Soul-by which we mean the spark of consciousness that preserves in the Spiritual Ego the idea of

The Key To Theosophy - HP Blavatsky.txt

the personal "I" of the last incarnation-this lasts, as a separate distinct recollection, only throughout the Devachanic period; after which time it is added to the series of other innumerable incarnations of the Ego, like the remembrance in our memory of one of a series of days, at the end of a year. Will you bind the infinitude you claim for your God to finite conditions? That alone which is indissolubly cemented by Atma (i. e., Buddhi-Manas) is immortal. The Soul of man (i. e., of the personality) per se is neither immortal, eternal nor divine. Says The Zohar:

The soul, when sent to this earth, puts on an earthly garment, to preserve herself here, so she receives above a shining garment, in order to be able to look without injury into the mirror, whose light proceeds from the Lord of Light.

Moreover, The Zohar teaches that the soul cannot reach the abode of bliss, unless she has received the "holy kiss," or the reunion of the soul with the substance from which she emanated-spirit. All souls are dual, and, while the latter is a feminine principle, the spirit is masculine. While imprisoned in body, man is a trinity, unless his pollution is such as to have caused his divorce from the spirit. "Woe to the soul which prefers to her divine husband (spirit) the earthly wedlock with her terrestrial body," records a text of The Book of the Keys, a Hermetic work. Woe indeed, for nothing will remain of that personality to be recorded on the imperishable tablets of the Ego's memory.

Q. How can that which, if not breathed by God into man, yet is on your own confession of an identical substance with the divine, fail to be immortal?

A. Every atom and speck of matter, not of substance only, is imperishable in its essence, but not in its individual consciousness. Immortality is but one's unbroken consciousness; and the personal consciousness can hardly last longer than the personality itself, can it? And such consciousness, as I already told you, survives only throughout Devachan, after which it is reabsorbed, first, in the individual, and then in the universal consciousness. Better enquire of your theologians how it is that they have so sorely jumbled up the Jewish Scriptures. Read the Bible, if you would have a good proof that the writers of the Pentateuch, and Genesis especially, never regarded nephesh, that which God breathes into Adam, as the immortal soul. Here are some instances: "And God created ... every nephesh (life) that moveth," meaning animals; and it is said: "And man became a nephesh" (living soul), which shows that the word nephesh was indifferently applied to immortal man and to mortal beast. "And surely your blood of your nepheshim (lives) will I require; at the hand of every beast will I require it, and at the hand of man," "Escape for nephesh" (escape for thy life, it is translated). "Let us not kill him," reads the English version. "Let us not kill his nephesh," is the Hebrew text. "Nephesh for nephesh," says Leviticus. "He that killeth any man shall surely be put to death," literally "He that smiteth the nephesh of a man;" and from verse 18 and following it reads: "And he that killeth a beast (nephesh) shall make it good ... Beast for beast," whereas the original text has it "nephesh for nephesh." How could man kill that which is immortal? And this explains also why the Sadducees denied the immortality of the soul, as it also affords another proof that very probably the Mosaic Jews-the uninitiated at any rate-never believed in the soul's survival at all.

- oOo-

On Eternal Reward and Punishment, and on Nirvana

Q. It is hardly necessary, I suppose, to ask you whether you believe in the Christian dogmas of Paradise and Hell, or in future rewards and punishments as taught by the Orthodox churches?

A. As described in your catechisms, we reject them absolutely; least of all

would we accept their eternity. But we believe firmly in what we call the Law of Retribution, and in the absolute justice and wisdom guiding this Law, or Karma. Hence we positively refuse to accept the cruel and unphilosophical belief in eternal reward or eternal punishment. We say with Horace:

Let rules be fixed that may our rage contain,
And punish faults with a proportioned pain;
But do not flay him who deserves alone
A whipping for the fault that he has done.

This is a rule for all men, and a just one. Have we to believe that God, of whom you make the embodiment of wisdom, love and mercy, is less entitled to these attributes than mortal man?

Q. Have you any other reasons for rejecting this dogma?

A. Our chief reason for it lies in the fact of reincarnation. As already stated, we reject the idea of a new soul created for every newly-born babe. We believe that every human being is the bearer, or Vehicle, of an Ego coeval with every other Ego; because all Egos are of the same essence and belong to the primeval emanation from one universal infinite Ego. Plato calls the latter the logos (or the second manifested God); and we, the manifested divine principle, which is one with the universal mind or soul, not the anthropomorphic, extra-cosmic and personal God in which so many Theists believe. Pray do not confuse.

Q. But where is the difficulty, once you accept a manifested principle, in believing that the soul of every new mortal is created by that Principle, as all the Souls before it have been so created?

A. Because that which is impersonal can hardly create, plan and think, at its own sweet will and pleasure. Being a universal Law, immutable in its periodical manifestations, those of radiating and manifesting its own essence at the beginning of every new cycle of life, it is not supposed to create men, only to repent a few years later of having created them. If we have to believe in a divine principle at all, it must be in one which is absolute harmony, logic, and justice, as it is absolute love, wisdom, and impartiality; and a God who would create every soul for the space of one brief span of life, regardless of the fact whether it has to animate the body of a wealthy, happy man, or that of a poor suffering wretch, hapless from birth to death though he has done nothing to deserve his cruel fate-would be rather a senseless fiend than a God. Why, even the Jewish philosophers, believers in the Mosaic Bible (esoterically, of course), have never entertained such an idea; and, moreover, they believed in reincarnation, as we do.

Q. Can you give me some instances as a proof of this?

A. Most decidedly I can. Philo Judaeus says:

The air is full of them (of souls); those which are nearest the earth, descending to be tied to mortal bodies, palindromousi authis, return to other bodies, being desirous to live in them.

In The Zohar, the soul is made to plead her freedom before God:

Lord of the Universe! I am happy in this world, and do not wish to go into another world, where I shall be a handmaid, and be exposed to all kinds of pollution.

The doctrine of fatal necessity, the everlasting immutable law, is asserted

in the answer of the Deity: "Against thy will thou becomest an embryo, and against thy will thou art born." Light would be incomprehensible without darkness to make it manifest by contrast; good would be no longer good without evil to show the priceless nature of the boon; and so personal virtue could claim no merit, unless it had passed through the furnace of temptation. Nothing is eternal and unchangeable, save the concealed Deity. Nothing that is finite-whether because it had a beginning, or must have an end-can remain stationary. It must either progress or recede; and a soul which thirsts after a reunion with its spirit, which alone confers upon it immortality, must purify itself through cyclic transmigrations onward toward the only land of bliss and eternal rest, called in The Zohar, "The Palace of Love," ; in the Hindu religion, "Moksha"; among the Gnostics, "The Pleroma of Eternal Light"; and by the Buddhists, "Nirvana." And all these states are temporary, not eternal.

Q. Yet there is no reincarnation spoken of in all this.

A. A soul which pleads to be allowed to remain where she is, must be preexistent, and not have been created for the occasion. In The Zohar, however, there is a still better proof. Speaking of the reincarnating Egos (the rational souls), those whose last personality has to fade out entirely, it is said:

All souls which have alienated themselves in heaven from the Holy One-blessed be His Name-have thrown themselves into an abyss at their very existence, and have anticipated the time when they are to descend once more on earth.

"The Holy One" means here, esoterically, the Atma, or Atma-Buddhi.

Q. Moreover, it is very strange to find Nirvana spoken of as something synonymous with the Kingdom of Heaven, or the Paradise, since according to every Orientalist of note Nirvana is a synonym of annihilation!

A. Taken literally, with regard to the personality and differentiated matter, not otherwise. These ideas on reincarnation and the trinity of man were held by many of the early Christian Fathers. It is the jumble made by the translators of the New Testament and ancient philosophical treatises between soul and spirit, that has occasioned the many misunderstandings. It is also one of the many reasons why Buddha, Plotinus, and so many other Initiates are now accused of having longed for the total extinction of their souls-"absorption unto the Deity," or "reunion with the universal soul," meaning, according to modern ideas, annihilation. The personal soul must, of course, be disintegrated into its particles, before it is able to link its purer essence forever with the immortal spirit. But the translators of both the Acts and the Epistles, who laid the foundation of the Kingdom of Heaven, and the modern commentators on the Buddhist Sutra of the Foundation of the Kingdom of Righteousness, have muddled the sense of the great apostle of Christianity as of the great reformer of India. The former have smothered the word *psuchikos*, so that no reader imagines it to have any relation with soul; and with this confusion of soul and spirit together, Bible readers get only a perverted sense of anything on the subject. On the other hand, the interpreters of Buddha have failed to understand the meaning and object of the Buddhist four degrees of Dhyana. Ask the Pythagoreans, "Can that spirit, which gives life and motion and partakes of the nature of light, be reduced to nonentity?" "Can even that sensitive spirit in brutes which exercises memory, one of the rational faculties, die and become nothing?" observe the Occultists. In Buddhist philosophy annihilation means only a dispersion of matter, in whatever form or semblance of form it may be, for everything that has form is temporary, and is, therefore, really an illusion. For in eternity the longest periods of time are as a wink of the eye. So with form. Before we have time to realize that we have seen it, it is gone like an instantaneous flash of lightning, and passed forever. When the Spiritual entity breaks loose forever from every particle of matter, substance, or

form, and rebecomes a Spiritual breath: then only does it enter upon the eternal and unchangeable Nirvana, lasting as long as the cycle of life has lasted-an eternity, truly. And then that Breath, existing in Spirit, is nothing because it is all; as a form, a semblance, a shape, it is completely annihilated; as absolute Spirit it still is, for it has become Be-ness itself. The very word used, "absorbed in the universal essence," when spoken of the "Soul" as Spirit, means "union with." It can never mean annihilation, as that would mean eternal separation.

Q. Do you not lay yourself open to the accusation of preaching annihilation by the language you yourself use? You have just spoken of the Soul of man returning to its primordial elements.

A. But you forget that I have given you the differences between the various meanings of the word Soul, and shown the loose way in which the term Spirit has been hitherto translated. We speak of an animal, a human, and a spiritual, Soul, and distinguish between them. Plato, for instance, calls "rational Soul" that which we call Buddhi, adding to it the adjective of "spiritual," however; but that which we call the reincarnating Ego, Manas, he calls Spirit, Nous, etc., whereas we apply the term Spirit, when standing alone and without any qualification, to Atma alone. Pythagoras repeats our archaic doctrine when stating that the Ego (Nous) is eternal with Deity; that the soul only passed through various stages to arrive at divine excellence; while thumos returned to the earth, and even the phren, the lower Manas, was eliminated. Again, Plato defines Soul (Buddhi) as "the motion that is able to move itself." "Soul," he adds (Laws X.), "is the most ancient of all things, and the commencement of motion," thus calling Atma-Buddhi "Soul," and Manas "Spirit," which we do not.

Soul was generated prior to body, and body is posterior and secondary, as being according to nature, ruled over by the ruling soul. The soul which administers all things that are moved in every way, administers likewise the heavens.

Soul then leads everything in heaven, and on earth, and in the sea, by its movements-the names of which are, to will, to consider to take care of, to consult. to form opinions true and false, to be in a state of joy, sorrow, confidence, fear, hate, love, together with all such primary movements as are allied to these ... Being a goddess herself, she ever takes as an ally Nous, a god, and disciplines all things correctly and happily; but when with Annoia-not nous-it works out everything the contrary.

In this language, as in the Buddhist texts, the negative is treated as essential existence. Annihilation comes under a similar exegesis. The positive state is essential being, but no manifestation as such. When the spirit, in Buddhist parlance, enters Nirvana, it loses objective existence, but retains subjective being. To objective minds this is becoming absolute "nothing"; to subjective, No-thing, nothing to be displayed to sense. Thus, their Nirvana means the certitude of individual immortality in Spirit, not in Soul, which, though "the most ancient of all things," is still-along with all the other Gods-a finite emanation, in forms and individuality, if not in substance.

Q. I do not quite seize the idea yet, and would be thankful to have you explain this to me by some illustrations.

A. No doubt it is very difficult to understand, especially to one brought up in the regular orthodox ideas of the Christian Church. Moreover, I must tell you one thing; and this is that unless you have studied thoroughly well the separate functions assigned to all the human principles and the state of all these after death, you will hardly realize our Eastern philosophy.

On the Various Principles in Man

Q. I have heard a good deal about this constitution of the "inner man" as you call it, but could never make "head or tail on't" as Gabalis expresses it.

A. Of course, it is most difficult, and, as you say, "puzzling" to understand correctly and distinguish between the various aspects, called by us the principles of the real Ego. It is the more so as there exists a notable difference in the numbering of those principles by various Eastern schools, though at the bottom there is the same identical substratum of teaching.

Q. Do you mean the Vedantins, as an instance? Don't they divide your seven principles into five only?

1. They do; but though I would not presume to dispute the point with a learned Vedantin, I may yet state as my private opinion that they have an obvious reason for it. With them it is only that compound spiritual aggregate which consists of various mental aspects that is called Man at all, the physical body being in their view something beneath contempt, and merely an illusion. Nor is the Vedanta the only philosophy to reckon in this manner. Lao-tzu, in his Tao Te Ching, mentions only five principles, because he, like the Vedantins, omits to include two principles, namely, the spirit (Atma) and the physical body, the latter of which, moreover, he calls "the cadaver." Then there is the Taraka Raja-Yoga School. Its teaching recognizes only three principles in fact; but then, in reality, their Sthulopadhi, or the physical body, in its waking conscious state, their Sukshmapadhi, the same body in Svapna, or the dreaming state, and their Karanopadhi or "causal body," or that which passes from one incarnation to another, are all dual in their aspects, and thus make six. Add to this Atma, the impersonal divine principle or the immortal element in Man, undistinguished from the Universal Spirit, and you have the same seven again. They are welcome to hold to their division; we hold to ours.

[See 'Secret Doctrine', part 1, p. 182 for a clearer exposition]

Q. Then it seems almost the same as the division made by the mystic Christians: body, soul, and spirit?

A. Just the same. We could easily make of the body the vehicle of the "vital Double"; of the latter the vehicle of Life or Prana; of Kamarupa, or (animal) soul, the vehicle of the higher and the lower mind, and make of this six principles, crowning the whole with the one immortal spirit. In Occultism every qualitative change in the state of our consciousness gives to man a new aspect, and if it prevails and becomes part of the living and acting Ego, it must be (and is) given a special name, to distinguish the man in that particular state from the man he is when he places himself in another state.

Q. It is just that which it is so difficult to understand.

A. It seems to me very easy, on the contrary, once that you have seized the main idea, i. e., that man acts on this or another plane of consciousness, in strict accordance with his mental and spiritual condition. But such is the materialism of the age that the more we explain the less people seem capable of understanding what we say. Divide the terrestrial being called man into three chief aspects, if you like, and unless you make of him a pure animal you cannot do less. Take his objective body; the thinking principle in him which is only a little higher than the instinctual element in the animal-or the vital conscious soul; and that which places him so immeasurably beyond and higher than the animal-i. e., his reasoning soul or "spirit." Well, if we take these three groups or representative entities,

and subdivide them, according to the occult teaching, what do we get?

First of all, Spirit (in the sense of the Absolute, and therefore, indivisible All), or Atma. As this can neither be located nor limited in philosophy, being simply that which is in Eternity, and which cannot be absent from even the tiniest geometrical or mathematical point of the universe of matter or substance, it ought not to be called, in truth, a "human" principle at all. Rather, and at best, it is in Metaphysics, that point in space which the human Monad and its vehicle man occupy for the period of every life. Now that point is as imaginary as man himself, and in reality is an illusion, a Maya; but then for ourselves, as for other personal Egos, we are a reality during that fit of illusion called life, and we have to take ourselves into account, in our own fancy at any rate, if no one else does. To make it more conceivable to the human intellect, when first attempting the study of Occultism, and to solve the a-b-c of the mystery of man, Occultism calls this seventh principle the synthesis of the sixth, and gives it for vehicle the Spiritual Soul, Buddhi. Now the latter conceals a mystery, which is never given to any one, with the exception of irrevocably pledged Chelas, or those, at any rate, who can be safely trusted. Of course, there would be less confusion, could it only be told; but, as this is directly concerned with the power of projecting one's double consciously and at will, and as this gift, like the "ring of Gyges," would prove very fatal to man at large and to the possessor of that faculty in particular, it is carefully guarded. But let us proceed with the principles. This divine soul, or Buddhi, then, is the vehicle of the Spirit. In conjunction, these two are one, impersonal and without any attributes (on this plane, of course), and make two spiritual principles. If we pass onto the Human Soul, Manas or mens, everyone will agree that the intelligence of man is dual to say the least: e.g., the high-minded man can hardly become low-minded; the very intellectual and spiritual-minded man is separated by an abyss from the obtuse, dull, and material, if not animal-minded man.

Q. But why should not man be represented by two principles or two aspects, rather?

A. Every man has these two principles in him, one more active than the other, and in rare cases, one of these is entirely stunted in its growth, so to say, or paralysed by the strength and predominance of the other aspect, in whatever direction. These, then, are what we call the two principles or aspects of Manas, the higher and the lower; the former, the higher Manas, or the thinking, conscious Ego gravitating toward the spiritual Soul (Buddhi); and the latter, or its instinctual principle, attracted to Kama, the seat of animal desires and passions in man. Thus, we have four principles justified; the last three being (1) the "Double," which we have agreed to call Protean, or Plastic Soul; the vehicle of (2) the life principle; and (3) the physical body. Of course no physiologist or biologist will accept these principles, nor can he make head or tail of them. And this is why, perhaps, none of them understand to this day either the functions of the spleen, the physical vehicle of the Protean Double, or those of a certain organ on the right side of man, the seat of the above-mentioned desires, nor yet does he know anything of the pineal gland, which he describes as a horny gland with a little sand in it, which gland is in truth the very seat of the highest and divinest consciousness in man, his omniscient, spiritual and all-embracing mind. And this shows to you still more plainly that we have neither invented these seven principles, nor are they new in the world of philosophy, as we can easily prove.

Q. But what is it that reincarnates, in your belief?

A. The Spiritual thinking Ego, the permanent principle in man, or that which is the seat of Manas. It is not Atma, or even Atma-Buddhi, regarded as the dual Monad, which is the individual, or divine man, but Manas; for Atma is the Universal All, and becomes the Higher-Self of man only in conjunction with Buddhi, its vehicle, which links it to the individuality (or divine

man). For it is the Buddhi-Manas which is called the Causal body, (the United fifth and sixth Principles) and which is Consciousness, that connects it with every personality it inhabits on earth. Therefore, Soul being a generic term, there are in men three aspects of Soul-the terrestrial, or animal; the Human Soul; and the Spiritual Soul; these, strictly speaking, are one Soul in its three aspects. Now of the first aspect, nothing remains after death; of the second (nous or Manas) only its divine essence if left unsoiled survives, while the third in addition to being immortal becomes consciously divine, by the assimilation of the higher Manas. But to make it clear, we have to say a few words first of all about Reincarnation.

Q. You will do well, as it is against this doctrine that your enemies fight the most ferociously.

A. You mean the Spiritualists? I know; and many are the absurd objections laboriously spun by them over the pages of Light. So obtuse and malicious are some of them, that they will stop at nothing. One of them found recently a contradiction, which he gravely discusses in a letter to that journal, in two statements picked out of Mr. Sinnett's lectures. He discovers that grave contradiction in these two sentences: "Premature returns to earth-life in the cases when they occur may be due to Karmic complication ... "; and "there is no accident in the supreme act of divine justice guiding evolution." So profound a thinker would surely see a contradiction of the law of gravitation if a man stretched out his hand to stop a falling stone from crushing the head of a child!

On Reincarnation or Rebirth

What is Memory According to Theosophical Teaching?

Q. The most difficult thing for you to do, will be to explain and give reasonable grounds for such a belief. No Theosophist has ever yet succeeded in bringing forward a single valid proof to shake my skepticism. First of all, you have against this theory of reincarnation, the fact that no single man has yet been found to remember that he has lived, least of all who he was, during his previous life.

A. Your argument, I see, tends to the same old objection; the loss of memory in each of us of our previous incarnation. You think it invalidates our doctrine? My answer is that it does not, and that at any rate such an objection cannot be final.

Q. I would like to hear your arguments.

A. They are short and few. Yet when you take into consideration (a) the utter inability of the best modern psychologists to explain to the world the nature of mind; and (b) their complete ignorance of its potentialities, and higher states, you have to admit that this objection is based on an a priori conclusion drawn from prima facie and circumstantial evidence more than anything else. Now what is "memory" in your conception, pray?

Q. That which is generally accepted: the faculty in our mind of remembering and of retaining the knowledge of previous thoughts, deeds, and events.

A. Please add to it that there is a great difference between the three accepted forms of memory. Besides memory in general you have Remembrance, Recollection, and Reminiscence, have you not? Have you ever thought over the difference? Memory, remember, is a generic name.

Q. Yet, all these are only synonyms.

A. Indeed, they are not-not in philosophy, at all events. Memory is simply an innate power in thinking beings, and even in animals, of reproducing past impressions by an association of ideas principally suggested by objective

The Key To Theosophy - HP Blavatsky.txt

things or by some action on our external sensory organs. Memory is a faculty depending entirely on the more or less healthy and normal functioning of our physical brain; and remembrance and recollection are the attributes and handmaidens of that memory. But reminiscence is an entirely different thing. Reminiscence is defined by the modern psychologist as something intermediate between remembrance and recollection, or "a conscious process of recalling past occurrences, but without that full and varied reference to particular things which characterizes recollection." Locke, speaking of recollection and remembrance, says:

When an idea again recurs without the operation of the like object on the external sensory, it is remembrance; if it be sought after by the mind, and with pain and endeavor found and brought again into view, it is recollection.

But even Locke leaves reminiscence without any clear definition, because it is no faculty or attribute of our physical memory, but an intuitional perception apart from and outside our physical brain; a perception which, covering as it does (being called into action by the ever-present knowledge of our spiritual Ego) all those visions in man which are regarded as abnormal—from the pictures suggested by genius to the ravings of fever and even madness—are classed by science as having no existence outside of our fancy. Occultism and Theosophy, however, regard reminiscence in an entirely different light. For us, while memory is physical and evanescent and depends on the physiological conditions of the brain—a fundamental proposition with all teachers of mnemonics, who have the researches of modern scientific psychologists to back them—we call reminiscence the memory of the soul. And it is this memory which gives the assurance to almost every human being, whether he understands it or not, of his having lived before and having to live again. Indeed, as Wordsworth has it:

Our birth is but a sleep and a forgetting,
The soul that rises with us, our life's star,
Hath elsewhere had its setting,
And cometh from afar.

Q. If it is on this kind of memory-poetry and abnormal fancies, on your own confession—that you base your doctrine, then you will convince very few, I am afraid.

A. I did not "confess" it was a fancy. I simply said that physiologists and scientists in general regard such reminiscences as hallucinations and fancy, to which learned conclusion they are welcome. We do not deny that such visions of the past and glimpses far back into the corridors of time, are not abnormal, as contrasted with our normal daily life experience and physical memory. But we do maintain with Professor W. Knight, that: The absence of memory of any action done in a previous state cannot be a conclusive argument against our having lived through it.

And every fair-minded opponent must agree with what is said in Butler's Lectures on Platonic Philosophy:

That the feeling of extravagance with which it (preexistence) affects us has its secret source in materialistic or semi-materialistic prejudices.

Besides which we maintain that memory, as Olympiodorus called it, is simply fantasy, and the most unreliable thing in us.

Say Olympiodorus, in Platonis Phaed. :

The fantasy is an impediment to our intellectual conceptions; and hence,

The Key To Theosophy - HP Blavatsky.txt

when we are agitated by the inspiring influence of the Divinity, if the fantasy intervenes, the enthusiastic energy ceases: for enthusiasm and the ecstasy are contrary to each other. Should it be asked whether the soul is able to energize without the fantasy, we reply, that its perception of universals proves that it is able. It has perceptions, therefore, independent of the fantasy; at the same time, however, the fantasy attends in its energies, just as a storm pursues him who sails on the sea.

Ammonius Saccas asserted that the only faculty in man directly opposed to prognostication, or looking into futurity, is memory. Furthermore, remember that memory is one thing and mind or thought is another; one is a recording machine, a register which very easily gets out of order; the other (thoughts) are eternal and imperishable. Would you refuse to believe in the existence of certain things or men only because your physical eyes have not seen them? Would not the collective testimony of past generations who have seen him be a sufficient guarantee that Julius Caesar once lived? Why should not the same testimony of the psychic senses of the masses be taken into consideration ?

Q. But don't you think that these are too fine distinctions to be accepted by the majority of mortals?

A. Say rather by the majority of materialists. And to them we say, behold: even in the short span of ordinary existence, memory is too weak to register all the events of a lifetime. How frequently do even most important events lie dormant in our memory until awakened by some association of ideas, or aroused to function and activity by some other link. This is especially the case with people of advanced age, who are always found suffering from feebleness of recollection. When, therefore, we remember that which we know about the physical and the spiritual principles in man, it is not the fact that our memory has failed to record our precedent life and lives that ought to surprise us, but the contrary, were it to happen.

- o0o-

Why Do We Not Remember Our Past Lives?

Q. You have given me a bird's eye view of the seven principles; now how do they account for our complete loss of any recollection of having lived before?

A. Very easily. Since those principles which we call physical, and none of which is denied by science, though it calls them by other names-namely, the body, life, passional and animal instincts, and the astral eidolon of every man (whether perceived in thought or our mind's eye, or objectively and separate from the physical body), which principles we call Sthula-sharira, Prana, Kamarupa, and Linga-sharira (see above).

[Those principles] are disintegrated after death with their constituent elements, memory along with its brain, this vanished memory of a vanished personality, can neither remember nor record anything in the subsequent reincarnation of the Ego. Reincarnation means that this Ego will be furnished with a new body, a new brain, and a new memory. Therefore it would be as absurd to expect this memory to remember that which it has never recorded as it would be idle to examine under a microscope a shirt never worn by a murderer, and seek on it for the stains of blood which are to be found only on the clothes he wore. It is not the clean shirt that we have to question, but the clothes worn during the perpetration of the crime; and if these are burnt and destroyed, how can you get at them?

Q. Aye! How can you get at the certainty that the crime was ever committed at all, or that the "man in the clean shirt" ever lived before?

A. Not by physical processes, most assuredly; nor by relying on the

testimony of that which exists no longer. But there is such a thing as circumstantial evidence, since our wise laws accept it, more, perhaps, even than they should. To get convinced of the fact of reincarnation and past lives, one must put oneself in rapport with one's real permanent Ego, not one's evanescent memory.

Q. But how can people believe in that which they do not know, nor have ever seen, far less put themselves in rapport with it?

A. If people, and the most learned, will believe in the Gravity, Ether, Force, and what not of Science, abstractions "and working hypotheses," which they have neither seen, touched, smelt, heard, nor tasted-why should not other people believe, on the same principle, in one's permanent Ego, a far more logical and important "working hypothesis" than any other?

Q. What is, finally, this mysterious eternal principle? Can you explain its nature so as to make it comprehensible to all?

A. The Ego which reincarnates, the individual and immortal-not personal-"I"; the vehicle, in short, of the Atma-Buddhic Monad, that which is rewarded in Devachan and punished on earth, and that, finally, to which the reflection only of the Skandhas, or attributes, of every incarnation attaches itself.

There are five Skandhas or attributes in the Buddhist teachings: Rupa (form or body), material qualities; Vedana, sensation; Sanna, abstract ideas; Samkhara, tendencies of mind; Vinnana, mental powers. Of these we are formed, by them we are conscious of existence; and through them communicate with the world about us.

Q. What do you mean by Skandhas?

A. Just what I said: "attributes," among which is memory, all of which perish like a flower, leaving behind them only a feeble perfume. Here is another paragraph from H. S. Olcott's Buddhist Catechism which bears directly upon the subject. It deals with the question as follows:

The aged man remembers the incidents of his youth, despite his being physically and mentally changed. Why, then, is not the recollection of past lives brought over by us from our last birth into the present birth? Because memory is included within the Skandhas, and the Skandhas having changed with the new existence, a memory, the record of that particular existence, develops. Yet the record or reflection of all the past lives must survive, for when Prince Siddh rtha became Buddha, the full sequence of His previous births were seen by Him ... and any one who attains to the state of Jñana can thus retrospectively trace the line of his lives.

This proves to you that while the undying qualities of the personality-such as love, goodness, charity, etc.-attach themselves to the immortal Ego, photographing on it, so to speak, a permanent image of the divine aspect of the man who was, his material Skandhas (those which generate the most marked Karmic effects) are as evanescent as a flash of lightning, and cannot impress the new brain of the new personality; yet their failing to do so impairs in no way the identity of the reincarnating Ego.

Q. Do you mean to infer that which survives is only the Soul-memory, as you call it, that Soul or Ego being one and the same, while nothing of the personality remains?

A. Not quite; something of each personality, unless the latter was an absolute materialist with not even a chink in his nature for a spiritual ray to pass through, must survive, as it leaves its eternal impress on the incarnating permanent Self or Spiritual Ego. (Or the Spiritual, in contradistinction to the personal Self. The student must not confuse this Spiritual Ego with the "higher self" which is Atma, the God within us, and

The Key To Theosophy - HP Blavatsky.txt
inseparable from the Universal Spirit.)

The personality with its Skandhas is ever changing with every new birth. It is, as said before, only the part played by the actor (the true Ego) for one night. This is why we preserve no memory on the physical plane of our past lives, though the real "Ego" has lived them over and knows them all.

Q. Then how does it happen that the real or Spiritual man does not impress his new personal "I" with this knowledge?

A. How is it that the servant-girls in a poor farmhouse could speak Hebrew and play the violin in their trance or somnambular state, and knew neither when in their normal condition? Because, as every genuine psychologist of the old, not your modern, school, will tell you, the Spiritual Ego can act only when the personal Ego is paralyzed. The Spiritual "I" in man is omniscient and has every knowledge innate in it; while the personal self is the creature of its environment and the slave of the physical memory. Could the former manifest itself uninterruptedly, and without impediment, there would be no longer men on earth, but we should all be gods.

Q. Still there ought to be exceptions, and some ought to remember.

A. And so there are. But who believes in their report? Such sensitives are generally regarded as hallucinated hysterics, as crack-brained enthusiasts, or humbugs, by modern materialism. Let them read, however, works on this subject, preeminently Reincarnation, a Study of Forgotten Truth by E. D. Walker, F.T.S., and see in it the mass of proofs which the able author brings to bear on this vexed question. One speaks to people of soul, and some ask "What is Soul?" "Have you ever proved its existence?" Of course it is useless to argue with those who are materialists. But even to them I would put the question:

Can you remember what you were or did when a baby? Have you preserved the smallest recollection of your life, thoughts, or deeds, or that you lived at all during the first eighteen months or two years of your existence? Then why not deny that you have ever lived as a babe, on the same principle?

When to all this we add that the reincarnating Ego, or individuality, retains during the Devachanic period merely the essence of the experience of its past earth-life or personality, the whole physical experience involving into a state of in potentia, or being, so to speak, translated into spiritual formulae; when we remember further that the term between two rebirths is said to extend from ten to fifteen centuries, during which time the physical consciousness is totally and absolutely inactive, having no organs to act through, and therefore no existence, the reason for the absence of all remembrance in the purely physical memory is apparent.

Q. You just said that the Spiritual Ego was omniscient. Where, then, is that vaunted omniscience during his Devachanic life, as you call it?

A. During that time it is latent and potential, because, first of all, the Spiritual Ego (the compound of Buddhi-Manas) is not the Higher Self, which being one with the Universal Soul or Mind is alone omniscient; and, secondly, because Devachan is the idealized continuation of the terrestrial life just left behind, a period of retributive adjustment, and a reward for unmerited wrongs and sufferings undergone in that special life. It is omniscient only potentially in Devachan, and de facto exclusively in Nirvana, when the Ego is merged in the Universal Mind-Soul. Yet it rebecomes quasi omniscient during those hours on earth when certain abnormal conditions and physiological changes in the body make the Ego free from the trammels of matter. Thus the examples cited above of somnambulists, a poor servant speaking Hebrew, and another playing the violin, give you an illustration of the case in point. This does not mean that the explanations of these two facts offered us by medical science have no truth in them, for

one girl had, years before, heard her master, a clergyman, read Hebrew works aloud, and the other had heard an artist playing a violin at their farm. But neither could have done so as perfectly as they did had they not been ensouled by that which, owing to the sameness of its nature with the Universal Mind, is omniscient. Here the higher principle acted on the Skandhas and moved them; in the other, the personality being paralyzed, the individuality manifested itself. Pray do not confuse the two.

- o0o-

On Individuality and Personality

Q. But what is the difference between the two?

A. Even Col. Olcott, forced to it by the logic of Esoteric philosophy, found himself obliged to correct the mistakes of previous Orientalists who made no such distinction, and gives the reader his reasons for it. Thus he says:

The successive appearances upon the earth, or "descents into generation," of the tanhaically coherent parts (Skandhas) of a certain being, are a succession of personalities. In each birth the personality differs from that of a previous or next succeeding birth. Karma, the deus ex machina, masks (or shall we say reflects?) itself now in the personality of a sage, again as an artisan, and so on throughout the string of births. But though personalities ever shift, the one line of life along which they are strung, like beads, runs unbroken; it is ever that particular line, never any other. It is therefore individual, an individual vital undulation, which began in Nirvana, or the subjective side of nature, as the light or heat undulation through aether, began at its dynamic source; is careering through the objective side of nature under the impulse of Karma and the creative direction of Tanha (the unsatisfied desire for existence); and leads through many cyclic changes back to Nirvana. Mr. Rhys-Davids calls that which passes from personality to personality along the individual chain character, or doing. Since character is not a mere metaphysical abstraction, but the sum of one's mental qualities and moral propensities, would it not help to dispel what Mr. Rhys-Davids calls "the desperate expedient of a mystery" if we regarded the life-undulation as individuality, and each of its series of natal manifestations as a separate personality? The perfect individual, Buddhist speaking, is a Buddha, I should say; for Buddha is but the rare flower of humanity, without the least supernatural admixture. And as countless generations ("four asankheyyas and a hundred thousand cycles,") are required to develop a man into a Buddha, and the iron will to become one runs throughout all the successive births, what shall we call that which thus wills and perseveres? Character? One's individuality: an individuality but partly manifested in any one birth, but built up of fragments from all the births?

Q. I confess that I am still in the dark. Indeed it is just that difference, then, that you cannot impress too much on our minds.

A. I try to; but alas, it is harder with some than to make them feel a reverence for childish impossibilities, only because they are orthodox, and because orthodoxy is respectable. To understand the idea well, you have to first study the dual sets of principles: the spiritual, or those which belong to the imperishable Ego; and the material, or those principles which make up the ever-changing bodies or the series of personalities of that Ego. Let us fix permanent names to these, and say that:

1. Atma, the "Higher Self," is neither your Spirit nor mine, but like sunlight shines on all. It is the universally diffused "divine principle," and is inseparable from its one and absolute Meta-Spirit, as the sunbeam is inseparable from sunlight.

2. Buddhi (the spiritual soul) is only its vehicle. Neither each separately,

nor the two collectively, are of any more use to the body of man, than sunlight and its beams are for a mass of granite buried in the earth, unless the divine Duad is assimilated by, and reflected in, some consciousness. Neither Atma nor Buddhi are ever reached by Karma, because the former is the highest aspect of Karma, its working agent of itself in one aspect, and the other is unconscious on this plane. This consciousness or mind is,

3. Manas, the derivation or product in a reflected form of Ahankara, "the conception of I," or Ego-ship. It is, therefore, when inseparably united to the first two, called the Spiritual Ego, and Taijasi (the radiant). This is the real Individuality, or the divine man. It is this Ego which-having originally incarnated in the senseless human form animated by, but unconscious (since it had no consciousness) of, the presence in itself of the dual monad-made of that human-like form a real man.

Mahat or the "Universal Mind" is the source of Manas. The latter is Mahat, i. e., mind, in man. Manas is also called Kshetrajaña, "embodied Spirit," because it is, according to our philosophy, the Manasaputras, or "Sons of the Universal Mind," who created, or rather produced, the thinking man, "manu," by incarnating in the third Race mankind in our Round. It is Manas, therefore, which is the real incarnating and permanent Spiritual Ego, the individuality, and our various and numberless personalities only its external masks.

It is that Ego, that "Causal Body," which overshadows every personality Karma forces it to incarnate into; and this Ego which is held responsible for all the sins committed through, and in, every new body or personality-the evanescent masks which hide the true Individual through the long series of rebirths.

Q. But is this just? Why should this Ego receive punishment as the result of deeds which it has forgotten?

A. It has not forgotten them; it knows and remembers its misdeeds as well as you remember what you have done yesterday. Is it because the memory of that bundle of physical compounds called "body" does not recollect what its predecessor (the personality that was) did, that you imagine that the real Ego has forgotten them? As well say it is unjust that the new boots on the feet of a boy, who is flogged for stealing apples, should be punished for that which they know nothing of.

Q. But are there no modes of communication between the Spiritual and human consciousness or memory?

A. Of course there are; but they have never been recognized by your scientific modern psychologists. To what do you attribute intuition, the "voice of the conscience," premonitions, vague undefined reminiscences, etc., etc., if not to such communications? Would that the majority of educated men, at least, had the fine spiritual perceptions of Coleridge, who shows how intuitional he is in some of his comments. Hear what he says with respect to the probability that "all thoughts are in themselves imperishable."

If the intelligent faculty (sudden 'revivals' of memory) should be rendered more comprehensive, it would require only a different and appropriate organization, the body celestial instead of the body terrestrial, to bring before every human soul the collective experience of its whole past existence (existences, rather).

And this body celestial is our Manasic Ego.

- oOo-

On the Reward and Punishment of the Ego

The Key To Theosophy - HP Blavatsky.txt

Q. I have heard you say that the Ego, whatever the life of the person he incarnated in may have been on Earth, is never visited with postmortem punishment.

A. Never, save in very exceptional and rare cases of which we will not speak here, as the nature of the "punishment" in no way approaches any of your theological conceptions of damnation.

Q. But if it is punished in this life for the misdeeds committed in a previous one, then it is this Ego that ought to be rewarded also, whether here, or when disincarnated.

A. And so it is. If we do not admit of any punishment outside of this earth, it is because the only state the Spiritual Self knows of, hereafter, is that of unalloyed bliss.

Q. What do you mean?

A. Simply this: crimes and sins committed on a plane of objectivity and in a world of matter, cannot receive punishment in a world of pure subjectivity. We believe in no hell or paradise as localities; in no objective hellfires and worms that never die, nor in any Jerusalem with streets paved with sapphires and diamonds. What we believe in is a postmortem state or mental condition, such as we are in during a vivid dream. We believe in an immutable law of absolute Love, Justice, and Mercy. And believing in it, we say: Whatever the sin and dire results of the original Karmic transgression of the now incarnated Egos no man (or the outer material and periodical form of the Spiritual Entity) can be held, with any degree of justice, responsible for the consequences of his birth. He does not ask to be born, nor can he choose the parents that will give him life. In every respect he is a victim to his environment, the child of circumstances over which he has no control; and if each of his transgressions were impartially investigated, there would be found nine out of every ten cases when he was the one sinned against, rather than the sinner.

It is on this transgression that the cruel and illogical dogma of the Fallen Angels has been built. It is explained in Vol. II of The Secret Doctrine. All our "Egos" are thinking and rational entities (Manasaputas) who had lived, whether under human or other forms, in the precedent life cycle (Manvantara), and whose Karma it was to incarnate in the man of this one. It was taught in the Mysteries that, having delayed to comply with this law (or having "refused to create" as Hinduism says of the Kumaras and Christian legend of the Archangel Michael), i. e., having failed to incarnate in due time, the bodies predestined for them got defiled, hence the original sin of the senseless forms and the punishment of the Egos. That which is meant by the rebellious angels being hurled down into Hell is simply explained by these pure Spirits or Egos being imprisoned in bodies of unclean matter, flesh.

Life is at best a heartless play, a stormy sea to cross, and a heavy burden often too difficult to bear. The greatest philosophers have tried in vain to fathom and find out its *raison d'être*, and have all failed except those who had the key to it, namely, the Eastern sages. Life is, as Shakespeare describes it:

... but a walking shadow—a poor player,

That struts and frets his hour upon the stage,

And then is heard no more. It is a tale

Told by an idiot, full of sound and fury,

Signifying nothing.

Nothing in its separate parts, yet of the greatest importance in its collectivity or series of lives. At any rate, almost every individual life is, in its full development, a sorrow. And are we to believe that poor, helpless man, after being tossed about like a piece of rotten timber on the angry billows of life, is, if he proves too weak to resist them, to be punished by never-ending damnation, or even a temporary punishment? Never! Whether a great or an average sinner, good or bad, guilty or innocent, once delivered of the burden of physical life, the tired and worn-out Manu ("thinking Ego") has won the right to a period of absolute rest and bliss. The same unerringly wise and just rather than merciful Law, which inflicts upon the incarnated Ego the Karmic punishment for every sin committed during the preceding life on Earth, provided for the now disembodied Entity a long lease of mental rest, i. e., the entire oblivion of every sad event, aye, to the smallest painful thought, that took place in its last life as a personality, leaving in the soul-memory but the reminiscence of that which was bliss, or led to happiness. Plotinus, who said that our body was the true river of Lethe, for "souls plunged into it forget all," meant more than he said. For, as our terrestrial body is like Lethe, so is our celestial body in Devachan, and much more.

Q. Then am I to understand that the murderer, the transgressor of law divine and human in every shape, is allowed to go unpunished?

A. Who ever said that? Our philosophy has a doctrine of punishment as stern as that of the most rigid Calvinist, only far more philosophical and consistent with absolute justice. No deed, not even a sinful thought, will go unpunished; the latter more severely even than the former, as a thought is far more potential in creating evil results than even a deed.

Verily I say unto you, that whosoever looketh at a woman to lust after her, hath committed adultery with her already in his heart.

We believe in an unerring law of Retribution, called Karma, which asserts itself in a natural concatenation of causes and their unavoidable results.

Q. And how, or where, does it act?

A. Every laborer is worthy of his hire, saith Wisdom in the Gospel; every action, good or bad, is a prolific parent, saith the Wisdom of the Ages. Put the two together, and you will find the "why." After allowing the Soul, escaped from the pangs of personal life, a sufficient, aye, a hundredfold compensation, Karma, with its army of Skandhas, waits at the threshold of Devachan, whence the Ego reemerges to assume a new incarnation. It is at this moment that the future destiny of the now-rested Ego trembles in the scales of just Retribution, as it now falls once again under the sway of active Karmic law. It is in this rebirth which is ready for it, a rebirth selected and prepared by this mysterious, inexorable, but in the equity and wisdom of its decrees infallible law, that the sins of the previous life of the Ego are punished. Only it is into no imaginary Hell, with theatrical flames and ridiculous tailed and horned devils, that the Ego is cast, but verily onto this earth, the plane and region of his sins, where he will have to atone for every bad thought and deed. As he has sown, so will he reap. Reincarnation will gather around him all those other Egos who have suffered, whether directly or indirectly, at the hands, or even through the unconscious instrumentality, of the past personality. They will be thrown by Nemesis in the way of the new man, concealing the old, the eternal Ego, and ...

Q. But where is the equity you speak of, since these new "personalities" are not aware of having sinned or been sinned against?

A. Has the coat torn to shreds from the back of the man who stole it, by

The Key To Theosophy - HP Blavatsky.txt

another man who was robbed of it and recognizes his property, to be regarded as fairly dealt with? The new "personality" is no better than a fresh suit of clothes with its specific characteristics, color, form, and qualities; but the real man who wears it is the same culprit as of old. It is the individuality who suffers through his "personality." And it is this, and this alone, that can account for the terrible, still only apparent, injustice in the distribution of lots in life to man. When your modern philosophers will have succeeded in showing to us a good reason, why so many apparently innocent and good men are born only to suffer during a whole lifetime; why so many are born poor unto starvation in the slums of great cities, abandoned by fate and men; why, while these are born in the gutter, others open their eyes to light in palaces; while a noble birth and fortune seem often given to the worst of men and only rarely to the worthy; while there are beggars whose inner selves are peers to the highest and noblest of men; when this, and much more, is satisfactorily explained by either your philosophers or theologians, then only, but not till then, you will have the right to reject the theory of reincarnation. The highest and grandest of poets have dimly perceived this truth of truths. Shelley believed in it, Shakespeare must have thought of it when writing on the worthlessness of Birth. Remember his words:

Why should my birth keep down my mounting spirit?

Are not all creatures subject unto time?

There's legions now of beggars on the earth,

That their original did spring from Kings,

And many monarchs now, whose fathers were

The riff-raff of their age ...

Alter the word fathers into Egos-and you will have the truth.

On the Kamaloka and Devachan

On the Fate of the Lower Principles

Q. You spoke of Kamaloka, what is it?

A. When the man dies, his lower three principles leave him forever; i. e., body, life, and the vehicle of the latter, the astral body or the double of the living man. And then, his four principles-the central or middle principle, the animal soul or Kamarupa, with what it has assimilated from the lower Manas, and the higher triad find themselves in Kamaloka. The latter is an astral locality, the limbus of scholastic theology, the Hades of the ancients, and, strictly speaking, a locality only in a relative sense. It has neither a definite area nor boundary, but exists within subjective space; i. e., is beyond our sensuous perceptions. Still it exists, and it is there that the astral eidolons of all the beings that have lived, animals included, await their second death. For the animals it comes with the disintegration and the entire fading out of their astral particles to the last. For the human eidolon it begins when the Atma-Buddhi-Manasic triad is said to "separate" itself from its lower principles, or the reflection of the ex-personality, by falling into the Devachanic state.

Q. And what happens after this?

A. Then the Kamarupic phantom, remaining bereft of its informing thinking principle, the higher Manas, and the lower aspect of the latter, the animal intelligence, no longer receiving light from the higher mind, and no longer having a physical brain to work through, collapses.

Q. In what way?

A. Well, it falls into the state of the frog when certain portions of its brain are taken out by the vivisector. It can think no more, even on the lowest animal plane. Henceforth it is no longer even the lower Manas, since this "lower" is nothing without the "higher."

Q. And is it this nonentity which we find materializing in Seance rooms with Mediums?

A. It is this nonentity. A true nonentity, however, only as to reasoning or cogitating powers, still an Entity, however astral and fluidic, as shown in certain cases when, having been magnetically and unconsciously drawn toward a medium, it is revived for a time and lives in him by proxy, so to speak. This "spook," or the Kamarupa, may be compared with the jelly-fish, which has an ethereal gelatinous appearance so long as it is in its own element, or water (the medium's specific aura), but which, no sooner is it thrown out of it, than it dissolves in the hand or on the sand, especially in sunlight. In the medium's Aura, it lives a kind of vicarious life and reasons and speaks either through the medium's brain or those of other persons present. But this would lead us too far, and upon other people's grounds, whereon I have no desire to trespass. Let us keep to the subject of reincarnation.

Q. What of the latter? How long does the incarnating Ego remain in the Devachanic state?

A. This, we are taught, depends on the degree of spirituality and the merit or demerit of the last incarnation. The average time is from ten to fifteen centuries, as I already told you.

Q. But why could not this Ego manifest and communicate with mortals as Spiritualists will have it? What is there to prevent a mother from communicating with the children she left on earth, a husband with his wife, and so on? It is a most consoling belief, I must confess; nor do I wonder that those who believe in it are so averse to give it up.

A. Nor are they forced to, unless they happen to prefer truth to fiction, however "consoling." Uncongenial our doctrines may be to Spiritualists; yet, nothing of what we believe in and teach is half as selfish and cruel as what they preach.

Q. I do not understand you. What is selfish?

A. Their doctrine of the return of Spirits, the real "personalities" as they say; and I will tell you why. If Devachan-call it "paradise" if you like, a "place of bliss and of supreme felicity," if it is anything-is such a place (or say state), logic tells us that no sorrow or even a shade of pain can be experienced therein. "God shall wipe away all the tears from the eyes" of those in paradise, we read in the book of many promises. And if the "Spirits of the dead" are enabled to return and see all that is happening on earth, and especially in their homes, what kind of bliss can be in store for them?

- oOo-

Why Theosophists Do Not Believe in the Return of Pure "Spirits"

Q. What do you mean? Why should this interfere with their bliss?

A. Simply this; and here is an instance. A mother dies, leaving behind her little helpless children-orphans whom she adores-perhaps a beloved husband also. We say that her "Spirit" or Ego-that individuality which is now all impregnated, for the entire Devachanic period, with the noblest feelings held by its late personality, i. e., love for her children, pity for those who suffer, and so on-we say that it is now entirely separated from the

"vale of tears," that its future bliss consists in that blessed ignorance of all the woes it left behind. Spiritualists say, on the contrary, that it is as vividly aware of them, and more so than before, for "Spirits see more than mortals in the flesh do." We say that the bliss of the Devachanee consists in its complete conviction that it has never left the earth, and that there is no such thing as death at all; that the postmortem spiritual consciousness of the mother will represent to her that she lives surrounded by her children and all those whom she loved; that no gap, no link, will be missing to make her disembodied state the most perfect and absolute happiness. The Spiritualists deny this point blank. According to their doctrine, unfortunate man is not liberated even by death from the sorrows of this life. Not a drop from the life-cup of pain and suffering will miss his lips; and whether willing or unwilling, since he sees everything now, shall he drink it to the bitter dregs. Thus, the loving wife, who during her lifetime was ready to save her husband sorrow at the price of her heart's blood, is now doomed to see, in utter helplessness, his despair, and to register every hot tear he sheds for her loss. Worse than that, she may see the tears dry too soon, and another beloved face shine on him, the father of her children; find another woman replacing her in his affections; doomed to hear her orphans giving the holy name of "mother" to one indifferent to them, and to see those little children neglected, if not ill-treated. According to this doctrine the "gentle wafting to immortal life" becomes without any transition the way into a new path of mental suffering! And yet, the columns of the Banner of Light, the veteran journal of the American Spiritualists, are filled with messages from the dead, the "dear departed ones," who all write to say how very happy they are! Is such a state of knowledge consistent with bliss? Then bliss stands in such a case for the greatest curse, and orthodox damnation must be a relief in comparison to it!

Q. But how does your theory avoid this? How can you reconcile the theory of Soul's omniscience with its blindness to that which is taking place on earth?

A. Because such is the law of love and mercy. During every Devachanic period the Ego, omniscient as it is per se, clothes itself, so to say, with the reflection of the "personality" that was. I have just told you that the ideal efflorescence of all the abstract, therefore undying and eternal qualities or attributes, such as love and mercy, the love of the good, the true and the beautiful, that ever spoke in the heart of the living "personality," clung after death to the Ego, and therefore followed it to Devachan. For the time being, then, the Ego becomes the ideal reflection of the human being it was when last on earth, and that is not omniscient. Were it that, it would never be in the state we call Devachan at all.

Q. What are your reasons for it?

A. If you want an answer on the strict lines of our philosophy, then I will say that it is because everything is illusion (Maya) outside of eternal truth, which has neither form, color, nor limitation. He who has placed himself beyond the veil of Maya - and such are the highest Adepts and Initiates - can have no Devachan. As to the ordinary mortal, his bliss in it is complete. It is an absolute oblivion of all that gave it pain or sorrow in the past incarnation, and even oblivion of the fact that such things as pain or sorrow exist at all. The Devachanee lives its intermediate cycle between two incarnations surrounded by everything it had aspired to in vain, and in the companionship of everyone it loved on earth. It has reached the fulfillment of all its soul-yearnings. And thus it lives throughout long centuries an existence of unalloyed happiness, which is the reward for its sufferings in earth-life. In short, it bathes in a sea of uninterrupted felicity spanned only by events of still greater felicity in degree.

Q. But this is more than simple delusion, it is an existence of insane hallucinations!

The Key To Theosophy - HP Blavatsky.txt

A. From your standpoint it may be, not so from that of philosophy. Besides which, is not our whole terrestrial life filled with such delusions? Have you never met men and women living for years in a fool's paradise? And because you should happen to learn that the husband of a wife, whom she adores and believes herself as beloved by him, is untrue to her, would you go and break her heart and beautiful dream by rudely awakening her to the reality? I think not. I say it again, such oblivion and hallucination-if you call it so-are only a merciful law of nature and strict justice. At any rate, it is a far more fascinating prospect than the orthodox golden harp with a pair of wings. The assurance that

The soul that lives ascends frequently and runs familiarly through the streets of the heavenly Jerusalem, visiting the patriarchs and prophets, saluting the apostles, and admiring the army of martyrs.

-may seem of a more pious character to some. Nevertheless, it is a hallucination of a far more delusive character, since mothers love their children with an immortal love, we all know, while the personages mentioned in the "heavenly Jerusalem" are still of a rather doubtful nature. But I would, still, rather accept the "new Jerusalem," with its streets paved like the show windows of a jeweler's shop, than find consolation in the heartless doctrine of the Spiritualists. The idea alone that the intellectual conscious souls of one's father, mother, daughter, or brother find their bliss in a "Summerland"-only a little more natural, but just as ridiculous as the "New Jerusalem" in its description-would be enough to make one lose every respect for one's "departed ones." To believe that a pure spirit can feel happy while doomed to witness the sins, mistakes, treachery, and, above all, the sufferings of those from whom it is severed by death and whom it loves best, without being able to help them, would be a maddening thought.

Q. There is something in your argument. I confess to having never seen it in this light.

A. Just so, and one must be selfish to the core and utterly devoid of the sense of retributive justice, to have ever imagined such a thing. We are with those whom we have lost in material form, and far, far nearer to them now, than when they were alive. And it is not only in the fancy of the Devachanee, as some may imagine, but in reality. For pure divine love is not merely the blossom of a human heart, but has its roots in eternity. Spiritual holy love is immortal, and Karma brings sooner or later all those who loved each other with such a spiritual affection to incarnate once more in the same family group. Again we say that love beyond the grave, illusion though you may call it, has a magic and divine potency which reacts on the living. A mother's Ego filled with love for the imaginary children it sees near itself, living a life of happiness, as real to it as when on earth-that love will always be felt by the children in flesh. It will manifest in their dreams, and often in various events-in providential protection and escape, for love is a strong shield, and is not limited by space or time. As with this Devachanic "mother," so with the rest of human relationships and attachments, save the purely selfish or material. Analogy will suggest to you the rest.

Q. In no case, then, do you admit the possibility of the communication of the living with the disembodied spirit?

A. Yes, there is a case, and even two exceptions to the rule.

The first exception is during the few days that follow immediately the death of a person and before the Ego passes into the Devachanic state. Whether any living mortal, save a few exceptional cases has derived much benefit from the return of the spirit into the objective plane is another question. The spirit is dazed after death and falls very soon into what we call "predevachanic unconsciousness." When the intensity of the desire in the dying person to return for some purpose forced the higher consciousness to

remain awake, and therefore it was really the individuality, the "Spirit" that communicated.

The second exception is found in the Nirmanakayas.

Q. What about them? And what does the name mean for you?

A. It is the name given to those who, though they have won the right to Nirvana and cyclic rest have out of pity for mankind and those they left on earth renounced the Nirvanic state. This is not "Devachan," as the latter is an illusion of our consciousness, a happy dream, and as those who are fit for Nirvana must have lost entirely every desire or possibility of the world's illusions.

Such an adept, or Saint, or whatever you may call him, believing it a selfish act to rest in bliss while mankind groans under the burden of misery produced by ignorance, renounces Nirvana, and determines to remain invisible in spirit on this earth. They have no material body, as they have left it behind; but otherwise they remain with all their principles even in astral life in our sphere. And such can and do communicate with a few elect ones, only surely not with ordinary mediums.

Q. I have put you the question about Nirmanakayas because I read in some German and other works that it was the name given to the terrestrial appearances or bodies assumed by Buddhas in the Northern Buddhist teachings.

A. So they are, only the Orientalists have confused this terrestrial body by understanding it to be objective and physical instead of purely astral and subjective.

Q. And what good can they do on earth?

A. Not much, as regards individuals, as they have no right to interfere with Karma, and can only advise and inspire mortals for the general good. Yet they do more beneficent actions than you imagine.

Q. To this Science would never subscribe, not even modern psychology. For them, no portion of intelligence can survive the physical brain. What would you answer them?

A. I would not even go to the trouble of answering, but would simply say, in the words given to "M. A. Oxon,"

Intelligence is perpetuated after the body is dead. Though it is not a question of the brain only ... It is reasonable to propound the indestructibility of the human spirit from what we know.

Q. But "M. A. Oxon" is a Spiritualist?

A. Quite so, and the only true Spiritualist I know of, though we may still disagree with him on many a minor question. Apart from this, no Spiritualist comes nearer to the occult truths than he does. Like any one of us he speaks incessantly

... of the surface dangers that beset the ill-equipped, feather-headed muddler with the occult, who crosses the threshold without counting the cost. Some things that I do know of Spiritualism and some that I do not.

Our only disagreement rests in the question of "Spirit Identity." Otherwise, I, for one, coincide almost entirely with him, and accept the three propositions he embodied in his address of July, 1884. It is this eminent Spiritualist, rather, who disagrees with us, not we with him.

Q. What are these propositions?

A. They are:

1. That there is a life coincident with, and independent of the physical life of the body.
2. That, as a necessary corollary, this life extends beyond the life of the body. We say it extends throughout Devachan.
3. That there is communication between the denizens of that state of existence and those of the world in which we now live.

All depend, you see, on the minor and secondary aspects of these fundamental propositions. Everything depends on the views we take of Spirit and Soul, or Individuality and Personality. Spiritualists confuse the two "into one." We separate them, and say that, with the exceptions above enumerated, no Spirit will revisit the earth, though the animal Soul may. But let us return once more to our direct subject, the Skandhas.

Q. I begin to understand better now. It is the Spirit, so to say, of those Skandhas which are the most ennobling, which, attaching themselves to the incarnating Ego, survive, and are added to the stock of its angelic experiences. And it is the attributes connected with the material Skandhas, with selfish and personal motives, which, disappearing from the field of action between two incarnations, reappear at the subsequent incarnation as Karmic results to be atoned for; and therefore the Spirit will not leave Devachan. Is it so?

A. Very nearly so. If you add to this that the law of retribution, or Karma, rewarding the highest and most spiritual in Devachan, never fails to reward them again on earth by giving them a further development, and furnishing the Ego with a body fitted for it, then you will be quite correct.

- oOo -

A Few Words About the Skandhas

Q. What becomes of the other, the lower Skandhas of the personality, after the death of the body? Are they quite destroyed?

A. They are and yet they are not—a fresh metaphysical and occult mystery for you. They are destroyed as the working stock in hand of the personality; they remain as Karmic effects, as germs, hanging in the atmosphere of the terrestrial plane, ready to come to life, as so many avenging fiends, to attach themselves to the new personality of the Ego when it reincarnates.

Q. This really passes my comprehension, and is very difficult to understand.

A. Not once that you have assimilated all the details. For then you will see that for logic, consistency, profound philosophy, divine mercy and equity, this doctrine of Reincarnation has not its equal on earth. It is a belief in a perpetual progress for each incarnating Ego, or divine soul, in an evolution from the outward into the inward, from the material to the Spiritual, arriving at the end of each stage at absolute unity with the divine Principle. From strength to strength, from the beauty and perfection of one plane to the greater beauty and perfection of another, with accessions of new glory, of fresh knowledge and power in each cycle, such is the destiny of every Ego, which thus becomes its own Savior in each world and incarnation.

Q. But Christianity teaches the same. It also preaches progression.

A. Yes, only with the addition of something else. It tells us of the impossibility of attaining Salvation without the aid of a miraculous Savior,

The Key To Theosophy - HP Blavatsky.txt

and therefore dooms to perdition all those who will not accept the dogma. This is just the difference between Christian theology and Theosophy. The former enforces belief in the Descent of the Spiritual Ego into the Lower Self; the latter inculcates the necessity of endeavoring to elevate oneself to the Christos, or Buddhi state.

Q. By teaching the annihilation of consciousness in case of failure, however, don't you think that it amounts to the annihilation of Self, a in the opinion of the non-metaphysical?

A. From the standpoint of those who believe in the resurrection of the body literally, and insist that every bone, every artery and atom of flesh will be raised bodily on the Judgment Day-of course it does. If you still insist that it is the perishable form and finite qualities that make up immortal man, then we shall hardly understand each other. And if you do not understand that, by limiting the existence of every Ego to one life on earth, you make of Deity an ever-drunken Indra of the Pur ic dead letter, a cruel Moloch, a god who makes an inextricable mess on Earth, and yet claims thanks for it, then the sooner we drop the conversation the better.

Q. But let us return, now that the subject of the Skandhas is disposed of, to the question of the consciousness which survives death. This is the point which interests most people. Do we possess more knowledge in Devachan than we do in earthlife?

A. In one sense, we can acquire more knowledge; that is, we can develop further any faculty which we loved and strove after during life, provided it is concerned with abstract and ideal things, such as music, painting, poetry, etc., since Devachan is merely an idealized and subjective continuation of earth-life.

Q. But if in Devachan the Spirit is free from matter, why should it not possess all knowledge?

A. Because, as I told you, the Ego is, so to say, wedded to the memory of its last incarnation. Thus, if you think over what I have said, and string all the facts together, you will realize that the Devachanic state is not one of omniscience, but a transcendental continuation of the personal life just terminated. It is the rest of the soul from the toils of life.

Q. But the scientific materialists assert that after the death of man nothing remains; that the human body simply disintegrates into its component elements; and that what we call soul is merely a temporary self-consciousness produced as a byproduct of organic action, which will evaporate like steam. Is not theirs a strange state of mind?

A. Not strange at all, that I see. If they say that self-consciousness ceases with the body, then in their case they simply utter an unconscious prophecy, for once they are firmly convinced of what they assert, no conscious after-life is possible for them. For there are exceptions to every rule.

- oOo-

On Postmortem and Postnatal Consciousness

Q. But if human self-consciousness survives death as a rule, why should there be exceptions?

A. In the fundamental principles of the spiritual world no exception is possible. But there are rules for those who see, and rules for those who prefer to remain blind.

Q. Quite so, I understand. This is but an aberration of the blind man, who

denies the existence of the sun because he does not see it. But after death his spiritual eyes will certainly compel him to see. Is this what you mean?

A. He will not be compelled, nor will he see anything. Having persistently denied during life the continuance of existence after death, he will be unable to see it, because his spiritual capacity having been stunted in life, it cannot develop after death, and he will remain blind. By insisting that he must see it, you evidently mean one thing and I another. You speak of the spirit from the spirit, or the flame from the flame-of Atma, in short-and you confuse it with the human soul-Manas ... You do not understand me; let me try to make it clear. The whole gist of your question is to know whether, in the case of a downright materialist, the complete loss of self-consciousness and self-perception after death is possible? Isn't it so? I answer, it is possible. Because, believing firmly in our Esoteric Doctrine, which refers to the postmortem period, or the interval between two lives or births, as merely a transitory state, I say, whether that interval between two acts of the illusionary drama of life lasts one year or a million, that postmortem state may, without any breach of the fundamental law, prove to be just the same state as that of a man who is in a dead faint.

Q. But since you have just said that the fundamental laws of the after-death state admit of no exceptions, how can this be?

A. Nor do I say that it does admit of an exception. But the spiritual law of continuity applies only to things which are truly real. To one who has read and understood Mundakya Upanishad and Vedantasara all this becomes very clear. I will say more: it is sufficient to understand what we mean by Buddhi and the duality of Manas to gain a clear perception why the materialist may fail to have a self-conscious survival after death. Since Manas, in its lower aspect, is the seat of the terrestrial mind, it can, therefore, give only that perception of the Universe which is based on the evidence of that mind; it cannot give spiritual vision. It is said in the Eastern school, that between Buddhi and Manas (the Ego), or Isvara and Prajña *1) there is in reality no more difference than between a forest and its trees, a lake and its waters, as the Mundakya teaches. One or hundreds of trees dead from loss of vitality, or uprooted, are yet incapable of preventing the forest from being still a forest.

1. But, as I understand it, Buddhi represents in this simile the forest, and Manas-Taijasi *2) the trees. And if Buddhi is immortal, how can that which is similar to it, i.e., Manas-Taijasi, entirely lose its consciousness till the day of its new incarnation? I cannot understand it.

*1) Isvara is the collective consciousness of the manifested godhead, Brahma, i.e. the collective consciousness of the host of Dhyana Chohans (see Secret Doctrine); Prajña is their individual wisdom.

*2) Taijasi means the 'radiant', as a consequence of its union with Buddhi, i.e. Manas, the human soul, enlightened by the rays of the divine soul. Hence Manas-Taijasi can be described as radiant intellect, the human reason enlightened by the light of the spirit; and Buddhi-Manas is the revelation of the divine plus the human intellect and self-consciousness.

(These two footnotes reversely translated from Dutch. [editor])

A. You cannot, because you will mix up an abstract representation of the whole with its casual changes of form. Remember that if it can be said of Buddhi-Manas that it is unconditionally immortal, the same cannot be said of the lower Manas, still less of Taijasi, which is merely an attribute. Neither of these, neither Manas nor Taijasi, can exist apart from Buddhi, the divine soul, because the first (Manas) is, in its lower aspect, a quality of the terrestrial personality, and the second (Taijasi) is

identical with the first, because it is the same Manas only with the light of Buddhi reflected on it. In its turn, Buddhi would remain only an impersonal spirit without this element which it borrows from the human soul, which conditions and makes of it, in this illusive Universe, as it were something separate from the universal soul for the whole period of the cycle of incarnation. Say rather that Buddhi-Manas can neither die nor lose its compound self-consciousness in Eternity, nor the recollection of its previous incarnations in which the two-i.e., the spiritual and the human soul-had been closely linked together. But it is not so in the case of a materialist, whose human soul not only receives nothing from the divine soul, but even refuses to recognize its existence. You can hardly apply this axiom to the attributes and qualities of the human soul, for it would be like saying that because your divine soul is immortal, therefore the bloom on your cheek must also be immortal; whereas this bloom, like Taijasi, is simply a transitory phenomenon.

Q. Do I understand you to say that we must not mix in our minds the noumenon with the phenomenon, the cause with its effect?

A. I do say so, and repeat that, limited to Manas or the human soul alone, the radiance of Taijas itself becomes a mere question of time; because both immortality and consciousness after death become, for the terrestrial personality of man, simply conditioned attributes, as they depend entirely on conditions and beliefs created by the human soul itself during the life of its body. Karma acts incessantly; we reap in our after-life only the fruit of that which we have ourselves sown in this.

Q. But if my Ego can, after the destruction of my body, become plunged in a state of entire unconsciousness, then where can be the punishment for the sins of my past life?

A. Our philosophy teaches that Karmic punishment reaches the Ego only in its next incarnation. After death it receives only the reward for the unmerited sufferings endured during its past incarnation.

(Some Theosophists have taken exception to this phrase, but the words are those of Master, and the meaning attached to the word unmerited is that given above. In the T.P.S. pamphlet No. 6, a phrase, criticized subsequently in Lucifer, was used which was intended to convey the same idea. In form, however, it was awkward and open to the criticism directed against it; but the essential idea was that men often suffer from the effects of the actions done by others, effects which thus do not strictly belong to their own Karma-and for these sufferings they of course deserve compensation.)

The whole punishment after death, even for the materialist, consists, therefore, in the absence of any reward, and the utter loss of the consciousness of one's bliss and rest. Karma is the child of the terrestrial Ego, the fruit of the actions of the tree which is the objective personality visible to all, as much as the fruit of all the thoughts and even motives of the spiritual "I"; but Karma is also the tender mother, who heals the wounds inflicted by her during the preceding life, before she will begin to torture this Ego by inflicting upon him new ones. If it may be said that there is not a mental or physical suffering in the life of a mortal which is not the direct fruit and consequence of some sin in a preceding existence; on the other hand, since he does not preserve the slightest recollection of it in his actual life, and feels himself not deserving of such punishment, and therefore thinks he suffers for no guilt of his own, this alone is sufficient to entitle the human soul to the fullest consolation, rest, and bliss in his postmortem existence. Death comes to our spiritual selves ever as a deliverer and friend. For the materialist who, notwithstanding his materialism, was not a bad man, the interval between the two lives will be like the unbroken and placid sleep of a child, either entirely dreamless, or filled with pictures of which he will have no definite perception; while for the average mortal it will be a dream as vivid as life, and full of

realistic bliss and visions.

Q. Then the personal man must always go on suffering blindly the Karmic penalties which the Ego has incurred?

A. Not quite so. At the solemn moment of death every man, even when death is sudden, sees the whole of his past life marshaled before him, in its minutest details. For one short instant the personal becomes one with the individual and all-knowing Ego. But this instant is enough to show to him the whole chain of causes which have been at work during his life. He sees and now understands himself as he is, unadorned by flattery or self-deception. He reads his life, remaining as a spectator looking down into the arena he is quitting; he feels and knows the justice of all the suffering that has overtaken him.

Q. Does this happen to everyone?

A. Without any exception. Very good and holy men see, we are taught, not only the life they are leaving, but even several preceding lives in which were produced the causes that made them what they were in the life just closing. They recognize the law of Karma in all its majesty and justice.

Q. Is there anything corresponding to this before rebirth?

A. There is. As the man at the moment of death has a retrospective insight into the life he has led, so, at the moment he is reborn onto earth, the Ego, awaking from the state of Devachan, has a prospective vision of the life which awaits him, and realizes all the causes that have led to it. He realizes them and sees futurity, because it is between Devachan and rebirth that the Ego regains his full manasic consciousness, and rebecomes for a short time the god he was, before, in compliance with Karmic law, he first descended into matter and incarnated in the first man of flesh. The "golden thread" sees all its "pearls" and misses not one of them.

- o0o-

What is Really Meant by Annihilation

Q. I have heard some Theosophists speak of a golden thread on which their lives were strung. What do they mean by this?

A. In the Hindu Sacred books it is said that the part of us which undergoes periodical incarnation is the Sutratman, which means literally the "Thread Soul." It is a synonym of the reincarnating Ego-Manas conjoined with Buddhi-which absorbs the Manasic recollections of all our preceding lives. It is so called, because, like the pearls on a thread, so is the long series of human lives strung together on that one thread. In some Upanishad these recurrent rebirths are likened to the life of a mortal which oscillates periodically between sleep and waking.

Q. This, I must say, does not seem very clear, and I will tell you why. For the man who awakes, another day commences, but that man is the same in soul and body as he was the day before; whereas at every incarnation a full change takes place not only of the external envelope, sex, and personality, but even of the mental and psychic capacities. The simile does not seem to me quite correct. The man who arises from sleep remembers quite clearly what he has done yesterday, the day before, and even months and years ago. But none of us has the slightest recollection of a preceding life or of any fact or event concerning it ... I may forget in the morning what I have dreamt during the night, still I know that I have slept and have the certainty that I lived during sleep; but what recollection can I have of my past incarnation until the moment of death? How do you reconcile this?

A. Some people do recollect their past incarnations during life; but these

are Buddhas and Initiates. This is what the Yogis call Samm - Sambuddha, or the knowledge of the whole series of one's past incarnations.

Q. But we ordinary mortals who have not reached Samm - Sambuddha, how are we to understand this simile?

A. By studying it and trying to understand more correctly the characteristics and the three kinds of sleep. Sleep is a general and immutable law for man as for beast, but there are different kinds of sleep and still more different dreams and visions.

Q. But this takes us to another subject. Let us return to the materialist who, while not denying dreams, which he could hardly do, yet denies immortality in general and the survival of his own individuality.

A. And the materialist, without knowing it, is right. One who has no inner perception of, and faith in, the immortality of his soul, in that man the soul can never become Buddhi-Taijasi, but will remain simply Manas, and for Manas alone there is no immortality possible. In order to live in the world to come a conscious life, one has to believe first of all in that life during the terrestrial existence. On these two aphorisms of the Secret Science all the philosophy about the postmortem consciousness and the immortality of the soul is built. The Ego receives always according to its deserts. After the dissolution of the body, there commences for it a period of full awakened consciousness, or a state of chaotic dreams, or an utterly dreamless sleep undistinguishable from annihilation, and these are the three kinds of sleep. If our physiologists find the cause of dreams and visions in an unconscious preparation for them during the waking hours, why cannot the same be admitted for the postmortem dreams? I repeat it: death is sleep. After death, before the spiritual eyes of the soul, begins a performance according to a program learnt and very often unconsciously composed by ourselves: the practical carrying out of correct beliefs or of illusions which have been created by ourselves. The Methodist will be Methodist, the Muslim a Muslim, at least for some time in a perfect fool's paradise of each man's creation and making. These are the postmortem fruits of the tree of life. Naturally, our belief or unbelief in the fact of conscious immortality is unable to influence the unconditioned reality of the fact itself, once that it exists; but the belief or unbelief in that immortality as the property of independent or separate entities, cannot fail to give color to that fact in its application to each of these entities. Now do you begin to understand it?

Q. I think I do. The materialist, disbelieving in everything that cannot be proven to him by his five senses, or by scientific reasoning, based exclusively on the data furnished by these senses in spite of their inadequacy, and rejecting every spiritual manifestation, accepts life as the only conscious existence. Therefore according to their beliefs so will it be unto them. They will lose their personal Ego, and will plunge into a dreamless sleep until a new awakening. Is it so?

A. Almost so. Remember the practically universal teaching of the two kinds of conscious existence: the terrestrial and the spiritual. The latter must be considered real from the very fact that it is inhabited by the eternal, changeless, and immortal Monad; whereas the incarnating Ego dresses itself up in new garments entirely different from those of its previous incarnations, and in which all except its spiritual prototype is doomed to a change so radical as to leave no trace behind.

Q. How so? Can my conscious terrestrial "I" perish not only for a time, like the consciousness of the materialist, but so entirely as to leave no trace behind?

A. According to the teaching, it must so perish and in its fullness; all except the principle which, having united itself with the Monad, has thereby

become a purely spiritual and indestructible essence, one with it in the Eternity. But in the case of an out-and-out materialist, in whose personal "I" no Buddhi has ever reflected itself, how can the latter carry away into the Eternity one particle of that terrestrial personality? Your spiritual "I" is immortal; but from your present self it can carry away into Eternity that only which has become worthy of immortality, namely, the aroma alone of the flower that has been mown by death.

Q. Well, and the flower, the terrestrial "I"?

A. The flower, as all past and future flowers which have blossomed and will have to blossom on the mother bough, the Sutratman, all children of one root or Buddhi-will return to dust. Your present "I," as you yourself know, is not the body now sitting before me, nor yet is it what I would call Manas-Sutratman, but Sutratman-Buddhi.

Q. But this does not explain to me, at all, why you call life after death immortal, infinite, and real, and the terrestrial life a simple phantom or illusion; since even that postmortem life has limits, however much wider they may be than those of terrestrial life.

A. No doubt. The spiritual Ego of man moves in eternity like a pendulum between the hours of birth and death. But if these hours, marking the periods of life terrestrial and life spiritual, are limited in their duration, and if the very number of such stages in Eternity between sleep and awakening, illusion and reality, has its beginning and its end, on the other hand, the spiritual pilgrim is eternal. Therefore are the hours of his postmortem life, when, disembodied, he stands face to face with truth and not the mirages of his transitory earthly existences, during the period of that pilgrimage which we call "the cycle of rebirths"-the only reality in our conception. Such intervals, their limitation notwithstanding, do not prevent the Ego, while ever perfecting itself, from following undeviatingly, though gradually and slowly, the path to its last transformation, when that Ego, having reached its goal, becomes a divine being. These intervals and stages help towards this final result instead of hindering it; and without such limited intervals the divine Ego could never reach its ultimate goal. I have given you once already a familiar illustration by comparing the Ego, or the individuality, to an actor, and its numerous and various incarnations to the parts it plays. Will you call these parts or their costumes the individuality of the actor himself? Like that actor, the Ego is forced to play during the cycle of necessity, up to the very threshold of ParaNirvana, many parts such as may be unpleasant to it. But as the bee collects its honey from every flower, leaving the rest as food for the earthly worms, so does our spiritual individuality, whether we call it Sutratman or Ego. Collecting from every terrestrial personality, into which Karma forces it to incarnate, the nectar alone of the spiritual qualities and self-consciousness, it unites all these into one whole and emerges from its chrysalis as the glorified Dhyani-Chohan. So much the worse for those terrestrial personalities from which it could collect nothing. Such personalities cannot assuredly outlive consciously their terrestrial existence.

Q. Thus, then, it seems that, for the terrestrial personality, immortality is still conditional. Is, then, immortality itself not unconditional?

A. Not at all. But immortality cannot touch the non-existent: for all that which exists as Sat, or emanates from Sat, immortality and Eternity are absolute. Matter is the opposite pole of spirit, and yet the two are one. The essence of all this, i. e., Spirit, Force, and Matter, or the three in one, is as endless as it is beginningless; but the form acquired by this triple unity during its incarnations, its externality, is certainly only the illusion of our personal conceptions. Therefore do we call Nirvana and the Universal life alone a reality, while relegating the terrestrial life, its terrestrial personality included, and even its Devachanic existence, to the

phantom realm of illusion.

Q. But why in such a case call sleep the reality, and waking the illusion?

A. It is simply a comparison made to facilitate the grasping of the subject, and from the standpoint of terrestrial conceptions it is a very correct one.

Q. And still I cannot understand, if the life to come is based on justice and the merited retribution for all our terrestrial suffering, how in the case of materialists, many of whom are really honest and charitable men, there should remain of their personality nothing but the refuse of a faded flower.

A. No one ever said such a thing. No materialist, however unbelieving, can die forever in the fullness of his spiritual individuality. What was said is that consciousness can disappear either fully or partially in the case of a materialist, so that no conscious remains of his personality survive.

Q. But surely this is annihilation?

A. Certainly not. One can sleep a dead sleep and miss several stations during a long railway journey, without the slightest recollection or consciousness, and awake at another station and continue the journey past innumerable other halting-places till the end of the journey or the goal is reached. Three kinds of sleep were mentioned to you: the dreamless, the chaotic, and the one which is so real, that to the sleeping man his dreams become full realities. If you believe in the latter why can't you believe in the former; according to the after-life a man has believed in and expected, such is the life he will have. He who expected no life to come will have an absolute blank, amounting to annihilation, in the interval between the two rebirths. This is just the carrying out of the program we spoke of, a program created by the materialists themselves. But there are various kinds of materialists, as you say. A selfish, wicked Egoist, one who never shed a tear for anyone but himself, thus adding entire indifference to the whole world to his unbelief, must, at the threshold of death, drop his personality forever. This personality having no tendrils of sympathy for the world around and hence nothing to hook onto Sutratman, it follows that with the last breath every connection between the two is broken. There being no Devachan for such a materialist, the Sutratman will reincarnate almost immediately. But those materialists who erred in nothing but their disbelief will oversleep but one station. And the time will come when that ex-materialist will perceive himself in the Eternity and perhaps repent that he lost even one day, one station, from the life eternal.

Q. Still, would it not be more correct to say that death is birth into a new life, or a return once more into eternity?

A. You may if you like. Only remember that births differ, and that there are births of "still-born" beings, which are failures of nature. Moreover, with your Western fixed ideas about material life, the words living and being are quite inapplicable to the pure subjective state of postmortem existence. It is just because, save in a few philosophers who are not read by the many, and who themselves are too confused to present a distinct picture of it, it is just because your Western ideas of life and death have finally become so narrow, that on the one hand they have led to crass materialism, and on the other, to the still more material conception of the other life, which the Spiritualists have formulated in their Summerland. There the souls of men eat, drink, marry, and live in a paradise quite as sensual as that of Mohammed, but even less philosophical. Nor are the average conceptions of the uneducated Christians any better, being if possible still more material. What between truncated angels, brass trumpets, golden harps, and material hellfires, the Christian heaven seems like a fairy scene at a Christmas pantomime.

The Key To Theosophy - HP Blavatsky.txt

It is because of these narrow conceptions that you find such difficulty in understanding. It is just because the life of the disembodied soul, while possessing all the vividness of reality, as in certain dreams, is devoid of every grossly objective form of terrestrial life, that the Eastern philosophers have compared it with visions during sleep.

- oOo -

Definite Words for Definite Things

Q. Don't you think it is because there are no definite and fixed terms to indicate each principle in man, that such a confusion of ideas arises in our minds with respect to the respective functions of these principles?

A. I have thought of it myself. The whole trouble has arisen from this: we have started our expositions of, and discussion about, the principles, using their Sanskrit names instead of coining immediately, for the use of Theosophists, their equivalents in English. We must try and remedy this now.

Q. You will do well, as it may avoid further confusion; no two theosophical writers, it seems to me, have hitherto agreed to call the same principle by the same name.

A. The confusion is more apparent than real, however. I have heard some of our Theosophists express surprise at, and criticize several essays speaking of these principles; but, when examined, there was no worse mistake in them than that of using the word Soul to cover the three principles without specifying the distinctions. The first, as positively the clearest of our Theosophical writers, Mr. A. P. Sinnett, has some comprehensive and admirably-written passages on the "Higher Self." His real idea has also been misconceived by some, owing to his using the word Soul in a general sense. Yet here are a few passages which will show to you how clear and comprehensive is all that he writes on the subject:

The human soul, once launched on the streams of evolution as a human individuality, passes through alternate periods of physical and relatively spiritual existence. It passes from the one plane, or stratum, or condition of nature to the other under the guidance of its Karmic affinities; living in incarnations the life which its Karma has preordained; modifying its progress within the limitations of circumstances, and developing fresh Karma by its use or abuse of opportunities-it returns to spiritual existence (Devachan) after each physical life-through the intervening region of Kamaloka-for rest and refreshment and for the gradual absorption into its essence, as so much cosmic progress, of the life's experience gained "on earth" or during physical existence. This view of the matter will, moreover, have suggested many collateral inferences to anyone thinking over the subject; for instance, that the transfer of consciousness from the Kamaloka to the Devachanic stage of this progression would necessarily be gradual; that in truth, no hard-and-fast line separates the varieties of spiritual conditions, that even the spiritual and physical planes, as psychic faculties in living people show, are not so hopelessly walled off from one another as materialistic theories would suggest; that all states of nature are all around us simultaneously, and appeal to different perceptive faculties; and so on ... It is clear that during physical existence people who possess psychic faculties remain in connection with the planes of super-physical consciousness; and although most people may not be endowed with such faculties, we all, as the phenomena of sleep, even, and especially ... those of somnambulism or mesmerism, show, are capable of entering into conditions of consciousness that the five physical senses have nothing to do with. We-the souls within us-are not as it were altogether adrift in the ocean of matter. We clearly retain some surviving interest or rights in the shore from which, for a time, we have floated off. The process of incarnation, therefore, is not fully described when we speak of an alternate existence on the physical and spiritual planes, and thus picture the soul as

The Key To Theosophy - HP Blavatsky.txt

a complete entity slipping entirely from the one state of existence to the other. The more correct definitions of the process would probably represent incarnation as taking place on this physical plane of nature by reason of an efflux emanating from the soul. The Spiritual realm would all the while be the proper habitat of the Soul, which would never entirely quit it; and that non-materializable portion of the Soul which abides permanently on the spiritual plane may fitly, perhaps, be spoken of as the Higher Self.

This "Higher Self" is Atma, and of course it is "non-materializable," as Mr. Sinnett says. Even more, it can never be "objective" under any circumstances, even to the highest spiritual perception. For Atma or the "Higher Self" is really Brahma, the Absolute, and indistinguishable from it. In hours of Samadhi, the higher spiritual consciousness of the Initiate is entirely absorbed in the one essence, which is Atma, and therefore, being one with the whole, there can be nothing objective for it. Now some of our Theosophists have got into the habit of using the words Self and Ego as synonymous, of associating the term Self with only man's higher individual or even personal "Self" or Ego, whereas this term ought never to be applied except to the One universal Self. Hence the confusion. Speaking of Manas, the "causal body," we may call it-when connecting it with the Buddhic radiance-the "Higher Ego," never the "Higher Self." For even Buddhi, the "Spiritual Soul," is not the Self, but the vehicle only of Self. All the other "Selves"-such as the "Individual" self and "personal" self-ought never to be spoken or written of without their qualifying and characteristic adjectives.

Thus in this most excellent essay on the "Higher Self," this term is applied to the sixth principle or Buddhi; and has in consequence given rise to just such misunderstandings. The statement that

A child does not acquire its sixth principle-or become a morally responsible being capable of generating Karma-until seven years old.

-proves what is meant therein by the Higher Self. Therefore, the able author is quite justified in explaining that after the "Higher Self" has passed into the human being and saturated the personality-in some of the finer organizations only-with its consciousness

People with psychic faculties may indeed perceive this Higher Self through their finer senses from time to time.

But so are those, who limit the term Higher Self to the Universal Divine Principle, "justified" in misunderstanding him. For, when we read, without being prepared for this shifting of metaphysical terms, that while

Fully manifesting on the physical plane ... the Higher Self still remains a conscious spiritual Ego on the corresponding plane of Nature.

We are apt to see in the "Higher Self" of this sentence, Atma, and in the spiritual Ego, Manas, or rather Buddhi-Manas, and forthwith to criticize the whole thing as incorrect.

To avoid henceforth such misapprehensions, I propose to translate literally from the Occult Eastern terms their equivalents in English, and offer these for future use.

[The Self and the Egos]

The Higher Self is Atma, the inseparable ray of the Universal and One Self. It is the God above, more than within, us. Happy the man who succeeds in saturating his inner Ego with it!

The Spiritual divine Ego is the Spiritual soul or Buddhi, in close union with Manas, the mind-principle, without which it is no Ego at all, but only

the Atmic Vehicle.

The Inner, or Higher "Ego" is Manas, the "Fifth" Principle, so-called, independently of Buddhi. The Mind-Principle is only the Spiritual Ego when merged into one with Buddhi-no materialist being supposed to have in him such an Ego, however great his intellectual capacities. It is the permanent Individuality or the "Reincarnating Ego."

The Lower, or Personal "Ego" is the physical man in conjunction with his lower Self, i. e., animal instincts, passions, desires, etc. It is called the "false personality," and consists of the lower Manas combined with Kamarupa, and operating through the Physical body and its phantom or "double."

The remaining principle Prana, or Life, is, strictly speaking, the radiating force or Energy of Atma-as the Universal Life and the One Self-Its lower or rather (in its effects) more physical, because manifesting, aspect. Prana or Life permeates the whole being of the objective Universe; and is called a principle only because it is an indispensable factor and the deus ex machina of the living man.

Q. This division being so much simplified in its combinations will answer better, I believe. The other is much too metaphysical.

A. If outsiders as well as Theosophists would agree to it, it would certainly make matters much more comprehensible.

On the Nature of Our Thinking Principle

The Mystery of the Ego

Q. I perceive in the quotation you brought forward a little while ago from The Buddhist Catechism a discrepancy that I would like to hear explained. It is there stated that the Skandhas-memory included-change with every new incarnation. And yet, it is asserted that the reflection of the past lives, which, we are told, are entirely made up of Skandhas, "must survive." At the present moment I am not quite clear in my mind as to what it is precisely that survives, and I would like to have it explained. What is it? Is it only that "reflection," or those Skandhas, or always that same Ego, the Manas?

A. I have just explained that the reincarnating Principle, or that which we call the divine man, is indestructible throughout the life cycle: indestructible as a thinking Entity, and even as an ethereal form. The "reflection" is only the spiritualized remembrance, during the Devachanic period, of the ex-personality, Mr. A. or Mrs. B. -with which the Ego identifies itself during that period. Since the latter is but the continuation of the earth-life, so to say, the very acme and pitch, in an unbroken series, of the few happy moments in that now past existence, the Ego has to identify itself with the personal consciousness of that life, if anything shall remain of it.

Q. This means that the Ego, notwithstanding its divine nature, passes every such period between two incarnations in a state of mental obscuraton, or temporary insanity.

A. You may regard it as you like. Believing that, outside the One Reality, nothing is better than a passing illusion-the whole Universe included-we do not view it as insanity, but as a very natural sequence or development of the terrestrial life. What is life? A bundle of the most varied experiences, of daily changing ideas, emotions, and opinions. In our youth we are often enthusiastically devoted to an ideal, to some hero or heroine whom we try to follow and revive; a few years later, when the freshness of our youthful feelings has faded out and sobered down, we are the first to laugh at our fancies. And yet there was a day when we had so thoroughly identified our own personality with that of the ideal in our mind-especially if it was that

of a living being-that the former was entirely merged and lost in the latter. Can it be said of a man of fifty that he is the same being that he was at twenty? The inner man is the same; the outward living personality is completely transformed and changed. Would you also call these changes in the human mental states insanity?

Q. How would you name them, and especially how would you explain the permanence of one and the evanescence of the other?

A. We have our own doctrine ready, and to us it offers no difficulty. The clue lies in the double consciousness of our mind, and also, in the dual nature of the mental principle. There is a spiritual consciousness, the Manasic mind illumined by the light of Buddhi, that which subjectively perceives abstractions; and the sentient consciousness (the lower Manasic light), inseparable from our physical brain and senses. This latter consciousness is held in subjection by the brain and physical senses, and, being in its turn equally dependent on them, must of course fade out and finally die with the disappearance of the brain and physical senses. It is only the former kind of consciousness, whose root lies in eternity, which survives and lives forever, and may, therefore, be regarded as immortal. Everything else belongs to passing illusions.

Q. What do you really understand by illusion in this case?

A. It is very well described in the just-mentioned essay on "The Higher Self." Says its author:

The theory we are considering (the interchange of ideas between the Higher Ego and the lower self) harmonizes very well with the treatment of this world in which we live as a phenomenal world of illusion, the spiritual plane of nature being on the other hand the noumenal world or plane of reality. That region of nature in which, so to speak, the permanent soul is rooted is more real than that in which its transitory blossoms appear for a brief space to wither and fall to pieces, while the plant recovers energy for sending forth a fresh flower. Supposing flowers only were perceptible to ordinary senses, and their roots existed in a state of Nature intangible and invisible to us, philosophers in such a world who divined that there were such things as roots in another plane of existence would be apt to say of the flowers: "These are not the real plants; they are of no relative importance, merely illusive phenomena of the moment."

This is what I mean. The world in which blossom the transitory and evanescent flowers of personal lives is not the real permanent world; but that one in which we find the root of consciousness, that root which is beyond illusion and dwells in the eternity.

Q. What do you mean by the root dwelling in eternity?

A. I mean by this root the thinking entity, the Ego which incarnates, whether we regard it as an "Angel," "Spirit," or a Force. Of that which falls under our sensuous perceptions only what grows directly from, or is attached to this invisible root above, can partake of its immortal life. Hence every noble thought, idea, and aspiration of the personality it informs, proceeding from and fed by this root, must become permanent. As to the physical consciousness, as it is a quality of the sentient but lower principle, (Kamarupa or animal instinct, illumined by the lower manasic reflection), or the human Soul-it must disappear. That which displays activity, while the body is asleep or paralyzed, is the higher consciousness, our memory registering but feebly and inaccurately-because automatically-such experiences, and often failing to be even slightly impressed by them.

Q. But how is it that Manas, although you call it Nous, a "God," is so weak during its incarnations, as to be actually conquered and fettered by its

body?

A. I might retort with the same question and ask:

How is it that he, whom you regard as "the God of Gods" and the One living God, is so weak as to allow evil (or the Devil) to have the best of him as much as of all his creatures, whether while he remains in Heaven, or during the time he was incarnated on this earth?

You are sure to reply again: "This is a Mystery; and we are forbidden to pry into the mysteries of God." Not being forbidden to do so by our religious philosophy, I answer your question that, unless a God descends as an Avatara, no divine principle can be otherwise than cramped and paralyzed by turbulent, animal matter. Heterogeneity will always have the upper hand over homogeneity, on this plane of illusions, and the nearer an essence is to its root-principle, Primordial Homogeneity, the more difficult it is for the latter to assert itself on earth. Spiritual and divine powers lie dormant in every human Being; and the wider the sweep of his spiritual vision the mightier will be the God within him. But as few men can feel that God, and since, as an average rule, deity is always bound and limited in our thought by earlier conceptions, those ideas that are inculcated in us from childhood, therefore, it is so difficult for you to understand our philosophy.

Q. And is it this Ego of ours which is our God?

A. Not at all; "A God" is not the universal deity, but only a spark from the one ocean of Divine Fire. Our God within us, or "our Father in Secret" is what we call the Higher Self, Atma. Our incarnating Ego was a God in its origin, as were all the primeval emanations of the One Unknown Principle. But since its "fall into Matter," having to incarnate throughout the cycle, in succession, from first to last, it is no longer a free and happy god, but a poor pilgrim on his way to regain that which he has lost. I can answer you more fully by repeating what is said of the Inner Man:

From the remotest antiquity mankind as a whole have always been convinced of the existence of a personal spiritual entity within the personal physical man. This inner entity was more or less divine, according to its proximity to the crown. The closer the union the more serene man's destiny, the less dangerous the external conditions. This belief is neither bigotry nor superstition, only an ever-present, instinctive feeling of the proximity of another spiritual and invisible world, which, though it be subjective to the senses of the outward man, is perfectly objective to the inner ego. Furthermore, they believed that there are external and internal conditions which affect the determination of our will upon our actions. They rejected fatalism, for fatalism implies a blind course of some still blinder power. But they believed in destiny or Karma, which from birth to death every man is weaving thread by thread around himself, as a spider does his cobweb; and this destiny is guided by that presence termed by some the guardian angel, or our more intimate astral inner man, who is but too often the evil genius of the man of flesh or the personality. Both these lead on Man, but one of them must prevail; and from the very beginning of the invisible affray the stern and implacable law of compensation and retribution steps in and takes its course, following faithfully the fluctuating of the conflict. When the last strand is woven, and man is seemingly enwrapped in the net-work of his own doing, then he finds himself completely under the empire of this self-made destiny. It then either fixes him like the inert shell against the immovable rock, or like a feather carries him away in a whirlwind raised by his own actions.

Such is the destiny of the Man-the true Ego, not the Automaton, the shell that goes by that name. It is for him to become the conqueror over matter.

The Complex Nature of Manas

Q. But you wanted to tell me something of the essential nature of Manas, and of the relation in which the Skandhas of physical man stand to it?

A. It is this nature, mysterious, Protean, beyond any grasp, and almost shadowy in its correlations with the other principles, that is most difficult to realize, and still more so to explain. Manas is a principle, and yet it is an "Entity" and individuality or Ego. He is a "God," and yet he is doomed to an endless cycle of incarnations, for each of which he is made responsible, and for each of which he has to suffer. All this seems as contradictory as it is puzzling; nevertheless, there are hundreds of people, even in Europe, who realize all this perfectly, for they comprehend the Ego not only in its integrity but in its many aspects. Finally, if I would make myself comprehensible, I must begin by the beginning and give you the genealogy of this Ego in a few lines.

Q. Say on.

A. Try to imagine a "Spirit," a celestial Being, whether we call it by one name or another, divine in its essential nature, yet not pure enough to be one with the All, and having, in order to achieve this, to do purify its nature as to finally gain that goal. It can do so only by passing individually and personally, i. e., spiritually and physically, through every experience and feeling that exists in the manifold or differentiated Universe. It has, therefore, after having gained such experience in the lower kingdoms, and having ascended higher and still higher with every rung on the ladder of being, to pass through every experience on the human planes. In its very essence it is thought, and is, therefore, called in its plurality Manasaputra, "the Sons of the (Universal) mind." This individualized "Thought" is what we Theosophists call the real human Ego, the thinking Entity imprisoned in a case of flesh and bones. This is surely a Spiritual Entity, not Matter, and such Entities are the incarnating Egos that inform the bundle of animal matter called mankind, and whose names are Manasa or "Minds." But once imprisoned, or incarnate, their essence becomes dual: that is to say, the rays of the eternal divine Mind, considered as individual entities, assume a two-fold attribute which is (a) their essential inherent characteristic, heaven-aspiring mind (higher Manas), and (b) the human quality of thinking, or animal cogitation, rationalized owing to the superiority of the human brain, the Kama-tending or lower Manas. One gravitates toward Buddhi, the other, tending downward, to the seat of passions and animal desires. The latter have no room in Devachan, nor can they associate with the divine triad which ascends as one into mental bliss. Yet it is the Ego, the Manasic Entity, which is held responsible for all the sins of the lower attributes, just as a parent is answerable for the transgressions of his child, so long as the latter remains irresponsible.

Q. Is this "child" the "personality"?

A. It is. When, therefore, it is stated that the "personality" dies with the body it does not state all. The body, which was only the objective symbol of Mr. A. or Mrs. B., fades away with all its material Skandhas, which are the visible expressions thereof. But all that which constituted during life the spiritual bundle of experiences, the noblest aspirations, undying affections, and unselfish nature of Mr. A. or Mrs. B. clings for the time of the Devachanic period to the Ego, which is identified with the spiritual portion of that terrestrial Entity, now passed away out of sight. The Actor is so imbued with the role just played by him that he dreams of it during the whole Devachanic night, which vision continues till the hour strikes for him to return to the stage of life to enact another part.

Q. But how is it that this doctrine, which you say is as old as thinking men, has found no room, say, in Christian theology?

The Key To Theosophy - HP Blavatsky.txt

A. You are mistaken, it has; only theology has disfigured it out of all recognition, as it has many other doctrines. Theology calls the Ego the Angel that God gives us at the moment of our birth, to take care of our Soul. Instead of holding that "Angel" responsible for the transgressions of the poor helpless "Soul," it is the latter which, according to theological logic, is punished for all the sins of both flesh and mind! It is the Soul, the immaterial breath of God and his alleged creation, which, by some most amazing intellectual jugglery, is doomed to burn in a material hell without ever being consumed, while the "Angel" escapes scot-free, after folding his white pinions and wetting them with a few tears. Aye, these are our "ministering Spirits," the "messengers of mercy" who are sent, Bishop Mant tells us:

... to fulfill

Good for Salvation's heirs, for us they still

Grieve when we sin, rejoice when we repent ...

Yet it becomes evident that if all the Bishops the world over were asked to define once for all what they mean by Soul and its functions, they would be as unable to do so as to show us any shadow of logic in the orthodox belief!

- o0o-

The Doctrine is Taught in St. John's Gospel

Q. To this the adherents to this belief might answer, that if even the orthodox dogma does promise the impenitent sinner and materialist a bad time of it in a rather too realistic Inferno, it gives them, on the other hand, a chance for repentance to the last minute. Nor do they teach annihilation, or loss of personality, which is all the same.

A. If the Church teaches nothing of the kind, on the other hand, Jesus does; and that is something to those, at least, who place Christ higher than Christianity.

Q. Does Christ teach anything of the sort?

A. He does; and every well-informed Occultist and even Cabalist will tell you so. Christ, or the fourth Gospel at any rate, teaches reincarnation as also the annihilation of the personality, if you but forget the dead letter and hold to the esoteric Spirit. Remember the parable spoken of by St. John. What does the parable speak about if not of the upper triad in man? Atma is the Husbandman-the Spiritual Ego or Buddhi (Christos) the Vine, while the animal and vital Soul, the personality, is the "branch."

I am the true vine, and my Father is the Husbandman. Every branch in me that beareth not fruit he taketh away ... As the branch cannot bear fruit of itself except it abide in the vine; no more can ye, except ye abide in me. I am the Vine-ye are the branches. If a man abide not in me he is cast forth as a branch, and is withered and cast into the fire and burned.

Now we explain it in this way. Disbelieving in the hellfire which theology discovers as underlying the threat to the branches, we say that the "Husbandman" means Atma, the Symbol for the infinite, impersonal Principle, while the Vine stands for the Spiritual Soul, Christos, and each "branch" represents a new incarnation.

Q. But what proofs have you to support such an arbitrary interpretation?

1. Universal symbology is a warrant for its correctness and that it is not arbitrary. Hermas says of "God" that he "planted the Vineyard," i. e.,

The Key To Theosophy - HP Blavatsky.txt

he created mankind. In the Cabala, it is shown that the Aged of the Aged, or the "Long Face," plants a vineyard, the latter typifying mankind; and a vine, meaning Life. The Spirit of "King Messiah" is, therefore, shown as washing his garments in the wine from above, from the creation of the world. [Zohar XL, 10] And King Messiah is the Ego purified by washing his garments (i. e., his personalities in rebirth), in the wine from above, or Buddhi. Adam, or A-Dam, is "blood." The Life of the flesh is in the blood (nephesh-soul). And Adam-Kadmon is the Only-Begotten. Noah also plants a vineyard-the allegorical hotbed of future humanity. As a consequence of the adoption of the same allegory, we find it reproduced in the Nazarene Codex. Seven vines are procreated-which seven vines are our Seven Races with their seven Saviors or Buddhas-which spring from Iukabar Zivo, and Ferho (or Parcha) Raba waters them. [Codex Nazareus, iii, pp. 60, 61] When the blessed will ascend among the creatures of Light, they shall see Iavar-Xivo, Lord of Life, and the First Vine. [Cod. Naz., ii, p. 281] These Cabalistic metaphors are thus naturally repeated in the Gospel according to St. John.

Let us not forget that in the human system-even according to those philosophies which ignore our septenary division-the Ego or thinking man is called the Logos, or the Son of Soul and Spirit. "Manas is the adopted Son of King *** and Queen ***" (esoteric equivalents for Atma and Buddhi), says an occult work. He is the "man-god" of Plato, who crucifies himself in Space (or the duration of the life cycle) for the redemption of Matter. This he does by incarnating over and over again, thus leading mankind onward to perfection, and making thereby room for lower forms to develop into higher. Not for one life does he cease progressing himself and helping all physical nature to progress; even the occasional, very rare event of his losing one of his personalities, in the case of the latter being entirely devoid of even a spark of spirituality, helps toward his individual progress.

Q. But surely, if the Ego is held responsible for the transgressions of its personalities, it has to answer also for the loss, or rather the complete annihilation, of one of such.

A. Not at all, unless it has done nothing to avert this dire fate. But if, all its efforts notwithstanding, its voice, that of our conscience, was unable to penetrate through the wall of matter, then the obtuseness of the latter proceeding from the imperfect nature of the material is classed with other failures of nature. The Ego is sufficiently punished by the loss of Devachan, and especially by having to incarnate almost immediately.

Q. This doctrine of the possibility of losing one's soul-or personality, do you call it?-militates against the ideal theories of both Christians and Spiritualists, though Swedenborg adopts it to a certain extent, in what he calls Spiritual death. They will never accept it.

A. This can in no way alter a fact in nature, if it be a fact, or prevent such a thing occasionally taking place. The universe and everything in it, moral, mental, physical, psychic, or Spiritual, is built on a perfect law of equilibrium and harmony. As said before (see Isis Unveiled), the centripetal force could not manifest itself without the centrifugal in the harmonious revolutions of the spheres, and all forms and their progress are the products of this dual force in nature. Now the Spirit (or Buddhi) is the centrifugal and the soul (Manas) the centripetal spiritual energy; and to produce one result they have to be in perfect union and harmony. Break or damage the centripetal motion of the earthly soul tending toward the center which attracts it; arrest its progress by clogging it with a heavier weight of matter than it can bear, or than is fit for the Devachanic state, and the harmony of the whole will be destroyed. Personal life, or perhaps rather its ideal reflection, can only be continued if sustained by the two-fold force, that is by the close union of Buddhi and Manas in every rebirth or personal life. The least deviation from harmony damages it; and when it is destroyed

beyond redemption the two forces separate at the moment of death. During a brief interval the personal form (called indifferently Kamarupa and Mayavirupa), the spiritual efflorescence of which, attaching itself to the Ego, follows it into Devachan and gives to the permanent individuality its personal coloring (pro tem, so to speak), is carried off to remain in Kamaloka and to be gradually annihilated. For it is after the death of the utterly depraved, the unspiritual and the wicked beyond redemption, that arrives the critical and supreme moment. If during life the ultimate and desperate effort of the Inner Self (Manas), to unite something of the personality with itself and the high glimmering ray of the divine Buddhi, is thwarted; if this ray is allowed to be more and more shut out from the ever-thickening crust of physical brain, the Spiritual Ego or Manas, once freed from the body, remains severed entirely from the ethereal relic of the personality; and the latter, or Kamarupa, following its earthly attractions, is drawn into and remains in Hades, which we call the Kamaloka. These are "the withered branches" mentioned by Jesus as being cut off from the Vine. Annihilation, however, is never instantaneous, and may require centuries sometimes for its accomplishment. But there the personality remains along with the remnants of other more fortunate personal Egos, and becomes with them a shell and an Elementary. As said in Isis Unveiled, it is these two classes of "Spirits," the shells and the Elementaries, which are the leading "Stars" on the great spiritual stage of "materializations." And you may be sure of it, it is not they who incarnate; and, therefore, so few of these "dear departed ones" know anything of reincarnation, misleading thereby the Spiritualists.

Q. But does not the author of Isis Unveiled stand accused of having preached against reincarnation?

A. By those who have misunderstood what was said, yes. At the time that work was written, reincarnation was not believed in by any Spiritualists, either English or American, and what is said there of reincarnation was directed against the French Spiritists, whose theory is as unphilosophical and absurd as the Eastern teaching is logical and self-evident in its truth. The Reincarnationists of the Allan Kardec School believe in an arbitrary and immediate reincarnation. With them, the dead father can incarnate in his own unborn daughter, and so on. They have neither Devachan, Karma, nor any philosophy that would warrant or prove the necessity of consecutive rebirths. But how can the author of Isis Unveiled argue against Karmic reincarnation, at long intervals varying between 1,000 and 1,500 years, when it is the fundamental belief of both Buddhists and Hindus?

Q. Then you reject the theories of both the Spiritists and the Spiritualists, in their entirety?

A. Not in their entirety, but only with regard to their respective fundamental beliefs. Both rely on what their "Spirits" tell them; and both disagree as much with each other as we Theosophists disagree with both. Truth is one; and when we hear the French spooks preaching reincarnation, and the English spooks denying and denouncing the doctrine, we say that either the French or the English "Spirits" do not know what they are talking about. We believe with the Spiritualists and the Spiritists in the existence of "Spirits," or invisible Beings endowed with more or less intelligence. But, while in our teachings their kinds and genera are legion, our opponents admit of no other than human disembodied "Spirits," which, to our knowledge, are mostly Kamalokic Shells.

Q. You seem very bitter against Spirits. As you have given me your views and your reasons for disbelieving in the materialization of, and direct communication in seances, with the disembodied spirits-or the "spirits of the dead"-would you mind enlightening me as to one more fact? Why are some Theosophists never tired of saying how dangerous is intercourse with spirits, and mediumship? Have they any particular reason for this?

The Key To Theosophy - HP Blavatsky.txt

A. We must suppose so. I know I have. Owing to my familiarity for over half a century with these invisible, yet but too tangible and undeniable "influences," from the conscious Elementals, semi-conscious shells, down to the utterly senseless and nondescript spooks of all kinds, I claim a certain right to my views.

Q. Can you give an instance or instances to show why these practices should be regarded as dangerous?

A. This would require more time than I can give you. Every cause must be judged by the effects it produces. Go over the history of Spiritualism for the last fifty years, ever since its reappearance in this century in America-and judge for yourself whether it has done its votaries more good or harm. Pray understand me. I do not speak against real Spiritualism, but against the modern movement which goes under that name, and the so-called philosophy invented to explain its phenomena.

Q. Don't you believe in their phenomena at all?

A. It is because I believe in them with too good reason, and (save some cases of deliberate fraud) know them to be as true as that you and I live, that all my being revolts against them. Once more I speak only of physical, not mental or even psychic phenomena. Like attracts like. There are several high-minded, pure, good men and women, known to me personally, who have passed years of their lives under the direct guidance and even protection of high "Spirits," whether disembodied or planetary. But these Intelligences are not of the type of the John Kings and the Ernests who figure in seance rooms. These Intelligences guide and control mortals only in rare and exceptional cases to which they are attracted and magnetically drawn by the Karmic past of the individual. It is not enough to sit "for development" in order to attract them. That only opens the door to a swarm of "spooks," good, bad, and indifferent, to which the medium becomes a slave for life. It is against such promiscuous mediumship and intercourse with goblins that I raise my voice, not against spiritual mysticism. The latter is ennobling and holy; the former is of just the same nature as the phenomena of two centuries ago, for which so many witches and wizards have been made to suffer. Read Glanvil and other authors on the subject of witchcraft, and you will find recorded there the parallels of most, if not all, of the physical phenomena of nineteenth century "Spiritualism."

Q. Do you mean to suggest that it is all witchcraft and nothing more?

A. What I mean is that, whether conscious or unconscious, all this dealing with the dead is necromancy, and a most dangerous practice. For ages before Moses such raising of the dead was regarded by all the intelligent nations as sinful and cruel, inasmuch as it disturbs the rest of the souls and interferes with their evolutionary development into higher states. The collective wisdom of all past centuries has ever been loud in denouncing such practices. Finally, I say, what I have never ceased repeating orally and in print for fifteen years: While some of the so-called "spirits" do not know what they are talking about, repeating merely-like poll-parrots-what they find in the mediums' and other people's brains, others are most dangerous, and can only lead one to evil. These are two self-evident facts. Go into Spiritualistic circles of the Allan Kardec school, and you find "spirits" asserting reincarnation and speaking like Roman Catholics born. Turn to the "dear departed ones" in England and America, and you will hear them denying reincarnation through thick and thin, denouncing those who teach it, and holding to Protestant views. Your best, your most powerful mediums, have all suffered in health of body and mind. Think of the sad end of Charles Foster, who died in an asylum, a raving lunatic; of Slade, an epileptic; of Eglinton-the best medium now in England-subject to the same. Look back over the life of D. D. Home, a man whose mind was steeped in gall and bitterness, who never had a good word to say of anyone whom he suspected of possessing psychic powers, and who slandered every other medium to the

The Key To Theosophy - HP Blavatsky.txt

bitter end. This Calvin of Spiritualism suffered for years from a terrible spinal disease, brought on by his intercourse with the "spirits," and died a perfect wreck. Think again of the sad fate of poor Washington Irving Bishop. I knew him in New York, when he was fourteen, and he was undeniably a medium. It is true that the poor man stole a march on his "spirits," and baptized them "unconscious muscular action," to the great gaudium of all the corporations of highly learned and scientific fools, and to the replenishment of his own pocket. But *de mortuis nil nisi bonum*; his end was a sad one. He had strenuously concealed his epileptic fits-the first and strongest symptom of genuine mediumship-and who knows whether he was dead or in a trance when the postmortem examination was performed? His relatives insist that he was alive, if we are to believe Reuter's telegrams. Finally, behold the veteran mediums, the founders and prime movers of modern spiritualism-the Fox sisters. After more than forty years of intercourse with the "Angels," the latter have led them to become incurable sots, who are now denouncing, in public lectures, their own life-long work and philosophy as a fraud. What kind of spirits must they be who prompted them, I ask you?

Q. But is your inference a correct one?

A. What would you infer if the best pupils of a particular school of singing broke down from overstrained sore throats? That the method followed was a bad one. So I think the inference is equally fair with regard to Spiritualism when we see their best mediums fall a prey to such a fate. We can only say: Let those who are interested in the question judge the tree of Spiritualism by its fruits, and ponder over the lesson. We Theosophists have always regarded the Spiritualists as brothers having the same mystic tendency as ourselves, but they have always regarded us as enemies. We, being in possession of an older philosophy, have tried to help and warn them; but they have repaid us by reviling and traducing us and our motives in every possible way. Nevertheless, the best English Spiritualists say just as we do, wherever they treat of their belief seriously. Hear "M. A. Oxon" confessing this truth:

Spiritualists are too much inclined to dwell exclusively on the intervention of external spirits in this world of ours, and to ignore the powers of the incarnate Spirit.

Why vilify and abuse us, then, for saying precisely the same? Henceforward, we will have nothing more to do with Spiritualism. And now let us return to Reincarnation.

On the Mysteries of Reincarnation

Periodical Rebirths

Q. You mean, then, that we have all lived on earth before, in many past incarnations, and shall go on so living?

A. I do. The life cycle, or rather the cycle of conscious life, begins with the separation of the mortal animal-man into sexes, and will end with the close of the last generation of men, in the seventh round and seventh race of mankind. Considering we are only in the fourth round and fifth race, its duration is more easily imagined than expressed.

Q. And we keep on incarnating in new personalities all the time?

A. Most assuredly so; because this life cycle or period of incarnation may be best compared to human life. As each such life is composed of days of activity separated by nights of sleep or of inaction, so, in the incarnation cycle, an active life is followed by a Devachanic rest.

Q. And it is this succession of births that is generally defined as

reincarnation?

A. Just so. It is only through these births that the perpetual progress of the countless millions of Egos toward final perfection and final rest (as long as was the period of activity) can be achieved.

Q. And what is it that regulates the duration, or special qualities of these incarnations?

A. Karma, the universal law of retributive justice.

Q. Is it an intelligent law?

A. For the Materialist, who calls the law of periodicity which regulates the marshaling of the several bodies, and all the other laws in nature, blind forces and mechanical laws, no doubt Karma would be a law of chance and no more. For us, no adjective or qualification could describe that which is impersonal and no entity, but a universal operative law. If you question me about the causative intelligence in it, I must answer you I do not know. But if you ask me to define its effects and tell you what these are in our belief, I may say that the experience of thousands of ages has shown us that they are absolute and unerring equity, wisdom, and intelligence. For Karma in its effects is an unfailing redresser of human injustice, and of all the failures of nature; a stern adjuster of wrongs; a retributive law which rewards and punishes with equal impartiality. It is, in the strictest sense, "no respecter of persons," though, on the other hand, it can neither be propitiated, nor turned aside by prayer. This is a belief common to Hindus and Buddhists, who both believe in Karma.

Q. In this Christian dogmas contradict both, and I doubt whether any Christian will accept the teaching.

A. No; and Inman gave the reason for it many years ago. As he puts it, while ... the Christians will accept any nonsense, if promulgated by the Church as a matter of faith ... the Buddhists hold that nothing which is contradicted by sound reason can be a true doctrine of Buddha.

They do not believe in any pardon for their sins, except after an adequate and just punishment for each evil deed or thought in a future incarnation, and a proportionate compensation to the parties injured.

Q. Where is it so stated?

A. In most of their sacred works. Consider the following Theosophical tenet:

Buddhists believe that every act, word, or thought has its consequence, which will appear sooner or later in the present or in the future state. Evil acts will produce evil consequences, good acts will produce good consequences: prosperity in this world, or birth in heaven (Devachan) ... in the future state.

Q. Christians believe the same thing, don't they?

A. Oh, no; they believe in the pardon and the remission of all sins. They are promised that if they only believe in the blood of Christ (an innocent victim!), in the blood offered by Him for the expiation of the sins of the whole of mankind, it will atone for every mortal sin. And we believe neither in vicarious atonement, nor in the possibility of the remission of the smallest sin by any god, not even by a "personal Absolute" or "Infinite," if such a thing could have any existence. What we believe in, is strict and impartial justice. Our idea of the unknown Universal Deity, represented by Karma, is that it is a Power which cannot fail, and can, therefore, have neither wrath nor mercy, only absolute Equity, which leaves every cause,

The Key To Theosophy - HP Blavatsky.txt

great or small, to work out its inevitable effects. The saying of Jesus: "With what measure you mete it shall be measured to you again," neither by expression nor implication points to any hope of future mercy or salvation by proxy. This is why, recognizing as we do in our philosophy the justice of this statement, we cannot recommend too strongly mercy, charity, and forgiveness of mutual offenses. Resist not evil, and render good for evil, are Buddhist precepts, and were first preached in view of the implacability of Karmic law. For man to take the law into his own hands is anyhow a sacrilegious presumption. Human Law may use restrictive not punitive measures; but a man who, believing in Karma, still revenges himself and refuses to forgive every injury, thereby rendering good for evil, is a criminal and only hurts himself. As Karma is sure to punish the man who wronged him, by seeking to inflict an additional punishment on his enemy, he, who instead of leaving that punishment to the great Law adds to it his own mite, only begets thereby a cause for the future reward of his own enemy and a future punishment for himself. The unfailing Regulator affects in each incarnation the quality of its successor; and the sum of the merit or demerit in preceding ones determines it.

Q. Are we then to infer a man's past from his present?

A. Only so far as to believe that his present life is what it justly should be, to atone for the sins of the past life. Of course-seers and great adepts excepted-we cannot as average mortals know what those sins were. From our paucity of data, it is impossible for us even to determine what an old man's youth must have been; neither can we, for like reasons, draw final conclusions merely from what we see in the life of some man, as to what his past life may have been.

- oOo-

What is Karma?

Q. But what is Karma?

A. As I have said, we consider it as the Ultimate Law of the Universe, the source, origin, and fount of all other laws which exist throughout Nature. Karma is the unerring law which adjusts effect to cause, on the physical, mental, and spiritual planes of being. As no cause remains without its due effect from greatest to least, from a cosmic disturbance down to the movement of your hand, and as like produces like, Karma is that unseen and unknown law which adjusts wisely, intelligently, and equitably each effect to its cause, tracing the latter back to its producer. Though itself unknowable, its action is perceivable.

Q. Then it is the "Absolute," the "Unknowable" again, and is not of much value as an explanation of the problems of life?

A. On the contrary. For, though we do not know what Karma is per se, and in its essence, we do know how it works, and we can define and describe its mode of action with accuracy. We only do not know its ultimate Cause, just as modern philosophy universally admits that the ultimate Cause of anything is "unknowable."

Q. And what has Theosophy to say in regard to the solution of the more practical needs of humanity? What is the explanation which it offers in reference to the awful suffering and dire necessity prevalent among the so-called "lower classes."

A. To be pointed, according to our teaching all these great social evils, the distinction of classes in Society, and of the sexes in the affairs of life, the unequal distribution of capital and of labor-all are due to what we tersely but truly denominate Karma.

Q. But, surely, all these evils which seem to fall upon the masses somewhat indiscriminately are not actual merited and individual Karma?

A. No, they cannot be so strictly defined in their effects as to show that each individual environment, and the particular conditions of life in which each person finds himself, are nothing more than the retributive Karma which the individual generated in a previous life. We must not lose sight of the fact that every atom is subject to the general law governing the whole body to which it belongs, and here we come upon the wider track of the Karmic law. Do you not perceive that the aggregate of individual Karma becomes that of the nation to which those individuals belong, and further, that the sumtotal of National Karma is that of the World? The evils that you speak of are not peculiar to the individual or even to the Nation, they are more or less universal; and it is upon this broad line of Human interdependence that the law of Karma finds its legitimate and equable issue.

Q. Do I, then, understand that the law of Karma is not necessarily an individual law?

A. That is just what I mean. It is impossible that Karma could readjust the balance of power in the world's life and progress, unless it had a broad and general line of action. It is held as a truth among Theosophists that the interdependence of Humanity is the cause of what is called Distributive Karma, and it is this law which affords the solution to the great question of collective suffering and its relief. It is an occult law, moreover, that no man can rise superior to his individual failings, without lifting, be it ever so little, the whole body of which he is an integral part. In the same way, no one can sin, nor suffer the effects of sin, alone. In reality, there is no such thing as "Separateness"; and the nearest approach to that selfish state, which the laws of life permit, is in the intent or motive.

Q. And are there no means by which the distributive or national Karma might be concentrated or collected, so to speak, and brought to its natural and legitimate fulfillment without all this protracted suffering?

A. As a general rule, and within certain limits which define the age to which we belong, the law of Karma cannot be hastened or retarded in its fulfillment. But of this I am certain, the point of possibility in either of these directions has never yet been touched. Listen to the following recital of one phase of national suffering, and then ask yourself whether, admitting the working power of individual, relative, and distributive Karma, these evils are not capable of extensive modification and general relief. What I am about to read to you is from the pen of a National Savior, one who, having overcome Self, and being free to choose, has elected to serve Humanity, in bearing at least as much as a woman's shoulders can possibly bear of National Karma. This is what she says:

Yes, Nature always does speak, don't you think? only sometimes we make so much noise that we drown her voice. That is why it is so restful to go out of the town and nestle awhile in the Mother's arms. I am thinking of the evening on Hampstead Heath when we watched the sun go down; but oh! upon what suffering and misery that sun had set! A lady brought me yesterday a big hamper of wild flowers. I thought some of my East-end family had a better right to it than I, and so I took it down to a very poor school in Whitechapel this morning. You should have seen the pallid little faces brighten! Thence I went to pay for some dinners at a little cookshop for some children. It was in a back street, narrow, full of jostling people; stench indescribable, from fish, meat, and other food, all reeking in a sun that, in Whitechapel, festers instead of purifying. The cookshop was the quintessence of all the smells. Indescribable meat-pies at 1d., loathsome lumps of 'food' and swarms of flies, a very altar of Beelzebub! All about, babies on the prowl for scraps, one, with the face of an angel, gathering up cherrystones as a light and nutritious form of diet. I came westward with every nerve shuddering and jarred, wondering whether anything can be done

The Key To Theosophy - HP Blavatsky.txt

with some parts of London save swallowing them up in an earthquake and starting their inhabitants afresh, after a plunge into some purifying Lethe, out of which not a memory might emerge! And then I thought of Hampstead Heath, and pondered. If by any sacrifice one could win the power to save these people, the cost would not be worth counting; but, you see, they must be changed-and how can that be wrought? In the condition they now are, they would not profit by any environment in which they might be placed; and yet, in their present surroundings they must continue to putrefy. It breaks my heart, this endless, hopeless misery, and the brutish degradation that is at once its outgrowth and its root. It is like the banyan tree; every branch roots itself and sends out new shoots. What a difference between these feelings and the peaceful scene at Hampstead! and yet we, who are the brothers and sisters of these poor creatures, have only a right to use Hampstead Heaths to gain strength to save Whitechapels.

Q. That is a sad but beautiful letter, and I think it presents with painful conspicuity the terrible workings of what you have called "Relative and Distributive Karma." But alas! there seems no immediate hope of any relief short of an earthquake, or some such general engulfment!

A. What right have we to think so while one-half of humanity is in a position to effect an immediate relief of the privations which are suffered by their fellows? When every individual has contributed to the general good what he can of money, of labor, and of ennobling thought, then, and only then, will the balance of National Karma be struck, and until then we have no right nor any reasons for saying that there is more life on the earth than Nature can support. It is reserved for the heroic souls, the Saviors of our Race and Nation, to find out the cause of this unequal pressure of retributive Karma, and by a supreme effort to readjust the balance of power, and save the people from a moral engulfment a thousand times more disastrous and more permanently evil than the like physical catastrophe, in which you seem to see the only possible outlet for this accumulated misery.

Q. Well, then, tell me generally how you describe this law of Karma?

A. We describe Karma as that Law of readjustment which ever tends to restore disturbed equilibrium in the physical, and broken harmony in the moral world. We say that Karma does not act in this or that particular way always; but that it always does act so as to restore Harmony and preserve the balance of equilibrium, in virtue of which the Universe exists.

Q. Give me an illustration.

A. Later on I will give you a full illustration. Think now of a pond. A stone falls into the water and creates disturbing waves. These waves oscillate backwards and forwards till at last, owing to the operation of what physicists call the law of the dissipation of energy, they are brought to rest, and the water returns to its condition of calm tranquility. Similarly all action, on every plane, produces disturbance in the balanced harmony of the Universe, and the vibrations so produced will continue to roll backwards and forwards, if its area is limited, till equilibrium is restored. But since each such disturbance starts from some particular point, it is clear that equilibrium and harmony can only be restored by the reconverging to that same point of all the forces which were set in motion from it. And here you have proof that the consequences of a man's deeds, thoughts, etc. must all react upon himself with the same force with which they were set in motion.

Q. But I see nothing of a moral character about this law. It looks to me like the simple physical law that action and reaction are equal and opposite.

A. I am not surprised to hear you say that. Europeans have got so much into the ingrained habit of considering right and wrong, good and evil, as

The Key To Theosophy - HP Blavatsky.txt

matters of an arbitrary code of law laid down either by men, or imposed upon them by a Personal God. We Theosophists, however, say that "Good" and "Harmony," and "Evil" and "Dis-harmony," are synonymous. Further we maintain that all pain and suffering are results of want of Harmony, and that the one terrible and only cause of the disturbance of Harmony is selfishness in some form or another. Hence Karma gives back to every man the actual consequences of his own actions, without any regard to their moral character; but since he receives his due for all, it is obvious that he will be made to atone for all sufferings which he has caused, just as he will reap in joy and gladness the fruits of all the happiness and harmony he had helped to produce. I can do no better than quote for your benefit certain passages from books and articles written by our Theosophists-those who have a correct idea of Karma.

Q. I wish you would, as your literature seems to be very sparing on this subject?

A. Because it is the most difficult of all our tenets. Some short time ago there appeared the following objection from a Christian pen:

Granting that the teaching in regard to Theosophy is correct, and that "man must be his own savior, must overcome self and conquer the evil that is in his dual nature, to obtain the emancipation of his soul," what is man to do after he has been awakened and converted to a certain extent from evil or wickedness? How is he to get emancipation, or pardon, or the blotting out of the evil or wickedness he has already done?

To this Mr. J.H. Conelly replies very pertinently that no one can hope to "make the theosophical engine run on the theological track." As he has it:

The possibility of shirking individual responsibility is not among the concepts of Theosophy. In this faith there is no such thing as pardoning, or "blotting out of evil or wickedness already done," otherwise than by the adequate punishment therefore of the wrong-doer and the restoration of the harmony in the universe that had been disturbed by his wrongful act. The evil has been his own, and while others must suffer its consequences, atonement can be made by nobody but himself.

The condition contemplated ... in which a man shall have been "awakened and converted to a certain extent from evil or wickedness," is that in which a man shall have realized that his deeds are evil and deserving of punishment. In that realization a sense of personal responsibility is inevitable, and just in proportion to the extent of his awakening or "converting" must be the sense of that awful responsibility. While it is strong upon him is the time when he is urged to accept the doctrine of vicarious atonement.

He is told that he must also repent, but nothing is easier than that. It is an amiable weakness of human nature that we are quite prone to regret the evil we have done when our attention is called, and we have either suffered from it ourselves or enjoyed its fruits. Possibly, close analysis of the feeling would show us that thing which we regret is rather the necessity that seemed to require the evil as a means of attainment of our selfish ends than the evil itself.

Attractive as this prospect of casting our burden of sins "at the foot of the cross" may be to the ordinary mind, it does not commend itself to the Theosophic student. He does not apprehend why the sinner by attaining knowledge of his evil can thereby merit any pardon for or the blotting out of his past wickedness; or why repentance and future right living entitle him to a suspension in his favor of the universal law of relation between cause and effect. The results of his evil deeds continue to exist; the suffering caused to others by his wickedness is not blotted out. The Theosophical student takes the result of wickedness upon the innocent into his problem. He considers not only the guilty person, but his victims.

The Key To Theosophy - HP Blavatsky.txt

Evil is an infraction of the laws of harmony governing the universe, and the penalty thereof must fall upon the violator of that law himself. Christ uttered the warning, "Sin no more, lest a worse thing come upon thee," and St. Paul said, "Work out your own salvation. Whatsoever a man soweth, that shall he also reap." That, by the way, is a fine metaphoric rendering of the sentence of the Pur as far antedating him that "every man reaps the consequences of his own acts."

This is the principle of the law of Karma which is taught by Theosophy. Sinnett, in his Esoteric Buddhism, rendered Karma as "the law of ethical causation." "The law of retribution," as Mme. Blavatsky translates its meaning, is better. It is the power which

Just though mysterious, leads us on unerring

Through ways unmarked from guilt to punishment.

But it is more. It rewards merit as unerringly and amply as it punishes demerit. It is the outcome of every act, of thought, word, and deed, and by it men mold themselves, their lives and happenings. Eastern philosophy rejects the idea of a newly created soul for every baby born. It believes in a limited number of monads, evolving and growing more and more perfect through their assimilation of many successive personalities. Those personalities are the product of Karma and it is by Karma and reincarnation that the human monad in time returns to its source-absolute deity.

E. D. Walker, in his Reincarnation, offers the following explanation:

Briefly, the doctrine of Karma is that we have made ourselves what we are by former actions, and are building our future eternity by present actions. There is no destiny but what we ourselves determine. There is no salvation or condemnation except what we ourselves bring about ... Because it offers no shelter for culpable actions and necessitates a sterling manliness, it is less welcome to weak natures than the easy religious tenets of vicarious atonement, intercession, forgiveness, and deathbed conversions ... In the domain of eternal justice the offense and the punishment are inseparably connected as the same event, because there is no real distinction between the action and its outcome ... It is Karma, or our old acts, that draws us back into earthly life. The spirit's abode changes according to its Karma, and this Karma forbids any long continuance in one condition, because it is always changing. So long as action is governed by material and selfish motives, just so long must the effect of that action be manifested in physical rebirths. Only the perfectly selfless man can elude the gravitation of material life. Few have attained this, but it is the goal of mankind.

And then the writer quotes from The Secret Doctrine:

Those who believe in Karma have to believe in destiny, which, from birth to death, every man is weaving, thread by thread, around himself, as a spider does his cobweb, and this destiny is guided either by the heavenly voice of the invisible prototype outside of us, or by our more intimate astral or inner man, who is but too often the evil genius of the embodied entity called man. Both these lead on the outward man, but one of them must prevail; and from the very beginning of the invisible affray the stern and implacable law of compensation steps in and takes its course, faithfully following the fluctuations. When the last strand is woven, and man is seemingly enwrapped in the network of his own doing, then he finds himself completely under the empire of this self-made destiny ... An Occultist or a philosopher will not speak of the goodness or cruelty of Providence; but, identifying it with Karma-Nemesis, he will teach that, nevertheless, it guards the good and watches over them in this as in future lives; and that it punishes the evil-doer-aye, even to his seventh rebirth-so long, in short, as the effect of his having thrown into perturbation even the smallest atom in the infinite world of harmony has not been finally

The Key To Theosophy - HP Blavatsky.txt

readjusted. For the only decree of Karma-an eternal and immutable decree-is absolute harmony in the world of matter as it is in the world of spirit. It is not, therefore, Karma that rewards or punishes, but it is we who reward or punish ourselves according to whether we work with, through and along with nature, abiding by the laws on which that harmony depends, or break them. Nor would the ways of Karma be inscrutable were men to work in union and harmony, instead of disunion and strife. For our ignorance of those ways-which one portion of mankind calls the ways of Providence, dark and intricate; while another sees in them the action of blind fatalism; and a third simple chance, with neither gods nor devils to guide them-would surely disappear if we would but attribute all these to their correct cause ... We stand bewildered before the mystery of our own making and the riddles of life that we will not solve, and then accuse the great Sphinx of devouring us. But verily there is not an accident of our lives, not a misshapen day, or a misfortune, that could not be traced back to our own doings in this or in another life ... The law of Karma is inextricably interwoven with that of reincarnation ... It is only this doctrine that can explain to us the mysterious problem of good and evil, and reconcile man to the terrible and apparent injustice of life. Nothing but such certainty can quiet our revolted sense of justice. For, when one unacquainted with the noble doctrine looks around him and observes the inequalities of birth and fortune, of intellect and capacities; when one sees honor paid to fools and wastrels, on whom fortune has heaped her favors by mere privilege of birth, and their nearest neighbor, with all his intellect and noble virtues-far more deserving in every way-perishing for want and for lack of sympathy-when one sees all this and has to turn away, helpless to relieve the undeserved suffering, one's ears ringing and heart aching with the cries of pain around him-that blessed knowledge of Karma alone prevents him from cursing life and men as well as their supposed Creator ... This law, whether conscious or unconscious, predestines nothing and no one. It exists from and in eternity truly, for it is eternity itself; and as such, since no act can be coequal with eternity, it cannot be said to act, for it is action itself. It is not the wave which drowns the man, but the personal action of the wretch who goes deliberately and places himself under the impersonal action of the laws that govern the ocean's motion. Karma creates nothing, nor does it design. It is man who plants and creates causes, and Karmic law adjusts the effects, which adjustment is not an act but universal harmony, tending ever to resume its original position, like a bough, which, bent down too forcibly, rebounds with corresponding vigor. If it happen to dislocate the arm that tried to bend it out of its natural position, shall we say it is the bough which broke our arm or that our own folly has brought us to grief? Karma has never sought to destroy intellectual and individual liberty, like the god invented by the Monotheists. It has not involved its decrees in darkness purposely to perplex man, nor shall it punish him who dares to scrutinize its mysteries. On the contrary, he who unveils through study and meditation its intricate paths, and throws light on those dark ways, in the windings of which so many men perish owing to their ignorance of the labyrinth of life, is working for the good of his fellowmen. Karma is an absolute and eternal law in the world of manifestation; and as there can only be one Absolute, as one Eternal, ever-present Cause, believers in Karma cannot be regarded as atheists or materialists, still less as fatalists, for Karma is one with the Unknowable, of which it is an aspect, in its effects in the phenomenal world.

Another able Theosophic writer says:

Every individual is making Karma either good or bad in each action and thought of his daily round, and is at the same time working out in this life the Karma brought about by the acts and desires of the last. When we see people afflicted by congenital ailments it may be safely assumed that these ailments are the inevitable results of causes started by themselves in a previous birth. It may be argued that, as these afflictions are hereditary, they can have nothing to do with a past incarnation; but it must be remembered that the Ego, the real man, the individuality, has no spiritual origin in the parentage by which it is reembodyed, but it is drawn by the

affinities which its previous mode of life attracted round it into the current that carries it, when the time comes for rebirth, to the home best fitted for the development of those tendencies ... This doctrine of Karma, when properly understood, is well calculated to guide and assist those who realize its truth to a higher and better mode of life, for it must not be forgotten that not only our actions but our thoughts also are most assuredly followed by a crowd of circumstances that will influence for good or for evil our own future, and, what is still more important, the future of many of our fellow-creatures. If sins of omission and commission could in any case be only self-regarding, the fact on the sinner's Karma would be a matter of minor consequence. The effect that every thought and act through life carries with it for good or evil a corresponding influence on other members of the human family renders a strict sense of justice, morality, and unselfishness so necessary to future happiness or progress. A crime once committed, an evil thought sent out from the mind, are past recall-no amount of repentance can wipe out their results in the future. Repentance, if sincere, will deter a man from repeating errors; it cannot save him or others from the effects of those already produced, which will most unerringly overtake him either in this life or in the next rebirth.

Mr. J. H. Conelly proceeds-

The believers in a religion based upon such doctrine are willing it should be compared with one in which man's destiny for eternity is determined by the accidents of a single, brief earthly existence, during which he is cheered by the promise that "as the tree falls so shall it lie"; in which his brightest hope, when he wakes up to a knowledge of his wickedness, is the doctrine of vicarious atonement, and in which even that is handicapped, according to the Presbyterian Confession of Faith.

By the decree of God, for the manifestation of his glory, some men and angels are predestinated unto everlasting life and others foreordained to everlasting death.

These angels and men thus predestinated and foreordained are particularly and unchangeably designed; and their number is so certain and definite that it cannot be either increased or diminished ... As God hath appointed the elect unto glory ... Neither are any other redeemed by Christ effectually called, justified, adopted, sanctified, and saved, but the elect only.

The rest of mankind God was pleased, according to the unsearchable counsel of his own will, whereby he extendeth or withholdeth mercy as he pleaseth, for the glory of his sovereign power over his creatures, to pass by and to ordain them to dishonor and wrath for their sin to the praise of his glorious justice.

This is what the able defender says. Nor can we do any better than wind up the subject as he does, by a quotation from a magnificent poem. As he says:

The exquisite beauty of Edwin Arnold's exposition of Karma in The Light of Asia tempts to its reproduction here, but it is too long for quotation in full. Here is a portion of it:

Karma-all that total of a soul
Which is the things it did, the thoughts it had,
The "self" it wove with woof of viewless time
Crossed on the warp invisible of acts.

* * * * *

Before beginning and without an end,

The Key To Theosophy - HP Blavatsky.txt

As space eternal and as surety sure,
Is fixed a Power divine which moves to good,
Only its laws endure.

It will not be despised of anyone;
Who thwarts it loses, and who serves it gains;
The hidden good it pays with peace and bliss,
The hidden ill with pains.

It seeth everywhere and marketh all;
Do right-it recompenseth! Do one wrong-
The equal retribution must be made,
Though Dharma tarry long.

It knows not wrath nor pardon; utter-true,
Its measures mete, its faultless balance weighs;
Times are as naught, tomorrow it will judge
Or after many days.

* * * * *

Such is the law which moves to righteousness,
Which none at last can turn aside or stay;
The heart of it is love, the end of it

Is peace and consummation sweet. Obey.

And now I advise you to compare our Theosophic views upon Karma, the law of Retribution, and say whether they are not both more philosophical and just than this cruel and idiotic dogma which makes of "God" a senseless fiend; the tenet, namely, that the "elect only" will be saved, and the rest doomed to eternal perdition!

Q. Yes, I see what you mean generally; but I wish you could give some concrete example of the action of Karma?

A. That I cannot do. We can only feel sure, as I said before, that our present lives and circumstances are the direct results of our own deeds and thoughts in lives that are past. But we, who are not Seers or Initiates, cannot know anything about the details of the working of the law of Karma.

Q. Can anyone, even an Adept or Seer, follow out this Karmic process of readjustment in detail?

A. Certainly: "Those who know" can do so by the exercise of powers which are latent even in all men.

- oOo-

Who Are Those Who Know?

Q. Does this hold equally of ourselves as of others?

A. Equally. As just said, the same limited vision exists for all, save those who have reached in the present incarnation the acme of spiritual vision and clairvoyance. We can only perceive that, if things with us ought to have been different, they would have been different; that we are what we have made ourselves, and have only what we have earned for ourselves.

Q. I am afraid such a conception would only embitter us.

A. I believe it is precisely the reverse. It is disbelief in the just law of retribution that is more likely to awaken every combative feeling in man. A child, as much as a man, resents a punishment, or even a reproof he believes to be unmerited, far more than he does a more severe punishment, if he feels that it is merited. Belief in Karma is the highest reason for reconciliation to one's lot in this life, and the very strongest incentive towards effort to better the succeeding rebirth. Both of these, indeed, would be destroyed if we supposed that our lot was the result of anything but strict Law, or that destiny was in any other hands than our own.

Q. You have just asserted that this system of Reincarnation under Karmic law commended itself to reason, justice, and the moral sense. But, if so, is it not at some sacrifice of the gentler qualities of sympathy and pity, and thus a hardening of the finer instincts of human nature?

A. Only apparently, not really. No man can receive more or less than his deserts without a corresponding injustice or partiality to others; and a law which could be averted through compassion would bring about more misery than it saved, more irritation and curses than thanks. Remember also, that we do not administer the law, if we do create causes for its effects; it administers itself; and again, that the most copious provision for the manifestation of just compassion and mercy is shown in the state of Devachan.

Q. You speak of Adepts as being an exception to the rule of our general ignorance. Do they really know more than we do of Reincarnation and after states?

A. They do, indeed. By the training of faculties we all possess, but which they alone have developed to perfection, they have entered in spirit these various planes and states we have been discussing. For long ages, one generation of Adepts after another has studied the mysteries of being, of life, death, and rebirth, and all have taught in their turn some of the facts so learned.

Q. And is the production of Adepts the aim of Theosophy?

A. Theosophy considers humanity as an emanation from divinity on its return path thereto. At an advanced point upon the path, Adeptship is reached by those who have devoted several incarnations to its achievement. For, remember well, no man has ever reached Adeptship in the Secret Sciences in one life; but many incarnations are necessary for it after the formation of a conscious purpose and the beginning of the needful training. Many may be the men and women in the very midst of our Society who have begun this uphill work toward illumination several incarnations ago, and who yet, owing to the personal illusions of the present life, are either ignorant of the fact, or on the road to losing every chance in this existence of progressing any farther. They feel an irresistible attraction toward occultism and the Higher Life, and yet are too personal and self-opinionated, too much in love with the deceptive allurements of mundane life and the world's ephemeral pleasures, to give them up; and so lose their chance in their present birth. But, for ordinary men, for the practical duties of daily life, such a far-off result is inappropriate as an aim and quite ineffective as a motive.

The Key To Theosophy - HP Blavatsky.txt

Q. What, then, may be their object or distinct purpose in joining the Theosophical Society?

A. Many are interested in our doctrines and feel instinctively that they are truer than those of any dogmatic religion. Others have formed a fixed resolve to attain the highest ideal of man's duty.

- o0o-

The Difference Between Faith and Knowledge, Or Blind and Reasoned Faith

Q. You say that they accept and believe in the doctrines of Theosophy. But, as they do not belong to those Adepts you have just mentioned, then they must accept your teachings on blind faith. In what does this differ from that of conventional religions?

A. As it differs on almost all the other points, so it differs on this one. What you call "faith," and that which is blind faith, in reality, and with regard to the dogmas of the Christian religions, becomes with us "knowledge," the logical sequence of things we know, about facts in nature. Your Doctrines are based upon interpretation, therefore, upon the secondhand testimony of Seers; ours upon the invariable and unvarying testimony of Seers. The ordinary Christian theology, for instance, holds that man is a creature of God, of three component parts-body, soul, and spirit-all essential to his integrity, and all, either in the gross form of physical earthly existence or in the etherealized form of post-resurrection experience, needed to so constitute him forever, each man having thus a permanent existence separate from other men, and from the Divine. Theosophy, on the other hand, holds that man, being an emanation from the Unknown, yet ever present and infinite Divine Essence, his body and everything else is impermanent, hence an illusion; Spirit alone in him being the one enduring substance, and even that losing its separated individuality at the moment of its complete reunion with the Universal Spirit.

Q. If we lose even our individuality, then it becomes simply annihilation.

A. I say it does not, since I speak of separate, not of universal individuality. The latter becomes as a part transformed into the whole; the dewdrop is not evaporated, but becomes the sea. Is physical man annihilated, when from a fetus he becomes an old man? What kind of Satanic pride must be ours if we place our infinitesimally small consciousness and individuality higher than the universal and infinite consciousness!

Q. It follows, then, that there is, de facto, no man, but all is Spirit?

A. You are mistaken. It thus follows that the union of Spirit with matter is but temporary; or, to put it more clearly, since Spirit and matter are one, being the two opposite poles of the universal manifested substance-that Spirit loses its right to the name so long as the smallest particle and atom of its manifesting substance still clings to any form, the result of differentiation. To believe otherwise is blind faith.

Q. Thus it is on knowledge, not on faith, that you assert that the permanent principle, the Spirit, simply makes a transit through matter?

A. I would put it otherwise and say-we assert that the appearance of the permanent and one principle, Spirit, as matter is transient, and, therefore, no better than an illusion.

Q. Very well; and this, given out on knowledge not faith?

A. Just so. But as I see very well what you are driving at, I may just as well tell you that we hold faith, such as you advocate, to be a mental

disease, and real faith, i. e., the pistis of the Greeks, as "belief based on knowledge," whether supplied by the evidence of physical or spiritual senses.

Q. What do you mean?

A. I mean, if it is the difference between the two that you want to know, then I can tell you that between faith on authority and faith on one's spiritual intuition, there is a very great difference.

Q. What is it?

A. One is human credulity and superstition, the other human belief and intuition. As Professor Alexander Wilder says in his "Introduction to the Eleusinian Mysteries,"

It is ignorance which leads to profanation. Men ridicule what they do not properly understand ... The undercurrent of this world is set towards one goal; and inside of human credulity ... is a power almost infinite, a holy faith capable of apprehending the most supreme truths of all existence.

Those who limit that "credulity" to human authoritative dogmas alone, will never fathom that power nor even perceive it in their natures. It is stuck fast to the external plane and is unable to bring forth into play the essence that rules it; for to do this they have to claim their right of private judgment, and this they never dare to do.

Q. And is it that "intuition" which forces you to reject God as a personal Father, Ruler, and Governor of the Universe?

A. Precisely. We believe in an ever unknowable Principle, because blind aberration alone can make one maintain that the Universe, thinking man, and all the marvels contained even in the world of matter, could have grown without some intelligent powers to bring about the extraordinarily wise arrangement of all its parts. Nature may err, and often does, in its details and the external manifestations of its materials, never in its inner causes and results. Ancient pagans held on this question far more philosophical views than modern philosophers, whether Agnostics, Materialists, or Christians; and no pagan writer has ever yet advanced the proposition that cruelty and mercy are not finite feelings, and can therefore be made the attributes of an infinite god. Their gods, therefore, were all finite. The Siamese author of the Wheel of the Law, expresses the same idea about your personal god as we do; he says:

A Buddhist might believe in the existence of a god, sublime above all human qualities and attributes—a perfect god, above love, and hatred, and jealousy, calmly resting in a quietude that nothing could disturb, and of such a god he would speak no disparagement not from a desire to please him or fear to offend him, but from natural veneration; but he cannot understand a god with the attributes and qualities of men, a god who loves and hates, and shows anger; a Deity who, whether described as by Christian Missionaries or by Mohammedans or Brahmins, or Jews, falls below his standard of even an ordinary good man.

Q. Faith for faith, is not the faith of the Christian who believes, in his human helplessness and humility, that there is a merciful Father in Heaven who will protect him from temptation, help him in life, and forgive him his transgressions, better than the cold and proud, almost fatalistic faith of the Buddhists, Vedantins, and Theosophists?

A. Persist in calling our belief "faith" if you will. But once we are again on this ever-recurring question, I ask in my turn: faith for faith, is not the one based on strict logic and reason better than the one which is based simply on human authority or-hero-worship? Our "faith" has all the logical

force of the arithmetical truism that two and two will produce four. Your faith is like the logic of some emotional women, of whom Tourgenyeff said that for them two and two were generally five, and a tallow candle into the bargain. Yours is a faith, moreover, which clashes not only with every conceivable view of justice and logic, but which, if analyzed, leads man to his moral perdition, checks the progress of mankind, and positively making of might, right-transforms every second man into a Cain to his brother Abel.

Q. What do you allude to?

- o0o-

Has God the Right to Forgive?

A. To the Doctrine of Atonement; I allude to that dangerous dogma in which you believe, and which teaches us that no matter how enormous our crimes against the laws of God and of man, we have but to believe in the self-sacrifice of Jesus for the salvation of mankind, and his blood will wash out every stain. It is twenty years that I preach against it, and I may now draw your attention to a paragraph from Isis Unveiled, written in 1875. This is what Christianity teaches, and what we combat:

God's mercy is boundless and unfathomable. It is impossible to conceive of a human sin so damnable that the price paid in advance for the redemption of the sinner would not wipe it out if a thousandfold worse. And furthermore, it is never too late to repent. Though the offender wait until the last minute of the last hour of the last day of his mortal life, before his blanched lips utter the confession of faith, he may go to Paradise; the dying thief did it, and so may all others as vile. These are the assumptions of the Church, and of the Clergy; assumptions banged at the heads of your countrymen by England's favorite preachers, right in the "light of the nineteenth century," ...

-this most paradoxical age of all. Now to what does it lead?

Q. Does it not make the Christian happier than the Buddhist or Brahmin?

A. No; not the educated man, at any rate, since the majority of these have long since virtually lost all belief in this cruel dogma. But it leads those who still believe in it more easily to the threshold of every conceivable crime, than any other I know of. Let me quote to you once more:

If we step outside the little circle of creed and consider the universe as a whole balanced by the exquisite adjustment of parts, how all sound logic, how the faintest glimmering sense of Justice, revolts against this Vicarious Atonement! If the criminal sinned only against himself, and wronged no one but himself; if by sincere repentance he could cause the obliteration of past events, not only from the memory of man, but also from that imperishable record, which no deity-not even the most Supreme of the Supreme-can cause to disappear, then this dogma might not be incomprehensible. But to maintain that one may wrong his fellowman, kill, disturb the equilibrium of society and the natural order of things, and then-through cowardice, hope, or compulsion, it matters not-be forgiven by believing that the spilling of one blood washes out the other blood spilt-this is preposterous! Can the results of a crime be obliterated even though the crime itself should be pardoned? The effects of a cause are never limited to the boundaries of the cause, nor can the results of crime be confined to the offender and his victim. Every good as well as evil action has its effects, as palpably as the stone flung into calm water. The simile is trite, but it is the best ever conceived, so let us use it. The eddying circles are greater and swifter as the disturbing object is greater or smaller, but the smallest pebble, nay, the tiniest speck, makes its ripples. And this disturbance is not alone visible and on the surface. Below, unseen, in every direction-outward and downward-drop pushes drop until the sides and

bottom are touched by the force. More, the air above the water is agitated, and this disturbance passes, as the physicists tell us, from stratum to stratum out into space forever and ever; an impulse has been given to matter, and that is never lost, can never be recalled! ...

So with crime, and so with its opposite. The action may be instantaneous, the effects are eternal. When, after the stone is once flung into the pond, we can recall it to the hand, roll back the ripples, obliterate the force expended, restore the etheric waves to their previous state of non-being, and wipe out every trace of the act of throwing the missile, so that Time's record shall not show that it ever happened, then, then we may patiently hear Christians argue for the efficacy of this Atonement,

-and cease to believe in Karmic Law. As it now stands, we call upon the whole world to decide, which of our two doctrines is the most appreciative of deific justice, and which is more reasonable, even on simple human evidence and logic.

Q. Yet millions believe in the Christian dogma and are happy.

A. Pure sentimentalism overpowering their thinking faculties, which no true philanthropist or Altruist will ever accept. It is not even a dream of selfishness, but a nightmare of the human intellect. Look where it leads to, and tell me the name of that pagan country where crimes are more easily committed or more numerous than in Christian lands. Look at the long and ghastly annual records of crimes committed in European countries; and behold Protestant and Biblical America. There, conversions effected in prisons are more numerous than those made by public revivals and preaching. See how the ledger-balance of Christian justice (!) stands: Red-handed murderers, urged on by the demons of lust, revenge, cupidity, fanaticism, or mere brutal thirst for blood, who kill their victims, in most cases, without giving them time to repent or call on Jesus. These, perhaps, died sinful, and, of course-consistently with theological logic-met the reward of their greater or lesser of fences. But the murderer, overtaken by human justice, is imprisoned, wept over by sentimentalists, prayed with and at, pronounces the charmed words of conversion, and goes to the scaffold a redeemed child of Jesus! Except for the murder, he would not have been prayed with, redeemed, pardoned. Clearly this man did well to murder, for thus he gained eternal happiness! And how about the victim, and his, or her family, relatives, dependents, social relations; has justice no recompense for them? Must they suffer in this world and the next, while he who wronged them sits beside the "holy thief" of Calvary, and is forever blessed? On this question the clergy keep a prudent silence. (Isis Unveiled) And now you know why Theosophists-whose fundamental belief and hope is justice for all, in Heaven as on earth, and in Karma-reject this dogma.

Q. The ultimate destiny of man, then, is not a Heaven presided over by God, but the gradual transformation of matter into its primordial element, Spirit?

A. It is to that final goal to which all tends in nature.

Q. Do not some of you regard this association or "fall of spirit into matter" as evil, and rebirth as a sorrow?

A. Some do, and therefore strive to shorten their period of probation on earth. It is not an unmingled evil, however, since it ensures the experience upon which we mount to knowledge and wisdom. I mean that experience which teaches that the needs of our spiritual nature can never be met by other than spiritual happiness. As long as we are in the body, we are subjected to pain, suffering and all the disappointing incidents occurring during life. Therefore, and to palliate this, we finally acquire knowledge which alone can afford us relief and hope of a better future.

What is Practical Theosophy?

Duty

Q. Why, then, the need for rebirths, since all alike fail to secure a permanent peace?

A. Because the final goal cannot be reached in any way but through life experiences, and because the bulk of these consist in pain and suffering. It is only through the latter that we can learn. Joys and pleasures teach us nothing; they are evanescent, and can only bring in the long run satiety. Moreover, our constant failure to find any permanent satisfaction in life which would meet the wants of our higher nature, shows us plainly that those wants can be met only on their own plane, to wit-the spiritual.

Q. Is the natural result of this a desire to quit life by one means or another?

A. If you mean by such desire "suicide," then I say, most decidedly not. Such a result can never be a "natural" one, but is ever due to a morbid brain disease, or to most decided and strong materialistic views. It is the worst of crimes and dire in its results. But if by desire, you mean simply aspiration to reach spiritual existence, not a wish to quit the earth, then I would call it a very natural desire indeed. Otherwise voluntary death would be an abandonment of our present post and of the duties incumbent on us, as well as an attempt to shirk Karmic responsibilities, and thus involve the creation of new Karma.

Q. But if actions on the material plane are unsatisfying, why should duties, which are such actions, be imperative?

A. First of all, because our philosophy teaches us that the object of doing our duties to all men and to ourselves the last, is not the attainment of personal happiness, but of the happiness of others; the fulfillment of right for the sake of right, not for what it may bring us. Happiness, or rather contentment, may indeed follow the performance of duty, but is not and must not be the motive for it.

Q. What do you understand precisely by "duty" in Theosophy? It cannot be the Christian duties preached by Jesus and his Apostles, since you recognize neither?

A. You are once more mistaken. What you call "Christian duties" were inculcated by every great moral and religious Reformer ages before the Christian era. All that was great, generous, heroic, was, in days of old, not only talked about and preached from pulpits as in our own time, but acted upon sometimes by whole nations. The history of the Buddhist reform is full of the most noble and most heroically unselfish acts.

Be ye all of one mind, having compassion one of another; love as brethren, be pitiful, be courteous; not rendering evil for evil, or railing for railing; but contrariwise, blessing ...

-was practically carried out by the followers of Buddha, several centuries before Peter. The Ethics of Christianity are grand, no doubt; but as undeniably they are not new, and have originated as "Pagan" duties.

Q. And how would you define these duties, or "duty," in general, as you understand the term?

A. Duty is that which is due to Humanity, to our fellowmen, neighbors, family, and especially that which we owe to all those who are poorer and more helpless than we are ourselves. This is a debt which, if left unpaid during life, leaves us spiritually insolvent and morally bankrupt in our

The Key To Theosophy - HP Blavatsky.txt
next incarnation. Theosophy is the quintessence of duty.

Q. So is Christianity when rightly understood and carried out.

A. No doubt it is; but then, were it not a lip-religion in practice, Theosophy would have little to do amidst Christians. Unfortunately it is but such lip-ethics. Those who practice their duty towards all, and for duty's own sake, are few; and fewer still are those who perform that duty, remaining content with the satisfaction of their own secret consciousness. It is-

... the public voice

Of praise that honors virtue and rewards it,

-which is ever uppermost in the minds of the "world renowned" philanthropists. Modern ethics are beautiful to read about and hear discussed; but what are words unless converted into actions? Finally: if you ask me how we understand Theosophical duty practically and in view of Karma, I may answer you that our duty is to drink without a murmur to the last drop, whatever contents the cup of life may have in store for us, to pluck the roses of life only for the fragrance they may shed on others, and to be ourselves content but with the thorns, if that fragrance cannot be enjoyed without depriving someone else of it.

Q. All this is very vague. What do you do more than Christians do?

A. It is not what we members of the Theosophical Society do-though some of us try our best-but how much farther Theosophy leads to good than modern Christianity does. I say-action, enforced action, instead of mere intention and talk. A man may be what he likes, the most worldly, selfish and hard-hearted of men, even a deep-dyed rascal, and it will not prevent him from calling himself a Christian, or others from so regarding him. But no Theosophist has the right to this name, unless he is thoroughly imbued with the correctness of Carlyle's truism: "The end of man is an action and not a thought, though it were the noblest"-and unless he sets and models his daily life upon this truth. The profession of a truth is not yet the enactment of it; and the more beautiful and grand it sounds, the more loudly virtue or duty is talked about instead of being acted upon, the more forcibly it will always remind one of the Dead Sea fruit. Cant is the most loathsome of all vices; and cant is the most prominent feature of the greatest Protestant country of this century-England.

Q. What do you consider as due to humanity at large?

A. Full recognition of equal rights and privileges for all, and without distinction of race, color, social position, or birth.

Q. When would you consider such due not given?

A. When there is the slightest invasion of another's right-be that other a man or a nation; when there is any failure to show him the same justice, kindness, consideration, or mercy which we desire for ourselves. The whole present system of politics is built on the oblivion of such rights, and the most fierce assertion of national selfishness. The French say: "Like master, like man." They ought to add, "Like national policy, like citizen."

Q. Do you take any part in politics?

A. As a Society, we carefully avoid them, for the reasons given below. To seek to achieve political reforms before we have effected a reform in human nature, is like putting new wine into old bottles. Make men feel and recognize in their innermost hearts what is their real, true duty to all men, and every old abuse of power, every iniquitous law in the national

policy, based on human, social, or political selfishness, will disappear of itself. Foolish is the gardener who seeks to weed his flowerbed of poisonous plants by cutting them off from the surface of the soil, instead of tearing them out by the roots. No lasting political reform can be ever achieved with the same selfish men at the head of affairs as of old.

- o0o-

The Relations of the T.S. to Political Reforms

Q. The Theosophical Society is not, then, a political organization?

A. Certainly not. It is international in the highest sense in that its members comprise men and women of all races, creeds, and forms of thought, who work together for one object, the improvement of humanity; but as a society it takes absolutely no part in any national or party politics.

Q. Why is this?

A. Just for the reasons I have mentioned. Moreover, political action must necessarily vary with the circumstances of the time and with the idiosyncrasies of individuals. While from the very nature of their position as Theosophists the members of the T.S. are agreed on the principles of Theosophy, or they would not belong to the society at all, it does not thereby follow that they agree on every other subject. As a society they can only act together in matters which are common to all-that is, in Theosophy itself; as individuals, each is left perfectly free to follow out his or her particular line of political thought and action, so long as this does not conflict with Theosophical principles or hurt the Theosophical Society.

Q. But surely the T.S. does not stand altogether aloof from the social questions which are now so fast coming to the front?

A. The very principles of the T.S. are a proof that it does not-or, rather, that most of its members do not-so stand aloof. If humanity can only be developed mentally and spiritually by the enforcement, first of all, of the soundest and most scientific physiological laws, it is the bounden duty of all who strive for this development to do their utmost to see that those laws shall be generally carried out. All Theosophists are only too sadly aware that, in Occidental countries especially, the social condition of large masses of the people renders it impossible for either their bodies or their spirits to be properly trained, so that the development of both is thereby arrested. As this training and development is one of the express objects of Theosophy, the T.S. is in thorough sympathy and harmony with all true efforts in this direction.

Q. But what do you mean by "true efforts"? Each social reformer has his own panacea, and each believes his to be the one and only thing which can improve and save humanity?

A. Perfectly true, and this is the real reason why so little satisfactory social work is accomplished. In most of these panaceas there is no really guiding principle, and there is certainly no one principle which connects them all. Valuable time and energy are thus wasted; for men, instead of cooperating, strive one against the other, often, it is to be feared, for the sake of fame and reward rather than for the great cause which they profess to have at heart, and which should be supreme in their lives.

Q. How, then, should Theosophical principles be applied so that social cooperation may be promoted and true efforts for social amelioration be carried on?

A. Let me briefly remind you what these principles are-universal Unity and Causation; Human Solidarity; the Law of Karma; Reincarnation. These are the

four links of the golden chain which should bind humanity into one family, one universal Brotherhood.

Q. How?

A. In the present state of society, especially in so-called civilized countries, we are continually brought face to face with the fact that large numbers of people are suffering from misery, poverty, and disease. Their physical condition is wretched, and their mental and spiritual faculties are often almost dormant. On the other hand, many persons at the opposite end of the social scale are leading lives of careless indifference, material luxury, and selfish indulgence. Neither of these forms of existence is mere chance. Both are the effects of the conditions which surround those who are subject to them, and the neglect of social duty on the one side is most closely connected with the stunted and arrested development on the other. In sociology, as in all branches of true science, the law of universal causation holds good. But this causation necessarily implies, as its logical outcome, that human solidarity on which Theosophy so strongly insists. If the action of one reacts on the lives of all, and this is the true scientific idea, then it is only by all men becoming brothers and all women sisters, and by all practicing in their daily lives true brotherhood and true sisterhood, that the real human solidarity, which lies at the root of the elevation of the race, can ever be attained. It is this action and interaction, this true brotherhood and sisterhood, in which each shall live for all and all for each, which is one of the fundamental Theosophical principles that every Theosophist should be bound, not only to teach, but to carry out in his or her individual life.

Q. All this is very well as a general principle, but how would you apply it in a concrete way?

A. Look for a moment at what you would call the concrete facts of human society. Contrast the lives not only of the masses of the people, but of many of those who are called the middle and upper classes, with what they might be under healthier and nobler conditions, where justice, kindness, and love were paramount, instead of the selfishness, indifference, and brutality which now too often seem to reign supreme. All good and evil things in humanity have their roots in human character, and this character is, and has been, conditioned by the endless chain of cause and effect. But this conditioning applies to the future as well as to the present and the past. Selfishness, indifference, and brutality can never be the normal state of the race—to believe so would be to despair of humanity—and that no Theosophist can do. Progress can be attained, and only attained, by the development of the nobler qualities. Now, true evolution teaches us that by altering the surroundings of the organism we can alter and improve the organism; and in the strictest sense this is true with regard to man. Every Theosophist, therefore, is bound to do his utmost to help on, by all the means in his power, every wise and well-considered social effort which has for its object the amelioration of the condition of the poor. Such efforts should be made with a view to their ultimate social emancipation, or the development of the sense of duty in those who now so often neglect it in nearly every relation of life.

Q. Agreed. But who is to decide whether social efforts are wise or unwise?

A. No one person and no society can lay down a hard-and-fast rule in this respect. Much must necessarily be left to the individual judgment. One general test may, however, be given. Will the proposed action tend to promote that true brotherhood which it is the aim of Theosophy to bring about? No real Theosophist will have much difficulty in applying such a test; once he is satisfied of this, his duty will lie in the direction of forming public opinion. And this can be attained only by inculcating those higher and nobler conceptions of public and private duties which lie at the root of all spiritual and material improvement. In every conceivable case he

himself must be a center of spiritual action, and from him and his own daily individual life must radiate those higher spiritual forces which alone can regenerate his fellowmen.

Q. But why should he do this? Are not he and all, as you teach, conditioned by their Karma, and must not Karma necessarily work itself out on certain lines?

A. It is this very law of Karma which gives strength to all that I have said. The individual cannot separate himself from the race, nor the race from the individual. The law of Karma applies equally to all, although all are not equally developed. In helping on the development of others, the Theosophist believes that he is not only helping them to fulfill their Karma, but that he is also, in the strictest sense, fulfilling his own. It is the development of humanity, of which both he and they are integral parts, that he has always in view, and he knows that any failure on his part to respond to the highest within him retards not only himself but all, in their progressive march. By his actions, he can make it either more difficult or more easy for humanity to attain the next higher plane of being.

Q. How does this bear on the fourth of the principles you mentioned, viz., Reincarnation?

A. The connection is most intimate. If our present lives depend upon the development of certain principles which are a growth from the germs left by a previous existence, the law holds good as regards the future. Once grasp the idea that universal causation is not merely present, but past, present, and future, and every action on our present plane falls naturally and easily into its true place, and is seen in its true relation to ourselves and to others. Every mean and selfish action sends us backward and not forward, while every noble thought and every unselfish deed are stepping-stones to the higher and more glorious planes of being. If this life were all, then in many respects it would indeed be poor and mean; but regarded as a preparation for the next sphere of existence, it may be used as the golden gate through which we may pass, not selfishly and alone, but in company with our fellows, to the palaces which lie beyond.

- o0o-

On Self-Sacrifice

Q. Is equal justice to all and love to every creature the highest standard of Theosophy?

A. No; there is an even far higher one.

Q. What can it be?

A. The giving to others more than to oneself-self-sacrifice. Such was the standard and abounding measure which marked so preeminently the greatest Teachers and Masters of Humanity-e.g., Gautama Buddha in History, and Jesus of Nazareth as in the Gospels. This trait alone was enough to secure to them the perpetual reverence and gratitude of the generations of men that come after them. We say, however, that self-sacrifice has to be performed with discrimination; and such a self-abandonment, if made without justice, or blindly, regardless of subsequent results, may often prove not only made in vain, but harmful. One of the fundamental rules of Theosophy is, justice to oneself-viewed as a unit of collective humanity, not as a personal self-justice, not more but not less than to others; unless, indeed, by the sacrifice of the one self we can benefit the many.

Q. Could you make your idea clearer by giving an instance?

The Key To Theosophy - HP Blavatsky.txt

A. There are many instances to illustrate it in history. Self-sacrifice for practical good to save many, or several people, Theosophy holds as far higher than self-abnegation for a sectarian idea, such as that of "saving the heathen from damnation," for instance. In our opinion, Father Damien, the young man of thirty who offered his whole life in sacrifice for the benefit and alleviation of the sufferings of the lepers at Molokai, and who went to live for eighteen years alone with them, to finally catch the loathsome disease and die, has not died in vain. He has given relief and relative happiness to thousands of miserable wretches. He has brought to them consolation, mental and physical. He threw a streak of light into the black and dreary night of an existence, the hopelessness of which is unparalleled in the records of human suffering. He was a true Theosophist, and his memory will live forever in our annals. In our sight this poor Belgian priest stands immeasurably higher than-for instance-all those sincere but vain-glorious fools, the Missionaries who have sacrificed their lives in the South Sea Islands or China. What good have they done? They went in one case to those who are not yet ripe for any truth; and in the other to a nation whose systems of religious philosophy are as grand as any, if only the men who have them would live up to the standard of Confucius and their other sages. And they died victims of irresponsible cannibals and savages, and of popular fanaticism and hatred. Whereas, by going to the slums of Whitechapel or some other such locality of those that stagnate right under the blazing sun of our civilization, full of Christian savages and mental leprosy, they might have done real good, and preserved their lives for a better and worthier cause.

Q. But the Christians do not think so?

A. Of course not, because they act on an erroneous belief. They think that by baptizing the body of an irresponsible savage they save his soul from damnation. One church forgets her martyrs, the other beatifies and raises statues to such men as Labro, who sacrificed his body for forty years only to benefit the vermin which it bred. Had we the means to do so, we would raise a statue to Father Damien, the true, practical saint, and perpetuate his memory forever as a living exemplar of Theosophical heroism and of Buddha- and Christ-like mercy and self-sacrifice.

Q. Then you regard self-sacrifice as a duty?

A. We do; and explain it by showing that altruism is an integral part of self-development. But we have to discriminate. A man has no right to starve himself to death that another man may have food, unless the life of that man is obviously more useful to the many than is his own life. But it is his duty to sacrifice his own comfort, and to work for others if they are unable to work for themselves. It is his duty to give all that which is wholly his own and can benefit no one but himself if he selfishly keeps it from others. Theosophy teaches self-abnegation, but does not teach rash and useless self-sacrifice, nor does it justify fanaticism.

Q. But how are we to reach such an elevated status?

A. By the enlightened application of our precepts to practice. By the use of our higher reason, spiritual intuition, and moral sense, and by following the dictates of what we call "the still small voice" of our conscience, which is that of our Ego, and which speaks louder in us than the earthquakes and the thunders of Jehovah, wherein "the Lord is not."

Q. If such are our duties to humanity at large, what do you understand by our duties to our immediate surroundings?

A. Just the same, plus those that arise from special obligations with regard to family ties.

Q. Then it is not true, as it is said, that no sooner does a man enter into

the Theosophical Society than he begins to be gradually severed from his wife, children, and family duties?

A. It is a groundless slander, like so many others. The first of the Theosophical duties is to do one's duty by all men, and especially by those to whom one's specific responsibilities are due, because one has either voluntarily undertaken them, such as marriage ties, or because one's destiny has allied one to them; I mean those we owe to parents or next of kin.

Q. And what may be the duty of a Theosophist to himself?

A. To control and conquer, through the Higher, the lower self. To purify himself inwardly and morally; to fear no one, and nought, save the tribunal of his own conscience. Never to do a thing by halves; i. e., if he thinks it the right thing to do, let him do it openly and boldly, and if wrong, never touch it at all. It is the duty of a Theosophist to lighten his burden by thinking of the wise aphorism of Epictetus, who says:

Be not diverted from your duty by any idle reflection the silly world may make upon you, for their censures are not in your power, and consequently should not be any part of your concern.

Q. But suppose a member of your Society should plead inability to practice altruism by other people, on the ground that "charity begins at home," urging that he is too busy, or too poor, to benefit mankind or even any of its units-what are your rules in such a case?

A. No man has a right to say that he can do nothing for others, on any pretext whatever. "By doing the proper duty in the proper place, a man may make the world his debtor," says an English writer. A cup of cold water given in time to a thirsty wayfarer is a nobler duty and more worth, than a dozen of dinners given away, out of season, to men who can afford to pay for them. No man who has not got it in him will ever become a Theosophist; but he may remain a member of our Society all the same. We have no rules by which we could force any man to become a practical Theosophist, if he does not desire to be one.

Q. Then why does he enter the Society at all?

A. That is best known to him who does so. For, here again, we have no right to prejudge a person, not even if the voice of a whole community should be against him, and I may tell you why. In our day, vox populi (so far as regards the voice of the educated, at any rate) is no longer vox dei, but ever that of prejudice, of selfish motives, and often simply that of unpopularity. Our duty is to sow seeds broadcast for the future, and see they are good; not to stop to enquire why we should do so, and how and wherefore we are obliged to lose our time, since those who will reap the harvest in days to come will never be ourselves.

On Charity

Q. How do you Theosophists regard the Christian duty of charity?

A. What charity do you mean? Charity of mind, or practical charity in the physical plane?

Q. I mean practical charity, as your idea of Universal brotherhood would include, of course, charity of mind.

A. Then you have in your mind the practical carrying out of the commandments given by Jesus in the Sermon on the Mount?

Q. Precisely so.

A. Then why call them "Christian"? Because, although your Savior preached and practiced them, the last thing the Christians of today think of is to carry them out in their lives.

Q. And yet many are those who pass their lives in dispensing charity?

A. Yes, out of the surplus of their great fortunes. But point out to me that Christian, among the most philanthropic, who would give to the shivering and starving thief, who would steal his coat, his cloak also; or offer his right cheek to him who smote him on the left, and never think of resenting it?

Q. Ah, but you must remember that these precepts have not to be taken literally. Times and circumstances have changed since Christ's day. Moreover, He spoke in Parables.

A. Then why don't your Churches teach that the doctrine of damnation and hellfire is to be understood as a parable too? Why do some of your most popular preachers, while virtually allowing these "parables" to be understood as you take them, insist on the literal meaning of the fires of Hell and the physical tortures of an "Asbestos-like" soul? If one is a "parable," then the other is. If Hellfire is a literal truth, then Christ's commandments in the Sermon on the Mount have to be obeyed to the very letter. And I tell you that many who do not believe in the Divinity of Christ-like Count Leo Tolstoi and more than one Theosophist-do carry out these noble, because universal, precepts literally; and many more good men and women would do so, were they not more than certain that such a walk in life would very probably land them in a lunatic asylum-so Christian are your laws!

Q. But surely everyone knows that millions and millions are spent annually on private and public charities?

A. Oh, yes; half of which sticks to the hands it passes through before getting to the needy; while a good portion or remainder gets into the hands of professional beggars, those who are too lazy to work, thus doing no good whatever to those who are really in misery and suffering. Haven't you heard that the first result of the great outflow of charity towards the East-end of London was to raise the rents in Whitechapel by some twenty percent?

Q. What would you do, then?

A. Act individually and not collectively; follow the Northern Buddhist precepts:

Never put food into the mouth of the hungry by the hand of another.

Never let the shadow of thy neighbor (a third person) come between thyself and the object of thy bounty.

Never give to the Sun time to dry a tear before thou hast wiped it.

Again

Never give money to the needy, or food to the priest, who begs at thy door, through thy servants, lest thy money should diminish gratitude, and thy food turn to gall.

Q. But how can this be applied practically?

A. The Theosophical ideas of charity mean personal exertion for others; personal mercy and kindness; personal interest in the welfare of those who suffer; personal sympathy, forethought and assistance in their troubles or

The Key To Theosophy - HP Blavatsky.txt

needs. It is important to note that we Theosophists do not believe in giving money, if we had it, through other people's hands or organizations. We believe in giving to the money a thousandfold greater power and effectiveness by our personal contact and sympathy with those who need it. We believe in relieving the starvation of the soul, as much if not more than the emptiness of the stomach; for gratitude does more good to the man who feels it, than to him for whom it is felt. Where's the gratitude which your "millions of pounds" should have called forth, or the good feelings provoked by them? Is it shown in the hatred of the East-End poor for the rich? In the growth of the party of anarchy and disorder? Or by those thousands of unfortunate working girls, victims to the "sweating" system, driven daily to eke out a living by going on the streets? Do your helpless old men and women thank you for the workhouses; or your poor for the poisonously unhealthy dwellings in which they are allowed to breed new generations of diseased, and rickety children, only to put money into the pockets of the insatiable Shylocks who own houses? Therefore it is that every sovereign of all those "millions," contributed by good and would-be charitable people, falls like a burning curse instead of a blessing on the poor whom it should relieve. We call this generating national Karma, and terrible will be its results on the day of reckoning.

Theosophy for the Masses

Q. And you think that Theosophy would, by stepping in, help to remove these evils, under the practical and adverse conditions of our modern life?

A. Had we more money, and had not most of the Theosophists to work for their daily bread, I firmly believe we could.

Q. How? Do you expect that your doctrines could ever take hold of the uneducated masses, when they are so abstruse and difficult that well-educated people can hardly understand them?

A. You forget one thing, which is that your much-boasted modern education is precisely that which makes it difficult for you to understand Theosophy. Your mind is so full of intellectual subtleties and preconceptions that your natural intuition and perception of the truth cannot act. It does not require metaphysics or education to make a man understand the broad truths of Karma and Reincarnation. Look at the millions of poor and uneducated Buddhists and Hindus, to whom Karma and reincarnation are solid realities, simply because their minds have never been cramped and distorted by being forced into an unnatural groove. They have never had the innate human sense of justice perverted in them by being told to believe that their sins would be forgiven because another man had been put to death for their sakes. And the Buddhists, note well, live up to their beliefs without a murmur against Karma, or what they regard as a just punishment; whereas the Christian populace neither lives up to its moral ideal, nor accepts its lot contentedly. Hence murmuring and dissatisfaction, and the intensity of the struggle for existence in Western lands.

Q. But this contentedness, which you praise so much, would do away with all motive for exertion and bring progress to a stand-still.

A. And we, Theosophists, say that your vaunted progress and civilization are no better than a host of will-o'-the-wisps, flickering over a marsh which exhales a poisonous and deadly miasma. This, because we see selfishness, crime, immorality, and all the evils imaginable, pouncing upon unfortunate mankind from this Pandora's box which you call an age of progress, and increasing pari passu with the growth of your material civilization. At such a price, better the inertia and inactivity of Buddhist countries, which have arisen only as a consequence of ages of political slavery.

Q. Then is all this metaphysics and mysticism with which you occupy yourself so much, of no importance?

A. To the masses, who need only practical guidance and support, they are not of much consequence; but for the educated, the natural leaders of the masses, those whose modes of thought and action will sooner or later be adopted by those masses, they are of the greatest importance. It is only by means of the philosophy that an intelligent and educated man can avoid the intellectual suicide of believing on blind faith; and it is only by assimilating the strict continuity and logical coherence of the Eastern, if not esoteric, doctrines, that he can realize their truth. Conviction breeds enthusiasm, and "Enthusiasm," says Bulwer Lytton, "is the genius of sincerity, and truth accomplishes no victories without it;" while Emerson most truly remarks that "every great and commanding movement in the annals of the world is the triumph of enthusiasm." And what is more calculated to produce such a feeling than a philosophy so grand, so consistent, so logical, and so all-embracing as our Eastern Doctrines?

Q. And yet its enemies are very numerous, and every day Theosophy acquires new opponents.

A. And this is precisely that which proves its intrinsic excellence and value. People hate only the things they fear, and no one goes out of his way to overthrow that which neither threatens nor rises beyond mediocrity.

Q. Do you hope to impart this enthusiasm, one day, to the masses?

A. Why not? Since history tells us that the masses adopted Buddhism with enthusiasm, while, as said before, the practical effect upon them of this philosophy of ethics is still shown by the smallness of the percentage of crime amongst Buddhist populations as compared with every other religion. The chief point is, to uproot that most fertile source of all crime and immortality-the belief that it is possible for them to escape the consequences of their own actions. Once teach them that greatest of all laws, Karma and Reincarnation, and besides feeling in themselves the true dignity of human nature, they will turn from evil and eschew it as they would a physical danger.

How Members Can Help the Society

Q. How do you expect the Fellows of your Society to help in the work?

A. First by studying and comprehending the theosophical doctrines, so that they may teach others, especially the young people. Secondly, by taking every opportunity of talking to others and explaining to them what Theosophy is, and what it is not; by removing misconceptions and spreading an interest in the subject. Thirdly, by assisting in circulating our literature, by buying books when they have the means, by lending and giving them and by inducing their friends to do so. Fourthly, by defending the Society from the unjust aspersions cast upon it, by every legitimate device in their power. Fifth, and most important of all, by the example of their own lives.

Q. But all this literature, to the spread of which you attach so much importance, does not seem to me of much practical use in helping mankind. This is not practical charity.

A. We think otherwise. We hold that a good book which gives people food for thought, which strengthens and clears their minds, and enables them to grasp truths which they have dimly felt but could not formulate-we hold that such a book does a real, substantial good. As to what you call practical deeds of charity, to benefit the bodies of our fellowmen, we do what little we can; but, as I have already told you, most of us are poor, whilst the Society

itself has not even the money to pay a staff of workers. All of us who toil for it, give our labor gratis, and in most cases money as well. The few who have the means of doing what are usually called charitable actions, follow the Buddhist precepts and do their work themselves, not by proxy or by subscribing publicly to charitable funds. What the Theosophist has to do above all is to forget his personality.

- o0o-

What a Theosophist Ought Not to Do

Q. Have you any prohibitory laws or clauses for Theosophists in your Society?

A. Many, but alas!-none of them are enforced. They express the ideal of our organization, but the practical application of such things we are compelled to leave to the discretion of the Fellows themselves. Unfortunately, the state of men's minds in the present century is such that, unless we allow these clauses to remain, so to speak, obsolete, no man or woman would dare to risk joining the Theosophical Society. This is precisely why I feel forced to lay such a stress on the difference between true Theosophy and its hard-struggling and well-intentioned, but still unworthy vehicle, the Theosophical Society.

Q. May I be told what are these perilous reefs in the open sea of Theosophy?

A. Well may you call them reefs, as more than one otherwise sincere and well-meaning F.T.S. has had his Theosophical canoe shattered into splinters on them! And yet to avoid certain things seems the easiest thing in the world to do. For instance, here is a series of such negatives, screening positive Theosophical duties:

No Theosophist should be silent when he hears evil reports or slanders spread about the Society, or innocent persons, whether they be his colleagues or outsiders.

Q. But suppose what one hears is the truth, or may be true without one knowing it?

A. Then you must demand good proofs of the assertion, and hear both sides impartially before you permit the accusation to go uncontradicted. You have no right to believe in evil, until you get undeniable proof of the correctness of the statement.

Q. And what should you do then?

A. Pity and forbearance, charity and long-suffering, ought to be always there to prompt us to excuse our sinning brethren, and to pass the gentlest sentence possible upon those who err. A Theosophist ought never to forget what is due to the shortcomings and infirmities of human nature.

Q. Ought he to forgive entirely in such cases?

A. In every case, especially he who is sinned against.

Q. But if by so doing, he risks to injure, or allow others to be injured? What ought he to do then?

A. His duty; that which his conscience and higher nature suggests to him; but only after mature deliberation. Justice consists in doing no injury to any living being; but justice commands us also never to allow injury to be done to the many, or even to one innocent person, by allowing the guilty one to go unchecked.

Q. What are the other negative clauses?

A. No Theosophist ought to be contented with an idle or frivolous life, doing no real good to himself and still less to others. He should work for the benefit of the few who need his help if he is unable to toil for Humanity, and thus work for the advancement of the Theosophical cause.

Q. This demands an exceptional nature, and would come rather hard upon some persons.

A. Then they had better remain outside the T.S. instead of sailing under false colors. No one is asked to give more than he can afford, whether in devotion, time, work, or money.

Q. What comes next?

A. No working member should set too great value on his personal progress or proficiency in Theosophic studies; but must be prepared rather to do as much altruistic work as lies in his power. He should not leave the whole of the heavy burden and responsibility of the Theosophical Movement on the shoulders of the few devoted workers. Each member ought to feel it his duty to take what share he can in the common work, and help it by every means in his power.

Q. This is but just. What comes next?

A. No Theosophist should place his personal vanity, or feelings, above those of his Society as a body. He who sacrifices the latter, or other people's reputations on the altar of his personal vanity, worldly benefit, or pride, ought not to be allowed to remain a member. One cancerous limb diseases the whole body.

Q. Is it the duty of every member to teach others and preach Theosophy?

A. It is indeed. No fellow has a right to remain idle, on the excuse that he knows too little to teach. For he may always be sure that he will find others who know still less than himself. And also it is not until a man begins to try to teach others, that he discovers his own ignorance and tries to remove it. But this is a minor clause.

Q. What do you consider, then, to be the chief of these negative Theosophical duties?

A. To be ever prepared to recognize and confess one's faults. To rather sin through exaggerated praise than through too little appreciation of one's neighbor's efforts. Never to backbite or slander another person. Always to say openly and direct to his face anything you have against him. Never to make yourself the echo of anything you may hear against another, nor harbor revenge against those who happen to injure you.

Q. But it is often dangerous to tell people the truth to their faces. Don't you think so? I know one of your members who was bitterly offended, left the Society, and became its greatest enemy, only because he was told some unpleasant truths to his face, and was blamed for them.

A. Of such we have had many. No member, whether prominent or insignificant, has ever left us without becoming our bitter enemy.

Q. How do you account for it?

A. It is simply this. Having been, in most cases, intensely devoted to the Society at first, and having lavished upon it the most exaggerated praises, the only possible excuse such a backslider can make for his subsequent behavior and past short-sightedness, is to pose as an innocent and deceived

victim, thus casting the blame from his own shoulders onto those of the Society in general, and its leaders especially. Such persons remind one of the old fable about the man with a distorted face, who broke his looking-glass on the ground that it reflected his countenance crookedly.

Q. But what makes these people turn against the Society?

A. Wounded vanity in some form or other, almost in every case. Generally, because their dicta and advice are not taken as final and authoritative; or else, because they are of those who would rather reign in Hell than serve in Heaven. Because, in short, they cannot bear to stand second to anybody in anything. So, for instance, one member-a true "Sir Oracle"-criticized, and almost defamed every member in the T.S. to outsiders as much as to Theosophists, under the pretext that they were all untheosophical, blaming them precisely for what he was himself doing all the time. Finally, he left the Society, giving as his reason a profound conviction that we were all (the Founders especially)-Frauds! Another one, after intriguing in every possible way to be placed at the head of a large Section of the Society, finding that the members would not have him, turned against the Founders of the T.S., and became their bitterest enemy, denouncing one of them whenever he could, simply because the latter could not, and would not, force him upon the Members. This was simply a case of an outrageous wounded vanity. Still another wanted to, and virtually did, practice black-magic-i.e., undue personal psychological influence on certain Fellows, while pretending devotion and every Theosophical virtue. When this was put a stop to, the Member broke with Theosophy, and now slanders and lies against the same hapless leaders in the most virulent manner, endeavoring to break up the society by blackening the reputation of those whom that worthy "Fellow" was unable to deceive.

Q. What would you do with such characters?

A. Leave them to their Karma. Because one person does evil that is no reason for others to do so.

Q. But, to return to slander, where is the line of demarcation between backbiting and just criticism to be drawn? Is it not one's duty to warn one's friends and neighbors against those whom one knows to be dangerous associates?

A. If by allowing them to go on unchecked other persons may be thereby injured, it is certainly our duty to obviate the danger by warning them privately. But true or false, no accusation against another person should ever be spread abroad. If true, and the fault hurts no one but the sinner, then leave him to his Karma. If false, then you will have avoided adding to the injustice in the world. Therefore, keep silent about such things with everyone not directly concerned. But if your discretion and silence are likely to hurt or endanger others, then I add: Speak the truth at all costs, and say, with Annesly, "Consult duty, not events." There are cases when one is forced to exclaim, "Perish discretion, rather than allow it to interfere with duty."

Q. Methinks, if you carry out these maxims, you are likely to reap a nice crop of troubles!

A. And so we do. We have to admit that we are now open to the same taunt as the early Christians were. "See, how these Theosophists love one another!" may now be said of us without a shadow of injustice.

Q. Admitting yourself that there is at least as much, if not more, backbiting, slandering, and quarreling in the T.S. as in the Christian Churches, let alone Scientific Societies-What kind of Brotherhood is this? I may ask.

The Key To Theosophy - HP Blavatsky.txt

A. A very poor specimen, indeed, as at present, and, until carefully sifted and reorganized, no better than all others. Remember, however, that human nature is the same in the Theosophical Society as out of it. Its members are no saints: they are at best sinners trying to do better, and liable to fall back owing to personal weakness. Add to this that our "Brotherhood" is no "recognized" or established body, and stands, so to speak, outside of the pale of jurisdiction. Besides which, it is in a chaotic condition, and as unjustly unpopular as is no other body. What wonder, then, that those members who fail to carry out its ideal should turn, after leaving the Society, for sympathetic protection to our enemies, and pour all their gall and bitterness into their too willing ears! Knowing that they will find support, sympathy, and ready credence for every accusation, however absurd, that it may please them to launch against the Theosophical Society, they hasten to do so, and vent their wrath on the innocent looking-glass, which reflected too faithfully their faces. People never forgive those whom they have wronged. The sense of kindness received, and repaid by them with ingratitude, drives them into a madness of self-justification before the world and their own consciences. The former is but too ready to believe in anything said against a society it hates. The latter-but I will say no more, fearing I have already said too much.

Q. Your position does not seem to me a very enviable one.

A. It is not. But don't you think that there must be something very noble, very exalted, very true, behind the Society and its philosophy, when the leaders and the founders of the Movement still continue to work for it with all their strength? They sacrifice to it all comfort, all worldly prosperity, and success, even to their good name and reputation-aye, even to their honor-to receive in return incessant and ceaseless obloquy, relentless persecution, untiring slander, constant ingratitude, and misunderstanding of their best efforts, blows, and buffets from all sides-when by simply dropping their work they would find themselves immediately released from every responsibility, shielded from every further attack.

Q. I confess, such a perseverance seems to me very astounding, and I wondered why you did all this.

A. Believe me for no self-gratification; only in the hope of training a few individuals to carry on our work for humanity by its original program when the Founders are dead and gone. They have already found a few such noble and devoted souls to replace them. The coming generations, thanks to these few, will find the path to peace a little less thorny, and the way a little widened, and thus all this suffering will have produced good results, and their self-sacrifice will not have been in vain. At present, the main, fundamental object of the Society is to sow germs in the hearts of men, which may in time sprout, and under more propitious circumstances lead to a healthy reform, conducive of more happiness to the masses than they have hitherto enjoyed.

On the Misconceptions About the T. S.

Theosophy and Asceticism

Q. I have heard people say that your rules require all members to be vegetarians, celibates, and rigid ascetics; but you have not told me anything of the sort yet. Can you tell me the truth once for all about this?

A. The truth is that our rules require nothing of the kind. The Theosophical Society does not even expect, far less require of any of its members that they should be ascetics in any way, except-if you call that asceticism-that they should try and benefit other people and be unselfish in their own lives.

Q. But still many of your members are strict vegetarians, and openly avow

their intention of remaining unmarried. This, too, is most often the case with those who take a prominent part in connection with the work of your Society.

A. That is only natural, because most of our really earnest workers are members of the Inner Section of the Society, which I told you about before.

Q. Oh! Then you do require ascetic practices in that Inner Section?

A. No; we do not require or enjoin them even there; but I see that I had better give you an explanation of our views on the subject of asceticism in general, and then you will understand about vegetarianism and so on.

Q. Please proceed.

A. As I have already told you, most people who become really earnest students of Theosophy, and active workers in our Society, wish to do more than study theoretically the truths we teach. They wish to know the truth by their own direct personal experience, and to study Occultism with the object of acquiring the wisdom and power, which they feel that they need in order to help others, effectually and judiciously, instead of blindly and at haphazard. Therefore, sooner or later, they join the Inner Section.

Q. But you said that "ascetic practices" are not obligatory even in that Inner Section?

A. No more they are; but the first thing which the members learn there is a true conception of the relation of the body, or physical sheath, to the inner, the true man. The relation and mutual interaction between these two aspects of human nature are explained and demonstrated to them, so that they soon become imbued with the supreme importance of the inner man over the outer case or body. They are taught that blind unintelligent asceticism is mere folly; that such conduct as that of St. Labro which I spoke of before, or that of the Indian Fakirs and jungle ascetics, who cut, burn, and macerate their bodies in the most cruel and horrible manner, is simply self-torture for selfish ends, i. e., to develop will-power, but is perfectly useless for the purpose of assisting true spiritual, or Theosophic, development.

Q. I see, you regard only moral asceticism as necessary. It is as a means to an end, that end being the perfect equilibrium of the inner nature of man, and the attainment of complete mastery over the body with all its passions and desires?

A. Just so. But these means must be used intelligently and wisely, not blindly and foolishly; like an athlete who is training and preparing for a great contest, not like the miser who starves himself into illness that he may gratify his passion for gold.

Q. I understand now your general idea; but let us see how you apply it in practice. How about vegetarianism, for instance?

A. One of the great German scientists has shown that every kind of animal tissue, however you may cook it, still retains certain marked characteristics of the animal which it belonged to, which characteristics can be recognized. And apart from that, everyone knows by the taste what meat he is eating. We go a step farther, and prove that when the flesh of animals is assimilated by man as food, it imparts to him, physiologically, some of the characteristics of the animal it came from. Moreover, occult science teaches and proves this to its students by ocular demonstration, showing also that this "coarsening" or "animalizing" effect on man is greatest from the flesh of the larger animals, less for birds, still less for fish and other cold-blooded animals, and least of all when he eats only vegetables.

Q. Then he had better not eat at all?

A. If he could live without eating, of course it would. But as the matter stands, he must eat to live, and so we advise really earnest students to eat such food as will least clog and weight their brains and bodies, and will have the smallest effect in hampering and retarding the development of their intuition, their inner faculties, and powers.

Q. Then you do not adopt all the arguments which vegetarians in general are in the habit of using?

A. Certainly not. Some of their arguments are very weak, and often based on assumptions which are quite false. But, on the other hand, many of the things they say are quite true. For instance, we believe that much disease, and especially the great predisposition to disease which is becoming so marked a feature in our time, is very largely due to the eating of meat, and especially of tinned meats. But it would take too long to go thoroughly into this question of vegetarianism on its merits; so please pass onto something else.

Q. One question more. What are your members of the Inner Section to do with regard to their food when they are ill?

A. Follow the best practical advice they can get, of course. Don't you grasp yet that we never impose any hard-and-fast obligations in this respect? Remember once for all that in all such questions we take a rational, and never a fanatical, view of things. If from illness or long habit a man cannot go without meat, why, by all means let him eat it. It is no crime; it will only retard his progress a little; for after all is said and done, the purely bodily actions and functions are of far less importance than what a man thinks and feels, what desires he encourages in his mind, and allows to take root and grow there.

Q. Then with regard to the use of wine and spirits, I suppose you do not advise people to drink them?

A. They are worse for his moral and spiritual growth than meat, for alcohol in all its forms has a direct, marked, and very deleterious influence on man's psychic condition. Wine and spirit drinking is only less destructive to the development of the inner powers, than the habitual use of hashish, opium, and similar drugs.

- o0o-

Theosophy and Marriage

Q. Now to another question; must a man marry or remain a celibate?

A. It depends on the kind of man you mean. If you refer to one who intends to live in the world, one who, even though a good, earnest Theosophist, and an ardent worker for our cause, still has ties and wishes which bind him to the world, who, in short, does not feel that he has done forever with what men call life, and that he desires one thing and one thing only-to know the truth, and to be able to help others-then for such a one I say there is no reason why he should not marry, if he likes to take the risks of that lottery where there are so many more blanks than prizes. Surely you cannot believe us so absurd and fanatical as to preach against marriage altogether? On the contrary, save in a few exceptional cases of practical Occultism, marriage is the only remedy against immorality.

Q. But why cannot one acquire this knowledge and power when living a married life?

The Key To Theosophy - HP Blavatsky.txt

A. My dear sir, I cannot go into physiological questions with you; but I can give you an obvious and, I think, a sufficient answer, which will explain to you the moral reasons we give for it. Can a man serve two masters? No! Then it is equally impossible for him to divide his attention between the pursuit of Occultism and a wife. If he tries to, he will assuredly fail in doing either properly; and, let me remind you, practical Occultism is far too serious and dangerous a study for a man to take up, unless he is in the most deadly earnest, and ready to sacrifice all, himself first of all, to gain his end. But this does not apply to the members of our Inner Section. I am only referring to those who are determined to tread that path of discipleship which leads to the highest goal. Most, if not all of those who join our Inner Section, are only beginners, preparing themselves in this life to enter in reality upon that path in lives to come.

- oOo-

Theosophy and Education

Q. One of your strongest arguments for the inadequacy of the existing forms of religion in the West, as also to some extent the materialistic philosophy which is now so popular, but which you seem to consider as an abomination of desolation, is the large amount of misery and wretchedness which undeniably exists, especially in our great cities. But surely you must recognize how much has been, and is being done to remedy this state of things by the spread of education and the diffusion of intelligence.

A. The future generations will hardly thank you for such a "diffusion of intelligence," nor will your present education do much good to the poor starving masses.

Q. Ah! But you must give us time. It is only a few years since we began to educate the people.

A. And what, pray, has your Christian religion been doing ever since the fifteenth century, once you acknowledge that the education of the masses has not been attempted till now-the very work, if ever there could be one, which a Christian, i. e., a Christ-following church and people, ought to perform?

Q. Well, you may be right; but now-

A. Just let us consider this question of education from a broad standpoint, and I will prove to you that you are doing harm not good, with many of your boasted improvements. The schools for the poorer children, though far less useful than they ought to be, are good in contrast with the vile surroundings to which they are doomed by your modern Society. The infusion of a little practical Theosophy would help a hundred times more in life the poor suffering masses than all this infusion of (useless) intelligence.

Q. But, really-

A. Let me finish, please. You have opened a subject on which we Theosophists feel deeply, and I must have my say. I quite agree that there is a great advantage to a small child bred in the slums, having the gutter for playground, and living amid continued coarseness of gesture and word, in being placed daily in a bright, clean schoolroom hung with pictures, and often gay with flowers. There it is taught to be clean, gentle, orderly; there it learns to sing and to play; has toys that awaken its intelligence; learns to use its fingers deftly; is spoken to with a smile instead of a frown; is gently rebuked or coaxed instead of cursed. All this humanizes the children, arouses their brains, and renders them susceptible to intellectual and moral influences. The schools are not all they might be and ought to be; but, compared with the homes, they are paradises; and they slowly are reacting on the homes. But while this is true of many of the Board schools, your system deserves the worst one can say of it.

Q. So be it; go on.

A. What is the real object of modern education? Is it to cultivate and develop the mind in the right direction; to teach the disinherited and hapless people to carry with fortitude the burden of life (allotted them by Karma); to strengthen their will; to inculcate in them the love of one's neighbor and the feeling of mutual interdependence and brotherhood; and thus to train and form the character for practical life? Not a bit of it. And yet, these are undeniably the objects of all true education. No one denies it; all your educators admit it, and talk very big indeed on the subject. But what is the practical result of their action? Every young man and boy, nay, every one of the younger generation of schoolmasters will answer: "The object of modern education is to pass examinations," a system not to develop right emulation, but to generate and breed jealousy, envy, hatred almost, in young people for one another, and thus train them for a life of ferocious selfishness and struggle for honors and emoluments instead of kindly feeling.

Q. I must admit you are right there.

A. And what are these examinations-the terror of modern boyhood and youth? They are simply a method of classification by which the results of your school teaching are tabulated. In other words, they form the practical application of the modern science method to the genus homo, qua intellection. Now "science" teaches that intellect is a result of the mechanical interaction of the brain-stuff; therefore it is only logical that modern education should be almost entirely mechanical-a sort of automatic machine for the fabrication of intellect by the ton. Very little experience of examinations is enough to show that the education they produce is simply a training of the physical memory, and, sooner or later, all your schools will sink to this level. As to any real, sound cultivation of the thinking and reasoning power, it is simply impossible while everything has to be judged by the results as tested by competitive examinations. Again, school training is of the very greatest importance in forming character, especially in its moral bearing. Now, from first to last, your modern system is based on the so-called scientific revelations: "The struggle for existence" and the "survival of the fittest." All through his early life, every man has these driven into him by practical example and experience, as well as by direct teaching, till it is impossible to eradicate from his mind the idea that "self," the lower, personal, animal self, is the end-all, and be-all, of life. Here you get the great source of all the after-misery, crime, and heartless selfishness, which you admit as much as I do. Selfishness, as said over and over again, is the curse of humanity, and the prolific parent of all the evils and crimes in this life; and it is your schools which are the hotbeds of such selfishness.

Q. That is all very fine as generalities, but I should like a few facts, and to learn also how this can be remedied.

A. Very well, I will try and satisfy you. There are three great divisions of scholastic establishments, board, middle-class and public schools, running up the scale from the most grossly commercial to the idealistic classical, with many permutations and combinations. The practical commercial begets the modern side, and the ancient and orthodox classical reflects its heavy respectability even as far as the School Board pupil teacher's establishments. Here we plainly see the scientific and material commercial supplanting the effete orthodox and classical. Neither is the reason very far to seek. The objects of this branch of education are, then, pounds, shillings, and pence, the summum bonum of the nineteenth century. Thus, the energies generated by the brain molecules of its adherents are all concentrated on one point, and are, therefore, to some extent, an organized army of educated and speculative intellects of the minority of men, trained against the hosts of the ignorant, simple-minded masses doomed to be

vampirized, lived, and sat upon by their intellectually stronger brethren. Such training is not only untheosophical, it is simply unchristian. Result: The direct outcome of this branch of education is an overflowing of the market with money-making machines, with heartless selfish men-animals-who have been most carefully trained to prey on their fellows and take advantage of the ignorance of their weaker brethren!

Q. Well, but you cannot assert that of our great public schools, at any rate?

A. Not exactly, it is true. But though the form is different, the animating spirit is the same: untheosophical and unchristian, whether Eton and Harrow turn out scientists or divines and theologians.

Q. Surely you don't mean to call Eton and Harrow "commercial"?

A. No. Of course the Classical system is above all things respectable, and in the present day is productive of some good. It does still remain the favorite at our great public schools, where not only an intellectual, but also a social education is obtainable. It is, therefore, of prime importance that the dull boys of aristocratic and wealthy parents should go to such schools to meet the rest of the young life of the "blood" and money classes. But unfortunately there is a huge competition even for entrance; for the moneyed classes are increasing, and poor but clever boys seek to enter the public schools by the rich scholarships, both at the schools themselves and from them to the Universities.

Q. According to this view, the wealthier "dullards" have to work even harder than their poorer fellows?

A. It is so. But, strange to say, the faithful of the cult of the "Survival of the fittest" do not practice their creed; for their whole exertion is to make the naturally unfit supplant the fit. Thus, by bribes of large sums of money, they allure the best teachers from their natural pupils to mechanize their naturally unfit progeny into professions which they uselessly overcrowd.

Q. And you attribute all this to what?

A. All this is owing to the perniciousness of a system which turns out goods to order, irrespective of the natural proclivities and talents of the youth. The poor little candidate for this progressive paradise of learning, comes almost straight from the nursery to the treadmill of a preparatory school for sons of gentlemen. Here he is immediately seized upon by the workmen of the materio-intellectual factory, and crammed with Latin, French, and Greek Accidence, Dates, and Tables, so that if he have any natural genius it is rapidly squeezed out of him by the rollers of what Carlyle has so well called "dead vocables."

Q. But surely he is taught something besides "dead vocables," and much of that which may lead him direct to Theosophy, if not entirely into the Theosophical Society?

A. Not much. For of history, he will attain only sufficient knowledge of his own particular nation to fit him with a steel armor of prejudice against all other peoples, and be steeped in the foul cesspools of chronicled national hate and bloodthirstiness; and surely, you would not call that-Theosophy?

Q. What are your further objections?

A. Added to this is a smattering of selected, so-called, Biblical facts, from the study of which all intellect is eliminated. It is simply a memory lesson, the "Why" of the teacher being a "Why" of circumstances and not of reason.

The Key To Theosophy - HP Blavatsky.txt

Q. Yes; but I have heard you congratulate yourself at the ever-increasing number of the Agnostics and Atheists in our day, so that it appears that even people trained in the system you abuse so heartily do learn to think and reason for themselves.

A. Yes; but it is rather owing to a healthy reaction from that system than due to it. We prefer immeasurably more in our Society Agnostics, and even rank Atheists, to bigots of whatever religion. An Agnostic's mind is ever opened to the truth; whereas the latter blinds the bigot like the sun does an owl. The best-i. e., the most truth-loving, philanthropic, and honest-of our Fellows were, and are, Agnostics and Atheists (disbelievers in a personal God). But there are no free-thinking boys and girls, and generally early training will leave its mark behind in the shape of a cramped and distorted mind. A proper and sane system of education should produce the most vigorous and liberal mind, strictly trained in logical and accurate thought, and not in blind faith. How can you ever expect good results, while you pervert the reasoning faculty of your children by bidding them believe in the miracles of the Bible on Sunday, while for the six other days of the week you teach them that such things are scientifically impossible?

Q. What would you have, then?

A. If we had money, we would found schools which would turn out something else than reading and writing candidates for starvation. Children should above all be taught self-reliance, love for all men, altruism, mutual charity, and more than anything else, to think and reason for themselves. We would reduce the purely mechanical work of the memory to an absolute minimum, and devote the time to the development and training of the inner senses, faculties, and latent capacities. We would endeavor to deal with each child as a unit, and to educate it so as to produce the most harmonious and equal unfoldment of its powers, in order that its special aptitudes should find their full natural development. We should aim at creating free men and women, free intellectually, free morally, unprejudiced in all respects, and above all things, unselfish. And we believe that much if not all of this could be obtained by proper and truly theosophical education.

- oOo-

Why Then is There So Much Prejudice Against the T. S. ?

Q. If Theosophy is even half of what you say, why should there exist such a terrible ill-feeling against it? This is even more of a problem than anything else.

A. It is; but you must bear in mind how many powerful adversaries we have aroused ever since the formation of our Society. As I just said, if the Theosophical Movement were one of those numerous modern crazes, as harmless at the end as they are evanescent, it would be simply laughed at-as it is now by those who still do not understand its real purport-and left severely alone. But it is nothing of the kind. Intrinsicly, Theosophy is the most serious Movement of this age; and one, moreover, which threatens the very life of most of the time-honored humbugs, prejudices, and social evils of the day-those evils which fatten and make happy the upper ten and their imitators and sycophants, the wealthy dozens of the middle classes, while they positively crush and starve out of existence the millions of the poor. Think of this, and you will easily understand the reason of such a relentless persecution by those others who, more observant and clear-sighted, do see the true nature of Theosophy, and therefore dread it.

Q. Do you mean to tell me that it is because a few have understood what Theosophy leads to, that they try to crush the Movement? But if Theosophy leads only to good, surely you cannot be prepared to utter such a terrible accusation of faithlessness, heartlessness, and treachery even against those

few?

A. I am so prepared, on the contrary. I do not call the enemies we have had to battle with during the first nine or ten years of the Society's existence either powerful or "dangerous"; but only those who have arisen against us in the last three or four years. And these neither speak, write, nor preach against Theosophy, but work in silence and behind the backs of the foolish puppets who act as their visible marionettes. Yet, if invisible to most of the members of our Society, they are well known to the true "Founders" and the protectors of our Society. But they must remain for certain reasons unnamed at present.

Q. And are they known to many of you, or to yourself alone?

A. I never said I knew them. I may or may not know them-but I know of them, and this is sufficient; and I defy them to do their worst. They may achieve great mischief and throw confusion into our ranks, especially among the faint-hearted, and those who can judge only by appearances. They will not crush the Society, do what they may. Apart from these truly dangerous enemies-"dangerous," however, only to those Theosophists who are unworthy of the name, and whose place is rather outside than within the T.S.-the number of our opponents is more than considerable.

Q. Can you name these, at least, if you will not speak of the others?

A. Of course I can. We have to contend against:-

1. The hatred of the Spiritualists, American, English, and French;
2. The constant opposition of the clergy of all denominations;
3. Especially the relentless hatred and persecution of the missionaries in India;
4. This led to the famous and infamous attack on our Theosophical Society by the Society for Psychical Research, an attack which was stirred up by a regular conspiracy organized by the missionaries in India.
5. We must count the defection of various prominent (?) members, for reasons I have already explained, all of whom have contributed their utmost to increase the prejudice against us.

Q. Cannot you give me more details about these, so that I may know what to answer when asked-a brief history of the Society, in short; and why the world believes all this?

A. The reason is simple. Most outsiders knew absolutely nothing of the Society itself, its motives, objects, or beliefs. From its very beginning, the world has seen in Theosophy nothing but certain marvelous phenomena, in which two-thirds of the non-Spiritualists do not believe. Very soon the Society came to be regarded as a body pretending to the possession of "miraculous" powers. The world never realized that the Society taught absolute disbelief in miracle or even the possibility of such; that in the Society there were only a few people who possessed such psychic powers and but few who cared for them. Nor did it understand that the phenomena were never produced publicly, but only privately for friends, and merely given as an accessory, to prove by direct demonstration that such things could be produced without dark rooms, spirits, mediums, or any of the usual paraphernalia. Unfortunately, this misconception was greatly strengthened and exaggerated by the first book on the subject which excited much attention in Europe-Mr. Sinnett's The Occult World. If this work did much to bring the Society into prominence, it attracted still more obloquy, derision, and misrepresentation upon the hapless heroes and heroine thereof. Of this the author was more than warned in The Occult World, but did not pay

The Key To Theosophy - HP Blavatsky.txt
attention to the prophecy-for such it was, though half-veiled.

Q. For what, and since when, do the Spiritualists hate you?

A. From the first day of the Society's existence. No sooner the fact became known that, as a body, the T.S. did not believe in communications with the spirits of the dead, but regarded the so-called "spirits" as, for the most part, astral reflections of disembodied personalities, shells, etc., than the Spiritualists conceived a violent hatred to us and especially to the Founders. This hatred found expression in every kind of slander, uncharitable personal remarks, and absurd misrepresentations of the Theosophical teachings in all the American Spiritualistic organs. For years we were persecuted, denounced, and abused. This began in 1875 and continues to the present day. In 1819, the headquarters of the T.S. were transferred from New York to Bombay, India, and then permanently to Madras. When the first branch of our Society, the British T.S., was founded in London, the English Spiritualists came out in arms against us, as the Americans had done; and the French Spiritists followed suit.

Q. But why should the clergy be hostile to you, when, after all, the main tendency of the Theosophical doctrines is opposed to Materialism, the great enemy of all forms of religion in our day?

A. The Clergy opposed us on the general principle that "He who is not with me is against me." Since Theosophy does not agree with any one Sect or Creed, it is considered the enemy of all alike, because it teaches that they are all, more or less, mistaken. The missionaries in India hated and tried to crush us because they saw the flower of the educated Indian youth and the Brahmins, who are almost inaccessible to them, joining the Society in large numbers. And yet, apart from this general class hatred, the T.S. counts in its ranks' many clergymen, and even one or two bishops.

Q. And what led the S.P.R. to take the field against you? You were both pursuing the same line of study, in some respects, and several of the psychic researchers belonged to your society.

A. First of all we were very good friends with the leaders of the S.P.R.; but when the attack on the phenomena appeared in the Christian College Magazine, supported by the pretended revelations of a menial, the S.P.R. found that they had compromised themselves by publishing in their "Proceedings" too many of the phenomena which had occurred in connection with the T.S. Their ambition is to pose as an authoritative and strictly scientific body; so that they had to choose between retaining that position by throwing overboard the T.S. and even trying to destroy it, and seeing themselves merged, in the opinion of the Sadducees of the grand monde, with the "credulous" Theosophists and Spiritualists. There was no way for them out of it, no two choices, and they chose to throw us overboard. It was a matter of dire necessity for them. But so hard pressed were they to find any apparently reasonable motive for the life of devotion and ceaseless labor led by the two Founders, and for the complete absence of any pecuniary profit or other advantage to them, that our enemies were obliged to resort to the thrice-absurd, eminently ridiculous, and now famous "Russian spy theory," to explain this devotion. But the old saying, "The blood of the martyrs is the seed of the Church," proved once more correct. After the first shock of this attack, the T.S. doubled and tripled its numbers, but the bad impression produced still remains. A French author was right in saying, "Calomniez, calomniez toujours et encore, il en restera toujours quelque chose." Therefore it is, that unjust prejudices are current, and that everything connected with the T.S., and especially with its Founders, is so falsely distorted, because based on malicious hearsay alone.

A. Yet in the 14 years during which the Society has existed, you must have had ample time and opportunity to show yourselves and your work in their true light?

The Key To Theosophy - HP Blavatsky.txt

A. How, or when, have we been given such an opportunity? Our most prominent members had an aversion to anything that looked like publicly justifying themselves. Their policy has ever been: "We must live it down;" and "What does it matter what the newspapers say, or people think?" The Society was too poor to send out public lecturers, and therefore the expositions of our views and doctrines were confined to a few Theosophical works that met with success, but which people often misunderstood, or only knew of through hearsay. Our journals were, and still are, boycotted; our literary works ignored; and to this day no one seems even to feel quite certain whether the Theosophists are a kind of Serpent-and-Devil worshipers, or simply "Esoteric Buddhists"-whatever that may mean. It was useless for us to go on denying, day after day and year after year, every kind of inconceivable cock-and-bull stories about us; for, no sooner was one disposed of, than another, a still more absurd and malicious one, was born out of the ashes of the first. Unfortunately, human nature is so constituted that any good said of a person is immediately forgotten and never repeated. But one has only to utter a slander, or to start a story-no matter how absurd, false, or incredible it may be, if only it is connected with some unpopular character-for it to be successful and forthwith accepted as a historical fact. Like Don Basilio's Calumnia, the rumor springs up, at first, as a soft gentle breeze hardly stirring the grass under your feet, and arising no one knows whence; then, in the shortest space of time, it is transformed into a strong wind, begins to blow a gale, and forthwith becomes a roaring storm! A slander among news, is what an octopus is among fishes; it sucks into one's mind, fastens upon our memory, which feeds upon it, leaving indelible marks even after the slander has been bodily destroyed. A slanderous lie is the only master-key that will open any and every brain. It is sure to receive welcome and hospitality in every human mind, the highest as the lowest, if only a little prejudiced, and no matter from however base a quarter and motive it has started.

Q. Don't you think your assertion altogether too sweeping? The Englishman has never been over-ready to believe in anything said, and our nation is proverbially known for its love of fair play. A lie has no legs to stand upon for long, and-

A. The Englishman is as ready to believe evil as a man of any other nation; for it is human nature, and not a national feature. As to lies, if they have no legs to stand upon, according to the proverb, they have exceedingly rapid wings; and they can and do fly farther and wider than any other kind of news, in England as elsewhere. Remember lies and slander are the only kind of literature we can always get gratis, and without paying any subscription. We can make the experiment if you like. Will you, who are so interested in Theosophical matters, and have heard so much about us, will you put me questions on as many of these rumors and "hearses" as you can think of? I will answer you the truth, and nothing but the truth, subject to the strictest verification.

Q. Before we change the subject, let us have the whole truth on this one. Now, some writers have called your teachings "immoral and pernicious." Others, on the ground that many so-called "authorities" and Orientalists find in the Indian religions nothing but sex-worship in its many forms, accuse you of teaching nothing better than Phallic worship. They say that since modern Theosophy is so closely allied with Eastern, and particularly Indian, thought, it cannot be free from this taint. Occasionally, even, they go so far as to accuse European Theosophists of reviving the practices connected with this cult. How about this?

A. I have heard and read about this before; and I answer that no more utterly baseless and lying slander has ever been invented and circulated. "Silly people can see but silly dreams," says a Russian proverb. It makes one's blood boil to hear such vile accusations made without the slightest foundation, and on the strength of mere inferences. Ask the hundreds of

The Key To Theosophy - HP Blavatsky.txt

honorable English men and women who have been members of the Theosophical Society for years whether an immoral precept or a pernicious doctrine was ever taught to them. Open The Secret Doctrine, and you will find page after page denouncing the Jews and other nations precisely on account of this devotion to Phallic rites, due to the dead letter interpretation of nature symbolism, and the grossly materialistic conceptions of her dualism in all the exoteric creeds. Such ceaseless and malicious misrepresentation of our teachings and beliefs is really disgraceful.

Q. But you cannot deny that the Phallic element does exist in the religions of the East?

A. Nor do I deny it; only I maintain that this proves no more than does its presence in Christianity, the religion of the West. Read Hargrave Jennings's Rosicrucians, if you would assure yourself of it. In the East, the Phallic symbolism is, perhaps, more crude, because more true to nature, or, I would rather say, more naive and sincere than in the West. But it is not more licentious, nor does it suggest to the Oriental mind the same gross and coarse ideas as to the Western, with, perhaps, one or two exceptions, such as the shameful sect known as the "Maharaja," or Vallabhacharya sect.

Q. A writer in the Agnostic journal-one of your accusers-has just hinted that the followers of this disgraceful sect are Theosophists, and "claim true Theosophic insight."

A. He wrote a falsehood, and that's all. There never was, nor is there at present, one single Vallabhacharya in our Society. As to their having, or claiming Theosophic insight, that is another fib, based on crass ignorance about the Indian Sects. Their "Maharaja" only claims a right to the money, wives, and daughters of his foolish followers and no more. This sect is despised by all the other Hindus.

But you will find the whole subject dealt with at length in The Secret Doctrine, to which I must again refer you for detailed explanations. To conclude, the very soul of Theosophy is dead against Phallic worship; and its occult or esoteric section more so even than the exoteric teachings. There never was a more lying statement made than the above. And now ask me some other questions.

- oOo-

Is the Theosophical Society A Money-Making Concern?

Q. Agreed. Well, have either of the Founders, Colonel H. S. Olcott or H. P. Blavatsky, ever made any money, profit, or derived any worldly benefit from the T. S., as some papers say?

A. Not one penny. The papers lie. On the contrary, they have both given all they had, and literally beggared themselves. As for "worldly benefits," think of the slanders and vilification they have been subjected to, and then ask the question!

Q. Yet I have read in a good many missionary organs that the entrance fees and subscriptions much more than covered all expenses; and one said that the Founders were making twenty thousand pounds a year!

A. This is a fib, like many others. In the published accounts of January, 1889, you will find an exact statement of all the money ever received from any source since 1879. The total received from all sources (entrance fees, donations, etc., etc.) during these ten years is under six thousand pounds, and of this a large part was contributed by the Founders themselves from the proceeds of their private resources and their literary work. All this has been openly and officially admitted, even by our enemies, the Society for Psychical Research. And now both the Founders are penniless: one, too old

The Key To Theosophy - HP Blavatsky.txt

and ill to work as she did before, unable to spare time for outside literary work to help the Society in money, can only write for the Theosophical cause; the other keeps laboring for it as before, and receives as little thanks for it.

Q. But surely they need money to live?

A. Not at all. So long as they have food and lodging, even though they owe it to the devotion of a few friends, they need little more.

Q. But could not Madame Blavatsky, especially, make more than enough to live upon by her writings?

A. When in India she received on the average some thousand rupees a year for articles contributed to Russian and other papers, but gave it all away to the Society.

Q. Political articles?

A. Never. Everything she has written throughout the seven years of her stay in India is all there in print. It deals only with the religions, ethnology, and customs of India, and with Theosophy-never with politics, of which she knows nothing and cares less. Again, two years ago she refused several contracts amounting together to about 1,200 rubles in gold per month; for she could not accept them without abandoning her work for the Society, which needed all her time and strength. She has documents to prove it.

Q. But why could not both she and Colonel Olcott do as others-notably many Theosophists-do: follow out their respective professions and devote the surplus of their time to the work of the Society?

A. Because by serving two masters, either the professional or the philanthropic work would have had to suffer. Every true Theosophist is morally bound to sacrifice the personal to the impersonal, his own present good to the future benefit of other people. If the Founders do not set the example, who will?

Q. And are there many who follow it?

A. I am bound to answer you the truth. In Europe about half-a-dozen in all, out of more than that number of Branches.

Q. Then it is not true that the Theosophical Society has a large capital or endowment of its own?

A. It is false, for it has none at all. Now that the entrance fee of £1 and the small annual due have been abolished, it is even a doubtful question whether the staff at the headquarters in India will not soon be starved to death.

Q. Then why not raise subscriptions?

A. We are not the Salvation Army; we cannot and have never begged; nor have we ever followed the example of the Churches and sects and "taken up collections." That which is occasionally sent for the support of the Society, the small sums contributed by some devoted Fellows, are all voluntary donations.

Q. But I have heard of large sums of money given to Mme. Blavatsky. It was said four years ago that she got £5,000 from one rich, young "Fellow," who went out to join them in India, and £10,000 from another wealthy and well-known American gentleman, one of your members who died in Europe four years ago.

The Key To Theosophy - HP Blavatsky.txt

A. Say to those who told you this, that they either themselves utter, or repeat, a gross falsehood. Never has "Madame Blavatsky" asked or received one penny from the two above-named gentlemen, nor anything like that from anyone else, since the Theosophical Society was founded. Let any man living try to substantiate this slander, and it will be easier for him to prove that the Bank of England is bankrupt than that the said "Founder" has ever made any money out of Theosophy. These two slanders have been started by two high-born ladies, belonging to the London aristocracy, and have been immediately traced and disproved. They are the dead bodies, the carcasses of two inventions, which, after having been buried in the sea of oblivion, are once more raised on the surface of the stagnant waters of slander.

Q. Then I have been told of several large legacies left to the T.S. One-some £8,000-was left to it by some eccentric Englishman, who did not even belong to the Society. The other-£3,000 or £4,000-were testated by an Australian F.T.S. Is this true?

A. I heard of the first; and I also know that, whether legally left or not, the T.S. has never profited by it, nor have the Founders ever been officially notified of it. For, as our Society was not then a chartered body, and thus had no legal existence, the Judge at the Court of Probate, as we were told, paid no attention to such legacy and turned over the sum to the heirs. So much for the first. As for the second, it is quite true. The testator was one of our devoted Fellows, and willed all he had to the T.S. But when the President, Colonel Olcott, came to look into the matter, he found that the testator had children whom he had disinherited for some family reasons. Therefore, he called a council, and it was decided that the legacy should be refused, and the moneys passed to the legal heirs. The Theosophical Society would be untrue to its name were it to profit by money to which others are entitled virtually, at any rate on Theosophical principles, if not legally.

Q. Again, and I say this on the authority of your own Journal, The Theosophist, there's a R ja of India who donated to the Society 25,000 rupees. Have you not thanked him for his great bounty in the January Theosophist for 1888?

A. We have, in these words, "That the thanks of the Convention be conveyed to H.H. the Mah r ja ... for his promised generous gift of Rupees 25,000 to the Society's Fund." The thanks were duly conveyed, but the money is still a "promise," and has never reached the Headquarters.

Q. But surely, if the Mah r ja promised and received thanks for his gift publicly and in print, he will be as good as his promise?

A. He may, though the promise is 18 months old. I speak of the present and not of the future.

Q. Then how do you propose to go on?

A. So long as the T.S. has a few devoted members willing to work for it without reward and thanks, so long as a few good Theosophists support it with occasional donations, so long will it exist, and nothing can crush it.

Q. I have heard many Theosophists speak of a "power behind the Society" and of certain "Mahatmas," mentioned also in Mr. Sinnett's works, that are said to have founded the Society, to watch over and protect it.

A. You may laugh, but it is so.

- o0o-

The Working Staff of the T.S.

The Key To Theosophy - HP Blavatsky.txt

Q. These men, I have heard, are great Adepts, Alchemists, and what not. If, then, they can change lead into gold and make as much money as they like, besides doing all kinds of miracles at will, as related in Mr. Sinnett's The Occult World, why do not they find you money, and support the Founders and the Society in comfort?

A. Because they did not found a "miracle club." Because the Society is intended to help men to develop the powers latent in them through their own exertions and merit. Because whatever they may or may not produce in the way of phenomena, they are not false coiners; nor would they throw an additional and very strong temptation on the path of members and candidates: Theosophy is not to be bought. Hitherto, for the past 14 years, not a single working member has ever received pay or salary from either the Masters or the Society.

Q. Then are none of your workers paid at all?

A. Till now, not one. But as everyone has to eat, drink, and clothe himself, all those who are without any means of their own, and devote their whole time to the work of the Society, are provided with the necessaries of life at the Headquarters at Madras, India, though these "necessaries" are humble enough, in truth! But now that the Society's work has increased so greatly and still goes on increasing (owing to slanders) in Europe, we need more working hands. We hope to have a few members who will henceforth be remunerated-if the word can be used in the cases in question. For every one of these Fellows, who are preparing to give all their time to the Society, are quitting good official situations with excellent prospects, to work for us at less than half their former salary.

Q. And who will provide the funds for this?

A. Some of our Fellows who are just a little richer than the rest. The man who would speculate or make money on Theosophy would be unworthy to remain in our ranks.

Q. But you must surely make money by your books, magazines, and other publications?

A. The Theosophist of Madras, alone among the magazines, pays a profit, and this has regularly been turned over to the Society, year by year, as the published accounts show. Lucifer is slowly but steadily engulfing money, never yet having paid its expenses-thanks to its being boycotted by the pious booksellers and railway stalls. The Lotus, in France-started on the private and not very large means of a Theosophist, who has devoted to it his whole time and labor-has ceased to exist, owing to the same causes, alas! Nor does the New York Path pay its way, while the Revue Théosophique of Paris has only just been started, also from the private means of a lady-member. Moreover, whenever any of the works issued by the Theosophical Publishing Company in London do pay, the proceeds will be devoted to the service of the Society.

Q. And now please tell me all you can about the Mahatmas. So many absurd and contradictory things are said about them, that one does not know what to believe, and all sorts of ridiculous stories become current.

A. Well may you call them "ridiculous!"

The "Theosophical Mahatmas"

Are They "Spirits of Light" or "Goblins Damned"?

Q. Who are they, finally, those whom you call your "Masters"? Some say they are "Spirits," or some other kind of supernatural beings, while others call them "myths."

The Key To Theosophy - HP Blavatsky.txt

A. They are neither. I once heard one outsider say to another that they were a sort of male mermaids, whatever such a creature may be. But if you listen to what people say, you will never have a true conception of them. In the first place they are living men, born as we are born, and doomed to die like every other mortal.

Q. Yes, but it is rumored that some of them are a thousand years old. Is this true?

A. As true as the miraculous growth of hair on the head of Meredith's Shagpat. Truly, like the "Identical," no Theosophical shaving has hitherto been able to crop it. The more we deny them, the more we try to set people right, the more absurd do the inventions become. I have heard of Methuselah being 969 years old; but, not being forced to believe in it, have laughed at the statement, for which I was forthwith regarded by many as a blasphemous heretic.

Q. Seriously, though, do they outlive the ordinary age of men?

A. What do you call the ordinary age? I remember reading in The Lancet of a Mexican who was almost 190 years old; but I have never heard of mortal man, layman, or Adept, who could live even half the years allotted to Methuselah. Some Adepts do exceed, by a good deal, what you would call the ordinary age; yet there is nothing miraculous in it, and very few of them care to live very long.

Q. But what does the word Mahatma really mean?

A. Simply a "great soul," great through moral elevation and intellectual attainment. If the title of "Great" is given to a drunken soldier like Alexander, why should we not call those "Great" who have achieved far greater conquests in Nature's secrets, than Alexander ever did on the field of battle? Besides, the term is an Indian and a very old word.

Q. And why do you call them "Masters"?

A. We call them "Masters" because they are our teachers; and because from them we have derived all the Theosophical truths, however inadequately some of us may have expressed, and others understood, them. They are men of great learning, whom we term Initiates, and still greater holiness of life. They are not ascetics in the ordinary sense, though they certainly remain apart from the turmoil and strife of your western world.

Q. But is it not selfish thus to isolate themselves?

A. Where is the selfishness? Does not the fate of the Theosophical Society sufficiently prove that the world is neither ready to recognize them nor to profit by their teaching? Of what use would Professor Clerk Maxwell have been to instruct a class of little boys in their multiplication table? Besides, they isolate themselves only from the West. In their own country they go about as publicly as other people do.

Q. Don't you ascribe to them supernatural powers?

A. We believe in nothing supernatural, as I have told you already. Had Edison lived and invented his phonograph two hundred years ago, he would most probably have been burnt along with it, and the whole attributed to the devil. The powers which they exercise are simply the development of potencies lying latent in every man and woman, and the existence of which even official science begins to recognize.

Q. Is it true that these men inspire some of your writers, and that many, if not all, of your Theosophical works were written under their dictation?

The Key To Theosophy - HP Blavatsky.txt

A. Some have. There are passages entirely dictated by them verbatim, but in most cases they only inspire the ideas and leave the literary form to the writers.

Q. But this in itself is miraculous; is, in fact, a miracle. How can they do it?

A. My dear Sir, you are laboring under a great mistake, and it is science itself that will refute your arguments at no distant day. Why should it be a "miracle," as you call it? A miracle is supposed to mean some operation which is supernatural, whereas there is really nothing above or beyond Nature and Nature's laws. Among the many forms of the "miracle" which have come under modern scientific recognition, there is Hypnotism, and one phase of its power is known as "Suggestion," a form of thought transference, which has been successfully used in combating particular physical diseases, etc. The time is not far distant when the World of Science will be forced to acknowledge that there exists as much interaction between one mind and another, no matter at what distance, as between one body and another in closest contact. When two minds are sympathetically related, and the instruments through which they function are tuned to respond magnetically and electrically to one another, there is nothing which will prevent the transmission of thoughts from one to the other, at will; for since the mind is not of a tangible nature, that distance can divide it from the subject of its contemplation, it follows that the only difference that can exist between two minds is a difference of state. So if this latter hindrance is overcome, where is the "miracle" of thought transference, at whatever distance?

Q. But you will admit that Hypnotism does nothing so miraculous or wonderful as that?

A. On the contrary, it is a well-established fact that a Hypnotist can affect the brain of his subject so far as to produce an expression of his own thoughts, and even his words, through the organism of his subject; and although the phenomena attaching to this method of actual thought transference are as yet few in number, no one, I presume, will undertake to say how far their action may extend in the future, when the laws that govern their production are more scientifically established. And so, if such results can be produced by the knowledge of the mere rudiments of Hypnotism, what can prevent the Adept in Psychic and Spiritual powers from producing results which, with your present limited knowledge of their laws, you are inclined to call "miraculous"?

1. Then why do not our physicians experiment and try if they could not do as much? *)

*) Like e.g. prof. Bernheim and Dr. C. Lloyd Tuckey in England, profs. Beaunis and Ligeois in Nancy, Delboeuf in Liège, Burot en Bourru in Rochefort, Fontain and Sigard in Bordeaux, Forel in Zurich, and the physicians Despine in Marseille, Van Renterghem and Van Eeden in Amsterdam, Wetterstrand in Stockholm, Schrenck-Notzing in Leipzig and many other respected physicians and writers.

A. Because, first of all, they are not Adepts with a thorough understanding of the secrets and laws of psychic and spiritual realms, but materialists, afraid to step outside the narrow groove of matter; and, secondly, because they must fail at present, and indeed until they are brought to acknowledge that such powers are attainable.

Q. And could they be taught?

A. Not unless they were first of all prepared, by having the materialistic dross they have accumulated in their brains swept away to the very last

atom.

Q. This is very interesting. Tell me, have the Adepts thus inspired or dictated to many of your Theosophists?

A. No, on the contrary, to very few. Such operations require special conditions. An unscrupulous but skilled Adept of the Black Brotherhood ("Brothers of the Shadow," and Dugpas, we call them) has far less difficulties to labor under. For, having no laws of the Spiritual kind to trammel his actions, such a Dugpa "sorcerer" will most unceremoniously obtain control over any mind, and subject it entirely to his evil powers. But our Masters will never do that. They have no right, except by falling into Black Magic, to obtain full mastery over anyone's immortal Ego, and can therefore act only on the physical and psychic nature of the subject, leaving thereby the free will of the latter wholly undisturbed. Hence, unless a person has been brought into psychic relationship with the Masters, and is assisted by virtue of his full faith in, and devotion to, his Teachers, the latter, whenever transmitting their thoughts to one with whom these conditions are not fulfilled, experience great difficulties in penetrating into the cloudy chaos of that person's sphere. But this is no place to treat of a subject of this nature. Suffice it to say, that if the power exists, then there are Intelligences (embodied or disembodied) which guide this power, and living conscious instruments through whom it is transmitted and by whom it is received. We have only to beware of black magic.

Q. But what do you really mean by "black magic"?

A. Simply abuse of psychic powers, or of any secret of nature; the fact of applying to selfish and sinful ends the powers of Occultism. A hypnotist, who, taking advantage of his powers of "suggestion," forces a subject to steal or murder, would be called a black magician by us. The famous "rejuvenating system" of Dr. Brown-Sequard, of Paris, through a loathsome animal injection into human blood—a discovery all the medical papers of Europe are now discussing—if true, is unconscious black magic.

Q. But this is medieval belief in witchcraft and sorcery! Even Law itself has ceased to believe in such things?

A. So much the worse for law, as it has been led, through such a lack of discrimination, into committing more than one judiciary mistake and crime. It is the term alone that frightens you with its "superstitious" ring in it. Would not law punish an abuse of hypnotic powers, as I just mentioned? Nay, it has so punished it already in France and Germany; yet it would indignantly deny that it applied punishment to a crime of evident sorcery. You cannot believe in the efficacy and reality of the powers of suggestion by physicians and mesmerizers (or hypnotists), and then refuse to believe in the same powers when used for evil motives. And if you do, then you believe in Sorcery. You cannot believe in good and disbelieve in evil, accept genuine money and refuse to credit such a thing as false coin. Nothing can exist without its contrast, and no day, no light, no good could have any representation as such in your consciousness, were there no night, darkness, nor evil to offset and contrast them.

Q. Indeed, I have known men, who, while thoroughly believing in that which you call great psychic, or magic powers, laughed at the very mention of Witchcraft and Sorcery.

A. What does it prove? Simply that they are illogical. So much the worse for them, again. And we, knowing as we do of the existence of good and holy Adepts, believe as thoroughly in the existence of bad and unholy Adepts, or-Dugpas.

Q. But if the Masters exist, why don't they come out before all men and

refute once for all the many charges which are made against Mme. Blavatsky and the Society?

A. What charges?

Q. That they do not exist, and that she has invented them. That they are men of straw, "Mahatmas of muslin and bladders." Does not all this injure her reputation?

A. In what way can such an accusation injure her in reality? Did she ever make money on their presumed existence, or derive benefit, or fame, therefrom? I answer that she has gained only insults, abuse, and slanders, which would have been very painful had she not learned long ago to remain perfectly indifferent to such false charges. For what does it amount to, after all? Why, to an implied compliment, which, if the fools, her accusers, were not carried away by their blind hatred, they would have thought twice before uttering. To say that she has invented the Masters comes to this: She must have invented every bit of philosophy that has ever been given out in Theosophical literature. She must be the author of the letters from which Esoteric Buddhism was written; the sole inventor of every tenet found in The Secret Doctrine, which, if the world were just, would be recognized as supplying many of the missing links of science, as will be discovered a hundred years hence. By saying what they do, they are also giving her the credit of being far cleverer than the hundreds of men-many very clever and not a few scientific men-who believe in what she says, inasmuch as she must have fooled them all! If they speak the truth, then she must be several Mahatmas rolled into one like a nest of Chinese boxes; since among the so-called "Mahatma letters" are many in totally different and distinct styles, all of which her accusers declare that she has written.

Q. It is just what they say. But is it not very painful to her to be publicly denounced as "the most accomplished impostor of the age, whose name deserves to pass to posterity," as is done in the Report of the Society for Psychical Research?

A. It might be painful if it were true, or came from people less rabidly materialistic and prejudiced. As it is, personally she treats the whole matter with contempt, while the Mahatmas simply laugh at it. In truth, it is the greatest compliment that could be paid to her. I say so, again.

Q. But her enemies claim to have proved their case.

A. Aye, it is easy enough to make such a claim when you have constituted yourself judge, jury, and prosecuting counsel at once, as they did. But who, except their direct followers and our enemies, believe in it?

Q. But they sent a representative to India to investigate the matter, didn't they?

A. They did, and their final conclusion rests entirely on the unchecked statements and unverified assertions of this young gentleman. A lawyer who read through his report told a friend of mine that in all his experience he had never seen "such a ridiculous and self-condemnatory document." It was found to be full of suppositions and "working hypotheses" which mutually destroyed each other. Is this a serious charge?

Q. Yet it has done the Society great harm. Why, then, did she not vindicate her own character, at least, before a Court of Law?

A. Because: -

1. As a Theosophist, it is her duty to leave unheeded all personal insults.
2. Neither the Society nor Mme. Blavatsky had any money to waste over such a

lawsuit.

3. It would have been ridiculous for both to be untrue to their principles, because of an attack made on them by a flock of stupid old British wethers, who had been led to butt at them by an over-frolicsome lambkin from Australia.

Q. This is complimentary. But do you not think that it would have done real good to the cause of Theosophy, if she had authoritatively disproved the whole thing once for all?

A. Perhaps. But do you believe that any English jury or judge would have ever admitted the reality of psychic phenomena, even if entirely unprejudiced beforehand? And when you remember that they would have been set against us already by the "Russian Spy" scare, the charge of Atheism and infidelity, and all the other slanders that have been circulated against us, you cannot fail to see that such an attempt to obtain justice in a Court of Law would have been worse than fruitless! All this the psychic researchers knew well, and they took a base and mean advantage of their position to raise themselves above our heads and save themselves at our expense.

Q. The S. P. R. now denies completely the existence of the Mahatmas. They say that from beginning to end they were a romance which Madame Blavatsky has woven from her own brain?

A. Well, she might have done many things less clever than this. At any rate, we have not the slightest objection to this theory. As she always says now, she almost prefers that people should not believe in the Masters. She declares openly that she would rather people should seriously think that the only Mahatma and is the grey matter of her brain, and that, in short, she has evolved them out of the depths of her own inner consciousness, than that their names and grand ideal should be so infamously desecrated as they are at present. At first she used to protest indignantly against any doubts as to their existence. Now she never goes out of her way to prove or disprove it. Let people think what they like.

Q. But, of course, these Masters do exist?

A. We affirm they do. Nevertheless, this does not help much. Many people, even some Theosophists and ex-Theosophists, say that they have never had any proof of their existence. Very well; then Mme. Blavatsky replies with this alternative: If she has invented them, then she has also invented their philosophy and the practical knowledge which some few have acquired; and if so, what does it matter whether they do exist or not, since she herself is here, and her own existence, at any rate, can hardly be denied? If the knowledge supposed to have been imparted by them is good intrinsically, and it is accepted as such by many persons of more than average intelligence, why should there be such a hullabaloo made over that question? The fact of her being an impostor has never been proved, and will always remain sub judice; whereas it is a certain and undeniable fact that, by whomsoever invented, the philosophy preached by the "Masters" is one of the grandest and most beneficent philosophies once it is properly understood. Thus the slanderers, while moved by the lowest and meanest feelings—those of hatred, revenge, malice, wounded vanity, or disappointed ambition—seem quite unaware that they are paying the greatest tribute to her intellectual powers. So be it, if the poor fools will have it so. Really, Mme. Blavatsky has not the slightest objection to being represented by her enemies as a triple Adept, and a "Mahatma" to boot. It is only her unwillingness to pose in her own sight as a crow parading in peacock's feathers that compels her to this day to insist upon the truth.

Q. But if you have such wise and good men to guide the Society, how is it that so many mistakes have been made?

The Key To Theosophy - HP Blavatsky.txt

A. The Masters do not guide the Society, not even the Founders; and no one has ever asserted that they did: they only watch over, and protect it. This is amply proved by the fact that no mistakes have been able to cripple it, and no scandals from within, nor the most damaging attacks from without, have been able to overthrow it. The Masters look at the future, not at the present, and every mistake is so much more accumulated wisdom for days to come. That other "Master" who sent the man with the five talents did not tell him how to double them, nor did he prevent the foolish servant from burying his one talent in the earth. Each must acquire wisdom by his own experience and merits. The Christian Churches, who claim a far higher "Master," the very Holy Ghost itself, have ever been and are still guilty not only of "mistakes," but of a series of bloody crimes throughout the ages. Yet, no Christian would deny, for all that, his belief in that "Master"-I suppose?-although his existence is far more hypothetical than that of the Mahatmas; as no one has ever seen the Holy Ghost, and his guidance of the Church, moreover, their own ecclesiastical history distinctly contradicts. Errare humanum est. Let us return to our subject.

- o0o-

The Abuse of Sacred Names and Terms

Q. Then, what I have heard, namely, that many of your Theosophical writers claim to have been inspired by these Masters, or to have seen and conversed with them, is not true?

A. It may or it may not be true. How can I tell? The burden of proof rests with them. Some of them, a few-very few, indeed-have distinctly either lied or were hallucinated when boasting of such inspiration; others were truly inspired by great Adepts. The tree is known by its fruits; and as all Theosophists have to be judged by their deeds and not by what they write or say, so all Theosophical books must be accepted on their merits, and not according to any claim to authority which they may put forward.

Q. But would M^{me}. Blavatsky apply this to her own works-The Secret Doctrine, for instance?

A. Certainly; she says expressly in the Preface that she gives out the doctrines that she has learnt from the Masters, but claims no inspiration whatever for what she has lately written. As for our best Theosophists, they would also in this case far rather that the names of the Masters had never been mixed up with our books in any way. With few exceptions, most of such works are not only imperfect, but positively erroneous and misleading. Great are the desecrations to which the names of two of the Masters have been subjected. There is hardly a medium who has not claimed to have seen them. Every bogus swindling Society, for commercial purposes, now claims to be guided and directed by "Masters," often supposed to be far higher than ours! Many and heavy are the sins of those who advanced these claims, prompted either by desire for material gain, vanity, or irresponsible mediumship. Many persons have been plundered of their money by such societies, which offer to sell the secrets of power, knowledge, and spiritual truth for worthless gold. Worst of all, the sacred names of Occultism and the holy keepers thereof have been dragged in this filthy mire, polluted by being associated with sordid motives and immoral practices, while thousands of men have been held back from the path of truth and light through the discredit and evil report which such shams, swindles, and frauds have brought upon the whole subject. I say again, every earnest Theosophist regrets today, from the bottom of his heart, that these sacred names and things have ever been mentioned before the public, and fervently wishes that they had been kept secret within a small circle of trusted and devoted friends.

Q. The names certainly do occur very frequently now-a-days, and I never remember hearing of such persons as "Masters" till quite recently.

The Key To Theosophy - HP Blavatsky.txt

A. It is so; and had we acted on the wise principle of silence, instead of rushing into notoriety and publishing all we knew and heard, such desecration would never have occurred. Behold, only fourteen years ago, before the Theosophical Society was founded, all the talk was of "Spirits." They were everywhere, in everyone's mouth; and no one by any chance even dreamt of talking about living "Adepts," "Mahatmas," or "Masters." One hardly heard even the name of the Rosicrucians, while the existence of such a thing as "Occultism" was suspected even but by very few. Now all that is changed. We Theosophists were, unfortunately, the first to talk of these things, to make the fact of the existence in the East of "Adepts" and "Masters" and Occult knowledge known; and now the name has become common property. It is on us, now, that the Karma, the consequences of the resulting desecration of holy names and things, has fallen. All that you now find about such matters in current literature-and there is not a little of it-all is to be traced back to the impulse given in this direction by the Theosophical Society and its Founders. Our enemies profit to this day by our mistake. The most recent book directed against our teachings is alleged to have been written by an Adept of twenty years' standing. Now, it is a palpable lie. We know the amanuensis and his inspirers (as he is himself too ignorant to have written anything of the sort). These "inspirers" are living persons, revengeful and unscrupulous in proportion to their intellectual powers; and these bogus Adepts are not one, but several. The cycle of "Adepts," used as sledge-hammers to break the theosophical heads with, began twelve years ago, with Mrs. Emma Hardinge Britten's "Louis" of Art Magic and Ghostland, and now ends with the "Adept" and "Author" of The Light of Egypt, a work written by Spiritualists against Theosophy and its teachings. But it is useless to grieve over what is done, and we can only suffer in the hope that our indiscretions may have made it a little easier for others to find the way to these Masters, whose names are now everywhere taken in vain, and under cover of which so many iniquities have already been perpetrated.

Q. Do you reject "Louis" as an Adept?

A. We denounce no one, leaving this noble task to our enemies. The Spiritualistic author of Art Magic, etc., may or may not have been acquainted with such an Adept-and saying this, I say far less than what that lady has said and written about us and Theosophy for the last several years-that is her own business. Only when, in a solemn scene of mystic vision, an alleged "Adept" sees "spirits" presumably at Greenwich, England, through Lord Rosse's telescope, which was built in, and never moved from, Parsonstown, Ireland, I may well be permitted to wonder at the ignorance of that "Adept" in matters of science. This beats all the mistakes and blunders committed at times by the Chelas of our Teachers! And it is this "Adept" that is used now to break the teachings of our Masters!

Q. I quite understand your feeling in this matter, and think it only natural. And now, in view of all that you have said and explained to me, there is one subject on which I should like to ask you a few questions.

A. If I can answer them I will. What is that?

Conclusion

The Future of the Theosophical Society

Q. Tell me, what do you expect for Theosophy in the future?

A. If you speak of Theosophy, I answer that, as it has existed eternally throughout the endless cycles upon cycles of the Past, so it will ever exist throughout the infinitude of the Future, because Theosophy is synonymous with everlasting truth.

Q. Pardon me; I meant to ask you rather about the prospects of the Theosophical Society.

The Key To Theosophy - HP Blavatsky.txt

A. Its future will depend almost entirely upon the degree of selflessness, earnestness, devotion, and last, but not least, on the amount of knowledge and wisdom possessed by those members, on whom it will fall to carry on the work, and to direct the Society after the death of the Founders.

Q. I quite see the importance of their being selfless and devoted, but I do not quite grasp how their knowledge can be as vital a factor in the question as these other qualities. Surely the literature which already exists, and to which constant additions are still being made, ought to be sufficient?

A. I do not refer to technical knowledge of the esoteric doctrine, though that is most important; I spoke rather of the great need which our successors in the guidance of the Society will have of unbiased and clear judgment. Every such attempt as the Theosophical Society has hitherto ended in failure, because, sooner or later, it has degenerated into a sect, set up hard-and-fast dogmas of its own, and so lost by imperceptible degrees that vitality which living truth alone can impart. You must remember that all our members have been bred and born in some creed or religion, that all are more or less of their generation both physically and mentally, and consequently that their judgment is but too likely to be warped and unconsciously biased by some or all of these influences. If, then, they cannot be freed from such inherent bias, or at least taught to recognize it instantly and so avoid being led away by it, the result can only be that the Society will drift off onto some sandbank of thought or another, and there remain a stranded carcass to molder and die.

Q. But if this danger be averted?

A. Then the Society will live on into and through the twentieth century. It will gradually leaven and permeate the great mass of thinking and intelligent people with its large-minded and noble ideas of Religion, Duty, and Philanthropy. Slowly but surely it will burst asunder the iron fetters of creeds and dogmas, of social and caste prejudices; it will break down racial and national antipathies and barriers, and will open the way to the practical realization of the Brotherhood of all men. Through its teaching, through the philosophy which it has rendered accessible and intelligible to the modern mind, the West will learn to understand and appreciate the East at its true value. Further, the development of the psychic powers and faculties, the premonitory symptoms of which are already visible in America, will proceed healthily and normally. Mankind will be saved from the terrible dangers, both mental and bodily, which are inevitable when that unfolding takes place, as it threatens to do, in a hotbed of selfishness and all evil passions. Man's mental and psychic growth will proceed in harmony with his moral improvement, while his material surroundings will reflect the peace and fraternal goodwill which will reign in his mind, instead of the discord and strife which is everywhere apparent around us today.

Q. A truly delightful picture! But tell me, do you really expect all this to be accomplished in one short century?

A. Scarcely. But I must tell you that during the last quarter of every hundred years an attempt is made by those "Masters," of whom I have spoken, to help on the spiritual progress of Humanity in a marked and definite way. Towards the close of each century you will invariably find that an outpouring or upheaval of spirituality-or call it mysticism if you prefer-has taken place. Some one or more persons have appeared in the world as their agents, and a greater or less amount of occult knowledge and teaching has been given out. If you care to do so, you can trace these movements back, century by century, as far as our detailed historical records extend.

Q. But how does this bear on the future of the Theosophical Society?

The Key To Theosophy - HP Blavatsky.txt

A. If the present attempt, in the form of our Society, succeeds better than its predecessors have done, then it will be in existence as an organized, living, and healthy body when the time comes for the effort of the twentieth century. The general condition of men's minds and hearts will have been improved and purified by the spread of its teachings, and, as I have said, their prejudices and dogmatic illusions will have been, to some extent at least, removed. Not only so, but besides a large and accessible literature ready to men's hands, the next impulse will find a numerous and united body of people ready to welcome the new torch-bearer of Truth. He will find the minds of men prepared for his message, a language ready for him in which to clothe the new truths he brings, an organization awaiting his arrival, which will remove the merely mechanical, material obstacles and difficulties from his path. Think how much one, to whom such an opportunity is given, could accomplish. Measure it by comparison with what the Theosophical Society actually has achieved in the last fourteen years, without any of these advantages and surrounded by hosts of hindrances which would not hamper the new leader. Consider all this, and then tell me whether I am too sanguine when I say that if the Theosophical Society survives and lives true to its mission, to its original impulses through the next hundred years-tell me, I say, if I go too far in asserting that earth will be a heaven in the twenty-first century in comparison with what it is now!

finis

Glossary

Absoluteness When predicated of the Universal Principle, it denotes an abstraction, which is more correct and logical than to apply the adjective absolute to that which can have neither attributes nor limitations.

Adam Kadmon (Heb.)

Archetypal man, Humanity. The "Heavenly man" not fallen into sin. Cabalists refer it to the Ten Sephiroth on the plane of human perception.

In the Cabala Adam Kadmon is the manifested Logos corresponding to our third Logos, the unmanifested being the first paradigmic ideal man, and symbolizing the universe in abscondito, or in its "privation" in the Aristotelian sense.

The first Logos is "the light of the World," the second, and the third, its gradually deepening shadows.

Adept (Lat. adeptus) In Occultism, one who has reached the stage of initiation and become a master in the Science of Esoteric Philosophy.

Aether (Gr.) With the Ancients, the Divine luminiferous substance which pervades the whole universe; the "garment" of the Supreme Deity, Zeus, or Jupiter. With the Moderns, Ether, for the meaning of which, in physics and chemistry, see Webster's Dictionary, or some other. In Esotericism, Aether is the third principle of the Kosmic Septenary, matter (earth) being the lowest, and akasha, the highest.

Agathon (Gr.) Plato's Supreme Deity, lit. "the good." Our Alaya or the Soul of the World.

Agnostic A word first used by Professor Huxley, to indicate one who believes nothing which cannot be demonstrated by the senses.

Ahankara (Sans.) The conception of "I," self-consciousness or self-identity; the "I," or egoistical and Mayavic principle in man, due to our ignorance which separates our "I" from the Universal One-Self. Personality, egoism also.

The Key To Theosophy - HP Blavatsky.txt

Ain-Soph (Heb.) The "Boundless" or "Limitless" Deity emanating and extending. Ain-Soph is also written En-Soph and Ain-Suph, for no one, not even the Rabbis, are quite sure of their vowels. In the religious metaphysics of the old Hebrew philosophers, the One Principle was an abstraction like Parabrahman, though modern Cabalists have succeeded by mere dint of sophistry and paradoxes in making a "Supreme God" of it, and nothing higher. But with the early Chaldean Cabalists Ain-Soph was "without form or being" with "no likeness with anything else." That Ain-Soph has never been considered as the "Creator" is proved conclusively by the fact that such an orthodox Jew as Philo calls "creator" the Logos, who stands next the "Limitless One," and is "the Second God." "The Second God is in its (Ain-Soph's) wisdom," says Philo in *Quaest et Solut.* Deity is no-thing; it is nameless, and therefore called Ain-Soph-the word Ain meaning nothing.

Alchemy (Arabic Ul-Khemi) the chemistry of nature. Ul-Khemi or Al-Kimia, however, is really an Arabianized word, taken from the Greek 'chemeia' from 'chumos': "juice," extracted from a plant. Alchemy deals with the finer forces of nature and the various conditions of matter in which they are found to operate. Seeking under the veil of language, more or less artificial, to convey to the uninitiated so much of the *Mysterium Magnum* as is safe in the hands of a selfish world, the Alchemist postulates as his first principle, the existence of a certain Universal Solvent in the homogeneous substance from which the elements were evolved; which substance he calls pure gold, or *summum materiae*. This solvent, also called *menstruum universale*, possesses the power of removing all the seeds of disease out of the human body, of renewing youth, and prolonging life. Such is the *lapis philosophorum* (philosopher's stone). Alchemy first penetrated into Europe through Geber, the great Arabian sage and philosopher, in the eighth century of our era; but it was known and practiced long ages ago in China and Egypt. Numerous papyri on Alchemy, and other proofs that it was the favorite study of Kings and Priests, have been exhumed and preserved under the generic name of Hermetic treatises. Alchemy is studied under three distinct aspects, which admit of many different interpretations, viz.: the Cosmic, the Human, and the Terrestrial.

These three methods were typified under the three alchemical properties-sulphur, mercury, and salt. Different writers have stated that these are three, seven, ten, and twelve processes respectively; but they are all agreed there is but one object in Alchemy, which is to transmute gross metals into pure gold. But what that gold really is, very few people understand correctly. No doubt there is such a thing in Nature as transmutation of the baser metal into the nobler; but this is only one aspect of Alchemy, the terrestrial, or purely material, for we see logically the same process taking place in the bowels of the earth. Yet, besides and beyond this interpretation, there is in Alchemy a symbolical meaning, purely psychic and spiritual. While the Cabalist-Alchemist seeks for the realization of the former, the Occultist-Alchemist, spurning the gold of the earth, gives all his attention to and directs his efforts only towards the transmutation of the baser quaternary into the divine upper trinity of man, which when finally blended, is one. The spiritual, mental, psychic, and physical planes of human existence are in Alchemy compared to the four elements-fire, air, water, and earth, and are each capable of a three-fold constitution, i.e., fixed, unstable, and volatile. Little or nothing is known by the world concerning the origin of this archaic branch of philosophy; but it is certain that it antedates the construction of any known Zodiac, and as dealing with the personified forces of nature, probably also any of the mythologies of the world. Nor is there any doubt that the true secrets of transmutation (on the physical plane) were known in the days of old, and lost before the dawn of the so-called historical period. Modern chemistry owes its best fundamental discoveries to Alchemy, but regardless of the undeniable truism of the latter, that there is but one element in the universe, chemistry placed metals in the class of elements, and is only now beginning to find out its gross mistake. Even some encyclopedists are forced to confess that if most of the accounts of transmutation are fraud or

delusion,

... yet some of them are accompanied by testimony which renders them probable. By means of the galvanic battery even the alkalis have been discovered to have a metallic basis. The possibility of obtaining metal from other substances which contain the ingredients composing it, of changing one metal into another ... must therefore be left undecided. Nor are all Alchemists to be considered impostors. Many have labored under the conviction of obtaining their object, with indefatigable patience and purity of heart, which is soundly recommended by Alchemists as the principal requisite for the success of their labors.

Alexandrian School See Alexandrian Philosophers.

Alexandrian Philosophers This famous school arose in Alexandria, Egypt, which city was for long ages the seat of learning and philosophy. It was famous for its library, founded by Ptolemy Soter at the very beginning of his reign—a library which once boasted 700,000 rolls, or volumes (Aulus Gellius), for its museum, the first real Academy of Sciences and Arts, for its world-renowned scholars, such as Euclid, the father of scientific geometry; Apollonius of Perga, the author of the still-extant work on conic sections; Nicomachus, the arithmetician; for astronomers, natural philosophers, anatomists such as Herophilus and Erasistratus; physicians, musicians, artists, etc. But it became still more famous for its eclectic, or new Platonic school, founded by Ammonius Saccas in 173 ad, whose disciples were Origen, Plotinus, and many other men now famous in history. The most celebrated schools of the Gnostics had their origin in Alexandria. Philo-Judaeus, Josephus, Iamblichus, Porphyry, Clement of Alexandria, Eratosthenes the astronomer, Hypatia, the virgin philosopher, and numberless other stars of second magnitude, all belonged at various times to these great schools, and helped to make of Alexandria one of the most justly renowned seats of learning that the world has ever produced.

Altruism from Alter, other. A quality opposed to Egoism. Actions tending to do good to others, regardless of self.

Ammonius Saccas A great and good philosopher who lived in Alexandria between the second and third centuries of our Era, the founder of the Neo-Platonic School of the Philaletheians or "lovers of truth." He was of poor birth and born of Christian parents, but endowed with such prominent, almost divine goodness as to be called Theodidaktos, the "God-taught." He honored that which was good in Christianity, but broke with it and the Churches at an early age, being unable to find in Christianity any superiority over the old religions.

Analogeticians The disciples of Ammonius Saccas (see above) so called because of their practice of interpreting all sacred legends, myths, and mysteries by a principle of analogy and correspondence, which rule is now found in the Cabalistic system, and preeminently so in the schools of Esoteric philosophy in the East.

Ananda (Sans.) Bliss, joy, felicity, happiness. A name of a favorite disciple of Gautama, the Lord Buddha.

Anaxagoras A famous Ionian philosopher, who lived 500 bc, studied philosophy under Anaximenes of Miletus, and settled in the days of Pericles, at Athens. Socrates, Euripides, Archelaus, and other distinguished men and philosophers were among his disciples and pupils. He was a most learned astronomer, and was one of the first to explain openly that which was taught by Pythagoras secretly—viz., the movements of the planets, the eclipses of the sun and moon, etc. It was he who taught the theory of chaos, on the principle that "nothing comes from nothing," ex nihilo nihil fit—and of atoms, as the underlying essence and substance of all bodies, "of the same nature as the bodies which they formed." These atoms, he taught, were primarily put in

The Key To Theosophy - HP Blavatsky.txt

motion by nous (universal intelligence, the Mahat of the Hindus), which nous is an immaterial, eternal, spiritual entity; by this combination the world was formed, the material gross bodies sinking down, and the ethereal atoms (or fiery ether) rising and spreading in the upper celestial regions. Antedating modern science by over 2,000 years, he taught that the stars were of the same material as our earth, and the sun a glowing mass; that the moon was a dark uninhabitable body, receiving its light from the sun; and beyond the aforesaid science he confessed himself thoroughly convinced that the real existence of things, perceived by our senses, could not be demonstrably proved. He died in exile at Lampsacus, at the age of seventy-two.

Anima Mundi (Lat.) The "Soul of the World," the same as Alaya of the Northern Buddhists; the divine Essence which pervades, permeates, animates, and informs all things, from the smallest atom of matter to man and god. It is in a sense "the seven-skinned Mother" of the stanzas in The Secret Doctrine; the essence of seven planes of sentience, consciousness, and differentiation, both moral and physical. In its highest aspect it is Nirvana; in its lowest, the Astral Light. It was feminine with the Gnostics, the early Christians, and the Nazarenes; bisexual with other sects, who considered it only in its four lower planes, of igneous and ethereal nature in the objective world of forms, and divine and spiritual in its three higher planes. When it is said that every human soul was born by detaching itself from the Anima Mundi, it is meant, esoterically, that our higher Egos are of an essence identical with It, and Mahat is a radiation of the ever unknown Universal Absolute.

Anoia (Gr.) is "want of understanding," "folly"; and is the name applied by Plato and others to the lower Manas when too closely allied with Kama, which is characterized by irrationality (agnoia). The Greek agnoia is evidently a derivative of the Sanskrit ajñāna (phonetically agnyana), or ignorance, irrationality, and absence of knowledge.

Anthropomorphism From the Greek Anthropos, man. The act of endowing God or the gods with a human form and human attributes or qualities.

Anugita (Sans.) One of the Upanishads. A very occult treatise.

Apollo Belvidere Of all the ancient statues of Apollo, the son of Jupiter and Latona, called Phoebus, Helios, the radiant, and the Sun-the best and most perfect is the one of this name, which is in the Belvidere Gallery in the Vatican, at Rome. It is called the Pythian Apollo, as the god is represented in the moment of his victory over the serpent Python. The statue was found in the ruins of Antium in 1503.

Apollonius of Tyana A wonderful philosopher born in Cappadocia about the beginning of the first century; an ardent Pythagorean, who studied the Phoenician sciences under Euthydemus, and Pythagorean philosophy and other subjects under Euxenus of Heraclea. According to the tenets of the Pythagorean school he remained a vegetarian the whole of his long life, ate only fruit and herbs, drank no wine, wore vestments made only of plant fibers, walked barefooted and let his hair grow to the full length, as all the Initiates have done before and after him. He was initiated by the priests of the temple of Aesculapius (Asclepios) at Aegae, and learnt many of the "miracles" for healing the sick wrought by the God of medicine. Having prepared himself for a higher initiation by a silence of five years, and by travel-visiting Antioch, Ephesus, and Pamphylia and other parts-he repaired via Babylon to India, alone, all his disciples having abandoned him as they feared to go to the "land of enchantments." A casual disciple, Damis, whom he met on his way, accompanied him, however, on his travels. At Babylon he got initiated by the Chaldeans and Magi, according to Damis, whose narrative was copied by one named Philostratus one hundred years later. After his return from India, he showed himself a true Initiate in that the pestilence, earthquakes, deaths of kings, and other events, which he prophesied, duly happened.

At Lesbos, the priests of Orpheus got jealous of him, and refused to initiate him into their peculiar mysteries, though they did so several years later. He preached to the people of Athens and other States the purest and noblest ethics, and the phenomena he produced were as wonderful as they were numerous, and well authenticated. "How is it," inquires Justin Martyr, in dismay,

How is it that the talismans (telesmata) of Apollonius have power, for they prevent, as we see, the fury of the waves, and the violence of the winds, and the attacks of wild beasts; and whilst our Lord's miracles are preserved by tradition alone, those of Apollonius are most numerous, and actually manifested in present facts?

But an answer is easily found to this, in the fact that, after crossing the Hindu Koosh, Apollonius had been directed by a king to the abode of the Sages, whose abode it may be to this day, and who taught him their unsurpassed knowledge. His dialogues, with the Corinthian Menippus, give to us truly the esoteric catechism, and disclose (when understood) many an important mystery of nature. Apollonius was the friend, correspondent, and guest of kings and queens, and no wonderful or "magic" powers are better attested than his. Towards the close of his long and wonderful life he opened an esoteric school at Ephesus, and died at the ripe old age of one hundred years.

Archangel Highest, supreme angel. From the two Greek words, arch, "first," and angelos, "messenger."

Arhat (Sans.) also pronounced and written Arahāt, Arhan, Rahat, etc., "the worthy one," a perfected Aryan, one exempt from reincarnation, "deserving Divine honors." This was the name first given to the Jain, and subsequently to the Buddhist holy men initiated into the esoteric mysteries. The Arhat is one who has entered the last and highest path, and is thus emancipated from rebirth.

Arians The followers of Arius, a presbyter of the Church in Alexandria in the fourth century. One who holds that Christ is a created and human being, inferior to God the Father, though a grand and noble man, a true adept, versed in all the divine mysteries.

Aristobulus An Alexandrian writer, and an obscure philosopher. A Jew who tried to prove that Aristotle explained the esoteric thoughts of Moses.

Aryan (Sans.) Lit., "the holy"; those who had mastered the aryasatyani and entered the aryamarga path to Nirvana or Moksha, the great "fourfold" path. They were originally known as ishhis. But now the name has become the epithet of a race, and our Orientalists, depriving the Hindu Brahmins of their birthright, have made ryans of all Europeans. Since, in esotericism, the four paths or stages can only be entered through great spiritual development and "growth in holiness," they are called the aryamarga. The degrees of Arhatship, called respectively Srotapatti, Sakridagamin, Anagamin, and Arhat, or the four classes of aryas, correspond to the four paths and truths.

Aspect The form (Rupa) under which any principle in septenary man or nature manifests is called an aspect of that principle in Theosophy.

Astral Body The ethereal counterpart or double of any physical body- Doppelgänger.

Astrology The science which defines the action of celestial bodies upon mundane affairs, and claims to foretell future events from the positions of the stars. Its antiquity is such as to place it among the very earliest records of human learning. It remained for long ages a secret science in the

The Key To Theosophy - HP Blavatsky.txt

East, and its final expression remains so to this day, its esoteric application only having been brought to any degree of perfection in the West during the lapse of time since Varaha Mihira wrote his book on Astrology, some 1400 years ago. Claudius Ptolemy, the famous geographer and mathematician who founded the system of Astronomy known under his name, wrote his Tetrabiblos, which is still the basis of modern Astrology, in 135 ad. The science of Horoscopy is studied now chiefly under four heads, viz.:

1. Mundane, in its application to meteorology, seismology, husbandry.
2. State or Civic, in regard to the future of nations, Kings, and rulers.
3. Horary, in reference to the solving of doubts arising in the mind upon any subject.
4. Genethliacal in connection with the future of individuals from birth unto death.

The Egyptians and the Chaldeans were among the most ancient votaries of Astrology, though their modes of reading the stars and the modern methods differ considerably. The former claimed that Belus, the Bel or Elu of the Chaldeans, a scion of the Divine Dynasty, or the dynasty of the King-gods, had belonged to the land of Chemi, and had left it to found a colony from Egypt on the banks of the Euphrates, where a temple, ministered by priests in the service of the "lords of the stars," was built. As to the origin of the science, it is known on the one hand that Thebes claimed the honor of the invention of Astrology; whereas, on the other hand, all are agreed that it was the Chaldeans who taught that science to the other nations. Now Thebes antedated considerably, not only "Ur of the Chaldeans," but also Nipur, where Bel was first worshipped-Sin, his son (the moon), being the presiding deity of Ur, the land of the nativity of Terah, the Sabeian and Astrolater, and of Abram, his son, the great Astrologer of Biblical tradition. All tends, therefore, to corroborate the Egyptian claim. If later on the name of Astrologer fell into disrepute in Rome and elsewhere, it was owing to the frauds of those who wanted to make money of that which was part and parcel of the Sacred Science of the Mysteries, and who, ignorant of the latter, evolved a system based entirely on mathematics, instead of transcendental metaphysics with the physical celestial bodies as its Upadhi or material basis. Yet, all persecutions notwithstanding, the number of adherents to Astrology among the most intellectual and scientific minds was always very great. If Cardan and Kepler were among its ardent supporters, then later votaries have nothing to blush for, even in its now imperfect and distorted form. As said in Isis:

Astrology is to exact astronomy, what psychology is to exact physiology. In astrology and psychology one has to step beyond the visible world of matter and enter into the domain of transcendent spirit.

Athenagoras A Platonic Philosopher of Athens, who wrote an apology for the Christians in 177 ad, addressed to Marcus Aurelius, to prove that the accusations brought against them, viz., that they were incestuous and ate murdered children, were untrue.

Atma (Sans.) The Universal Spirit, the divine monad, "the seventh Principle," so called, in the exoteric "septenary" classification of man. The Supreme Soul.

Aura (Gr. and Lat.) A fine, delicate invisible essence or fluid that emanates from human, animal, and other bodies. It is a psychic effluvium partaking of both the mind and the body, as there is both an electro-vital and at the same time an electro-mental aura; called in Theosophy the akashic or magnetic aura. In R. C. Martyrology, a Saint.

Avatara (Sans.) Divine incarnation. The descent of a god or some exalted

The Key To Theosophy - HP Blavatsky.txt

Being who has progressed beyond the necessity for rebirth, into the body of a simple mortal. Krishna was an Avatara of Vishnu. The Dalai-Lama is regarded as an Avatara of Avalokitesvara and the Tashi-Lama as one of Tson-kha-pa, or Amitabha. These are two kinds of Avataras: one born from woman and the other "parentless," Anupapadaka.

Beness A term coined by Theosophists to render more accurately the essential meaning of the untranslatable word Sat. The latter word does not mean Being, for the term Being presupposes a sentient consciousness of existence. But as the term Sat is applied solely to the absolute principle, that universal, unknown, and ever unknowable principle which philosophical Pantheism postulates, calling it the basic root of Kosmos and Kosmos itself, it could not be translated by the simple term Being. Sat, indeed, is not even, as translated by some Orientalists, "the incomprehensible Entity," for it is no more an "Entity" than a non-entity, but both. It is as said absolute Beness-not "Being"-the one, secondless, undivided and indivisible All-the root of nature both visible and invisible, objective and subjective, comprehensible and never to be fully comprehended.

Bhagavad-Gita (Sans.) Lit., "the Lord's Song," a portion of The Mahabharata, the great epic poem of India. It contains a dialogue wherein Krishna (the "Charioteer") and Arjuna (his Chela) have a discussion upon the highest spiritual philosophy. The work is preeminently occult or esoteric.

Black Magic Sorcery; necromancy, or the raising of the dead and other selfish abuses of abnormal powers. This abuse may be unintentional; still it has to remain "black" magic whenever anything is produced phenomenally simply for one's own gratification.

Böhme, Jacob A mystic and great philosopher, one of the most prominent Theosophists of the medieval ages. He was born about 1575 at Old Diedenberg, some two miles from Görlitz (Silesia), and died in 1624, being nearly fifty years old. When a boy he was a common shepherd, and, after learning to read and write in a village school, became an apprentice to a poor shoemaker at Görlitz. He was a natural clairvoyant of the most wonderful power. With no education or acquaintance with science he wrote works which are now proved to be full of scientific truths; but these, as he himself says of what he wrote, he "saw as in a Great Deep in the Eternal." He had "a thorough view of the universe, as in chaos," which yet opened itself in him, from time to time, "as in a young planet," he says. He was a thorough born mystic, and evidently of a constitution which is most rare; one of those fine natures whose material envelope impedes in no way the direct, even if only occasional, intercommunication between the intellectual and spiritual Ego. It is this Ego which Jacob Böhme, as so many other untrained mystics, mistook for God. "Man must acknowledge," he writes, "that his knowledge is not his own, but from God, who manifests the Ideas of Wisdom to the Soul of Man in what measure he pleases." Had this great Theosophist been born 300 years later he might have expressed it otherwise. He would have known that the "God" who spoke through his poor uncultured and untrained brain was his own Divine Ego, the omniscient Deity within himself, and that what that Deity gave out was not "what measure he pleased," but in the measure of the capacities of the mortal and temporary dwelling it informed.

Book of the Keys An ancient Cabalistic work. The original is no longer extant, though there may be spurious and disfigured copies and forgeries of it.

Brahma (Sans.) The student must distinguish between the neuter Brahma, and the male Creator of the Indian Pantheon, Brahmā. The former Brahma or Brahman is the impersonal, Supreme, and uncognizable Soul of the Universe, from the essence of which all emanates, and into which all returns; which is incorporeal, immaterial, unborn, eternal, beginningless, and endless. It is all-pervading, animating the highest god as well as the smallest mineral atom. Brahmā, on the other hand, the male and the alleged Creator, exists in

his manifestation periodically only, and passes into pralaya, i. e., disappears and is annihilated as periodically. (see below)

Brahmā's Day A period of 2,160,000,000 years, during which Brahmā, having emerged out of his Golden Egg (Hiranyagarbha), creates and fashions the material world (for he is simply the fertilizing and creative force in Nature). After this period the worlds being destroyed in turn by fire and water, he vanishes with objective nature; and then comes the Night of Brahmā (see below).

Brahmā's Night A period of equal duration to Brahmā's Day, in which Brahmā is said to be asleep. Upon awakening he recommences the process, and this goes on for an age of Brahmā composed of alternate "Days" and "Nights," and lasting for 100 years of 2,160,000,000 each. It requires fifteen figures to express the duration of such an age, after the expiration of which the Maha-Pralaya or Great Dissolution sets in, and lasts in its turn for the same space of fifteen figures.

Brahma-Vidya (Sans.) The knowledge or Esoteric Science about the true nature of Brahma and Brahmā.

Buddha (Sans.) "The enlightened." Generally known as the title of Gautama Buddha, the Prince of Kapilavastu, the founder of modern Buddhism. The highest degree of knowledge and holiness. To become a Buddha one has to break through the bondage of sense and personality; to acquire a complete perception of the real Self, and learn not to separate it from all the other Selves; to learn by experience the utter unreality of all phenomena, foremost of all the visible Kosmos; to attain a complete detachment from all that is evanescent and finite, and to live while yet on earth only in the immortal and everlasting.

Buddhi (Sans.) Universal Soul or Mind. Maha-Buddhi is a name of Mahat; also the Spiritual Soul in man (the sixth principle exoterically), the vehicle of atma, the seventh, according to the exoteric enumeration.

Buddhism the religious philosophy taught by Gautama Buddha. It is now split into two distinct churches: the Southern and Northern. The former is said to be the purer, as having preserved more religiously the original teachings of the Lord Buddha. The Northern Buddhism is confined to Tibet, China, and Nepal. But this distinction is incorrect. If the Southern Church is nearer, and has not, in fact, departed, except perhaps in trifling dogmas, due to the many councils held after the death of the Master, from the public or exoteric teachings of Sakyamuni, the Northern Church is the outcome of Siddhartha Buddha's esoteric teachings which he confined to his elect Bhikshus and Arhats. Buddhism, in fact, cannot be justly judged in our age either by one or the other of its exoteric popular forms. Real Buddhism can be appreciated only by blending the philosophy of the Southern Church and the metaphysics of the Northern Schools. If one seems too iconoclastic and stern, and the other too metaphysical and transcendental, events being overcharged with the weeds of Indian exotericism-many of the gods of its Pantheon having been transplanted under new names into Tibetan soil-it is due to the popular expression of Buddhism in both churches. Correspondentially, they stand in their relation to each other as Protestantism to Roman Catholicism. Both err by an excess of zeal and erroneous interpretations, though neither the Southern nor the Northern Buddhist clergy have ever departed from Truth consciously, still less have they acted under the dictates of priestocracy, ambition, or an eye to personal gain and power, as the later churches have.

Buddhi-Taijas (Sans.) A very mystic term, capable of several interpretations. In Occultism, however, and in relation to the human principles (exoterically), it is a term to express the state of our dual Manas, when, reunited during a man's life, it bathes in the radiance of Buddhi, the Spiritual Soul. For Taijas means the radiant, and Manas,

The Key To Theosophy - HP Blavatsky.txt

becoming radiant in consequence of its union with Buddhi, and being, so to speak, merged into it, is identified with the latter; the trinity has become one; and, as the element of Buddhi is the highest, it becomes Buddhi-Taijas. In short, it is the human soul illuminated by the radiance of the divine soul, the human reason lit by the light of the Spirit or Divine Self-Consciousness.

Cabala (Heb.)

The hidden wisdom of the Hebrew Rabbis of the middle ages derived from the older secret doctrines concerning divine things and cosmogony, which were combined into a theology after the time of the captivity of the Jews in Babylon.

All the works that fall under the esoteric category are termed Cabalistic.

Caste Originally the system of the four hereditary classes into which Indian population was divided: Brahmana, Kshatriya, Vaisya, and Sudra- (a) descendant of Brahmā; (b) warrior; (c) mercantile, and (d) the lowest or agricultural Sudra class. From these four, hundreds of divisions and minor castes have sprung.

Causal Body This "body," which is in reality no body at all, either objective or subjective, but Buddhi the Spiritual Soul, is so-called because it is the direct cause of the Sushupti state leading to the Turiya state, the highest state of Samadhi. It is called Karanopadhi, "the basis of the cause," by the "Taraka Raja" Yogis, and in the Vedanta System corresponds to both the Vijñānamaya and Anandamayakosha (the latter coming next to Atma, and therefore being the vehicle of the Universal Spirit). Buddhi alone could not be called a "Causal body," but becomes one in conjunction with Manas, the incarnating Entity or Ego.

Chela (Sans.) A disciple. The pupil of a Guru or Sage, the follower of some Adept, or a school of philosophy.

Chrétos (Gr.) The early gnostic term for Christ. This technical term was used in the fifth century bc by Aeschylus, Herodotus and others. The Manteumata pythocresta, or the "Oracles delivered by a Pythian God" through a pythoness, are mentioned by the former (Cho. 901), and Pythocrétos is derived from chrao. Chrésterion is not only "the test of an oracle," but an offering to, or for, the oracle. Chrétes is one who explains oracles, a "prophet and soothsayer," and Chrésterios, one who serves an oracle or a God. The earliest Christian writer, Justin Martyr, in his first Apology, calls his coreligionists Chréstians. "It is only through ignorance that men call themselves Christians, instead of Chréstians," says Lactantius. The terms Christ and Christians, spelt originally Chrést and Chréstians, were borrowed from the Temple vocabulary of the Pagans. Chrétos meant, in that vocabulary, "a disciple on probation," a candidate for hierophantship; who, when he had attained it, through Initiation, long trials and suffering, and had been anointed (i. e., "rubbed with oil," as Initiates and even Idols of the Gods were, as the last touch of ritualistic observance), was changed into Christos-the "purified" in esoteric or mystery language. In mystic symbology, indeed, Christes or Christos meant that the "way," the Path, was already trodden and the goal reached; when the fruits of the arduous labor, uniting the personality of evanescent clay with the indestructible Individuality, transformed it thereby into the immortal Ego. "At the end of the way stands the Christes," the Purifier; and the union once accomplished, the Chrétos, the "man of sorrow" became Christos himself. Paul, the Initiate, knew this, and meant this precisely, when he is made to say in bad translation, "I travail in birth again until Christ be formed in you," the true rendering of which is, "... until you form the Christos within yourselves." But the profane, who knew only that Chrétos was in some way connected with priest and prophet, and knew nothing about the hidden meaning of Christos, insisted, as did Lactantius and Justin Martyr, on being called

Chréstians instead of Christians. Every good individual, therefore, may find Christ in his "inner man," as Paul expresses it, whether he be Jew, Muslim, Hindu, or Christian.

Christ See Chréstos.

Christian Scientist A newly-coined term for denoting the practitioners of a healing art by will. The name is a misnomer, since Buddhist or Jew, Hindu or Materialist can practice this new form of Western Yoga with like success if he can only guide and control his will with sufficient firmness. "Mental Scientists" is another rival school. These work by a universal denial of every disease and evil imaginable, and claim, syllogistically, that since Universal Spirit cannot be subject to the ailing of flesh, and since every atom is Spirit and in Spirit, and since, finally, they-the healers and the healed-are all absorbed in this Spirit or Deity, there is not, nor can there be, such a thing as disease. This prevents in nowise both Christian and Mental Scientists from succumbing to disease and nursing chronic diseases for years in their own bodies just like other ordinary mortals.

Clairaudience The faculty-whether innate or acquired by occult training-to hear things at whatever distance.

Clairvoyance A faculty of seeing with the inner eye or spiritual sight. As now used, it is a loose and flippant term, embracing under its meaning both a happy guess due to natural shrewdness or intuition, and also that faculty which was so remarkably exercised by Jacob Böhme and Swedenborg. Yet even these two great seers, since they could never rise superior to the general spirit of the Jewish Bible and Sectarian teachings, have sadly confused what they saw, and fallen far short of true clairvoyance.

Clemens Alexandrinus A Church Father and voluminous writer, who had been a Neo-Platonist and a disciple of Ammonius Saccas. He was one of the few Christian philosophers between the second and third centuries of our era, at Alexandria.

College of Rabbis A college at Babylon; most famous during the early centuries of Christianity, but its glory was greatly darkened by the appearance in Alexandria of Hellenic teachers, such as Philo-Judaeus, Josephus, Aristobulus, and others. The former avenged themselves on their successful rivals by speaking of the Alexandrians as Theurgists and unclean prophets. But the Alexandrian believers in thaumaturgy were not regarded as sinners and impostors when orthodox Jews were at the head of such schools of "hazim." There were colleges for teaching prophecy and occult sciences. Samuel was the chief of such a college at Ramah; Elisha, at Jericho. Hillel had a regular academy for prophets and seers; and it is Hillel, a pupil of the Babylonian College, who was the founder of the sect of the Pharisees and the great orthodox Rabbis.

Cycle (Gr. Kuklos) The ancients divided time into endless cycles, wheels within wheels, all such periods being of various durations, and each marking the beginning or end of some event either cosmic, mundane, physical, or metaphysical. There were cycles of only a few years, and cycles of immense duration, the great Orphic cycle referring to the ethnological change of races lasting 120,000 years, and that of Cassandrus of 136,000, which brought about a complete change in planetary influences and their correlations between men and gods-a fact entirely lost sight of by modern astrologers.

Deist One who admits the possibility of the existence of a God or gods, but claims to know nothing of either, and denies revelation. An agnostic of olden times.

Deva (Sans.) A god, a "resplendent" Deity, Deva-Deus, from the root div, "to shine." A Deva is a celestial being-whether good, bad or indifferent-which

inhabits "the three worlds," or the three planes above us. There are 33 groups or millions of them.

Devachan (Sans.) The "Dwelling of the Gods." A state intermediate between two earth-lives, and into which the Ego (Atma-Buddhi-Manas, or the Trinity made one) enters after its separation from Kamarupa, and the disintegration of the lower principles, after the death of the body, on Earth.

Dhammapada (Sans.) A work containing various aphorisms from the Buddhist Scriptures.

Dhyana (Sans.) One of the six Paramitas of perfection. A state of abstraction which carries the ascetic practicing it far above the region of sensuous perception, and out of the world of matter. Lit., contemplation. The six stages of Dhyani differ only in the degrees of abstraction of the personal Ego from sensuous life.

Dhyani-Chohans (Sans.) Lit., "The Lords of Light." The highest gods, answering to the Roman Catholic Archangels. The divine Intelligences charged with the supervision of Kosmos.

Double The same as the Astral body or "Doppelgänger."

Ecstasis (Gr.) A psycho-spiritual state; a physical trance which induces clairvoyance, and a beatific state which brings on visions.

Ego (Lat.) "I"; the consciousness in man of the "I am I," or the feeling of I-am-ship. Esoteric philosophy teaches the existence of two Egos in man, the mortal or personal, and the higher, the divine or impersonal, calling the former "personality," and the latter "individuality."

Egoity (from the word Ego). Egoity means "individuality"-never "personality," as it is the opposite of Egoism or "selfishness," the characteristic par excellence of the latter.

Eidolon (Gr.) The same as that which we term the human phantom, the Astral form.

Elementals (Spirits of the Elements) The creatures evolved in the Four Kingdoms, or Elements-Earth, Air, Fire, and Water. They are called by the Cabalists, Gnomes (of the Earth), Sylphs (of the Air), Salamanders (of the Fire), and Undines (of the Water), except a few of the higher kinds and their rulers. They are rather the forces of nature than ethereal men and women. These forces, as the servile agents of the occultist, may produce various effects; but if employed by elementaries (Kamarupas)-in which case they enslave the mediums-they will deceive. All the lower invisible beings generated on the fifth, sixth, and seventh Planes of our terrestrial atmosphere are called Elementals-Peris, Devs, Djins, Sylvans, Satyrs, Fauns, Elves, Dwarfs, Trolls, Norns, Kobolds, Brownies, Nixies, Goblins, Pinkies, Banshees, Moss People, White Ladies, Spooks, Fairies, etc., etc.

Eleusinia (Gr.) The Eleusinian Mysteries were the most famous and the most ancient of all the Greek mysteries (save the Samothracian), and were performed near the hamlet of Eleusis, not far from Athens. Epiphanius traces them to the days of Iacchos (1800 bc) They were held in honor of Demeter, the great Ceres, and the Egyptian Isis; and the last act of the performance referred to a sacrificial victim of atonement and a resurrection, when the Initiate was admitted to the highest degree of Eopt. The festival of the Mysteries began in the month of Boëdromion (September), the time of grape-gathering, and lasted from the 15th to the 22nd-seven days. The Hebrew Feast of Tabernacles-the feast of ingatherings-in the month of Ethanim (the seventh) also began on the 15th and ended on the 22nd of that month. The name of the month (Ethanim) is derived, according to some, from Adonim, Adonia, Attenim, Ethanim, and was in honor of Adonai, or Adonis (Tham),

whose death was lamented by the Hebrews in the groves of Bethlehem. The sacrifice of "Bread and Wine" was performed both in the Eleusinia and during the Feast of Tabernacles.

Emanation (the doctrine of) is in its metaphysical meaning opposed to evolution, yet one with it. Science teaches that, physiologically, evolution is a mode of generation in which the germ that develops the fetus preexists already in the parent, the development and final form and characteristics of that germ being accomplished by nature; and that (as in its cosmology) the process takes place blindly, through the correlation of the elements and their various compounds. Occultism teaches that this is only the apparent mode, the real process being Emanation, guided by intelligent forces under an immutable Law. Therefore, while the Occultists and Theosophists believe thoroughly in the doctrine of Evolution as given out by Kapila and Manu, they are Emanationists rather than Evolutionists. The doctrine of Emanation was at one time universal. It was taught by the Alexandrian, as well as by the Indian philosophers, by the Egyptian, the Chaldean, and Hellenic Hierophants, and also by the Hebrews (in their Cabala, and even in Genesis). For it is only owing to deliberate mistranslation that the Hebrew word asdt was translated "angels" from the Septuagint, while it means Emanations, Aeons, just as with the Gnostics. Indeed, in Deuteronomy the word asdt or ashdt is translated as "fiery law," whilst the correct rendering of the passage should be, "from his right went (not a fiery law, but) a fire according to law," viz., that the fire of one flame is imparted to and caught up by another-like as in a trail of inflammable substance. This is precisely Emanation, as shown in Isis Unveiled.

In Evolution, as it is now beginning to be understood, there is supposed to be in all matter an impulse to take on a higher form-a supposition clearly expressed by Manu and other Hindu philosophers of the highest antiquity. The philosopher's tree illustrates it in the case of the zinc solution. The controversy between the followers of this school and the Emanationists may be briefly stated thus: The Evolutionist stops all inquiry at the borders of "the unknowable." The Emanationist believes that nothing can be evolved-or, as the word means, unwombed or born-except it has first been involved, thus indicating that life is from a spiritual potency above the whole.

Esoteric Hidden, secret. From the Greek Esotericos-"inner," concealed.

Esoteric Bodhism Secret wisdom or intelligence, from the Greek Esotericos, "inner," and the Sanskrit Bodhi, "knowledge," in contradistinction to Buddhi, "the faculty of knowledge or intelligence," and Buddhism, the philosophy or Law of Buddha (the Enlightened). Also written "Budhism," from Budha (Intelligence, Wisdom) the Son of Soma.

Exoteric (Gr.) Outward, public; the opposite of esoteric or hidden.

Extra-Cosmic Outside of Kosmos or Nature. A nonsensical word invented to assert the existence of a personal god independent of or outside Nature per se; for as Nature, or the Universe, is infinite and limitless there can be nothing outside it. The term is coined in opposition to the Pantheistic idea that the whole Kosmos is animated or informed with the Spirit of Deity, Nature being but the garment, and matter the illusive shadows, of the real unseen Presence.

Eurasians An abbreviation of "European-Asians." The mixed colored races; the children of the white fathers, and the dark mothers of India, and vice versa.

Ferho (Gnostic). The highest and greatest creative power with the Nazarene Gnostics (Codex Nazaraeus).

Fire-Philosophers The name given to the Hermetists and Alchemists of the Middle Ages, and also to the Rosicrucians. The latter, the successors of

The Key To Theosophy - HP Blavatsky.txt

Theurgists, regarded fire as the symbol of Deity. It was the source, not only of material atoms, but the container of the Spiritual and Psychic Forces energizing them. Broadly analyzed, Fire is a triple principle; esoterically, a septenary, as are all the rest of the elements. As man is composed of Spirit, Soul, and Body, plus a fourfold aspect; so is Fire. As in the works of Robert Flood (de Fluctibus), one of the famous Rosicrucians, fire contains-Firstly, a visible flame (body); secondly, an invisible, astral fire (soul); and thirdly, spirit. The four aspects are (a) heat (life), (b) light (mind), (c) electricity (Kamic or molecular powers), and (d) the synthetic essences, beyond spirit, or the radical cause of its existence and manifestation. For the Hermetist or Rosicrucian, when a flame is extinct on the objective plane, it has only passed from the seen world into the unseen; from the knowable into the unknowable.

Gautama (Sans.) A name in India. It is that of the Prince of Kapilavastu, son of Sudhodana, the Sākya King of a small territory on the borders of Nepal, born in the seventh century bc, now called the "Savior of the world." Gautama or Gotama was the sacerdotal name of the Sākya family. Born a simple mortal, he rose to Buddhahood through his own personal and unaided merit; a man-veryly greater than any God!

Gebirol Salomon Ben Jehudah, called in literature Avicbron. An Israelite by birth, a philosopher, poet, and Cabalist; a voluminous writer and a mystic. He was born in the eleventh century at Malaga (1021), educated at Saragossa, and died at Valencia in 1070, murdered by a Mohammedan. His fellow-religionists called him Salomon, the Sephardi, or the Spaniard, and the Arabs, Abu Ayyub Suleiman-ben ya'hya Ibn Dgebirol, whilst the Scholastics named him Avicbron (see Myers' Quabbalah). Ibn Gebirol was certainly one of the greatest philosophers and scholars of his age. He wrote much in Arabic, and most of his manuscript have been preserved. His greatest work appears to be The Megôr Hayyim, i. e., The Fountain of Life, "one of the earliest exposures of the secrets of the Speculative Cabala," as his biographer informs us.

Gnosis (Gr.) Lit. "knowledge." The technical term used by the schools of religious philosophy, both before and during the first centuries of so-called Christianity, to denote the object of their enquiry. This spiritual and sacred knowledge, the Gupta-Vidya of the Hindus, could only be obtained by Initiation into Spiritual Mysteries of which the ceremonial "Mysteries" were a type.

Gnostics (Gr.) The philosophers who formulated and taught the "Gnosis" or knowledge. They flourished in the first three centuries of the Christian Era. The following were eminent: Valentinus, Basilides, Marcion, Simon Magus, etc.

Golden Age The ancients divided the life cycle into the Golden, Silver, Bronze, and Iron Ages. The Golden was an age of primeval purity, simplicity, and general happiness.

Great Age There were several "Great Ages" mentioned by the ancients. In India it embraced the whole Maha-Manvantara the "Age of Brahmâ," each "Day" of which represents the Life Cycle of a chain, i. e., it embraces a period of Seven Rounds. Thus while a "Day" and a "Night" represent, as Manvantara and Pralaya, 8,640,000,000 years, an "age" lasts through a period of 311,040,000,000; after which the Pralaya or dissolution of the universe becomes universal. With the Egyptian and Greeks the "Great Age" referred only to the Tropical, or Sidereal year, the duration of which is 25,868 solar years. Of the complete age-that of the Gods-they said nothing, as it was a matter to be discussed and divulged only at the Mysteries, and during the Initiation Ceremonies. The "Great Age" of the Chaldeans was the same in figures as that of the Hindus.

Guhya-Vidya (Sans.) The secret knowledge of mystic-mantras.

Gupta-Vidya (Sans.) The same as Guhya-Vidya . Esoteric or secret science, knowledge.

Gyges "The ring of Gyges" has become a familiar metaphor in European literature. Gyges was a Lydian, who, after murdering the King Candaules, married his widow. Plato tells us that Gyges descending once into a chasm of the earth, discovered a brazen horse, within whose opened side was the skeleton of a man of gigantic stature, who had a brazen ring on his finger. This ring when placed on his own finger made him invisible.

Hades (Gr.), or Aides, the "invisible," the land of shadows; one of whose regions was Tartarus, a place of complete darkness, as was also the region of profound dreamless sleep in Amenti. Judging by the allegorical description of the punishments inflicted therein, the place was purely Karmic. Neither Hades nor Amenti were the Hell still preached by some retrograde priests and clergymen; and whether represented by the Elysian Fields or by Tartarus, they could only be reached by crossing the river to the "other shore." As well expressed in the "Egyptian Belief," the story of Charon, the ferryman (of the Styx) is to be found not only in Homer, but in the poetry of many lands. The River must be crossed before gaining the Isles of the Blest. The Ritual of Egypt described a Charon and his boat long ages before Homer. He is Khu-en-na, "the hawk-headed steersman." (See Hell.)

Hallucinations A state produced sometimes by physiological disorders, sometimes by mediumship, and at others by drunkenness. But the cause that produces the visions has to be sought deeper than physiology. All such, particularly when produced through mediumship, are preceded by a relaxation of the nervous system, generating invariably an abnormal magnetic condition which attracts to the sufferer waves of astral light. It is these latter that furnish the various hallucinations, which, however, are not always, as physicians would explain them, mere empty and unreal dreams. No one can see that which does not exist-i. e., which is not impressed-in or on the astral waves. But a seer may perceive objects and scenes (whether past, present, or future) which have no relation whatever to himself; and perceive, moreover, several things entirely disconnected with each other at one and the same time, so as to produce the most grotesque and absurd combinations. But drunkard and seer, medium and adept see their respective visions in the astral light; only while the drunkard, the madman, and the untrained medium, or one in a brain fever, see, because they cannot help it, and evoke jumbled visions unconsciously to themselves without being able to control them, the adept and the trained Seer have the choice and the control of such visions. They know where to fix their gaze, how to steady the scenes they wish to observe, and how to see beyond the upper outward layers of the astral light. With the former such glimpses into the waves are hallucinations; with the latter they become the faithful reproduction of what actually has been, is, or will be taking place. The glimpses at random, caught by the medium, and his flickering visions in the deceptive light, are transformed under the guiding will of the adept and seer into steady pictures, the truthful representation of that which he wills to come within the focus of his perception.

Hell A term which the Anglo-Saxon race has evidently derived from the name of the Scandinavian goddess, Hela, just as the word ad, in Russian and other Slavonian tongues expressing the same conception, is derived from the Greek Hades, the only difference between the Scandinavian cold Hell, and the hot Hell of the Christians, being found in their respective temperatures. But even the idea of these overheated regions is not original with the Europeans, many people having entertained the conception of an underworld climate; as well we may, if we localize our Hell in the center of the earth. All exoteric religions-the creeds of the Brahmins, Buddhists, Zoroastrians, Mohammedans, Jews, and the rest, made their Hells hot and dark, though many were more attractive than frightful. The idea of a hot Hell is an afterthought, the distortion of an astronomical allegory. With the Egyptians

The Key To Theosophy - HP Blavatsky.txt

Hell became a place of punishment by fire not earlier than the 17th or 18th Dynasty, when Typhon was transformed from a God into a Devil. But at whatever time they implanted this dread superstition in the minds of the poor ignorant masses, the scheme of a burning Hell and souls tormented therein is purely Egyptian. Ra (the Sun) became the Lord of the Furnace, in Karr, the Hell of the Pharaohs, and the sinner was threatened with misery "in the heat of infernal fires." "A lion was there," says Dr. Birch, "and was called the roaring monster." Another describes the place as "the bottomless pit and lake of fire, into which the victims are thrown" (compare Revelation). The Hebrew word *gai-hinnom* (*gehena*) had never really the significance given to it in Christian orthodoxy.

Hermas An ancient Greek writer, of whose works only a few fragments now remain extant.

Hierogrammatists (Gr.) The title given to those Egyptian priests who were entrusted with the writing and reading of the sacred and secret records. The "scribes of the secret records" literally. They were the instructors of the neophytes preparing for initiation.

Hierophant From the Greek *Hierophantes*, literally "he who explains sacred things," a title belonging to the highest adepts in the temples of antiquity, who were the teachers and expounders of the Mysteries, and the Initiators into the final great Mysteries. The Hierophant stood for the Demiurge, and explained to the postulants for Initiation the various phenomena of creation that were produced for their tuition.

He was the sole expounder of the exoteric secrets and doctrines. It was forbidden even to pronounce his name before an uninitiated person. He sat in the East, and wore as symbol of authority, a golden globe, suspended from the neck. He was also called *Mystagogus*.

Hillel A great Babylonian Rabbi of the century preceding the Christian Era. He was the founder of the sect of the Pharisees, a learned and a saintly man.

Hinayana (Sans.) The "Smaller Vehicle," a Scripture and a School of the Buddhists, contrasted with the *Mahayana*, "The Greater Vehicle." Both schools are mystical. (See *Mahayana*.) Also in exoteric superstition, the lowest form of transmigration.

Homogeneity From the Greek words *homos*, "the same," and *genos*, "kind." That which is of the same nature throughout, undifferentiated, non-compound, as gold is supposed to be.

Hypnotism (Gr.) A name given by Dr. Braid to the process by which one man of strong will-power plunges another of weaker mind into a kind of trance; once in such a state the latter will do anything suggested to him by the hypnotist. Unless produced for beneficial purposes, the Occultists would call it black magic or sorcery. It is the most dangerous of practices, morally and physically, as it interferes with the nerve fluids.

Iamblichus A great Theosophist and an Initiate of the third century. He wrote a great deal about the various kinds of demons who appear through evocation, but spoke severely against such phenomena. His austerities, purity of life, and earnestness were great. He is credited with having been levitated ten cubits high from the ground, as are some modern Yogis, and mediums.

Illusion In Occultism everything finite (such as the Universe and all in it) is called Illusion or *Maya*.

Individuality One of the names given in Theosophy and Occultism to the human Higher Ego. We make a distinction between the immortal and divine and the

mortal human Ego which perishes. The latter or "Personality" (personal Ego) survives the dead body but for a time in Kamaloka: the Individuality prevails forever.

Initiate From the Latin Initiatus. The designation of anyone who was received into and had revealed to him the mysteries and secrets of either Masonry or Occultism. In times of antiquity they were those who had been initiated into the arcane knowledge taught by the Hierophants of the Mysteries; and in our modern days those who have been initiated by the adepts of mystic lore into the mysterious knowledge, which, notwithstanding the lapse of ages, has yet a few real votaries on earth.

Isvara (Sans.) The "Lord" or the personal god, divine spirit in man. Literally Sovereign (independent) existence. A title given to Siva and other gods in India. Siva is also called Isvaradeva, or sovereign deva.

Iu-Kabar Zivo Gnostic term. The "Lord of the Aeons" in the Nazarene system. He is the procreator (Emanator) of the seven holy lives (the seven primal Dhyani-Chohans or Archangels, each representing one of the cardinal virtues), and is himself called the third life (third Logos). In the Codex he is addressed as the Helm and Vine of the food of life. Thus he is identical with Christ (Christos) who says: "I am the true vine and my Father is the husbandman." It is well known that Christ is regarded in the Roman Catholic Church as the "Chief of the Aeons," as also is Michael, "who is as God." Such also was the belief of the Gnostics.

Javidan Khirad (Pers.) A work on moral precepts.

Jñana (Sans.) Knowledge: Occult Wisdom

Josephus Flavius A historian of the first century; a Hellenized Jew who lived in Alexandria and died at Rome. He was credited by Eusebius with having written the 16 famous lines relating to Christ, which were most probably interpolated by Eusebius himself, the greatest forger among the Church Fathers. This passage, in which Josephus, who was an ardent Jew and died in Judaism, is nevertheless made to acknowledge the Messiahship and divine origin of Jesus, is now declared spurious both by most of the Christian Bishops (Lardner among others) and even by Paley (See his Evidence of Christianity). It was for centuries one of the weightiest proofs of the real existence of Jesus, the Christ.

Kamaloka (Sans.) The semi-material plane, to us subjective and invisible, where the disembodied "personalities," the astral forms called Kamarupa, remain until they fade out from it by the complete exhaustion of the effects of the mental impulses that created these eidolons of the lower animal passions and desires. (See Kamarupa.) It is the Hades of the ancient Greeks and the Amenti of the Egyptians-the land of Silent Shadows.

Kamarupa (Sans.) Metaphysically and in our esoteric philosophy it is the subjective form created through the mental and physical desires and thoughts in connection with things of matter, by all sentient beings: a form which survives the death of its body. After that death, three of the seven principles-or, let us say, planes of the senses and consciousness on which the human instincts and ideation act in turn-viz., the body, its astral prototype, and physical vitality, being of no further use, remain on earth; the three higher principles, grouped into one, merge into a state of Devachan, in which state the Higher Ego will remain until the hour for a new reincarnation arrives, and the eidolon of the expersonality is left alone in its new abode. Here the pale copy of the man that was, vegetates for a period of time, the duration of which is variable according to the element of materiality which is left in it, and which is determined by the past life of the defunct. Bereft as it is of its higher mind, spirit, and physical senses, if left alone to its own senseless devices, it will gradually fade out and disintegrate. But if forcibly drawn back into the terrestrial

The Key To Theosophy - HP Blavatsky.txt

sphere, whether by the passionate desires and appeals of the surviving friends or by regular necromantic practices-one of the most pernicious of which is mediumship-the "spook" may prevail for a period greatly exceeding the span of the natural life of its body. Once the Kamarupa has learnt the way back to living human bodies, it becomes a vampire feeding on the vitality of those who are so anxious for its company. In India these Eidolons are called Pisachas-and are much dreaded.

Kapilavastu (Sans.) The birthplace of the Lord Buddha, called the "yellow dwelling," the capital of the monarch who was the father of Gautama Buddha.

Kardec, Allan The adopted name of the Founder of the French Spiritists, whose real name was Rivaille. It was he who gathered and published the trance utterances of certain mediums and afterwards made a "philosophy" of them between the years 1855 and 1870.

Karma (Sans.) Physically, action; Metaphysically, the Law of Retribution; the Law of Cause and Effect or Ethical Causation. It is Nemesis only in the sense of bad Karma. It is the eleventh Nidana in the concatenation of causes and effects in orthodox Buddhism; yet it is the power that controls all things, the resultant of moral action, the metaphysical Samskâra, or the moral effect of an act committed for the attainment of something which gratifies a personal desire. There is the Karma of merit and the Karma of demerit. Karma neither punishes nor rewards; it is simply the one Universal Law which guides unerringly and, so to say, blindly, all other laws productive of certain effects along the grooves of their respective causations. When Buddhism teaches that "Karma is that moral Kernel (of any being) which alone survives death and continues in transmigration" or reincarnation, it simply means that there remains nought after each personality, but the causes produced by it, causes which are undying, i. e., which cannot be eliminated from the Universe until replaced by their legitimate effects, and so to speak, wiped out by them. And such causes, unless compensated during the life of the person who produced them with adequate effects, will follow the reincarnated Ego and reach it in its subsequent incarnations until a full harmony between effects and causes is fully reestablished. No "personality"-a mere bundle of material atoms and instinctual and mental characteristics-can, of course, continue as such in the world of pure spirit. Only that which is immortal in its very nature and divine in its essence, namely, the Ego, can exist forever. And as it is that Ego which chooses the personality it will inform after each Devachan, and which receives through these personalities the effects of the Karmic causes produced, it is, therefore, the Ego, that Self, which is the "moral Kernel" referred to, and embodied Karma itself, that "which alone survives death."

Kether (Heb.)

The Crown, the highest of the ten Sephiroth; the first of the supernal Triad. It corresponds to the Macroprosopus, Vast Countenance, or Arikh Anpin, which differentiates into Chokmah and Binah.

Krishna (Sans.) The most celebrated Avatara of Vishnu, the "Savior" of the Hindus and the most popular god. He is the eighth Avatara, the son of Devaki, and the nephew of Kansa, the Indian Herod, who while seeking for him among the shepherds and cowherds who concealed him, slew thousands of their newly-born babes. The story of Krishna's conception, birth, and childhood are the exact prototype of the New Testament story. The missionaries, of course, try to show that the Hindus stole the story of the Nativity from the early Christians who came to India.

Kshetrajaña or Kshetrajañesvara (Sans.) Embodied Spirit in Occultism, the conscious Ego in its highest manifestations; the reincarnating Principle, or the "Lord" in us.

Kumara (Sans.) A virgin boy or young celibate. The first Kumaras are the

The Key To Theosophy - HP Blavatsky.txt

seven sons of Brahmâ , born out of the limbs of the god in the so-called Ninth Creation. It is stated that the name was given to them owing to their formal refusal to "procreate" their species, and thus they "remained Yogis" according to the legend.

Labro, St. A Roman Saint solemnly beatified a few years ago. His great holiness consisted in sitting at one of the gates of Rome night and day for forty years, and remaining unwashed through the whole of that time, the result of which was that he was eaten by vermin to his bones.

Lao-tzu (Chin.) A great Sage, Saint, and Philosopher, who preceded Confucius.

Law of Retribution (See Karma).

Linga-sharîra (Sans.) "Astral body," i. e., the aerial symbol of the body. This term designates the doppelgänger, or the "astral body" of man or animal. It is the eidolon of the Greeks, the vital and prototypal body, the reflection of the man of flesh. It is born before man and dies or fades out with the disappearance of the last atom of the body.

Logos (Gr.) The manifested deity with every nation and people; the outward expression or the effect of the Cause which is ever concealed. Thus, speech is the logos of thought; hence, in its metaphysical sense, it is aptly translated by the terms Verbum, and the Word.

Long Face A Cabalistic term, Areekh Anpeen in Hebrew; or "Long Face," in Greek, Macroprosopus, as contrasted with "Short Face," or Zeir Anpeen, the Microprosopus. One relates to Deity, the other to man, the "little image of the great form."

Longinus, Dionysius Cassius A famous critic and philosopher, born in the very beginning of the third century (about 213). He was a great traveler, and attended at Alexandria the lectures of Ammonius Saccas, the founder of Neo-Platonism, but was rather a critic than a follower. Porphyry (the Jew Malek or Malchus) was his pupil before he became the disciple of Plotinus. It is said of him that he was a living library and a walking museum. Towards the end of his life he became the instructor in Greek literature of Zenobia, Queen of Palmyra. She repaid his services by accusing him before the Emperor Aurelius of having advised her to rebel against the latter, a crime for which Longinus, with several others, was put to death by the Emperor in 273.

Macrocosm (Gr.) The "Great Universe" or Kosmos, literally.

Magic The "great" Science. According to Deveria and other Orientalists, "Magic was considered as a sacred science inseparable from religion" by the oldest and most civilized and learned nations. The Egyptians, for instance, were a most sincerely religious nation, as were, and are still, the Hindus. "Magic consists of, and is acquired by, the worship of the gods," says Plato. Could, then, a nation which, owing to the irrefragable evidence of inscriptions and papyri, is proved to have firmly believed in magic for thousands of years, have been deceived for so long a time? And is it likely that generations upon generations of a learned and pious hierarchy, many among whom led lives of self-martyrdom, holiness, and asceticism, would have gone on deceiving themselves and the people (or even only the latter) for the pleasure of perpetuating belief in "miracles"? Fanatics, we are told, will do anything to enforce belief in their god or idols. To this we reply:

In such cases Brahmîns and Egyptian Rekhget-amens or Hierophants, would not have popularized the belief in the power of man by magic practices, to command the services of the gods: which gods are in truth but the occult powers or potencies of Nature, personified by the learned priests themselves, who revered only in them the attributes of the one unknown and nameless Principle.

The Key To Theosophy - HP Blavatsky.txt

As Proclus, the Platonist, ably puts it:

Ancient priests, when they considered that there is a certain alliance and sympathy in natural things to each other, and of things manifest to occult powers, and discovered that all things subsist in all, fabricated a sacred science from this mutual sympathy and similarity ... and applied for occult purposes both celestial and terrene natures, by means of which, through a certain similitude, they deduced divine natures into this inferior abode.

Magic is the science of communicating with, and directing supernal supramundane potencies, as well as commanding those of lower spheres; a practical knowledge of the hidden mysteries of nature which are known only to the few, because they are so difficult to acquire without falling into sin against the law. Ancient and medieval mystics divided magic into three classes-Theurgia, Goetia, and Natural Magic.

Theurgia has long since been appropriated as the peculiar sphere of the Theosophists and metaphysicians,

- says Kenneth Mackenzie.

Goetia is black magic, and "natural" or white magic has risen with healing in its wings to the proud position of an exact and progressive study.

The remarks added by our late learned brother are remarkable:

The realistic desires of modern times have contributed to bring magic into disrepute and ridicule ... Faith (in one's own self) is an essential element in magic, and existed long before other ideas which presume its preexistence. It is said that it takes a wise man to make a fool; and a man's idea must be exalted almost to madness, i. e., his brain susceptibilities must be increased far beyond the low miserable status of modern civilization, before he can become a true magician, for a pursuit of this science implies a certain amount of isolation and an abnegation of self.

A very great isolation certainly, the achievement of which constitutes a wonderful phenomenon, a miracle in itself. Withal, magic is not something supernatural. As explained by Iamblichus,

... they, through the sacerdotal theurgy, announce that they are able to ascend to more elevated and universal essences, and to those that are established above fate, viz., to god and the demiurgos: neither employing matter, nor assuming any other things besides, except the observation of a sensible time.

Already some are beginning to recognize the existence of subtle powers and influences in nature, in which they have hitherto known nought. But, as Dr. Carter Blake truly remarks:

The nineteenth century is not that which has observed the genesis of new, nor the completion of old, methods of thought ...

- to which Mr. Bonwick adds, that:

... if the Ancients knew but little of our mode of investigation into the secrets of Nature, we know still less of their mode of research.

Magic, Black (See above). Sorcery, abuse of powers.

Magic, Ceremonial Magic, according to Cabalistic rites worked out, as alleged by the Rosicrucians and other mystics, by invoking Powers higher spiritually than Man, and commanding Elementals who are far lower than

himself on the scale of being.

Magic, White or "Beneficent Magic," so called, is divine magic, devoid of selfishness, love of power, of ambition or material gain, and bent only on doing good to the world in general and one's neighbor in particular. The smallest attempt to use one's abnormal powers for the gratification of self makes of these powers sorcery or Black Magic.

Maha-Manvantara (Sans.) Lit., the great interludes between the Manus-the period of universal activity. Manvantara here implies simply a period of activity as opposed to Pralaya or rest-without reference to the length of the cycle.

Mahat (Sans.) Lit. "The Great One." The first principle of Universal Intelligence and consciousness. In the Puranic philosophy, the first product of root-nature or Pradhana (the same as Mûlaprakiti); the producer of Manas the thinking principle, and of Ahankâra, Egotism or the feeling of "I am I" in the lower Manas.

Mahatma (Sans.) Lit., "Great Soul." An adept of the highest order. An exalted being, who having attained to the mastery over his lower principles, is therefore living unimpeded by the "man of flesh." Mahatmas are in possession of knowledge and power commensurate with the stage they have reached in their spiritual evolution. Called in Pali Rahats and Arahats.

Mahayana (Sans.) A school of Buddhist philosophy; lit., the "Great Vehicle." A mystical system founded by Nagarjuna. Its books were written in the second century bc.

Manas (Sans.) Lit., the "Mind." The mental faculty which makes of a man an intelligent and moral being, and distinguishes him from the mere animal; a synonym of Mahat. Esoterically, however, it means, when unqualified, the Higher Ego or the sentient reincarnating Principle in man. When qualified it is called by Theosophists Buddhi-Manas, or the spiritual soul, in contradistinction to its human reflection-Kama-Manas.

Manasaputra (Sans.) Lit., the "Sons of Mind" or mind-born Sons; a name given to our Higher Egos before they incarnated in mankind. In the exoteric though allegorical and symbolical Purânas (the sacred and ancient writings of Hindus), it is the title given to the mind-born Sons of Brahmâ, the Kumâra.

Manas Sutratman (Sans.) Two words meaning mind (Manas) and Thread Soul (Sutratman). It is, as said, the synonym of our Ego, or that which reincarnates. It is a technical term of Vedantic philosophy.

Manas-Taijas (Sans.) Lit., the "radiant" Manas; a state of the Higher Ego which only high metaphysicians are able to realize and comprehend. The same as "Buddhi-Taijas" (see above).

Mantras (Sans.) Verses from the Vedic works, used as incantations and charms. By Mantras are meant all those portions of the Vedas which are distinct from the Brâhmanas, or their interpretation.

Manu (Sans.) The great Indian legislator. The name comes from the Sanskrit root man, to think, man really standing only for Svayambhuva, the first of the Manus, who started from Svayambhu, the Self-Existent, who is hence the Logos and the progenitor of mankind. Manu is the first legislator-almost a divine being.

Manvantara (Sans.) A period of manifestation, as opposed to Pralaya (dissolution or rest); the term is applied to various cycles, especially to a Day of Brahmâ -4, 320, 000, 000 Solar years-and to the reign of one Manu-308, 448, 000. Lit., Manvantara-"between Manus."

Master A translation from the Sanskrit Guru, "Spiritual teacher," and adopted by the Theosophists to designate the Adepts, from whom they hold their teachings.

Materializations In Spiritualism the word signifies the objective appearance of the so-called "spirits of the dead," who reclothe themselves occasionally in matter; i. e., they form for themselves out of the materials at hand found in the atmosphere and the emanations of those present, a temporary body bearing the human likeness of the defunct, as he appeared when alive. Theosophists accept the phenomenon of "materialization," but they reject the theory that it is produced by "Spirits," i. e., the immortal principles of disembodied persons. Theosophists hold that when the phenomena are genuine which is a fact of rarer occurrence than is generally believed they are produced by the larvae, the eidolons, or Kamalokic "ghosts" of the dead personalities. (See Kamaloka and Kamarupa.) As Kamaloka is on the earth-plane and differs from its degree of materiality only in the degree of its plane of consciousness, for which reason it is concealed from our normal sight, the occasional apparition of such shells is as natural as that of electric balls and other atmospheric phenomena. Electricity as a fluid, or atomic matter (for Occultists hold with Maxwell that it is atomic), is ever, though invisibly, present in the air and manifests under various shapes, but only when certain conditions are present to "materialize" the fluid, when it passes from its own onto our plane and makes itself objective. Similarly with the eidolons of the dead. They are present around us, but being on another plane do not see us any more than we see them. But whenever the strong desires of living men and the conditions furnished by the abnormal constitutions of mediums are combined together, these eidolons are drawn-nay pulled down from their plane onto ours and made objective. This is necromancy; it does no good to the dead, and great harm to the living, in addition to the fact that it interferes with a law of nature. The occasional materialization of the "astral bodies" or doubles of living persons is quite another matter. These "astrals" are often mistaken for the apparitions of the dead, since, chameleon-like, our own "elementaries" along with those of the disembodied and cosmic Elementals, will often assume the appearance of those images which are strongest in our thoughts. In short, at the so-called "materialization seances," it is those present and the medium who create the peculiar apparition. Independent "apparitions" belong to another kind of psychic phenomena.

Materialist Not necessarily only one who believes in neither God nor soul, nor the survival of the latter, but also any person who materializes the purely spiritual; such as believe in an anthropomorphic deity, in a soul capable of burning in hell fire, and a hell and paradise as localities instead of states of consciousness. American "Substantialists," a Christian sect, are materialists, as also the so-called Spiritualists.

Maya (Sans.) Illusion; the cosmic power which renders phenomenal existence and the perceptions thereof possible. In Hindu philosophy that alone which is changeless and eternal is called reality: all that which is subject to change through decay and differentiation, and which has, therefore, a beginning and an end, is regarded as Maya -illusion.

Mediumship A word now accepted to indicate that abnormal psycho-physiological state which leads a person to take the fancies of his imagination, his hallucinations, real or artificial, for realities. No entirely healthy person on the physiological and psychic planes can ever be a medium. That which mediums see, hear, and sense, is "real" but untrue; it is either gathered from the astral plane, so deceptive in its vibrations and suggestions, or from pure hallucinations, which have no actual existence, but for him who perceives them. "Mediumship" is a kind of vulgarized mediatorship in which one afflicted with this faculty is supposed to become an agent of communication between a living man and a departed "Spirit." There exist regular methods of training for the development of this undesirable acquirement.

Merkabah (Heb.)

A chariot. The Cabalists say that the Supreme, after he had established the ten Sephiroth-which, in their totality, are Adam Kadmon, the Archetypal Man, used them as a chariot or throne of glory in which to descend upon the souls of men.

Mesmerism The term comes from Mesmer, who rediscovered this magnetic force and its practical application toward the year 1775, at Vienna. It is a vital current that one person may transfer to another; and through which he induces an abnormal state of the nervous system that permits him to have a direct influence upon the mind and will of the subject or mesmerized person.

Metaphysics From the Greek meta, beyond, and physica, the things of the external material world. It is to forget the spirit and hold to the dead letter, to translate it beyond nature or supernatural, as it is rather beyond the natural, visible, or concrete. Metaphysics, in ontology and philosophy is the term to designate that science which treats of the real and permanent being as contrasted with the unreal, illusionary, or phenomenal being.

Microcosm The "little" Universe meaning man, made in the image of his creator, the Macrocosm, or "great" Universe, and containing all that the latter contains. These terms are used in Occultism and Theosophy.

Mishnah (Heb.) Lit., "a repetition" from the word Shânâh, "to repeat" something said orally. A summary of written explanations from the oral traditions of the Jews and a digest of the Scriptures on which the later Talmud was based.

Moksha (Sans.) The same as Nirvana; a postmortem state of rest and bliss of the "Soul-pilgrim."

Monad It is the Unity, the One; but in occultism it often means the unified duad, Atma-Buddhi-or that immortal part of man which incarnating in the lower kingdoms and gradually progressing through them to Man, finds thence way to the final goal-Nirvana.

Monas (Gr.) The same as the Latin Monad, "the only," a Unit. In the Pythagorean system the Duad emanates from the higher and solitary Monas, which is thus the First Cause.

Monogenes (Gr.) Literally, the "only-begotten," a name of Proserpine and other gods and goddesses, as also of Jesus.

Mundakya Upanishad (Sans.) Lit., the "Mundaka esoteric doctrine." A work of high antiquity; it has been translated by Raja Ram Mohun Roy.

Mysteries, Sacred They were enacted in the ancient temples by the initiated Hierophants for the benefit and instruction of candidates. The most solemn and occult were certainly those which were performed in Egypt by "the band of secret-keepers," as Mr. Bonwick calls the Hierophants. Maurice describes their nature very graphically in a few lines. Speaking of the Mysteries performed in Philae (the Nile-island), he says:

It was in these gloomy caverns that the grand mystic arcana of the goddess (Isis) were unfolded to the adoring aspirant, while the solemn hymn of initiation resounded through the long extent of these stony recesses.

The word mystery is derived from the Greek mu , "to close the mouth," and every symbol connected with them had a hidden meaning. As Plato and many of the other sages of antiquity affirm, these mysteries were highly religious, moral, and beneficent as a school of ethics. The Grecian Mysteries, those of

The Key To Theosophy - HP Blavatsky.txt

Ceres and Bacchus, were only imitations of the Egyptian, and the author of Egyptian Belief and Modern Thought informs us that our own "chapel or capella is said to be the caph-el or college of El, the solar divinity." The well-known Cabiri are associated with the mysteries.

In short, the Mysteries were in every country a series of dramatic performances, in which the mysteries of Cosmogony and nature in general were personified by the priests and neophytes, who enacted the parts of various gods and goddesses, repeating supposed scenes (allegories) from their respective lives. These were explained in their hidden meaning to the candidates for initiation and incorporated into philosophical doctrines.

Mystery Language The sacerdotal secret "jargon" used by the initiated priests, and employed only when discussing sacred things. Every nation had its own "mystery" tongue, unknown to all save those admitted to the Mysteries.

Mystic From the Greek word *mysticos*. In antiquity, one belonging to those admitted to the ancient mysteries; in our own times, one who practices mysticism, holds mystic, transcendental views, etc.

Mysticism Any doctrine involved in mystery and metaphysics, and dealing more with the ideal worlds than with our matter-of-fact, actual universe.

Nazarene Codex The Scriptures of the Nazarenes and of the Nabothians also. According to sundry Church Fathers, Jerome and Epiphanius especially, they were heretical teachings, but are in fact one of the numerous Gnostic readings of cosmogony and theogony, which produced a distinct sect.

Necromancy The raising of the images of the dead, considered in antiquity and by modern occultists as a practice of Black Magic. Iamblichus, Porphyry, and other theurgists deprecated the practice no less than Moses, who condemned the "witches" of his day to death, the said witches being often only mediums, e. g., the case of the Witch of Endor and Samuel.

Neo-Platonists A school of philosophy which arose between the second and third century of our era, and was founded by Ammonius Saccas, of Alexandria. The same as the Philaletheians, and the Analogeticists; they were also called Theurgists and by various other names. They were the Theosophists of the early centuries. Neo-Platonism is Platonic philosophy plus ecstasy, divine R^oja-Yoga.

Nephesh (Heb.)

Breath of Life, Anima, Mens Vitae, appetites. The term is used very loosely in the Bible. It generally means Prana, "life"; in the Cabala it is the animal passions and the animal soul. Therefore, as maintained in theosophical teachings, Nephesh is the Prana-Kama Principle, or the vital animal soul in man.

Nirmanakaya (Sans.) Something entirely different in esoteric philosophy from the popular meaning attached to it, and from the fancies of the Orientalists. Some call the Nirmanakaya body "Nirvana with remains" (Schlagintweit), on the supposition, probably, that it is a kind of Nirvanic condition during which consciousness and form are retained. Others say that it is one of the Trikaya (three bodies) with "the power of assuming any form of appearance in order to propagate Buddhism." Again, that "it is the incarnate Avatara of a deity." Occultism, on the other hand, says that Nirmanakaya, although meaning literally a transformed "body," is a state. The form is that of the Adept or Yogi who enters, or chooses, that postmortem condition in preference to the Dharmakaya or absolute Nirvanic state. He does this because the latter Kaya separates him forever from the world of form, conferring upon him a state of selfish bliss, in which no other living being can participate, the adept being thus precluded from the

The Key To Theosophy - HP Blavatsky.txt

possibility of helping humanity, or even devas. As a Nirmanakaya, however, the adept leaves behind him only his physical body, and retains every other principle save the Karmic, for he has crushed this out forever from his nature during life, and it can never resurrect in his postmortem state. Thus, instead of going into selfish bliss, he chooses a life of self-sacrifice, an existence which ends only with the life cycle, in order to be enabled to help mankind in an invisible, yet most effective, manner. Thus a Nirmanakaya is not, as popularly believed, the body "in which a Buddha or a Bodhisattva appears on earth," but verily one who, whether a Chutuktu or a Khubilkhan, an adept or a Yogi during life, has since become a member of that invisible Host which ever protects and watches over humanity within Karmic limits. Mistaken often for a "Spirit," a Deva, God himself, etc., a Nirmanakaya is ever a protecting, compassionate, verily a guardian, angel to him who is worthy of his help. Whatever objection may be brought forward against this doctrine, however much it is denied, because, forsooth, it has never hitherto been made public in Europe, and therefore, since it is unknown to Orientalists, it must needs be a "myth of modern invention"-no one will be bold enough to say that this idea of helping suffering mankind at the price of one's own almost interminable self-sacrifice, is not one of the grandest and noblest that was ever evolved from the human brain.

Nirvana (Sans.) According to the Orientalists, the entire "blowing-out," like the flame of a candle, the utter extinction of existence. But in the exoteric explanations it is the state of absolute existence and absolute consciousness, into which the Ego of a man who had reached the highest degree of perfection and holiness during life, goes after the body dies, and occasionally, as is the case of Gautama Buddha and others, during life.

Nirvanee (Sans.) One who has attained Nirvana-an emancipated Soul. That Nirvana means something quite different from the puerile assertions of Orientalists, every scholar who has visited India, China, or Japan, is well aware. It is "escape from misery," but only from that of matter, freedom from Klesha, or Kama, and the complete extinction of animal desires. If we are told that Abhidharma defines Nirvana as "a state of absolute annihilation" we concur, adding to the last word the qualification "of everything connected with matter or the physical world," and this simply because the latter (as also all in it) is illusion or Maya. Sakyamuni Buddha said in the last moments of his life: "the spiritual body is immortal." As Mr. Eitel, the scholarly Sinologist, explains it:

The popular exoteric systems agree in defining Nirvana negatively as a state of absolute exemption from the circle of transmigration; as a state of entire freedom from all forms of existence, to begin with, freedom from all passion and exertion; a state of indifference to all sensibility.

-and he might have added "death of all compassion for the world of suffering." And this is why the Bodhisattvas who prefer the Nirmanakaya to the Dharmakaya vesture stand higher in the popular estimation than the Nirvanees. But the same scholar adds that:

Positively (and esoterically) they define Nirvana as the highest state of spiritual bliss, as absolute immortality through absorption of the Soul (Spirit rather) into itself, but preserving individuality, so that, e.g., Buddhas, after entering Nirvana, may reappear on earth-i.e., in the future Manvantara.

Noumena (Gr.) The true essential nature of Being as distinguished from the illusive objects of sense.

Nous (Gr.) A Platonic term for the Higher Mind or Soul. It means Spirit as distinct from animal-Soul, Psyche; divine consciousness or mind in man. The name was adopted by the Gnostics for their first conscious Aeon, which, with the Occultists, is the third logos, cosmically, and the third principle (from above) or Manas, in man. (See Nout.)

The Key To Theosophy - HP Blavatsky.txt

Nout (Eg.) In the Egyptian Pantheon it meant the "One-only-One," because it does not proceed in the popular or exoteric religion higher than the third manifestation which radiates from the Unknowable and the Unknown in the esoteric philosophy of every nation. The Nous of Anaxagoras was the Mahat of the Hindus-Brahmā, the first manifested deity-"the Mind or spirit Self-potent." This creative principle is the primum mobile of everything to be found in the Universe-its Soul or Ideation. (see "Seven Principles" in man.)

Occultism See Occult Sciences.

Occult Sciences The science of the secrets of nature-physical and psychic, mental and spiritual; called Hermetic and Esoteric Sciences. In the west, the Cabala may be named; in the east, mysticism, magic, and Yoga philosophy. The latter is often referred to by the Chelas in India as the seventh "Darshana" (school of philosophy), there being only six Darshanas in India known to the world of the profane. These sciences are, and have been for ages, hidden from the vulgar, for the very good reason that they would never be appreciated by the selfish educated classes, who would misuse them for their own profit, and thus turn the Divine science into black magic, nor by the uneducated, who would not understand them. It is often brought forward as an accusation against the Esoteric Philosophy of the Cabala, that its literature is full of "a barbarous and meaningless jargon," unintelligible to the ordinary mind. But do not exact Sciences-medicine, physiology, chemistry, and the rest-plead guilty to the same impeachment? Do not official scientists veil their facts and discoveries with a newly-coined and most barbarous Graeco-Latin terminology? As justly remarked by our late Brother, Kenneth Mackenzie,

... to juggle thus with words, when the facts are so simple, is the art of the Scientists of the present time, in striking contrast to those of the seventeenth century, who called spades, and not "agricultural implements."

Moreover, whilst their "facts" spades would be as simple, and as comprehensible if rendered in ordinary language, the facts of Occult Science are of so abstruse a nature, that in most cases no words exist in European languages to express them. Finally our "jargon" is a double necessity-(a) for describing clearly these facts to one who is versed in the occult terminology; and (b) for concealing them from the profane.

Occultist One who practices Occultism, an adept in the Secret Sciences, but very often applied to a mere student.

Occult World, The The name of the first book which treated of Theosophy, its history, and certain of its tenets. Written by A. P. Sinnett, then editor of the leading Indian paper, The Pioneer, of Allahabad, India.

Olympiodorus The last Neo-platonist of fame and celebrity in the school of Alexandria. He lived in the sixth century under the Emperor Justinian. There were several writers and philosophers of this name in pre-Christian as in post-Christian periods. One of these was the teacher of Proclus, another a historian in the eighth century, and so on.

Origen A Christian Churchman, born at the end of the second century, probably in Africa, of whom little, if anything, is known, since his biographical fragments have passed to posterity on the authority of Eusebius, the most unmitigated falsifier that has ever existed in any age. The latter is credited with having collected upwards of one hundred letters of Origen (or Origenes Adamantius), which are now said to have been lost. To Theosophists, the most interesting of all the works of Origen is his Doctrine of the Preexistence of Souls. He was a pupil of Ammonius Saccas, and for a long time attended the lectures of this great teacher of philosophy.

The Key To Theosophy - HP Blavatsky.txt

Panaenus A Platonic philosopher in the Alexandrian school of the Philaletheians.

Pandora In Greek Mythology, the first woman on earth, created by Vulcan out of clay to punish Prometheus and counteract his gift to mortals. Each God having made her a present of some virtue, she was made to carry them in a box to Prometheus, who, however, being endowed with foresight, sent her away, changing the gifts into evils. Thus, when his brother Epimetheus saw and married her, when he opened the box, all the evils now afflicting humanity issued from it, and have remained since then in the world.

Pantheist One who identifies God with nature and vice versa. If we have to regard Deity as an infinite and omnipresent Principle, this can hardly be otherwise; nature being thus simply the physical aspect of Deity, or its body.

Parabrahm (Sans.) A Vedantin term meaning "beyond Brahmâ ." The Supreme and the absolute Principle, impersonal and nameless. In the Vedas it is referred to as That.

Paranirvana (Sans.) In the Vedantic philosophy the highest form of Nirvana-beyond the latter.

Parsis or **Parsees** The present Persian followers of Zoroaster, now settled in India, especially in Bombay and Guzerat; sun and fire worshipers. One of the most intelligent and esteemed communities in the country, generally occupied with commercial pursuits. There are between 50,000 and 60,000 now left in India where they settled some 1,000 years ago.

Personality The teachings of Occultism divide man into three aspects-the divine, the thinking or rational, and the irrational or animal man. For metaphysical purposes also he is considered under a septenary division, or, as it is agreed to express it in Theosophy, he is composed of seven principles, three of which constitute the Higher Triad, and the remaining four the lower Quaternary. It is in the latter that dwells the Personality which embraces all the characteristics, including memory and consciousness, of each physical life in turn. The Individuality is the Higher Ego (Manas) of the Triad considered as a Unity. In other words the Individuality is our imperishable Ego which reincarnates and clothes itself in a new Personality at every new birth.

Phallic Worship or **Sex Worship**; reverence and adoration shown to those gods and goddesses which, like Shiva and Durga in India, symbolize respectively the two sexes.

Philadelphians Lit., "those who love their brother-man." A sect in the seventeenth century, founded by one Jane Leadly. They objected to all rites, forms, or ceremonies of the Church, and even to the Church itself, but professed to be guided in soul and spirit by an internal Deity, their own Ego or God within them.

Philaletheians See Neo-Platonists.

Philo Judaeus A Hellenized Jew of Alexandria, a famous historian and philosopher of the first century, born about the year 30 bc, and died between the years 45 and 50 ad Philo's symbolism of the Bible is very remarkable. The animals, birds, reptiles, trees, and places mentioned in it are all, it is said,

...allegories of conditions of the soul, of faculties, dispositions, or passions; the useful plants were allegories of virtues, the noxious of the affections of the unwise and so on through the mineral kingdom; through heaven, earth, and stars; through fountains and rivers, fields and

dwelling; through metals, substances, arms, clothes, ornaments, furniture, the body and its parts, the sexes, and our outward condition.

All of which would strongly corroborate the idea that Philo was acquainted with the ancient Cabala.

Philosopher's Stone A term in Alchemy; called also the Powder of Projection, a mysterious principle having the power of transmuting the base metals into pure gold. In Theosophy it symbolizes the transmutation of the lower animal nature of man into the highest divine.

Phren A Pythagorean term denoting what we call the Kama-Manas, still overshadowed by Buddhi-Manas.

Plane From the Latin Planus (level, flat), an extension of space, whether in the physical or metaphysical sense. In Occultism, the range or extent of some state of consciousness, or the state of matter corresponding to the perceptive powers of a particular set of senses or the action of a particular force.

Planetary Spirits Rulers and governors of the Planets. Planetary Gods.

Plastic Used in Occultism in reference to the nature and essence of the astral body, or the "Protean Soul." (See "Plastic Soul" in the Theosophical Glossary.)

Pleroma "Fullness," a gnostic term used also by St. Paul. Divine world or the abode of gods. Universal space divided into metaphysical Aeons.

Plotinus A distinguished Platonic philosopher of the third century, a great practical mystic, renowned for his virtues and learning. He taught a doctrine identical with that of the Vedantins, namely, that the spirit soul emanating from the One Deific Principle was after its pilgrimage on earth reunited to it. (See Theosophical Glossary.)

Porphyry (Porphyrius). His real name was Malek, which led to his being regarded as a Jew. He came from Tyre, and having first studied under Longinus, the eminent philosopher-critic, became the disciple of Plotinus, at Rome. He was a Neo-Platonist and a distinguished writer, specially famous for his controversy with Iamblichus regarding the evils attending the practice of Theurgy, but was, however, finally converted to the views of his opponent. A natural-born mystic he followed, like his master Plotinus, the pure Indian Raja-Yoga system, which, by training, leads to the union of the soul with the oversoul of the universe, and of the human with its divine soul, Buddhi-Manas. He complains, however, that in spite of all his efforts, he reached the highest state of ecstasy only once, and that when he was sixty-eight years of age, while his teacher Plotinus had experienced the supreme bliss six times during his life. (See "Porphyry," in the Theosophical Glossary)

Pot-Amun A Coptic term meaning "one consecrated to the god Amun," the Wisdom-god. The name of an Egyptian priest and occultist under the Ptolemies.

Prajña (Sans.) A term used to designate the "Universal Mind." A synonym of Mahat.

Pralaya (Sans.) Dissolution, the opposite of Manvantara, one being the period of rest and the other of full activity (death and life) of a planet, or of the whole universe.

Prana (Sans.) Life Principle, the breath of life, Nephesh.

Protean Soul A name for Mayavi-Rupa or thought-body, the higher astral form

The Key To Theosophy - HP Blavatsky.txt

which assumes all forms and every form at the will of an adept's thought. (See "Plastic Soul" in the Theosophical Glossary)

Psychism The word is used now to denote every kind of mental phenomena, e.g., mediumship as well as the higher form of sensitiveness. A newly-coined word.

Purânas (Sans.) Lit., "the ancient," referring to Hindu writings or Scriptures, of which there is a considerable number.

Pythagoras The most famous mystic philosopher, born at Samos about 586 bc, who taught the heliocentric system and reincarnation, the highest mathematics and the highest metaphysics, and who had a school famous throughout the world. (See for fuller particulars, Theosophical Glossary)

Quaternary The four lower "principles in man," those which constitute his personality (i.e., Body, Astral Double, Prana or life, organs of desire, and lower Manas, or brain-mind), as distinguished from the Higher Ternary or Triad, composed of the higher Spiritual Soul, Mind, and Atma (Higher Self).

Recollection, Remembrance, Reminiscence Occultists make a difference between these three functions. As, however, a glossary cannot contain the full explanation of every term in all its metaphysical and subtle differences, we can only state here that these terms vary in their applications, according to whether they relate to the past or the present birth, and whether one or the other of these phases of memory emanates from the spiritual or the material brain; or, again, from the "Individuality" or the "Personality."

Reincarnation or Rebirth The once universal doctrine, which taught that the Ego is born on this earth an innumerable number of times. Now-a-days it is denied by Christians, who seem to misunderstand the teachings of their own gospels. Nevertheless, the putting on of flesh periodically and throughout long cycles by the higher human Soul (Buddhi-Manas) or Ego is taught in the Bible as it is in all other ancient scriptures, and "resurrection" means only the rebirth of the Ego in another form. (See Theosophical Glossary)

Reuchlin, John A great German philosopher and philologist, Cabalist and scholar. He was born at Pfortzheim in Germany, in 1455, and early in youth was a diplomat. At one period of his life he held the high office of judge of the tribunal at Tubingen, where he remained for eleven years. He was also the preceptor of Melancthon, and was greatly persecuted by the clergy for his glorification of the Hebrew Cabala, though at the same time called the "Father of the Reformation." He died in 1522, in great poverty, the common fate of all who in those days went against the dead-letter of the Church.

Sacred Science The epithet given to the occult sciences in general, and by the Rosicrucians to the Cabala, and especially to the Hermetic philosophy.

Samadhi The name in India for spiritual ecstasy. It is a state of complete trance, induced by means of mystic concentration.

Samkhara One of the five Buddhist Skandhas or attributes. (See Skandhas.) "Tendencies of mind."

Samma - Sambuddha The sudden remembrance of all one's past incarnations, a phenomenon of memory obtained through Yoga. A Buddhist mystic term.

Samothrace An island in the Grecian Archipelago, famous in days of old for the mysteries celebrated in its temples. These mysteries were world-renowned.

Samyuttaka-Nikaya One of the Buddhist Sutras.

Sanna (Pali) One of the five Skandhas, or attributes, meaning "abstract

ideas."

Seance A term now used to denote a sitting with a medium for sundry phenomena. Used chiefly among the Spiritualists.

Self There are two Selves in men-the Higher and the Lower, the Impersonal and the Personal Self. One is divine, the other semi-animal. A great distinction should be made between the two.

Sephiroth A Hebrew Cabalistic word, for the ten divine emanations from Ain-Soph, the impersonal, universal Principle, or Deity. (See Theosophical Glossary)

Skandhas The attributes of every personality, which after death form the basis, so to say, for a new Karmic reincarnation. They are five in the popular or exoteric system of the Buddhists: i.e., Rupa, form or body, which leaves behind it its magnetic atoms and occult affinities; Vedana, sensations, which do likewise; Sanjna, or abstract ideas, which are the creative powers at work from one incarnation to another; Samkhara, tendencies of mind; and Vijñana, mental powers.

Somnambulism "Sleep walking." A psycho-physiological state, too well known to need explanation.

Spiritism The same as the above, with the difference that the Spiritualists reject almost unanimously the doctrine of Reincarnation, while the Spiritists make of it the fundamental principle in their belief. There is, however, a vast difference between the views of the latter and the philosophical teachings of Eastern Occultists. Spiritists belong to the French School founded by Allan Kardec, and the Spiritualists of America and England to that of the "Fox girls," who inaugurated their theories at Rochester, U. S. A. Theosophists, while believing in the mediumistic phenomena of both Spiritualists and Spiritists, reject the idea of "spirits."

Spiritualism The modern belief that the spirits of the dead return on earth to commune with the living. (See Spiritism.)

St. Germain, Count A mysterious personage, who appeared in the last century and early in the present one in France, England, and elsewhere.

Sthula-Sharira The Sanskrit name for the human physical body, in Occultism and Vedanta philosophy.

Sthulopadhi The physical body in its waking, conscious state (Jagrat).

Sukshmopadhi The physical body in the dreaming state (Svapna), and **Karanopadhi**, "the causal body."

Summerland The fancy name given by the Spiritualists to the abode of their disembodied "Spirits," which they locate somewhere in the Milky Way. It is described on the authority of returning "Spirits" as a lovely land, having beautiful cities and buildings, a Congress Hall, Museums, etc., etc.

Swedenborg, Emanuel A famous scholar and clairvoyant of the past century, a man of great learning, who has vastly contributed to Science, but whose mysticism and transcendental philosophy placed him in the ranks of hallucinated visionaries. He is now universally known as the Founder of the Swedenborgian sect, or the New Jerusalem Church. He was born at Stockholm (Sweden) in 1688, from Lutheran parents, his father being the Bishop of West Gothland. His original name was Swedberg, but on his being ennobled and knighted in 1719 it was changed to Swedenborg. He became a Mystic in 1743, and four years later (in 1747) resigned his office (of Assessor Extraordinary to the College of Mines) and gave himself up entirely to Mysticism. He died in 1772.

The Key To Theosophy - HP Blavatsky.txt

Taijas (Sans.) From tejas "fire," meaning the "radiant," the "luminous," and referring to the Manasa-Rupa, "the body of Manas," also to the stars, and the star-like shining envelopes. A term in Vedanta philosophy, having other meanings besides the Occult signification just given.

Taraka Raja-Yoga (Sans.) One of the Brahmanical Yoga systems, the most philosophical, and in fact the most secret of all, as its real tenets are never given out publicly. It is a purely intellectual and spiritual school of training.

Tetragrammaton (Gr.) The deity-name in four letters, which are in their English form IHVH. It is a Cabalistic term and corresponds on a more material plane to the sacred Pythagorean Tetraktys. (See Theosophical Glossary)

Theodidaktos (Gr.) The "God taught," a title applied to Ammonius Saccas.

Theogony From the Greek theogonia, lit., the "Genesis of the Gods."

Theosophia (Gr.) Lit., "divine wisdom or the wisdom of the gods."

Therapeutae, or Therapeuts (Gr.) A school of Jewish mystic healers, or esotericists, wrongly referred to, by some, as a sect. They resided in and near Alexandria, and their doings and beliefs are to this day a mystery to the critics, as their philosophy seems a combination of Orphic, Pythagorean, Essenian, and purely Cabalistic practices. (See Theosophical Glossary)

Theurgy From the Greek theiourgía. Rites for bringing down to earth planetary and other Spirits or Gods. To arrive at the realization of such an object, the Theurgist had to be absolutely pure and unselfish in his motives. The practice of theurgy is very undesirable and even dangerous in the present day. The world has become too corrupt and wicked for the practice of that which such holy and learned men as Ammonius, Plotinus, Porphyry, and Iamblichus (the most learned Theurgist of all) could alone attempt with impunity. In our day theurgy or divine, beneficent magic is but too apt to become goëtic, or in other words Sorcery. Theurgy is the first of the three subdivisions of magic, which are theurgic, goëtic, and natural magic.

Thread Soul The same as Sutratman (see above).

Thumos (Gr.) A Pythagorean and Platonic term, applied to an aspect of the human soul, to denote its passionate Kamarupic condition: almost equivalent to the Sanskrit word tamas: "the quality of darkness," and probably derived from the latter.

Timæus of Locris A Pythagorean philosopher, born at Locris. He differed somewhat from his teacher in the doctrine of metempsychosis. He wrote a treatise on the Soul of the World and its nature and essence, which is in the Doric dialect and still extant.

Triad or Trinity In every religion and philosophy-the three in One.

Universal Brotherhood The subtitle of the Theosophical Society, and the first of the three objects professed by it.

Upadhi (Sans.) Basis of something, substructure; as in Occultism-substance is the Upadhi of Spirit.

Upanishad (Sans.) Lit., "Esoteric Doctrine." The third Division of the Vedas, and classed with revelations (sruti or "revealed word"). Some 150 of the Upanishads still remain extant, though no more than about twenty can be fully relied upon as free from falsification. These are all earlier than the

sixth century bc. Like the Cabala, which interprets the esoteric sense of the Bible, so the Upanishads explain the mystic sense of the Vedas. Professor Cowell has two statements regarding the Upanishads as interesting as they are correct. Thus he says:

These works have (1) ... one remarkable peculiarity, the total absence of any Brahmanical exclusiveness in their doctrine ... They breathe an entirely different spirit, a freedom of thought unknown in any earlier work except the Rig-Veda hymns themselves; and (2) the great teachers of the higher knowledge (Gupta-Vidya), and Brahmins, are continually represented as going to Kshatriya Kings to become their pupils (Chelas).

This shows conclusively that (a) the Upanishads were written before the enforcement of caste and Brahmanical power, and are thus only second in antiquity to the Vedas; and (b) that the occult sciences or the "higher knowledge," as Cowell puts it, is far older than the Brahmins in India, or even of them as a caste. The Upanishads are, however, far later than Gupta-Vidya , or the "Secret Science" which is as old as human philosophical thought itself.

Vahan (Sans.) "Vehicle," a synonym of Upadhi.

Vallabhachâryas Sect (Sans.), or the "Sect of the Maharâjas," a licentious phallic-worshipping community, whose main branch is at Bombay. The object of the worship is the infant Krishna. The Anglo-Indian Government was compelled several times to interfere in order to put a stop to its rites and vile practices, and its governing Maharâja, a kind of High Priest, was more than once imprisoned, and very justly so. It is one of the blackest spots of India.

Vedanta (Sans.) Meaning literally, the "end of all knowledge." Among the six Darshanas or the schools of philosophy, it is also called Uttara Mimansa , or the "later" Mimansa. There are those who, unable to understand its esotericism, consider it atheistical; but this is not so, as Shankaracharya, the great apostle of this school, and its popularizer, was one of the greatest mystics and adepts of India.

Vidya (Sans.) Knowledge, or rather "Wisdom-Knowledge."

Vijñana (Sans.) One of five Skandhas; meaning literally, "mental powers."
(See Skandhas.)

Wisdom-Religion The same as Theosophy. The name given to the secret doctrine which underlies every exoteric scripture and religion.

Yoga (Sans.) A school of philosophy founded by Patañjali, but which existed as a distinct teaching and system of life long before that sage. It is Yajñavalkya, a famous and very ancient sage, to whom the White Yajur-Veda, the Satapatha-Brahmana and the Brihad-Aranyaka are attributed and who lived in pre-Mahabharatean times, who is credited with inculcating the necessity and positive duty of religious meditation and retirement into the forests, and who, therefore, is believed to have originated the Yoga doctrine. Professor Max Müller states that it is Yajñavalkya who prepared the world for the preaching of Buddha. Patañjali's Yoga, however, is more definite and precise as a philosophy, and embodies more of the occult sciences than any of the works attributed to Yajñavalkya.

Yogi or Yogin (Sans.) A devotee, one who practices the Yoga system. There are various grades and kinds of Yogis, and the term has now become in India a generic name to designate every kind of ascetic.

Yuga (Sans.) An age of the world of which there are four, which follow each other in a series, namely, Krita (or Satya) Yuga, the golden age; Treta -Yuga, Dvapara-Yuga, and finally Kali-Yuga, the black age-in which we now

are.

Zenobia The Queen of Palmyra, defeated by the Emperor Aurelianus. She had for her instructor Longinus, the famous critic and logician in the third century ad (See Longinus.)

Zivo, Kabar (or Yukabar) The name of one of the creative deities in the Nazarene Codex. (See Isis Unveiled.)

Zohar (Heb.) The Book of Splendor, a Cabalistic work attributed to Simeon Ben Iochai, in the first century of our era. (See for fuller explanation Theosophical Glossary)

Zoroastrian One who follows the religion of the Parsis, sun, or fire-worshippers.

Appendix

- o0o-

The Theosophical Society: Information for Inquirers

The Theosophical Society was formed at New York, November 17th, 1875. Its founders believed that the best interests of Religion and Science would be promoted by the revival of Sanskrit, Pali, Zend, and other ancient literature, in which the Sages and Initiates had preserved for the use of mankind truths of the highest value respecting man and nature. A Society of an absolutely unsectarian character, whose work should be amicably prosecuted by the learned of all races, in a spirit of unselfish devotion to the research of truth, and with the purpose of disseminating it impartially, seemed likely to do much to check materialism and strengthen the waning religious spirit. The simplest expression of the objects of the Society is the following:

1. To form the nucleus of a Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste, or color.
2. To promote the study of ryan and other Eastern literatures, religions, and sciences.
3. A third object-pursued by a portion only of the members of the Society-is to investigate unexplained laws of nature and the psychical powers of man.

No person's religious opinions are asked upon his joining, nor is interference with them permitted, but everyone is required, before admission, to promise to show towards his fellow-members the same tolerance in this respect as he claims for himself.

The headquarters, offices, and managing staff are at Adyar, a suburb of Madras, where the Society has a property of twenty-seven acres and extensive buildings, including one for the Oriental Library, and a spacious hall wherein the General Council meets annually in Convention, on the 27th of December.

The Society is not yet endowed, but there is a nucleus of a Fund, the income from the investment of which will go towards defraying the current expenses; these have hitherto been met by the proceeds of entrance-fees, donations, and a small annual subscription from each member. But by the Revised Rules of 1889, the Society has been placed upon a basis of voluntary contributions, and is therefore entirely dependent for maintenance upon the generosity of its Fellows and others, as Entrance Fees and Annual Dues are abolished. No salaries are paid; all work is done by volunteers, who receive simple food and necessary clothing, when their private circumstances require such allowances.

The Key To Theosophy - HP Blavatsky.txt

The Official Trustee for all Society property is the President for the time being, and legacies and bequests should invariably be made in his name, in the legal phraseology of the Code of the country where the testator executes his Will. If left to the Society by name, the bequest becomes void in law. The President's full address is Henry Steel Olcott, Adyar, Madras, India.

The Society, as a body, eschews politics and all subjects outside its declared sphere of work. The Rules stringently forbid members to compromise its strict neutrality in these matters.

Many Branches of the Society have been formed in various parts of the world, and new ones are constantly being organized. Each branch frames its own bylaws and manages its own local business without interference from Headquarters; provided only that the fundamental rules of the Society are not violated. Branches lying within certain territorial limits (as for instance, America, British Islands, Ceylon, etc., have been grouped for purposes of administration in territorial Sections). For particulars, see the Revised Rules of 1889, where all necessary information with regard to joining the Society, etc., will also be found.

There have been founded up to date (1889) 173 Branches of the Society. For particulars see the Rules, etc., of the Theosophical Society, to be had on application to the Recording Secretary of the Theosophical Society, Adyar, Madras; or to the General Secretaries of the Sections.

In England, Dr. A. Keightley, 7 Duke Street, Adelphi, London. In America, William Q. Judge, P. O. Box 2659, New York.

The Legal Status of the Theosophical Society

The following Official Report, on which was granted a Decree of Incorporation to the St. Louis Theosophical Society, is an important document, as putting on record the view taken of the Theosophical Society after a careful examination of witnesses on oath by an American Court of Law.

1. The petitioner is not a religious body. I report this negative finding for the reason that the word Theosophical contained in petitioners' name conveys a possible religious implication. The statutory phrase "society formed for religious purposes" applies, I suppose, only to an organization formed in part for worship, worship being an individual act involving adoration and perhaps emotional power, both being of necessity individual acts, or else to an organization formed for a propagation of a religious faith. Merely to teach a religion as one may teach algebra, is not, I think, a religious work, as the word religious is used in the Statute and the Constitution. A man may occupy a collegiate chair of Professor of Religions and as such teach the tenets of many religions. These different religions being variant and antagonistic, the Professor could not by any possibility worship under all. Nay, he might even be irreligious. Hence, merely teaching religions is not a religious work in the statutory sense. It will be noted that in article two of this society's constitution, the word religion is used in the plural. To teach religions is educational, not religious. "To promote the study of religions" is in part to promote the study of the history of man. I add the subordinate finding that the society has no religious creed and practices no worship.

2. The petitioner proposes to promote the study of literature and sciences. These objects are expressly within the terms of the Statute.

3. Cognate with the last objects is that of investigating "unexplained laws of nature and psychical powers latent in man." These two phrases, taken in

their apparent meaning, are unobjectionable. But there is reason to believe that they form a meaning other than the apparent one.

The court will take notice of the commonly accepted meaning of the word Theosophy. Though I am ignorant of Theosophy, I think it is supposed to include among other things manifestations and phenomena, physical and psychical, that are violations of the laws now known by physicists and metaphysicians, and perhaps not explained or claimed to be explained or understood even by Theosophists themselves. In this group may be included Spiritualism, mesmerism, clairvoyance, mind-healing, mind-reading and the like. I took testimony on this question, and found that while a belief in any one of these sorts of manifestations and phenomena is not required, while each member of the society is at liberty to hold his own opinion, yet such questions form topics of inquiry and discussion, and the members as a mass probably believe individually in phenomena that are abnormal and in powers that are superhuman as far as science now knows. It is undoubtedly the right of any citizen to hold whatever opinions he pleases on these subjects, and to endeavor at his pleasure to investigate the unexplained and to display the latent. But the question here is: Shall the Court grant a franchise in aid of such endeavor? Voodooism is a word applied to the practices of guileful men among the ignorant and superstitious who inflict impostures upon guileless men among the ignorant and superstitious. No Court would grant a franchise in furtherance of such practices. The Court then will stop to inquire into the practices and perhaps the reputation of the enterprise which seeks judicial aid. I am not meaning to make a comparison between voodooism and this group of phenomena which for convenience (though I know not whether accurately) I will call occultism. I only take voodooism as a strong case to show the Court ought to inquire. If we now inquire into occultism we shall find that it has been occasionally used, as is reported, for the purposes of imposture. But this goes for nothing against its essential character. Always and everywhere bad men will make a bad use of anything for selfish ends. The object of this society, whether attainable or not, is undeniably laudable, assuming that there are physical and psychical phenomena unexplained, and that Theosophy seeks to explain them. Assuming that there are human powers yet latent, it seeks to discover them. It may be that absurdities and impostures are in fact incident to the nascent stage of its development. As to an understanding like that of occultism, which asserts powers commonly thought superhuman, and phenomena commonly thought supernatural, it seemed to me that the Court, though not assuming to determine judicially the question of their verity, would, before granting to occultism a franchise, inquire whether at least it had gained the position of being reputable or whether its adherents were merely men of narrow intelligence, mean intellect, and omnivorous credulity. I accordingly took testimony on that point, and find that a number of gentlemen in different countries of Europe, and also in this country, eminent in science, are believers in occultism. Sir Edward Bulwer Lytton, a writer of large and varied learning, and of solid intellect, is asserted to have been an occultist, an assertion countenanced by at least two of his books. The late President Wayland, of Brown University, writing of abnormal mental operations as shown in clairvoyance, says:

The subject seems to me well worthy of the most searching and candid examination. It is by no means deserving of ridicule, but demands the attention of the most philosophical inquiry.

Sir William Hamilton, probably the most acute and, undeniably, the most learned of English metaphysicians that ever lived, said at least thirty years ago:

However astonishing, it is now proved beyond all rational doubt that in certain abnormal states of the nervous organism perceptions are possible through other than the ordinary channels of the senses.

By such testimony Theosophy is at least placed on the footing of

The Key To Theosophy - HP Blavatsky.txt

respectability. Whether by further labor it can make partial truths complete truths, whether it can eliminate extravagances and purge itself of impurities, if there are any, are probably questions upon which the Court will not feel called upon to pass. I perceive no other feature of the petitioners' constitution that is obnoxious to legal objection, and accordingly I have the honor to report that I show no cause why the prayer of the petitioners should not be granted.

- AUGUST W. ALEXANDER,

Amicus Curiae.

PREFACE.

THE Author -- the writer, rather -- feels it necessary to apologise for the long delay which has occurred in the appearance of this work. It has been occasioned by ill-health and the magnitude of the undertaking. Even the two volumes now issued do not complete the scheme, and these do not treat exhaustively of the subjects dealt with in them. A large quantity of material has already been prepared, dealing with the history of occultism as contained in the lives of the great Adepts of the Aryan Race, and showing the bearing of occult philosophy upon the conduct of life, as it is and as it ought to be. Should the present volumes meet with a favourable reception, no effort will be spared to carry out the scheme of the work in its entirety. The third volume is entirely ready; the fourth almost so.

This scheme, it must be added, was not in contemplation when the preparation of the work was first announced. As originally announced, it was intended that the "Secret Doctrine" should be an amended and enlarged version of "Isis Unveiled." It was, however, soon found that the explanations which could be added to those already put before the world in the last-named and other works dealing with esoteric science, were such as to require a different method of treatment: and consequently the present volumes do not contain, in all, twenty pages extracted from "Isis Unveiled."

The author does not feel it necessary to ask the indulgence of her readers and critics for the many defects of literary style, and the imperfect English which may be found in these pages. She is a foreigner, and her knowledge of the language was acquired late in life. The English tongue is employed because it offers the most widely-diffused medium for conveying the truths which it had become her duty to place before the world.

These truths are in no sense put forward as a revelation; nor does the author claim the position of a revealer of mystic lore, now made public for the first time in the world's history. For what is contained in this work is to be found scattered throughout thousands of volumes embodying the scriptures of the great Asiatic and early European religions, hidden under glyph and symbol, and hitherto left unnoticed because of this veil. What is now attempted is to gather the oldest tenets together and to make of them one harmonious and unbroken whole. The sole advantage which the writer has over her predecessors, is that she need not resort to personal speculations and theories. For this work is a partial statement of what she herself has been taught by more advanced students, supplemented, in a few details only, by the results of her

[[Vol. 1, Page]] viii

own study and observation. The publication of many of the facts herein stated has been rendered necessary by the wild and fanciful speculations in which many Theosophists and students of mysticism have indulged, during the last few years, in their endeavour to, as they imagined, work out a complete system of thought from the few facts previously communicated to them.

It is needless to explain that this book is not the Secret Doctrine in its entirety, but a select number of fragments of its fundamental tenets, special attention being paid to some facts which have been seized upon by various writers, and distorted out of all resemblance to the truth.

But it is perhaps desirable to state unequivocally that the teachings, however fragmentary and incomplete, contained in these volumes, belong neither to the Hindu, the Zoroastrian, the Chaldean, nor the Egyptian religion, neither to Buddhism, Islam, Judaism nor Christianity exclusively. The Secret Doctrine is the essence of all these. Sprung from it in their origins, the various religious schemes are now made to merge back into their original element, out of which every mystery and dogma has grown, developed, and become materialised.

It is more than probable that the book will be regarded by a large section of the public as a romance of the wildest kind; for who has ever even heard of the book of Dzyan?

The writer, therefore, is fully prepared to take all the responsibility for what is contained in this work, and even to face the charge of having invented the whole of it. That it has many shortcomings she is fully aware; all that she claims for it is that, romantic as it may

seem to many, its logical coherence and consistency entitle this new Genesis to rank, at any rate, on a level with the "working hypotheses" so freely accepted by modern science. Further, it claims consideration, not by reason of any appeal to dogmatic authority, but because it closely adheres to Nature, and follows the laws of uniformity and analogy.

The aim of this work may be thus stated: to show that Nature is not "a fortuitous concurrence of atoms," and to assign to man his rightful place in the scheme of the Universe; to rescue from degradation the archaic truths which are the basis of all religions; and to uncover, to some extent, the fundamental unity from which they all spring; finally, to show that the occult side of Nature has never been approached by the Science of modern civilization.

If this is in any degree accomplished, the writer is content. It is written in the service of humanity, and by humanity and the future generations it must be judged. Its author recognises no inferior court of appeal. Abuse she is accustomed to; calumny she is daily acquainted with; at slander she smiles in silent contempt.

De minimis non curat lex.

INTRODUCTORY.

"Gently to hear, kindly to judge."
-- SHAKESPEARE.

SINCE the appearance of Theosophical literature in England, it has become customary to call its teachings "Esoteric Buddhism." And, having become a habit -- as an old proverb based on daily experience has it -- "Error runs down an inclined plane, while Truth has to laboriously climb its way up hill."

Old truisms are often the wisest. The human mind can hardly remain entirely free from bias, and decisive opinions are often formed before a thorough examination of a subject from all its aspects has been made. This is said with reference to the prevailing double mistake (a) of limiting Theosophy to Buddhism: and (b) of confounding the tenets of the religious philosophy preached by Gautama, the Buddha, with the doctrines broadly outlined in "Esoteric Buddhism." Any thing more erroneous than this could be hardly imagined. It has enabled our enemies to find an effective weapon against theosophy; because, as an eminent Pali scholar very pointedly expressed it, there was in the volume named "neither esotericism nor Buddhism." The esoteric truths, presented in Mr. Sinnett's work, had ceased to be esoteric from the moment they were made public; nor did it contain the religion of Buddha, but simply a few tenets from a hitherto hidden teaching which are now supplemented by many more, enlarged and explained in the present volumes. But even the latter, though giving out many fundamental tenets from the SECRET DOCTRINE of the East, raise but a small corner of the dark veil. For no one, not even the greatest living adept, would be permitted to, or could -- even if he would -- give out promiscuously, to a mocking, unbelieving world, that which has been so effectually concealed from it for long aeons and ages.

"Esoteric Buddhism" was an excellent work with a very unfortunate

[[Vol. 1, Page]] xviii INTRODUCTORY.

title, though it meant no more than does the title of this work, the "SECRET DOCTRINE." It proved unfortunate, because people are always in the habit of judging things by their appearance, rather than their meaning; and because the error has now become so universal, that even most of the Fellows of the Theosophical Society have fallen victims to the same misconception. From the first, however, protests were raised by Brahmins and others against the title; and, in justice to myself, I must add that "Esoteric Buddhism" was presented to me as a completed volume, and that I was entirely unaware of the manner in which the author intended to spell the word "Budh-ism."

This has to be laid directly at the door of those who, having been the first to bring the subject under public notice, neglected to point out the difference between "Buddhism" -- the religious system of ethics preached by the Lord Gautama, and named after his title of Buddha, "the Enlightened" -- and Budha, "Wisdom," or knowledge (Vidya), the faculty of cognizing, from the Sanskrit root "Budh," to know. We theosophists of India are ourselves the real culprits, although, at the time, we did our best to correct the mistake. (See Theosophist, June, 1883.) To avoid this deplorable misnomer was easy; the spelling of the word had only to be altered, and by common consent both pronounced and written "Budhism," instead of "Buddhism." Nor is the latter term correctly spelt and pronounced, as it ought to be called, in English, Buddhism, and its votaries "Buddhaists."

This explanation is absolutely necessary at the beginning of a work like this one. The "Wisdom Religion" is the inheritance of all the nations, the world over, though the statement was made in "Esoteric Buddhism" (Preface to the original Edition) that "two years ago (i.e. 1883), neither I nor any other European living, knew the alphabet of the Science, here for the first time put into a scientific shape," etc. This error must have crept in through inadvertence. For the present writer knew all that which is "divulged" in "Esoteric Buddhism" -- and much more -- many years before it became her duty (in 1880) to impart a small portion of the Secret Doctrine to two European gentlemen, one of whom was the author of "Esoteric Buddhism"; and surely the present writer has the undoubted, though to her, rather equivocal, privilege of being a European, by birth and education. Moreover, a considerable part of the philosophy

[[Vol. 1, Page]] xix INTRODUCTORY.

expounded by Mr. Sinnett was taught in America, even before Isis Unveiled was published, to two Europeans and to my colleague, Colonel H. S. Olcott. Of the three teachers the latter gentleman has had, the first was a Hungarian Initiate, the second an Egyptian, the third a Hindu. As permitted, Colonel Olcott has given out some of this teaching in various ways; if the other two have not, it has been simply because they were not allowed: their time for public work having not yet come. But for others it has, and the appearance

of Mr. Sinnett's several interesting books is a visible proof of the fact. It is above everything important to keep in mind that no theosophical book acquires the least additional value from pretended authority.

In etymology *Adi*, and *Adhi Budha*, the one (or the First) and "Supreme Wisdom" is a term used by *Aryasanga* in his Secret treatises, and now by all the mystic Northern Buddhists. It is a Sanskrit term, and an appellation given by the earliest Aryans to the Unknown deity; the word "*Brahma*" not being found in the Vedas and the early works. It means the absolute Wisdom, and "*Adi-bhuta*" is translated "the primeval uncreated cause of all" by Fitzedward Hall. AEons of untold duration must have elapsed, before the epithet of Buddha was so humanized, so to speak, as to allow of the term being applied to mortals and finally appropriated to one whose unparalleled virtues and knowledge caused him to receive the title of the "Buddha of Wisdom unmoved." *Bodha* means the innate possession of divine intellect or "understanding"; "Buddha," the acquirement of it by personal efforts and merit; while *Buddhi* is the faculty of cognizing the channel through which divine knowledge reaches the "Ego," the discernment of good and evil, "divine conscience" also; and "Spiritual Soul," which is the vehicle of *Atma*. "When *Buddhi* absorbs our EGOtism (destroys it) with all its *Vikaras*, *Avalokiteshvara* becomes manifested to us, and *Nirvana*, or *Mukti*, is reached," "*Mukti*" being the same as *Nirvana*, i.e., freedom from the trammels of "*Maya*" or illusion. "*Bodhi*" is likewise the name of a particular state of trance condition, called *Samadhi*, during which the subject reaches the culmination of spiritual knowledge.

Unwise are those who, in their blind and, in our age, untimely hatred of Buddhism, and, by re-action, of "Budhism," deny its esoteric teachings (which are those also of the Brahmins), simply because the name

[[Vol. 1, Page]] xx INTRODUCTORY.

suggests what to them, as Monotheists, are noxious doctrines. Unwise is the correct term to use in their case. For the Esoteric philosophy is alone calculated to withstand, in this age of crass and illogical materialism, the repeated attacks on all and everything man holds most dear and sacred, in his inner spiritual life. The true philosopher, the student of the Esoteric Wisdom, entirely loses sight of personalities, dogmatic beliefs and special religions. Moreover, Esoteric philosophy reconciles all religions, strips every one of its outward, human garments, and shows the root of each to be identical with that of every other great religion. It proves the necessity of an absolute Divine Principle in nature. It denies Deity no more than it does the Sun. Esoteric philosophy has never rejected God in Nature, nor Deity as the absolute and abstract *Ens*. It only refuses to accept any of the gods of the so-called monotheistic religions, gods created by man in his own image and likeness, a blasphemous and sorry caricature of the Ever Unknowable. Furthermore, the records we mean to place before the reader embrace the esoteric tenets of the whole world since the beginning of our humanity, and Buddhist occultism occupies therein only its legitimate place, and no more. Indeed, the secret portions of the "*Dan*" or *Jan-na*"* ("*Dhyan*") of *Gautama*'s metaphysics -- grand as they appear to one unacquainted with the tenets of the Wisdom Religion of antiquity - are but a very small portion of the whole. The Hindu Reformer limited his public teachings to the purely moral and physiological aspect of the Wisdom Religion, to Ethics and *MAN* alone. Things "unseen and incorporeal," the mystery of Being outside our terrestrial sphere, the great Teacher left entirely untouched in his public lectures, reserving the hidden Truths for a select circle of his *Arhats*. The latter received their Initiation at the famous *Saptaparna* cave (the *Sattapanni* of *Mahavansa*) near *Mount Baibhar* (the *Webhara* of the *Pali MSS.*). This cave was in *Rajagriha*, the ancient capital of *Mogadha*, and was the *Cheta* cave of *Fa-hian*, as rightly suspected by some archaeologists.**

Time and human imagination made short work of the purity and philo-

[[Footnote(s)]] -----

* *Dan*, now become in modern Chinese and Tibetan phonetics *ch'an*, is the general term for the esoteric schools, and their literature. In the old books, the word *Janna* is defined as "to reform one's self by meditation and knowledge," a second inner birth. Hence *Dzan*, *Djan* phonetically, the "Book of *Dzyan*."

** *Mr. Beglor*, the chief engineer at *Buddhagaya*, and a distinguished archaeologist, was the first, we believe, to discover it.

[[Vol. 1, Page]] xxi INTRODUCTORY.

sophy of these teachings, once that they were transplanted from the secret and sacred circle of the *Arhats*, during the course of their work of proselytism, into a soil less prepared for metaphysical conceptions than India; i.e., once they were transferred into China, Japan, Siam, and *Burmah*. How the pristine purity of these grand revelations was dealt with may be seen in studying some of the so-called "esoteric" Buddhist schools of antiquity in their modern garb, not only in China and other Buddhist countries in general, but even in not a few schools in *Thibet*, left to the care of uninitiated *Lamas* and *Mongolian* innovators.

Thus the reader is asked to bear in mind the very important difference between orthodox Buddhism -- i.e., the public teachings of *Gautama* the Buddha, and his esoteric *Budhism*. His Secret Doctrine, however, differed in no wise from that of the initiated Brahmins of his day. The Buddha was a child of the Aryan soil; a born Hindu, a *Kshatrya* and a disciple of the "twice born" (the initiated Brahmins) or *Dwijas*. His teachings, therefore, could not be different from their doctrines, for the whole Buddhist reform merely consisted in giving out a portion of that which had been kept secret from every man outside of the "enchanted" circle of Temple-Initiates and ascetics. Unable to teach all that had been imparted to him -- owing to his pledges -- though he taught a philosophy built upon the ground-work of the true esoteric knowledge, the Buddha gave to the world only its outward material body and kept its soul for his Elect. (See also Volume II.) Many Chinese scholars among Orientalists have heard of the "Soul Doctrine." None seem to have understood its real meaning and importance.

That doctrine was preserved secretly -- too secretly, perhaps -- within the sanctuary. The mystery that shrouded its chief dogma and aspirations -- Nirvana -- has so tried and irritated the curiosity of those scholars who have studied it, that, unable to solve it logically and satisfactorily by untying the Gordian knot, they cut it through, by declaring that Nirvana meant absolute annihilation.

Toward the end of the first quarter of this century, a distinct class of literature appeared in the world, which became with every year more defined in its tendency. Being based, *soi-disant*, on the scholarly researches of Sanskritists and Orientalists in general, it was held scientific. Hindu, Egyptian, and other ancient religions, myths, and emblems were made to yield anything the symbolist wanted them to

[[Vol. 1, Page]] xxii INTRODUCTORY.

yield, thus often giving out the rude outward form in place of the inner meaning. Works, most remarkable for their ingenious deductions and speculations, in *circulo vicioso*, foregone conclusions generally changing places with premisses as in the syllogisms of more than one Sanskrit and Pali scholar, appeared rapidly in succession, over-flooding the libraries with dissertations rather on phallic and sexual worship than on real symbology, and each contradicting the other.

This is the true reason, perhaps, why the outline of a few fundamental truths from the Secret Doctrine of the Archaic ages is now permitted to see the light, after long millenniums of the most profound silence and secrecy. I say "a few truths," advisedly, because that which must remain unsaid could not be contained in a hundred such volumes, nor could it be imparted to the present generation of Sadducees. But, even the little that is now given is better than complete silence upon those vital truths. The world of to-day, in its mad career towards the unknown -- which it is too ready to confound with the unknowable, whenever the problem eludes the grasp of the physicist -- is rapidly progressing on the reverse, material plane of spirituality. It has now become a vast arena -- a true valley of discord and of eternal strife -- a necropolis, wherein lie buried the highest and the most holy aspirations of our Spirit-Soul. That soul becomes with every new generation more paralyzed and atrophied. The "amiable infidels and accomplished profligates" of Society, spoken of by Greeley, care little for the revival of the dead sciences of the past; but there is a fair minority of earnest students who are entitled to learn the few truths that may be given to them now; and now much more than ten years ago, when "Isis Unveiled," or even the later attempts to explain the mysteries of esoteric science, were published.

One of the greatest, and, withal, the most serious objection to the correctness and reliability of the whole work will be the preliminary STANZAS: "How can the statements contained in them be verified?" True, if a great portion of the Sanskrit, Chinese, and Mongolian works quoted in the present volumes are known to some Orientalists, the chief work -- that one from which the Stanzas are given -- is not in the possession of European Libraries. The Book of Dzyan (or "Dzan") is utterly unknown to our Philologists, or at any rate was never heard of by them under its present name. This is, of course, a great drawback

[[Vol. 1, Page]] xxiii INTRODUCTORY.

to those who follow the methods of research prescribed by official Science; but to the students of Occultism, and to every genuine Occultist, this will be of little moment. The main body of the Doctrines given is found scattered throughout hundreds and thousands of Sanskrit MSS., some already translated -- disfigured in their interpretations, as usual, -- others still awaiting their turn. Every scholar, therefore, has an opportunity of verifying the statements herein made, and of checking most of the quotations. A few new facts (new to the profane Orientalist, only) and passages quoted from the Commentaries will be found difficult to trace. Several of the teachings, also, have hitherto been transmitted orally: yet even those are in every instance hinted at in the almost countless volumes of Brahminical, Chinese and Tibetan temple-literature.

However it may be, and whatsoever is in store for the writer through malevolent criticism, one fact is quite certain. The members of several esoteric schools -- the seat of which is beyond the Himalayas, and whose ramifications may be found in China, Japan, India, Tibet, and even in Syria, besides South America -- claim to have in their possession the sum total of sacred and philosophical works in MSS. and type: all the works, in fact, that have ever been written, in whatever language or characters, since the art of writing began; from the ideographic hieroglyphs down to the alphabet of Cadmus and the Devanagari.

It has been claimed in all ages that ever since the destruction of the Alexandrian Library (see *Isis Unveiled*, Vol. II., p. 27), every work of a character that might have led the profane to the ultimate discovery and comprehension of some of the mysteries of the Secret Science, was, owing to the combined efforts of the members of the Brotherhoods, diligently searched for. It is added, moreover, by those who know, that once found, save three copies left and stored safely away, such works were all destroyed. In India, the last of the precious manuscripts were secured and hidden during the reign of the Emperor Akbar.*

It is maintained, furthermore, that every sacred book of that kind, whose text was not sufficiently veiled in symbolism, or which had any

[[Footnote(s)]] -----

* Prof. Max Muller shows that no bribes or threats of Akbar could extort from the Brahmans the original text of the Veda; and boasts that European Orientalists have it (*Lecture on the "Science of Religion,"* p. 23). Whether Europe has the complete text is very doubtful, and the future may have very disagreeable surprises in store for the Orientalists.

direct references to the ancient mysteries, after having been carefully copied in cryptographic characters, such as to defy the art of the best and cleverest palaeographer, was also destroyed to the last copy. During Akbar's reign, some fanatical courtiers, displeased at the Emperor's sinful prying into the religions of the infidels, themselves helped the Brahmans to conceal their MSS. Such was Badaoni, who had an undisguised horror for Akbar's mania for idolatrous religions.*

Moreover in all the large and wealthy lamasaries, there are subterranean crypts and cave-libraries, cut in the rock, whenever the gonpa and the lhakhang are situated in the mountains. Beyond the Western Tsay-dam, in the solitary passes of Kuen-lun** there are several such hiding places. Along the ridge of Altyn-Toga, whose soil no European foot has ever trodden so far, there exists a certain hamlet, lost in a deep gorge. It is a small cluster of houses, a hamlet rather than a monastery, with a poor-looking temple in it, with one old lama, a hermit, living near by to watch it. Pilgrims say that the subterranean galleries and halls under it contain a collection of books, the number of which, according to the accounts given, is too large to find room even in the British Museum.***

All this is very likely to provoke a smile of doubt. But then, before

[[Footnote(s)]] -----

* Badaoni wrote in his Muntakhab at Tawarikh: "His Majesty relished inquiries into the sects of these infidels (who cannot be counted, so numerous they are, and who have no end of revealed books) . . . As they (the Sramana and Brahmans) surpass other learned men in their treatises on morals, on physical and religious sciences, and reach a high degree in their knowledge of the future, in spiritual power, and human perfection, they brought proofs based on reason and testimony, and inculcated their doctrines so firmly that no man could now raise a doubt in his Majesty even if mountains were to crumble to dust, or the heavens were to tear asunder." This work "was kept secret, and was not published till the reign of Jahangir." (Ain i Akbari, translated by Dr. Blochmann, p. 104, note.)

** Karakorum mountains, Western Tibet.

*** According to the same tradition the now desolate regions of the waterless land of Tarim -- a true wilderness in the heart of Turkestan -- were in the days of old covered with flourishing and wealthy cities. At present, hardly a few verdant oases relieve its dead solitude. One such, sprung on the sepulchre of a vast city swallowed by and buried under the sandy soil of the desert, belongs to no one, but is often visited by Mongolians and Buddhists. The same tradition speaks of immense subterranean abodes, of large corridors filled with tiles and cylinders. It may be an idle rumour, and it may be an actual fact.

the reader rejects the truthfulness of the reports, let him pause and reflect over the following well known facts. The collective researches of the Orientalists, and especially the labours of late years of the students of comparative Philology and the Science of Religions have led them to ascertain as follows: An immense, incalculable number of MSS., and even printed works known to have existed, are now to be found no more. They have disappeared without leaving the slightest trace behind them. Were they works of no importance they might, in the natural course of time, have been left to perish, and their very names would have been obliterated from human memory. But it is not so; for, as now ascertained, most of them contained the true keys to works still extant, and entirely incomprehensible, for the greater portion of their readers, without those additional volumes of Commentaries and explanations. Such are, for instance, the works of Lao-tse, the predecessor of Confucius.*

He is said to have written 930 books on Ethics and religions, and seventy on magic, one thousand in all. His great work, however, the heart of his doctrine, the "Tao-te-King," or the sacred scriptures of the Taosse, has in it, as Stanislas Julien shows, only "about 5,000 words" (Tao-te-King, p. xxvii.), hardly a dozen of pages, yet Professor Max Muller finds that "the text is unintelligible without commentaries, so that Mr. Julien had to consult more than sixty commentators for the purpose of his translation," the earliest going back as far as the year 163 B.C., not earlier, as we see. During the four centuries and a half that preceded this earliest of the commentators there was ample time to veil the true Lao-tse doctrine from all but his initiated priests. The Japanese, among whom are now to be found the most learned of the priests and followers of Lao-tse, simply laugh at the blunders and hypotheses of the European Chinese scholars; and tradition affirms that the commentaries to which our Western Sinologues have access are not the real occult records, but intentional veils, and that the true commentaries, as well as almost all the texts, have long since disappeared from the eyes of the profane.

[[Footnote(s)]] -----

* "If we turn to China, we find that the religion of Confucius is founded on the Five King and the Four Shu-books, in themselves of considerable extent and surrounded by voluminous Commentaries, without which even the most learned scholars would not venture to fathom the depth of their sacred canon." (Lectures on the "Science of Religion," p. 185. Max Muller.) But they have not fathomed it -- and this is the complaint of the Confucianists, as a very learned member of that body, in Paris, complained in 1881.

If one turns to the ancient literature of the Semitic religions, to the Chaldean Scriptures, the elder sister and instructress, if not the fountain-head of the Mosaic Bible, the basis and starting-point of Christianity, what do the scholars find? To perpetuate the memory

of the ancient religions of Babylon; to record the vast cycle of astronomical observations of the Chaldean Magi; to justify the tradition of their splendid and eminently occult literature, what now remains? -- only a few fragments, said to be by Berosus.

These, however, are almost valueless, even as a clue to the character of what has disappeared. For they passed through the hands of his Reverence the Bishop of Caesarea -- that self-constituted censor and editor of the sacred records of other men's religions -- and they doubtless bear to this day the mark of his eminently veracious and trustworthy hand. For what is the history of this treatise on the once grand religion of Babylon?

Written in Greek by Berosus, a priest of the temple of Belus, for Alexander the Great, from the astronomical and chronological records preserved by the priests of that temple, and covering a period of 200,000 years, it is now lost. In the first century B.C. Alexander Polyhistor made a series of extracts from it -- also lost. Eusebius used these extracts in writing his Chronicon (270-340 A.D.). The points of resemblance -- almost of identity -- between the Jewish and the Chaldean Scriptures,* made the latter most dangerous to Eusebius, in his role of defender and champion of the new faith which had adopted the Jewish Scriptures, and with them an absurd chronology. It is pretty certain that Eusebius did not spare the Egyptian Synchronistic tables of Manetho -- so much so that Bunsen** charges him with mutilating history most unscrupulously. And Socrates, a historian of the fifth century, and Syncellus, vice-patriarch of Constantinople (eighth century), both denounce him as the most daring and desperate forger.

Is it likely, then, that he dealt more tenderly with the Chaldean records, which were already menacing the new religion, so rashly accepted?

[[Footnote(s)]] -----

* Found out and proven only now, through the discoveries made by George Smith (vide his "Chaldean account of Genesis"), and which, thanks to this Armenian forger, have misled all the civilized nations for over 1,500 years into accepting Jewish derivations for direct Divine Revelation!

** Bunsen's "Egypt's Place in History," vol. i. p. 200

[[Vol. 1, Page]] xxvii INTRODUCTORY.

So that, with the exception of these more than doubtful fragments, the entire Chaldean sacred literature has disappeared from the eyes of the profane as completely as the lost Atlantis. A few facts that were contained in the Berosian History are given in Part II. of Vol. II., and may throw a great light on the true origin of the Fallen Angels, personified by Bel and the Dragon.

Turning now to the oldest Aryan literature, the Rig-Veda, the student will find, following strictly in this the data furnished by the said Orientalists themselves, that, although the Rig-Veda contains only "about 10,580 verses, or 1,028 hymns," in spite of the Brahmanas and the mass of glosses and commentaries, it is not understood correctly to this day. Why is this so? Evidently because the Brahmanas, "the scholastic and oldest treatises on the primitive hymns," themselves require a key, which the Orientalists have failed to secure.

What do the scholars say of Buddhist literature? Have they got it in its completeness? Assuredly not. Notwithstanding the 325 volumes of the Kanjur and the Tanjur of the Northern Buddhists, each volume we are told, "weighing from four to five pounds," nothing, in truth, is known of Lamaism. Yet, the sacred canon of the Southern Church is said to contain 29,368,000 letters in the Saddharma alankara,* or, exclusive of treatises and commentaries, "five or six times the amount of the matter contained in the Bible," the latter, in the words of Professor Max Muller, rejoicing only in 3,567,180 letters. Notwithstanding, then, these "325 volumes" (in reality there are 333, Kanjur comprising 108, and Tanjur 225 volumes), "the translators, instead of supplying us with correct versions, have interwoven them with their own commentaries, for the purpose of justifying the dogmas of their several schools."** Moreover, "according to a tradition preserved by the Buddhist schools, both of the South and of the North, the sacred Buddhist Canon comprised originally 80,000 or 84,000 tracts, but most of them were lost, so that there remained but 6,000," the professor tells his audiences. "Lost" as usual for Europeans. But who can be quite sure that they are likewise lost for Buddhists and Brahmins?

Considering the sacredness for the Buddhists of every line written

[[Footnote(s)]] -----

[[Vol. 1, Page]] xxviii INTRODUCTORY.

upon Buddha or his "Good Law," the loss of nearly 76,000 tracts does seem miraculous. Had it been vice versa, every one acquainted with the natural course of events would subscribe to the statement that, of these 76,000, five or six thousand treatises might have been destroyed during the persecutions in, and emigrations from, India. But as it is well ascertained that Buddhist Arhats began their religious exodus, for the purpose of propagating the new faith beyond Kashmir and the Himalayas, as early as the year 300 before our era,* and reached China in the year 61 A.D.** when Kashyapa, at the invitation of the Emperor Ming-ti, went there to acquaint the

"Son of Heaven" with the tenets of Buddhism, it does seem strange to hear the Orientalists speaking of such a loss as though it were really possible. They do not seem to allow for one moment the possibility that the texts may be lost only for West and for themselves; or, that the Asiatic people should have the unparalleled boldness to keep their most sacred records out of the reach of foreigners, thus refusing to deliver them to the profanation and misuse of races even so "vastly superior" to themselves.

Owing to the expressed regrets and numerous confessions of almost every one of the Orientalists (See Max Muller's Lectures for example) the public may feel sufficiently sure (a) that the students of ancient religions have indeed very few data upon which to build such final conclusions as they generally do about the old religions, and (b) that such lack of data does not prevent them in the least from dogmatising. One would imagine that, thanks to the numerous records of the Egyptian theogony and mysteries preserved in the classics, and in a number of ancient writers, the rites and dogmas of Pharaonic Egypt ought to be well understood at least; better, at any rate, than the too abstruse philosophies and Pantheism of India, of whose religion and language Europe had hardly any idea before the beginning of the present century. Along the Nile and on the face of the whole country, there stand to this hour, exhumed yearly and daily, fresh relics which eloquently tell their own history. Still it is not so. The learned Oxford philologist himself confesses the truth by saying that "Though . . . we see still standing the Pyramids, and the ruins of temples and labyrinths, their walls

[[Footnote(s)]] -----

** Reverend T. Edkins, "Chinese Buddhism."

[[Vol. 1, Page]] xxix INTRODUCTORY.

covered with hieroglyphic inscriptions, and with the strange pictures of gods and goddesses. . . . On rolls of papyrus, which seem to defy the ravages of time, we have even fragments of what may be called the sacred books of the Egyptians; yet, though much has been deciphered in the ancient records of that mysterious race, the mainspring of the religion of Egypt and the original intention of its ceremonial worship are far from being fully disclosed to us."* Here again the mysterious hieroglyphic documents remain, but the keys by which alone they become intelligible have disappeared.

Nevertheless, having found that "there is a natural connection between language and religion"; and, secondly, that there was a common Aryan religion before the separation of the Aryan race; a common Semitic religion before the separation of the Semitic race; and a common Turanian religion before the separation of the Chinese and the other tribes belonging to the Turanian class; having, in fact, only discovered "three ancient centres of religion" and "three centres of language," and though as entirely ignorant of those primitive religions and languages, as of their origin, the professor does not hesitate to declare "that a truly historical basis for a scientific treatment of those principal religions of the world has been gained!"

A "scientific treatment" of a subject is no guarantee for its "historical basis"; and with such scarcity of data on hand, no philologist, even among the most eminent, is justified in giving out his own conclusions for historical facts. No doubt, the eminent Orientalist has proved thoroughly to the world's satisfaction, that according to Grimm's law of phonetic rules, Odin and Buddha are two different personages, quite distinct from each other, and he has shown it scientifically. When, however, he takes the opportunity of saying in the same breath that Odin "was worshipped as the supreme deity during a period long anterior to the age of the Veda and of Homer" (Compar. Theol., p. 318), he has not the slightest "historical basis" for it. He makes history and fact subservient to his

[[Footnote(s)]] -----

* So little acquainted are our greatest Egyptologists with the funerary rites of the Egyptians and the outward marks of the difference of sexes made on the mummies, that it has led to the most ludicrous mistakes. Only a year or two since, one of that kind was discovered at Boulaq, Cairo. The mummy of what had been considered the wife of an unimportant Pharaoh, has turned out, thanks to an inscription found on an amulet hung on his neck, to be that of Sesostris -- the greatest King of Egypt!

[[Vol. 1, Page]] xxx INTRODUCTORY.

own conclusions, which may be very "scientific," in the sight of Oriental scholars, but yet very wide of the mark of actual truth. The conflicting views on the subject of chronology, in the case of the Vedas, of the various eminent philologists and Orientalists, from Martin Haug down to Mr. Max Muller himself, are an evident proof that the statement has no historical basis to stand upon, "internal evidence" being very often a jack-o'-lantern, instead of a safe beacon to follow. Nor has the Science of modern Comparative Mythology any better proof to show, that those learned writers, who have insisted for the last century or so that there must have been "fragments of a primeval revelation, granted to the ancestors of the whole race of mankind . . . preserved in the temples of Greece and Italy," were entirely wrong. For this is what all the Eastern Initiates and Pundits have been proclaiming to the world from time to time. While a prominent Cinghalese priest assured the writer that it was well known that the most important Buddhist tracts belonging to the sacred canon were stored away in countries and places inaccessible to the European pundits, the late Swami Dayanand Sarasvati, the greatest Sanskritist of his day in India, assured some members of the Theosophical Society of the same fact with regard to ancient Brahmanical works. When told that Professor Max Muller had declared to the audiences of his "Lectures" that the theory . . . "that there was a primeval preternatural revelation granted to the fathers of the human race, finds but few supporters at present," -- the holy and learned man laughed. His answer was suggestive. "If Mr. Moksh Mooller, as he pronounced the name, were a Brahmin,

and came with me, I might take him to a gupta cave (a secret crypt) near Okhee Math, in the Himalayas, where he would soon find out that what crossed the Kalapani (the black waters of the ocean) from India to Europe were only the bits of rejected copies of some passages from our sacred books. There was a "primeval revelation," and it still exists; nor will it ever be lost to the world, but will reappear; though the Mlechchhas will of course have to wait."

Questioned further on this point, he would say no more. This was at Meerut, in 1880.

No doubt the mystification played, in the last century at Calcutta, by the Brahmins upon Colonel Wilford and Sir William Jones was a cruel one. But it had been well deserved, and no one was more to be blamed

[[Vol. 1, Page]] xxxi INTRODUCTORY.

in that affair than the Missionaries and Colonel Wilford themselves. The former, on the testimony of Sir William Jones himself (see *Asiat. Res.*, Vol. I., p. 272), were silly enough to maintain that "the Hindus were even now almost Christians, because their Brahma, Vishnu and Mahesa were no other than the Christian trinity."* It was a good lesson. It made the Oriental scholars doubly cautious; but perchance it has also made some of them too shy, and caused, in its reaction, the pendulum of foregone conclusions to swing too much the other way. For "that first supply on the Brahmanical market," made for Colonel Wilford, has now created an evident necessity and desire in the Orientalists to declare nearly every archaic Sanskrit manuscript so modern as to give to the missionaries full justification for availing themselves of the opportunity. That they do so and to the full extent of their mental powers, is shown by the absurd attempts of late to prove that the whole Puranic story about Christna was plagiarized by the Brahmins from the Bible! But the facts cited by the Oxford Professor in his *Lectures on the "Science of Religion,"* concerning the now famous interpolations, for the benefit, and later on to the sorrow, of Col. Wilford, do not at all interfere with the conclusions to which one who studies the Secret Doctrine must unavoidably come. For, if the results show that neither the New nor even the Old Testament borrowed anything from the more ancient religion of the Brahmins and Buddhists, it does not follow that the Jews have not borrowed all they knew from the Chaldean records, the latter being mutilated later on by Eusebius. As to the Chaldeans, they assuredly got their primitive learning from the Brahmins, for Rawlinson shows an undeniably Vedic influence in the early mythology of Babylon; and Col. Vans Kennedy has long since justly declared that Babylonia was, from her origin, the seat of Sanskrit and Brahman learning. But all such proofs must lose their value, in the presence of the latest theory worked out by Prof. Max Muller. What it is everyone knows. The code of phonetic laws has now become a universal solvent for every identification and "connection" between

[[Footnote(s)]] -----

* See Max Muller's "Introduction to the Science of Religion." Lecture On False Analogies in comparative Theology, pp. 288 and 296 et seq. This relates to the clever forgery (on leaves inserted in old Puranic MSS.), in correct and archaic Sanskrit, of all that the Pundits of Col. Wilford had heard from him about Adam and Abraham, Noah and his three sons, etc., etc

[[Vol. 1, Page]] xxxii INTRODUCTORY.

the gods of many nations. Thus, though the Mother of Mercury (Budha, Thot-Hermes, etc.), was Maia, the mother of Buddha (Gautama), also Maya, and the mother of Jesus, likewise Maya (illusion, for Mary is Mare, the Sea, the great illusion symbolically) -- yet these three characters have no connection, nor can they have any, since Bopp, has "laid down his code of phonetic laws."

In their efforts to collect together the many skeins of unwritten history, it is a bold step for our Orientalists to take, to deny, a priori, everything that does not dovetail with their special conclusions. Thus, while new discoveries are daily made of great arts and sciences having existed far back in the night of time, even the knowledge of writing is refused to some of the most ancient nations, and they are credited with barbarism instead of culture. Yet the traces of an immense civilization, even in Central Asia, are still to be found. This civilization is undeniably prehistoric. And how can there be civilization without a literature, in some form, without annals or chronicles? Common sense alone ought to supplement the broken links in the history of departed nations. The gigantic, unbroken wall of the mountains that hem in the whole table-land of Tibet, from the upper course of the river Khuan-Khe down to the Kara-Korum hills, witnessed a civilization during millenniums of years, and would have strange secrets to tell mankind. The Eastern and Central portions of those regions -- the Nan-Schayn and the Altyne-taga -- were once upon a time covered with cities that could well vie with Babylon. A whole geological period has swept over the land, since those cities breathed their last, as the mounds of shifting sand, and the sterile and now dead soil of the immense central plains of the basin of Tarim testify. The borderlands alone are superficially known to the traveller. Within those table-lands of sand there is water, and fresh oases are found blooming there, wherein no European foot has ever yet ventured, or trodden the now treacherous soil. Among these verdant oases there are some which are entirely inaccessible even to the native profane traveller. Hurricanes may "tear up the sands and sweep whole plains away," they are powerless to destroy that which is beyond their reach. Built deep in the bowels of the earth, the subterranean stores are secure; and as their entrances are concealed in such oases, there is little fear that any one should discover them, even should several armies invade the sandy wastes where --

[[Vol. 1, Page]] xxxiii INTRODUCTORY.

"Not a pool, not a bush, not a house is seen,
And the mountain-range forms a rugged screen
Round the parch'd flats of the dry, dry desert. . . ."

But there is no need to send the reader across the desert, when the same proofs of ancient civilization are found even in comparatively populated regions of the same country. The oasis of Tchertchen, for instance, situated about 4,000 feet above the level of the river Tchertchen-D'arya, is surrounded with the ruins of archaic towns and cities in every direction. There, some 3,000 human beings represent the relics of about a hundred extinct nations and races -- the very names of which are now unknown to our ethnologists. An anthropologist would feel more than embarrassed to class, divide and subdivide them; the more so, as the respective descendants of all these antediluvian races and tribes know as little of their own forefathers themselves, as if they had fallen from the moon. When questioned about their origin, they reply that they know not whence their fathers had come, but had heard that their first (or earliest) men were ruled by the great genii of these deserts. This may be put down to ignorance and superstition, yet in view of the teachings of the Secret Doctrine, the answer may be based upon primeval tradition. Alone, the tribe of Khoorassan claims to have come from what is now known as Afghanistan, long before the days of Alexander, and brings legendary lore to that effect as corroboration. The Russian traveller, Colonel (now General) Prjevalsky, found quite close to the oasis of Tchertchen, the ruins of two enormous cities, the oldest of which was, according to local tradition, ruined 3,000 years ago by a hero and giant; and the other by the Mongolians in the tenth century of our era. "The emplacement of the two cities is now covered, owing to shifting sands and the desert wind, with strange and heterogeneous relics; with broken china and kitchen utensils and human bones. The natives often find copper and gold coins, melted silver, ingots, diamonds, and turquoises, and what is the most remarkable -- broken glass. . . ." "Coffins of some undecaying wood, or material, also, within which beautifully preserved embalmed bodies are found. . . . The male mummies are all extremely tall powerfully built men with long waving hair. . . . A vault was found with twelve dead men sitting in it. Another time, in a separate coffin, a young girl was discovered by us. Her eyes were closed with golden discs, and the jaws held firm by a golden cirlet running from under the chin across the top of the head. Clad in a narrow

[[Vol. 1, Page]] xxxiv INTRODUCTORY.

woollen garment, her bosom was covered with golden stars, the feet being left naked." (From a lecture by N. M. Prjevalsky.) To this, the famous traveller adds that all along their way on the river Tchertchen they heard legends about twenty-three towns buried ages ago by the shifting sands of the deserts. The same tradition exists on the Lob-nor and in the oasis of Kerya.

The traces of such civilization, and these and like traditions, give us the right to credit other legendary lore warranted by well educated and learned natives of India and Mongolia, when they speak of immense libraries reclaimed from the sand, together with various reliques of ancient MAGIC lore, which have all been safely stowed away.

To recapitulate. The Secret Doctrine was the universally diffused religion of the ancient and prehistoric world. Proofs of its diffusion, authentic records of its history, a complete chain of documents, showing its character and presence in every land, together with the teaching of all its great adepts, exist to this day in the secret crypts of libraries belonging to the Occult Fraternity.

This statement is rendered more credible by a consideration of the following facts: the tradition of the thousands of ancient parchments saved when the Alexandrian library was destroyed; the thousands of Sanskrit works which disappeared in India in the reign of Akbar; the universal tradition in China and Japan that the true old texts with the commentaries, which alone make them comprehensible -- amounting to many thousands of volumes -- have long passed out of the reach of profane hands; the disappearance of the vast sacred and occult literature of Babylon; the loss of those keys which alone could solve the thousand riddles of the Egyptian hieroglyphic records; the tradition in India that the real secret commentaries which alone make the Veda intelligible, though no longer visible to profane eyes, still remain for the initiate, hidden in secret caves and crypts; and an identical belief among the Buddhists, with regard to their secret books.

The Occultists assert that all these exist, safe from Western spoliating hands, to re-appear in some more enlightened age, for which in the words of the late Swami Dayanand Sarasvati, "the Mlechchhas (outcasts, savages, those beyond the pale of Aryan civilization) will have to wait."

For it is not the fault of the initiates that these documents are now "lost" to the profane; nor was their policy dictated by selfishness, or

[[Vol. 1, Page]] xxxv INTRODUCTORY.

any desire to monopolise the life-giving sacred lore. There were portions of the Secret Science that for incalculable ages had to remain concealed from the profane gaze. But this was because to impart to the unprepared multitude secrets of such tremendous importance, was equivalent to giving a child a lighted candle in a powder magazine.

The answer to a question which has frequently arisen in the minds of students, when meeting with statements such as this, may be outlined here.

"We can understand," they say, "the necessity for concealing from the herd such secrets as the Vril, or the rock-destroying force, discovered by J. W. Keely, of Philadelphia, but we cannot understand how any danger could arise from the revelation of such a purely philosophic doctrine, as, e.g., the evolution of the planetary chains."

The danger was this: Doctrines such as the planetary chain, or the seven races, at once give a clue to the seven-fold nature of man, for each principle is correlated to a plane, a planet, and a race; and the human principles are, on every plane, correlated to seven-fold occult forces -- those of the higher planes being of tremendous power. So that any septenary division at once gives a clue to

tremendous occult powers, the abuse of which would cause incalculable evil to humanity. A clue, which is, perhaps, no clue to the present generation -- especially the Westerns -- protected as they are by their very blindness and ignorant materialistic disbelief in the occult; but a clue which would, nevertheless, have been very real in the early centuries of the Christian era, to people fully convinced of the reality of occultism, and entering a cycle of degradation, which made them ripe for abuse of occult powers and sorcery of the worst description.

The documents were concealed, it is true, but the knowledge itself and its actual existence had never been made a secret of by the Hierophants of the Temple, wherein MYSTERIES have ever been made a discipline and stimulus to virtue. This is very old news, and was repeatedly made known by the great adepts, from Pythagoras and Plato down to the Neoplatonists. It was the new religion of the Nazarenes that wrought a change for the worse -- in the policy of centuries.

Moreover, there is a well-known fact, a very curious one, corroborated to the writer by a reverend gentleman attached for years to a Russian Embassy -- namely, that there are several documents in the St. Peters-

[[Vol. 1, Page]] xxxvi INTRODUCTORY.

burg Imperial Libraries to show that, even so late as during the days when Freemasonry, and Secret Societies of Mystics flourished unimpeded in Russia, i.e., at the end of the last and the beginning of the present century, more than one Russian Mystic travelled to Tibet via the Ural mountains in search of knowledge and initiation in the unknown crypts of Central Asia. And more than one returned years later, with a rich store of such information as could never have been given him anywhere in Europe. Several cases could be cited, and well-known names brought forward, but for the fact that such publicity might annoy the surviving relatives of the said late Initiates. Let any one look over the Annals and History of Freemasonry in the archives of the Russian metropolis, and he will assure himself of the fact stated.

This is a corroboration of that which has been stated many times before, and, unfortunately, too indiscreetly. Instead of benefiting humanity, the virulent charges of deliberate invention and imposture with a purpose thrown at those who asserted but a truthful, if even a little known fact, have only generated bad Karma for the slanderers. But now the mischief is done, and truth should no longer be denied, whatever the consequences. Is it a new religion, we are asked? By no means; it is not a religion, nor is its philosophy new; for, as already stated, it is as old as thinking man. Its tenets are not now published for the first time, but have been cautiously given out to, and taught by, more than one European Initiate -- especially by the late Ragon.

More than one great scholar has stated that there never was a religious founder, whether Aryan, Semitic or Turanian, who had invented a new religion, or revealed a new truth. These founders were all transmitters, not original teachers. They were the authors of new forms and interpretations, while the truths upon which the latter were based were as old as mankind. Selecting one or more of those grand verities -- actualities visible only to the eye of the real Sage and Seer -- out of the many orally revealed to man in the beginning, preserved and perpetuated in the adyta of the temples through initiation, during the MYSTERIES and by personal transmission -- they revealed these truths to the masses. Thus every nation received in its turn some of the said truths, under the veil of its own local and special symbolism; which, as time went on, developed into a more or less philosophical cultus, a Pantheon in mythical disguise. Therefore is Confucius, a very ancient

[[Vol. 1, Page]] xxxvii INTRODUCTORY.

legislator in historical chronology, though a very modern Sage in the World's History, shown by Dr. Legge* -- who calls him "emphatically a transmitter, not a maker" -- as saying: "I only hand on: I cannot create new things. I believe in the ancients and therefore I love them."** (Quoted in "Science of Religions" by Max Muller.)

The writer loves them too, and therefore believes in the ancients, and the modern heirs to their Wisdom. And believing in both, she now transmits that which she has received and learnt herself to all those who will accept it. As to those who may reject her testimony, - i.e., the great majority -- she will bear them no malice, for they will be as right in their way in denying, as she is right in hers in affirming, since they look at TRUTH from two entirely different stand-points. Agreeably with the rules of critical scholarship, the Orientalist has to reject a priori whatever evidence he cannot fully verify for himself. And how can a Western scholar accept on hearsay that which he knows nothing about? Indeed, that which is given in these volumes is selected from oral, as much as from written teachings. This first instalment of the esoteric doctrines is based upon Stanzas, which are the records of a people unknown to ethnology; it is claimed that they are written in a tongue absent from the nomenclature of languages and dialects with which philology is acquainted; they are said to emanate from a source (Occultism) repudiated by science; and, finally, they are offered through an agency, incessantly discredited before the world by all those who hate unwelcome truths, or have some special hobby of their own to defend. Therefore, the rejection of these teachings may be expected, and must be accepted beforehand. No one styling himself a "scholar," in whatever department of exact science, will be permitted to regard these teachings seriously. They will be derided and rejected a priori in this century; but only in this one. For in the twentieth century of our era scholars will begin to recognize that the Secret Doctrine has neither been invented nor exaggerated, but, on the contrary, simply outlined; and finally, that its teachings antedate the Vedas.*** Have not the latter been derided, rejected, and

*** This is no pretension to prophecy, but simply a statement based on the knowledge of facts. Every century an attempt is being made to show the world that Occultism [[Footnote continued on next page]]

[[Vol. 1, Page]] xxxviii INTRODUCTORY.

called "a modern forgery" even so recently as fifty years ago? Was not Sanskrit proclaimed at one time the progeny of, and a dialect derived from, the Greek, according to Lempriere and other scholars? About 1820, Prof. Max Muller tells us, the sacred books of the Brahmans, of the Magians, and of the Buddhists, "were all but unknown, their very existence was doubted, and there was not a single scholar who could have translated a line of the Veda . . . of the Zend Avesta, or . . . of the Buddhist Tripitaka, and now the Vedas are proved to be the work of the highest antiquity whose 'preservation amounts almost to a marvel' (Lecture on the Vedas).

The same will be said of the Secret Archaic Doctrine, when proofs are given of its undeniable existence and records. But it will take centuries before much more is given from it. Speaking of the keys to the Zodiacal mysteries as being almost lost to the world, it was remarked by the writer in "Isis Unveiled" some ten years ago that: "The said key must be turned seven times before the whole system is divulged. We will give it but one turn, and thereby allow the profane one glimpse into the mystery. Happy he, who understands the whole!"

The same may be said of the whole Esoteric system. One turn of the key, and no more, was given in "Isis." Much more is explained in these volumes. In those days the writer hardly knew the language in which the work was written, and the disclosure of many things, freely spoken about now, was forbidden. In Century the Twentieth some disciple more informed, and far better fitted, may be sent by the Masters of Wisdom to give final and irrefutable proofs that there exists a Science called Gupta-Vidya; and that, like the once-mysterious sources of the Nile, the source of all religions and philosophies now known to the world has been for many ages forgotten and lost to men, but is at last found.

Such a work as this has to be introduced with no simple Preface, but with a volume rather; one that would give facts, not mere disquisitions, since the SECRET DOCTRINE is not a treatise, or a series of vague theories, but contains all that can be given out to the world in this century.

It would be worse than useless to publish in these pages even those

[[Footnote(s)]] -----

[[Footnote continued from previous page]] is no vain superstition. Once the door permitted to be kept a little ajar, it will be opened wider with every new century. The times are ripe for a more serious knowledge than hitherto permitted, though still very limited, so far.

[[Vol. 1, Page]] xxxix INTRODUCTORY.

portions of the esoteric teachings that have now escaped from confinement, unless the genuineness and authenticity -- at any rate, the probability -- of the existence of such teachings was first established. Such statements as will now be made, have to be shown warranted by various authorities: those of ancient philosophers, classics and even certain learned Church Fathers, some of whom knew these doctrines because they had studied them, had seen and read works written upon them; and some of whom had even been personally initiated into the ancient Mysteries, during the performance of which the arcane doctrines were allegorically enacted. The writer will have to give historical and trustworthy names, and to cite well-known authors, ancient and modern, of recognized ability, good judgment, and truthfulness, as also to name some of the famous proficient in the secret arts and science, along with the mysteries of the latter, as they are divulged, or, rather, partially presented before the public in their strange archaic form.

How is this to be done? What is the best way for achieving such an object? was the ever-recurring question. To make our plan clearer, an illustration may be attempted. When a tourist coming from a well-explored country, suddenly reaches the borderland of a terra incognita, hedged in, and shut out from view by a formidable barrier of impassable rocks, he may still refuse to acknowledge himself baffled in his exploratory plans. Ingress beyond is forbidden. But, if he cannot visit the mysterious region personally, he may still find a means of examining it from as short a distance as can be arrived at. Helped by his knowledge of landscapes left behind him, he can get a general and pretty correct idea of the transmural view, if he will only climb to the loftiest summit of the altitudes in front of him. Once there, he can gaze at it, at his leisure, comparing that which he dimly perceives with that which he has just left below, now that he is, thanks to his efforts, beyond the line of the mists and the cloud-capped cliffs.

Such a point of preliminary observation, for those who would like to get a more correct understanding of the mysteries of the pre-archaic periods given in the texts, cannot be offered to them in these two volumes. But if the reader has patience, and would glance at the present state of beliefs and creeds in Europe, compare and check it with what is known to history of the ages directly preceding and

[[Vol. 1, Page]] xl INTRODUCTORY.

following the Christian era, then he will find all this in Volume III. of this work.

In that volume a brief recapitulation will be made of all the principal adepts known to history, and the downfall of the mysteries will be described; after which began the disappearance and final and systematic elimination from the memory of men of the real nature of initiation and the Sacred Science. From that time its teachings became Occult, and Magic sailed but too often under the venerable but frequently misleading name of Hermetic philosophy. As real Occultism had been prevalent among the Mystics during the centuries that preceded our era, so Magic, or rather Sorcery, with its Occult Arts, followed the beginning of Christianity.

However great and zealous the fanatical efforts, during those early centuries, to obliterate every trace of the mental and intellectual labour of the Pagans, it was a failure; but the same spirit of the dark demon of bigotry and intolerance has perverted systematically and ever since, every bright page written in the pre-Christian periods. Even in her uncertain records, history has preserved enough of that which has survived to throw an impartial light upon the whole. Let, then, the reader tarry a little while with the writer, on the spot of observation selected. He is asked to give all his attention to that millennium which divided the pre-Christian and the post-Christian periods, by the year ONE of the Nativity. This event -- whether historically correct or not -- has nevertheless been made to serve as a first signal for the erection of manifold bulwarks against any possible return of, or even a glimpse into, the hated religions of the Past; hated and dreaded -- because throwing such a vivid light on the new and intentionally veiled interpretation of what is now known as the "New Dispensation."

However superhuman the efforts of the early Christian fathers to obliterate the Secret Doctrine from the very memory of man, they all failed. Truth can never be killed; hence the failure to sweep away entirely from the face of the earth every vestige of that ancient Wisdom, and to shackle and gag every witness who testified to it. Let one only think of the thousands, and perhaps millions, of MSS. burnt; of monuments, with their too indiscreet inscriptions and pictorial symbols, pulverised to dust; of the bands of early hermits and ascetics roaming about among the ruined cities of Upper and Lower Egypt, in desert and

[[Vol. 1, Page]] xli INTRODUCTORY.

mountain, valleys and highlands, seeking for and eager to destroy every obelisk and pillar, scroll or parchment they could lay their hands on, if it only bore the symbol of the tau, or any other sign borrowed and appropriated by the new faith; and he will then see plainly how it is that so little has remained of the records of the Past. Verily, the fiendish spirits of fanaticism, of early and mediaeval Christianity and of Islam, have from the first loved to dwell in darkness and ignorance; and both have made

"----- the sun like blood, the earth a tomb,
The tomb a hell, and hell itself a murkier gloom!"

Both creeds have won their proselytes at the point of the sword; both have built their churches on heaven-kissing hecatombs of human victims. Over the gateway of Century I. of our era, the ominous words "the KARMA OF ISRAEL," fatally glowed. Over the portals of our own, the future seer may discern other words, that will point to the Karma for cunningly made-up HISTORY, for events purposely perverted, and for great characters slandered by posterity, mangled out of recognition, between the two cars of Jagannatha -- Bigotry and Materialism; one accepting too much, the other denying all. Wise is he who holds to the golden mid-point, who believes in the eternal justice of things. Says Faigi Diwan, the "witness to the wonderful speeches of a free-thinker who belongs to a thousand sects": "In the assembly of the day of resurrection, when past things shall be forgiven, the sins of the Ka'bah will be forgiven for the sake of the dust of Christian churches." To this, Professor Max Muller replies: "The sins of Islam are as worthless as the dust of Christianity. On the day of resurrection both Muhammadans and Christians will see the vanity of their religious doctrines. Men fight about religion on earth -- in heaven they shall find out that there is only one true religion -- the worship of God's SPIRIT."*

In other words -- "THERE IS NO RELIGION (OR LAW) HIGHER THAN TRUTH" -- "SATYAT NASTI PARO DHARMAH" -- the motto of the Maharajah of Benares, adopted by the Theosophical Society.

As already said in the Preface, the Secret Doctrine is not a version of "Isis Unveiled" -- as originally intended. It is a volume explanatory of

[[Footnote(s)]] -----

* "Lectures on the Science of Religion," by F. Max Muller, p. 257.

[[Vol. 1, Page]] xlii INTRODUCTORY.

it rather, and, though entirely independent of the earlier work, an indispensable corollary to it. Much of what was in Isis could hardly be understood by theosophists in those days. The Secret Doctrine will now throw light on many a problem left unsolved in the first work, especially on the opening pages, which have never been understood.

Concerned simply with the philosophies within our historical times and the respective symbolism of the fallen nations, only a hurried glance could be thrown at the panorama of Occultism in the two volumes of Isis. In the present work, detailed Cosmogony and the evolution of the four races that preceded our Fifth race Humanity are given, and now two large volumes explain that which was stated on the first page of ISIS UNVEILED alone, and in a few allusions scattered hither and thither throughout that work. Nor could the vast catalogue of the Archaic Sciences be attempted in the present volumes, before we have disposed of such tremendous problems as Cosmic and Planetary Evolution, and the gradual development of the mysterious Humanities and races that preceded our "Adamic"

Humanity. Therefore, the present attempt to elucidate some mysteries of the Esoteric philosophy has, in truth, nothing to do with the earlier work. As an instance, the writer must be allowed to illustrate what is said.

Volume I. of "Isis" begins with a reference to "an old book" --

"So very old that our modern antiquarians might ponder over its pages an indefinite time, and still not quite agree as to the nature of the fabric upon which it is written. It is the only original copy now in existence. The most ancient Hebrew document on occult learning -- the Siphrah Dzeniouta -- was compiled from it, and that at a time when the former was already considered in the light of a literary relic. One of its illustrations represents the Divine Essence emanating from ADAM* like a luminous arc proceeding to form a circle; and then, having attained the highest point of its circumference, the ineffable glory bends back again, and returns to earth, bringing a higher type of humanity in its vortex. As it approaches nearer and nearer to our planet, the Emanation becomes more and more shadowy, until upon touching the ground it is as black as night."

[[Footnote(s)]] -----

* The name is used in the sense of the Greek word [[anthropos]].

[[Vol. 1, Page]] xliii INTRODUCTORY.

The "very old Book" is the original work from which the many volumes of Kiu-ti were compiled. Not only this latter and the Siphrah Dzeniouta but even the Sepher Jezirah,* the work attributed by the Hebrew Kabalists to their Patriarch Abraham (!), the book of Shu-king, China's primitive Bible, the sacred volumes of the Egyptian Thoth-Hermes, the Puranas in India, and the Chaldean Book of Numbers and the Pentateuch itself, are all derived from that one small parent volume. Tradition says, that it was taken down in Senzar, the secret sacerdotal tongue, from the words of the Divine Beings, who dictated it to the sons of Light, in Central Asia, at the very beginning of the 5th (our) race; for there was a time when its language (the Sen-zar) was known to the Initiates of every nation, when the forefathers of the Toltec understood it as easily as the inhabitants of the lost Atlantis, who inherited it, in their turn, from the sages of the 3rd Race, the Manushis, who learnt it direct from the Devas of the 2nd and 1st Races. The "illustration" spoken of in "Isis" relates to the evolution of these Races and of our 4th and 5th Race Humanity in the Vaivasvata Manvantara or "Round"; each Round being composed of the Yugas of the seven periods of Humanity; four of which are now passed in our life cycle, the middle point of the 5th being nearly reached. The illustration is symbolical, as every one can well understand, and covers the ground from the beginning. The old book, having described Cosmic Evolution and explained the origin of everything on earth, including physical man, after giving the true history of the races from the First down to the Fifth (our) race, goes no further. It stops short at the beginning of the Kali Yuga just 4989 years ago at the death of Krishna, the bright "Sun-god," the once living hero and reformer.

But there exists another book. None of its possessors regard it as very ancient, as it was born with, and is only as old as the Black Age,

[[Footnote(s)]] -----

* Rabbi Jehoshua Ben Chananea, who died about A.D. 72, openly declared that he had performed "miracles" by means of the Book of Sepher Jezireh, and challenged every sceptic. Franck, quoting from the Babylonian Talmud, names two other thaumaturgists, Rabbis Chanina and Oshoi. (See "Jerusalem Talmud, Sanhedrin," c. 7, etc.; and "Franck," pp. 55, 56.) Many of the Mediaeval Occultists, Alchemists, and Kabalists claimed the same; and even the late modern Magus, Eliphas Levi, publicly asserts it in print in his books on Magic.

[[Vol. 1, Page]] xliv INTRODUCTORY.

namely, about 5,000 years. In about nine years hence, the first cycle of the first five millenniums, that began with the great cycle of the Kali-Yuga, will end. And then the last prophecy contained in that book (the first volume of the prophetic record for the Black Age) will be accomplished. We have not long to wait, and many of us will witness the Dawn of the New Cycle, at the end of which not a few accounts will be settled and squared between the races. Volume II. of the Prophecies is nearly ready, having been in preparation since the time of Buddha's grand successor, Sankaracharya.

One more important point must be noticed, one that stands foremost in the series of proofs given of the existence of one primeval, universal Wisdom -- at any rate for the Christian Kabalists and students. The teachings were, at least, partially known to several of the Fathers of the Church. It is maintained, on purely historical grounds, that Origen, Synesius, and even Clemens Alexandrinus, had been themselves initiated into the mysteries before adding to the Neo-Platonism of the Alexandrian school, that of the Gnostics, under the Christian veil. More than this, some of the doctrines of the Secret schools -- though by no means all -- were preserved in the Vatican, and have since become part and parcel of the mysteries, in the shape of disfigured additions made to the original Christian programme by the Latin Church. Such is the now materialised dogma of the Immaculate Conception. This accounts for the great persecutions set on foot by the Roman Catholic Church against Occultism, Masonry, and heterodox mysticism generally.

The days of Constantine were the last turning-point in history, the period of the Supreme struggle that ended in the Western world throttling the old religions in favour of the new one, built on their bodies. From thence the vista into the far distant Past, beyond the "Deluge" and the Garden of Eden, began to be forcibly and relentlessly closed by every fair and unfair means against the indiscreet gaze of posterity. Every issue was blocked up, every record that hands could be laid upon, destroyed. Yet there remains enough, even among such mutilated records, to warrant us in saying that there is in them every possible evidence of the actual existence of a Parent

Doctrine. Fragments have survived geological and political cataclysms to tell the story; and every survival shows evidence that the now Secret Wisdom was once the

[[Vol. 1, Page]] xlv INTRODUCTORY.

one fountain head, the ever-flowing perennial source, at which were fed all its streamlets -- the later religions of all nations -- from the first down to the last. This period, beginning with Buddha and Pythagoras at the one end and the Neo-Platonists and Gnostics at the other, is the only focus left in History wherein converge for the last time the bright rays of light streaming from the aeons of time gone by, unobscured by the hand of bigotry and fanaticism.

This accounts for the necessity under which the writer has laboured to be ever explaining the facts given from the hoariest Past by evidence gathered from the historical period. No other means was at hand, at the risk even of being once more charged with a lack of method and system. The public must be made acquainted with the efforts of many World-adepts, of initiated poets, writers, and classics of every age, to preserve in the records of Humanity the Knowledge of the existence, at least, of such a philosophy, if not actually of its tenets. The Initiates of 1888 would indeed remain incomprehensible and ever a seemingly impossible myth, were not like Initiates shown to have lived in every other age of history. This could be done only by naming Chapter and Verse where may be found mention of these great characters, who were preceded and followed by a long and interminable line of other famous Antediluvian and Post-diluvian Masters in the arts. Thus only could be shown, on semi-traditional and semi-historical authority, that knowledge of the Occult and the powers it confers on man, are not altogether fictions, but that they are as old as the world itself.

To my judges, past and future, therefore -- whether they are serious literary critics, or those howling dervishes in literature who judge a book according to the popularity or unpopularity of the author's name, who, hardly glancing at its contents, fasten like lethal bacilli on the weakest points of the body -- I have nothing to say. Nor shall I condescend to notice those crack-brained slanderers -- fortunately very few in number -- who, hoping to attract public attention by throwing discredit on every writer whose name is better known than their own, foam and bark at their very shadows. These, having first maintained for years that the doctrines taught in the Theosophist, and which culminated in "Esoteric Buddhism," had been all invented by the present writer, have finally turned round, and denounced "Isis Unveiled" and the rest as a plagiarism from Eliphas Levi (!), Paracelsus (!!), and, mirabile

[[Vol. 1, Page]] xlvi INTRODUCTORY.

dictu, Buddhism and Brahmanism (!!!) As well charge Renan with having stolen his Vie de Jesus from the Gospels, and Max Muller his "Sacred Books of the East" or his "Chips" from the philosophies of the Brahmins and Gautama, the Buddha. But to the public in general and the readers of the "Secret Doctrine" I may repeat what I have stated all along, and which I now clothe in the words of Montaigne: Gentlemen, "I HAVE HERE MADE ONLY A NOSEGAY OF CULLED FLOWERS, AND HAVE BROUGHT NOTHING OF MY OWN BUT THE STRING THAT TIES THEM."

Pull the "string" to pieces and cut it up in shreds, if you will. As for the nosegay of FACTS -- you will never be able to make away with these. You can only ignore them, and no more.

We may close with a parting word concerning this Volume I. In an INTRODUCTION prefacing a Part dealing chiefly with Cosmogony, certain subjects brought forward might be deemed out of place, but one more consideration added to those already given have led me to touch upon them. Every reader will inevitably judge the statements made from the stand-point of his own knowledge, experience, and consciousness, based on what he has already learnt. This fact the writer is constantly obliged to bear in mind: hence, also the frequent references in this first Book to matters which, properly speaking, belong to a later part of the work, but which could not be passed by in silence, lest the reader should look down on this work as a fairy tale indeed -- a fiction of some modern brain.

Thus, the Past shall help to realise the PRESENT, and the latter to better appreciate the PAST. The errors of the day must be explained and swept away, yet it is more than probable -- and in the present case it amounts to certitude -- that once more the testimony of long ages and of history will fail to impress anyone but the very intuitional -- which is equal to saying the very few. But in this as in all like cases, the true and the faithful may console themselves by presenting the sceptical modern Sadducee with the mathematical proof and memorial of his obdurate obstinacy and bigotry. There still exists somewhere in the archives of the French Academy, the famous law of probabilities worked out by an algebraical process for the benefit of sceptics by certain mathematicians. It runs thus: If two persons give their evidence to

[[Vol. 1, Page]] xlvii INTRODUCTORY.

a fact, and thus impart to it each of them 5/6 of certitude; that fact will have then 35/36 of certitude; i.e., its probability will bear to its improbability the ratio of 35 to 1. If three such evidences are joined together the certitude will become 215/216. The agreement of ten persons giving each 1/2 of certitude will produce 1023/1024, etc., etc. The Occultist may remain satisfied, and care for no more.

PROEM.

PAGES FROM A PRE-HISTORIC PERIOD.

AN Archaic Manuscript -- a collection of palm leaves made impermeable to water, fire, and air, by some specific unknown process -- is before the writer's eye. On the first page is an immaculate white disk within a dull black ground. On the following page, the same disk, but with a central point. The first, the student knows to represent Kosmos in Eternity, before the re-awakening of still slumbering Energy, the emanation of the Word in later systems. The point in the hitherto immaculate Disk, Space and Eternity in Pralaya, denotes the dawn of differentiation. It is the Point in the Mundane Egg (see Part II., "The Mundane Egg"), the germ within the latter which will become the Universe, the ALL, the boundless, periodical Kosmos, this germ being latent and active, periodically and by turns. The one circle is divine Unity, from which all proceeds, whither all returns. Its circumference -- a forcibly limited symbol, in view of the limitation of the human mind -- indicates the abstract, ever incognisable PRESENCE, and its plane, the Universal Soul, although the two are one. Only the face of the Disk being white and the ground all around black, shows clearly that its plane is the only knowledge, dim and hazy though it still is, that is attainable by man. It is on this plane that the Manvantaric manifestations begin; for it is in this SOUL that slumbers, during the Pralaya, the Divine Thought,* wherein lies concealed the plan of every future Cosmogony and Theogony.

[[Footnote(s)]] -----

* It is hardly necessary to remind the reader once more that the term "Divine Thought," like that of "Universal Mind," must not be regarded as even vaguely shadowing forth an intellectual process akin to that exhibited by man. The "Unconscious," according to von Hartmann, arrived at the vast creative, or rather Evolutionary Plan, "by a clairvoyant wisdom superior to all consciousness," which in the Vedantic language would mean absolute Wisdom. Only those who realise how far Intuition soars above the tardy processes of ratiocinative thought can form the faintest conception of [[Footnote continued on next page]]

[[Vol. 1, Page]] 2 THE SECRET DOCTRINE.

It is the ONE LIFE, eternal, invisible, yet Omnipresent, without beginning or end, yet periodical in its regular manifestations, between which periods reigns the dark mystery of non-Being; unconscious, yet absolute Consciousness; unrealisable, yet the one self-existing reality; truly, "a chaos to the sense, a Kosmos to the reason." Its one absolute attribute, which is ITSELF, eternal, ceaseless Motion, is called in esoteric parlance the "Great Breath,"* which is the perpetual motion of the universe, in the sense of limitless, ever-present SPACE. That which is motionless cannot be Divine. But then there is nothing in fact and reality absolutely motionless within the universal soul.

Almost five centuries B.C. Leucippus, the instructor of Democritus, maintained that Space was filled eternally with atoms actuated by a ceaseless motion, the latter generating in due course of time, when those atoms aggregated, rotatory motion, through mutual collisions producing lateral movements. Epicurus and Lucretius taught the same, only adding to the lateral motion of the atoms the idea of affinity -- an occult teaching.

From the beginning of man's inheritance, from the first appearance of the architects of the globe he lives in, the unrevealed Deity was recognised and considered under its only philosophical aspect -- universal motion, the thrill of the creative Breath in Nature. Occultism sums up the "One Existence" thus: "Deity is an arcane, living (or moving) FIRE, and the eternal witnesses to this unseen Presence are Light, Heat, Moisture," -- this trinity including, and being the cause of, every

[[Footnote(s)]] -----

[[Footnote continued from previous page]] that absolute Wisdom which transcends the ideas of Time and Space. Mind, as we know it, is resolvable into states of consciousness, of varying duration, intensity, complexity, etc. -- all, in the ultimate, resting on sensation, which is again Maya. Sensation, again, necessarily postulates limitation. The personal God of orthodox Theism perceives, thinks, and is affected by emotion; he repents and feels "fierce anger." But the notion of such mental states clearly involves the unthinkable postulate of the externality of the exciting stimuli, to say nothing of the impossibility of ascribing changelessness to a Being whose emotions fluctuate with events in the worlds he presides over. The conceptions of a Personal God as changeless and infinite are thus unpsychological and, what is worse, unphilosophical.

* Plato proves himself an Initiate, when saying in Cratylus that [[theos]] is derived from the verb [[theein]], "to move," "to run," as the first astronomers who observed the motions of the heavenly bodies called the planets [[theoi]], the gods. (See Book II., "Symbolism of the Cross and Circle.") Later, the word produced another term, [[aletheia]] -- "the breath of God."

[[Vol. 1, Page]] 3 PROEM.

phenomenon in Nature.* Intra-Cosmic motion is eternal and ceaseless; cosmic motion (the visible, or that which is subject to perception) is finite and periodical. As an eternal abstraction it is the EVER-PRESENT; as a manifestation, it is finite both in the coming direction and the opposite, the two being the alpha and omega of successive reconstructions. Kosmos -- the NOUMENON -- has nought to do with the causal relations of the phenomenal World. It is only with reference to the intra-cosmic soul, the ideal Kosmos in the immutable Divine Thought, that we may say: "It never had a beginning nor will it have an end." With regard to its body or Cosmic organization, though it cannot be said that it had a first, or will ever have a last construction, yet at each new Manvantara, its organization may be regarded as the first and the last of its kind, as it evolutes every time on a higher plane

A few years ago only, it was stated that:--

"The esoteric doctrine teaches, like Buddhism and Brahminism, and even the Kabala, that the one infinite and unknown Essence exists from all eternity, and in regular and harmonious successions is either passive or active. In the poetical phraseology of Manu these conditions are called the "Days" and the "Nights" of Brahma. The latter is either "awake" or "asleep." The Svabhavikas, or philosophers of the oldest school of Buddhism (which still exists in Nepaul), speculate only upon the active condition of this "Essence," which they call Svabhavat, and deem it foolish to theorise upon the abstract and "unknowable" power in its passive condition. Hence they are called atheists by both Christian theologians and modern scientists, for neither of the

[[Footnote(s)]] -----

* Nominalists, arguing with Berkeley that "it is impossible . . . to form the abstract idea of motion distinct from the body moving" ("Prin. of Human Knowledge," Introd., par. 10), may put the question, "What is that body, the producer of that motion? Is it a substance? Then you are believers in a Personal God?" etc., etc. This will be answered farther on, in the Addendum to this Book; meanwhile, we claim our rights of Conceptionalists as against Roscelini's materialistic views of Realism and Nominalism. "Has science," says one of its ablest advocates, Edward Clodd, "revealed anything that weakens or opposes itself to the ancient words in which the Essence of all religion, past, present, and to come, is given; to do justly, to love mercy, to walk humbly before thy God?" Provided we connote by the word God, not the crude anthropomorphism which is still the backbone of our current theology, but the symbolic conception of that which is Life and Motion of the Universe, to know which in physical order is to know time past, present, and to come, in the existence of successions of phenomena; to know which, in the moral, is to know what has been, is, and will be, within human consciousness. (See "Science and the Emotions." A Discourse delivered at South Place Chapel, Finsbury, London, Dec. 27th, 1885.)

[[Vol. 1, Page]] 4 THE SECRET DOCTRINE.

two are able to understand the profound logic of their philosophy. The former will allow of no other God than the personified secondary powers which have worked out the visible universe, and which became with them the anthropomorphic God of the Christians -- the male Jehovah, roaring amid thunder and lightning. In its turn, rationalistic science greets the Buddhists and the Svabhavikas as the "positivists" of the archaic ages. If we take a one-sided view of the philosophy of the latter, our materialists may be right in their own way. The Buddhists maintained that there is no Creator, but an infinitude of creative powers, which collectively form the one eternal substance, the essence of which is inscrutable -- hence not a subject for speculation for any true philosopher. Socrates invariably refused to argue upon the mystery of universal being, yet no one would ever have thought of charging him with atheism, except those who were bent upon his destruction. Upon inaugurating an active period, says the Secret Doctrine, an expansion of this Divine essence from without inwardly and from within outwardly, occurs in obedience to eternal and immutable law, and the phenomenal or visible universe is the ultimate result of the long chain of cosmical forces thus progressively set in motion. In like manner, when the passive condition is resumed, a contraction of the Divine essence takes place, and the previous work of creation is gradually and progressively undone. The visible universe becomes disintegrated, its material dispersed; and 'darkness' solitary and alone, broods once more over the face of the 'deep.' To use a Metaphor from the Secret Books, which will convey the idea still more clearly, an out-breathing of the 'unknown essence' produces the world; and an inhalation causes it to disappear. This process has been going on from all eternity, and our present universe is but one of an infinite series, which had no beginning and will have no end." -- (See "Isis Unveiled"; also "The Days and Nights of Brahma" in Part II.)

This passage will be explained, as far as it is possible, in the present work. Though, as it now stands, it contains nothing new to the Orientalist, its esoteric interpretation may contain a good deal which has hitherto remained entirely unknown to the Western student.

The first illustration being a plain disc [[diagram]] the second one in the Archaic symbol shows [[diagram]], a disc with a point in it -- the first differentiation in the periodical manifestations of the ever-eternal nature, sexless and infinite "Aditi in THAT" (Rig Veda), the point in the disc, or potential Space within abstract Space. In its third stage the point is transformed into a diameter, thus [[diagram]] It now symbolises a divine immaculate Mother-Nature within the all-embracing absolute Infinitude.

[[Vol. 1, Page]] 5 PROEM.

When the diameter line is crossed by a vertical one [[diagram]], it becomes the mundane cross. Humanity has reached its third root-race; it is the sign for the origin of human life to begin. When the circumference disappears and leaves only the [[diagram]] it is a sign that the fall of man into matter is accomplished, and the FOURTH race begins. The Cross within a circle symbolises pure Pantheism; when the Cross was left un-inscribed, it became phallic. It had the same and yet other meanings as a TAU inscribed within a circle [[diagram]] or as a "Thor's hammer," the Jaina cross, so-called, or simply Svastika within a circle [[diagram]]

By the third symbol -- the circle divided in two by the horizontal line of the diameter -- the first manifestation of creative (still passive, because feminine) Nature was meant. The first shadowy perception of man connected with procreation is feminine, because man knows his mother more than his father. Hence female deities were more sacred than the male. Nature is therefore feminine, and, to a degree, objective and tangible, and the spirit Principle which fructifies it is concealed. By adding to the circle with the horizontal line in it, a perpendicular line, the tau was formed --  -- the oldest form of the letter. It was the glyph of the third root-race to the day of its symbolical Fall -- i.e., when the separation of sexes by natural evolution took place -- when the figure became , the circle, or sexless life modified or separated -- a double glyph or symbol. With the races of our Fifth Race it became in symbology the sacr', and in Hebrew n'cabvah, of the first-formed races;* then it changed into the Egyptian  (emblem of life), and still later into the sign of Venus,  Then comes the Svastica (Thor's hammer, or the "Hermetic Cross" now), entirely separated from its Circle, thus becoming purely phallic. The esoteric symbol of Kali Yuga is the five-pointed star reversed, thus  -- the sign of human sorcery, with its two points (horns) turned heavenward, a position every

[[Footnote(s)]] -----

* See that suggestive work, "The Source of Measures," where the author explains the real meaning of the word "sacr'," from which "sacred," "sacrament," are derived, which have now become synonyms of "holiness," though purely phallic!

[[Vol. 1, Page]] 6 THE SECRET DOCTRINE.

Occultist will recognise as one of the "left-hand," and used in ceremonial magic.*

It is hoped that during the perusal of this work the erroneous ideas of the public in general with regard to Pantheism will be modified. It is wrong and unjust to regard the Buddhists and Advaitic Occultists as atheists. If not all of them philosophers, they are, at any rate, all logicians, their objections and arguments being based on strict reasoning. Indeed, if the Parabrahm of the Hindus may be taken as a representative of the hidden and nameless deities of other nations, this absolute Principle will be found to be the prototype from which all the others were copied. Parabrahm is not "God," because It is not a God. "It is that which is supreme, and not supreme (paravara)," explains Mandukya Upanishad (2.28). IT is "Supreme" as CAUSE, not supreme as effect. Parabrahm is simply, as a "Secondless Reality," the all-inclusive Kosmos -- or, rather, the infinite Cosmic Space -- in the highest spiritual sense, of course. Brahma (neuter) being the unchanging, pure, free, undecaying supreme Root, "the ONE true Existence, Paramarthika," and the absolute Chit and Chaitanya (intelligence, consciousness) cannot be a cogniser, "for THAT can have no subject of cognition." Can the flame be called the essence of Fire? This Essence is "the LIFE and LIGHT of the Universe, the visible fire and flame are destruction, death, and evil." "Fire and Flame destroy the body of an Arhat, their essence makes him immortal." (Bodhi-mur, Book II.) "The knowledge of the absolute Spirit, like the effulgence of the sun, or like heat in fire, is naught else than the absolute Essence itself," says Sankaracharya. IT -- is "the Spirit of the Fire," not fire itself; therefore, "the attributes of the latter, heat or flame, are not the attributes of the Spirit, but of that of which that Spirit is the unconscious cause." Is not the above sentence the true key-note of later Rosicrucian

[[Footnote(s)]] -----

* We are told by the Western mathematicians and some American Kabalists, that in the Kabala also "the value of the Jehovah name is that of the diameter of a circle." Add to this the fact that Jehovah is the third Sephiroth, Binah, a feminine word, and you have the key to the mystery. By certain Kabalistic transformations this name, androgynous in the first chapters of Genesis, becomes in its transformations entirely masculine, Cainite and phallic. The fact of choosing a deity among the pagan gods and making of it a special national God, to call upon it as the "One living God," the "God of Gods," and then proclaim this worship Monotheistic, does not change it into the ONE Principle whose "Unity admits not of multiplication, change, or form," especially in the case of a priapic deity, as Jehovah now demonstrated to be.

[[Vol. 1, Page]] 7 PROEM.

philosophy? Parabrahm is, in short, the collective aggregate of Kosmos in its infinity and eternity, the "THAT" and "THIS" to which distributive aggregates can not be applied.* "In the beginning THIS was the Self, one only" (Aitareya Upanishad); the great Sankaracharya, explains that "THIS" referred to the Universe (Jagat); the sense of the words, "In the beginning," meaning before the reproduction of the phenomenal Universe.

Therefore, when the Pantheists echo the Upanishads, which state, as in the Secret Doctrine, that "this" cannot create, they do not deny a Creator, or rather a collective aggregate of creators, but only refuse, very logically, to attribute "creation" and especially formation, something finite to an Infinite Principle. With them, Parabrahm is a passive because an Absolute Cause, the unconditioned Mukta. It is only limited Omniscience and Omnipotence that are refused to the latter, because these are still attributes (as reflected in man's perceptions); and because Parabrahm, being the "Supreme ALL," the ever invisible spirit and Soul of Nature, changeless and eternal, can have no attributes; absoluteness very naturally precluding any idea of the finite or conditioned from being connected with it. And if the Vedantin postulates attributes as belonging simply to its emanation, calling it "Iswara plus Maya," and Avidya (Agnosticism and Nescience rather than ignorance), it is difficult to find any Atheism in this conception.** Since there can be neither two INFINITES nor two ABSOLUTES in a Universe supposed to be Boundless, this Self-Existence can hardly be conceived of as creating personally. In the sense and perceptions of finite "Beings," THAT is Non-"being," in the sense that it is the one BE-NESS; for, in this ALL lies concealed its coeternal and coeval emanation or inherent radiation, which, upon becoming periodically

Brahma (the male-female Potency) becomes or expands itself into the manifested Universe. Narayana moving on the (abstract) waters of Space, is transformed into the Waters of concrete substance moved by him, who now becomes the manifested WORD or Logos.

[[Footnote(s)]] -----

* See "Vedanta Sara," by Major G. A. Jacob; as also "The Aphorisms of S'andilya," translated by Cowell, p. 42.

** Nevertheless, prejudiced and rather fanatical Christian Orientalists would like to prove this pure Atheism. For proof of this, see about Major Jacob's "Vedanta Sara." Yet, the whole Antiquity echoes this Vedantic thought:--

"Omnis enim per se divom natura necesse est
Immortali aevo summa cum pace fruatur."

[[Vol. 1, Page]] 8 THE SECRET DOCTRINE.

The orthodox Brahmins, those who rise the most against the Pantheists and Adwaites, calling them Atheists, are forced, if Manu has any authority in this matter, to accept the death of Brahma, the creator, at the expiration of every "Age" of this (creative) deity (100 Divine years -- a period which in our years requires fifteen figures to express it). Yet, no philosopher among them will view this "death" in any other sense than as a temporary disappearance from the manifested plane of existence, or as a periodical rest.

The Occultists are, therefore, at one with the Adwaita Vedantin philosophers as to the above tenet. They show the impossibility of accepting on philosophical grounds the idea of the absolute ALL creating or even evolving the "Golden Egg," into which it is said to enter in order to transform itself into Brahma -- the Creator, who expands himself later into gods and all the visible Universe. They say that Absolute Unity cannot pass to infinity; for infinity presupposes the limitless extension of something, and the duration of that "something"; and the One All is like Space -- which is its only mental and physical representation on this Earth, or our plane of existence -- neither an object of, nor a subject to, perception. If one could suppose the Eternal Infinite All, the Omnipresent Unity, instead of being in Eternity, becoming through periodical manifestation a manifold Universe or a multiple personality, that Unity would cease to be one. Locke's idea that "pure Space is capable of neither resistance nor Motion" -- is incorrect. Space is neither a "limitless void," nor a "conditioned fulness," but both: being, on the plane of absolute abstraction, the ever-incognisable Deity, which is void only to finite minds,* and on that of mayavic perception, the Plenum, the absolute Container of all that is, whether manifested or unmanifested: it is, therefore, that ABSOLUTE ALL. There is no difference between the Christian Apostle's "In Him we live and move and have our being," and the Hindu Rishi's "The Universe lives in, proceeds from, and will

[[Footnote(s)]] -----

* The very names of the two chief deities, Brahma and Vishnu, ought to have long ago suggested their esoteric meanings. For the root of one, Brahmam, or Brahm, is derived by some from the word Brih, "to grow" or "to expand" (see Calcutta Review, vol. lxvi., p. 14); and of the other, Vishnu, from the root Vis, "to pervade," to enter in the nature of the essence; Brahma-Vishnu being this infinite SPACE, of which the gods, the Rishis, the Manus, and all in this universe are simply the potencies, Vibhutayah.

[[Vol. 1, Page]] 9 PROEM.

return to, Brahma (Brahma)": for Brahma (neuter), the unmanifested, is that Universe in abscondito, and Brahma, the manifested, is the Logos, made male-female* in the symbolical orthodox dogmas. The God of the Apostle-Initiate and of the Rishi being both the Unseen and the Visible SPACE. Space is called in the esoteric symbolism "the Seven-Skinned Eternal Mother-Father." It is composed from its undifferentiated to its differentiated surface of seven layers.

"What is that which was, is, and will be, whether there is a Universe or not; whether there be gods or none?" asks the esoteric Senzar Catechism. And the answer made is -- SPACE.

It is not the One Unknown ever-present God in Nature, or Nature in abscondito, that is rejected, but the God of human dogma and his humanized "Word." In his infinite conceit and inherent pride and vanity, man shaped it himself with his sacrilegious hand out of the material he found in his own small brain-fabric, and forced it upon mankind as a direct revelation from the one unrevealed SPACE.** The Occultist

[[Footnote(s)]] -----

* See Manu's account of Brahma separating his body into male and female, the latter the female Vach, in whom he creates Viraj, and compare this with the esotericism of Chapters II., III., and IV. of Genesis.

** Occultism is indeed in the air at the close of this our century. Among many other works recently published, we would recommend one especially to students of theoretical Occultism who would not venture beyond the realm of our special human plane. It is called "New Aspects of Life and Religion," by Henry Pratt, M.D. It is full of esoteric dogmas and philosophy, the latter rather limited, in the concluding chapters, by what seems to be a spirit of conditioned positivism. Nevertheless, what is said of Space as "the Unknown First Cause," merits quotation. "This unknown something, thus recognised as, and identified with, the primary embodiment of Simple Unity, is invisible and impalpable" -- (abstract space, granted); "and because invisible and impalpable, therefore incognisable. And

this incognisability has led to the error of supposing it to be a simple void, a mere receptive capacity. But, even viewed as an absolute void, space must be admitted to be either Self-existent, infinite, and eternal, or to have had a first cause outside, behind, and beyond itself.

"And yet could such a cause be found and defined, this would only lead to the transferring thereto of the attributes otherwise accruing to space, and thus merely throw the difficulty of origination a step farther back, without gaining additional light as to primary causation." (p. 5.)

This is precisely what has been done by the believers in an anthropomorphic Creator, an extracosmic, instead of an intracosmic God. Many -- most of Mr. Pratt's subjects, we may say -- are old Kabalistic ideas and theories which he presents in quite a new garb: "New Aspects" of the Occult in Nature, indeed. Space, however, viewed as a "Substantial Unity" -- the "living Source of Life" -- is as the "Un-
[[Footnote continued on next page]]

[[Vol. 1, Page]] 10 THE SECRET DOCTRINE.

accepts revelation as coming from divine yet still finite Beings, the manifested lives, never from the Unmanifestable ONE LIFE; from those entities, called Primordial Man, Dhyani-Buddhas, or Dhyani-Chohans, the "Rishi-Prajapati" of the Hindus, the Elohim or "Sons of God," the Planetary Spirits of all nations, who have become Gods for men. He also regards the Adi-Sakti -- the direct emanation of Mulaprakriti, the eternal Root of THAT, and the female aspect of the Creative Cause Brahma, in her A'kasic form of the Universal Soul -- as philosophically a Maya, and cause of human Maya. But this view does not prevent him from believing in its existence so long as it lasts, to wit, for one Mahamanvantara; nor from applying Akasa, the radiation of Mulaprakriti,* to practical purposes, connected as the World-Soul is with all natural phenomena, known or unknown to science.

The oldest religions of the world -- exoterically, for the esoteric root or foundation is one -- are the Indian, the Mazdean, and the Egyptian. Then comes the Chaldean, the outcome of these -- entirely lost to the world now, except in its disfigured Sabeanism as at present rendered by the archaeologists; then, passing over a number of religions that will be mentioned later, comes the Jewish, esoterically, as in the Kabala, following in the line of Babylonian Magism; exoterically, as in Genesis and the Pentateuch, a collection of allegorical legends. Read by the light of the Zohar, the initial four chapters of Genesis are the fragment

[[Footnote(s)]] -----

[[Footnote continued from previous page]] known Causeless Cause," is the oldest dogma in Occultism, millenniums earlier than the Pater-AEther of the Greeks and Latins. So are the "Force and Matter, as Potencies of Space, inseparable, and the Unknown revealers of the Unknown." They are all found in Aryan philosophy personified by Visvakarman, Indra, Vishnu, etc., etc. Still they are expressed very philosophically, and under many unusual aspects, in the work referred to.

* In contradistinction to the manifested universe of matter, the term Mulaprakriti (from Mula, "the root," and prakriti, "nature"), or the unmanifested primordial matter -- called by Western alchemists Adam's Earth -- is applied by the Vedantins to Parabrahmam. Matter is dual in religious metaphysics, and septenary in esoteric teachings, like everything else in the universe. As Mulaprakriti, it is undifferentiated and eternal; as Vyakta, it becomes differentiated and conditioned, according to Svetasvatara Upanishad, I. 8, and Devi Bhagavata Purana. The author of the Four Lectures on the Bhagavad Gita, says, in speaking of Mulaprakriti: "From its (the Logos') objective standpoint, Parabrahmam appears to it as Mulaprakriti. . . . Of course this Mulaprakriti is material to it, as any material object is material to us. . . . Parabrahmam is an unconditioned and absolute reality, and Mulaprakriti is a sort of veil thrown over it." (Theosophist, Vol. VIII., p. 304.)

[[Vol. 1, Page]] 11 PROEM.

of a highly philosophical page in the World's Cosmogony. (See Book III., Gupta Vidya and the Zohar.) Left in their symbolical disguise, they are a nursery tale, an ugly thorn in the side of science and logic, an evident effect of Karma. To have let them serve as a prologue to Christianity was a cruel revenge on the part of the Rabbis, who knew better what their Pentateuch meant. It was a silent protest against their spoliation, and the Jews have certainly now the better of their traditional persecutors. The above-named exoteric creeds will be explained in the light of the Universal doctrine as we proceed with it.

The Occult Catechism contains the following questions and answers:

"What is it that ever is?" "Space, the eternal Anupadaka." "What is it that ever was?" "The Germ in the Root." "What is it that is ever coming and going?" "The Great Breath." "Then, there are three Eternals?" "No, the three are one. That which ever is is one, that which ever was is one, that which is ever being and becoming is also one: and this is Space."

"Explain, oh Lanoo (disciple)." -- "The One is an unbroken Circle (ring) with no circumference, for it is nowhere and everywhere; the One is the boundless plane of the Circle, manifesting a diameter only during the manvantaric periods; the One is the indivisible point found nowhere, perceived everywhere during those periods; it is the Vertical and the Horizontal, the Father and the Mother, the summit and base of the Father, the two extremities of the Mother, reaching in reality nowhere, for the One is the Ring as also the rings that are within that Ring. Light in darkness and darkness in light: the 'Breath which is eternal.' It proceeds from without inwardly, when it is everywhere, and from within outwardly, when it is nowhere -- (i.e., maya,** one of the centres***). It expands and

[[Footnote(s)]] -----

* Meaning "parentless" -- see farther on.

** Esoteric philosophy, regarding as Maya (or the illusion of ignorance) every finite thing, must necessarily view in the same light every intra-Cosmic planet and body, as being something organised, hence finite. The expression, therefore, "it proceeds from without inwardly, etc." refers in the first portion of the sentence to the dawn of the Mahamanvantaric period, or the great re-evolution after one of the complete periodical dissolutions of every compound form in Nature (from planet to molecule) into its ultimate essence or element; and in its second portion, to the partial or local manvantara, which may be a solar or even a planetary one.

*** By "centre," a centre of energy or a Cosmic focus is meant; when the so-called "Creation," or formation of a planet, is accomplished by that force which is designated by the Occultists LIFE and by Science "energy," then the process takes place
[[Footnote continued on next page]]

[[Vol. 1, Page]] 12 THE SECRET DOCTRINE.

contracts (exhalation and inhalation). When it expands the mother diffuses and scatters; when it contracts, the mother draws back and ingathers. This produces the periods of Evolution and Dissolution, Manwantara and Pralaya. The Germ is invisible and fiery; the Root (the plane of the circle) is cool; but during Evolution and Manwantara her garment is cold and radiant. Hot Breath is the Father who devours the progeny of the many-faced Element (heterogeneous); and leaves the single-faced ones (homogeneous). Cool Breath is the Mother, who conceives, forms, brings forth, and receives them back into her bosom, to reform them at the Dawn (of the Day of Brahma, or Manvantara). . . ."

For clearer understanding on the part of the general reader, it must be stated that Occult Science recognises Seven Cosmical Elements -- four entirely physical, and the fifth (Ether) semi-material, as it will become visible in the air towards the end of our Fourth Round, to reign supreme over the others during the whole of the Fifth. The remaining two are as yet absolutely beyond the range of human perception. These latter will, however, appear as presentments during the 6th and 7th Races of this Round, and will become known in the 6th and 7th Rounds respectively.* These seven elements with their numberless Sub-Elements

[[Footnote(s)]] -----

[[Footnote continued from previous page]] from within outwardly, every atom being said to contain in itself creative energy of the divine breath. Hence, whereas after an absolute pralaya, or when the pre-existing material consists but of ONE Element, and BREATH "is everywhere," the latter acts from without inwardly: after a minor pralaya, everything having remained in statu quo -- in a refrigerated state, so to say, like the moon -- at the first flutter of manvantara, the planet or planets begin their resurrection to life from within outwardly.

* It is curious to notice how, in the evolutionary cycles of ideas, ancient thought seems to be reflected in modern speculation. Had Mr. Herbert Spencer read and studied ancient Hindu philosophers when he wrote a certain passage in his "First Principles" (p. 482), or is it an independent flash of inner perception that made him say half correctly, half incorrectly, "motion as well as matter, being fixed in quantity (?), it would seem that the change in the distribution of Matter which Motion effects, coming to a limit in whichever direction it is carried (?), the indestructible Motion thereupon necessitates a reverse distribution. Apparently, the universally co-existent forces of attraction and repulsion which, as we have seen, necessitate rhythm in all minor changes throughout the Universe, also necessitate rhythm in the totality of its changes -- produce now an immeasurable period during which the attracting forces predominating, cause universal concentration, and then an immeasurable period, during which the repulsive forces predominating, cause universal diffusion -- alternate eras of Evolution and dissolution."

[[Vol. 1, Page]] 13 PROEM.

far more numerous than those known to Science) are simply conditional modifications and aspects of the ONE and only Element. This latter is not Ether,* not even A'kasa but the Source of these. The Fifth Element, now advocated quite freely by Science, is not the Ether hypothesised by Sir Isaac Newton -- although he calls it by that name, having associated it in his mind probably with the AEther, "Father-Mother" of Antiquity. As Newton intuitionally says, "Nature is a perpetual circulatory worker, generating fluids out of solids, fixed things out of volatile, and volatile out of fixed, subtile out of gross, and gross out of subtile. . . . Thus, perhaps, may all things be originated from Ether," (Hypoth, 1675).

The reader has to bear in mind that the Stanzas given treat only of the Cosmogony of our own planetary System and what is visible around it, after a Solar Pralaya. The secret teachings with regard to the Evolution of the Universal Kosmos cannot be given, since they could not be understood by the highest minds in this age, and there seem to be very few Initiates, even among the greatest, who are allowed to speculate upon this subject. Moreover the Teachers say openly that not even the highest Dhyani-Chohans have ever penetrated the mysteries beyond those boundaries that separate the milliards of Solar systems from the "Central Sun," as it is called. Therefore, that which is given, relates only to our visible Kosmos, after a "Night of Brahma."

Before the reader proceeds to the consideration of the Stanzas from the Book of Dzyan which form the basis of the present work, it is absolutely necessary that he should be made acquainted with the few fundamental conceptions which underlie and pervade the entire system of thought to which his attention is invited. These basic ideas are few in number, and on their clear apprehension

depends the understanding of all that follows; therefore no apology is required for asking the reader to make himself familiar with them first, before entering on the perusal of the work itself.

[[Footnote(s)]] -----

* Whatever the views of physical Science upon the subject, Occult Science has been teaching for ages that A'kasa -- of which Ether is the grossest form -- the fifth universal Cosmic Principle (to which corresponds and from which proceeds human Manas) is, cosmically, a radiant, cool, diathermanous plastic matter, creative in its physical nature, correlative in its grossest aspects and portions, immutable in its higher principles. In the former condition it is called the Sub-Root; and in conjunction with radiant heat, it recalls "dead worlds to life." In its higher aspect it is the Soul of the World; in its lower -- the DESTROYER.

[[Vol. 1, Page]] 14 THE SECRET DOCTRINE.

The Secret Doctrine establishes three fundamental propositions:--

(a) An Omnipresent, Eternal, Boundless, and Immutable PRINCIPLE on which all speculation is impossible, since it transcends the power of human conception and could only be dwarfed by any human expression or similitude. It is beyond the range and reach of thought -- in the words of Mandukya, "unthinkable and unspeakable."

To render these ideas clearer to the general reader, let him set out with the postulate that there is one absolute Reality which antecedes all manifested, conditioned, being. This Infinite and Eternal Cause -- dimly formulated in the "Unconscious" and "Unknowable" of current European philosophy -- is the rootless root of "all that was, is, or ever shall be." It is of course devoid of all attributes and is essentially without any relation to manifested, finite Being. It is "Be-ness" rather than Being (in Sanskrit, Sat), and is beyond all thought or speculation.

This "Be-ness" is symbolised in the Secret Doctrine under two aspects. On the one hand, absolute abstract Space, representing bare subjectivity, the one thing which no human mind can either exclude from any conception, or conceive of by itself. On the other, absolute Abstract Motion representing Unconditioned Consciousness. Even our Western thinkers have shown that Consciousness is inconceivable to us apart from change, and motion best symbolises change, its essential characteristic. This latter aspect of the one Reality, is also symbolised by the term "The Great Breath," a symbol sufficiently graphic to need no further elucidation. Thus, then, the first fundamental axiom of the Secret Doctrine is this metaphysical ONE ABSOLUTE -- BE-NESS -- symbolised by finite intelligence as the theological Trinity.

It may, however, assist the student if a few further explanations are given here.

Herbert Spencer has of late so far modified his Agnosticism, as to assert that the nature of the "First Cause,"* which the Occultist more logically derives from the "Causeless Cause," the "Eternal," and the "Unknowable," may be essentially the same as that of the Consciousness which wells up within us: in short, that the impersonal reality pervading

[[Footnote(s)]] -----

* The "first" presupposes necessarily something which is the "first brought forth, the first in time, space, and rank" -- and therefore finite and conditioned. The "first" [[Footnote continued on next page]]

[[Vol. 1, Page]] 15 PROEM.

the Kosmos is the pure noumenon of thought. This advance on his part brings him very near to the esoteric and Vedantin tenet.*

Parabrahm (the One Reality, the Absolute) is the field of Absolute Consciousness, i.e., that Essence which is out of all relation to conditioned existence, and of which conscious existence is a conditioned symbol. But once that we pass in thought from this (to us) Absolute Negation, duality supervenes in the contrast of Spirit (or consciousness) and Matter, Subject and Object.

Spirit (or Consciousness) and Matter are, however, to be regarded, not as independent realities, but as the two facets or aspects of the Absolute (Parabrahm), which constitute the basis of conditioned Being whether subjective or objective.

Considering this metaphysical triad as the Root from which proceeds all manifestation, the great Breath assumes the character of precosmic Ideation. It is the fons et origo of force and of all individual consciousness, and supplies the guiding intelligence in the vast scheme of cosmic Evolution. On the other hand, precosmic root-substance (Mulaprakriti) is that aspect of the Absolute which underlies all the objective planes of Nature.

Just as pre-Cosmic Ideation is the root of all individual consciousness, so pre-Cosmic Substance is the substratum of matter in the various grades of its differentiation.

Hence it will be apparent that the contrast of these two aspects of the Absolute is essential to the existence of the "Manifested Universe." Apart from Cosmic Substance, Cosmic Ideation could not manifest as individual consciousness, since it is only through a vehicle** of matter that consciousness wells up as "I am I," a physical basis being necessary to focus a ray of the Universal Mind at a

certain stage of complexity. Again, apart from Cosmic Ideation, Cosmic Substance would remain an empty abstraction, and no emergence of consciousness could ensue.

The "Manifested Universe," therefore, is pervaded by duality, which is, as it were, the very essence of its EX-istence as "manifestation."

[[Footnote(s)]] -----

[[Footnote continued from previous page]] cannot be the absolute, for it is a manifestation. Therefore, Eastern Occultism calls the Abstract All the "Causeless One Cause," the "Rootless Root," and limits the "First Cause" to the Logos, in the sense that Plato gives to this term.

* See Mr. Subba Row's four able lectures on the Bhagavad Gita, "Theosophist," February, 1887.

** Called in Sanskrit: "Upadhi."

[[Vol. 1, Page]] 16 THE SECRET DOCTRINE.

But just as the opposite poles of subject and object, spirit and matter, are but aspects of the One Unity in which they are synthesized, so, in the manifested Universe, there is "that" which links spirit to matter, subject to object.

This something, at present unknown to Western speculation, is called by the occultists Fohat. It is the "bridge" by which the "Ideas" existing in the "Divine Thought" are impressed on Cosmic substance as the "laws of Nature." Fohat is thus the dynamic energy of Cosmic Ideation; or, regarded from the other side, it is the intelligent medium, the guiding power of all manifestation, the "Thought Divine" transmitted and made manifest through the Dhyana Chohans,* the Architects of the visible World. Thus from Spirit, or Cosmic Ideation, comes our consciousness; from Cosmic Substance the several vehicles in which that consciousness is individualised and attains to self -- or reflective -- consciousness; while Fohat, in its various manifestations, is the mysterious link between Mind and Matter, the animating principle electrifying every atom into life.

The following summary will afford a clearer idea to the reader.

- (1.) The ABSOLUTE; the Parabrahm of the Vedantins or the one Reality, SAT, which is, as Hegel says, both Absolute Being and Non-Being.
- (2.) The first manifestation, the impersonal, and, in philosophy, unmanifested Logos, the precursor of the "manifested." This is the "First Cause," the "Unconscious" of European Pantheists.
- (3.) Spirit-matter, LIFE; the "Spirit of the Universe," the Purusha and Prakriti, or the second Logos.
- (4.) Cosmic Ideation, MAHAT or Intelligence, the Universal World-Soul; the Cosmic Noumenon of Matter, the basis of the intelligent operations in and of Nature, also called MAHA-BUDDHI.

The ONE REALITY; its dual aspects in the conditioned Universe.

Further, the Secret Doctrine affirms:--

(b.) The Eternity of the Universe in toto as a boundless plane; periodically "the playground of numberless Universes incessantly manifesting and disappearing," called "the manifesting stars," and the "sparks of Eternity." "The Eternity of the Pilgrim"*** is like a wink

[[Footnote(s)]] -----

* Called by Christian theology: Archangels, Seraphs, etc., etc.

** "Pilgrim" is the appellation given to our Monad (the two in one) during its cycle of incarnations. It is the only immortal and eternal principle in us, being an indivisible part of the integral whole -- the Universal Spirit, from which it emanates, and into which it is absorbed at the end of the cycle. When it is said to emanate from the one [[Footnote continued on next page]]

[[Vol. 1, Page]] 17 PROEM.

of the Eye of Self-Existence (Book of Dzyan.) "The appearance and disappearance of Worlds is like a regular tidal ebb of flux and reflux." (See Part II., "Days and Nights of Brahma.")

This second assertion of the Secret Doctrine is the absolute universality of that law of periodicity, of flux and reflux, ebb and flow, which physical science has observed and recorded in all departments of nature. An alternation such as that of Day and Night, Life and Death, Sleeping and Waking, is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe.

Moreover, the Secret Doctrine teaches:--

(c) The fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul -- a spark of the former -- through the Cycle of Incarnation (or "Necessity") in accordance with Cyclic and Karmic law, during the whole term. In other words, no purely spiritual Buddhi (divine Soul) can have an independent (conscious) existence before the spark which issued from the pure Essence of the Universal Sixth principle, -- or the OVER-SOUL, -- has (a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised efforts (checked by its Karma), thus ascending through all the degrees of intelligence, from the lowest to the highest Manas, from mineral and plant, up to the holiest archangel (Dhyani-Buddha). The pivotal doctrine of the Esoteric philosophy admits no privileges or special gifts in man, save those won by his own Ego through personal effort and merit throughout a long series of metempsychoses and reincarnations. This is why the Hindus say that the Universe is Brahma and Brahmā, for Brahma is in every atom of the universe, the six principles in Nature being all the outcome -- the variously differentiated aspects -- of the SEVENTH and ONE, the only reality in the Universe whether Cosmical or micro-cosmical; and also why the permutations (psychic, spiritual and physical), on the plane of manifestation and form, of the sixth (Brahmā the vehicle of Brahma) are viewed by metaphysical

[[Footnote(s)]] -----

[[Footnote continued from previous page]] spirit, an awkward and incorrect expression has to be used, for lack of appropriate words in English. The Vedantins call it Sutratma (Thread-Soul), but their explanation, too, differs somewhat from that of the occultists; to explain which difference, however, is left to the Vedantins themselves.

[[Vol. 1, Page]] 18 THE SECRET DOCTRINE.

antiphrasis as illusive and Mayavic. For although the root of every atom individually and of every form collectively, is that seventh principle or the one Reality, still, in its manifested phenomenal and temporary appearance, it is no better than an evanescent illusion of our senses. (See, for clearer definition, Addendum "Gods, Monads and Atoms," and also "Theophania," "Bodhisatvas and Reincarnation," etc., etc.)

In its absoluteness, the One Principle under its two aspects (of Parabrahmam and Mulaprakriti) is sexless, unconditioned and eternal. Its periodical (manvantaric) emanation -- or primal radiation -- is also One, androgynous and phenomenally finite. When the radiation radiates in its turn, all its radiations are also androgynous, to become male and female principles in their lower aspects. After Pralaya, whether the great or the minor Pralaya (the latter leaving the worlds in statu quo*), the first that re-awakes to active life is the plastic A'kasa, Father-Mother, the Spirit and Soul of Ether, or the plane on the surface of the Circle. Space is called the "Mother" before its Cosmic activity, and Father-Mother at the first stage of re-awakening. (See Comments, Stanza II.) In the Kabala it is also Father-Mother-Son. But whereas in the Eastern doctrine, these are the Seventh Principle of the manifested Universe, or its "Atma-Buddhi-Manas" (Spirit, Soul, Intelligence), the triad branching off and dividing into the seven cosmical and seven human principles, in the Western Kabala of the Christian mystics it is the Triad or Trinity, and with their occultists, the male-female Jehovah, Jah-Havah. In this lies the whole difference between the esoteric and the Christian trinities. The Mystics and the Philosophers, the Eastern and Western Pantheists, synthesize their pregenetic triad in the pure divine abstraction. The orthodox, anthropomorphize it. Hiranyagarbha, Hari, and Sankara -- the three hypostases of the manifesting "Spirit of the Supreme Spirit" (by which title Prithivi -- the Earth -- greets Vishnu in his first Avatar) -- are the purely metaphysical abstract qualities of formation, preservation, and destruction, and are the three divine Avasthas (lit. hypostases) of that which "does

[[Footnote(s)]] -----

* It is not the physical organisms that remain in statu quo, least of all their psychical principles, during the great Cosmic or even Solar pralayas, but only their Akasic or astral "photographs." But during the minor pralayas, once over-taken by the "Night," the planets remain intact, though dead, as a huge animal, caught and embedded in the polar ice, remains the same for ages.

[[Vol. 1, Page]] 19 PROEM.

not perish with created things" (or Achyuta, a name of Vishnu); whereas the orthodox Christian separates his personal creative Deity into the three personages of the Trinity, and admits of no higher Deity. The latter, in Occultism, is the abstract Triangle; with the orthodox, the perfect Cube. The creative god or the aggregate gods are regarded by the Eastern philosopher as Bhrantidarsanatah -- "false apprehension," something "conceived of, by reason of erroneous appearances, as a material form," and explained as arising from the illusive conception of the Egotistic personal and human Soul (lower fifth principle). It is beautifully expressed in a new translation of Vishnu Purana. "That Brahma in its totality has essentially the aspect of Prakriti, both evolved and unevolved (Mulaprakriti), and also the aspect of Spirit and the aspect of Time. Spirit, O twice born, is the leading aspect of the Supreme Brahma.* The next is a twofold aspect, -- Prakriti, both evolved and unevolved, and is the time last." Kronos is shown in the Orphic theogony as being also a generated god or agent.

At this stage of the re-awakening of the Universe, the sacred symbolism represents it as a perfect Circle with the (root) point in the Centre. This sign was universal, therefore we find it in the Kabala also. The Western Kabala, however, now in the hands of Christian mystics, ignores it altogether, though it is plainly shown in the Zohar. These sectarians begin at the end, and show as the symbol of

pre-genetic Kosmos this sign , calling it "the Union of the Rose and Cross," the great mystery of occult generation, from whence the name -- Rosicrucians (Rose Cross)!

As may be judged, however, from the most important, as the best known of the Rosicrucians' symbols, there is one which has never been hitherto understood even by modern mystics. It is that of the "Pelican" tearing open its breast to feed its seven little ones -- the real creed of the Brothers of the Rosie-Cross and a direct outcome from the Eastern

[[Footnote(s)]] -----

* Thus Spencer, who, nevertheless, like Schopenhauer and von Hartmann, only reflects an aspect of the old esoteric philosophers, and hence lands his readers on the bleak shore of Agnostic despair -- reverently formulates the grand mystery; "that which persists unchanging in quantity, but ever changing in form, under these sensible appearances which the Universe presents to us, is an unknown and unknowable power, which we are obliged to recognise as without limit in Space and without beginning or end in time." It is only daring Theology -- never Science or philosophy -- which seeks to gauge the Infinite and unveil the Fathomless and Unknowable.

[[Vol. 1, Page]] 20 THE SECRET DOCTRINE.

Secret Doctrine. Brahma (neuter) is called Kalahansa, meaning, as explained by Western Orientalists, the Eternal Swan or goose (see Stanza III., Comment. 8), and so is Brahma, the Creator. A great mistake is thus brought under notice; it is Brahma (neuter) who ought to be referred to as Hansa-vahana (He who uses the swan as his Vehicle) and not Brahma the Creator, who is the real Kalahansa, while Brahma (neuter) is hamsa, and "A-hamsa," as will be explained in the Commentary. Let it be understood that the terms Brahma and Parabrahmam are not used here because they belong to our Esoteric nomenclature, but simply because they are more familiar to the students in the West. Both are the perfect equivalents of our one, three, and seven vowelled terms, which stand for the ONE ALL, and the One "All in all."

Such are the basic conceptions on which the Secret Doctrine rests.

It would not be in place here to enter upon any defence or proof of their inherent reasonableness; nor can I pause to show how they are, in fact, contained -- though too often under a misleading guise -- in every system of thought or philosophy worthy of the name.

Once that the reader has gained a clear comprehension of them and realised the light which they throw on every problem of life, they will need no further justification in his eyes, because their truth will be to him as evident as the sun in heaven. I pass on, therefore, to the subject matter of the Stanzas as given in this volume, adding a skeleton outline of them, in the hope of thereby rendering the task of the student more easy, by placing before him in a few words the general conception therein explained.

Stanza I. The history of cosmic evolution, as traced in the Stanzas, is, so to say, the abstract algebraical formula of that Evolution. Hence the student must not expect to find there an account of all the stages and transformations which intervene between the first beginnings of "Universal" evolution and our present state. To give such an account would be as impossible as it would be incomprehensible to men who cannot even grasp the nature of the plane of existence next to that to which, for the moment, their consciousness is limited.

The Stanzas, therefore, give an abstract formula which can be applied, mutatis mutandis, to all evolution: to that of our tiny earth, to

[[Vol. 1, Page]] 21 PROEM.

that of the chain of planets of which that earth forms one, to the solar Universe to which that chain belongs, and so on, in an ascending scale, till the mind reels and is exhausted in the effort.

The seven Stanzas given in this volume represent the seven terms of this abstract formula. They refer to, and describe the seven great stages of the evolutionary process, which are spoken of in the Puranas as the "Seven Creations," and in the Bible as the "Days" of Creation.

The First Stanza describes the state of the ONE ALL during Pralaya, before the first flutter of re-awakening manifestation.

A moment's thought shows that such a state can only be symbolised; to describe it is impossible. Nor can it be symbolised except in negatives; for, since it is the state of Absoluteness per se, it can possess none of those specific attributes which serve us to describe objects in positive terms. Hence that state can only be suggested by the negatives of all those most abstract attributes which men feel rather than conceive, as the remotest limits attainable by their power of conception.

The stage described in Stanza II. is, to a western mind, so nearly identical with that mentioned in the first Stanza, that to express the idea of its difference would require a treatise in itself. Hence it must be left to the intuition and the higher faculties of the reader to grasp, as far as he can, the meaning of the allegorical phrases used. Indeed it must be remembered that all these Stanzas appeal to the inner faculties rather than to the ordinary comprehension of the physical brain.

Stanza III. describes the Re-awakening of the Universe to life after Pralaya. It depicts the emergence of the "Monads" from their state of absorption within the ONE; the earliest and highest stage in the formation of "Worlds," the term Monad being one which may apply equally to the vastest Solar System or the tiniest atom.

Stanza IV. shows the differentiation of the "Germ" of the Universe

[[Vol. 1, Page]] 22 THE SECRET DOCTRINE.

into the septenary hierarchy of conscious Divine Powers, who are the active manifestations of the One Supreme Energy. They are the framers, shapers, and ultimately the creators of all the manifested Universe, in the only sense in which the name "Creator" is intelligible; they inform and guide it; they are the intelligent Beings who adjust and control evolution, embodying in themselves those manifestations of the ONE LAW, which we know as "The Laws of Nature."

Generically, they are known as the Dhyana Chohans, though each of the various groups has its own designation in the Secret Doctrine.

This stage of evolution is spoken of in Hindu mythology as the "Creation" of the Gods.

In Stanza V. the process of world-formation is described:--- First, diffused Cosmic Matter, then the fiery "whirlwind," the first stage in the formation of a nebula. That nebula condenses, and after passing through various transformations, forms a Solar Universe, a planetary chain, or a single planet, as the case may be.

The subsequent stages in the formation of a "World" are indicated in Stanza VI., which brings the evolution of such a world down to its fourth great period, corresponding to the period in which we are now living.

Stanza VII. continues the history, tracing the descent of life down to the appearance of Man; and thus closes the first Book of the Secret Doctrine.

The development of "Man" from his first appearance on this earth in this Round to the state in which we now find him will form the subject of Book II.

NOTE.

The Stanzas which form the thesis of every section are given throughout in their modern translated version, as it would be worse

[[Vol. 1, Page]] 23 PROEM.

than useless to make the subject still more difficult by introducing the archaic phraseology of the original, with its puzzling style and words. Extracts are given from the Chinese Tibetan and Sanskrit translations of the original Senzar Commentaries and Glosses on the Book of DZYAN -- these being now rendered for the first time into a European language. It is almost unnecessary to state that only portions of the seven Stanzas are here given. Were they published complete they would remain incomprehensible to all save the few higher occultists. Nor is there any need to assure the reader that, no more than most of the profane, does the writer, or rather the humble recorder, understand those forbidden passages. To facilitate the reading, and to avoid the too frequent reference to foot-notes, it was thought best to blend together texts and glosses, using the Sanskrit and Tibetan proper names whenever those cannot be avoided, in preference to giving the originals. The more so as the said terms are all accepted synonyms, the former only being used between a Master and his chelas (or disciples).

Thus, were one to translate into English, using only the substantives and technical terms as employed in one of the Tibetan and Senzar versions, Verse I would read as follows:--- "Tho-ag in Zhi-gyu slept seven Khorlo. Zodmanas zhiba. All Nyug bosom. Konch-hog not; Thyan-Kam not; Lha-Chohan not; Tenbrel Chugnyi not; Dharmakaya ceased; Tgenchang not become; Barnang and Ssa in Ngovonyidj; alone Tho-og Yinsin in night of Sun-chan and Yong-grub (Parinishpanna), &c., &c.," which would sound like pure Abracadabra.

As this work is written for the instruction of students of Occultism, and not for the benefit of philologists, we may well avoid such foreign terms wherever it is possible to do so. The untranslatable terms alone, incomprehensible unless explained in their meanings, are left, but all such terms are rendered in their Sanskrit form. Needless to remind the reader that these are, in almost every case, the late developments of the later language, and pertain to the Fifth Root-Race. Sanskrit, as now known, was not spoken by the Atlanteans, and most of the philosophical terms used in the systems of the India of the post-Mahabharatan period are not found in the Vedas, nor are they to be met with in the original Stanzas, but only their equivalents. The reader who is not a Theosophist, is once more invited to regard all that which follows as a fairy tale, if he likes; at best as one of the yet unproven speculations of

[[Vol. 1, Page]] 24 THE SECRET DOCTRINE.

dreamers; and, at the worst, as an additional hypothesis to the many Scientific hypotheses past, present and future, some exploded, others still lingering. It is not in any sense worse than are many of the so called Scientific theories; and it is in every case more philosophical and probable.

In view of the abundant comments and explanations required, the references to the footnotes are given in the usual way, while the sentences to be commented upon are marked with figures. Additional matter will be found in the Chapters on Symbolism forming Part II., as well as in Part III., these being often more full of information than the text.

[[Vol. 1, Page 25]]

PART I.

COSMIC EVOLUTION.

SEVEN STANZAS TRANSLATED WITH COMMENTARIES
FROM THE
SECRET BOOK OF DZYAN.

[[Vol. 1, Page 26]]

Nor Aught nor Nought existed; yon bright sky
Was not, nor heaven's broad roof outstretched above.
What covered all? what sheltered? what concealed?
Was it the water's fathomless abyss?
There was not death -- yet there was nought immortal,
There was no confine betwixt day and night;
The only One breathed breathless by itself,
Other than It there nothing since has been.
Darkness there was, and all at first was veiled
In gloom profound -- an ocean without light --
The germ that still lay covered in the husk
Burst forth, one nature, from the fervent heat.

.....
Who knows the secret? who proclaimed it here?
Whence, whence this manifold creation sprang?
The Gods themselves came later into being --
Who knows from whence this great creation sprang?
That, whence all this great creation came,
Whether Its will created or was mute,
The Most High Seer that is in highest heaven,
He knows it -- or perchance even He knows not."

"Gazing into eternity . . .
Ere the foundations of the earth were laid,

.....
Thou wert. And when the subterranean flame
Shall burst its prison and devour the frame . . .
Thou shalt be still as Thou wert before
And knew no change, when time shall be no more.
Oh! endless thought, divine ETERNITY."

[[Vol. 1, Page]] 27 THE SECRET DOCTRINE.

COSMIC EVOLUTION.

In Seven Stanzas translated from the Book of Dzyan.

STANZA I.

1. THE ETERNAL PARENT WRAPPED IN HER EVER INVISIBLE ROBES HAD SLUMBERED ONCE AGAIN FOR SEVEN ETERNITIES.
2. TIME WAS NOT, FOR IT LAY ASLEEP IN THE INFINITE BOSOM OF DURATION.
3. UNIVERSAL MIND WAS NOT, FOR THERE WERE NO AH-HI TO CONTAIN IT.
4. THE SEVEN WAYS TO BLISS WERE NOT. THE GREAT CAUSES OF MISERY WERE NOT, FOR THERE WAS NO ONE TO PRODUCE AND GET ENSNARED BY THEM.
5. DARKNESS ALONE FILLED THE BOUNDLESS ALL, FOR FATHER, MOTHER AND SON WERE ONCE MORE ONE, AND THE SON HAD NOT AWAKENED YET FOR THE NEW WHEEL, AND HIS PILGRIMAGE THEREON.
6. THE SEVEN SUBLIME LORDS AND THE SEVEN TRUTHS HAD CEASED TO BE, AND THE UNIVERSE, THE SON OF NECESSITY, WAS IMMERSSED IN PARANISHPANNA, TO BE OUTBREATHED BY THAT WHICH IS AND YET IS NOT. NAUGHT WAS.
7. THE CAUSES OF EXISTENCE HAD BEEN DONE AWAY WITH; THE VISIBLE THAT WAS, AND THE INVISIBLE THAT IS, RESTED IN ETERNAL NON-BEING -- THE ONE BEING.
8. ALONE THE ONE FORM OF EXISTENCE STRETCHED BOUNDLESS, INFINITE, CAUSELESS, IN DREAMLESS SLEEP; AND LIFE PULSATED UNCONSCIOUS IN UNIVERSAL SPACE, THROUGHOUT THAT ALL-PRESENCE WHICH IS SENSED BY THE OPENED EYE OF THE DANGMA.
9. BUT WHERE WAS THE DANGMA WHEN THE ALAYA OF THE UNIVERSE WAS IN PARAMARTHA AND THE GREAT WHEEL WAS ANUPADAKA?

[[Vol. 1, Page]] 28 THE SECRET DOCTRINE.

STANZA II.

1. . . . WHERE WERE THE BUILDERS, THE LUMINOUS SONS OF MANVANTARIC DAWN? . . . IN THE UNKNOWN DARKNESS IN THEIR AH-HI PARANISHPANNA. THE PRODUCERS OF FORM FROM NO-FORM -- THE ROOT OF THE WORLD -- THE DEVAMATRI AND SVABHAVAT, RESTED IN THE BLISS OF NON-BEING.
2. . . . WHERE WAS SILENCE? WHERE THE EARS TO SENSE IT? NO, THERE WAS NEITHER SILENCE NOR SOUND; NAUGHT SAVE CEASELESS ETERNAL BREATH, WHICH KNOWS ITSELF NOT.
3. THE HOUR HAD NOT YET STRUCK; THE RAY HAD NOT YET FLASHED INTO THE GERM; THE MATRIPADMA HAD NOT YET SWOLLEN.
4. HER HEART HAD NOT YET OPENED FOR THE ONE RAY TO ENTER, THENCE TO FALL, AS THREE INTO FOUR, INTO THE LAP OF MAYA.
5. THE SEVEN SONS WERE NOT YET BORN FROM THE WEB OF LIGHT. DARKNESS ALONE WAS FATHER-MOTHER, SVABHAVAT; AND SVABHAVAT WAS IN DARKNESS.
6. THESE TWO ARE THE GERM, AND THE GERM IS ONE. THE UNIVERSE WAS STILL CONCEALED IN THE DIVINE THOUGHT AND THE DIVINE BOSOM. . . .

STANZA III.

1. . . . THE LAST VIBRATION OF THE SEVENTH ETERNITY THRILLS THROUGH INFINITUDE. THE MOTHER SWELLS, EXPANDING FROM WITHIN WITHOUT, LIKE THE BUD OF THE LOTUS.
2. THE VIBRATION SWEEPS ALONG, TOUCHING WITH ITS SWIFT WING THE WHOLE UNIVERSE AND THE GERM THAT DWELLETH IN DARKNESS: THE DARKNESS THAT BREATHEES OVER THE SLUMBERING WATERS OF LIFE. . . .
3. DARKNESS RADIATES LIGHT, AND LIGHT DROPS ONE SOLITARY RAY INTO THE MOTHER-DEEP. THE RAY SHOOTS THROUGH THE VIRGIN EGG, THE RAY CAUSES THE ETERNAL EGG TO THRILL, AND DROP THE NON-ETERNAL GERM, WHICH CONDENSES INTO THE WORLD-EGG.

[[Vol. 1, Page]] 29 THE SECRET DOCTRINE.

4. THEN THE THREE FALL INTO THE FOUR. THE RADIANT ESSENCE BECOMES SEVEN INSIDE, SEVEN OUTSIDE. THE LUMINOUS EGG, WHICH IN ITSELF IS THREE, CURDLES AND SPREADS IN MILK-WHITE CURDS THROUGHOUT THE DEPTHS OF MOTHER, THE ROOT THAT GROWS IN THE DEPTHS OF THE OCEAN OF LIFE.

5. THE ROOT REMAINS, THE LIGHT REMAINS, THE CURDS REMAIN, AND STILL OEAOHOO IS ONE.

6. THE ROOT OF LIFE WAS IN EVERY DROP OF THE OCEAN OF IMMORTALITY, AND THE OCEAN WAS RADIANT LIGHT, WHICH WAS FIRE, AND HEAT, AND MOTION. DARKNESS VANISHED AND WAS NO MORE; IT DISAPPEARED IN ITS OWN ESSENCE, THE BODY OF FIRE AND WATER, OR FATHER AND MOTHER.

7. BEHOLD, OH LANOO! THE RADIANT CHILD OF THE TWO, THE UNPARALLELED REFULGENT GLORY: BRIGHT SPACE SON OF DARK SPACE, WHICH EMERGES FROM THE DEPTHS OF THE GREAT DARK WATERS. IT IS OEAOHOO THE YOUNGER, THE * * * HE SHINES FORTH AS THE SON; HE IS THE BLAZING DIVINE DRAGON OF WISDOM; THE ONE IS FOUR, AND FOUR TAKES TO ITSELF THREE,** AND THE UNION PRODUCES THE SAPTA, IN WHOM ARE THE SEVEN WHICH BECOME THE TRIDASA (OR THE HOSTS AND THE MULTITUDES). BEHOLD HIM LIFTING THE VEIL AND UNFURLING IT FROM EAST TO WEST. HE SHUTS OUT THE ABOVE, AND LEAVES THE BELOW TO BE SEEN AS THE GREAT ILLUSION. HE MARKS THE PLACES FOR THE SHINING ONES, AND TURNS THE UPPER INTO A SHORELESS SEA OF FIRE, AND THE ONE MANIFESTED INTO THE GREAT WATERS.

8. WHERE WAS THE GERM AND WHERE WAS NOW DARKNESS? WHERE IS THE SPIRIT OF THE FLAME THAT BURNS IN THY LAMP, OH LANOO? THE GERM IS THAT, AND THAT IS LIGHT, THE WHITE BRILLIANT SON OF THE DARK HIDDEN FATHER.

9. LIGHT IS COLD FLAME, AND FLAME IS FIRE, AND FIRE PRODUCES HEAT, WHICH YIELDS WATER: THE WATER OF LIFE IN THE GREAT MOTHER.

10. FATHER-MOTHER SPIN A WEB WHOSE UPPER END IS FASTENED TO SPIRIT -- THE LIGHT OF THE ONE DARKNESS -- AND THE LOWER ONE TO ITS SHADOWY END, MATTER; AND THIS WEB IS THE UNIVERSE SPUN OUT OF THE TWO SUBSTANCES MADE IN ONE, WHICH IS SVABHAVAT.

[[Footnote(s)]] -----

** In the English translation from the Sanskrit the numbers are given in that language, Eka, Chatur, etc., etc. It was thought best to give them in English.

[[Vol. 1, Page]] 30 THE SECRET DOCTRINE.

11. IT EXPANDS WHEN THE BREATH OF FIRE IS UPON IT; IT CONTRACTS WHEN THE BREATH OF THE MOTHER TOUCHES IT. THEN THE SONS DISSOCIATE AND SCATTER, TO RETURN INTO THEIR MOTHER'S BOSOM AT THE END OF THE GREAT DAY, AND RE-BECOME ONE WITH HER; WHEN IT IS COOLING IT BECOMES RADIANT, AND THE SONS EXPAND AND CONTRACT THROUGH THEIR OWN SELVES AND HEARTS; THEY EMBRACE INFINITUDE.

12. THEN SVABHAVAT SENDS FOHAT TO HARDEN THE ATOMS. EACH IS A PART OF THE WEB. REFLECTING THE "SELF-EXISTENT LORD" LIKE A MIRROR, EACH BECOMES IN TURN A WORLD.

STANZA IV.

1. . . LISTEN, YE SONS OF THE EARTH, TO YOUR INSTRUCTORS -- THE SONS OF THE FIRE. LEARN, THERE IS NEITHER FIRST NOR LAST, FOR ALL IS ONE: NUMBER ISSUED FROM NO NUMBER.

2. LEARN WHAT WE WHO DESCEND FROM THE PRIMORDIAL SEVEN, WE WHO ARE BORN FROM THE PRIMORDIAL FLAME, HAVE LEARNT FROM OUR FATHERS. . . .

3. FROM THE EFFULGENCEY OF LIGHT -- THE RAY OF THE EVER-DARKNESS -- SPRUNG IN SPACE THE RE-AWAKENED ENERGIES; THE ONE FROM THE EGG, THE SIX, AND THE FIVE. THEN THE THREE, THE ONE, THE FOUR, THE ONE, THE FIVE -- THE TWICE SEVEN THE SUM TOTAL. AND THESE ARE THE ESSENCES, THE FLAMES, THE ELEMENTS, THE BUILDERS, THE NUMBERS, THE ARUPA, THE RUPA, AND THE FORCE OF DIVINE MAN -- THE SUM TOTAL. AND FROM THE DIVINE MAN EMANATED THE FORMS, THE SPARKS, THE SACRED ANIMALS, AND THE MESSENGERS OF THE SACRED FATHERS WITHIN THE HOLY FOUR.

4. THIS WAS THE ARMY OF THE VOICE -- THE DIVINE MOTHER OF THE SEVEN. THE SPARKS OF THE SEVEN ARE SUBJECT TO, AND THE SERVANTS OF, THE FIRST, THE SECOND, THE THIRD, THE FOURTH, THE FIFTH, THE SIXTH, AND THE

SEVENTH OF THE SEVEN. THESE "SPARKS" ARE CALLED SPHERES, TRIANGLES, CUBES, LINES, AND MODELLERS; FOR THUS STANDS THE ETERNAL NIDANA -- THE OEAOHOO, WHICH IS:

[[Vol. 1, Page]] 31 THE SECRET DOCTRINE.

5. "DARKNESS" THE BOUNDLESS, OR THE NO-NUMBER, ADI-NIDANA SVABHAVAT:--

I. THE ADI-SANAT, THE NUMBER, FOR HE IS ONE.

II. THE VOICE OF THE LORD SVABHAVAT, THE NUMBERS, FOR HE IS ONE AND NINE.

III. THE "FORMLESS SQUARE."

AND THESE THREE ENCLOSED WITHIN THE [[diagram]] ARE THE SACRED FOUR; AND THE TEN ARE THE ARUPA UNIVERSE. THEN COME THE "SONS," THE SEVEN FIGHTERS, THE ONE, THE EIGHTH LEFT OUT, AND HIS BREATH WHICH IS THE LIGHT-MAKER.

6. THEN THE SECOND SEVEN, WHO ARE THE LIPIKA, PRODUCED BY THE THREE. THE REJECTED SON IS ONE. THE "SON-SUNS" ARE COUNTLESS.

STANZA V.

1. THE PRIMORDIAL SEVEN, THE FIRST SEVEN BREATHS OF THE DRAGON OF WISDOM, PRODUCE IN THEIR TURN FROM THEIR HOLY CIRCUMGYRATING BREATHS THE FIERY WHIRLWIND.

2. THEY MAKE OF HIM THE MESSENGER OF THEIR WILL. THE DZUYU BECOMES FOHAT, THE SWIFT SON OF THE DIVINE SONS WHOSE SONS ARE THE LIPIKA, RUNS CIRCULAR ERRANDS. FOHAT IS THE STEED AND THE THOUGHT IS THE RIDER. HE PASSES LIKE LIGHTNING THROUGH THE FIERY CLOUDS; TAKES THREE, AND FIVE, AND SEVEN STRIDES THROUGH THE SEVEN REGIONS ABOVE, AND THE SEVEN BELOW. HE LIFTS HIS VOICE, AND CALLS THE INNUMERABLE SPARKS, AND JOINS THEM.

3. HE IS THEIR GUIDING SPIRIT AND LEADER. WHEN HE COMMENCES WORK, HE SEPARATES THE SPARKS OF THE LOWER KINGDOM THAT FLOAT AND THRILL WITH JOY IN THEIR RADIANT DWELLINGS, AND FORMS THEREWITH THE GERMS OF WHEELS. HE PLACES THEM IN THE SIX DIRECTIONS OF SPACE, AND ONE IN THE MIDDLE -- THE CENTRAL WHEEL.

4. FOHAT TRACES SPIRAL LINES TO UNITE THE SIXTH TO THE SEVENTH -- THE CROWN; AN ARMY OF THE SONS OF LIGHT STANDS AT EACH ANGLE, AND THE LIPIKA IN THE MIDDLE WHEEL, THEY SAY: THIS IS GOOD, THE

[[Vol. 1, Page]] 32 THE SECRET DOCTRINE.

FIRST DIVINE WORLD IS READY, THE FIRST IS NOW THE SECOND. THEN THE "DIVINE ARUPA" REFLECTS ITSELF IN CHHAYA LOKA, THE FIRST GARMENT OF THE ANUPADAKA.

5. FOHAT TAKES FIVE STRIDES AND BUILDS A WINGED WHEEL AT EACH CORNER OF THE SQUARE, FOR THE FOUR HOLY ONES AND THEIR ARMIES.

6. THE LIPIKA CIRCUMSCRIBE THE TRIANGLE, THE FIRST ONE, THE CUBE, THE SECOND ONE, AND THE PENTACLE WITHIN THE EGG. IT IS THE RING CALLED "PASS NOT" FOR THOSE WHO DESCEND AND ASCEND. ALSO FOR THOSE WHO DURING THE KALPA ARE PROGRESSING TOWARDS THE GREAT DAY "BE WITH US." THUS WERE FORMED THE RUPA AND THE ARUPA: FROM ONE LIGHT SEVEN LIGHTS; FROM EACH OF THE SEVEN, SEVEN TIMES SEVEN LIGHTS. THE WHEELS WATCH THE RING. . . .

STANZA VI.

1. BY THE POWER OF THE MOTHER OF MERCY AND KNOWLEDGE -- KWAN-YIN -- THE "TRIPLE" OF KWAN-SHAI-YIN, RESIDING IN KWAN-YIN-TIEN, FOHAT, THE BREATH OF THEIR PROGENY, THE SON OF THE SONS, HAVING CALLED FORTH, FROM THE LOWER ABYSS, THE ILLUSIVE FORM OF SIEN-TCHANG AND THE SEVEN ELEMENTS:*

2. THE SWIFT AND RADIANT ONE PRODUCES THE SEVEN LAYA CENTRES, AGAINST WHICH NONE WILL PREVAIL TO THE GREAT DAY "BE-WITH-US," AND SEATS THE UNIVERSE ON THESE ETERNAL FOUNDATIONS SURROUNDING TSIEN-TCHAN WITH THE ELEMENTARY GERMS.

3. OF THE SEVEN -- FIRST ONE MANIFESTED, SIX CONCEALED, TWO MANIFESTED, FIVE CONCEALED; THREE MANIFESTED, FOUR CONCEALED; FOUR PRODUCED, THREE HIDDEN; FOUR AND ONE TSAN REVEALED, TWO AND ONE HALF CONCEALED; SIX TO BE MANIFESTED, ONE LAID ASIDE. LASTLY, SEVEN SMALL WHEELS REVOLVING; ONE GIVING BIRTH TO THE OTHER.

[[Footnote(s)]] -----

* Verse 1 of Stanza VI. is of a far later date than the other Stanzas, though still very ancient. The old text of this verse, having names entirely unknown to the Orientalists would give no clue to the student.

[[Vol. 1, Page]] 33 THE SECRET DOCTRINE.

4. HE BUILDS THEM IN THE LIKENESS OF OLDER WHEELS, PLACING THEM ON THE IMPERISHABLE CENTRES.

HOW DOES FOHAT BUILD THEM? HE COLLECTS THE FIERY DUST. HE MAKES BALLS OF FIRE, RUNS THROUGH THEM, AND ROUND THEM, INFUSING LIFE THEREINTO THEN SETS THEM INTO MOTION; SOME ONE WAY, SOME THE OTHER WAY. THEY ARE COLD, HE MAKES THEM HOT. THEY ARE DRY, HE MAKES THEM MOIST. THEY SHINE, HE FANS AND COOLS THEM. THUS ACTS FOHAT FROM ONE TWILIGHT TO THE OTHER, DURING SEVEN ETERNITIES.

5. AT THE FOURTH, THE SONS ARE TOLD TO CREATE THEIR IMAGES. ONE THIRD REFUSES -- TWO OBEY.

THE CURSE IS PRONOUNCED; THEY WILL BE BORN ON THE FOURTH, SUFFER AND CAUSE SUFFERING; THIS IS THE FIRST WAR.

6. THE OLDER WHEELS ROTATED DOWNWARDS AND UPWARDS. . . . THE MOTHER'S SPAWN FILLED THE WHOLE. THERE WERE BATTLES FOUGHT BETWEEN THE CREATORS AND THE DESTROYERS, AND BATTLES FOUGHT FOR SPACE; THE SEED APPEARING AND RE-APPEARING CONTINUOUSLY.

7. MAKE THY CALCULATIONS, LANOO, IF THOU WOULDST LEARN THE CORRECT AGE OF THY SMALL WHEEL. ITS FOURTH SPOKE IS OUR MOTHER. REACH THE FOURTH "FRUIT" OF THE FOURTH PATH OF KNOWLEDGE THAT LEADS TO NIRVANA, AND THOU SHALT COMPREHEND, FOR THOU SHALT SEE

STANZA VII.

1. BEHOLD THE BEGINNING OF SENTIENT FORMLESS LIFE.

FIRST THE DIVINE, THE ONE FROM THE MOTHER-SPIRIT; THEN THE SPIRITUAL; THE THREE FROM THE ONE, THE FOUR FROM THE ONE, AND THE FIVE FROM WHICH THE THREE, THE FIVE, AND THE SEVEN. THESE ARE THE THREE-FOLD, THE FOUR-FOLD DOWNWARD; THE "MIND-BORN" SONS OF THE FIRST LORD; THE SHINING SEVEN.

IT IS THEY WHO ARE THOU, ME, HIM, OH LANOO. THEY, WHO WATCH OVER THEE, AND THY MOTHER EARTH.

[[Vol. 1, Page]] 34 THE SECRET DOCTRINE.

2. THE ONE RAY MULTIPLIES THE SMALLER RAYS. LIFE PRECEDES FORM, AND LIFE SURVIVES THE LAST ATOM OF FORM. THROUGH THE COUNTLESS RAYS PROCEEDS THE LIFE-RAY, THE ONE, LIKE A THREAD THROUGH MANY JEWELS.

3. WHEN THE ONE BECOMES TWO, THE THREEFOLD APPEARS, AND THE THREE ARE ONE; AND IT IS OUR THREAD, OH LANOO, THE HEART OF THE MAN-PLANT CALLED SAPTASARMA.

4. IT IS THE ROOT THAT NEVER DIES; THE THREE-TONGUED FLAME OF THE FOUR WICKS. THE WICKS ARE THE SPARKS, THAT DRAW FROM THE THREE-TONGUED FLAME SHOT OUT BY THE SEVEN -- THEIR FLAME -- THE BEAMS AND SPARKS OF ONE MOON REFLECTED IN THE RUNNING WAVES OF ALL THE RIVERS OF EARTH.

5. THE SPARK HANGS FROM THE FLAME BY THE FINEST THREAD OF FOHAT. IT JOURNEYS THROUGH THE SEVEN WORLDS OF MAYA. IT STOPS IN THE FIRST, AND IS A METAL AND A STONE; IT PASSES INTO THE SECOND AND BEHOLD -- A PLANT; THE PLANT WHIRLS THROUGH SEVEN CHANGES AND BECOMES A SACRED ANIMAL. FROM THE COMBINED ATTRIBUTES OF THESE, MANU, THE THINKER IS FORMED. WHO FORMS HIM? THE SEVEN LIVES, AND THE ONE LIFE. WHO COMPLETES HIM? THE FIVE-FOLD LHA. AND WHO PERFECTS THE LAST BODY? FISH, SIN, AND SOMA. . . .

6. FROM THE FIRST-BORN THE THREAD BETWEEN THE SILENT WATCHER AND HIS SHADOW BECOMES MORE STRONG AND RADIANT WITH EVERY CHANGE. THE MORNING SUN-LIGHT HAS CHANGED INTO NOON-DAY GLORY. . . .

7. THIS IS THY PRESENT WHEEL, SAID THE FLAME TO THE SPARK. THOU ART MYSELF, MY IMAGE, AND MY SHADOW. I HAVE CLOTHED MYSELF IN THEE, AND THOU ART MY VAHAN TO THE DAY, "BE WITH US," WHEN THOU SHALT RE-BECOME MYSELF AND OTHERS, THYSELF AND ME. THEN THE BUILDERS, HAVING DONNED THEIR FIRST CLOTHING, DESCEND ON RADIANT EARTH AND REIGN OVER MEN -- WHO ARE THEMSELVES. . . .

Thus ends this portion of the archaic narrative, dark, confused, almost incomprehensible. An attempt will now be made to throw light into this darkness, to make sense out of this apparent NON-SENSE.

[[Vol. 1, Page]] 35 STANZA I.

COMMENTARIES

ON THE SEVEN STANZAS AND THEIR TERMS, ACCORDING TO THEIR NUMERATION, IN STANZAS AND SLOKAS.

STANZA I.

1. "THE ETERNAL PARENT (Space), WRAPPED IN HER EVER INVISIBLE ROBES, HAD SLUMBERED ONCE AGAIN FOR SEVEN ETERNITIES (a)."

The "Parent Space" is the eternal, ever present cause of all -- the incomprehensible DEITY, whose "invisible robes" are the mystic root of all matter, and of the Universe. Space is the one eternal thing that we can most easily imagine, immovable in its abstraction and uninfluenced by either the presence or absence in it of an objective Universe. It is without dimension, in every sense, and self-existent. Spirit is the first differentiation from THAT, the causeless cause of both Spirit and Matter. It is, as taught in the esoteric catechism, neither limitless void, nor conditioned fulness, but both. It was and ever will be. (See Proem pp. 2 et seq.)

Thus, the "Robes" stand for the noumenon of undifferentiated Cosmic Matter. It is not matter as we know it, but the spiritual essence of matter, and is co-eternal and even one with Space in its abstract sense. Root-nature is also the source of the subtle invisible properties in visible matter. It is the Soul, so to say, of the ONE infinite Spirit. The Hindus call it Mulaprakriti, and say that it is the primordial substance, which is the basis of the Upadhi or vehicle of every phenomenon, whether physical, mental or psychic. It is the source from which Akasa radiates.

(a) By the Seven "Eternities," aeons or periods are meant. The word "Eternity," as understood in Christian theology, has no meaning to the Asiatic ear, except in its application to the ONE existence; nor is

[[Vol. 1, Page]] 36 THE SECRET DOCTRINE.

the term sempiternity, the eternal only in futurity, anything better than a misnomer.* Such words do not and cannot exist in philosophical metaphysics, and were unknown till the advent of ecclesiastical Christianity. The Seven Eternities meant are the seven periods, or a period answering in its duration to the seven periods, of a Manvantara, and extending throughout a Maha-Kalpa or the "Great Age" -- 100 years of Brahma -- making a total of 311,040,000,000,000 of years; each year of Brahma being composed of 360 "days," and of the same number of "nights" of Brahma (reckoning by the Chandrayana or lunar year); and a "Day of Brahma" consisting of 4,320,000,000 of mortal years. These "Eternities" belong to the most secret calculations, in which, in order to arrive at the true total, every figure must be $7x$ (7 to the power of x); x varying according to the nature of the cycle in the subjective or real world; and every figure or number relating to, or representing all the different cycles from the greatest to the smallest -- in the objective or unreal world -- must necessarily be multiples of seven. The key to this cannot be given, for herein lies the mystery of esoteric calculations, and for the purposes of ordinary calculation it has no sense. "The number seven," says the Kabala, "is the great number of the Divine Mysteries;" number ten is that of all human knowledge (Pythagorean decade); 1,000 is the number ten to the third power, and therefore the number 7,000 is also symbolical. In the Secret Doctrine the figure and number 4 are the male symbol only on the highest plane of abstraction; on the plane of matter the 3 is the masculine and the 4 the female: the upright and the horizontal in the fourth stage of symbolism, when the symbols became the glyphs of the generative powers on the physical plane.

STANZA I. -- Continued.

2. TIME WAS NOT, FOR IT LAY ASLEEP IN THE INFINITE BOSOM OF DURATION (a).

[[Footnote(s)]] -----

* It is stated in Book II., ch. viii., of Vishnu Purana: "By immortality is meant existence to the end of the Kalpa;" and Wilson, the translator, remarks in a footnote: "This, according to the Vedas, is all that is to be understood of the immortality (or eternity) of the gods; they perish at the end of universal dissolution (or Pralaya)." And Esoteric philosophy says: They "perish" not, but are re-absorbed.

[[Vol. 1, Page]] 37 TIME AND UNIVERSAL MIND.

(a) Time is only an illusion produced by the succession of our states of consciousness as we travel through eternal duration, and it does not exist where no consciousness exists in which the illusion can be produced; but "lies asleep." The present is only a mathematical line which divides that part of eternal duration which we call the future, from that part which we call the past. Nothing on earth has real duration, for nothing remains without change -- or the same -- for the billionth part of a second; and the sensation we have of the actuality of the division of "time" known as the present, comes from the blurring of that momentary glimpse, or succession of glimpses, of things that our senses give us, as those things pass from the region of ideals which we call the future, to the region of memories that we name the past. In the same way we experience a sensation of duration in the case of the instantaneous electric spark, by reason of the blurred and continuing impression on the retina. The real person or thing does not consist solely of what is seen at any particular moment, but is composed of the sum of all its various and changing conditions from its appearance in the material form to its disappearance from the earth. It is these "sum-totals" that exist from eternity in the "future," and pass by degrees through matter, to exist for eternity in the "past." No one could say that a bar of metal dropped into the sea came into existence as it left the air, and ceased to exist as it entered the water, and that the bar itself consisted only of that cross-section thereof which at any given moment coincided with the mathematical plane that separates, and, at the same time, joins, the atmosphere and the ocean. Even so of persons and things, which, dropping out of the to-be into the has-been, out of the future into the past -- present momentarily to our senses a cross-section, as it were, of their total selves, as they pass through time and space (as matter) on their way from one eternity to another: and these two constitute that "duration" in which alone anything has true existence, were our senses but able to cognize it there.

STANZA I. -- Continued.

3. . . . UNIVERSAL MIND WAS NOT, FOR THERE WERE NO AH-HI (celestial beings) TO CONTAIN (hence to manifest) IT (a).

[[Vol. 1, Page]] 38 THE SECRET DOCTRINE.

(a) Mind is a name given to the sum of the states of Consciousness grouped under Thought, Will, and Feeling. During deep sleep, ideation ceases on the physical plane, and memory is in abeyance; thus for the time-being "Mind is not," because the organ, through which the Ego manifests ideation and memory on the material plane, has temporarily ceased to function. A noumenon can become a phenomenon on any plane of existence only by manifesting on that plane through an appropriate basis or vehicle; and during the long night of rest called Pralaya, when all the existences are dissolved, the "UNIVERSAL MIND" remains as a permanent possibility of mental action, or as that abstract absolute thought, of which mind is the concrete relative manifestation. The AH-HI (Dhyan-Chohans) are the collective hosts of spiritual beings -- the Angelic Hosts of Christianity, the Elohim and "Messengers" of the Jews -- who are the vehicle for the manifestation of the divine or universal thought and will. They are the Intelligent Forces that give to and enact in Nature her "laws," while themselves acting according to laws imposed upon them in a similar manner by still higher Powers; but they are not "the personifications" of the powers of Nature, as erroneously thought. This hierarchy of spiritual Beings, through which the Universal Mind comes into action, is like an army -- a "Host," truly -- by means of which the fighting power of a nation manifests itself, and which is composed of army corps, divisions, brigades, regiments, and so forth, each with its separate individuality or life, and its limited freedom of action and limited responsibilities; each contained in a larger individuality, to which its own interests are subservient, and each containing lesser individualities in itself.

STANZA I. -- Continued.

4. THE SEVEN WAYS TO BLISS (Moksha* or Nirvana) WERE NOT (a). THE GREAT CAUSES OF MISERY (Nidana** and Maya) WERE NOT, FOR THERE WAS NO ONE TO PRODUCE AND GET ENSNARED BY THEM (b).

(a) There are seven "Paths" or "Ways" to the bliss of Non-Exist-

[[Footnote(s)]] -----

* Nippang in China; Neibban in Burmah; or Moksha in India.

** The "12" Nidanas (in Tibetan Ten-brel chug-nyi) the chief causes of existence, effects generated by a concatenation of causes produced (see Comment. II).

[[Vol. 1, Page]] 39 THE CAUSES OF BEING.

ence, which is absolute Being, Existence, and Consciousness. They were not, because the Universe was, so far, empty, and existed only in the Divine Thought. For it is . . .

(b) The twelve Nidanas or causes of being. Each is the effect of its antecedent cause, and a cause, in its turn, to its successor; the sum total of the Nidanas being based on the four truths, a doctrine especially characteristic of the Hinayana System.* They belong to the theory of the stream of catenated law which produces merit and demerit, and finally brings Karma into full sway. It is based upon the

great truth that re-incarnation is to be dreaded, as existence in this world only entails upon man suffering, misery and pain; Death itself being unable to deliver man from it, since death is merely the door through which he passes to another life on earth after a little rest on its threshold -- Devachan. The Hinayana System, or School of the "Little Vehicle," is of very ancient growth; while the Mahayana is of a later period, having originated after the death of Buddha. Yet the tenets of the latter are as old as the hills that have contained such schools from time immemorial, and the Hinayana and Mahayana Schools (the latter, that of the "Great Vehicle") both teach the same doctrine in reality. Yana, or Vehicle (in Sanskrit, Vahan) is a mystic expression, both "vehicles" inculcating that man may escape the sufferings of rebirths and even the false bliss of Devachan, by obtaining Wisdom and Knowledge, which alone can dispel the Fruits of Illusion and Ignorance.

Maya or illusion is an element which enters into all finite things, for everything that exists has only a relative, not an absolute, reality, since the appearance which the hidden noumenon assumes for any observer depends upon his power of cognition. To the untrained eye of the savage, a painting is at first an unmeaning confusion of streaks and daubs of color, while an educated eye sees instantly a face or a landscape. Nothing is permanent except the one hidden absolute existence which contains in itself the noumena of all realities. The existences belonging to every plane of being, up to the highest Dhyana-Chohans, are, in degree, of the nature of shadows cast by a magic lantern on a colourless screen; but all things are relatively real, for the cogniser is also a reflection, and the things cognised are therefore as real to him as himself. Whatever reality things possess must be looked for in them

[[Footnote(s)]] -----

* See Wassilief on Buddhism, pp. 97-950.

[[Vol. 1, Page]] 40 THE SECRET DOCTRINE.

before or after they have passed like a flash through the material world; but we cannot cognise any such existence directly, so long as we have sense-instruments which bring only material existence into the field of our consciousness. Whatever plane our consciousness may be acting in, both we and the things belonging to that plane are, for the time being, our only realities. As we rise in the scale of development we perceive that during the stages through which we have passed we mistook shadows for realities, and the upward progress of the Ego is a series of progressive awakenings, each advance bringing with it the idea that now, at last, we have reached "reality;" but only when we shall have reached the absolute Consciousness, and blended our own with it, shall we be free from the delusions produced by Maya.

STANZA I. -- Continued.

5. DARKNESS ALONE FILLED THE BOUNDLESS ALL (a), FOR FATHER, MOTHER AND SON WERE ONCE MORE ONE, AND THE SON HAD NOT AWAKENED YET FOR THE NEW WHEEL* AND HIS PILGRIMAGE THEREON (b).

(a) "Darkness is Father-Mother: light their son," says an old Eastern proverb. Light is inconceivable except as coming from some source which is the cause of it; and as, in the instance of primordial light, that source is unknown, though as strongly demanded by reason and logic, therefore it is called "Darkness" by us, from an intellectual point of view. As to borrowed or secondary light, whatever its source, it can be but of a temporary mayavic character. Darkness, then, is the eternal

[[Footnote(s)]] -----

* That which is called "wheel" is the symbolical expression for a world or globe, which shows that the ancients were aware that our Earth was a revolving globe, not a motionless square as some Christian Fathers taught. The "Great Wheel" is the whole duration of our Cycle of being, or Maha Kalpa, i.e., the whole revolution of our special chain of seven planets or Spheres from beginning to end; the "Small Wheels" meaning the Rounds, of which there are also Seven.

[[Vol. 1, Page]] 41 WHAT IS DARKNESS IN PHILOSOPHY?

matrix in which the sources of light appear and disappear. Nothing is added to darkness to make of it light, or to light to make it darkness, on this our plane. They are interchangeable, and scientifically light is but a mode of darkness and vice versa. Yet both are phenomena of the same noumenon -- which is absolute darkness to the scientific mind, and but a gray twilight to the perception of the average mystic, though to that of the spiritual eye of the Initiate it is absolute light. How far we discern the light that shines in darkness depends upon our powers of vision. What is light to us is darkness to certain insects, and the eye of the clairvoyant sees illumination where the normal eye perceives only blackness. When the whole universe was plunged in sleep -- had returned to its one primordial element -- there was neither centre of luminosity, nor eye to perceive light, and darkness necessarily filled the boundless all.

(b) The Father-Mother are the male and female principles in root-nature, the opposite poles that manifest in all things on every plane of Kosmos, or Spirit and Substance, in a less allegorical aspect, the resultant of which is the Universe, or the Son. They are "once more One" when in "The Night of Brahma," during Pralaya, all in the objective Universe has returned to its one primal and eternal cause, to reappear at the following Dawn -- as it does periodically. "Karana" -- eternal cause -- was alone. To put it more plainly: Karana is alone during the "Nights of Brahma." The previous objective Universe has dissolved into its one primal and eternal cause,

and is, so to say, held in solution in space, to differentiate again and crystallize out anew at the following Manvantaric dawn, which is the commencement of a new "Day" or new activity of Brahma -- the symbol of the Universe. In esoteric parlance, Brahma is Father-Mother-Son, or Spirit, Soul and Body at once; each personage being symbolical of an attribute, and each attribute or quality being a graduated efflux of Divine Breath in its cyclic differentiation, involutory and evolutionary. In the cosmophysical sense, it is the Universe, the planetary chain and the earth; in the purely spiritual, the Unknown Deity, Planetary Spirit, and Man -- the Son of the two, the creature of Spirit and Matter, and a manifestation of them in his periodical appearances on Earth during the "wheels," or the Manvantaras. -- (See Part II. §: "Days and Nights of Brahma.")

[[Vol. 1, Page]] 42 THE SECRET DOCTRINE.

STANZA I. -- Continued.

6. THE SEVEN SUBLIME LORDS AND THE SEVEN TRUTHS HAD CEASED TO BE (a), AND THE UNIVERSE, THE SON OF NECESSITY, WAS IMMERSSED IN PARANISHPANNA (b) (absolute perfection, Paranirvana, which is Yong-Grub) TO BE OUT-BREATHED BY THAT WHICH IS AND YET IS NOT. NAUGHT WAS (c).

(a) The seven sublime lords are the Seven Creative Spirits, the Dhyani-Chohans, who correspond to the Hebrew Elohim. It is the same hierarchy of Archangels to which St. Michael, St. Gabriel, and others belong, in the Christian theogony. Only while St. Michael, for instance, is allowed in dogmatic Latin theology to watch over all the promontories and gulfs, in the Esoteric System, the Dhyanis watch successively over one of the Rounds and the great Root-races of our planetary chain. They are, moreover, said to send their Bhodisatvas, the human correspondents of the Dhyani-Buddhas (of whom vide infra) during every Round and Race. Out of the Seven Truths and Revelations, or rather revealed secrets, four only have been handed to us, as we are still in the Fourth Round, and the world also has only had four Buddhas, so far. This is a very complicated question, and will receive more ample treatment later on.

So far "There are only Four Truths, and Four Vedas" -- say the Hindus and Buddhists. For a similar reason Irenaeus insisted on the necessity of Four Gospels. But as every new Root-race at the head of a Round must have its revelation and revealers, the next Round will bring the Fifth, the following the Sixth, and so on.

(b) "Paranishpanna" is the absolute perfection to which all existences attain at the close of a great period of activity, or Maha-Manvantara, and in which they rest during the succeeding period of repose. In Tibetan it is called Yong-Grub. Up to the day of the Yogacharya school the true nature of Paranirvana was taught publicly, but since then it has become entirely esoteric; hence so many contradictory interpretations of it. It is only a true Idealist who can understand it. Everything has to be viewed as ideal, with the exception of Paranirvana, by him who would comprehend that state, and acquire a knowledge of how Non Ego, Voidness, and Darkness are Three in One and alone Self-existent and perfect. It is absolute, however, only in a relative

[[Vol. 1, Page]] 43 MOTIONS, THE "GREAT BREATH."

sense, for it must give room to still further absolute perfection, according to a higher standard of excellence in the following period of activity -- just as a perfect flower must cease to be a perfect flower and die, in order to grow into a perfect fruit, -- if a somewhat Irish mode of expression may be permitted.

The Secret Doctrine teaches the progressive development of everything, worlds as well as atoms; and this stupendous development has neither conceivable beginning nor imaginable end. Our "Universe" is only one of an infinite number of Universes, all of them "Sons of Necessity," because links in the great Cosmic chain of Universes, each one standing in the relation of an effect as regards its predecessor, and being a cause as regards its successor.

The appearance and disappearance of the Universe are pictured as an outbreathing and inbreathing of "the Great Breath," which is eternal, and which, being Motion, is one of the three aspects of the Absolute -- Abstract Space and Duration being the other two. When the "Great Breath" is projected, it is called the Divine Breath, and is regarded as the breathing of the Unknowable Deity -- the One Existence -- which breathes out a thought, as it were, which becomes the Kosmos. (See "Isis Unveiled.") So also is it when the Divine Breath is inspired again the Universe disappears into the bosom of "the Great Mother," who then sleeps "wrapped in her invisible robes."

(c) By "that which is and yet is not" is meant the Great Breath itself, which we can only speak of as absolute existence, but cannot picture to our imagination as any form of existence that we can distinguish from Non-existence. The three periods -- the Present, the Past, and the Future -- are in the esoteric philosophy a compound time; for the three are a composite number only in relation to the phenomenal plane, but in the realm of noumena have no abstract validity. As said in the Scriptures: "The Past time is the Present time, as also the Future, which, though it has not come into existence, still is"; according to a precept in the Prasanga Madhyamika teaching, whose dogmas have been known ever since it broke away from the purely esoteric schools.* Our ideas, in short, on duration and time are all derived from our

[[Footnote(s)]] -----

[[Vol. 1, Page]] 44 THE SECRET DOCTRINE.

sensations according to the laws of Association. Inextricably bound up with the relativity of human knowledge, they nevertheless can have no existence except in the experience of the individual ego, and perish when its evolutionary march dispels the Maya of phenomenal existence. What is Time, for instance, but the panoramic succession of our states of consciousness? In the words of a Master, "I feel irritated at having to use these three clumsy words -- Past, Present, and Future -- miserable concepts of the objective phases of the subjective whole, they are about as ill-adapted for the purpose as an axe for fine carving." One has to acquire Paramartha lest one should become too easy a prey to Samvriti -- is a philosophical axiom.*

STANZA I. -- Continued.

7. THE CAUSES OF EXISTENCE HAD BEEN DONE AWAY WITH (a); THE VISIBLE THAT WAS, AND THE INVISIBLE THAT IS, RESTED IN ETERNAL NON-BEING, THE ONE BEING (b).

(a) "The Causes of Existence" mean not only the physical causes known to science, but the metaphysical causes, the chief of which is the desire to exist, an outcome of Nidana and Maya. This desire for a sentient life shows itself in everything, from an atom to a sun, and is a reflection of the Divine Thought propelled into objective existence, into a law that the Universe should exist. According to esoteric teaching, the real cause of that supposed desire, and of all existence, remains for ever hidden, and its first emanations are the most complete abstractions mind can conceive. These abstractions must of necessity be postulated as the cause of the material Universe which presents itself to the senses and intellect; and they underlie the secondary and subordinate powers of Nature, which, anthropomorphized, have been worshipped as God and gods by the common herd of every age. It is impossible to conceive anything without a cause; the attempt to do so makes the mind a blank.

[[Footnote(s)]] -----

* In clearer words: "One has to acquire true Self-Consciousness in order to understand Samvriti, or the 'origin of delusion.'" Paramartha is the synonym of the Sanskrit term Svasam-vedana, or "the reflection which analyses itself." There is a difference in the interpretation of the meaning of "Paramartha" between the Yogacharyas and the Madhyamikas, neither of whom, however, explain the real and true esoteric sense of the expression. See further, sloka No. 9.

[[Vol. 1, Page]] 45 BEING AND NON-BEING.

This is virtually the condition to which the mind must come at last when we try to trace back the chain of causes and effects, but both science and religion jump to this condition of blankness much more quickly than is necessary; for they ignore the metaphysical abstractions which are the only conceivable cause of physical concretions. These abstractions become more and more concrete as they approach our plane of existence, until finally they phenomenalise in the form of the material Universe, by a process of conversion of metaphysics into physics, analogous to that by which steam can be condensed into water, and the water frozen into ice.

(b) The idea of Eternal Non-Being, which is the One Being, will appear a paradox to anyone who does not remember that we limit our ideas of being to our present consciousness of existence; making it a specific, instead of a generic term. An unborn infant, could it think in our acceptance of that term, would necessarily limit its conception of being, in a similar manner, to the intrauterine life which alone it knows; and were it to endeavour to express to its consciousness the idea of life after birth (death to it), it would, in the absence of data to go upon, and of faculties to comprehend such data, probably express that life as "Non-Being which is Real Being." In our case the One Being is the noumenon of all the noumena which we know must underlie phenomena, and give them whatever shadow of reality they possess, but which we have not the senses or the intellect to cognize at present. The impalpable atoms of gold scattered through the substance of a ton of auriferous quartz may be imperceptible to the naked eye of the miner, yet he knows that they are not only present there but that they alone give his quartz any appreciable value; and this relation of the gold to the quartz may faintly shadow forth that of the noumenon to the phenomenon. But the miner knows what the gold will look like when extracted from the quartz, whereas the common mortal can form no conception of the reality of things separated from the Maya which veils them, and in which they are hidden. Alone the Initiate, rich with the lore acquired by numberless generations of his predecessors, directs the "Eye of Dangma" toward the essence of things in which no Maya can have any influence. It is here that the teachings of esoteric philosophy in relation to the Nidanas and the Four Truths become of the greatest importance; but they are secret.

[[Vol. 1, Page]] 46 THE SECRET DOCTRINE.

STANZA I. -- Continued.

8. ALONE, THE ONE FORM OF EXISTENCE STRETCHED BOUNDLESS, INFINITE, CAUSELESS, IN DREAMLESS SLEEP (a); AND LIFE PULSATED UNCONSCIOUS IN UNIVERSAL SPACE, THROUGHOUT THAT ALL-PRESENCE WHICH IS SENSED BY THE "OPENED EYE" OF THE DANGMA (b).**

(a) The tendency of modern thought is to recur to the archaic idea of a homogeneous basis for apparently widely different things -- heterogeneity developed from homogeneity. Biologists are now searching for their homogeneous protoplasm and chemists for their

protyle, while science is looking for the force of which electricity, magnetism, heat, and so forth, are the differentiations. The Secret Doctrine carries this idea into the region of metaphysics and postulates a "One Form of Existence" as the basis and source of all things. But perhaps the phrase, the "One Form of Existence," is not altogether correct. The Sanskrit word is Prabhavapyaya, "the place, or rather plane, whence emerges the origination, and into which is the resolution of all things," says a commentator. It is not the "Mother of the World," as translated by Wilson (see Book I., Vishnu Purana); for Jagad Yoni (as shown by FitzEdward Hall) is scarcely so much "the Mother of the World" or "the Womb of the World" as the "Material Cause of the Universe." The Puranic Commentators explain it by Karana -- "Cause" -- but the Esoteric philosophy, by the ideal spirit of that cause. It is, in its secondary stage, the Svabhavat of the Buddhist philosopher, the eternal cause and effect, omnipresent yet abstract, the self-existent plastic Essence and the root of all things, viewed in the same dual light as the Vedantin views his Parabrahm and Mulaprakriti, the one under two aspects. It seems indeed extraordinary to find great scholars speculating on the possibility of the Vedanta, and the Uttara-Mimansa especially, having been "evoked by the teachings of the Buddhists,"

[[Footnote(s)]] -----

* In India it is called "The Eye of Siva," but beyond the great range it is known as "Dangma's opened eye" in esoteric phraseology.

** Dangma means a purified soul, one who has become a Jivanmukta, the highest adept, or rather a Mahatma so-called. His "opened eye" is the inner spiritual eye of the seer, and the faculty which manifests through it is not clairvoyance as ordinarily understood, i.e., the power of seeing at a distance, but rather the faculty of spiritual intuition, through which direct and certain knowledge is obtainable. This faculty is intimately connected with the "third eye," which mythological tradition ascribes to certain races of men. Fuller explanations will be found in Book II.

[[Vol. 1, Page]] 47 THE EYE OF DANGMA.

whereas, it is on the contrary Buddhism (of Gautama, the Buddha) that was "evoked" and entirely upreared on the tenets of the Secret Doctrine, of which a partial sketch is here attempted, and on which, also, the Upanishads are made to rest.* The above, according to the teachings of Sri Sankaracharya,** is undeniable.

(b) Dreamless sleep is one of the seven states of consciousness known in Oriental esotericism. In each of these states a different portion of the mind comes into action; or as a Vedantin would express it, the individual is conscious in a different plane of his being. The term "dreamless sleep," in this case is applied allegorically to the Universe to express a condition somewhat analogous to that state of consciousness in man, which, not being remembered in a waking state, seems a blank, just as the sleep of the mesmerised subject seems to him an unconscious blank when he returns to his normal condition, although he has been talking and acting as a conscious individual would.

STANZA I. -- Continued.

9. BUT WHERE WAS THE DANGMA WHEN THE ALAYA OF THE UNIVERSE (Soul as the basis of all, Anima Mundi) WAS IN PARAMARTHA (a) (Absolute Being and Consciousness which are Absolute Non-Being and Unconsciousness) AND THE GREAT WHEEL WAS ANUPADAKA (b)?

[[Footnote(s)]] -----

* And yet, one, claiming authority, namely, Sir Monier Williams, Boden Professor of Sanskrit at Oxford, has just denied this fact. This is what he taught his audience, on June the 4th, 1888, in his annual address before the Victoria Institute of Great Britain: "Originally, Buddhism set its face against all solitary asceticism . . . to attain sublime heights of knowledge. It had no occult, no esoteric system of doctrine . . . withheld from ordinary men" (!) And, again: " . . . When Gautama Buddha began his career, the later and lower form of Yoga seems to have been little known." And then, contradicting himself, the learned lecturer forthwith informs his audience that "We learn from Lalita-Vistara that various forms of bodily torture, self-maceration, and austerity were common in Gautama's time." (!) But the lecturer seems quite unaware that this kind of torture and self-maceration is precisely the lower form of Yoga, Hatha Yoga, which was "little known" and yet so "common" in Gautama's time.

** It is even argued that all the Six Darsanas (Schools of philosophy) show traces of Buddha's influence, being either taken from Buddhism or due to Greek teaching! (See Weber, Max Muller, etc.) We labour under the impression that Colebrooke, "the highest authority" in such matters, had long ago settled the question by showing, that "the Hindus were in this instance the teachers, not the learners."

[[Vol. 1, Page]] 48 THE SECRET DOCTRINE.

(a) Here we have before us the subject of centuries of scholastic disputations. The two terms "Alaya" and "Paramartha" have been the causes of dividing schools and splitting the truth into more different aspects than any other mystic terms. Alaya is literally the "Soul of the World" or Anima Mundi, the "Over-Soul" of Emerson, and according to esoteric teaching it changes periodically its nature. Alaya, though eternal and changeless in its inner essence on the planes which are unreachable by either men or Cosmic Gods (Dhyani Buddhas), alters during the active life-period with respect to the lower planes, ours included. During that time not only the Dhyani-

Buddhas are one with Alaya in Soul and Essence, but even the man strong in the Yoga (mystic meditation) "is able to merge his soul with it" (Aryasanga, the Bumapa school). This is not Nirvana, but a condition next to it. Hence the disagreement. Thus, while the Yogacharyas (of the Mahayana school) say that Alaya is the personification of the Voidness, and yet Alaya (Nyingpo and Tsang in Tibetan) is the basis of every visible and invisible thing, and that, though it is eternal and immutable in its essence, it reflects itself in every object of the Universe "like the moon in clear tranquil water"; other schools dispute the statement. The same for Paramartha: the Yogacharyas interpret the term as that which is also dependent upon other things (paratantra); and the Madhyamikas say that Paramartha is limited to Paranishpanna or absolute perfection; i.e., in the exposition of these "two truths" (out of four), the former believe and maintain that (on this plane, at any rate) there exists only Samvritisatya or relative truth; and the latter teach the existence of Paramarthatasatya, the "absolute truth." "No Arhat, oh mendicants, can reach absolute knowledge before he becomes one with Paranirvana. Parikalpita and Paratantra are his two great enemies" (Aphorisms of the Bodhisattvas). Parikalpita (in Tibetan Kunttag) is error, made by those unable to realize the emptiness and illusionary nature of all; who believe something to exist which does not -- e.g., the Non-Ego. And

[[Footnote(s)]] -----

* "Paramartha" is self-consciousness in Sanskrit, Svasamvedana, or the "self-analysing reflection" -- from two words, parama (above everything) and artha (comprehension), Satya meaning absolute true being, or Esse. In Tibetan Paramarthatasatya is Dondampaidenpa. The opposite of this absolute reality, or actuality, is Samvritisatya -- the relative truth only -- "Samvriti" meaning "false conception" and being the origin of illusion, Maya; in Tibetan Kundzabchi-denpa, "illusion-creating appearance."

[[Vol. 1, Page]] 49 ALAYA, THE UNIVERSAL SOUL.

Paratantra is that, whatever it is, which exists only through a dependent or causal connexion, and which has to disappear as soon as the cause from which it proceeds is removed -- e.g., the light of a wick. Destroy or extinguish it, and light disappears.

Esoteric philosophy teaches that everything lives and is conscious, but not that all life and consciousness are similar to those of human or even animal beings. Life we look upon as "the one form of existence," manifesting in what is called matter; or, as in man, what, incorrectly separating them, we name Spirit, Soul and Matter. Matter is the vehicle for the manifestation of soul on this plane of existence, and soul is the vehicle on a higher plane for the manifestation of spirit, and these three are a trinity synthesized by Life, which pervades them all. The idea of universal life is one of those ancient conceptions which are returning to the human mind in this century, as a consequence of its liberation from anthropomorphic theology. Science, it is true, contents itself with tracing or postulating the signs of universal life, and has not yet been bold enough even to whisper "Anima Mundi!" The idea of "crystalline life," now familiar to science, would have been scouted half a century ago. Botanists are now searching for the nerves of plants; not that they suppose that plants can feel or think as animals do, but because they believe that some structure, bearing the same relation functionally to plant life that nerves bear to animal life, is necessary to explain vegetable growth and nutrition. It hardly seems possible that science can disguise from itself much longer, by the mere use of terms such as "force" and "energy," the fact that things that have life are living things, whether they be atoms or planets.

But what is the belief of the inner esoteric Schools? the reader may ask. What are the doctrines taught on this subject by the Esoteric "Buddhists"? With them "Alaya" has a double and even a triple meaning. In the Yogacharya system of the contemplative Mahayana school, Alaya is both the Universal Soul (Anima Mundi) and the Self of a progressed adept. "He who is strong in the Yoga can introduce at will his Alaya by means of meditation into the true Nature of Existence." The "Alaya has an absolute eternal existence," says Aryasanga -- the rival of Nagarjuna.* In one sense it is Pradhana; which

[[Footnote(s)]] -----

* Aryasanga was a pre-Christian Adept and founder of a Buddhist esoteric school, though Csoma di Koros places him, for some reasons of his own, in the seventh century [[Footnote continued on next page]]

[[Vol. 1, Page]] 50 THE SECRET DOCTRINE.

is explained in Vishnu Purana as: "that which is the unevolved cause, is emphatically called by the most eminent sages Pradhana, original base, which is subtle Prakriti, viz., that which is eternal, and which at once is (or comprehends) what is and what is not, or is mere process." "Prakriti," however, is an incorrect word, and Alaya would explain it better; for Prakriti is not the "uncognizable Brahma."** It is a mistake of those who know nothing of the Universality of the Occult doctrines from the very cradle of the human races, and especially so of those scholars who reject the very idea of a "primordial revelation," to teach that the Anima Mundi, the One Life or "Universal Soul," was made known only by Anaxagoras, or during his age. This philosopher brought the teaching forward simply to oppose the too materialistic conceptions on Cosmogony of Democritus, based on his exoteric theory of blindly driven atoms. Anaxagoras of Clazomene was not its inventor but only its propagator, as also was Plato. That which he called Mundane Intelligence, the nous ([[nous]]), the principle that according to his views is absolutely separated and free from matter and acts on design,** was called Motion, the ONE LIFE, or Jivatma, ages before the year 500 B.C. in India. Only the Aryan philosophers never endowed the principle, which with them is infinite, with the finite "attribute" of "thinking."

This leads the reader naturally to the "Supreme Spirit" of Hegel and the German Transcendentalists as a contrast that it may be useful to point out. The schools of Schelling and Fichte have diverged widely from the primitive archaic conception of an ABSOLUTE principle, and have mirrored only an aspect of the basic idea of the Vedanta. Even the "Absoluter Geist" shadowed forth by von

Hartman in his pessimistic philosophy of the Unconscious, while it is, perhaps, the closest approximation made by European speculation to the Hindu Adwaitee Doctrines, similarly falls far short of the reality.

[[Footnote(s)]] -----

[[Footnote continued from previous page]] A.D. There was another Aryasanga, who lived during the first centuries of our era and the Hungarian scholar most probably confuses the two.

* "The indiscreet cause which is uniform, and both cause and effect, and which those who are acquainted with first principles call Pradhana and Prakriti, is the incognizable Brahma who was before all" (Vayu Purana); i.e., Brahma does not put forth evolution itself or create, but only exhibits various aspects of itself, one of which is Prakriti, an aspect of Pradhana.

** Finite Self-consciousness, I mean. For how can the absolute attain it otherwise than as simply an aspect, the highest of which known to us is human consciousness?

[[Vol. 1, Page]] 51 CAN THE FINITE CONCEIVE THE INFINITE?

According to Hegel, the "Unconscious" would never have undertaken the vast and laborious task of evolving the Universe, except in the hope of attaining clear Self-consciousness. In this connection it is to be borne in mind that in designating Spirit, which the European Pantheists use as equivalent to Parabrahm, as unconscious, they do not attach to that expression of "Spirit" -- one employed in the absence of a better to symbolise a profound mystery -- the connotation it usually bears.

The "Absolute Consciousness," they tell us, "behind" phenomena, which is only termed unconsciousness in the absence of any element of personality, transcends human conception. Man, unable to form one concept except in terms of empirical phenomena, is powerless from the very constitution of his being to raise the veil that shrouds the majesty of the Absolute. Only the liberated Spirit is able to faintly realise the nature of the source whence it sprung and whither it must eventually return. . . . As the highest Dhyani Chohan, however, can but bow in ignorance before the awful mystery of Absolute Being; and since, even in that culmination of conscious existence -- "the merging of the individual in the universal consciousness" -- to use a phrase of Fichte's -- the Finite cannot conceive the Infinite, nor can it apply to it its own standard of mental experiences, how can it be said that the "Unconscious" and the Absolute can have even an instinctive impulse or hope of attaining clear self-consciousness? A Vedantin would never admit this Hegelian idea; and the Occultist would say that it applies perfectly to the awakened MAHAT, the Universal Mind already projected into the phenomenal world as the first aspect of the changeless ABSOLUTE, but never to the latter. "Spirit and Matter, or Purusha and Prakriti are but the two primeval aspects of the One and Secondless," we are taught.

The matter-moving Nous, the animating Soul, immanent in every atom, manifested in man, latent in the stone, has different degrees of power; and this pantheistic idea of a general Spirit-Soul pervading all Nature is the oldest of all the philosophical notions. Nor was the Archaeus a discovery of Paracelsus nor of his pupil Van Helmont; for it is again the same Archaeus or "Father-Ether," -- the manifested basis

[[Footnote(s)]] -----

* See Schwegler's "Handbook of the History of Philosophy" in Sterling's translation, p. 28.

[[Vol. 1, Page]] 52 THE SECRET DOCTRINE.

and source of the innumerable phenomena of life -- localised. The whole series of the numberless speculations of this kind are but variations on this theme, the key-note of which was struck in this primeval Revelation. (See Part II., "Primordial Substance.")

(b) The term Anupadaka, "parentless," or without progenitors, is a mystical designation having several meanings in the philosophy. By this name celestial beings, the Dhyani-Chohans or Dhyani-Buddhas, are generally meant. But as these correspond mystically to the human Buddhas and Bodhisattvas, known as the "Manushi (or human) Buddhas," the latter are also designated "Anupadaka," once that their whole personality is merged in their compound sixth and seventh principles -- or Atma-Buddhi, and that they have become the "diamond-souled" (Vajra-sattvas),* the full Mahatmas. The "Concealed Lord" (Sangbai Dag-po), "the one merged with the absolute," can have no parents since he is Self-existent, and one with the Universal Spirit (Svayambhu),** the Svabhavat in the highest aspect. The mystery in the hierarchy of the Anupadaka is great, its apex being the universal Spirit-Soul, and the lower rung the Manushi-Buddha; and even every Soul-endowed man is an Anupadaka in a latent state. Hence, when speaking of the Universe in its formless, eternal, or absolute condition, before it was fashioned by the "Builders" -- the expression, "the Universe was Anupadaka." (See Part II., "Primordial Substance.")

[[Footnote(s)]] -----

* Vajra -- diamond-holder. In Tibetan Dorjesempa; sempa meaning the soul, its adamant quality referring to its indestructibility in the hereafter. The explanation with regard to the "Anupadaka" given in the Kala Chakra, the first in the Gyu(t) division of the Kanjur, is half esoteric. It has misled the Orientalists into erroneous speculations with respect to the Dhyani-Buddhas and their earthly correspondencies, the Manushi-Buddhas. The real tenet is hinted at in a subsequent Volume, (see "The Mystery about Buddha"), and will be more fully explained in its proper place.

** To quote Hegel again, who with Schelling practically accepted the Pantheistic conception of periodical Avatars (special incarnations of the World-Spirit in Man, as seen in the case of all the great religious reformers) . . . "the essence of man is spirit . . . only by stripping himself of his finiteness and surrendering himself to pure self-consciousness does he attain the truth. Christ-man, as man in whom the Unity of God-man (identity of the individual with the Universal consciousness as taught by the Vedantins and some Adwaites) appeared, has, in his death and history generally, himself presented the eternal history of Spirit -- a history which every man has to accomplish in himself, in order to exist as Spirit." -- Philosophy of History. Sibree's English translation, p. 340.

[[Vol. 1, Page]] 53 THE STATE OF PARANIRVANA.

STANZA II.

COMMENTARY.

1. . . . WHERE WERE THE BUILDERS, THE LUMINOUS SONS OF MANVANTARIC DAWN (a)? . . . IN THE UNKNOWN DARKNESS IN THEIR AH-HI (Chohanic, Dhyani-Buddhic) PARANISHPANNA, THE PRODUCERS OF FORM (rupa) FROM NO-FORM (arupa), THE ROOT OF THE WORLD -- THE DEVAMATRI* AND SVABHAVAT, RESTED IN THE BLISS OF NON-BEING (b).

(a) The "Builders," the "Sons of Manvantaric Dawn," are the real creators of the Universe; and in this doctrine, which deals only with our Planetary System, they, as the architects of the latter, are also called the "Watchers" of the Seven Spheres, which exoterically are the Seven planets, and esoterically the seven earths or spheres (planets) of our chain also. The opening sentence of Stanza I., when mentioning "Seven Eternities," is made to apply both to the Maha-Kalpa or "the (great) Age of Brahma," as well as to the Solar pralaya and subsequent resurrection of our Planetary System on a higher plane. There are many kinds of pralaya (dissolution of a thing visible), as will be shown elsewhere.

(b) Paranishpanna, remember, is the summum bonum, the Absolute, hence the same as Paranirvana. Besides being the final state it is that condition of subjectivity which has no relation to anything but the one absolute truth (Para-marthasatya) on its plane. It is that state which leads one to appreciate correctly the full meaning of Non-Being, which, as explained, is absolute Being. Sooner or later, all that now seemingly exists, will be in reality and actually in the state of Paranishpanna. But there is a great difference between conscious and unconscious "being." The condition of Paranishpanna, without Paramartha, the Self-analysis-

[[Footnote(s)]] -----

"Mother of the Gods," Aditi, or Cosmic Space. In the Zohar, she is called Sephira the Mother of the Sephiroth, and Shekinah in her primordial form, in abscondito.

[[Vol. 1, Page]] 54 THE SECRET DOCTRINE.

ing consciousness (Svasamvedana), is no bliss, but simply extinction (for Seven Eternities). Thus, an iron ball placed under the scorching rays of the sun will get heated through, but will not feel or appreciate the warmth, while a man will. It is only "with a mind clear and undarkened by personality, and an assimilation of the merit of manifold existences devoted to being in its collectivity (the whole living and sentient Universe)," that one gets rid of personal existence, merging into, becoming one with, the Absolute,* and continuing in full possession of Paramartha.

STANZA II. -- Continued.

2. . . . WHERE WAS SILENCE? WHERE WERE THE EARS TO SENSE IT? NO! THERE WAS NEITHER SILENCE, NOR SOUND (a). NAUGHT SAVE CEASELESS, ETERNAL BREATH (Motion) WHICH KNOWS ITSELF NOT (b).

(a) The idea that things can cease to exist and still BE, is a fundamental one in Eastern psychology. Under this apparent contradiction in terms, there rests a fact of Nature to realise which in the mind, rather than to argue about words, is the important thing. A familiar instance of a similar paradox is afforded by chemical combination. The question whether Hydrogen and Oxygen cease to exist, when they combine to form water, is still a moot one, some arguing that since they are found again when the water is decomposed they must be there all the while; others contending that as they actually turn into something totally different they must cease to exist as themselves for the time being; but neither side is able to form the faintest conception of the real condition of a thing, which has become something else and yet has not ceased to be itself. Existence as water may be said to be, for Oxygen and Hydrogen, a state of Non-being which is "more real being" than their existence as gases; and it may faintly symbolise the

[[Footnote(s)]] -----

* Hence Non-being is "ABSOLUTE Being," in esoteric philosophy. In the tenets of the latter even Adi-Budha (first or primeval wisdom) is, while manifested, in one sense an illusion, Maya, since all the gods, including Brahma, have to die at the end of the "Age of Brahma"; the abstraction called Parabrahm alone -- whether we call it Ensoph, or Herbert Spencer's Unknowable -- being "the One

Absolute" Reality. The One secondless Existence is ADWAITA, "Without a Second," and all the rest is Maya, teaches the Advaita philosophy.

[[Vol. 1, Page]] 55 THE ABSOLUTE KNOWS ITSELF NOT.

condition of the Universe when it goes to sleep, or ceases to be, during the "Nights of Brahma" -- to awaken or reappear again, when the dawn of the new Manvantara recalls it to what we call existence.

(b) The "Breath" of the One Existence is used in its application only to the spiritual aspect of Cosmogony by Archaic esotericism; otherwise, it is replaced by its equivalent in the material plane -- Motion. The One Eternal Element, or element-containing Vehicle, is Space, dimensionless in every sense; co-existent with which are -- endless duration, primordial (hence indestructible) matter, and motion -- absolute "perpetual motion" which is the "breath" of the "One" Element. This breath, as seen, can never cease, not even during the Pralaya eternities. (See "Chaos, Theos, Kosmos," in Part II.)

But the "Breath of the One Existence" does not, all the same, apply to the One Causeless Cause or the "All Be-ness" (in contradistinction to All-Being, which is Brahma, or the Universe). Brahma (or Hari) the four-faced god who, after lifting the Earth out of the waters, "accomplished the Creation," is held to be only the instrumental, and not, as clearly implied, the ideal Cause. No Orientalist, so far, seems to have thoroughly comprehended the real sense of the verses in the Purana, that treat of "creation."

Therein Brahma is the cause of the potencies that are to be generated subsequently for the work of "creation." When a translator says, "And from him proceed the potencies to be created, after they had become the real cause": "and from IT proceed the potencies that will create as they become the real cause" (on the material plane) would perhaps be more correct? Save that one (causeless) ideal cause there is no other to which the universe can be referred. "Worthiest of ascetics! through its potency -- i.e., through the potency of that cause -- every created thing comes by its inherent or proper nature." If, in the Vedanta and Nyaya, nimitta is the efficient cause, as contrasted with upadana, the material cause, (and in the Sankhya, pradhana implies the functions of both); in the Esoteric philosophy, which reconciles all these systems, and the nearest exponent of which is the Vedanta as expounded by the Advaita Vedantists, none but the upadana can be speculated upon; that which is in the minds of the Vaishnavas (the Vasishtha-dvaita) as the ideal in contradistinction to the real -- or Parabrahm and Isvara -- can find no room in published speculations, since

[[Vol. 1, Page]] 56 THE SECRET DOCTRINE.

that ideal even is a misnomer, when applied to that of which no human reason, even that of an adept, can conceive.

To know itself or oneself, necessitates consciousness and perception (both limited faculties in relation to any subject except Parabrahm), to be cognized. Hence the "Eternal Breath which knows itself not." Infinity cannot comprehend Finiteness. The Boundless can have no relation to the bounded and the conditioned. In the occult teachings, the Unknown and the Unknowable MOVER, or the Self-Existing, is the absolute divine Essence. And thus being Absolute Consciousness, and Absolute Motion -- to the limited senses of those who describe this indescribable -- it is unconsciousness and immoveableness. Concrete consciousness cannot be predicated of abstract Consciousness, any more than the quality wet can be predicated of water -- wetness being its own attribute and the cause of the wet quality in other things. Consciousness implies limitations and qualifications; something to be conscious of, and someone to be conscious of it. But Absolute Consciousness contains the cognizer, the thing cognized and the cognition, all three in itself and all three one. No man is conscious of more than that portion of his knowledge that happens to have been recalled to his mind at any particular time, yet such is the poverty of language that we have no term to distinguish the knowledge not actively thought of, from knowledge we are unable to recall to memory. To forget is synonymous with not to remember. How much greater must be the difficulty of finding terms to describe, and to distinguish between, abstract metaphysical facts or differences. It must not be forgotten, also, that we give names to things according to the appearances they assume for ourselves. We call absolute consciousness "unconsciousness," because it seems to us that it must necessarily be so, just as we call the Absolute, "Darkness," because to our finite understanding it appears quite impenetrable, yet we recognize fully that our perception of such things does not do them justice. We involuntarily distinguish in our minds, for instance, between unconscious absolute consciousness, and unconsciousness, by secretly endowing the former with some indefinite quality that corresponds, on a higher plane than our thoughts can reach, with what we know as consciousness in ourselves. But this is not any kind of consciousness that we can manage to distinguish from what appears to us as unconsciousness.

[[Vol. 1, Page]] 57 THE GERM OF LIFE.

STANZA II. -- Continued.

3. THE HOUR HAD NOT YET STRUCK; THE RAY HAD NOT YET FLASHED INTO THE GERM (a); THE MATRI-PADMA (mother lotus) HAD NOT YET SWOLLEN (b).*

(a) The ray of the "Ever Darkness" becomes, as it is emitted, a ray of effulgent light or life, and flashes into the "Germ" -- the point in the Mundane Egg, represented by matter in its abstract sense. But the term "Point" must not be understood as applying to any particular point in Space, for a germ exists in the centre of every atom, and these collectively form "the Germ;" or rather, as no atom can be made visible to our physical eye, the collectivity of these (if the term can be applied to something which is boundless and infinite) forms the noumenon of eternal and indestructible matter.

(b) One of the symbolical figures for the Dual creative power in Nature (matter and force on the material plane) is Padma, the water-lily of India. The Lotus is the product of heat (fire) and water (vapour or Ether); fire standing in every philosophical and religious system as a representation of the Spirit of Deity,** the active, male, generative principle; and Ether, or the Soul of matter, the light of the fire, for the passive female principle from which everything in this Universe emanated. Hence, Ether or Water is the Mother, and Fire is the Father. Sir W. Jones (and before him archaic botany) showed that the seeds of the Lotus contain -- even before they germinate -- perfectly formed leaves, the miniature shape of what one day, as perfect plants, they will become: nature thus giving us a specimen of the preformation of its production . . . the seed of all phanerogamous plants bearing proper flowers containing an embryo plantlet ready formed.*** (See Part II., "The Lotus Flower as an Universal Symbol.") This explains the sentence "The Mother had not yet swollen" -- the form being usually sacrificed to the inner or root idea in Archaic symbology.

The Lotus, or Padma, is, moreover, a very ancient and favourite

[[Footnote(s)]] -----

* An unpoetical term, yet still very graphic. (See foot-note to Stanza III.)

** Even in Christianity. (See Part II., "Primordial Substance and Divine Thought.")

*** Gross, "The Heathen Religion," p. 195.

[[Vol. 1, Page]] 58 THE SECRET DOCTRINE.

simile for the Kosmos itself, and also for man. The popular reasons given are, firstly, the fact just mentioned, that the Lotus-seed contains within itself a perfect miniature of the future plant, which typifies the fact that the spiritual prototypes of all things exist in the immaterial world before those things become materialised on Earth. Secondly, the fact that the Lotus plant grows up through the water, having its root in the Illus, or mud, and spreading its flower in the air above. The Lotus thus typifies the life of man and also that of the Kosmos; for the Secret Doctrine teaches that the elements of both are the same, and that both are developing in the same direction. The root of the Lotus sunk in the mud represents material life, the stalk passing up through the water typifies existence in the astral world, and the flower floating on the water and opening to the sky is emblematical of spiritual being.

STANZA II. -- Continued.

4. HER HEART HAD NOT YET OPENED FOR THE ONE RAY TO ENTER, THENCE TO FALL AS THREE INTO FOUR IN THE LAP OF MAYA (a).

(a) The Primordial Substance had not yet passed out of its precosmic latency into differentiated objectivity, or even become the (to man, so far,) invisible Protyle of Science. But, as the hour strikes and it becomes receptive of the Fohatic impress of the Divine Thought (the Logos, or the male aspect of the Anima Mundi, Alaya) -- its heart opens. It differentiates, and the THREE (Father, Mother, Son) are transformed into four. Herein lies the origin of the double mystery of the Trinity and the immaculate Conception. The first and Fundamental dogma of Occultism is Universal Unity (or Homogeneity) under three aspects. This led to a possible conception of Deity, which as an absolute unity must remain forever incomprehensible to finite intellects. "If thou wouldst believe in the Power which acts within the root of a plant, or imagine the root concealed under the soil, thou hast to think of its stalk or trunk and of its leaves and flowers. Thou canst not imagine that Power independently of these objects. Life can be known only by the Tree of Life. . . ." (Precepts for Yoga). The idea of Absolute Unity

[[Vol. 1, Page]] 59 ASTRAL LIGHT IS NOT THE ANIMA MUNDI.

would be broken entirely in our conception, had we not something concrete before our eyes to contain that Unity. And the deity being absolute, must be omnipresent, hence not an atom but contains IT within itself. The roots, the trunk and its many branches are three distinct objects, yet they are one tree. Say the Kabalists: "The Deity is one, because It is infinite. It is triple, because it is ever manifesting." This manifestation is triple in its aspects, for it requires, as Aristotle has it, three principles for every natural body to become objective: privation, form, and matter.* Privation meant in the mind of the great philosopher that which the Occultists call the prototypes impressed in the Astral Light -- the lowest plane and world of Anima Mundi. The union of these three principles depends upon a fourth -- the LIFE which radiates from the summits of the Unreachable, to become an universally diffused Essence on the manifested planes of Existence. And this QUATERNARY (Father, Mother, Son, as a UNITY, and a quaternary, as a living manifestation) has been the means of leading to the very archaic Idea of Immaculate Conception, now finally crystallized into a dogma of the Christian Church, which canalized this metaphysical idea beyond any common sense. For one has but to read the Kabala and study its numerical methods of interpretation to find the origin of that dogma. It is purely astronomical, mathematical, and pre-eminently metaphysical: the Male element in Nature (personified by the male deities and Logoi -- Viraj, or Brahma; Horus, or Osiris, etc., etc.) is born through, not from, an immaculate source, personified by the "Mother"; because that Male having a Mother cannot have a "Father" -- the abstract Deity being sexless, and not even a Being but Be-ness, or Life itself. Let us render this in the mathematical language of the author of "The Source of Measures." Speaking of the "Measure of a Man" and his numerical (Kabalistic) value, he writes that in Genesis, ch. iv., v. 1, "It is called the 'Man even Jehovah'

[[Footnote(s)]] -----

* A Vedantin of the Visishtadwaita philosophy would say that, though the only independent Reality, Parabrahmam is inseparable from his trinity. That He is three, "Parabrahmam, Chit, and Achit," the last two being dependent realities unable to exist separately; or, to make it clearer, Parabrahmam is the SUBSTANCE -- changeless, eternal, and incognizable -- and Chit (Atma), and Achit (Anatma) are its qualities, as form and colour are the qualities of any object. The two are the garment, or body, or rather attribute (Sarira) of Parabrahmam. But an Occultist would find much to say against this claim, and so would the Adwaitee Vedantin.

[[Vol. 1, Page 60]] THE SECRET DOCTRINE.

Measure, and this is obtained in this way, viz.: $113 \times 5 = 565$, and the value 565 can be placed under the form of expression $56.5 \times 10 = 565$. Here the Man-number 113 becomes a factor of 56.5×10 , and the (Kabalistic) reading of this last numbered expression is Jod, He, Vau, He, or Jehovah. . . . The expansion of 565 into 56.5×10 is purposed to show the emanation of the male (Jod) from the female (Eva) principle; or, so to speak, the birth of a male element from an immaculate source, in other words, an immaculate conception."

Thus is repeated on Earth the mystery enacted, according to the Seers, on the divine plane. The "Son" of the immaculate Celestial Virgin (or the undifferentiated cosmic protyle, Matter in its infinitude) is born again on Earth as the Son of the terrestrial Eve -- our mother Earth, and becomes Humanity as a total -- past, present, and future -- for Jehovah or Jod-he-vau-he is androgyne, or both male and female. Above, the Son is the whole KOSMOS; below, he is MANKIND. The triad or triangle becomes Tetraktis, the Sacred Pythagorean number, the perfect Square, and a 6-faced cube on Earth. The Macroprosopus (the Great Face) is now Microprosopus (the lesser face); or, as the Kabalists have it, the "Ancient of Days," descending on Adam Kadmon whom he uses as his vehicle to manifest through, gets transformed into Tetragrammaton. It is now in the "Lap of Maya," the Great Illusion, and between itself and the Reality has the Astral Light, the great Deceiver of man's limited senses, unless Knowledge through Paramarthasatya comes to the rescue.

STANZA II. -- Continued.

5. THE SEVEN (Sons) WERE NOT YET BORN FROM THE WEB OF LIGHT. DARKNESS ALONE WAS FATHER-MOTHER, SVABHAVAT, AND SVABHAVAT WAS IN DARKNESS (a).

(a) The Secret Doctrine, in the Stanzas given here, occupies itself chiefly, if not entirely, with our Solar System, and especially with our planetary chain. The "Seven Sons," therefore, are the creators of the latter. This teaching will be explained more fully hereafter. (See Part II., "Theogony of the Creative Gods.")

[[Vol. 1, Page]] 61 DIVINE THOUGHT, DIVINE THINKERS.

Svabhavat, the "Plastic Essence" that fills the Universe, is the root of all things. Svabhavat is, so to say, the Buddhistic concrete aspect of the abstraction called in Hindu philosophy Mulaprakriti. It is the body of the Soul, and that which Ether would be to Akasa, the latter being the informing principle of the former. Chinese mystics have made of it the synonym of "being." In the Ekasloka-Shastra of Nagarjuna (the Lung-shu of China) called by the Chinese the Yih-shu-lu-kia-lun, it is said that the original word of Yeu is "Being" or "Subhava," "the Substance giving substance to itself," also explained by him as meaning "without action and with action," "the nature which has no nature of its own." Subhava, from which Svabhavat, is composed of two words: Su "fair," "handsome," "good"; Sva, "self"; and bhava, "being" or "states of being."

STANZA II. -- Continued.

6. THESE TWO ARE THE GERM, AND THE GERM IS -- ONE. THE UNIVERSE WAS STILL CONCEALED IN THE DIVINE THOUGHT AND THE DIVINE BOSOM.

The "Divine Thought" does not imply the idea of a Divine thinker. The Universe, not only past, present, and future -- which is a human and finite idea expressed by finite thought -- but in its totality, the Sat (an untranslatable term), the absolute being, with the Past and Future crystallized in an eternal Present, is that Thought itself reflected in a secondary or manifest cause. Brahma (neuter) as the Mysterium Magnum of Paracelsus is an absolute mystery to the human mind. Brahma, the male-female, its aspect and anthropomorphic reflection, is conceivable to the perceptions of blind faith, though rejected by human intellect when it attains its majority. (See Part II., "Primordial Substance and Divine Thought.")

Hence the statement that during the prologue, so to say, of the drama of Creation, or the beginning of cosmic evolution, the Universe or the "Son" lies still concealed "in the Divine Thought," which had not yet penetrated "into the Divine Bosom." This idea, note well, is at the root, and forms the origin of all the allegories about the "Sons of God" born of immaculate virgins.

[[Vol. 1, Page]] 62 THE SECRET DOCTRINE.

STANZA III.

COMMENTARY.

1. THE LAST VIBRATION OF THE SEVENTH ETERNITY THRILLS THROUGH INFINITUDE (a). THE MOTHER SWELLS, EXPANDING FROM WITHIN WITHOUT LIKE THE BUD OF THE LOTUS (b).

(a) The seemingly paradoxical use of the sentence "Seventh Eternity," thus dividing the indivisible, is sanctified in esoteric philosophy. The latter divides boundless duration into unconditionally eternal and universal Time and a conditioned one (Khandakala). One is the abstraction or noumenon of infinite time (Kala); the other its phenomenon appearing periodically, as the effect of Mahat (the Universal Intelligence limited by Manvantaric duration). With some schools, Mahat is "the first-born" of Pradhana (undifferentiated substance, or the periodical aspect of Mulaprakriti, the root of Nature), which (Pradhana) is called Maya, the Illusion. In this respect, I believe, esoteric teaching differs from the Vedantin doctrines of both the Advaita and the Visishtadwaita schools. For it says that, while Mulaprakriti, the noumenon, is self-existing and without any origin -- is, in short, parentless, Anupadaka (as one with Brahman) -- Prakriti, its phenomenon, is periodical and no better than a phantasm of the former, so Mahat, with the Occultists, the first-born of Gnana (or gnosis) knowledge, wisdom or the Logos -- is a phantasm reflected from the Absolute NIRGUNA (Parabrahm, the one reality, "devoid of attributes and qualities"; see Upanishads); while with some Vedantins Mahat is a manifestation of Prakriti, or Matter.

(b) Therefore, the "last vibration of the Seventh Eternity" was "fore-ordained" -- by no God in particular, but occurred in virtue of the eternal and changeless LAW which causes the great periods of Activity and Rest, called so graphically, and at the same time so poetically, the "Days and Nights of Brahma." The expansion "from within without" of the Mother, called elsewhere the "Waters of Space," "Universal Matrix," etc., does not allude to an expansion from a small centre or focus, but, without reference to size or limitation or area, means the development of limitless subjectivity into as limitless objectivity. "The ever (to us) invisible and immaterial Substance present in eternity, threw its periodical shadow from its own plane into the lap

[[Vol. 1, Page]] 63 THE UNIVERSE, A FLITTING SHADOW.

of Maya." It implies that this expansion, not being an increase in size -- for infinite extension admits of no enlargement -- was a change of condition. It "expanded like the bud of the Lotus"; for the Lotus plant exists not only as a miniature embryo in its seed (a physical characteristic), but its prototype is present in an ideal form in the Astral Light from "Dawn" to "Night" during the Manvantaric period, like everything else, as a matter of fact, in this objective Universe; from man down to mite, from giant trees down to the tiniest blades of grass.

All this, teaches the hidden Science, is but the temporary reflection, the shadow of the eternal ideal prototype in Divine Thought -- the word "Eternal," note well again, standing here only in the sense of "AEon," as lasting throughout the seemingly interminable, but still limited cycle of activity, called by us Manvantara. For what is the real esoteric meaning of Manvantara, or rather a Manu-Antara? It means, esoterically, "between two Manus," of whom there are fourteen in every "Day of Brahma," such a "Day" consisting of 1,000 aggregates of four ages, or 1,000 "Great Ages," Mahayugas. Let us now analyse the word or name Manu. Orientalists and their Dictionaries tell us that the term "Manu" is from the root Man, "to think"; hence "the thinking man." But, esoterically, every Manu, as an anthropomorphized patron of his special cycle (or Round), is but the personified idea of the "Thought Divine" (as the Hermetic "Pymander"); each of the Manus, therefore, being the special god, the creator and fashioner of all that appears during his own respective cycle of being or Manvantara. Fohat runs the Manus' (or Dhyan-Chohans') errands, and causes the ideal prototypes to expand from within without -- viz., to cross gradually, on a descending scale, all the planes from the noumenon to the lowest phenomenon, to bloom finally on the last into full objectivity -- the acme of illusion, or the grossest matter.

STANZA III. -- continued.

2. THE VIBRATION SWEEPS ALONG, TOUCHING WITH ITS SWIFT WING (simultaneously) THE WHOLE UNIVERSE, AND THE GERM THAT DWELLETH IN DARKNESS: THE DARKNESS THAT BREATHES (moves) OVER THE SLUMBERING WATERS OF LIFE (a).

[[Vol. 1, Page]] 64 THE SECRET DOCTRINE.

(a) The Pythagorean Monad is also said to dwell in solitude and darkness like the "germ." The idea of the "breath" of Darkness moving over "the slumbering Waters of life," which is primordial matter with the latent Spirit in it, recalls the first chapter of Genesis. Its original is the Brahminical Narayana (the mover on the Waters), who is the personification of the eternal Breath of the unconscious All (or Parabrahm) of the Eastern Occultists. The Waters of Life, or Chaos -- the female principle in symbolism -- are the vacuum (to our mental sight) in which lie the latent Spirit and Matter. This it was that made Democritus assert, after his instructor Leucippus, that the primordial principles of all were atoms and a vacuum, in the sense of space, but not of empty space, as "Nature abhors a vacuum" according to the Peripatetics, and every ancient philosopher.

In all Cosmogonies "Water" plays the same important part. It is the base and source of material existence. Scientists, mistaking the word for the thing, understood by water the definite chemical combination of oxygen and hydrogen, thus giving a specific meaning to a term used by Occultists in a generic sense, and which is used in Cosmogony with a metaphysical and mystical meaning. Ice is not water, neither is steam, although all three have precisely the same chemical composition.

STANZA III. -- Continued.

2. [[3.]] "DARKNESS" RADIATES LIGHT, AND LIGHT DROPS ONE SOLITARY RAY INTO THE WATERS, INTO THE MOTHER DEEP. THE RAY SHOOTS THROUGH THE VIRGIN-EGG; THE RAY CAUSES THE ETERNAL EGG TO THRILL, AND DROP THE NON-ETERNAL (periodical) GERM, WHICH CONDENSES INTO THE WORLD EGG (a).

(a) The solitary ray dropping into the mother deep may be taken as meaning Divine Thought or Intelligence, impregnating chaos. This, however, occurs on the plane of metaphysical abstraction, or rather the plane whereon that which we call a metaphysical abstraction is a reality. The Virgin-egg being in one sense abstract Egg-ness, or the power of becoming developed through fecundation, is eternal and for ever the same. And just as the fecundation of an egg takes place before it is dropped; so the non-eternal periodical germ which becomes later in

[[Vol. 1, Page]] 65 NATURE'S SYMBOLS.

symbolism the mundane egg, contains in itself, when it emerges from the said symbol, "the promise and potency" of all the Universe. Though the idea per se is, of course, an abstraction, a symbolical mode of expression, it is a symbol truly, as it suggests the idea of infinity as an endless circle. It brings before the mind's eye the picture of Kosmos emerging from and in boundless space, a Universe as shoreless in magnitude if not as endless in its objective manifestation. The simile of an egg also expresses the fact taught in Occultism that the primordial form of everything manifested, from atom to globe, from man to angel, is spheroidal, the sphere having been with all nations the emblem of eternity and infinity -- a serpent swallowing its tail. To realize the meaning, however, the sphere must be thought of as seen from its centre. The field of vision or of thought is like a sphere whose radii proceed from one's self in every direction, and extend out into space, opening up boundless vistas all around. It is the symbolical circle of Pascal and the Kabalists, "whose centre is everywhere and circumference nowhere," a conception which enters into the compound idea of this emblem.

The "Mundane Egg" is, perhaps, one of the most universally adopted symbols, highly suggestive as it is, equally in the spiritual, physiological, and cosmological sense. Therefore, it is found in every world-theogony, where it is largely associated with the serpent symbol; the latter being everywhere, in philosophy as in religious symbolism, an emblem of eternity, infinitude, regeneration, and rejuvenation, as well as of wisdom. (See Part II. "Tree and Serpent and Crocodile Worship.") The mystery of apparent self-generation and evolution through its own creative power repeating in miniature the process of Cosmic evolution in the egg, both being due to heat and moisture under the efflux of the unseen creative spirit, justified fully the selection of this graphic symbol. The "Virgin Egg" is the microcosmic symbol of the macrocosmic prototype -- the "Virgin Mother" -- Chaos or the Primeval Deep. The male Creator (under whatever name) springs forth from the Virgin female, the immaculate root fructified by the Ray. Who, if versed in astronomy and natural sciences, can fail to see its suggestiveness? Cosmos as receptive Nature is an Egg fructified -- yet left immaculate; once regarded as boundless, it could have no other representation than a spheroid. The Golden Egg was surrounded by seven natural elements (ether, fire, air, water), "four ready, three secret." It may be found

[[Vol. 1, Page]] 66 THE SECRET DOCTRINE.

stated in Vishnu Purana, where elements are translated "Envelopes" and a secret one is added: "Aham-kara" (see Wilson's Vishnu Purana, Book I., p. 40). The original text has no "Aham-kara;" it mentions seven Elements without specifying the last three (see Part II. on "The Mundane Egg").

STANZA III. -- Continued.

4. (Then) THE THREE (triangle) FALL INTO THE FOUR (quaternary). THE RADIANT ESSENCE BECOMES SEVEN INSIDE, SEVEN OUTSIDE (a). THE LUMINOUS EGG (Hiranyagarbha), WHICH IN ITSELF IS THREE (the triple hypostases of Brahma, or Vishnu, the three "Avasthas"), CURDLES AND SPREADS IN MILK-WHITE CURDS THROUGHOUT THE DEPTHS OF MOTHER, THE ROOT THAT GROWS IN THE OCEAN OF LIFE (b).

The use of geometrical figures and the frequent allusions to figures in all ancient scriptures (see Puranas, Egyptian papyri, the "Book of the Dead" and even the Bible) must be explained. In the "Book of Dzyan," as in the Kabala, there are two kinds of numerals to be studied -- the figures, often simple blinds, and the Sacred Numbers, the values of which are all known to the Occultists through Initiation. The former is but a conventional glyph, the latter is the basic symbol of all. That is to say, that one is purely physical, the other purely metaphysical, the two standing in relation to each other as matter stands to spirit -- the extreme poles of the ONE Substance.

As Balzac, the unconscious Occultist of French literature, says somewhere, the Number is to Mind the same as it is to matter: "an incomprehensible agent;" (perhaps so to the profane, never to the Initiated mind). Number is, as the great writer thought, an Entity, and, at the same time, a Breath emanating from what he called God and what we call the ALL; the breath which alone could organize the physical Kosmos, "where naught obtains its form but through the Deity, which is an effect of Number." It is instructive to quote Balzac's words upon this subject:--

"The smallest as the most immense creations, are they not to be distinguished from each other by their quantities, their qualities, their dimensions, their forces and attributes, all begotten by the NUMBER? The infinitude of the Numbers is a fact proven to our mind, but of which no proof can be physically

[[Vol. 1, Page]] 67 THE POWER OF NUMBERS.

given. The mathematician will tell us that the infinitude of the numbers exists but is not to be demonstrated. God is a Number endowed with motion, which is felt but not demonstrated. As Unity, it begins the Numbers, with which it has nothing in common. . . . The existence of the Number depends on Unity, which, without a single Number, begets them all. . . . What! unable either to measure the first abstraction yielded to you by the Deity, or to get hold of it, you still hope to subject to your measurements the mystery of the Secret Sciences which emanate from that Deity? . . . And what would you feel, were I to plunge you into the abysses of MOTION, the Force which organizes the Number? What would you think, were I to add that Motion and Number* are begotten by the WORD, the Supreme Reason of the Seers and Prophets, who, in days of old, sensed the mighty Breath of God, a witness to which is the Apocalypse?"

(b) "The radiant essence curdled and spread throughout the depths" of Space. From an astronomical point of view this is easy of explanation: it is the "milky way," the world-stuff, or primordial matter in its first form. It is more difficult, however, to explain it in a few words or even lines, from the standpoint of Occult Science and Symbolism, as it is the most complicated of glyphs. Herein are enshrined more than a dozen symbols. To begin with, the whole pantheon of mysterious objects,** every one of them having some definite Occult meaning, extracted from the allegorical "churning of the ocean" by the Hindu gods. Besides Amrita, the water of life or immortality, "Surabhi" the "cow of plenty," called "the fountain of milk and curds," was extracted from this "Sea of Milk." Hence the universal adoration of the cow and bull, one the productive, the other the generative power in Nature: symbols connected with both the Solar and the Cosmic deities. The specific properties, for occult purposes, of the "fourteen precious things," being explained only at the fourth Initiation, cannot be given here; but the following may be remarked. In the "Satapatha Brahmana" it is stated that the churning of the "Ocean of Milk" took place in the Satya Yuga, the first age which immediately followed the "Deluge." As, however, neither the Rig-Veda nor

[[Footnote(s)]] -----

* Number, truly; but never MOTION. It is Motion which begets the Logos, the Word, in occultism.

** The "Fourteen precious things." The narrative or allegory is found in the Satapatha Brahmana and others. The Japanese Secret Science of the Buddhist Mystics, the Yamabooshi, has "seven precious things." We will speak of them, hereafter.

[[Vol. 1, Page]] 68 THE SECRET DOCTRINE.

Manu -- both preceding Vaivasvata's "deluge," that of the bulk of the Fourth Race -- mention this deluge, it is evident that it is not the "great" deluge, nor that which carried away Atlantis, nor even the deluge of Noah, which is meant here. This "churning" relates to a period before the earth's formation, and is in direct connection with that other universal legend, the various and contradictory versions of which culminated in the Christian dogma of the "War in Heaven," and the fall of the Angels (see Book II., also Revelations chap. xii.). The Brahmanas, reproached by the Orientalists with their versions on the same subjects, often clashing with each other, are pre-eminently occult works, hence used purposely as blinds. They were allowed to survive for public use and property only because they were and are absolutely unintelligible to the masses. Otherwise they would have disappeared from circulation as long ago as the days of Akbar.

STANZA III. -- Continued.

5. THE ROOT REMAINS, THE LIGHT REMAINS, THE CURDS REMAIN, AND STILL OEAOHOO (a) IS ONE (b).

(a) OEAOHOO is rendered "Father-Mother of the Gods" in the Commentaries, or the SIX IN ONE, or the septenary root from which all proceeds. All depends upon the accent given to these seven vowels, which may be pronounced as one, three, or even seven syllables by adding an e after the letter "o." This mystic name is given out, because without a thorough mastery of the triple pronunciation it remains for ever ineffectual.

(b) This refers to the Non-Separateness of all that lives and has its being, whether in active or passive state. In one sense, Oeaoahoo is the "Rootless Root of All"; hence, one with Parabrahmam; in another sense it is a name for the manifested ONE LIFE, the Eternal living Unity. The "Root" means, as already explained, pure knowledge (Sattva),*

[[Footnote(s)]] -----

* The original for Understanding is Sattva, which Sankara (acharya) renders antahkarana. "Refined," he says, "by sacrifices and other sanctifying operations." In the Katha, at p. 148, Sattva is said by Sankara to mean buddhi -- a common use of the word. ("The BHAGAVATGITA with The Sanatsugatiya and The Anugita," trans- [[Footnote continued on next page]]

[[Vol. 1, Page]] 69 THE BLOSSOM OF THE ROOT OF LIFE.

eternal (Nitya) unconditioned reality or SAT (Satya), whether we call it Parabrahmam or Mulaprakriti, for these are the two aspects of the ONE. The "Light" is the same Omnipresent Spiritual Ray, which has entered and now fecundated the Divine Egg, and calls cosmic matter to begin its long series of differentiations. The curds are the first differentiation, and probably refer also to that cosmic matter which is supposed to be the origin of the "Milky Way" -- the matter we know. This "matter," which, according to the revelation received from the primeval Dhyani-Buddhas, is, during the periodical sleep of the Universe, of the ultimate tenuity conceivable to the eye of the perfect Bodhisatva -- this matter, radical and cool, becomes, at the first reawakening of cosmic motion, scattered through Space; appearing, when seen from the Earth, in clusters and lumps, like curds in thin milk. These are the seeds of the future worlds, the "Star-stuff."

STANZA III. -- Continued.

6. THE ROOT OF LIFE WAS IN EVERY DROP OF THE OCEAN OF IMMORTALITY (Amrita)* AND THE OCEAN WAS RADIANT LIGHT, WHICH WAS FIRE AND HEAT AND MOTION. DARKNESS VANISHED AND WAS NO MORE.** IT DISAPPEARED IN ITS OWN ESSENCE, THE BODY OF FIRE AND WATER, OF FATHER AND MOTHER (a).

(a) The essence of darkness being absolute light, Darkness is taken as the appropriate allegorical representation of the condition of the Universe during Pralaya, or the term of absolute rest, or non-being, as it appears to our finite minds. The "fire," "heat," and "motion" here spoken of, are, of course, not the fire, heat, and motion of physical science, but the underlying abstractions, the noumena, or the soul, of the essence of these material manifestations -- the "things in themselves," which, as modern science confesses, entirely elude the instru-

[[Footnote(s)]] -----

[[Footnote continued from previous page]] lated by Kashinath Trimbak Telang, M.A.; edited by Max Muller.) Whatever meaning various schools may give the term, Sattva is the name given among Occult students of the Aryasanga School to the dual Monad or Atma-buddhi, and Atma-buddhi on this plane corresponds to Parabrahm and Mulaprakriti on the higher plane.

* Amrita is "immortality."

** See Commentary No. 1 to this Stanza.

[[Vol. 1, Page]] 70 THE SECRET DOCTRINE.

ments of the laboratory, and which even the mind cannot grasp, although it can equally little avoid the conclusion that these underlying essences of things must exist. Fire and Water, or Father* and Mother, may be taken here to mean the divine Ray and Chaos. "Chaos, from this union with Spirit obtaining sense, shone with pleasure, and thus was produced the Protogonos (the first-born light)," says a fragment of Hermas. Damascius calls it Dis in "Theogony" -- "The disposer of all things." (See Cory's "Ancient Fragments," p. 314.)

According to the Rosicrucian tenets, as handled and explained by the profane for once correctly, if only partially, so "Light and Darkness are identical in themselves, being only divisible in the human mind"; and according to Robert Fludd, "Darkness adopted illumination in order to make itself visible" (On Rosenkranz). According to the tenets of Eastern Occultism, DARKNESS is the one true actuality, the basis and the root of light, without which the latter could never manifest itself, nor even exist. Light is matter, and DARKNESS pure Spirit. Darkness, in its radical, metaphysical basis, is subjective and absolute light; while the latter in all its seeming effulgence and glory, is merely a mass of shadows, as it can never be eternal, and is simply an illusion, or Maya.

Even in the mind-baffling and science-harassing Genesis, light is created out of darkness "and darkness was upon the face of the deep" (ch. i. v. 2.) -- and not vice versa. "In him (in darkness) was life; and the life was the light of men" (John i. 4). A day may come when the eyes of men will be opened; and then they may comprehend better than they do now, that verse in the Gospel of John that says "And the light shineth in darkness; and the darkness comprehendeth it not." They will see then that the word "darkness" does not apply to man's spiritual eyesight, but indeed to "Darkness," the absolute, that comprehendeth not (cannot cognize) transient light, however transcendent to human eyes. Demon est Deus inversus. The devil is now called Darkness by the Church, whereas, in the Bible he is called the "Son of God" (see Job), the bright star of the early morning, Lucifer (see Isaiah). There is a whole philosophy of dogmatic craft in the reason why the first Archangel, who sprang from the depths of Chaos, was called Lux (Lucifer), the "Luminous Son of the Morning," or man-

[[Footnote(s)]] -----

* See "Kwan-Shai-Yin." The real name from the text cannot be given.

[[Vol. 1, Page]] 71 LIGHT EMERGES FROM DARKNESS.

vantaric Dawn. He was transformed by the Church into Lucifer or Satan, because he is higher and older than Jehovah, and had to be sacrificed to the new dogma. (See Book II.)

STANZA III. -- Continued.

7. BEHOLD, OH LANOO!** THE RADIANT CHILD OF THE TWO, THE UNPARALLELED REFULGENT GLORY, BRIGHT SPACE, SON OF DARK SPACE, WHO EMERGES FROM THE DEPTHS OF THE GREAT DARK WATERS. IT IS OEAOHOO, THE YOUNGER, THE * * * (whom thou knowest now as Kwan-Shai-Yin. -- Comment) (a). HE SHINES FORTH AS THE SUN. HE IS THE BLAZING DIVINE DRAGON OF WISDOM. THE EKA IS CHATUR (four), AND CHATUR TAKES TO ITSELF THREE, AND THE UNION PRODUCES THE SAPTA (seven) IN WHOM ARE THE SEVEN WHICH BECOME THE TRIDASA*** (the thrice ten) THE HOSTS AND THE MULTITUDES (b). BEHOLD HIM LIFTING THE VEIL, AND UNFURLING IT FROM EAST TO WEST. HE SHUTS OUT THE ABOVE AND LEAVES THE BELOW TO BE SEEN AS THE GREAT ILLUSION. HE MARKS THE PLACES FOR THE SHINING ONES (stars) AND TURNS THE UPPER (space) INTO A SHORELESS SEA OF FIRE, AND THE ONE MANIFESTED (element) INTO THE GREAT WATERS (c).

"Bright Space, son of dark Space," corresponds to the Ray dropped at the first thrill of the new "Dawn" into the great Cosmic depths, from which it re-emerges differentiated as Oeaohoo the younger, (the "new LIFE"), to become, to the end of the life-cycle, the germ of all things. He is "the Incorporeal man who contains in himself the divine Idea," -- the generator of Light and Life, to use an expression of Philo Judaeus. He is called the "Blazing Dragon of Wisdom,"

[[Footnote(s)]] -----

** Lanoo is a student, a chela who studies practical Esotericism.

*** "Tri-dasa," or three times ten (30), alludes to the Vedic deities, in round numbers, or more accurately 33 -- a sacred number. They are the 12 Adityas, the 8 Vasus, the 11 Rudras, and 2 Aswins -- the twin sons of the Sun and the Sky. This is the root-number of the Hindu Pantheon, which enumerates 33 crores or over three hundred millions of gods and goddesses.

[[Vol. 1, Page]] 72 THE SECRET DOCTRINE.

because, firstly, he is that which the Greek philosophers called the Logos, the Verbum of the Thought Divine; and secondly, because in Esoteric philosophy this first manifestation, being the synthesis or the aggregate of Universal Wisdom, Oeaohoo, "the Son of the Son," contains in himself the Seven Creative Hosts (The Sephiroth), and is thus the essence of manifested Wisdom. "He who bathes in the light of Oeaohoo will never be deceived by the veil of Maya."

Kwan-Shai-Yin is identical with, and an equivalent of the Sanskrit Avalokiteshwara, and as such he is an androgynous deity, like the Tetragrammaton and all the Logoi* of antiquity. It is only by some sects in China that he is anthropomorphized and represented with female attributes,** when, under his female aspect, he becomes Kwan-Yin, the goddess of mercy, called the "Divine Voice."**** The latter is the patron deity of Thibet and of the island of Puto in China, where both deities have a number of monasteries.**** (See Part II. Kwan-Shai-Yin and Kwan-yin.)

[[Footnote(s)]] -----

* Hence all the higher gods of antiquity are all "Sons of the Mother" before they become those of the "Father." The Logoi, like Jupiter or Zeus, Son of Kronos-Saturn, "Infinite Time" (or Kala), in their origin were represented as male-female. Zeus is said to be the "beautiful Virgin," and Venus is made bearded. Apollo is originally bisexual, so is Brahma-Vach in Manu and the Puranas. Osiris is interchangeable with Isis, and Horus is of both sexes. Finally St. John's vision in Revelation, that of the Logos, who is now connected with Jesus -- is hermaphrodite, for he is described as having female breasts. So is the Tetragrammaton = Jehovah. But there are two Avalokiteshwaras in Esotericism; the first and the second Logos.

** No religious symbol can escape profanation and even derision in our days of politics and Science. In Southern India the writer has seen a converted native making pujah with offerings before a statue of Jesus clad in woman's clothes and with a ring in his nose. When asking the meaning of the masquerade we were answered that it was Jesu-Maria blended in one, and that it was done by the permission of the Padri, as the zealous convert had no money to purchase two statues or "idols" as they, very properly, were called by a witness -- another but a non-converted Hindu. Blasphemous this will appear to a dogmatic Christian, but the Theosophist and the Occultist must award the palm of logic to the converted Hindu. The esoteric Christos in the gnosis is, of course, sexless, but in exoteric theology he is male and female.

*** The Gnostic Sophia, "Wisdom" who is "the Mother" of the Ogdoad (Aditi, in a certain sense, with her eight sons), is the Holy Ghost and the Creator of all, as in the ancient systems. The "father" is a far later invention. The earliest manifested Logos was female everywhere -- the mother of the seven planetary powers.

**** See "Chinese Buddhism," by the Rev. J. C. Edkins, who always gives correct facts, although his conclusions are very frequently erroneous.

[[Vol. 1, Page]] 73 THE DRAGON AND THE LOGOI.

(b) "The "Dragon of Wisdom" is the One, the "Eka" (Sanskrit) or Saka. It is curious that Jehovah's name in Hebrew should also be One, Echod. "His name is Echod": say the Rabbinists. The philologists ought to decide which of the two is derived from the other -- linguistically and symbolically: surely, not the Sanskrit? The "One" and the Dragon are expressions used by the ancients in connection with their respective Logoi. Jehovah -- esoterically (as Elohim) -- is also the Serpent or Dragon that tempted Eve, and the "Dragon" is an old glyph for "Astral Light" (Primordial Principle), "which is the Wisdom of Chaos." Archaic philosophy, recognizing neither Good nor Evil as a fundamental or independent power, but starting from the Absolute ALL (Universal Perfection eternally), traced both through the course of natural evolution to pure Light condensing gradually into form, hence becoming Matter or Evil. It was left with the early and ignorant Christian fathers to degrade the philosophical and highly scientific idea of this emblem (the Dragon) into the absurd superstition called the "Devil." They took it from the later Zoroastrians, who saw devils or the Evil in the Hindu Devas, and the word Evil thus became by a double transmutation D'Evil in every tongue (Diabolos, Diable, Diavolo, Teufel). But the Pagans have always shown a philosophical discrimination in their symbols. The primitive symbol of the serpent symbolised divine Wisdom and Perfection, and had always stood for psychical Regeneration and Immortality. Hence -- Hermes, calling the serpent the most spiritual of all beings; Moses, initiated in the wisdom of Hermes, following suit in Genesis; the Gnostic's Serpent with the seven vowels over its head, being the emblem of the seven hierarchies of the Septenary or Planetary Creators. Hence, also, the Hindu serpent Sessa or Ananta, "the Infinite," a name of Vishnu, whose first Vahan or vehicle on the primordial waters is this serpent.* Yet they all made a difference between the good and the bad Serpent (the Astral Light of

[[Footnote(s)]] -----

* Like the logoi and the Hierarchies of Powers, however, the "Serpents" have to be distinguished one from the other. Sessa or Ananta, "the couch of Vishnu," is an allegorical abstraction, symbolizing infinite Time in Space, which contains the germ and throws off periodically the efflorescence of this germ, the manifested Universe; whereas, the gnostic Ophis contained the same triple symbolism in its seven vowels as the One, Three and Seven-syllabled Oeaothoo of the Archaic doctrine; i.e., the One Unmanifested Logos, the Second manifested, the triangle concreting into the Quaternary or Tetragrammaton, and the rays of the latter on the material plane.

[[Vol. 1, Page]] 74 THE SECRET DOCTRINE.

the Kabalists) -- between the former, the embodiment of divine Wisdom in the region of the Spiritual, and the latter, Evil, on the plane of matter.* Jesus accepted the serpent as a synonym of Wisdom, and this formed part of his teaching: "Be ye wise as serpents," he says. "In the beginning, before Mother became Father-Mother, the fiery Dragon moved in the infinitudes alone" (Book of Sarparajni.) The Aitareya Brahmana calls the Earth Sarparajni, "the Serpent Queen," and "the Mother of all that moves." Before our globe became egg-shaped (and the Universe also) "a long trail of Cosmic dust (or fire mist) moved and writhed like a serpent in Space." The "Spirit of God moving on Chaos" was symbolized by every nation in the shape of a fiery serpent breathing fire and light upon the primordial waters, until it had incubated cosmic matter and made it assume the annular shape of a serpent with its tail in its mouth -- which symbolises not only Eternity and Infinitude, but also the globular shape of all the bodies formed within the Universe from that fiery mist. The Universe, as well as the Earth and Man, cast off periodically, serpent-like, their old skins, to assume new ones after a time of rest. The serpent is, surely, a not less graceful or a more unpoetical image than the caterpillar and chrysalis from which springs the butterfly, the Greek emblem of Psyche, the human soul. The "Dragon" was also the symbol of the Logos with the Egyptians, as with the Gnostics. In the "Book of Hermes," Pymander, the oldest and the most spiritual of the Logoi of the Western Continent, appears to Hermes in the shape of a Fiery Dragon of "Light, Fire, and Flame." Pymander, the "Thought Divine" personified, says: The Light is me, I am the Nous (the mind or Manu), I am thy God, and I am far older than the human principle which escapes from the shadow ("Darkness," or the concealed Deity). I am the germ of thought, the resplendent Word, the Son of God. All that thus sees and hears in thee is the Verbum of the Master, it is the Thought (Mahat) which is God, the Father.**

[[Footnote(s)]] -----

* The Astral Light, or the AEther, of the ancient pagans (for the name of Astral Light is quite modern) is Spirit-Matter. Beginning with the pure spiritual plane, it becomes grosser as it descends until it becomes the Maya or the tempting and deceitful serpent on our plane.

** By "God, the Father," the seventh principle in Man and Kosmos are here unmistakeably meant, this principle being inseparable in its Esse and Nature from the seventh Cosmic principle. In one sense it is the Logos of the Greeks and the Avalokiteswara of the esoteric Buddhists.

[[Vol. 1, Page]] 75 NOUMENAL AND PHENOMENAL LIGHT.

The celestial Ocean, the 'Ether . . . is the Breath of the Father, the life-giving principle, the Mother, the Holy Spirit, . . . for these are not separated, and their union is LIFE."

Here we find the unmistakable echo of the Archaic Secret Doctrine, as now expounded. Only the latter does not place at the head and Evolution of Life "the Father," who comes third and is the "Son of the Mother," but the "Eternal and Ceaseless Breath of the ALL." The Mahat (Understanding, Universal Mind, Thought, etc.), before it manifests itself as Brahma or Siva, appears as Vishnu, says Sankhya Sara (p. 16); hence Mahat has several aspects, just as the logos has. Mahat is called the Lord, in the Primary Creation, and is, in this sense, Universal Cognition or Thought Divine; but, "That Mahat which was first produced is (afterwards) called Ego-ism, when it is born as "I," that is said to be the second Creation" (Anugita, ch. xxvi.). And the translator (an able and learned Brahmin, not a European Orientalist) explains in a foot-note (6), "i.e., when Mahat develops into the feeling of Self-Consciousness -- I -- then it assumes the name of Egoism," which, translated into our esoteric phraseology, means when Mahat is transformed into the human Manas (or even that of the finite gods), and becomes Aham-ship. Why it is called the Mahat of the Second creation (or the ninth, that of the Kumara in Vishnu Purana) will be explained in Book II. The "Sea of Fire" is then the Super-Astral (i.e., noumenal) Light, the first radiation from the Root, the Mulaprakriti, the undifferentiated Cosmic Substance, which becomes Astral Matter. It is also called the "Fiery Serpent," as above described. If the student bears in mind that there is but One Universal Element, which is infinite, unborn, and undying, and that all the rest -- as in the world of phenomena -- are but so many various differentiated aspects and transformations (correlations, they are now called) of that One, from Cosmical down to microcosmical effects, from super-human down to human and sub-human beings, the totality, in short, of objective existence -- then the first and chief difficulty will disappear and Occult Cosmology may be mastered.* All the Kabalists and Occultists, Eastern and Western, recognise (a)

[[Footnote(s)]] -----

* In the Egyptian as in the Indian theogony there was a concealed deity, the ONE, and the creative, androgynous god. Thus Shoo is the god of creation and Osiris is, in his original primary form, the "god whose name is unknown." (See Mariette's Abydos II., p. 63, and Vol. III., pp. 413, 414, No. 1122.)

[[Vol. 1, Page]] 76 THE SECRET DOCTRINE.

the identity of "Father-Mother" with primordial Aether or Akasa, (Astral Light)*; and (b) its homogeneity before the evolution of the "Son," cosmically Fohat, for it is Cosmic Electricity. "Fohat hardens and scatters the seven brothers" (Book III. Dzyan); which means that the primordial Electric Entity -- for the Eastern Occultists insist that Electricity is an Entity -- electrifies into life, and separates primordial stuff or pregenetic matter into atoms, themselves the source of all life and consciousness. "There exists an universal agent unique of all forms and of life, that is called Od,** Ob, and Aour, active and passive, positive and negative, like day and night: it is the first light in Creation" (Eliphas Levi's Kabala):--- the first Light of the primordial Elohim -- the Adam, "male and female" -- or (scientifically) ELECTRICITY AND LIFE.

(c) The ancients represented it by a serpent, for "Fohat hisses as he glides hither and thither" (in zigzags). The Kabala figures it with the Hebrew letter Teth [[hebrew]], whose symbol is the serpent which played such a prominent part in the Mysteries. Its universal value is nine, for it is the ninth letter of the alphabet and the ninth door of the fifty portals or gateways that lead to the concealed mysteries of being. It is the magical agent par excellence, and designates in Hermetic philosophy "Life infused into primordial matter," the essence that composes all things, and the spirit that determines their form. But there are two secret Hermetical operations, one spiritual, the other material-correlative, and for ever united. "Thou shalt separate the earth from the fire, the subtile from the solid . . . that which ascends from earth to heaven and descends again from heaven to earth. It (the subtile light), is the strong force of every force, for it conquers every subtile thing and penetrates into every solid. Thus was the world formed" (Hermes).

It was not Zeno alone, the founder of the Stoics, who taught that the

[[Footnote(s)]] -----

* See next note.

** Od is the pure life-giving Light, or magnetic fluid; Ob the messenger of death used by the sorcerers, the nefarious evil fluid; Aour is the synthesis of the two, Astral Light proper. Can the Philologists tell why Od -- a term used by Reichenbach to denominate the vital fluid -- is also a Tibetan word meaning light, brightness, radiancy? It equally means "Sky" in an occult sense. Whence the root of the word? But Akasa is not quite Ether, but far higher than that, as will be shown.

[[Vol. 1, Page]] 77 DEITY IN SPACE AND TIME.

Universe evolves, when its primary substance is transformed from the state of fire into that of air, then into water, etc. Heraclitus of Ephesus maintained that the one principle that underlies all phenomena in Nature is fire. The intelligence that moves the Universe is fire, and fire is intelligence. And while Anaximenes said the same of air, and Thales of Miletus (600 years B.C.) of water, the Esoteric Doctrine reconciles all those philosophers by showing that though each was right the system of none was complete.

STANZA III. -- Continued.

8. WHERE WAS THE GERM, AND WHERE WAS NOW DARKNESS? WHERE IS THE SPIRIT OF THE FLAME THAT BURNS IN THY LAMP, OH LANOO? THE GERM IS THAT, AND THAT IS LIGHT; THE WHITE BRILLIANT SON OF THE DARK HIDDEN FATHER (a).

(a) The answer to the first question, suggested by the second, which is the reply of the teacher to the pupil, contains in a single phrase one of the most essential truths of occult philosophy. It indicates the existence of things imperceptible to our physical senses which are of far greater importance, more real and more permanent, than those that appeal to these senses themselves. Before the Lanoo can hope to understand the transcendently metaphysical problem contained in the first question he must be able to answer the second, while the very answer he gives to the second will furnish him with the clue to the correct reply to the first.

In the Sanscrit Commentary on this Stanza, the terms used for the concealed and the unrevealed Principle are many. In the earliest MSS. of Indian literature this Unrevealed, Abstract Deity has no name. It is called generally "That" (Tad in Sanskrit), and means all that is, was, and will be, or that can be so received by the human mind.

Among such appellations, given, of course, only in esoteric philosophy, as the "Unfathomable Darkness," the "Whirlwind," etc. -- it is also called the "It of the Kalahansa, the Kala-ham-sa," and even the "Kali Hamsa," (Black swan). Here the m and the n are convertible, and

[[Vol. 1, Page]] 78 THE SECRET DOCTRINE.

both sound like the nasal French an or am, or, again, en or em (Ennu, Embarras, etc.) As in the Hebrew Bible, many a mysterious sacred name in Sanscrit conveys to the profane ear no more than some ordinary, and often vulgar word, because it is concealed anagrammatically or otherwise. This word of Hansa or esoterically "hamsa" is just such a case. Hamsa is equal to a-ham-sa, three words meaning "I am he" (in English), while divided in still another way it will read "So-ham," "he (is) I" -- Soham being equal to Sah, "he," and aham, "I," or "I am he." In this alone is contained the universal mystery, the doctrine of the identity of man's essence with god-essence, for him who understands the language of wisdom. Hence the glyph of, and the allegory about, Kalahansa (or hamsa), and the name given to Brahma neuter (later on, to the male Brahma) of "Hansa-Vahana," he who uses the Hansa as his vehicle." The same word may be read "Kalaham-sa" or "I am I" in the eternity of Time, answering to the Biblical, or rather Zoroastrian "I am that I am." The same doctrine is found in the Kabala, as witness the following extract from an unpublished MS. by Mr. S. Liddell McGregor Mathers, the learned Kabbalist: "The three pronouns [[hebrew]], Hoa, Atah, Ani; He, Thou, I; are used to symbolize the ideas of Macroprosopus and Microprosopus in the Hebrew Qabalah. Hoa, "He," is applied to the hidden and concealed Macroprosopus; Atah, "Thou," to Microprosopus; and Ani, "I," to the latter when He is represented as speaking. (See Lesser Holy Assembly, 204 et seq.) It is to be noted that each of these names consists of three letters, of which the letter Aleph [[hebrew]], A, forms the conclusion of the first word Hoa, and the commencement of Atah and Ani, as if it were the connecting link between them. But [[hebrew]] is the symbol of the Unity and consequently of the unvarying Idea of the Divine operating through all these. But behind the [[hebrew]] in the name Hoa are the letters [[hebrew]] and [[hebrew]], the symbols of the numbers Six and Five, the Male and the Female, the Hexagram and the Pentagram. And the numbers of these three words, Hoa Atah Ani, are 12, 406, and 61, which are resumed in the key numbers of 3, 10, and 7, by the Qabalah of the Nine Chambers, which is a form of the exegetical rule of Temura."

It is useless to attempt to explain the mystery in full. Materialists and the men of modern Science will never understand it, since, in order

[[Vol. 1, Page]] 79 PRIMEVAL RADIATIONS FROM THE UNITY.

to obtain clear perception of it, one has first of all to admit the postulate of a universally diffused, omnipresent, eternal Deity in Nature; secondly, to have fathomed the mystery of electricity in its true essence; and thirdly, to credit man with being the septenary symbol, on the terrestrial plane, of the One Great UNIT (the Logos), which is Itself the Seven-vowelled sign, the Breath crystallized into the WORD.* He who believes in all this, has also to believe in the multiple combination of the seven planets of Occultism and of the Kabala, with the twelve zodiacal signs; to attribute, as we do, to each planet and to each constellation an influence which, in the words of Ely Star (a French Occultist), "is proper to it, beneficent or maleficent, and this, after the planetary Spirit which rules it, who, in his turn, is capable of influencing men and things which are found in harmony with him and with which he has any affinity." For these reasons, and since few believe in the foregoing, all that can now be given is that in both cases the symbol of Hansa (whether "I," "He," Goose or Swan) is an important symbol, representing, for instance, Divine Wisdom, Wisdom in darkness beyond the reach of men. For all exoteric purposes, Hansa, as every Hindu knows, is a fabulous bird, which, when given milk mixed with water for its food (in the allegory) separated the two, drinking the milk and leaving the water; thus showing inherent wisdom -- milk standing symbolically for spirit, and water for matter.

That this allegory is very ancient and dates from the very earliest archaic period, is shown by the mention (in Bhagavata Purana) of a certain caste named "Hamsa" or "Hansa," which was the "one caste" par excellence; when far back in the mists of a forgotten past there was among the Hindus only "One Veda, One Deity, One Caste." There is also a range in the Himalayas, described in the old books as being situated north of Mount Meru, called "Hamsa," and connected with episodes pertaining to the history of religious mysteries and initiations. As to the name of Kala-Hansa being the supposed vehicle of Brahma-Prajapati, in the exoteric texts and translations of the

[[Footnote(s)]] -----

* This is again similar to the doctrine of Fichte and German Pantheists. The former reveres Jesus as the great teacher who inculcated the unity of the spirit of man with the God-Spirit (the Adwaita doctrine) or universal Principle. It is difficult to find a single speculation in Western metaphysics which has not been anticipated by Archaic Eastern philosophy. From Kant to Herbert Spencer, it is all a more or less distorted echo of the Dwaita, Adwaita, and Vedantic doctrines generally.

[[Vol. 1, Page]] 80 THE SECRET DOCTRINE.

Orientalists, it is quite a mistake. Brahma, the neuter, is called by them Kala-Hansa and Brahma, the male, Hansa-Vahana, because forsooth "his vehicle or Vahan is a swan or goose" (vide "the Hindu Classical Dictionary.") This is a purely exoteric gloss. Esoterically and logically, if Brahma, the infinite, is all that is described by the Orientalists, namely, agreeably with the Vedantic texts, an abstract deity in no way characterised by the description of any human attributes, and it is still maintained that he or it is called Kala-Hansa -- then how can it ever become the Vahan of Brahma, the manifested finite god? It is quite the reverse. The "Swan or goose" (Hansa) is the symbol of that male or temporary deity, as he, the emanation of the primordial Ray, is made to serve as a Vahan or vehicle for that divine Ray, which otherwise could not manifest itself in the Universe, being, antiphrastically, itself an emanation of "Darkness" -- for our human intellect, at any rate. It is Brahma, then, who is Kala-Hansa, and the Ray, the Hansa-Vahana.

As to the strange symbol chosen, it is equally suggestive; the true mystic significance being the idea of a universal matrix, figured by the primordial waters of the "deep," or the opening for the reception, and subsequently for the issue, of that one ray (the Logos), which contains in itself the other seven procreative rays or powers (the logoi or builders). Hence the choice by the Rosecroix of the aquatic fowl -- whether swan or pelican,* with seven young ones for a symbol, modified and adapted to the religion of every country. En-Soph is called the "Fiery Soul of the Pelican" in the Book of Numbers.** (See Part II. "The Hidden Deity and its Symbols and Glyphs.") Appearing with every Manvantara as Narayan, or Swayambhuva (the

[[Footnote(s)]] -----

* Whether the genus of the bird be cygnus, anser, or pelecanus, it is no matter, as it is an aquatic bird floating or moving on the waters like the Spirit, and then issuing from those waters to give birth to other beings. The true significance of the symbol of the Eighteenth Degree of the Rose-Croix is precisely this, though poetised later on into the motherly feeling of the Pelican rending its bosom to feed its seven little ones with its blood.

** The reason why Moses forbids eating the pelican and swan, classing the two among the unclean fowls, and permits eating "bald locusts, beetles, and the grasshopper after his kind" (Leviticus xi. and Deuteronomy xiv.) is a purely physiological one, and has to do with mystic symbology only in so far as the word "unclean," like every other word, ought not to be read and understood literally, as it is esoteric like all the [[Footnote continued on next page]]

[[Vol. 1, Page]] 81 PRIMEVAL DIFFERENTIATIONS.

Self-Existent), and penetrating into the Mundane Egg, it emerges from it at the end of the divine incubation as Brahma or Prajapati, a progenitor of the future Universe into which he expands. He is Purusha (spirit), but he is also Prakriti (matter). Therefore it is only after separating himself into two halves -- Brahma-vach (the female) and Brahma-Viraj (the male), that the Prajapati becomes the male Brahma.

STANZA III. -- Continued.

9. LIGHT IS COLD FLAME, AND FLAME IS FIRE, AND THE FIRE PRODUCES HEAT, WHICH YIELDS WATER, THE WATER OF LIFE IN THE GREAT MOTHER (Chaos) (a).

(a) It must be remembered that the words "Light," "Fire," and "Flame" used in the Stanzas have been adopted by the translators thereof from the vocabulary of the old "Fire philosophers,"** in order to render better the meaning of the archaic terms and symbols employed in the original. Otherwise they would have remained entirely unintelligible to a European reader. But to a student of the Occult the terms used will be sufficiently clear.

All these -- "Light," "Flame," "Hot," "Cold," "Fire," "Heat," "Water," and the "water of life" are all, on our plane, the progeny; or as a modern physicist would say, the correlations of ELECTRICITY. Mighty word, and a still mightier symbol! Sacred generator of a no less sacred progeny; of fire -- the creator, the preserver and the destroyer; of light -- the essence of our divine ancestors; of flame -- the Soul of things. Electricity, the ONE Life at the upper rung of Being, and Astral Fluid, the Athanor of the Alchemists, at its lowest; GOD and DEVIL, GOOD and EVIL. . . .

[[Footnote(s)]] -----

[[Footnote continued from previous page]] rest, and may as well mean "holy" as not. It is a blind, very suggestive in connection with certain superstitions -- e.g., that of the Russian people who will not use the pigeon for food; not because it is "unclean," but because the "Holy Ghost" is credited with having appeared under the form of a Dove.

** Not the Mediaeval Alchemists, but the Magi and Fire-Worshippers, from whom the Rosicrucians or the Philosophers per ignem, the successors of the theurgists borrowed all their ideas concerning Fire, as a mystic and divine element.

[[Vol. 1, Page]] 82 THE SECRET DOCTRINE.

Now, why is Light called in the Stanzas "cold flame"? Because in the order of Cosmic evolution (as taught by the Occultist), the energy that actuates matter after its first formation into atoms is generated on our plane by Cosmic heat; and because Kosmos, in the sense of dissociated matter, was not, before that period. The first primordial matter, eternal and coeval with Space, "which has neither a beginning nor an end," is "neither hot nor cold, but is of its own special nature," says the Commentary (Book II). Heat and cold are relative qualities and pertain to the realms of the manifested worlds, which all proceed from the manifested Hyle, which, in its absolutely latent aspect, is referred to as the "cold Virgin," and when awakened to life, as the "Mother." The ancient Western Cosmogonic myths state that at first there was but cold mist which was the Father, and the prolific slime (the Mother, Illus or Hyle), from which crept forth the Mundane snake-matter, (Isis, vol. i., p. 146). Primordial matter, then, before it emerges from the plane of the never-manifesting, and awakens to the thrill of action under the impulse of Fohat, is but "a cool Radiance, colourless, formless, tasteless, and devoid of every quality and aspect." Even such are her first-born, the "four sons," who "are One, and become Seven," -- the entities, by whose qualifications and names the ancient Eastern Occultists called the four of the seven primal "centres of Forces," or atoms, that develop later into the great Cosmic "Elements," now divided into the seventy or so sub-elements, known to science. The four primal natures of the first Dhyana Chohans, are the so-called (for want of better terms) "Akasic," "Ethereal," "Watery," and "Fiery," answering, in the terminology of practical occultism, to scientific definitions of gases, which, to convey a clear idea to both Occultists and laymen, must be defined as Parahydrogenic,* Paraoxygenic, Oxyhydrogenic, and Ozonic, or perhaps Nitro-ozonic; the latter forces or gases (in Occultism, supersensuous, yet atomic substances) being the most effective and active when energising on the plane of more grossly differentiated matter.** These are both electro-positive and electro-negative.

[[Footnote(s)]] -----

* [[para]], "beyond," outside.

** Each of these and many more are probably the missing links of chemistry. They are known by other names in Alchemy and to the Occultists who practise in phenomenal powers. It is by combining and recombining in a certain way (or dissociating) the "Elements" by means of astral fire that the greatest phenomena are produced.

[[Vol. 1, Page]] 83 THE WEB OF BEING.

STANZA III. -- Continued.

10. FATHER-MOTHER SPIN A WEB WHOSE UPPER END IS FASTENED TO SPIRIT (Purusha), THE LIGHT OF THE ONE DARKNESS, AND THE LOWER ONE TO MATTER (Prakriti) ITS (the Spirit's) SHADOWY END; AND THIS WEB IS THE UNIVERSE SPUN OUT OF THE TWO SUBSTANCES MADE IN ONE, WHICH IS SWABHAVAT (a).

(a) In the Mandukya (Mundaka) Upanishad it is written, "As a spider throws out and retracts its web, as herbs spring up in the ground . . . so is the Universe derived from the undecaying one" (I. 1. 7). Brahma, as "the germ of unknown Darkness," is the material from which all evolves and develops "as the web from the spider, as foam from the water," etc. This is only graphic and true, if Brahma the "Creator" is, as a term, derived from the root brih, to increase or expand. Brahma "expands" and becomes the Universe woven out of his own substance.

The same idea has been beautifully expressed by Goethe, who says:

"Thus at the roaring loom of Time I ply,
And weave for God the garment thou see'st Him by."

STANZA III. -- Continued.

11. IT (the Web) EXPANDS WHEN THE BREATH OF FIRE (the Father) IS UPON IT; IT CONTRACTS WHEN THE BREATH OF THE MOTHER (the root of Matter) TOUCHES IT. THEN THE SONS (the Elements with their respective Powers, or Intelligences) DISSOCIATE AND SCATTER, TO RETURN INTO THEIR MOTHER'S BOSOM AT THE END OF THE "GREAT DAY" AND REBECOME ONE WITH HER (a). WHEN IT (the Web) IS COOLING, IT BECOMES RADIANT, ITS SONS EXPAND AND CONTRACT THROUGH THEIR OWN SELVES AND HEARTS; THEY EMBRACE INFINITY. (b)

The expanding of the Universe under the breath of FIRE is very suggestive in the light of the "Fire mist" period of which modern science speaks so much, and knows in reality so little.

Great heat breaks up the compound elements and resolves the

[[Vol. 1, Page]] 84 THE SECRET DOCTRINE.

heavenly bodies into their primeval one element, explains the commentary. "Once disintegrated into its primal constituent by getting within the attraction and reach of a focus, or centre of heat (energy), of which many are carried about to and fro in space, a body, whether alive or dead, will be vapourised and held in "the bosom of the Mother" until Fohat, gathering a few of the clusters of Cosmic matter (nebulae) will, by giving it an impulse, set it in motion anew, develop the required heat, and then leave it to follow its own new growth.

The expanding and contracting of the Web -- i.e., the world stuff or atoms -- expresses here the pulsatory movement; for it is the regular contraction and expansion of the infinite and shoreless Ocean of that which we may call the noumenon of matter emanated by Swabhavat, which causes the universal vibration of atoms. But it is also suggestive of something else. It shows that the ancients were acquainted with that which is now the puzzle of many scientists and especially of astronomers: the cause of the first ignition of matter or the world-stuff, the paradox of the heat produced by the refrigerative contraction and other such Cosmic riddles. For it points unmistakably to a knowledge by the ancients of such phenomena. "There is heat internal and heat external in every atom," say the manuscript Commentaries, to which the writer has had access; "the breath of the Father (or Spirit) and the breath (or heat) of the Mother (matter);" and they give explanations which show that the modern theory of the extinction of the solar fires by loss of heat through radiation, is erroneous. The assumption is false even on the Scientists' own admission. For as Professor Newcomb points out (Popular Astronomy, pp. 506-508), "by losing heat, a gaseous body contracts, and the heat generated by the contraction exceeds that which it had to lose in order to produce the contraction." This paradox, that a body gets hotter as the shrinking produced by its getting colder is greater, led to long disputes. The surplus of heat, it was argued, was lost by radiation, and to assume that the temperature is not lowered *pari passu* with a decrease of volume under a constant pressure, is to set at nought the law of Charles (Nebular Theory, Winchell). Contraction develops heat, it is true; but contraction (from cooling) is incapable of developing the whole amount of heat at any time existing in the mass, or even of maintaining a body at a constant temperature, etc. Professor Winchell tries to reconcile the paradox -- only a seeming one in fact, as

[[Vol. 1, Page]] 85 CONSCIOUS ELECTRICITY.

Homer Lanes proved, -- by suggesting "something besides heat." "May it not be," he asks, "simply a repulsion among the molecules, which varies according to some law of the distance?" But even this will be found irreconcilable, unless this "something besides heat" is ticketed "Causeless Heat," the "Breath of Fire," the all-creative Force Plus ABSOLUTE INTELLIGENCE, which physical science is not likely to accept.

However it may be, the reading of this Stanza shows it, notwithstanding its archaic phraseology, to be more scientific than even modern science.

STANZA III. -- Continued.

12. THEN SVABHAVAT SENDS FOHAT TO HARDEN THE ATOMS. EACH (of these) IS A PART OF THE WEB (Universe). REFLECTING THE "SELF-EXISTENT LORD" (Primeval Light) LIKE A MIRROR, EACH BECOMES IN TURN A WORLD.* . . .

"Fohat hardens the atoms"; i.e., by infusing energy into them: he scatters the atoms or primordial matter. "He scatters himself while scattering matter into atoms" (MSS. Commentaries.)

It is through Fohat that the ideas of the Universal Mind are impressed upon matter. Some faint idea of the nature of Fohat may be gathered from the appellation "Cosmic Electricity" sometimes applied to it; but to the commonly known properties of electricity must, in this case, be added others, including intelligence. It is of interest to note that modern science has come to the conclusion, that all cerebration and brain-activity are attended by electrical phenomena. (For further details as to "Fohat" See Stanza V. and Comments.)

[[Footnote(s)]] -----

* This is said in the sense that the flame from a fire is endless, and that the lights of the whole Universe could be lit at one simple rush-light without diminishing its flame.

[[Vol. 1, Page]] 86 THE SECRET DOCTRINE.

STANZA IV.

COMMENTARY.

1. LISTEN, YE SONS OF THE EARTH, TO YOUR INSTRUCTORS -- THE SONS OF THE FIRE (a). LEARN THERE IS NEITHER FIRST NOR LAST; FOR ALL IS ONE NUMBER, ISSUED FROM NO NUMBER (b).

(a) These terms, the "Sons of the Fire," the "Sons of the Fire-Mist," and the like, require explanation. They are connected with a great primordial and universal mystery, and it is not easy to make it clear. There is a passage in the Bhagavatgita (ch. viii.) wherein Krishna, speaking symbolically and esoterically, says: "I will state the times (conditions) . . . at which devotees departing (from this life) do so never to return (be reborn), or to return (to incarnate again). The Fire, the Flame, the day, the bright (lucky) fortnight, the six months of the Northern solstice, departing (dying) in these, those who know the Brahman (Yogis) go to the Brahman. Smoke, night, the dark (unlucky) fortnight, the six months of the Southern solstice, (dying) in these, the devotee goes to the lunar light (or mansion the astral light also) and returns (is reborn). These two paths, bright and dark, are said to be eternal in this world (or great kalpa, 'Age'). By the one a man goes never to come back, by the other he returns." Now these names, "Fire," "Flame," "Day," the "bright fortnight," etc., as "Smoke," "Night," and so on, leading only to the end of the lunar path are incomprehensible without a knowledge of Esotericism. These are all names of various deities which preside over the Cosmo-psychic Powers. We often speak of the Hierarchy of "Flames" (see Book II.) of the "Sons of Fire," etc. Sankaracharya the greatest of the Esoteric masters of India, says that fire means a deity which presides over Time (kala). The able translator of Bhagavatgita, Kashinath Trimbak Telang, M.A., of Bombay, confesses he has "no clear notion of the meaning of these verses" (p. 81, footnote). It seems quite clear, on the contrary, to him who knows the occult doctrine. With these verses the mystic sense of the solar and lunar symbols are connected: the Pitris are lunar deities and our ancestors, because they created the physical man.

[[Vol. 1, Page]] 87 THE SEVEN MYSTIC SENSES.

The Agnishwatha, the Kumara (the seven mystic sages), are solar deities, though the former are Pitris also; and these are the "fashioners of the Inner Man." (See Book II.) They are:--

"The Sons of Fire" -- because they are the first Beings (in the Secret Doctrine they are called "Minds"), evolved from Primordial Fire. "The Lord is a consuming Fire" (Deuteronomy iv. 24); "The Lord (Christos) shall be revealed with his mighty angels in flaming fire" (2 Thessal. i. 7, 8). The Holy Ghost descended on the Apostles like "cloven tongues of fire," (Acts ii. v. 3); Vishnu will return on Kalki, the White Horse, as the last Avatar amid fire and flames; and Sosiosh will be brought down equally on a White Horse in a "tornado of fire." "And I saw heaven open and behold a white horse, and he that sat upon him . . . is called the Word of God," (Rev. xix. 13) amid flaming Fire. Fire is Aether in its purest form, and hence is not regarded as matter, but it is the unity of Aether -- the second manifested deity -- in its universality. But there are two "Fires" and a distinction is made between them in the Occult teachings. The first, or the purely Formless and invisible Fire concealed in the Central Spiritual Sun, is spoken of as "triple" (metaphysically); while the Fire of the manifested Kosmos is Septenary, throughout both the Universe and our Solar System. "The fire or knowledge burns up all action on the plane of illusion," says the commentary. "Therefore, those who have acquired it and are emancipated, are called 'Fires.' " Speaking of the seven senses symbolised as Hotris, priests, the Brahmana says in Anugita: "Thus these seven (senses, smell and taste, and colour, and sound, etc., etc.) are the causes of emancipation;" and the commentator adds: "It is from these seven from which the Self is to be emancipated. 'I' (am here devoid of qualities) must mean the Self, not the Brahmana who speaks." ("Sacred Books of the East," ed. by Max Muller, Vol. VIII., 278.)

(b) The expression "All is One Number, issued from No Number" relates again to that universal and philosophical tenet just explained in Stanza III. (Comm. 4). That which is absolute is of course No Number; but in its later significance it has an application in Space as in Time. It means that not only every increment of time is part of a larger increment, up to the most indefinitely prolonged duration conceivable by the human intellect, but also that no manifested thing can

[[Vol. 1, Page]] 88 THE SECRET DOCTRINE.

be thought of except as part of a larger whole: the total aggregate being the One manifested Universe that issues from the unmanifested or Absolute -- called Non-Being or "No-Number," to distinguish it from BEING or "the One Number."

STANZA IV. -- Continued.

(2) LEARN WHAT WE, WHO DESCEND FROM THE PRIMORDIAL SEVEN, WE, WHO ARE BORN FROM THE PRIMORDIAL FLAME, HAVE LEARNED FROM OUR FATHERS (a).

(a) This is explained in Book II., and this name, "Primordial Flame," corroborates what is said in the first paragraph of the preceding commentary on Stanza IV.

The distinction between the "Primordial" and the subsequent seven Builders is this: The former are the Ray and direct emanation of the first "Sacred Four," the Tetraktis, that is, the eternally Self-Existent One (Eternal in Essence note well, not in manifestation, and distinct from the universal ONE). Latent, during Pralaya, and active, during Manvantara, the "Primordial" proceed from "Father-Mother" (Spirit-Hyle, or Ilus); whereas the other manifested Quaternary and the Seven proceed from the Mother alone. It is the latter who is the immaculate Virgin-Mother, who is overshadowed, not impregnated, by the Universal MYSTERY -- when she emerges from her state of Laya or undifferentiated condition. In reality, they are, of course, all one; but their aspects on the various planes of being are different. (See Part II., "Theogony of the Creative Gods.")

The first "Primordial" are the highest Beings on the Scale of Existence. They are the Archangels of Christianity, those who refuse -- as Michael did in the latter system, and as did the eldest "Mind-born sons" of Brahma (Vedddhas) -- to create or rather to multiply.

STANZA IV. -- Continued.

3. FROM THE EFFULGENCE OF LIGHT -- THE RAY OF THE EVER-DARKNESS -- SPRUNG IN SPACE THE RE-AWAKENED ENERGIES (Dhyān Chohans): THE ONE FROM THE EGG, THE SIX AND THE FIVE (a); THEN THE THREE, THE ONE,

[[Vol. 1, Page]] 89 THE VEHICLE OF THE UNIVERSE.

THE FOUR, THE ONE, THE FIVE -- THE TWICE SEVEN, THE SUM TOTAL (b). AND THESE ARE: THE ESSENCES, THE FLAMES, THE ELEMENTS, THE BUILDERS, THE NUMBERS, THE ARUPA (formless), THE RUPA (with bodies), AND THE FORCE OR DIVINE MAN -- THE SUM TOTAL. AND FROM THE DIVINE MAN EMANATED THE FORMS, THE SPARKS, THE SACRED ANIMALS, AND THE MESSENGERS OF THE SACRED FATHERS (the Pitris) WITHIN THE HOLY FOUR.*

(a) This relates to the sacred Science of the Numerals: so sacred, indeed, and so important in the study of Occultism that the subject can hardly be skimmed, even in such a large work as the present. It is on the Hierarchies and correct numbers of these Beings invisible (to us) except upon very rare occasions, that the mystery of the whole Universe is built. The Kumaras, for instance, are called the "Four" though in reality seven in number, because Sanaka, Sananda, Sanatana and Sanat-Kumara are the chief Vaidhatra (their patronymic name), as they spring from the "four-fold mystery." To make the whole clearer we have to turn for our illustrations to tenets more familiar to some of our readers, namely, the Brahminical.

According to Manu, Hiranyagarbha is Brahma the first male formed by the undiscernible Causeless CAUSE in a "Golden Egg resplendent as the Sun," as states the Hindu Classical Dictionary. "Hiranyagarbha" means the golden, or rather the "Effulgent Womb" or Egg. The meaning tallies awkwardly with the epithet of "male." Surely the esoteric meaning of the sentence is clear enough. In the Rig Veda it is said:-- "THAT, the one Lord of all beings . . . the one animating principle of gods and man," arose, in the beginning, in the Golden Womb, Hiranyagarbha -- which is the Mundane Egg or sphere of our Universe. That Being is surely androgynous, and the allegory of Brahma separating into two and recreating in one of his halves (the female Vach) himself as Viraj, is a proof of it.

"The One from the Egg, the Six and the Five," give the number 1065, the value of the first-born (later on the male and female Brahma-Prajapati), who answers to the numbers 7, and 14, and 21 respectively. The Prajapati are, like the Sephiroth, only seven, including the

[[Footnote(s)]] -----

* The 4, represented in the Occult numerals by the Tetraktis, the Sacred or Perfect Square, is a Sacred Number with the mystics of every nation and race. It has one and the same significance in Brahmanism, Buddhism, the Kabala and in the Egyptian, Chaldean and other numerical systems.

[[Vol. 1, Page]] 90 THE SECRET DOCTRINE.

synthetic Sephira of the triad from which they spring. Thus from Hiranyagarbha or Prajapati, the triune (primeval Vedic Trimurti, Agni, Vayu, and Surya), emanate the other seven, or again ten, if we separate the first three which exist in one, and one in three, all, moreover, being comprehended within that one "supreme" Parama, called Guhya or "secret," and Sarvatma, the "Super-Soul." "The seven Lords of Being lie concealed in Sarvatma like thoughts in one brain." So are the Sephiroth. It is either seven when counting from the upper Triad headed by Kether, or ten -- exoterically. In the Mahabharata the Prajapati are 21 in number, or ten, six, and five (1065), thrice seven.*

(b) "The Three, the One, the Four, the One, the Five" (in their totality -- twice seven) represent 31415 -- the numerical hierarchy of the Dhyān-Chohans of various orders, and of the inner or circumscribed world.** When placed on the boundary of the great circle of "Pass not" (see Stanza V.), called also the Dhyānipasa, the "rope of the Angels," the "rope" that hedges off the phenomenal from the noumenal Kosmos, (not falling within the range of our present objective consciousness); this number, when not enlarged by permutation and expansion, is ever 31415 anagrammatically and Kabalistically, being both the number of the circle and the mystic Svastica, the twice seven once more; for whatever way the two sets of figures are counted, when added separately, one figure after another, whether crossways, from right or from left, they will always yield fourteen. Mathematically they represent the well-known calculation, namely, that the ratio of the diameter to the circumference of a circle is as 1 to 3.1415, or the value of the (pi), as this ratio is called -- the symbol being always used in

[[Footnote(s)]] -----

* In the Kabala the same numbers are a value of Jehovah, viz., 1065, since the numerical values of the three letters which compose his name -- Jod, Vau and twice He -- are respectively 10 ([[hebrew]]), 6 ([[hebrew]]) and 5 ([[hebrew]]); or again thrice seven, 21. "Ten is the Mother of the Soul, for Life and Light are therein united," says Hermes. "For number one is born of the Spirit and the number ten from matter (chaos, feminine); the unity has made the ten, the ten the unity" (Book of the Keys). By the means of the

Temura, the anagrammatical method of the Kabala, and the knowledge of 1065 (21), a universal science may be obtained regarding Kosmos and its mysteries" (Rabbi Yogel). The Rabbis regard the numbers 10, 6, and 5 as the most sacred of all.

** The reader may be told that an American Kabbalist has now discovered the same number for the Elohim. It came to the Jews from Chaldea. See "Hebrew Metrology" in the Masonic Review, July, 1885, McMillan Lodge, No. 141.

[[Vol. 1, Page]] 91 THE IMMACULATE CONCEPTIONS.

mathematical formulae to express it. This set of figures must have the same meaning, since the 1 : 314,159, and then again 1 : 3 : 1,415,927 are worked out in the secret calculations to express the various cycles and ages of the "first born," or 311,040,000,000,000 with fractions, and yield the same 13,415 by a process we are not concerned with at present. And it may be shown that Mr. Ralston Skinner, author of The Source of Measures, reads the Hebrew word Alhim in the same number values, by omitting, as said, the ciphers and by permutation -- 13,514: since [[hebrew]] (a) is 1 : [[hebrew]] (l) is 3 (or 30); [[hebrew]] (h) is 5; [[hebrew]] (i) 1 for 10; and [[hebrew]] (m) is 4 (40), and anagrammatically -- 31,415 as explained by him.

Thus, while in the metaphysical world, the circle with the one central Point in it has no number, and is called Anupadaka (parentless and numberless) -- viz., it can fall under no calculation, -- in the manifested world the mundane Egg or Circle is circumscribed within the groups called the Line, the Triangle, the Pentacle, the second Line and the Cube (or 13514); and when the Point having generated a Line, thus becomes a diameter which stands for the androgynous Logos, then the figures become 31415, or a triangle, a line, a cube, the second line, and a pentacle. "When the Son separates from the Mother he becomes the Father," the diameter standing for Nature, or the feminine principle. Therefore it is said: "In the world of being, the one Point fructifies the Line -- the Virgin Matrix of Kosmos (the egg-shaped zero) -- and the immaculate Mother gives birth to the form that combines all forms." Prajapati is called the first procreating male, and "his Mother's husband."* This gives the key-note to all the later divine sons from immaculate mothers. It is greatly corroborated by the significant fact that Anna (the name of the Mother of the Virgin Mary) now represented by the Roman Catholic church as having given birth to her daughter in an immaculate way ("Mary conceived without sin"), is derived from the Chaldean Ana, heaven, or Astral Light, Anima Mundi; whence Anaitia, Devi-durga, the wife of Siva, is also called Annapurna,

[[Footnote(s)]] -----

* We find the same expression in Egypt. Mout signifies, for one thing, "Mother," and shows the character assigned to her in the triad of that country. "She was no less the mother than the wife of Ammon, one of the principle titles of the god being "the husband of his mother." The goddess Mout, or Mut, is addressed as "our lady," the "queen of Heaven" and of "the Earth," thus "sharing these titles with the other mother goddesses, Isis, Hathor, etc." (Maspero).

[[Vol. 1, Page]] 92 THE SECRET DOCTRINE.

and Kanya, the Virgin; "Uma-Kanya" being her esoteric name, and meaning the "Virgin of light," Astral Light in one of its multitudinous aspects.

(c) The Devas, Pitris, Rishis; the Suras and the Asuras; the Daityas and Adityas; the Danavas and Gandharvas, etc., etc., have all their synonyms in our Secret Doctrine, as well as in the Kabala and the Hebrew Angelology; but it is useless to give their ancient names, as it would only create confusion. Many of these may be also found now, even in the Christian hierarchy of divine and celestial powers. All those Thrones and Dominions, Virtues and Principalities, Cherubs, Seraphs and demons, the various denizens of the Sidereal World, are the modern copies of archaic prototypes. The very symbolism in their names, when transliterated and arranged in Greek and Latin, are sufficient to show it, as will be proved in several cases further on.

The "Sacred Animals" are found in the Bible as well as in the Kabala, and they have their meaning (a very profound one, too) on the page of the origins of Life. In the Sepher Jezirah it is stated that "God engraved in the Holy Four the throne of his glory, the Ophanim (Wheels or the World-Spheres), the Seraphim,* the Sacred Animals, and the ministering angels, and from these three (the Air, Water, and Fire or Ether) he formed his habitation." Thus was the world made "through three Seraphim -- Sepher, Saphar, and Sipur," or "through Number, Numbers, and Numbered." With the astronomical key these "Sacred Animals" become the signs of the Zodiac.

[[Footnote(s)]] -----

* This is the literal translation from the IXth and Xth Sections: "Ten numbers without what? One: the spirit of the living God . . . who liveth in eternities! Voice and Spirit and Word, and this is the Holy Spirit. Two: Spirit out of Spirit. He designed and hewed therewith twenty-two letters of foundation, three Mothers and seven double and Twelve single, and one spirit out of them. Three: Water out of spirit; he designed and hewed with them the barren and the void, mud and earth. He designed them as a flowerbed, hewed them as a wall, covered them as a paving. Four: Fire out of water. He designed and hewed therewith the throne of glory and the wheels, and the seraphim and the holy animals and the ministering angels, and of the three He founded his dwelling, as it is said, He makes his angels spirits and his servants fiery flames!" Which words "founded his dwelling" show clearly that in the Kabala, as in India, the Deity was considered as the Universe, and was not, in his origin, the extra-cosmic God he is now.

[[Vol. 1, Page]] 93 THE POTENCY OF SPEECH AND SOUND.

STANZA IV. -- Continued.

4. THIS WAS THE ARMY OF THE VOICE -- THE DIVINE SEPTENARY. THE SPARKS OF THE SEVEN ARE SUBJECT TO, AND THE SERVANTS OF, THE FIRST, SECOND, THIRD, FOURTH, FIFTH, SIXTH, AND THE SEVENTH OF THE SEVEN (a). THESE ("sparks") ARE CALLED SPHERES, TRIANGLES, CUBES, LINES, AND MODELLERS; FOR THUS STANDS THE ETERNAL NIDANA -- THE OI-HA-HOU (the Permutation of Oeaoohoo) (b).*

(a) This Sloka gives again a brief analysis of the Hierarchies of the Dhyana Chohans, called Devas (gods) in India, or the conscious intelligent powers in Nature. To this Hierarchy correspond the actual types into which humanity may be divided; for humanity, as a whole, is in reality a materialized though as yet imperfect expression thereof. The "army of the Voice" is a term closely connected with the mystery of Sound and Speech, as an effect and corollary of the cause -- Divine Thought. As beautifully expressed by P. Christian, the learned author of "The History of Magic" and of "L'Homme Rouge des Tuileries," the word spoken by, as well as the name of, every individual largely determine his future fate. Why? Because --

-- "When our Soul (mind) creates or evokes a thought, the representative sign of that thought is self-engraved upon the astral fluid, which is the receptacle and, so to say, the mirror of all the manifestations of being.

"The sign expresses the thing: the thing is the (hidden or occult) virtue of the sign.

"To pronounce a word is to evoke a thought, and make it present: the magnetic potency of the human speech is the commencement of every manifestation in the Occult World. To utter a Name is not only to define a Being (an Entity), but to place it under and condemn it through the emission of the Word (Verbum), to the influence of one or more Occult potencies. Things are, for every one of us, that which it (the Word) makes them while naming them. The Word (Verbum) or the speech of every man is, quite unconsciously to himself, a BLESSING or a CURSE; this is why our present ignorance about the properties or attributes of the IDEA as well as about the attributes and properties of MATTER, is often fatal to us.

[[Footnote(s)]] -----

* The literal signification of the word is, among the Eastern Occultists of the North, a circular wind, whirlwind; but in this instance, it is a term to denote the ceaseless and eternal Cosmic Motion; or rather the Force that moves it, which Force is tacitly accepted as the Deity but never named. It is the eternal Karana, the ever-acting Cause.

[[Vol. 1, Page]] 94 THE SECRET DOCTRINE.

"Yes, names (and words) are either BENEFICENT or MALEFICENT; they are, in a certain sense, either venomous or health-giving, according to the hidden influences attached by Supreme Wisdom to their elements, that is to say, to the LETTERS which compose them, and the NUMBERS correlative to these letters."

This is strictly true as an esoteric teaching accepted by all the Eastern Schools of Occultism. In the Sanskrit, as also in the Hebrew and all other alphabets, every letter has its occult meaning and its rationale; it is a cause and an effect of a preceding cause and a combination of these very often produces the most magical effect. The vowels, especially, contain the most occult and formidable potencies. The Mantras (esoterically, magical rather than religious) are chanted by the Brahmins and so are the Vedas and other Scriptures.

The "Army of the Voice," is the prototype of the "Host of the Logos," or the "WORD" of the Sepher Jezirah, called in the Secret Doctrine "the One Number issued from No-Number" -- the One Eternal Principle. The esoteric theogony begins with the One, manifested, therefore not eternal in its presence and being, if eternal in its essence; the number of the numbers and numbered -- the latter proceeding from the Voice, the feminine Vach, Satarupa "of the hundred forms," or Nature. It is from this number 10, or creative nature, the Mother (the occult cypher, or "nought," ever procreating and multiplying in union with the Unit "I," one, or the Spirit of Life), that the whole Universe proceeded.

In the Anugita a conversation is given (ch. vi., 15) between a Brahmana and his wife, on the origin of Speech and its occult properties.* The wife asks how Speech came into existence, and which was prior to the other, Speech or Mind. The Brahmana tells her that the Apana (inspirational breath) becoming lord, changes that intelligence, which does not understand Speech or Words, into the state of Apana, and thus opens the mind. Thereupon he tells her a story, a dialogue between Speech and Mind. "Both went to the Self of Being (i.e., to the individual Higher Self, as Nilakantha thinks, to Prajapati, according to the commentator Arjuna Misra), and asked him to destroy their doubts and decide which of them preceded and was superior to the

[[Footnote(s)]] -----

* Anugita forms part of the Asvamedha Parvan of the "Mahabharata." The translator of the Bhagavatgita, edited by Max Muller, regards it as a continuation of the Bhagavatgita. Its original is one of the oldest Upanishads.

[[Vol. 1, Page]] 95 SPEECH AND MIND.

other. To this the lord said: 'Mind is Superior.' But Speech answered the Self of Being, by saying: 'I verily yield (you) your desires,' meaning that by speech he acquired what he desired. Thereupon again, the Self told her that there are two minds, the 'movable' and the 'immovable.' 'The immovable is with me,' he said, 'the movable is in your dominion' (i.e. of Speech) on the plane of matter. To that you are superior. But inasmuch, O beautiful one, as you came personally to speak to me (in the way you did, i.e. proudly), therefore, O, Sarasvati! you shall never speak after (hard) exhalation." "The goddess Speech" (Sarasvati, a later form or aspect of Vach, the goddess also of secret learning or Esoteric Wisdom), "verily, dwelt always between the Prana and the Apana. But O noble one! going with the Apana wind (vital air), though impelled, without the Prana (expirational breath), she ran up to Prajapati (Brahma), saying, 'Be pleased, O venerable sir!' Then the Prana appeared again, nourishing Speech. And, therefore, Speech never speaks after (hard or inspirational) exhalation. It is always noisy or noiseless. Of these two, the noiseless is the superior to the noisy (Speech). . . . The (speech) which is produced in the body by means of the Prana, and which then goes (is transformed) into Apana, and then becoming assimilated with the Udana (physical organs of Speech) . . . then finally dwells in the Samana ('at the navel in the form of sound, as the material cause of all words,' says Arjuna Misra). So Speech formerly spoke. Hence the mind is distinguished by reason of its being immovable, and the Goddess (Speech) by reason of her being movable."

This allegory is at the root of the Occult law, which prescribes silence upon the knowledge of certain secret and invisible things perceptible only to the spiritual mind (the 6th sense), and which cannot be expressed by "noisy" or uttered speech. This chapter of Anugita explains, says Arjuna Misra, Pranayama, or regulation of the breath in Yoga practices. This mode, however, without the previous acquisition of, or at least full understanding of the two higher senses, of which there are seven, as will be shown, pertains rather to the lower Yoga. The Hatha so called was and still is discountenanced by the Arhats. It is injurious to the health and alone can never develop into Raj Yoga. This story is quoted to show how inseparably connected are, in the metaphysics of old, intelligent beings, or rather "Intelligences," with every sense or

[[Vol. 1, Page]] 96 THE SECRET DOCTRINE.

function whether physical or mental. The Occult claim that there are seven senses in man, as in nature, as there are seven states of consciousness, is corroborated in the same work, chapter vii., on Pratyahara (the restraint and regulation of the senses, Pranayama being that of the "vital winds" or breath). The Brahmana speaks in it "of the institution of the seven sacrificial Priests (Hotris). He says: "The nose and the eyes, and the tongue, and the skin and the ear as the fifth (or smell, sight, taste, touch and hearing), mind and understanding are the seven sacrificial priests separately stationed"; and which "dwelling in a minute space (still) do not perceive each other" on this sensuous plane, none of them except mind. For mind says: "The nose smells not without me, the eye does not take in colour, etc., etc. I am the eternal chief among all elements (i.e., senses). Without me, the senses never shine, like an empty dwelling, or like fires the flames of which are extinct. Without me, all beings, like fuel half dried and half moist, fail to apprehend qualities or objects even with the senses exerting themselves."*

This, of course, with regard only to mind on the sensuous plane. Spiritual mind (the upper portion or aspect of the impersonal MANAS) takes no cognisance of the senses in physical man. How well the ancients were acquainted with the correlation of forces and all the recently discovered phenomena of mental and physical faculties and functions, with many more mysteries also -- may be found in reading chapters vii. and viii. of this (in philosophy and mystic learning) priceless work. See the quarrel of the senses about their respective superiority and their taking the Brahman, the lord of all creatures, for their arbiter. "You are all greatest and not greatest," or superior to objects, as A. Misra says, none being independent of the other. "You are all possessed of one another's qualities. All are greatest in their own spheres and all support one another. There is one unmoving (life-wind or breath, the 'Yoga inhalation,' so called, which is the breath of the One or Higher SELF). That is the (or my) own Self, accumulated in numerous (forms)."

This Breath, Voice, Self or "Wind" (pneuma?) is the Synthesis of the Seven Senses, noumenally all minor deities and esoterically -- the septenary and the "Army of the VOICE."

[[Footnote(s)]] -----

* This shows the modern metaphysicians, added to all past and present Haegels, Berkeleys, Schopenhauers, Hartmanns, Herbert Spencers, and even the modern Hylo-Idealists to boot, no better than the pale copyists of hoary antiquity.

[[Vol. 1, Page]] 97 NATURE, THE PERPETUAL MOTION.

(b) Next we see Cosmic matter scattering and forming itself into elements; grouped into the mystic four within the fifth element -- Ether, the lining of Akasa, the Anima Mundi or Mother of Kosmos. "Dots, Lines, Triangles, Cubes, Circles" and finally "Spheres" -- why or how? Because, says the Commentary, such is the first law of Nature, and because Nature geometrizes universally in all her manifestations. There is an inherent law -- not only in the primordial, but also in the manifested matter of our phenomenal plane -- by which Nature correlates her geometrical forms, and later, also, her compound elements; and in which there is no place for accident or chance. It is a fundamental law in Occultism, that there is no rest or cessation of motion in Nature.* That which seems rest is only the change of one form into another; the change of substance going hand in hand with that of form -- as we are taught in Occult physics, which thus seem to have anticipated the discovery of the "Conservation of matter" by a considerable time. Says the ancient Commentary** to Stanza IV.:-

"The Mother is the fiery Fish of Life. She scatters her spawn and the Breath (Motion) heats and quickens it. The grains (of spawn) are soon attracted to each other and form the curds in the Ocean (of Space). The larger lumps coalesce and receive new spawn -- in fiery dots, triangles and cubes, which ripen, and at the appointed time some of the lumps detach themselves and assume spheroidal form,

a process which they effect only when not interfered with by the others. After which, law No. * * * comes into operation. Motion (the Breath) becomes the whirlwind and sets them into rotation."****

[[Footnote(s)]] -----

* It is the knowledge of this law that permits and helps the Arhat to perform his Siddhis, or various phenomena, such as disintegration of matter, the transport of objects from one place to another.

** These are ancient Commentaries attached with modern Glossaries to the Stanzas, as the Commentaries in their symbolical language are usually as difficult to understand as the Stanzas themselves.

*** In a polemical scientific work, "The Modern Genesis," the author, the Rev. W. B. Slaughter, criticising the position assumed by the astronomers, asks:-- "It is to be regretted that the advocates of this (nebular) theory have not entered more largely into the discussion of it (the beginning of rotation). No one condescends to give us the rationale of it. How does the process of cooling and contracting the mass impart to it a rotatory motion?" The question is amply treated in the Addendum. It is not materialistic science that can ever solve it. "Motion is eternal in the unmanifested, and periodical in the manifest," says an Occult teaching. It is "when heat caused [[Footnote continued on next page]]

[[Vol. 1, Page]] 98 THE SECRET DOCTRINE.

STANZA IV. -- Continued.

5. WHICH IS:---

"DARKNESS," THE BOUNDLESS OR THE NO-NUMBER, ADI-NIDANA SVABHAVAT: THE [[diagram]] (for x, unknown quantity):

I. THE ADI-SANAT, THE NUMBER, FOR HE IS ONE (a).

II. THE VOICE OF THE WORD, SVABHAVAT, THE NUMBERS, FOR HE IS ONE AND NINE.*

III. THE "FORMLESS SQUARE." (Arupa.) (b).

AND THESE THREE ENCLOSED WITHIN THE [[diagram]] (boundless circle), ARE THE SACRED FOUR, AND THE TEN ARE THE ARUPA (subjective, formless) UNIVERSE (c); THEN COME THE "SONS," THE SEVEN FIGHTERS, THE ONE, THE EIGHTH LEFT OUT, AND HIS BREATH WHICH IS THE LIGHT-MAKER (Bhaskara) (d).

(a) "Adi-Sanat," translated literally is the First or "primeval" ancient, which name identifies the Kabalistic "Ancient of Days" and the "Holy Aged" (Sephira and Adam Kadmon) with Brahma the Creator, called also Sanat among his other names and titles.

Svabhavat is the mystic Essence, the plastic root of physical Nature -- "Numbers" when manifested; the Number, in its Unity of Substance, on the highest plane. The name is of Buddhist use and a Synonym for the four-fold Anima Mundi, the Kabalistic "Archetypal World," from whence proceed the "Creative, Formative, and the

[[Footnote(s)]] -----

[[Footnote continued from previous page]] by the descent of FLAME into primordial matter causes its particles to move, which motion becomes Whirlwind." A drop of liquid assumes a spheroidal form owing to its atoms moving around themselves in their ultimate, unresolvable, and noumenal essence; unresolvable for physical science, at any rate.

* Which makes ten, or the perfect number applied to the "Creator," the name given to the totality of the Creators blended by the Monotheists into One, as the "Elohim," Adam Kadmon or Sephira -- the Crown -- are the androgynous synthesis of the 10 Sephiroth, who stand for the symbol of the manifested Universe in the popularised Kabala. The esoteric Kabalists, however, following the Eastern Occultists, divide the upper Sephirothal triangle from the rest (or Sephira, Chochmah and Binah), which leaves seven Sephiroth. As for Svabhavat, the Orientalists explain the term as meaning the Universal plastic matter diffused through Space, with, perhaps, half an eye to the Ether of Science. But the Occultists identify it with "FATHER-MOTHER" on the mystic plane. (Vide supra.)

[[Vol. 1, Page]] 99 THE OGDOAD AND HEPTAD.

Material Worlds"; the Scintillae or Sparks, -- the various other worlds contained in the last three. The Worlds are all subject to Rulers or Regents -- Rishis and Pitris with the Hindus, Angels with the Jews and Christians, Gods, with the Ancients in general.

(b) [[diagram]] This means that the "Boundless Circle" (Zero) becomes a figure or number, only when one of the nine figures precedes it, and thus manifests its value and potency, the Word or Logos in union with VOICE and Spirit* (the expression and source of Consciousness) standing for the nine figures and thus forming, with the Cypher, the Decade which contains in itself all the Universe. The triad forms within the circle the Tetraktis or Sacred Four, the Square within the Circle being the most potent of all the magical figures.

(c) The "One Rejected" is the Sun of our system. The exoteric version may be found in the oldest Sanskrit Scriptures. In the Rig Veda, Aditi, "The Boundless" or infinite Space, translated by Mr. Max Muller, "the visible infinite, visible by the naked eye (!); the endless expanse beyond the Earth, beyond the clouds, beyond the sky," is the equivalent of "Mother-Space" coeval with "Darkness." She is very properly called "The Mother of the Gods," DEVA-MATRI, as it is from her Cosmic matrix that all the heavenly bodies of our system were born -- Sun and Planets. Thus she is described, allegorically, in this wise: "Eight Sons were born from the body of Aditi; she approached the gods with seven, but cast away the eighth, Martanda," our sun. The seven sons called the Aditya are, cosmically or astronomically, the seven planets; and the Sun being excluded from their number shows plainly that the Hindus may have known, and in fact knew of a seventh planet, without calling it Uranus.** But esoterically and theologically,

[[Footnote(s)]] -----

* "In union with the Spirit and the Voice," referring to the Abstract Thought and concrete Voice, or the manifestation thereof, the effect of the Cause. Adam Kadmon or Tetragrammaton is the Logos in the Kabala; therefore this triad answers in the latter to the highest triangle of Kether, Chochmah and Binah, the last a female potency and at the same time the male Jehovah, as partaking of the nature of Chochmah, or the male Wisdom.

** The Secret Doctrine teaches that the Sun is a central Star and not a planet. Yet the Ancients knew of and worshipped seven great gods, excluding the Sun and Earth. Which was that "Mystery God" they set apart? Of course not Uranus, discovered only by Herschel in 1781. But could it not be known by another name? Says the [[Footnote continued on next page]]

[[Vol. 1, Page]] 100 THE SECRET DOCTRINE.

so to say, the Adityas are, in their primitive most ancient meanings, the eight, and the twelve great gods of the Hindu Pantheon. "The Seven allow the mortals to see their dwellings, but show themselves only to the Arhats," says an old proverb, "their dwellings" standing here for planets. The ancient Commentary gives an allegory and explains it:--

"Eight houses were built by Mother. Eight houses for her Eight Divine sons; four large and four small ones. Eight brilliant suns, according to their age and merits. Bal-ilu (Martanda) was not satisfied, though his house was the largest. He began (to work) as the huge elephants do. He breathed (drew in) into his stomach the vital airs of his brothers. He sought to devour them. The larger four were far away; far, on the margin of their kingdom.* They were not robbed (affected), and laughed. Do your worst, Sir, you cannot reach us, they said. But the smaller wept. They complained to the Mother. She exiled Bal-i-lu to the centre of her Kingdom, from whence he could not move. (Since then) he (only) watches and threatens. He pursues them, turning slowly around himself, they turning swiftly from him, and he following from afar the direction in which his brothers move on the path that encircles their houses.** From that day he feeds on the sweat of the Mother's body. He fills himself with her breath and refuse. Therefore, she rejected him."

Thus the "rejected Son" being our Sun, evidently, as shown above, the "Sun-Sons" refer not only to our planets but to the heavenly bodies in general. Himself only a reflection of the Central Spiritual Sun, Surya is the prototype of all those bodies that evolved after him. In the Vedas he is called Loka-Chakshuh, "the Eye of the World" (our

[[Footnote(s)]] -----

[[Footnote continued from previous page]] author of "Maconnerie Occulte":-- "Occult Sciences having discovered through astronomical calculations that the number of the planets must be seven, the ancients were led to introduce the Sun into the scale of the celestial harmonies, and make him occupy the vacant place. Thus, every time they perceived an influence that pertained to none of the six planets known, they attributed it to the Sun. The error only seems important, but was not so in practical results, if the ancient astrologers replaced Uranus by the Sun, which is a central Star relatively motionless, turning only on its axis and regulating time and measure; and which cannot be turned aside from its true functions." The nomenclature of the days of the week is thus faulty. "The Sun-Day ought to be Uranus-day (Urani dies, Urandi)," adds the learned writer, Ragon.

* Planetary System.

** "The Sun rotates on his axis always in the same direction in which the planets revolve in their respective orbits," astronomy teaches us.

[[Vol. 1, Page]] 101 FIRE, THE GREAT SYMBOL OF DEITY.

planetary world), and he is one of the three chief deities. He is called indifferently the Son of Dyaus and of Aditi, because no distinction is made with reference to, or scope allowed for, the esoteric meaning. Thus he is depicted as drawn by seven horses, and by one horse with seven heads; the former referring to his seven planets, the latter to their one common origin from the One Cosmic Element. This "One Element" is called figuratively "FIRE." The Vedas (Aitareya-Brahmana of Haug also; p. i) teach "that the fire verily is all the deities." (Narada in Anugita).

The meaning of the allegory is plain, for we have both the Dzyan Commentary and modern science to explain it, though the two differ in more than one particular. The Occult Doctrine rejects the hypothesis born out of the Nebular Theory, that the (seven) great planets have evolved from the Sun's central mass, not of this our visible Sun, at any rate. The first condensation of Cosmic matter of

course took place about a central nucleus, its parent Sun; but our sun, it is taught, merely detached itself earlier than all the others, as the rotating mass contracted, and is their elder, bigger brother therefore, not their father. The eight Adityas, "the gods," are all formed from the eternal substance (Cometary matter* -- the Mother) or the "World-Stuff " which is both the fifth and the sixth COSMIC Principle, the Upadhi or basis of the Universal Soul, just as in man, the Microcosm, Manas** is the Upadhi of Buddhi.***

(d) There is a whole poem on the pregenetic battles fought by the growing planets before the final formation of Kosmos, thus accounting for the seemingly disturbed position of the systems of several planets, the plane of the satellites of some (of Neptune and Uranus, for instance, of which the ancients knew nothing, it is said) being tilted over, thus giving them an appearance of retrograde motion. These planets are called the warriors, the Architects, and are accepted by the

[[Footnote(s)]] -----

* This Essence of Cometary matter, Occult Science teaches, is totally different from any of the chemical or physical characteristics with which modern science is acquainted. It is homogeneous in its primitive form beyond the Solar Systems, and differentiates entirely once it crosses the boundaries of our Earth's region, vitiated by the atmospheres of the planets and the already compound matter of the interplanetary stuff, heterogeneous only in our manifested world.

** Manas -- the Mind-Principle, or the human Soul.

*** Buddhi -- the divine Soul.

[[Vol. 1, Page]] 102 THE SECRET DOCTRINE.

Roman Church as the leaders of the heavenly Hosts, thus showing the same traditions. Having evolved from Cosmic Space, and before the final formation of the primaries and the annulation of the planetary nebula, the Sun, we are taught, drew into the depths of its mass all the Cosmic vitality he could, threatening to engulf his weaker "brothers" before the law of attraction and repulsion was finally adjusted; after which he began feeding on "The Mother's refuse and sweat"; in other words, on those portions of Ether (the "breath of the Universal Soul") of the existence and constitution of which science is as yet absolutely ignorant. A theory of this kind having been propounded by Sir William Grove (see "Correlation of the Physical Forces," 1843, p. 81; and "Address to the British Association, 1866"), who theorized that the systems "are gradually changing by atmospheric additions or subtractions, or by accretions and diminutions arising from nebular substances" . . . and again that "the Sun may condense gaseous matter as it travels in Space and so heat may be produced" -- the archaic teaching seems scientific enough, even in this age.* Mr. W. Mattieu Williams suggested that the diffused matter or Ether which is the recipient of the heat radiations of the Universe is thereby drawn into the depths of the solar mass. Expelling thence the previously condensed and thermally exhausted Ether, it becomes compressed and gives up its heat, to be in turn itself driven out in a rarified and cooled state, to absorb a fresh supply of heat, which he supposes to be in this way taken up by the Ether, and again concentrated and redistributed by the Suns of the Universe.**

This is about as close an approximation to the Occult teachings as Science ever imagined; for Occultism explains it by "the dead breath" given back by Martanda and his feeding on the "sweat and refuse" of "Mother Space." What could affect Neptune,*** Saturn and Jupiter,

[[Footnote(s)]] -----

* Very similar ideas in Mr. W. Mattieu Williams' "The Fuel of the Sun;" in Dr. C. William Siemens' "On the Conservation of Solar Energy" (Nature, XXV., p. 440-444, March 9, 1882); and also in Dr. P. Martin Duncan's "Address of the President of the Geological Society," London, May, 1877.

** See "Comparative Geology," by Alexander Winchell, LL.D., p. 56.

*** When we speak of Neptune it is not as an Occultist but as a European. The true Eastern Occultist will maintain that, whereas there are many yet undiscovered planets in our system, Neptune does not belong to it, his apparent connection with our sun and the influence of the latter upon Neptune notwithstanding. This connection is mayavic, imaginary, they say.

[[Vol. 1, Page]] 103 THE STELLAR "SONS OF LIGHT."

but little, would have killed such comparatively small "Houses" as Mercury, Venus and Mars. As Uranus was not known before the end of the eighteenth century, the name of the fourth planet mentioned in the allegory must remain to us, so far, a mystery.

The "Breath" of all the "seven" is said to be Bhaskara (light-making), because they (the planets) were all comets and suns in their origin. They evolve into Manvantaric life from primaeva Chaos (now the noumenon of irresolvable nebulae) by aggregation and accumulation of the primary differentiations of the eternal matter, according to the beautiful expression in the Commentary, "Thus the Sons of Light clothed themselves in the fabric of Darkness." They are called allegorically "the Heavenly Snails," on account of their (to us) formless INTELLIGENCES inhabiting unseen their starry and planetary homes, and, so to speak, carrying them as the snails do along with themselves in their revolution. The doctrine of a common origin for all the heavenly bodies and planets, was, as we see, inculcated by the Archaic astronomers, before Kepler, Newton, Leibnitz, Kant, Herschel and Laplace. Heat (the Breath), attraction and repulsion -- the three great factors of Motion -- are the conditions under which all the members of all this primitive family are born,

developed, and die, to be reborn after a "Night of Brahma," during which eternal matter relapses periodically into its primary undifferentiated state. The most attenuated gases can give no idea of its nature to the modern physicist. Centres of Forces at first, the invisible sparks of primordial atoms differentiate into molecules, and become Suns -- passing gradually into objectivity gaseous, radiant, cosmic, the one "Whirlwind" (or motion) finally giving the impulse to the form, and the initial motion, regulated and sustained by the never-resting Breaths -- the Dhyān Chohans.

STANZA IV. -- Continued.

6. . . . THEN THE SECOND SEVEN, WHO ARE THE LIPIKA, PRODUCED BY THE THREE (Word, Voice, and Spirit). THE REJECTED SON IS ONE, THE "SON-SUNS" ARE COUNTLESS.

The Lipi-ka, from the word lipi, "writing," means literally the

[[Vol. 1, Page]] 104 THE SECRET DOCTRINE.

"Scribes."* Mystically, these Divine Beings are connected with Karma, the Law of Retribution, for they are the Recorders or Annalists who impress on the (to us) invisible tablets of the Astral Light, "the great picture-gallery of eternity" -- a faithful record of every act, and even thought, of man, of all that was, is, or ever will be, in the phenomenal Universe. As said in "Isis," this divine and unseen canvas is the BOOK OF LIFE. As it is the Lipika who project into objectivity from the passive Universal Mind the ideal plan of the universe, upon which the "Builders" reconstruct the Kosmos after every Pralaya, it is they who stand parallel to the Seven Angels of the Presence, whom the Christians recognise in the Seven "Planetary Spirits" or the "Spirits of the Stars;" for thus it is they who are the direct amanuenses of the Eternal Ideation -- or, as called by Plato, the "Divine Thought." The Eternal Record is no fantastic dream, for we meet with the same records in the world of gross matter. "A shadow never falls upon a wall without leaving thereupon a permanent trace which might be made visible by resorting to proper processes," says Dr. Draper. . . . "The portraits of our friends or landscape-views may be hidden on the sensitive surface from the eye, but they are ready to make their appearance as soon as proper developers are resorted to. A spectre is concealed on a silver or a glassy surface, until, by our necromancy, we make it come forth into the visible world. Upon the walls of our most private apartments, where we think the eye of intrusion is altogether shut out, and our retirement can never be profaned, there exist the vestiges of all our acts, silhouettes of whatever we have done."** Drs. Jevons and Babbage believe that every thought, displacing the particles of the brain and setting them in motion, scatters them throughout the Universe, and they think that "each particle of the existing matter must be a register of all that has happened." (Principles of Science, Vol. II. p. 455.) Thus the ancient doctrine has begun to acquire rights of citizenship in the speculations of the scientific world.

The forty "Assessors" who stand in the region of Amenti as the accusers of the Soul before Osiris, belong to the same class of deities as the Lipika, and might stand paralleled, were not the Egyptian gods so

[[Footnote(s)]] -----

* These are the four "Immortals" which are mentioned in Atharva Veda as the "Watchers" or Guardians of the four quarters of the sky (see ch. lxxvi., 1-4, et seq.).

** "Conflict between Religion and Science." -- Draper, pp. 132 and 133.

[[Vol. 1, Page]] 105 THE DIVINE RECORDERS.

little understood in their esoteric meaning. The Hindu Chitra-Gupta who reads out the account of every Soul's life from his register, called Agra-Sandhani; the "Assessors" who read theirs from the heart of the defunct, which becomes an open book before (whether) Yama, Minos, Osiris, or Karma -- are all so many copies of, and variants from the Lipika, and their Astral Records. Nevertheless, the Lipi-ka are not deities connected with Death, but with Life Eternal.

Connected as the Lipika are with the destiny of every man and the birth of every child, whose life is already traced in the Astral Light not fatalistically, but only because the future, like the PAST, is ever alive in the PRESENT -- they may also be said to exercise an influence on the Science of Horoscopy. We must admit the truth of the latter whether we will or not. For, as observed by one of the modern adepts of Astrology, "Now that photography has revealed to us the chemical influence of the Sidereal system, by fixing on the sensitized plate of the apparatus milliards of stars and planets that had hitherto baffled the efforts of the most powerful telescopes to discover them, it becomes easier to understand how our solar system can, at the birth of a child, influence his brain -- virgin of any impression -- in a definite manner and according to the presence on the zenith of such or another zodiacal constellation."**

STANZA V.

1. THE PRIMORDIAL SEVEN, THE FIRST SEVEN BREATHS OF THE DRAGON OF WISDOM, PRODUCE IN THEIR TURN FROM THEIR HOLY CIRCUMGYRATING BREATHS THE FIERY WHIRLWIND (a).

COMMENTARY.

(a) This is, perhaps, the most difficult of all the Stanzas to explain. Its language is comprehensible only to him who is thoroughly versed in Eastern allegory and its purposely obscure phraseology. The question will surely be asked, "Do the Occultists believe in all these 'Builders,' 'Lipika,' and 'Sons of Light' as Entities, or are they merely imageries?" To this the answer is given as plainly: "After due allowance for the imagery of personified Powers, we must admit the existence of these Entities, if we would not reject the existence of spiritual humanity within physical mankind. For the hosts of these Sons of Light and 'Mind-born Sons' of the first manifested Ray of the UNKNOWN ALL, are the very root of spiritual man." Unless we want to believe the unphilosophical dogma of a specially created soul for every human birth -- a fresh supply of these pouring in daily, since "Adam" -- we have to admit the occult teachings. This will be explained in its place. Let us see, now, what may be the occult meaning of this Stanza.

The Doctrine teaches that, in order to become a divine, fully conscious god, -- aye, even the highest -- the Spiritual primeval INTELLIGENCES must pass through the human stage. And when we say human, this does not apply merely to our terrestrial humanity, but to the mortals that inhabit any world, i.e., to those Intelligences that have reached the appropriate equilibrium between matter and spirit, as we have now, since the middle point of the Fourth Root Race of the Fourth Round was passed. Each Entity must have won for itself the right of becoming divine, through self-experience. Hegel, the great German thinker, must have known or sensed intuitively this truth when saying, as he did, that the Unconscious evolved the Universe only "in the hope of attaining clear self-consciousness," of becoming, in other words, MAN; for this is also the secret meaning of the usual Puranic phrase about

[[Vol. 1, Page]] 107 NO MAN -- NO GOD.

Brahma being constantly "moved by the desire to create." This explains also the hidden Kabalistic meaning of the saying: "The Breath becomes a stone; the stone, a plant; the plant, an animal; the animal, a man; the man, a spirit; and the spirit, a god." The Mind-born Sons, the Rishis, the Builders, etc., were all men -- of whatever forms and shapes -- in other worlds and the preceding Manvantaras.

This subject, being so very mystical, is therefore the most difficult to explain in all its details and bearings; since the whole mystery of evolutionary creation is contained in it. A sentence or two in it vividly recalls to mind similar ones in the Kabala and the phraseology of the King Psalmist (civ.), as both, when speaking of God, show him making the wind his messenger and his "ministers a flaming fire." But in the Esoteric doctrine it is used figuratively. The "fiery Wind" is the incandescent Cosmic dust which only follows magnetically, as the iron filings follow the magnet, the directing thought of the "Creative Forces." Yet, this cosmic dust is something more; for every atom in the Universe has the potentiality of self-consciousness in it, and is, like the Monads of Leibnitz, a Universe in itself, and for itself. It is an atom and an angel.

In this connection it should be noted that one of the luminaries of the modern Evolutionist School, Mr. A. R. Wallace, when discussing the inadequacy of "natural selection" as the sole factor in the development of physical man, practically concedes the whole point here discussed. He holds that the evolution of man was directed and furthered by superior Intelligences, whose agency is a necessary factor in the scheme of Nature. But once the operation of these Intelligences is admitted in one place, it is only a logical deduction to extend it still further. No hard and fast line can be drawn.

STANZA V. -- Continued.

2. THEY MAKE OF HIM THE MESSENGER OF THEIR WILL (a). THE DZHU BECOMES FOHAT; THE SWIFT SON OF THE DIVINE SONS, WHOSE SONS ARE THE LIPIKA,* RUNS CIRCULAR ERRANDS. HE IS THE STEED, AND

[[Footnote(s)]] -----

* The difference between the "Builders," the Planetary Spirits, and the Lipika must not be lost sight of. (See Nos. 5 and 6 of this Commentary.)

[[Vol. 1, Page]] 108 THE SECRET DOCTRINE.

THE THOUGHT IS THE RIDER (i.e., he is under the influence of their guiding thought). HE PASSES LIKE LIGHTNING THROUGH THE FIERY CLOUDS (cosmic mists) (b); TAKES THREE, AND FIVE, AND SEVEN STRIDES THROUGH THE SEVEN REGIONS ABOVE AND THE SEVEN BELOW (the world to be). HE LIFTS HIS VOICE, AND CALLS THE INNUMERABLE SPARKS (atoms) AND JOINS THEM TOGETHER (c).

(a) This shows the "Primordial Seven" using for their Vahan (vehicle, or the manifested subject which becomes the symbol of the Power directing it), Fohat, called in consequence, the "Messenger of their will" -- the fiery whirlwind.

"Dzyu becomes Fohat" -- the expression itself shows it. Dzyu is the one real (magical) knowledge, or Occult Wisdom; which, dealing with eternal truths and primal causes, becomes almost omnipotence when applied in the right direction. Its antithesis is Dzyu-mi, that which deals with illusions and false appearances only, as in our exoteric modern sciences. In this case, Dzyu is the expression of the collective Wisdom of the Dhyani-Buddhas.

(b) As the reader is supposed not to be acquainted with the Dhyani-Buddhas, it is as well to say at once that, according to the Orientalists, there are five Dhyanis who are the "celestial" Buddhas, of whom the human Buddhas are the manifestations in the world of form and matter. Esoterically, however, the Dhyani-Buddhas are seven, of whom five only have hitherto manifested,* and two are to come in the sixth and seventh Root-races. They are, so to speak, the eternal prototypes of the Buddhas who appear on this earth, each of whom has his particular divine prototype. So, for instance, Amitabha is the Dhyani-Buddha of Gautama Sakyamuni, manifesting through him whenever this great Soul incarnates on earth as He did in Tzon-kha-pa.** As the synthesis of the seven Dhyani-Buddhas, Avalokiteswara was the first Buddha (the Logos), so Amitabha is the inner "God" of Gautama, who, in China, is called Amita(-Buddha). They are, as Mr. Rhys Davids

[[Footnote(s)]] -----

* See A. P. Sinnett's "Esoteric Buddhism," 5th annotated edition, pp. 171-173.

** The first and greatest Reformer who founded the "Yellow-Caps," Gyalugpas. He was born in the year 1355 A.D. in Amdo, and was the Avatar of Amitabha, the celestial name of Gautama Buddha.

[[Vol. 1, Page]] 109 THEOGONY OF THE CREATORS.

correctly states, "the glorious counterparts in the mystic world, free from the debasing conditions of this material life" of every earthly mortal Buddha -- the liberated Manushi-Buddhas appointed to govern the Earth in this Round. They are the "Buddhas of Contemplation," and are all Anupadaka (parentless), i.e., self-born of divine essence. The exoteric teaching which says that every Dhyani-Buddha has the faculty of creating from himself, an equally celestial son -- a Dhyani-Bodhisattva -- who, after the decease of the Manushi (human) Buddha, has to carry out the work of the latter, rests on the fact that owing to the highest initiation performed by one overshadowed by the "Spirit of Buddha" -- (who is credited by the Orientalists with having created the five Dhyani-Buddhas!), -- a candidate becomes virtually a Bodhisattva, created such by the High Initiator.

(c) Fohat, being one of the most, if not the most important character in esoteric Cosmogony, should be minutely described. As in the oldest Grecian Cosmogony, differing widely from the later mythology, Eros is the third person in the primeval trinity: Chaos, Gaea, Eros: answering to the Kabalistic En-Soph (for Chaos is SPACE, [[chaino]], "void") the Boundless ALL, Shekinah and the Ancient of Days, or the Holy Ghost; so Fohat is one thing in the yet unmanifested Universe and another in the phenomenal and Cosmic World. In the latter, he is that Occult, electric, vital power, which, under the Will of the Creative Logos, unites and brings together all forms, giving them the first impulse which becomes in time law. But in the unmanifested Universe, Fohat is no more this, than Eros is the later brilliant winged Cupid, or LOVE. Fohat has naught to do with Kosmos yet, since Kosmos is not born, and the gods still sleep in the bosom of "Father-Mother." He is an abstract philosophical idea. He produces nothing yet by himself; he is simply that potential creative power in virtue of whose action the NOUMENON of all future phenomena divides, so to speak, but to reunite in a mystic supersensuous act, and emit the creative ray. When the "Divine Son" breaks forth, then Fohat becomes the propelling force, the active Power which causes the ONE to become TWO and THREE -- on the Cosmic plane of manifestation. The triple One differentiates into the many, and then Fohat is transformed into that force which brings together the elemental atoms and makes them aggregate and combine. We find an echo of this primeval teaching

[[Vol. 1, Page]] 110 THE SECRET DOCTRINE.

in early Greek mythology. Erebus and Nux are born out of Chaos, and, under the action of Eros, give birth in their turn to Ether and Hemera, the light of the superior and the light of the inferior or terrestrial regions. Darkness generates light. See in the Puranas Brahma's "Will" or desire to create; and in the Phoenician Cosmogony of Sanchoniathon the doctrine that Desire, [[pothos]], is the principle of creation.

Fohat is closely related to the "ONE LIFE." From the Unknown One, the Infinite TOTALITY, the manifested ONE, or the periodical, Manvantaric Deity, emanates; and this is the Universal Mind, which, separated from its Fountain-Source, is the Demiurgos or the creative Logos of the Western Kabalists, and the four-faced Brahma of the Hindu religion. In its totality, viewed from the standpoint of manifested Divine Thought in the esoteric doctrine, it represents the Hosts of the higher creative Dhyani Chohans. Simultaneously with the evolution of the Universal Mind, the concealed Wisdom of Adi-Buddha -- the One Supreme and eternal -- manifests itself as Avalokiteshwara (or manifested Iswara), which is the Osiris of the Egyptians, the Ahura-Mazda of the Zoroastrians, the Heavenly Man of the Hermetic philosopher, the Logos of the Platonists, and the Atman of the Vedantins.* By the action of the manifested Wisdom, or Mahat, represented by these innumerable centres of spiritual Energy in the Kosmos, the reflection of the Universal Mind, which is Cosmic Ideation and the intellectual Force accompanying such ideation, becomes objectively the Fohat of the Buddhist esoteric philosopher. Fohat, running along the seven principles of AKASA, acts upon manifested substance or the One Element, as declared

above, and by differentiating it into various centres of Energy, sets in motion the law of Cosmic Evolution, which, in obedience to the Ideation of the Universal Mind, brings into existence all the various states of being in the manifested Solar System.

The Solar System, brought into existence by these agencies, consists of Seven Principles, like everything else within these centres. Such is the teaching of the trans-Himalayan Esotericism. Every philosophy, however, has its own way of dividing these principles.

[[Footnote(s)]] -----

* Mr. Subba Row seems to identify him with, and to call him, the LOGOS. (See his four lectures on the "Bhagavadgita" in the Theosophist.)

[[Vol. 1, Page]] 111 THE PROTEAN SPIRIT-SUBSTANCE.

Fohat, then, is the personified electric vital power, the transcendental binding Unity of all Cosmic Energies, on the unseen as on the manifested planes, the action of which resembles -- on an immense scale -- that of a living Force created by WILL, in those phenomena where the seemingly subjective acts on the seemingly objective and propels it to action. Fohat is not only the living Symbol and Container of that Force, but is looked upon by the Occultists as an Entity -- the forces he acts upon being cosmic, human and terrestrial, and exercising their influence on all those planes respectively. On the earthly plane his influence is felt in the magnetic and active force generated by the strong desire of the magnetizer. On the Cosmic, it is present in the constructive power that carries out, in the formation of things -- from the planetary system down to the glow-worm and simple daisy -- the plan in the mind of nature, or in the Divine Thought, with regard to the development and growth of that special thing. He is, metaphysically, the objectivised thought of the gods; the "Word made flesh," on a lower scale, and the messenger of Cosmic and human ideations: the active force in Universal Life. In his secondary aspect, Fohat is the Solar Energy, the electric vital fluid,* and the preserving fourth

[[Footnote(s)]] -----

* In 1882 the President of the Theosophical Society, Col. Olcott, was taken to task for asserting in one of his lectures that Electricity is matter. Such, nevertheless, is the teaching of the Occult Doctrine. "Force," "Energy," may be a better name for it, so long as European Science knows so little about its true nature; yet matter it is, as much as Ether is matter, since it is as atomic, though several removes from the latter. It seems ridiculous to argue that because a thing is imponderable to Science, therefore it cannot be called matter. Electricity is "immaterial" in the sense that its molecules are not subject to perception and experiment; yet it may be -- and Occultism says it is -- atomic; therefore it is matter. But even supposing it were unscientific to speak of it in such terms, once Electricity is called in Science a source of Energy, Energy simply, and a Force -- where is that Force or that Energy which can be thought of without thinking of matter? Maxwell, a mathematician and one of the greatest authorities upon Electricity and its phenomena, said, years ago, that Electricity was matter, not motion merely. "If we accept the hypothesis that the elementary substances are composed of atoms we cannot avoid concluding that electricity also, positive as well as negative, is divided into definite elementary portions, which behave like atoms of electricity." (Helmholtz, Faraday Lecture, 1881). We will go further than that, and assert that Electricity is not only Substance but that it is an emanation from an Entity, which is neither God nor Devil, but one of the numberless Entities that rule and guide our world according to the eternal Law of KARMA. (See the Addendum to this Book.)

[[Vol. 1, Page]] 112 THE SECRET DOCTRINE.

principle, the animal Soul of Nature, so to say, or -- Electricity. In India, Fohat is connected with Vishnu and Surya in the early character of the (first) God; for Vishnu is not a high god in the Rig Veda. The name Vishnu is from the root vish, "to pervade," and Fohat is called the "Pervader" and the Manufacturer, because he shapes the atoms from crude material.* In the sacred texts of the Rig Veda, Vishnu, also, is "a manifestation of the Solar Energy," and he is described as striding through the Seven regions of the Universe in three steps, the Vedic God having little in common with the Vishnu of later times. Therefore the two are identical in this particular feature, and one is the copy of the other.

The "three and seven" strides refer to the Seven spheres inhabited by man, of the esoteric Doctrine, as well as to the Seven regions of the Earth. Notwithstanding the frequent objections made by would-be Orientalists, the Seven Worlds or spheres of our planetary chain are distinctly referred to in the exoteric Hindu scriptures. But how strangely all these numbers are connected with like numbers in other Cosmogonies and with their symbols, can be seen from comparisons and parallelisms made by students of old religions. The "three strides of Vishnu" through the "seven regions of the Universe," of the Rig Veda, have been variously explained by commentators as meaning "fire, lightning and the Sun" cosmically; and as having been taken in the Earth, the atmosphere, and the sky; also as the "three steps" of the dwarf (Vishnu's incarnation), though more philosophically -- and in the astronomical sense, very correctly -- they are explained by Aurnavabha as being the various positions of the sun, rising, noon, and setting. Esoteric philosophy alone explains it clearly, and the Zohar laid it down very philosophically and comprehensively. It is said and plainly demonstrated therein that in the beginning the Elohim (Elhim) were called Echod, "one," or the "Deity is one in many," a very simple idea in a pantheistic conception (in its philosophical sense, of course). Then came the change, "Jehovah is Elohim," thus unifying the multiplicity and taking the first step towards Monotheism. Now to the query, "How is Jehovah Elohim?" the answer is, "By three Steps" from below.

[[Footnote(s)]] -----

* It is well known that sand, when placed on a metal plate in vibration assumes a series of regular curved figures of various descriptions. Can Science give a complete explanation of this fact?

The meaning is plain.* They are all symbols, and emblematic, mutually and correlatively, of Spirit, Soul and Body (MAN); of the circle transformed into Spirit, the Soul of the World, and its body (or Earth). Stepping out of the Circle of Infinity, that no man comprehendeth, Ain-Soph (the Kabalistic synonym for Parabrahm, for the Zeroana Akerne, of the Mazdeans, or for any other "UNKNOWABLE") becomes "One" -- the ECHOD, the EKA, the AHU -- then he (or it) is transformed by evolution into the One in many, the Dhyani-Buddhas or the Elohim, or again the Amshaspends, his third Step being taken into generation of the flesh, or "Man." And from man, or Jah-Hova, "male female," the inner divine entity becomes, on the metaphysical plane, once more the Elohim.

The Kabalistic idea is identical with the Esotericism of the Archaic period. This esotericism is the common property of all, and belongs neither to the Aryan 5th Race, nor to any of its numerous Sub-races. It cannot be claimed by the Turanians, so-called, the Egyptians, Chinese, Chaldeans, nor any of the Seven divisions of the Fifth Root Race, but really belongs to the Third and Fourth Root Races, whose descendants we find in the Seed of the Fifth, the earliest Aryans. The Circle was with every nation the symbol of the Unknown -- "Boundless Space," the abstract garb of an ever present abstraction -- the Incognisable Deity. It represents limitless Time in Eternity. The Zeroana Akerne is also the "Boundless Circle of the Unknown Time," from which Circle issues the radiant light -- the Universal SUN, or Ormazd** -- and the latter

[[Footnote(s)]] -----

* The numbers 3, 5, and 7 are prominent in speculative masonry, as shown in "Isis." A mason writes:-- "There are the 3, 5, and 7 steps to show a circular walk. The three faces of 3, 3; 5, 3; and 7, 3; etc., etc. Sometimes it comes in this form -- $753/2 = 376.5$ and $7635/2 = 3817.5$ and the ratio of 20612/6561 feet for cubit measure gives the Great Pyramid measures," etc., etc. Three, five and seven are mystical numbers, and the last and the first are as greatly honoured by Masons as by the Parsis -- the triangle being a symbol of Deity everywhere. (See the Masonic Cyclopaedia, and "Pythagorean Triangle," Oliver.) As a matter of course, doctors of divinity (Cassel, for instance) show the Zohar explaining and supporting the Christian trinity (!). It is the latter, however, that had its origin from the [[diagram]] of the Heathen, in the Archaic Occultism and Symbology. The three strides relate metaphysically to the descent of Spirit into matter, of the Logos falling as a ray into the Spirit, then into the Soul, and finally into the human physical form of man, in which it becomes LIFE.

** Ormazd is the Logos, the "First Born" and the Sun.

is identical with Kronos, in his AEolian form, that of a Circle. For the circle is Sar, and Saros, or cycle, and was the Babylonian god whose circular horizon was the visible symbol of the invisible, while the sun was the ONE Circle from which proceeded the Cosmic orbs, and of which he was considered the leader. Zero-ana, is the Chakra or circle of Vishnu, the mysterious emblem which is, according to the definition of a mystic, "a curve of such a nature that as to any, the least possible part thereof, if the curve be protracted either way it will proceed and finally re-enter upon itself, and form one and the same curve -- or that which we call the circle." No better definition could thus be given of the natural symbol and the evident nature of Deity, which having its circumference everywhere (the boundless) has, therefore, its central point also everywhere; in other words, is in every point of the Universe. The invisible Deity is thus also the Dhyani Chohans, or the Rishis, the primitive seven, and the nine, without, and ten, including, their synthetical unit; from which IT steps into Man. Returning to the Commentary (4) of Stanza IV. the reader will understand why, while the trans-Himalayan Chackra has inscribed within it [[diagram]] | [[diagram]] | [[diagram]] (triangle, first line, cube second line, and a pentacle with a dot in the centre thus: [[diagram]]), and some other variations), the Kabalistic circle of the Elohim reveals, when the letters of the word [[hebrew]] (Alhim or Elohim) are numerically read, the famous numerals 13514, or by anagram 31415 -- the astronomical (pi) number, or the hidden meaning of Dhyani-Buddhas, of the Gebers, the Geborim, the Kabeiri, and the Elohim, all signifying "great men," "Titans," "Heavenly Men," and, on earth, "the giants."

The Seven was a Sacred Number with every nation; but none applied it to more physiologically materialistic uses than the Hebrews. With these it was pre-eminently the generative number and 9 the male causative one, forming as shown by the Kabalists the [[hebrew with numbers above]] or otz -- "the Tree of the Garden of Eden,"* the "double hermaphrodite rod" of the fourth race. Whereas with the Hindus and Aryans generally, the significance was manifold, and related almost entirely to purely metaphysical

[[Footnote(s)]] -----

* This was the symbol of the "Holy of Holies," the 3 and the 4 of sexual separation. Nearly every one of the 22 Hebrew letters are merely phallic symbols. Of the two letters -- as shown above -- one, the ayin, is a negative female letter, symbolically an eye; the other a male letter, tza, a fish-hook or a dart.

and astronomical truths.* Their Rishis and gods, their Demons and Heroes, have historical and ethical meanings, and the Aryans never made their religion rest solely on physiological symbols, as the old Hebrews have done. This is found in the exoteric Hindu Scriptures. That these accounts are blinding is shown by their contradicting each other, a different construction being found in almost

every Purana and epic poem. Read esoterically -- they will all yield the same meaning. Thus one account enumerates Seven worlds, exclusive of the nether worlds, also seven in number; these fourteen upper and nether worlds have

[[Footnote(s)]] -----

* We are told by a Kabalist, who in a work not yet published contrasts the Kabala and Zohar with Aryan Esotericism, that "The Hebrew clear, short, terse and exact modes far and beyond measure surpass the toddling word-talk of the Hindus -- just as by parallelisms the Psalmist says, 'My mouth speaks with my tongue, I know not thy numbers' (lxxi., 15). . . . The Hindu Glyph shows by its insufficiency in the large admixture of adventitious sides the same borrowed plumage that the Greeks (the lying Greeks) had, and that Masonry has: which in the rough monosyllabic (and apparent) poverty of the Hebrew, shows the latter to have come down from a far more remote antiquity than any of these, and to have been the source (!?), or nearer the old original source than any of them." This is entirely erroneous. Our learned brother and correspondent judges apparently the Hindu religious systems by their Shastras and Puranas, probably the latter, and in their modern translation moreover, which is disfigured out of all recognition, by the Orientalists. It is to their philosophical systems that one has to turn, to their esoteric teaching, if he would make a point of comparison. No doubt the symbology of the Pentateuch and even of the New Testament, comes from the same source. But surely the Pyramid of Cheops, whose measurements are all found repeated by Professor Piazzi Smythe in Solomon's alleged and mythical temple, is not of a later date than the Mosaic books? Hence, if there is any such great identity as claimed, it must be due to servile copying on the part of the Jews, not on that of the Egyptians. The Jewish glyphs -- and even their language, the Hebrew -- are not original. They are borrowed from the Egyptians, from whom Moses got his Wisdom; from the Coptic, the probable kinsman, if not parent, of the old Phoenician and from the Hyksos, their (alleged) ancestors, as Josephus shows in his "Against Apion," l., 25. Aye; but who are the Hyksos shepherds? And who the Egyptians? History knows nothing of the question, and speculates and theorizes out of the depths of the respective consciousnesses of her historians. (See Isis Unveiled, vol. II., p. 430-438.) "Khamism, or old Coptic," says Bunsen, "is from Western Asia, and contains some germ of the Semitic, thus bearing witness to the primitive cognate unity of the Aryan and Semitic races"; and he places the great events in Egypt 9,000 years B.C. The fact is that in archaic Esotericism and Aryan thought we find a grand philosophy, whereas in the Hebrew records we find only the most surprising ingenuity in inventing apotheoses for phallic worship and sexual theogony.

[[Vol. 1, Page]] 116 THE SECRET DOCTRINE.

nothing to do with the classification of the septenary chain and belong to the purely aethereal, invisible worlds. These will be noticed elsewhere. Suffice for the present to show that they are purposely referred to as though they belonged to the chain. "Another enumeration calls the Seven worlds -- earth, sky, heaven, middle region, place of birth, mansion of the blest, and abode of truth; placing the 'Sons of Brahma' in the sixth division, and stating the fifth, or Jana Loka, to be that where animals destroyed in the general conflagration are born again." (see Hindu Classical Dictionary.) Some real esoteric teaching is given in the "Symbolism." He who is prepared for it will understand the hidden meaning.

STANZA V. -- Continued.

3. HE IS THEIR GUIDING SPIRIT AND LEADER. WHEN HE COMMENCES WORK, HE SEPARATES THE SPARKS OF THE LOWER KINGDOM (mineral atoms) THAT FLOAT AND THRILL WITH JOY IN THEIR RADIANT DWELLINGS (gaseous clouds), AND FORMS THEREWITH THE GERMS OF WHEELS. HE PLACES THEM IN THE SIX DIRECTIONS OF SPACE AND ONE IN THE MIDDLE -- THE CENTRAL WHEEL (a).

(a) "Wheels," as already explained, are the centres of force, around which primordial Cosmic matter expands, and, passing through all the six stages of consolidation, becomes spheroidal and ends by being transformed into globes or spheres. It is one of the fundamental dogmas of Esoteric Cosmogony, that during the Kalpas (or aeons) of life, MOTION, which, during the periods of Rest "pulsates and thrills through every slumbering atom" (Commentary on Dzyan), assumes an evergrowing

[[Footnote(s)]] -----

* It may be asked, as also the writer has not failed to ask, "Who is there to ascertain the difference in that motion, since all nature is reduced to its primal essence, and there can be no one -- not even one of the Dhyani-Chohans, who are all in Nirvana -- to see it?" The answer to this is: "Everything in Nature has to be judged by analogy. Though the highest Deities (Archangels or Dhyani-Buddhas) are unable to penetrate the mysteries too far beyond our planetary system and the visible Kosmos, yet there were great seers and prophets in olden times who were enabled to perceive the mystery of Breath and Motion retrospectively, when the systems of worlds were at rest and plunged in their periodic sleep."

[[Vol. 1, Page]] 117 THE ANTIQUITY OF PHYSICAL SCIENCES.

tendency, from the first awakening of Kosmos to a new "Day," to circular movement. The "Deity becomes a WHIRLWIND." They are also called Rotae -- the moving wheels of the celestial orbs participating in the world's creation -- when the meaning refers to the animating principle of the stars and planets; for in the Kabala, they are represented by the Ophanim, the Angels of the Spheres and stars, of which they are the informing Souls. (See Kabala Denudata, "De Anima," p. 113.)

This law of vortical movement in primordial matter, is one of the oldest conceptions of Greek philosophy, whose first historical Sages were nearly all Initiates of the Mysteries. The Greeks had it from the Egyptians, and the latter from the Chaldeans, who had been the pupils of Brahmins of the esoteric school. Leucippus, and Democritus of Abdera -- the pupil of the Magi -- taught that this gyratory movement of the atoms and spheres existed from eternity.* Hicetas, Heraclides, Ecphantus, Pythagoras, and all his pupils, taught the rotation of the earth; and Aryabhata of India, Aristarchus, Seleucus, and Archimedes calculated its revolution as scientifically as the astronomers do now; while the theory of the Elemental Vortices was known to Anaxagoras, and maintained by him 500 years B.C., or nearly 2,000 before it was taken up by Galileo, Descartes, Swedenborg, and finally, with slight modifications, by Sir W. Thomson. (See his "Vortical Atoms.") All such knowledge, if justice be only done to it, is an echo of the archaic doctrine, an attempt to explain which is now being made. How men of the last few centuries have come to the same ideas and conclusions that were taught as axiomatic truths in the secrecy of the Adyta dozens of

[[Footnote(s)]] -----

* "The doctrine of the rotation of the earth about an axis is taught by the Pythagorean Hicetas, probably as early as 500 B.C. It was also taught by his pupil Ecphantus, and by Heraclides, a pupil of Plato. The immobility of the Sun and the orbital rotation of the earth were shown by Aristarchus of Samos as early as 281 B.C. to be suppositions accordant with facts of observation. The Heliocentric theory was taught about 150 B.C., by Seleucus of Seleucia on the Tigris. -- [It was taught 500 B.C. by Pythagoras. -- H. P. B.] It is said also that Archimedes, in a work entitled Psammites, inculcated the Heliocentric theory. The sphericity of the earth was distinctly taught by Aristotle, who appealed for proof to the figure of the Earth's shadow on the moon in eclipses (Aristotle, De Coelo, lib. II, cap. XIV.). The same idea was defended by Pliny (Nat. Hist., II., 65). These views seem to have been lost from knowledge for more than a thousand years. . . ." (Comparative Geology, Part IV., "Pre-Kantian Speculation," p. 551, by Alex. Winchell, LL.D.).

[[Vol. 1, Page]] 118 THE SECRET DOCTRINE.

millenniums ago, is a question that is treated separately. Some were led to it by the natural progress in physical science and by independent observation; others -- such as Copernicus, Swedenborg, and a few more -- their great learning notwithstanding, owed their knowledge far more to intuitive than to acquired ideas, developed in the usual way by a course of study.* (See "A Mystery about Buddha.")

By the "Six directions of Space" is here meant the "Double Triangle," the junction and blending together of pure Spirit and Matter, of the Arupa and the Rupa, of which the Triangles are a Symbol. This double Triangle is a sign of Vishnu, as it is Solomon's seal, and the Sri-Antara of the Brahmins.

STANZA V. -- (Continued.)

4. FOHAT TRACES SPIRAL LINES TO UNITE THE SIX TO THE SEVENTH -- THE CROWN (a); AN ARMY OF THE SONS OF LIGHT STANDS AT EACH ANGLE (and) THE LIPIKA -- IN THE MIDDLE WHEEL. THEY (the Lipika) SAY, "THIS IS GOOD" (b). THE FIRST DIVINE WORLD IS READY, THE FIRST (is now), THE SECOND (world), THEN THE "DIVINE ARUPA" (the formless Universe

[[Footnote(s)]] -----

* That Swedenborg, who could not possibly have known anything of the esoteric ideas of Buddhism, came independently near the Occult teaching in his general conceptions, is shown by his essay on the Vortical Theory. In Clissold's translation of it, quoted by Prof. Winchell, we find the following resume:-- "The first Cause is the Infinite or Unlimited. This gives existence to the First Finite or Limited." (The Logos in His manifestation and the Universe.) "That which produces a limit is analogous to motion. (See first Stanza, supra.) The limit produced is a point, the Essence of which is Motion; but being without parts, this Essence is not actual Motion, but only a connatus to it." (In our Doctrine it is not a "connatus," but a change from eternal vibration in the unmanifested, to Vortical Motion in the phenomenal or manifested World). . . "From this first proceed Extension, Space, Figure, and Succession, or Time. As in Geometry a point generates a line, a line a surface, and a surface a solid, so here the connatus of a point tends towards lines, surfaces and solids. In other words, the Universe is contained in ovo in the first natural point . . . the Motion toward which the connatus tends, is circular, since the circle is the most perfect of all figures . . . The most perfect figure of a Motion . . . must be the perpetually circular, that is to say, it must proceed from the centre to the periphery and from the periphery to the centre." (Quoted from Principia Rerum Naturalia.) This is Occultism pure and simple.

[[Vol. 1, Page]] 119 THE EVOLUTION OF THE PRINCIPLES.

of Thought) REFLECTS ITSELF IN CHHAYALOKA (the shadowy world of primal form, or the intellectual) THE FIRST GARMENT OF (the) ANUPADAKA (c).

(a) This tracing of "Spiral lines" refers to the evolution of man's as well as Nature's principles; an evolution which takes place gradually (as will be seen in Book II., on "The origin of the Human Races"), as does everything else in nature. The Sixth principle in Man (Buddhi, the Divine Soul) though a mere breath, in our conceptions, is still something material when compared with divine "Spirit" (Atma) of which it is the carrier or vehicle. Fohat, in his capacity of DIVINE LOVE (Eros), the electric Power of affinity and sympathy, is shown allegorically as trying to bring the pure Spirit, the Ray inseparable from the ONE absolute, into union with the Soul, the two

constituting in Man the MONAD, and in Nature the first link between the ever unconditioned and the manifested. "The first is now the second" (world) -- of the Lipikas -- has reference to the same.

(b) The "Army" at each angle is the Host of angelic Beings (Dhyan-Chohans) appointed to guide and watch over each respective region from the beginning to the end of Manvantara. They are the "Mystic Watchers" of the Christian Kabalists and Alchemists, and relate, symbolically as well as cosmogonically, to the numerical system of the Universe. The numbers with which these celestial Beings are connected are extremely difficult to explain, as each number refers to several groups of distinct ideas, according to the particular group of "Angels" which it is intended to represent. Herein lies the nodus in the study of symbology, with which, unable to untie by disentangling it, so many scholars have preferred dealing as Alexander dealt with the Gordian knot; hence erroneous conceptions and teachings, as a direct result.

The "First is the Second," because the "First" cannot really be numbered or regarded as the First, as that is the realm of noumena in its primary manifestation: the threshold to the World of Truth, or SAT, through which the direct energy that radiates from the ONE REALITY -- the Nameless Deity -- reaches us. Here again, the untranslatable term SAT (Be-ness) is likely to lead into an erroneous conception, since that which is manifested cannot be SAT, but is something phenomenal, not everlasting, nor, in truth, even sempiternal. It is coeval and

[[Vol. 1, Page]] 120 THE SECRET DOCTRINE.

coexistent with the One Life, "Secondless," but as a manifestation it is still a Maya -- like the rest. This "World of Truth" can be described only in the words of the Commentary as "A bright star dropped from the heart of Eternity; the beacon of hope on whose Seven Rays hang the Seven Worlds of Being." Truly so; since those are the Seven Lights whose reflections are the human immortal Monads -- the Atma, or the irradiating Spirit of every creature of the human family. First, this septenary Light; then:--

(c) The "Divine World" -- the countless Lights lit at the primeval Light -- the Buddhis, or formless divine Souls, of the last Arupa (formless) world; the "Sum Total," in the mysterious language of the old Stanza. In the Catechism, the Master is made to ask the pupil:--

"Lift thy head, oh Lanoo; dost thou see one, or countless lights above thee, burning in the dark midnight sky?"

"I sense one Flame, oh Gurudeva, I see countless undetached sparks shining in it."

"Thou sayest well. And now look around and into thyself. That light which burns inside thee, dost thou feel it different in anywise from the light that shines in thy Brother-men?"

"It is in no way different, though the prisoner is held in bondage by Karma, and though its outer garments delude the ignorant into saying, 'Thy Soul and My Soul.' "

The radical unity of the ultimate essence of each constituent part of compounds in Nature -- from Star to mineral Atom, from the highest Dhyan Chohan to the smallest infusoria, in the fullest acceptance of the term, and whether applied to the spiritual, intellectual, or physical worlds -- this is the one fundamental law in Occult Science. "The Deity is boundless and infinite expansion," says an Occult axiom; and hence, as remarked, the name of Brahma.* There is a deep philosophy underlying the earliest worship in the world, that of the Sun and of Fire. Of all the Elements known to physical science, Fire is the one that has ever eluded definite analysis. It is confidently asserted that

[[Footnote(s)]] -----

* In the Rig Veda we find the names Brahmanaspati and Brihaspati alternating and equivalent to each other. Also see "Brihad Upanishad"; Brihaspati is a deity called "the Father of the gods."

[[Vol. 1, Page]] 121 THE MYSTERY OF THE FIRE.

Air is a mixture containing the gases Oxygen and Nitrogen. We view the Universe and the Earth as matter composed of definite chemical molecules. We speak of the primitive ten Earths, endowing each with a Greek or Latin name. We say that water is, chemically, a compound of Oxygen and Hydrogen. But what is FIRE? It is the effect of combustion, we are gravely answered. It is heat and light and motion, and a correlation of physical and chemical forces in general. And this scientific definition is philosophically supplemented by the theological one in Webster's Dictionary, which explains fire as "the instrument of punishment, or the punishment of the impenitent in another state" -- the "state," by the bye, being supposed to be spiritual; but, alas! the presence of fire would seem to be a convincing proof of its material nature. Yet, speaking of the illusion of regarding phenomena as simple, because they are familiar, Professor Bain says (Logic. Part II.): "Very familiar facts seem to stand in no need of explanation themselves and to be the means of explaining whatever can be assimilated to them. Thus, the boiling and evaporation of a liquid is supposed to be a very simple phenomenon requiring no explanation, and a satisfactory explanation of rarer phenomena. That water should dry up is, to the un instructed mind, a thing wholly intelligible; whereas to the man acquainted with physical science the liquid state is anomalous and inexplicable. The lighting of a fire by a flame is a GREAT SCIENTIFIC DIFFICULTY, yet few people think so" (p. 125).

What says the esoteric teaching with regard to fire? "Fire," it says, "is the most perfect and unadulterated reflection, in Heaven as on Earth, of the ONE FLAME. It is Life and Death, the origin and the end of every material thing. It is divine 'SUBSTANCE.'" Thus, not only the FIRE-WORSHIPPER, the Parsee, but even the wandering savage tribes of America, which proclaim themselves "born of fire," show more science in their creeds and truth in their superstitions, than all the speculations of modern physics and learning. The Christian who says: "God is a living Fire," and speaks of the Pentecostal "Tongues of Fire" and of the "burning bush" of Moses, is as much a fire-worshipper as any other "heathen." The Rosicrucians, among all the mystics and Kabalists, were those who defined Fire in the right and most correct way. Procure a sixpenny lamp, keep it only supplied with oil, and you will be able to light at its flame the lamps, candles,

[[Vol. 1, Page]] 122 THE SECRET DOCTRINE.

and fires of the whole globe without diminishing that flame. If the Deity, the radical One, is eternal and an infinite substance ("the Lord thy God is a consuming fire") and never consumed, then it does not seem reasonable that the Occult teaching should be held as unphilosophical when it says: "Thus were the Arupa and Rupa worlds formed: from ONE light seven lights; from each of the seven, seven times seven," etc., etc.

STANZA V. -- Continued.

5. FOHAT TAKES FIVE STRIDES (having already taken the first three) (a), AND BUILDS A WINGED WHEEL AT EACH CORNER OF THE SQUARE FOR THE FOUR HOLY ONES AND THEIR ARMIES (hosts) (b).

(a) The "strides," as already explained (see Commentary on Stanza IV.), refer to both the Cosmic and the Human principles -- the latter of which consist, in the exoteric division, of three (Spirit, Soul, and Body), and, in the esoteric calculation, of seven principles -- three rays of the Essence and four aspects.* Those who have studied Mr. Sinnett's "Esoteric Buddhism" can easily grasp the nomenclature. There are two esoteric schools -- or rather one school, divided into two parts -- one for the inner Lanoos, the other for the outer or semi-lay chelas beyond the Himalayas; the first teaching a septenary, the other a six-fold division of human principles.

From a Cosmic point of view, Fohat taking "five strides" refers here to the five upper planes of Consciousness and Being, the sixth and the seventh (counting downwards) being the astral and the terrestrial, or the two lower planes.

(b) "Four winged wheels at each corner for the four holy ones and their armies (hosts)" These are the "four Maharajahs" or great Kings of the Dhyana-Chohans, the Devas who preside, each over one of the four cardinal points. They are the Regents or Angels who rule over the Cosmical Forces of North, South,

[[Footnote(s)]] -----

* The four aspects are the body, its life or vitality, and the "Double" of the body, the triad which disappears with the death of the person, and the Kama-rupa which disintegrates in Kama-loka.

[[Vol. 1, Page]] 123 THE SECRET OF THE ELEMENTS.

East and West, Forces having each a distinct occult property. These BEINGS are also connected with Karma, as the latter needs physical and material agents to carry out her decrees, such as the four kinds of winds, for instance, professedly admitted by Science to have their respective evil and beneficent influences upon the health of Mankind and every living thing. There is occult philosophy in that Roman Catholic doctrine which traces the various public calamities, such as epidemics of disease, and wars, and so on, to the invisible "Messengers" from North and West. "The glory of God comes from the way of the East" says Ezekiel; while Jeremiah, Isaiah, and the Psalmist assure their readers that all the evil under the Sun comes from the North and the West -- which proposition, when applied to the Jewish nation, sounds like an undeniable prophecy for themselves. And this accounts also for St. Ambrose (On Amos, ch. iv.) declaring that it is precisely for that reason that "we curse the North-Wind, and that during the ceremony of baptism we begin by turning towards the West (Sidereal), to renounce the better him who inhabits it; after which we turn to the East."

Belief in the "Four Maharajahs" -- the Regents of the Four cardinal points -- was universal and is now that of Christians,* who call them, after St. Augustine, "Angelic Virtues," and "Spirits" when enumerated by themselves, and "Devils" when named by Pagans. But where is the difference between the Pagans and the Christians in this cause? Following Plato, Aristotle explained that the term [[stoicheia]] was understood only as meaning the incorporeal principles placed at each of the four great divisions of our Cosmical world to supervise them. Thus, no more than the Christians did, do they adore and worship the Elements and the cardinal (imaginary) points, but the "gods" that ruled these respectively. For the Church there are two kinds of Sidereal beings, the

[[Footnote(s)]] -----

* Says the scholarly Vossius, in his Theol. Cir. I. VII.: "Though St. Augustine has said that every visible thing in this world had an angelic virtue as an overseer near it, it is not individuals but entire species of things that must be understood, each such species having indeed its particular angel to watch it. He is at one in this with all the philosophers . . . For us these angels are spirits separated from the objects . . . whereas for the philosophers (pagan) they were gods." Considering the Ritual established by the Roman Catholic

Church for "Spirits of the Stars," the latter look suspiciously like "Gods," and were no more honoured and prayed to by the ancient and modern pagan rabble than they are now at Rome by the highly cultured Catholic Christians.

[[Vol. 1, Page]] 124 THE SECRET DOCTRINE.

Angels and the Devils. For the Kabalist and Occultist there is but one; and neither of them makes any difference between "the Rectors of Light" and the Cosmocraiores, or "Rectores tenebrarum harum," whom the Roman Church imagines and discovers in a "Rector of Light" as soon as he is called by another name than the one she addresses him by. It is not the "Rector" or "Maharajah" who punishes or rewards, with or without "God's" permission or order, but man himself -- his deeds or Karma, attracting individually and collectively (as in the case of whole nations sometimes), every kind of evil and calamity. We produce CAUSES, and these awaken the corresponding powers in the sidereal world; which powers are magnetically and irresistibly attracted to -- and react upon -- those who produced these causes; whether such persons are practically the evil-doers, or simply Thinkers who brood mischief. Thought is matter,* we are taught by modern Science; and "every particle of the existing matter must be a register of all that has happened," as in their "Principles of Science" Messrs. Jevons and Babbage tell the profane. Modern Science is drawn more every day into the maelstrom of Occultism; unconsciously, no doubt, still very sensibly. The two main theories of science -- re the relations between Mind and Matter -- are Monism and Materialism. These two cover the whole ground of negative psychology with the exception of the quasi-occult views of the pantheistic German schools.**

[[Footnote(s)]] -----

* Not of course in the sense of the German Materialist Moleschott, who assures us that "Thought is the movement of matter," a statement of almost unequalled absurdity. Mental states and bodily states are utterly contrasted as such. But that does not affect the position that every thought, in addition to its physical accompaniment (brain-change), exhibits an objective -- though to us supersensuously objective -- aspect on the astral plane. (See "The Occult World," pp. 89, 90.)

** The views of our present-day scientific thinkers as to the relations between mind and matter may be reduced to two hypotheses. These show that both views equally exclude the possibility of an independent Soul, distinct from the physical brain through which it functions. They are:--

(1.) MATERIALISM, the theory which regards mental phenomena as the product of molecular change in the brain; i.e., as the outcome of a transformation of motion into feeling (!). The cruder school once went so far as to identify mind with a "peculiar mode of motion" (!), but this view is now happily regarded as absurd by most of the men of science themselves.

(2.) MONISM, or the Single Substance Doctrine, is the more subtle form of negative psychology, which one of its advocates, Professor Bain, ably terms "guarded [[Footnote continued on next page]]

[[Vol. 1, Page]] 125 THE REAL MEANING OF THE TABERNACLE.

In the Egyptian temples, according to Clemens Alexandrinus, an immense curtain separated the tabernacle from the place for the congregation. The Jews had the same. In both, the curtain was drawn over five pillars (the Pentacle) symbolising our five senses and five Root-races esoterically, while the four colours of the curtain represented the four cardinal points and the four terrestrial elements. The whole was an allegorical symbol. It is through the four high Rulers over the four points and Elements that our five senses may become cognisant of the hidden truths of Nature; and not at all, as Clemens would have it, that it is the elements per se that furnished the Pagans with divine Knowledge or the knowledge of God.* While the Egyptian emblem was spiritual, that of the Jews was purely materialistic, and, indeed, honoured only the blind Elements and the imaginary "Points." For what was the meaning of the square tabernacle raised by Moses in the wilderness, if it had not the same cosmical significance? "Thou shalt make an hanging . . . of blue, purple, and scarlet" and "five pillars of shittim wood for the hanging . . . four brazen rings in the four corners thereof . . . boards of fine wood for the four sides, North, South, West, and East . . . of the Tabernacle . . . with Cherubims of cunning work." (Exodus, ch. xxvi., xxvii.) The Tabernacle and the square courtyard, Cherubim and all, were precisely the same as those in the Egyptian temples. The square form of the Tabernacle meant just the same thing as it still means, to this day, in the exoteric worship of the Chinese and Tibetans -- the four cardinal points signifying that which the four sides of the pyramids, obelisks, and other such square erections mean. Josephus takes care to explain the whole thing. He declares that the Tabernacle pillars are the same

[[Footnote(s)]] -----

[[Footnote continued from previous page]] Materialism." This doctrine, which commands a very wide assent, counting among its upholders such men as Lewis, Spencer, Ferrier, and others, while positing thought and mental phenomena generally as radically contrasted with matter, regards both as equal to the two sides, or aspects, of one and the same substance in some of its conditions. Thought as thought, they say, is utterly contrasted with material phenomena, but it must be also regarded as only "the subjective side of nervous motion" whatever our learned men may mean by this.

* Thus the sentence, "Natura Elementorum obtinet revelationem Dei," (In Clemens's Stromata, R. IV., para. 6), is applicable to both or neither. Consult the Zends, vol II., p. 228, and Plutarch De Iside, as compared by Layard, Academie des Inscriptions, 1854, Vol. XV.

[[Vol. 1, Page]] 126 THE SECRET DOCTRINE.

as those raised at Tyre to the four Elements, which were placed on pedestals whose four angles faced the four cardinal points: adding that "the angles of the pedestals had equally the four figures of the Zodiac" on them, which represented the same orientation (Antiquities I., VIII., ch. xxii.).

The idea may be traced in the Zoroastrian caves, in the rock-cut temples of India, as in all the sacred square buildings of antiquity that have survived to this day. This is shown definitely by Layard, who finds the four cardinal points, and the four primitive elements, in the religion of every country, under the shape of square obelisks, the four sides of the pyramids, etc., etc. Of these elements and their points the four Maharajahs were the regents and the directors.

If the student would know more of them, he has but to compare the Vision of Ezekiel (chap. i.) with what is known of Chinese Buddhism (even in its exoteric teachings); and examine the outward shape of these "Great Kings." In the opinion of the Rev. Joseph Edkins, they are "the Devas who preside each over one of the four continents into which the Hindus divide the world."* Each leads an army of spiritual beings to protect mankind and Buddhism. With the exception of favouritism towards Buddhism, the four celestial beings are precisely this. They are the protectors of mankind and also the Agents of Karma on Earth, whereas the Lipika are concerned with Humanity's hereafter. At the same time they are the four living creatures "who have the likeness of a man" of Ezekiel's visions, called by the translators of the Bible, "Cherubim," "Seraphim," etc.; and by the Occultists, "the winged Globes," the "Fiery Wheels," and in the Hindu Pantheon by a number of different names. All these Gandharvas, the "Sweet Songsters," the Asuras, Kinnaras, and Nagas, are the allegorical descriptions of the "four Maharajahs." The Seraphim are the fiery Serpents of Heaven which we find in a passage describing Mount Meru as: "the exalted mass of glory, the venerable haunt of gods and heavenly choristers . . . not to be reached by sinful men . . . because guarded by Serpents." They are called the Avengers, and the "Winged Wheels."

Their mission and character being explained, let us see what the

[[Footnote(s)]] -----

* The Hindus happen to divide the world into seven continents, exoterically as esoterically; and their four cosmic Devas are eight, presiding over the eight points of the compass and not the Continents. (Compare "Chinese Buddhism," p. 216.)

[[Vol. 1, Page]] 127 THE DRAGONS OF SECRET WISDOM.

Christian Bible-interpreters say of the Cherubim:-- "The word signifies in Hebrew, fullness of knowledge; these angels are so called from their exquisite Knowledge, and were therefore used for the punishment of men who affected divine Knowledge." (Interpreted by Cruden in his Concordance, from Genesis iii., 24.) Very well; and vague as the information is, it shows that the Cherub placed at the gate of the garden of Eden after the "Fall," suggested to the venerable Interpreters the idea of punishment connected with forbidden Science or divine Knowledge -- one that generally leads to another "Fall," that of the gods, or "God," in man's estimation. But as the good old Cruden knew nought of Karma, he may be forgiven. Yet the allegory is suggestive. From Meru, the abode of gods, to Eden, the distance is very small, and from the Hindu Serpents to the Ophite Cherubim, the third out of the seven of which was the Dragon, the separation is still smaller, for both watched the entrance to the realm of Secret Knowledge. But Ezekiel plainly describes the four Cosmic Angels: "I looked, and behold, a whirlwind, a cloud and fire infolding it . . . also out of the midst thereof came the likeness of four living creatures . . . they had the likeness of a man. And every one had four faces and four wings . . . the face of a man, and the face of a lion, the face of an ox, and the face of an eagle . . ." ("Man" was here substituted for "Dragon." Compare the "Ophite Spirits.") . . . "Now as I beheld the living creatures behold one wheel upon the Earth with his four faces . . . as it were a wheel in the middle of a wheel . . . for the support of the living creature was in the wheel . . . their appearance was like coals of fire . . ." etc. (Ezekiel, ch. i.)

There are three chief groups of Builders and as many of the Planetary Spirits and the Lipika, each group being again divided into Seven sub-groups. It is impossible, even in such a large work as this, to enter into a minute examination of even the three principal groups, as it would demand an extra volume. The "Builders" are the representatives of the first "Mind-Born" Entities, therefore of the primeval Rishi-Prajapati: also of the Seven great Gods of Egypt, of which Osiris is the chief: of the Seven Amshaspendis of the Zoroastrians, with

[[Footnote(s)]] -----

* The Angels recognised by the Roman Catholic Church who correspond to these "Faces" were with the Ophites:-- Dragon -- Raphael; Lion -- Michael; Bull, or ox -- Uriel; and Eagle -- Gabriel. The four keep company with the four Evangelists, and preface the Gospels.

[[Vol. 1, Page]] 128 THE SECRET DOCTRINE.

Ormazd at their head: or the "Seven Spirits of the Face": the Seven Sephiroth separated from the first Triad, etc., etc.*

They build or rather rebuild every "System" after the "Night." The Second group of the Builders is the Architect of our planetary chain exclusively; and the third, the progenitor of our Humanity -- the Macrocosmic prototype of the microcosm.

The Planetary Spirits are the informing spirits of the Stars in general, and of the Planets especially. They rule the destinies of men who are all born under one or other of their constellations; the second and third groups pertaining to other systems have the same

functions, and all rule various departments in Nature. In the Hindu exoteric Pantheon they are the guardian deities who preside over the eight points of the compass -- the four cardinal and the four intermediate points -- and are called Loka-Palas, "Supporters or guardians of the World" (in our visible Kosmos), of which Indra (East), Yama (South), Varuna (West), and Kuvera (North) are the chief; their elephants and their spouses pertaining of course to fancy and afterthought, though all of them have an occult significance.

The Lipika (a description of whom is given in the Commentary on Stanza IV. No. 6) are the Spirits of the Universe, whereas the Builders are only our own planetary deities. The former belong to the most occult portion of Cosmogogenesis, which cannot be given here. Whether the Adepts (even the highest) know this angelic order in the completeness of its triple degrees, or only the lower one connected with the records of our world, is something which the writer is unprepared to say, and she would incline rather to the latter supposition. Of its highest grade one thing only is taught: the Lipika are connected with Karma -- being its direct Recorders.**

[[Footnote(s)]] -----

* The Jews, save the Kabalists, having no names for East, West, South, and North, expressed the idea by words signifying before, behind, right and left, and very often confounded the terms exoterically, thus making the blinds in the Bible more confused and difficult to interpret. Add to this the fact that out of the forty-seven translators of King James I. of England's Bible "only three understood Hebrew, and of these two died before the Psalms were translated" (Royal Masonic Cyclopaedia), and one may easily understand what reliance can be placed on the English version of the Bible. In this work the Douay Roman Catholic version is generally followed.

** The Symbol for Sacred and Secret Knowledge was universally in antiquity, a Tree, by which a Scripture or a Record was also meant. Hence the word Lipika, the [[Footnote continued on next page]]

[[Vol. 1, Page]] 129 THE LIPIKA.

STANZA V. -- Continued.

6. THE LIPIKA CIRCUMSCRIBE THE TRIANGLE, THE FIRST ONE (the vertical line or the figure 1.), THE CUBE, THE SECOND ONE, AND THE PENTACLE WITHIN THE EGG (circle) (a). IT IS THE RING CALLED "PASS NOT," FOR THOSE WHO DESCEND AND ASCEND (as also for those) WHO, DURING THE KALPA, ARE PROGRESSING TOWARD THE GREAT DAY "BE WITH US" (b). . . . THUS WERE FORMED THE ARUPA AND THE RUPA (the Formless World and the World of Forms); FROM ONE LIGHT SEVEN LIGHTS; FROM EACH OF THE SEVEN SEVEN TIMES SEVEN LIGHTS. THE "WHEELS" WATCH THE RING.

The Stanza proceeds with a minute classification of the Orders of Angelic Hierarchy. From the group of Four and Seven emanates the "mind-born" group of Ten, of Twelve, of Twenty-one, etc., all these divided again into sub-groups of septenaries, novenaries, duodecimals, and so on, until the mind is lost in this endless enumeration of celestial hosts and Beings, each having its distinct task in the ruling of the visible Kosmos during its existence.

(a) The esoteric meaning of the first sentence of the Sloka is, that those who have been called Lipikas, the Recorders of the Karmic ledger, make an impassible barrier between the personal EGO and the impersonal SELF, the Noumenon and Parent-Source of the former. Hence the allegory. They circumscribe the manifested world of matter within the RING "Pass-Not." This world is the symbol (objective) of the ONE divided into the many, on the planes of Illusion, of Adi (the "First") or of Eka (the "One"); and this One is the collective aggregate, or totality, of the principal Creators or Architects of this visible universe. In Hebrew Occultism their name is both Achath, feminine, "One," and Achod, "One" again, but masculine. The monotheists have taken (and are still taking) advantage of the profound esotericism of the Kabala to apply the name by which the One Supreme Essence is known to ITS manifestation, the Sephiroth-Elohim, and call it Jehovah. But this is

[[Footnote(s)]] -----

[[Footnote continued from previous page]] "writers" or scribes; the "Dragons," symbols of wisdom, who guard the Trees of Knowledge; the "golden" apple Tree of the Hesperides; the "Luxuriant Trees" and vegetation of Mount Meru guarded by a Serpent. Juno giving to Jupiter, on her marriage with him, a Tree with golden fruit is another form of Eve offering Adam the apple from the Tree of Knowledge.

[[Vol. 1, Page]] 130 THE SECRET DOCTRINE.

quite arbitrary and against all reason and logic, as the term Elohim is a plural noun, identical with the plural word Chiim, often compounded with the Elohim.* Moreover, in Occult metaphysics there are, properly speaking, two "ONES" -- the One on the unreachable plane of Absoluteness and Infinity, on which no speculation is possible, and the Second "One" on the plane of Emanations. The former can neither emanate nor be divided, as it is eternal, absolute, and immutable. The Second, being, so to speak, the reflection of the first One (for it is the Logos, or Eswara, in the Universe of Illusion), can do all this.** It emanates from itself - as the upper Sephiroth Triad emanates the lower seven Sephiroth -- the seven Rays or Dhyana Chohans; in other words, the Homogeneous becomes the Heterogeneous, the "Protyle" differentiates into the Elements. But these, unless they return into their primal Element, can never cross beyond the Laya, or zero-point.

Hence the allegory. The Lipika separate the world (or plane) of pure spirit from that of Matter. Those who "descend and ascend" -- the incarnating Monads, and men striving towards purification and "ascending," but still not having quite reached the goal -- may cross the "circle of the Pass-Not," only on the day "Be-With-Us"; that day when man, freeing himself from the trammels of ignorance, and recog-

[[Footnote(s)]] -----

* The sentence in the Sepher Jezirah and elsewhere: "Achath-Ruach-Elohim-Chiim" denotes the Elohim as androgynous at best, the feminine element almost predominating, as it would read: "ONE is She the Spirit of the Elohim of Life." As said above, Echath (or Achath) is feminine, and Echod (or Achod) masculine, both meaning ONE.

** This metaphysical tenet can hardly be better described than Mr. Subba Row's in "Bhagavadgita" lectures: "Mulaprakriti (the veil of Parabrahmam) acts as the one energy through the Logos (or 'Eswara'). Now Parabrahmam, is the one essence from which starts into existence a centre of energy, which I shall for the present call the Logos. . . . It is called the Verbum . . . by the Christians, and it is the divine Christos who is eternal in the bosom of his father. It is called Avalokiteshwara by the Buddhists. . . . In almost every doctrine, they have formulated the existence of a centre of spiritual energy which is unborn and eternal, and which exists in the bosom of Parabrahmam at the time of Pralaya, and starts as a centre of conscious energy at the time of Cosmic activity. . . ." For, as the lecturer premised by saying, Parabrahmam is not this or that, it is not even consciousness, as it cannot be related to matter or anything conditioned. It is not Ego nor is it Non-ego, not even Atma, but verily the one source of all manifestations and modes of existence.

[[Vol. 1, Page]] 131 THE SIDEREAL BOOK OF LIFE.

nising fully the non-separateness of the Ego within his personality -- erroneously regarded as his own -- from the UNIVERSAL EGO (Anima Supra-Mundi), merges thereby into the One Essence to become not only one "with us" (the manifested universal lives which are "ONE" LIFE), but that very life itself.

Astronomically, the "Ring PASS-NOT" that the Lipika trace around the Triangle, the First One, the Cube, the Second One, and the Pentacle to circumscribe these figures, is thus shown to contain the symbol of 31415 again, or the coefficient constantly used in mathematical tables (the value of, pi), the geometrical figures standing here for numerical figures. According to the general philosophical teachings, this ring is beyond the region of what are called nebulae in astronomy. But this is an erroneous conception as that of the topography and the descriptions, given in Puranic and other exoteric Scriptures, about the 1008 worlds of the Devaloka worlds and firmaments. There are worlds, of course, in the esoteric as well as in the profane scientific teachings, at such incalculable distances that the light of the nearest of them which has just reached our modern Chaldees, had left its luminary long before the day on which the words "Let there be Light" were pronounced; but these are no worlds on the Devaloka plane, but in our Kosmos.

The chemist goes to the laya or zero point of the plane of matter with which he deals, and then stops short. The physicist or the astronomer counts by billions of miles beyond the nebulae, and then they also stop short; the semi-initiated Occultist will represent this laya-point to himself as existing on some plane which, if not physical, is still conceivable to the human intellect. But the full Initiate knows that the ring "Pass-Not" is neither a locality nor can it be measured by distance, but that it exists in the absoluteness of infinity. In this "Infinity" of the full Initiate there is neither height, breadth nor thickness, but all is fathomless profundity, reaching down from the physical to the "para-para-metaphysical." In using the word "down," essential depth -- "nowhere and everywhere" -- is meant, not depth of physical matter.

If one searches carefully through the exoteric and grossly anthropomorphic allegories of popular religions, even in these the doctrine embodied in the circle of "Pass-Not" thus guarded by the Lipika, may be dimly perceived. Thus one finds it even in the teachings of

[[Vol. 1, Page]] 132 THE SECRET DOCTRINE.

the Vedantin sect of the Visishtadwaita, the most tenaciously anthropomorphic in all India. For we read of the released soul that:--

After reaching Moksha (a state of bliss meaning "release from Bandha" or bondage), bliss is enjoyed by it in a place called PARAMAPADHA, which place is not material, but made of Suddasatwa (the essence, of which the body of Iswara -- "the Lord" -- is formed). There, Muktas or Jivatmas (Monads) who have attained Moksha, are never again subject to the qualities of either matter or Karma. "But if they choose, for the sake of doing good to the world, they may incarnate on Earth."** The way to Paramapadha, or the immaterial worlds, from this world, is called Devayana. When a person has attained Moksha and the body dies:--

"The Jiva (Soul) goes with Sukshma Sarira** from the heart of the body, to the Brahmarandra in the crown of the head, traversing Sushumna, a nerve connecting the heart with the Brahmarandra. The Jiva breaks through the Brahmarandra and goes to the region of the Sun (Suryamandala) through the solar Rays. Then it goes, through a dark spot in the Sun, to Paramapadha. The Jiva is directed on its way by the Supreme Wisdom acquired by Yoga.*** The Jiva thus proceeds to Paramapadha by the aid of Athivahikas (bearers in transit), known by the names of Archi-Ahas . . . Aditya, Prajapati, etc. The Archis here mentioned are certain pure Souls, etc., etc." (Visishtadwaita Catechism, by Pundit Bhashyacharya, F.T.S.)

No Spirit except the "Recorders" (Lipika) has ever crossed its forbidden line, nor will any do so until the day of the next Pralaya, for it is the boundary that separates the finite -- however infinite in man's sight -- from the truly INFINITE. The Spirits referred to, therefore, as those who "ascend and descend" are the "Hosts" of what we loosely call "celestial Beings." But they are, in fact, nothing of the kind.

[[Footnote(s)]] -----

* These voluntary re-incarnations are referred to in our Doctrine as Nirmanakayas (the surviving spiritual principles of men).

** Sukshma-sarira, "dream-like" illusive body, with which are clothed the inferior Dhyanis of the celestial Hierarchy.

*** Compare this esoteric tenet with the Gnostic doctrine found in "Pistis-Sophia" (Knowledge = Wisdom), in which treatise Sophia Achamoth is shown lost in the waters of Chaos (matter), on her way to Supreme Light, and Christos delivering and helping her on the right Path. Note well, "Christos" with the Gnostics meant the impersonal principal, the Atman of the Universe, and the Atma within every man's soul -- not Jesus; though in the old Coptic MSS. in the British Museum "Christos" is almost constantly replaced by "Jesus."

[[Vol. 1, Page]] 133 THE GOD OF MAN AND THE GOD OF THE ANT.

They are Entities of the higher worlds in the hierarchy of Being, so immeasurably high that, to us, they must appear as Gods, and collectively -- GOD. But so we, mortal men, must appear to the ant, which reasons on the scale of its special capacities. The ant may also, for all we know, see the avenging finger of a personal God in the hand of the urchin who, in one moment, under the impulse of mischief, destroys its anthill, the labour of many weeks -- long years in the chronology of insects. The ant, feeling it acutely, and attributing the undeserved calamity to a combination of Providence and sin, may also, like man, see in it the result of the sin of its first parent. Who knows and who can affirm or deny? The refusal to admit in the whole Solar system of any other reasonable and intellectual beings on the human plane, than ourselves, is the greatest conceit of our age. All that science has a right to affirm, is that there are no invisible Intelligences living under the same conditions as we do. It cannot deny point-blank the possibility of there being worlds within worlds, under totally different conditions to those that constitute the nature of our world; nor can it deny that there may be a certain limited communication* between some of those worlds and our own. To the highest, we are taught, belong the seven orders of the purely divine Spirits; to the six lower ones belong hierarchies that can occasionally be seen and heard by men, and who do communicate with their progeny of the Earth; which progeny is indissolubly linked with them, each principle in man having its direct source in the nature of those great Beings, who furnish us with the respective invisible elements in us. Physical Science is welcome to speculate upon the physiological mechanism of living beings, and to continue her fruitless efforts in trying to resolve our feelings, our sensations, mental and spiritual, into functions of their inorganic vehicles. Nevertheless, all that will ever be accomplished in this direction has already been done, and Science will go no farther.

[[Footnote(s)]] -----

* The greatest philosopher of European birth, Imanuel Kant, assures us that such a communication is in no way improbable. "I confess I am much disposed to assert the existence of Immaterial natures in the world, and to place my own soul in the class of these beings. It will hereafter, I know not where, or when, yet be proved that the human soul stands even in this life in indissoluble connection with all immaterial natures in the spirit-world, that it reciprocally acts upon these and receives impressions from them." (Traume eines Geistersehers, quoted by C. C. Massey, in his preface to Von Hartmann's "Spiritismus.")

[[Vol. 1, Page]] 134 THE SECRET DOCTRINE.

She is before a dead wall, on the face of which she traces, as she imagines, great physiological and psychic discoveries, but every one of which will be shown later on to be no better than the cobwebs spun by her scientific fancies and illusions. The tissues of our objective framework alone are subservient to the analysis and researches of physiological science.* The six higher principles in them will evade for ever the hand that is guided by an animus that purposely ignores and rejects the Occult Sciences.

The "Great Day of BE-WITH-US," then, is an expression the only merit of which lies in its literal translation. Its significance is not so easily revealed to a public, unacquainted with the mystic tenets of Occultism, or rather of Esoteric Wisdom or "Budhism." It is an expression peculiar to the latter, and as hazy for the profane as that of the Egyptians who called the same the "Day of COME-TO-US,"** which

[[Footnote(s)]] -----

* E.g., all that modern physiological research in connection with psychological problems has, and owing to the nature of things, could have shown, is, that every thought, sensation, and emotion is attended with a re-marshalling of the molecules of certain nerves. The inference drawn by scientists of the type of Buchner, Vogt, and others, that thought is molecular motion, necessitates a complete abstraction being made of the fact of our subjective consciousness.

** See "Le Livre des Morts," by Paul Pierret; "Le Jour de 'Viens a nous' . . . c'est le jour ou Osiris a dit au Soleil: Viens! Je le vois rencontrant le Soleil dans l'Amenti." (Chap. xvii., p. 61.) The Sun here stands for the Logos (or Christos, or Horus) as central Essence synthetically, and as a diffused essence of radiated Entities, different in substance, but not in essence. As expressed by the Bhagavadgita lecturer, "it must not be supposed that the Logos is but a single centre of energy manifested from Parabrahmam; there are innumerable other centres . . . and their number is almost infinite in the bosom of Parabrahmam." Hence the expressions, "The Day of Come to us" and "The Day of Be with us," etc. Just as the square is the Symbol of the Four sacred Forces or Powers -- Tetraktis - - so the Circle shows the boundary within the Infinity that no man can cross, even in spirit, nor Deva nor Dhyani Chohan. The Spirits of those who "descend and ascend" during the course of cyclic evolution shall cross the "iron-bound world" only on the day of their

approach to the threshold of Paranirvana. If they reach it -- they will rest in the bosom of Parabrahmam, or the "Unknown Darkness," which shall then become for all of them Light -- during the whole period of Mahapralaya, the "Great NIGHT," namely, 311,040,000,000,000 years of absorption in Brahm. The day of "Be-With-Us" is this period of rest or Paranirvana. See also for other data on this peculiar expression, the day of "Come-To-Us," The Funerary Ritual of the Egyptians, by Viscount de Rouge. It corresponds to the Day of the Last Judgment of the Christians, which has been sorely materialised by their religion.

[[Vol. 1, Page]] 135 THE SOUL'S PILGRIMAGE.

is identical with the former, though the verb "be" in this sense, might be still better replaced with either of the two words "Remain" or "Rest-with-us," as it refers to that long period of REST which is called Paranirvana. As in the exoteric interpretation of the Egyptian rites the soul of every defunct person -- from the Hierophant down to the sacred bull Apis -- became an Osiris, was Osirified, though the Secret Doctrine had always taught, that the real Osirification was the lot of every Monad only after 3,000 cycles of Existences; so in the present case. The "Monad," born of the nature and the very Essence of the "Seven" (its highest principle becoming immediately enshrined in the Seventh Cosmic Element), has to perform its septenary gyration throughout the Cycle of Being and forms, from the highest to the lowest; and then again from man to God. At the threshold of Paranirvana it reassumes its primeval Essence and becomes the Absolute once more.

[[Vol. 1, Page]] 136 THE SECRET DOCTRINE.

STANZA VI.

1. BY THE POWER OF THE MOTHER OF MERCY AND KNOWLEDGE (a), KWAN-YIN,* THE "TRIPLE" OF KWAN-SHAI-YIN, RESIDING IN KWAN-YIN-TIEN (b), FOHAT, THE BREATH OF THEIR PROGENY, THE SON OF THE SONS, HAVING CALLED FORTH FROM THE LOWER ABYSS (chaos) THE ILLUSIVE FORM OF SIEN-TCHAN (our Universe) AND THE SEVEN ELEMENTS:--

(a.) The Mother of Mercy and Knowledge is called "the triple" of Kwan-Shai-Yin because in her correlations, metaphysical and cosmical, she is the "Mother, the Wife and the Daughter" of the Logos, just as in the later theological translations she became "the Father, Son and (the female) Holy Ghost" -- the Sakti or Energy -- the Essence of the three. Thus in the Esotericism of the Vedantins, Daiviprakriti, the Light manifested through Esvara, the Logos,** is at one and the same time the Mother and also the Daughter of the Logos or Verbum of Parabrahmam; while in that of the trans-Himalayan teachings it is -- in the hierarchy of allegorical and metaphysical theogony -- "the MOTHER" or abstract, ideal matter, Mulaprakriti, the Root of Nature; -- from the metaphysical standpoint, a correlation of Adi-Bhuta, manifested in the Logos, Avalokiteshwara; -- and from the purely occult and

[[Footnote(s)]] -----

* This stanza is translated from the Chinese text, and the names, as the equivalents of the original terms, are preserved. The real esoteric nomenclature cannot be given, as it would only confuse the reader. The Brahmanical doctrine has no equivalent to these. Vach seems, in many an aspect, to approach the Chinese Kwan-yin, but there is no regular worship of Vach under this name in India, as there is of Kwan-Yin in China. No exoteric religious system has ever adopted a female Creator, and thus woman was regarded and treated, from the first dawn of popular religions, as inferior to man. It is only in China and Egypt that Kwan-Yin and Isis were placed on a par with the male gods. Esotericism ignores both sexes. Its highest Deity is sexless as it is formless, neither Father nor Mother; and its first manifested beings, celestial and terrestrial alike, become only gradually androgynous and finally separate into distinct sexes.

** The "Theosophist" of February, 1887, p. 305, first lecture on the Bhagavadgita.

[[Vol. 1, Page]] 137 THE MYSTERY OF THE FEMALE LOGOS.

Cosmical, Fohat,* the "Son of the Son," the androgynous energy resulting from this "Light of the Logos," and which manifests in the plane of the objective Universe as the hidden, as much as the revealed, Electricity -- which is LIFE.

(b) Kwan-Yin-Tien means the "melodious heaven of Sound," the abode of Kwan-Yin, or the "Divine Voice" literally. This "Voice" is a synonym of the Verbum or the Word: "Speech," as the expression of thought. Thus may be traced the connection with, and even the origin of the Hebrew Bath-Kol, the "daughter of the Divine Voice," or Verbum, or the male and female Logos, the "Heavenly Man" or Adam Kadmon, who is at the same time Sefira. The latter was surely anticipated by the Hindu Vach, the goddess of Speech, or of the Word. For Vach -- the daughter and the female portion, as is stated, of Brahma, one "generated by the gods" -- is, in company with Kwan-Yin, with Isis (also the daughter, wife and sister of Osiris) and other goddesses, the female Logos, so to speak, the goddess of the active forces in Nature, the Word, Voice or Sound, and Speech. If Kwan-Yin is the "melodious Voice," so is Vach; "the melodious cow who milked forth sustenance and water" (the female principle) -- "who yields us nourishment and sustenance," as Mother-Nature. She is associated in the work of creation with the Prajapati. She is male and female ad libitum, as Eve is with Adam. And she is a form of Aditi -- the principle higher than Ether -- in Akasa, the synthesis of all the forces in Nature; thus Vach and Kwan-Yin are both the magic potency of Occult sound in Nature and Ether -- which "Voice" calls forth Sien-Tchan, the illusive form of the Universe out of Chaos and the Seven Elements.

Thus in Manu Brahma (the Logos also) is shown dividing his body into two parts, male and female, and creating in the latter, who is Vach, Viraj, who is himself, or Brahma again -- it is in this way a learned Vedantin Occultist speaks of that "goddess," explaining the reason why Eswara (or Brahma) is called Verbum or Logos; why in fact it is called Sabda Brahman:--

[[Footnote(s)]] -----

* Says the lecturer on p. 306: "Evolution is commenced by the intellectual energy of the Logos, not merely on account of the potentialities locked up in Mulaprakriti. This light of the Logos is the link . . . between objective matter and the subjective thought of Eswara (or Logos). It is called in several Buddhist books Fohat. It is the one instrument with which the Logos works."

[[Vol. 1, Page]] 138 THE SECRET DOCTRINE.

"The explanation I am going to give you will appear thoroughly mystical; but if mystical, it has a tremendous significance when properly understood. Our old writers said that Vach is of four kinds (see Rig Veda and the Upanishads). Vaikhari-Vach is what we utter. Every kind of Vaikhari-Vach exists in its Madhyama, further in its Pasyanti, and ultimately in its Para form.* The reason why this Pranava is called Vach is this, that the four principles of the great Kosmos correspond to these four forms of Vach. Now the whole manifested solar System exists in its Sukshma form in the light or energy of the Logos, because its energy is caught up and transferred to Cosmic matter. . . . The whole Kosmos in its objective form is Vaikhari-Vach, the light of the Logos is the Madhyama form, and the Logos itself the Pasyanti form, and Parabrahm the Para form or aspect of that Vach. It is by the light of this explanation that we must try to understand certain statements made by various philosophers to the effect that the manifested Kosmos is the Verbum manifested as Kosmos" (see Lecture on the Bhagavadgita, referred to above).

STANZA VI. -- (Continued.)

2. THE SWIFT AND THE RADIANT ONE PRODUCES THE SEVEN Layu** (a) CENTRES, AGAINST WHICH NONE WILL PREVAIL TO THE GREAT DAY "BE WITH US" -- AND SEATS THE UNIVERSE ON THESE ETERNAL FOUNDATIONS, SURROUNDING SIEN-TCHAN WITH THE ELEMENTARY GERMS (b).

(a.) The seven Layu centres are the seven Zero points, using the term Zero in the same sense that Chemists do, to indicate a point at which, in Esotericism, the scale of reckoning of differentiation begins. From the Centres -- beyond which Esoteric philosophy allows us to perceive the dim metaphysical outlines of the "Seven Sons" of Life and Light, the Seven Logoi of the Hermetic and all other philosophers -- begins

[[Footnote(s)]] -----

* Madhya is said of something whose commencement and end are unknown, and Para means infinite. These expressions all relate to infinitude and to division of time.

** From the Sanskrit Laya, the point of matter where every differentiation has ceased.

[[Vol. 1, Page]] 139 FROM NO-NUMBER TO NUMBER SEVEN.

the differentiation of the elements which enter into the constitution of our Solar System. It has often been asked what was the exact definition of Fohat and his powers and functions, as he seems to exercise those of a Personal God as understood in the popular religions. The answer has just been given in the comment on Stanza V. As well said in the Bhagavadgita Lectures, "The whole Kosmos must necessarily exist in the One Source of energy from which this light (Fohat) emanates." Whether we count the principles in Kosmos and man as seven or only as four, the forces of, and in, physical Nature are Seven; and it is stated by the same authority that "Pragna, or the capacity of perception, exists in seven different aspects corresponding to the seven conditions of matter" (Personal and impersonal God). For, "just as a human being is composed of seven principles, differentiated matter in the Solar System exists in seven different conditions" (ibid). So does Fohat.* He is One and Seven, and on the Cosmic plane is behind all such manifestations as light, heat, sound, adhesion, etc., etc., and is the "spirit" of ELECTRICITY, which is the LIFE of the Universe. As an abstraction, we call it the ONE LIFE; as an objective and evident Reality, we speak of a septenary scale of manifestation, which begins at the upper rung with the One Unknowable CAUSALITY, and ends as Omnipresent Mind and Life immanent in every atom of Matter. Thus, while science speaks of its evolution through brute matter, blind force, and senseless motion, the Occultists point to intelligent LAW and sentient LIFE, and add that Fohat is the guiding Spirit of all this. Yet he is no personal god at all, but the emanation of those other Powers behind him whom the Christians call the "Messengers" of their God (who is in reality only the Elohim, or rather one of the Seven Creators called Elohim), and we, the "Messenger of the primordial Sons of Life and Light."

(b.) The "Elementary Germs" with which he fills Sien-Tchan (the "Universe") from Tien-Sin (the "Heaven of Mind," literally, or that which is absolute) are the Atoms of Science and the Monads of Leibnitz.

[[Footnote(s)]] -----

* "Fohat" has several meanings. (See Stanza V., Commentary et infra). He is called the "Builder of the Builders," the Force that he personifies having formed our Septenary chain.

[[Vol. 1, Page]] 140 THE SECRET DOCTRINE.

STANZA VI. -- Continued.

3. OF THE SEVEN (elements) -- FIRST ONE MANIFESTED, SIX CONCEALED; TWO MANIFESTED -- FIVE CONCEALED; THREE MANIFESTED -- FOUR CONCEALED; FOUR PRODUCED -- THREE HIDDEN; FOUR AND ONE TSAN (fraction) REVEALED -- TWO AND ONE HALF CONCEALED; SIX TO BE MANIFESTED -- ONE LAID ASIDE (a). LASTLY, SEVEN SMALL WHEELS REVOLVING; ONE GIVING BIRTH TO THE OTHER (b).

(a.) Although these Stanzas refer to the whole Universe after a Mahapralaya (universal destruction), yet this sentence, as any student of Occultism may see, refers also by analogy to the evolution and final formation of the primitive (though compound) Seven Elements on our Earth. Of these, four elements are now fully manifested, while the fifth -- Ether -- is only partially so, as we are hardly in the second half of the Fourth Round, and consequently the fifth Element will manifest fully only in the Fifth Round. The Worlds, including our own, were of course, as germs, primarily evolved from the ONE Element in its second stage ("Father-Mother," the differentiated World's Soul, not what is termed the "Over-Soul" by Emerson), whether we call it, with modern Science, Cosmic dust and Fire Mist, or with Occultism -- Akasa, Jivatma, divine Astral Light, or the "Soul of the World." But this first stage of Evolution was in due course of time followed by the next. No world, as no heavenly body, could be constructed on the objective plane, had not the Elements been sufficiently differentiated already from their primeval Ilus, resting in Laya. The latter term is a synonym of Nirvana. It is, in fact, the Nirvanic dissociation of all substances, merged after a life-cycle into the latency of their primary conditions. It is the luminous but bodiless shadow of the matter that was, the realm of negativeness -- wherein lie latent during their period of rest the active Forces of the Universe. Now, speaking of Elements, it is made the standing reproach of the Ancients, that they "supposed their Elements simple and undecomposable."* Once more this is an unwarrantable state-

[[Footnote(s)]] -----

* The shades of our pre-historical ancestors might return the compliment to modern physicists, now that new discoveries in chemistry have led Mr. Crookes, F.R.S., to admit that Science is yet a thousand leagues from the knowledge of the compound nature of the simplest molecule. From him we learn that such a thing as a really simple [[Footnote continued on next page]]

[[Vol. 1, Page]] 141 WERE THE ANCIENTS IGNORANT OF THE PHYSICAL SCIENCES?

ment; as, at any rate, their initiated philosophers can hardly come under such an imputation, since it is they who have invented allegories and religious myths from the beginning. Had they been ignorant of the Heterogeneity of their Elements they would have had no personifications of Fire, Air, Water, Earth, and AEther; their Cosmic gods and goddesses would never have been blessed with such posterity, with so many sons and daughters, elements born from and within each respective Element. Alchemy and occult phenomena would have been a delusion and a snare, even in theory, had the Ancients been ignorant of the potentialities and correlative functions and attributes of every element that enters into the composition of Air, Water, Earth, and even Fire -- the latter a terra incognita to this day to modern Science, which is obliged to call it Motion, evolution of light and heat, state of ignition, -- defining it by its outward aspects in short, and remaining ignorant of its nature. But that which

[[Footnote(s)]] -----

[[Footnote continued from previous page]] molecule entirely homogeneous is terra incognita in chemistry. "Where are we to draw the line?" he asks; "is there no way out of this perplexity? Must we either make the elementary examinations so stiff that only 60 or 70 candidates can pass, or must we open the examination doors so wide that the number of admissions is limited only by the number of applicants?" And then the learned gentleman gives striking instances. He says: "Take the case of yttrium. It has its definite atomic weight, it behaved in every respect as a simple body, an element, to which we might indeed add, but from which we could not take away. Yet this yttrium, this supposed homogeneous whole, on being submitted to a certain method of fractionation, is resolved into portions not absolutely identical among themselves, and exhibiting a gradation of properties. Or take the case of didymium. Here was a body betraying all the recognised characters of an element. It had been separated with much difficulty from other bodies which approximated closely to it in their properties, and during this crucial process it had undergone very severe treatment and very close scrutiny. But then came another chemist, who, treating this assumed homogeneous body by a peculiar process of fractionation, resolved it into the two bodies praseodymium and neodymium, between which certain distinctions are perceptible. Further, we even now have no certainty that neodymium and praseodymium are simple bodies. On the contrary, they likewise exhibit symptoms of splitting up. Now, if one supposed element on proper treatment is thus found to comprise dissimilar molecules, we are surely warranted in asking whether similar results might not be obtained in other elements, perhaps in all elements, if treated in the right way. We may even ask where the process of sorting-out is to stop -- a process which of course pre-supposes variations between the individual molecules of each species. And in these successive separations we naturally find bodies approaching more and more closely to each other." (Presidential address before the Royal Society of Chemists, March, 1888.)

[[Vol. 1, Page]] 142 THE SECRET DOCTRINE.

modern Science seems to fail to perceive is that, differentiated as may have been those simple chemical atoms -- which archaic philosophy called "the creators of their respective Parents," fathers, brothers, husbands of their mothers, and those mothers the daughters of their own sons, like Aditi and Daksha, for example -- differentiated as these elements were in the beginning, still, they were not the compound bodies known to science, as they are now. Neither Water, Air, Earth (synonym for solids generally) existed in their present form, representing the three states of matter alone recognised by Science; for all these are the productions already recombined by the atmospheres of globes completely formed -- even to fire -- so that in the first periods of the earth's formation they were something quite sui generis. Now that the conditions and laws ruling our solar system are fully developed; and that the atmosphere of our earth, as of every other globe, has become, so to say, a crucible of its own, Occult Science teaches that there is a perpetual exchange taking place in space of molecules, or of atoms rather, correlating, and thus changing their combining equivalents on every planet. Some men of Science, and those among the greatest physicists and chemists, begin to suspect this fact, which has been known for ages to the Occultists. The spectroscope only shows the probable similarity (on external evidence) of terrestrial and sidereal substance; it is unable to go any farther, or to show whether atoms gravitate towards one another in the same way and under the same conditions as they are supposed to do on our planet, physically and chemically. The scale of temperature, from the highest degree to the lowest that can be conceived of, may be imagined to be one and the same in and for the whole Universe; nevertheless, its properties, other than those of dissociation and reassociation, differ on every planet; and thus atoms enter into new forms of existence, undreamt of, and incognizable to, physical Science. As already expressed in "Five Years of Theosophy," the essence of Cometary matter, for instance, "is totally different from any of the chemical or physical characteristics with which the greatest chemists and physicists of the earth are acquainted" (p. 242). And even that matter, during rapid passage through our atmosphere, undergoes a certain change in its nature. Thus not alone the elements of our planets, but even those of all its sisters in the Solar System, differ as widely from each other in their combinations, as from the Cosmic elements beyond our

[[Vol. 1, Page]] 143 THE SLEEP OF THE ETERNAL MOTHER.

Solar limits.* Therefore, they cannot be taken as a standard for comparison with the same in other worlds.** Enshrined in their virgin, pristine state within the bosom of the Eternal Mother, every atom born beyond the threshold of her realm is doomed to incessant differentiation. "The Mother sleeps, yet is ever breathing." And every breath sends out into the plane of manifestation her Protean products, which, carried on by the wave of the efflux, are scattered by Fohat, and driven toward and beyond this or another planetary atmosphere. Once caught by the latter, the atom is lost; its pristine purity is gone for ever, unless Fate dissociates it by leading it to "a current of EFFLUX" (an occult term meaning quite a different process from that which the ordinary term implies); when it may be carried once more to the borderland where it had perished, and taking its flight, not into Space above but into Space within, it will be brought under a state of differential equilibrium and happily re-absorbed. Were a truly learned Occultist-chemist to write the "Life and Adventures of an Atom" he would secure thereby the eternal scorn of the modern chemist, perchance also his subsequent

[[Footnote(s)]] -----

* This is again corroborated by the same man of science in the same lecture, who quotes Clerk Maxwell, saying "that the elements are not absolutely homogeneous." He writes: "It is difficult to conceive of selection and elimination of intermediate varieties, for where can these eliminated molecules have gone to, if, as we have reason to believe, the hydrogen, &c. of the fixed stars is composed of molecules identical in all respects with our own." And he adds: "In the first place we may call in question this absolute molecular identity, since we have hitherto had no means for coming to a conclusion save the means furnished by the spectroscope, while it is admitted that, for accurately comparing and discriminating the spectra of two bodies, they should be examined under identical states of temperature, pressure, and all other physical conditions. We have certainly seen, in the spectrum of the sun, rays which we have not been able to identify."

** "Each world has its Fohat, who is omnipresent in his own sphere of action. But there are as many Fohats as there are worlds, each varying in power and degree of manifestations. The individual Fohats make one Universal, Collective Fohat -- the aspect-Entity of the one absolute Non-Entity, which is absolute Be-Ness, 'SAT.' "Millions and billions of worlds are produced at every Manvantara" -- it is said. Therefore there must be many Fohats, whom we consider as conscious and intelligent Forces. This, no doubt, to the disgust of scientific minds. Nevertheless the Occultists, who have good reasons for it, consider all the forces of Nature as veritable, though supersensuous, states of Matter; and as possible objects of perception to Beings endowed with the requisite senses.

[[Vol. 1, Page]] 144 THE SECRET DOCTRINE.

gratitude.* However it may be, "The Breath of the Father-Mother issues cold and radiant and gets hot and corrupt, to cool once more, and be purified in the eternal bosom of inner Space," says the Commentary. Man absorbs cold pure air on the mountain-top, and throws it out impure, hot and transformed. Thus -- the higher atmosphere being the mouth, and the lower one the lungs of every globe -- the man of our planet breathes only the refuse of "Mother"; therefore, "he is doomed to die on it."**

(b) The process referred to as "the small wheels giving birth, one to the other," takes place in the sixth region from above, and on the plane of the most material world of all in the manifested Kosmos -- our terrestrial plane. These "Seven Wheels" are our planetary chain (see Commentary Nos. 5 and 6). By "Wheels" the various spheres and centres of forces are generally meant; but in this case they refer to our septenary ring.

STANZA VI. -- Continued.

4. HE BUILDS THEM IN THE LIKENESS OF OLDER WHEELS (worlds), PLACING THEM ON THE IMPERISHABLE CENTRES (a).

HOW DOES FOHAT BUILD THEM? HE COLLECTS THE FIERY DUST. HE MAKES BALLS OF FIRE, RUNS THROUGH THEM AND ROUND THEM, INFUSING LIFE THEREINTO; THEN SETS THEM INTO MOTION, SOME ONE, SOME THE OTHER WAY. THEY ARE COLD -- HE MAKES THEM HOT. THEY ARE DRY -- HE MAKES THEM MOIST. THEY SHINE -- HE FANS AND COOLS THEM (b).

THUS ACTS FOHAT FROM ONE Twilight TO THE OTHER DURING SEVEN ETERNITIES.***

(a) The Worlds are built "in the likeness of older Wheels" -- i.e., those that existed in preceding Manvantaras and went into Pralaya,

[[Footnote(s)]] -----

* Indeed, if such an imaginary Chemist happened to be intuitional, and would for a moment step out of the habitual groove of strictly "Exact Science," as the Alchemists of old did, he might be repaid for his audacity.

** He who would allotropise sluggish oxygen into Ozone to a measure of alchemical activity, reducing it to its pure essence (for which there are means), would discover thereby a substitute for an "Elixir of Life" and prepare it for practical use.

*** A period of 311,040,000,000,000 years, according to Brahminical calculations.

[[Vol. 1, Page]] 145 THE COSMIC PLANE, AN ILLUSION.

because the LAW for the birth, growth, and decay of everything in Kosmos, from the Sun to the glow-worm in the grass, is ONE. It is an everlasting work of perfection with every new appearance, but the Substance-Matter and Forces are all one and the same. But this LAW acts on every planet through minor and varying laws. The "imperishable Laya Centres" have a great importance, and their meaning must be fully understood if we would have a clear conception of the Archaic Cosmogony, whose theories have now passed into Occultism. At present, one thing may be stated. The worlds are built neither upon, nor over, nor in the Laya centres, the zero-point being a condition, not any mathematical point.

(b) Bear in mind that Fohat, the constructive Force of Cosmic Electricity, is said, metaphorically, to have sprung like Rudra from Brahma "from the brain of the Father and the bosom of the Mother," and then to have metamorphosed himself into a male and a female, i.e., polarity, into positive and negative electricity. He has seven sons who are his brothers; and Fohat is forced to be born time after time whenever any two of his son-brothers indulge in too close contact -- whether an embrace or a fight. To avoid this, he binds together and unites those of unlike nature and separates those of similar temperaments. This, of course, relates, as any one can see, to electricity generated by friction and to the law involving attraction between two objects of unlike, and repulsion between those of like polarity. The Seven "Sons-brothers," however, represent and personify the seven forms of Cosmic magnetism called in practical Occultism the "Seven Radicals," whose co-operative and active progeny are, among other energies, Electricity, Magnetism, Sound, Light, Heat, Cohesion, etc. Occult Science defines all these as Super-sensuous effects in their hidden behaviour, and as objective phenomena in the world of senses; the former requiring abnormal faculties to perceive them -- the latter, our ordinary physical senses. They all pertain to, and are the emanations of, still more supersensuous spiritual qualities, not personated by, but belonging to, real and conscious CAUSES. To attempt a description of such ENTITIES would be worse than useless. The reader must bear in mind that, according to our teaching which regards this phenomenal Universe as a great Illusion, the nearer a body is to the UNKNOWN SUBSTANCE, the more it approaches reality, as being removed the farther

[[Vol. 1, Page]] 146 THE SECRET DOCTRINE.

from this world of Maya. Therefore, though the molecular constitution of their bodies is not deducible from their manifestations on this plane of consciousness, they nevertheless (from the standpoint of the adept Occultist) possess a distinctive objective if not material structure, in the relatively noumenal -- as opposed to the phenomenal -- Universe. Men of science may term them Force or Forces generated by matter, or "modes of its motion," if they will; Occultism sees in the effects "Elemental" (forces), and, in the direct causes producing them, intelligent DIVINE Workmen. The intimate connection of those Elementals (guided by the unerring hand of the Rulers) -- their correlation we might call it -- with the elements of pure Matter, results in our terrestrial phenomena, such as light, heat, magnetism, etc., etc. Of course we shall never agree with the American Substantialists* who call every Force and Energy -- whether Light, Heat, Electricity or Cohesion -- an "Entity"; for this would be equivalent to calling the noise produced by the rolling of the wheels of a vehicle an Entity -- thus confusing and identifying that "noise" with the driver outside, and the guiding Master Intelligence within the vehicle. But we certainly give that name to the "drivers" and to these guiding Intelligences -- the ruling Dhyana Chohans, as shown. The "Elementals," the Nature-Forces, are the acting, though invisible, or rather imperceptible, secondary Causes and in themselves the effects of primary Causes behind the Veil of all terrestrial phenomena. Electricity, light, heat, etc., have been aptly termed the "Ghost or Shadow of Matter in Motion," i.e., supersensuous states of matter whose effects only we are able to cognize. To expand, then, the simile given above. The sensation of light is like the sound of the rolling wheels -- a purely phenomenal effect, having no existence outside the observer; the proximate exciting cause of the sensation is comparable to the driver -- a supersensuous state of matter in motion, a Nature-Force or Elemental. But, behind even this, stand -- just as the owner of the carriage directs the driver from within -- the higher and noumenal causes, the Intelligences from whose essence radiate these States of "Mother," generating the countless millions of Elementals or psychic Nature-Spirits, just as every drop of water generates its physical

[[Footnote(s)]] -----

[[Vol. 1, Page]] 147 PRIMORDIAL SUBSTANCE, A REALITY.

infinitesimal Infusoria. (See "Gods, Monads, and Atoms," in Part III.) It is Fohat who guides the transfer of the principles from one planet to the other, from one star to another -- child-star. When a planet dies, its informing principles are transferred to a laya or sleeping centre, with potential but latent energy in it, which is thus awakened into life and begins to form itself into a new sidereal body. (Vide infra, "A Few Theosophical Misconceptions, etc.")

It is most remarkable that, while honestly confessing their entire ignorance of the true Nature of even terrestrial matter -- primordial substance being regarded more as a dream than as a sober reality -- the physicists should set themselves up as judges, nevertheless, of that matter, and claim to know what it is able and is not able to do, in various combinations. Scientists know it (matter) hardly skin-deep, and yet they will dogmatise. It is "a mode of motion" and nothing else. But the force that is inherent in a living person's breath, when blowing a speck of dust from the table, is also, and undeniably, "a mode of motion"; and it is as undeniably not a quality of the matter, or the particles of that speck, and it emanates from the living and thinking Entity that breathed, whether the impulse originated consciously or unconsciously. Indeed, to endow matter -- something of which nothing is known so far -- with an inherent quality called Force, of the nature of which still less is known, is to create a far more serious difficulty than that which lies in the acceptance of the intervention of our "Nature-Spirits" in every natural phenomenon.

The Occultists, who do not say -- if they would express themselves correctly -- that matter, but only the substance or essence of matter, is indestructible and eternal, (i.e., the Root of all, Mulaprakriti): assert that all the so-called Forces of Nature, Electricity, Magnetism, Light, Heat, etc., etc., far from being modes of motion of material particles, are in esse, i.e., in their ultimate constitution, the differentiated aspects of that Universal Motion which is discussed and explained in the first pages of this volume (See Proem). When Fohat is said to produce "Seven Laya Centres," it means that for formative or creative purposes, the GREAT LAW (Theists may call it God) stops, or rather modifies its perpetual motion on seven invisible points within the area of the manifested Universe. "The great Breath digs through Space seven holes into Laya to cause them to circumscribe during Manvantara" (Occult Catechism). We

[[Vol. 1, Page]] 148 THE SECRET DOCTRINE.

have said that Laya is what Science may call the Zero-point or line; the realm of absolute negativeness, or the one real absolute Force, the NOUMENON of the Seventh State of that which we ignorantly call and recognise as "Force"; or again the Noumenon of Undifferentiated Cosmic Substance which is itself an unreachable and unknowable object to finite perception; the root and basis of all states of objectivity and subjectivity too; the neutral axis, not one of the many aspects, but its centre. It may serve to elucidate the meaning if we attempt to imagine a neutral centre -- the dream of those who would discover perpetual motion. A "neutral centre" is, in one aspect, the limiting point of any given set of senses. Thus, imagine two consecutive planes of matter as already formed; each of these corresponding to an appropriate set of perceptive organs. We are forced to admit that between these two planes of matter an incessant circulation takes place; and if we follow the atoms and molecules of (say) the lower in their transformation upwards, these will come to a point where they pass altogether beyond the range of the faculties we are using on the lower plane. In fact, to us the matter of the lower plane there vanishes from our perception into nothing -- or rather it passes on to the higher plane, and the state of matter corresponding to such a point of transition must certainly possess special and not readily discoverable properties. Such "Seven Neutral Centres,"* then, are produced by Fohat, who, when, as Milton has it --

"Fair foundations (are) laid whereon to build . . ."

quickens matter into activity and evolution.

The Primordial Atom (anu) cannot be multiplied either in its pregenetic state, or its primogeneity; therefore it is called "SUM TOTAL," figuratively, of course, as that "SUM TOTAL" is boundless. (See Addendum to this Book.) That which is the abyss of nothingness to the physicist, who knows only the world of visible causes and effects, is the boundless Space of the Divine Plenum to the Occultist. Among many other objections to the doctrine of an endless evolution and re-involution (or re-absorption) of the Kosmos, a process which, according to the Brahminical and Esoteric Doctrine, is without a beginning or an end, the Occultist is told that it cannot be, since "by all the admissions of

[[Footnote(s)]] -----

* Such, we believe, is the name applied by Mr. Keely, of Philadelphia, the inventor of the famous "Motor" -- destined, as his admirers have hoped, to revolutionise the motor power of the world -- to what he again calls the "Ethereic Centres."

[[Vol. 1, Page]] 149 THE MOON IS NOT DEAD, BUT ONLY SLEEPETH.

modern scientific philosophy it is a necessity of Nature to run down." If the tendency of Nature "to run down" is to be considered so forcible an objection to Occult Cosmogony, "How," we may ask, "do your Positivists and Free-thinkers and Scientists account for the phalanx around us of active stellar systems?" They had eternity to "run down" in; why, then, is not the Kosmos a huge inert mass? Even the moon is only hypothetically believed to be a dead planet, "run down," and astronomy does not seem to be acquainted with many such dead planets.* The query is unanswerable. But apart from this it must be noted that the idea of the amount of "transformable energy" in our little system coming to an end is based purely on the fallacious conception of a "white-hot, incandescent Sun" perpetually radiating away his heat without compensation into Space. To this we reply that nature runs down and disappears from the objective plane, only to re-emerge after a time of rest out of the subjective and to reascend once more. Our Kosmos and Nature will run down only to reappear on a more perfect plane after every PRALAYA. The matter of the Eastern philosophers is not the "matter" and Nature of the Western metaphysicians. For what is Matter? And above all, what is our scientific philosophy but that which was so justly and so politely defined by Kant as "the Science of the limits to our Knowledge"? Where have the many attempts made by Science to bind, to connect, and define all the phenomena of organic life by mere physical and chemical manifestations, brought it to? To speculation generally -- mere soap-bubbles, that burst one after the other before the men of Science were permitted to discover real facts. All this would have been avoided, and the progress of knowledge would have proceeded with gigantic strides, had only Science and its philosophy abstained from accepting hypotheses on the mere one-sided Knowledge of their Matter.**

[[Footnote(s)]] -----

* The moon is dead only so far as regards her inner "principles" -- i.e., psychically and spiritually, however absurd the statement may seem. Physically, she is only as a semi-paralysed body may be. She is aptly referred to in Occultism as the "insane mother," the great sidereal lunatic.

** The instance of Uranus and Neptune, whose satellites, four and one respectively, revolved, it was thought, in their orbits from East to West, whereas all the other satellites rotate from West to East, is a very good one, as showing how unreliable are all a priori speculations even when based on the strictest mathematical analysis. The famous hypothesis of the formation of our Solar System out of the nebulous rings, put [[Footnote continued on next page]]

[[Vol. 1, Page]] 150 THE SECRET DOCTRINE.

If no physical intellect is capable of counting the grains of sand covering a few miles of sea-shore; or to fathom the ultimate nature and essence of those grains, palpable and visible on the palm of the naturalist, how can any materialist limit the laws changing the conditions and being of the atoms in primordial chaos, or know anything certain about the capabilities and potency of their atoms and molecules before and after their formation into worlds? These changeless and eternal molecules -- far thicker in space than the grains on the ocean shore -- may differ in their constitution along the line of their planes of existence, as the soul-substance differs from its vehicle, the body. Each atom has seven planes of being or existence, we are taught; and each plane is governed by its specific laws of evolution and absorption. Ignorant of any, even approximate, chronological data from which to start in attempting to decide the age of our planet or the origin of the solar system, astronomers, geologists, and physicists are drifting with each new hypothesis farther and farther away from the shores of fact into the fathomless depths of speculative ontology.* The Law of Analogy in the plan of structure between the trans-Solar systems and the intra-Solar planets, does not necessarily bear upon the finite conditions to which every visible body is subject, in this our plane of being. In Occult Science this law is the first and most important key to Cosmic physics; but it has to be studied in its minutest details and, "to be

[[Footnote(s)]] -----

[[Footnote continued from previous page]] forward by Kant and Laplace, was chiefly based on the above fact that all the planets revolved in the same direction. It is on this fact, mathematically demonstrated during the time of Laplace, that this great astronomer, calculating on the theory of probabilities, offered to bet three milliards to one that the next planet discovered would have in its system the same peculiarity of motion Eastward. The immutable laws of scientific mathematics got "worsted by further experiments and observations," it was said. This idea of Laplace's mistake prevails generally to this day; but some astronomers have finally succeeded in demonstrating (?) that the mistake had been in accepting Laplace's assertion for a mistake; and steps to correct it without attracting general attention to the bevue are now being taken. Many such unpleasant surprises are in store for hypotheses of even a purely physical character. What further disillusiones, then, may there not be in questions of a transcendental, Occult Nature? At any rate, Occultism teaches that the so-called "reverse rotation" is a fact.

* The Occultists, having most perfect faith in their own exact records, astronomical and mathematical, calculate the age of Humanity, and assert that the latter (as separate sexes) has existed in this Round just 18,618,727 years, as the Brahmanical teachings and even some Hindu calendars declare.

[[Vol. 1, Page]] 151 NATURE CAN NEVER CEASE.

turned seven times," before one comes to understand it. Occult philosophy is the only science that can teach it. How, then, can anyone hang the truth or the untruth of the Occultist's proposition that "the Kosmos is eternal in its unconditioned collectivity, and finite but in its conditioned manifestations" on this one-sided physical enunciation that "it is a necessity of Nature to run down?"

With these verses -- the 4th Sloka of Stanza VI. -- ends that portion of the Stanzas which relates to the Universal Cosmogony after the last Mahapralaya or Universal destruction, which, when it comes, sweeps out of Space every differentiated thing, Gods as atoms, like so many dry leaves. From this verse onwards, the Stanzas are concerned only with our Solar System in general, with the planetary chains therein, inferentially, and with the history of our globe (the 4th and its chain) especially. All the Stanzas and verses which follow in this Book I. refer only to the evolution of, and on, our Earth. With regard to the latter, a strange tenet -- strange from the modern scientific stand-point only, of course -- is held, which ought to be made known.

But before entirely new and rather startling theories are presented to the reader, they must be prefaced by a few words of explanation. This is absolutely necessary, as these theories clash not only with modern science, but contradict, on certain points, earlier statements made by other Theosophists, who claim to base their explanations and renderings of these teachings on the same authority as we do.*

This may give rise to the idea that there is a decided contradiction between the expounders of the same doctrine; whereas the difference, in reality, arises from the incompleteness of the information given to earlier writers, who thus drew some erroneous conclusions and indulged in premature speculations, in their endeavour to present a complete system to the public. Thus the reader, who is already a student of Theosophy, must not be surprised to find in these pages the rectification of certain statements made in various Theosophical works, and also the explanation of certain points which have remained obscure, because they were necessarily left incomplete. Many are the questions upon which even the author of "Esoteric Buddhism" (the best and

[[Footnote(s)]] -----

* "Esoteric Buddhism" and "Man."

[[Vol. 1, Page]] 152 THE SECRET DOCTRINE.

most accurate of all such works) has not touched. On the other hand, even he has introduced several mistaken notions which must now be presented in their true mystic light, as far as the present writer is capable of doing so.

Let us then make a short break between the Slokas just explained and those which follow, for the Cosmic periods which separate them are of immense duration. This will afford us ample time to take a bird's eye view of some points pertaining to the Secret Doctrine, which have been presented to the public under a more or less uncertain and sometimes mistaken light.

A FEW EARLY THEOSOPHICAL MISCONCEPTIONS CONCERNING PLANETS, ROUNDS, AND MAN.

Among the eleven Stanzas omitted* there is one which gives a full description of the formation of the planetary chains one after another, after the first Cosmic and Atomic differentiation had commenced in the primitive Acosmism. It is idle to speak of "laws arising when Deity prepares to create" for (a) laws or rather LAW is eternal and uncreated; and (b) that Deity is Law, and vice versa. Moreover, the one eternal LAW unfolds everything in the (to be) manifested Nature on a sevenfold principle; among the rest, the countless circular chains of worlds, composed of seven globes, graduated on the four lower planes of the world of formation (the three others belonging to the Archetypal Universe). Out of these seven only one, the lowest and the most material of those globes, is within our plane or means of perception, the six others lying outside of it and being therefore invisible to the terrestrial eye. Every such chain of worlds is the progeny and creation of another, lower, and dead chain -- its reincarnation, so to say. To make it clearer: we are told of the planets -- of which seven only were held as sacred, as being ruled by the highest regents or gods, and not at all because the ancients knew nothing of the others** -- that each of these, whether known or unknown, is a septenary, as is the chain to which the Earth belongs (see "Esoteric

[[Footnote(s)]] -----

* See the note which follows the Commentary on the preceding page, and also the summary of the Stanzas in the Proem, page 22.

** Many more planets are enumerated in the Secret Books than in modern astronomical works.

[[Vol. 1, Page]] 153 DESCENDING AND RE-ASCENDING STATES.

Buddhism"). For instance, all such planets as Mercury, Venus, Mars, Jupiter, Saturn, etc., etc., or our Earth, are as visible to us as our globe, probably, is to the inhabitants of the other planets, if any, because they are all on the same plane; while the superior fellow-globes of these planets are on other planes quite outside that of our terrestrial senses. As their relative position is given further on, and also in the diagram appended to the Comments on Verse 7 of Stanza VI., a few words of explanation is all that is needed at present. These invisible companions correspond curiously to that which we call "the principles in Man." The seven are on three material planes and one spiritual plane, answering to the three Upadhis (material bases) and one spiritual vehicle (Vahan) of our seven principles in the human division. If, for the sake of a clearer mental conception, we imagine the human principles to be arranged as in the following scheme, we shall obtain the annexed diagram of correspondences:--

HUMAN PRINCIPLES.

- (1) Spirit*
- (2) Soul
Vehicle of Spirit
- (3) Mind
- (4) Animal Soul
Upadhi of Mind
- (5) Life
Upadhi of Life
- (6) Astral Body

DIAGRAM I.

[[above is in diagram format in the original text]]

[[Footnote(s)]] -----

* As we are proceeding here from Universals to Particulars, instead of using the inductive or Aristotelean method, the numbers are reversed. Spirit is enumerated the first instead of seventh, as is usually done, but, in truth, ought not to be done.

** Or as usually named after the manner of Esoteric Buddhism and others: 1, Atma; 2, Buddhi (or Spiritual Soul); 3, Manas (Human Soul); 4, Kama Rupa (Vehicle of Desires and Passions); 5, Linga Sarira; 6, Prana; 7, Sthula Sarira.

[[Vol. 1, Page]] 154 THE SECRET DOCTRINE.

The dark horizontal lines of the lower planes are the Upadhis in one case, and the planes in the case of the planetary chain. Of course, as regards the human principles, the diagram does not place them quite in order, yet it shows the correspondence and analogy to which attention is now drawn. As the reader will see, it is a case of descent into matter, the adjustment -- in both the mystic and the physical senses -- of the two, and their interblending for the great coming "struggle of life" that awaits both the entities. "Entity" may be thought a strange term to use in the case of a globe; but the ancient philosophers, who saw in the earth a huge "animal," were wiser in their generation than our modern geologists are in theirs; and Pliny, who called the Earth our kind nurse and mother, the only element which is not inimical to man, spoke more truly than Watts, who fancied that he saw in her the footstool of God. For Earth is only the footstool of man in his ascension to higher regions; the vestibule --

". to glorious mansions,
Through which a moving crowd for ever press."

But this only shows how admirably the occult philosophy fits everything in Nature, and how much more logical are its tenets than the lifeless hypothetical speculations of physical science.

Having learned thus much, the mystic will be better prepared to understand the occult teaching, though every formal student of modern science may, and probably will, regard it as preposterous nonsense. The student of occultism, however, holds that the theory at present under discussion is far more philosophical and probable than any other. It is more logical, at any rate, than the theory recently advanced which made of the moon the projection of a portion of our Earth extruded when the latter was but a globe in fusion, a molten plastic mass.*

It is said that the planetary chains having their "Days" and their

[[Footnote(s)]] -----

* Says the author of "Modern Science and Modern Thought," Mr. Samuel Laing: "The astronomical conclusions are theories based on data so uncertain, that while in some cases they give results incredibly short, like that of 15 millions of years for the whole past process of formation of the solar system, in others they give results almost incredibly long, as in that which supposes the moon to have been thrown off when the Earth was rotating in three hours, while the utmost actual retardation obtained from observation would require 600 millions of years to make it rotate in twenty-three hours instead of twenty-four" (p. 48). And if physicists persist, why should the chronology of the Hindus be laughed at as exaggerated?

[[Vol. 1, Page]] 155 EXCHANGE OF LIFE-PRINCIPLES.

"Nights" -- i.e., periods of activity or life, and of inertia or death -- and behave in heaven as do men on Earth: they generate their likes, get old, and become personally extinct, their spiritual principles only living in their progeny as a survival of themselves.

Without attempting the very difficult task of giving out the whole process in all its cosmic details, enough may be said to give an approximate idea of it. When a planetary chain is in its last Round, its Globe 1 or A, before finally dying out, sends all its energy and "principles" into a neutral centre of latent force, a "laya centre," and thereby informs a new nucleus of undifferentiated substance or matter, i.e., calls it into activity or gives it life. Suppose such a process to have taken place in the lunar "planetary" chain; suppose again, for argument's sake (though Mr. Darwin's theory quoted below has lately been upset, even if the fact has not yet been ascertained by mathematical calculation) that the moon is far older than the Earth. Imagine the six fellow-globes of the moon -- aeons before the first globe of our seven was evolved -- just in the same position in relation to each other as the fellow-globes of our chain occupy in regard to our Earth now. (See in "Esoteric Buddhism," "The Constitution of Man," and the "Planetary Chain.") And now it will be easy to imagine further Globe A of the lunar chain informing Globe A of the terrestrial chain, and -- dying; Globe B of the former sending after that its energy into Globe B of the new chain; then Globe C of the lunar, creating its progeny sphere C of the terrene chain; then the Moon (our Satellite*) pouring forth into

[[Footnote(s)]] -----

* She is the satellite, undeniably, but this does not invalidate the theory that she has given to the Earth all but her corpse. For Darwin's theory to hold good, besides the hypothesis just upset (vide last footnote), other still more incongruous speculations had to be invented. The Moon, it is said, has cooled nearly six times as rapidly as the Earth (Winchell's "World-Life"): "The Moon, if the earth is 14,000,000 years old since its incrustation, is only eleven and two thirds millions of years old since that stage . . ." etc. And if our Moon is but a splash from our Earth, why can no similar inference be established for the Moons of other planets? The Astronomers "do not know." Why should Venus and Mercury have no satellites, and by what, when they exist, were they formed? Because, we say, science has only one key -- the key of matter -- to open the mysteries of nature withal, while occult philosophy has seven keys and explains that which science fails to see. Mercury and Venus have no satellites but they had "parents" just as the earth had. Both are far older than the Earth and, before the latter reaches her seventh Round, her mother Moon will have dissolved [[Footnote continued on next page]]

[[Vol. 1, Page]] 156 THE SECRET DOCTRINE.

the lowest globe of our planetary ring -- Globe D, our Earth -- all its life, energy and powers; and, having transferred them to a new centre becoming virtually a dead planet, in which rotation has almost ceased since the birth of our globe. The Moon is now the cold residual quantity, the shadow dragged after the new body, into which her living powers and "principles" are transfused. She now is doomed for long ages to be ever pursuing the Earth, to be attracted by and to attract her progeny. Constantly vampirised by her child, she revenges herself on it by soaking it through and through with the nefarious, invisible, and poisoned influence which emanates from the occult side of her nature. For she is a dead, yet a living body. The particles of her decaying corpse are full of active and destructive life, although the body which they had formed is soulless and lifeless. Therefore its emanations are at the same time beneficent and maleficent -- this circumstance finding its parallel on earth in the fact that the grass and plants are nowhere more juicy and thriving than on the graves; while at the same time it is the graveyard or corpse-emanations, which kill. And like all ghouls or vampires, the moon is the friend of the sorcerers and the foe of the unwary. From the archaic aeons and the later times of the witches of Thessaly, down to some of the present tantrikas of Bengal, her nature and properties were known to every Occultist, but have remained a closed book for physicists.

Such is the moon from the astronomical, geological, and physical standpoints. As to her metaphysical and psychic nature it must remain an occult secret in this work, as it was in the volume on "Esoteric Buddhism," notwithstanding the rather sanguine statement made therein on p. 113 (5th edition) that "there is not much mystery left now in the riddle of the eighth sphere." These are topics, indeed, "on which the adepts are very reserved in their communications to uninitiated pupils," and since they have, moreover, never sanctioned or permitted any published speculations upon them, the less said the better.

Yet without treading upon the forbidden ground of the "eighth sphere," it may be useful to state some additional facts with regard to ex-monads of the lunar chain -- the "lunar ancestors" -- as they play a

[[Footnote(s)]] -----

[[Footnote continued from previous page]] into thin air, as the "Moons" of the other planets have, or have not, as the case may be, since there are planets which have several moons -- a mystery again which no OEdipus of astronomy has solved.

[[Vol. 1, Page]] 157 OPINIONS DIFFER AND YET AGREE.

leading part in the coming Anthropogenesis. This brings us directly to the septenary constitution of man; and as some discussion has arisen of late about the best classification to be adopted for the division of the microcosmic entity, two systems are now appended with a view to facilitate comparison. The subjoined short article is from the pen of Mr. T. Subba Row, a learned Vedantin scholar. He prefers the Brahmanical division of the Raja Yoga, and from a metaphysical point of view he is quite right. But, as it is a question of simple choice and expediency, we hold in this work to the "time-honoured" classification of the trans-Himalayan "Arhat Esoteric School." The following table and its explanatory text are reprinted from the "Theosophist" of Madras, and they are also contained in "Five Years of Theosophy":--

SEPTENARY DIVISION IN DIFFERENT INDIAN SYSTEMS.

"We give below in a tabular form the classifications adopted by the Buddhist and Vedantic teachers of the principles of man:--

CLASSIFICATION IN ESOTERIC BUDDHISM.

1. Sthula Sarira.
2. Prana.**
3. The vehicle of Prana.***
4. Kama Rupa.
5. Mind
- (a) Volitions and feelings, etc.
- (b) Vignanam.
6. Spiritual Soul.*****
7. Atma.

VEDANTIC CLASSIFICATION.

- [[1.]] Annamaya kosa.*
[[2., 3.]] Pranamaya kosa.
[[4., 5.(a)]] Manomaya kosa.
[[5.(b)]] Vignanamaya kosa.
[[6.]] Anandamaya kosa.
[[7.]] Atma.

CLASSIFICATION IN TARAKA RAJA YOGA

- [[1., 2.]] Sthulopadhi.****
[[5.(a), (b)]] Sukshmopadhi.
[[6.]] Karanopadhi.
[[7.]] Atma.

[[above is in table format in the original text.]]

[[Footnote(s)]] -----

* Kosa (kosha) is "Sheath" literally, the sheath of every principle.

** "Life."

*** The astral body or Linga Sarira.

**** Sthula-Upadhi, or basis of the principle.

***** Buddhi.

[[Vol. 1, Page]] 158 THE SECRET DOCTRINE.

From the foregoing table it will be seen that the third principle in the Buddhist classification is not separately mentioned in the Vedantic division, as it is merely the vehicle of Prana. It will also be seen that the Fourth principle is included in the third Kosa (Sheath), as the same principle is but the vehicle of will-power, which is but an energy of the mind. It must also be noticed that the Vignanamaya Kosa is considered to be distinct from the Manomaya Kosa, as a division is made after death between the lower part of the mind, as it were, which has a closer affinity with the fourth principle than with the sixth; and its higher part, which attaches itself to the latter, and which is, in fact, the basis for the higher spiritual individuality of man.

We may also here point out to our readers that the classification mentioned in the last column is, for all practical purposes, connected with Raja Yoga, the best and simplest. Though there are seven principles in man, there are but three distinct Upadhis (bases), in each of which his Atma may work independently of the rest. These three Upadhis can be separated by an Adept without killing himself. He cannot separate the seven principles from each other without destroying his constitution."

The student will now be better prepared to see that between the three Upadhis of the Raja Yoga and its Atma, and our three Upadhis, Atma, and the additional three divisions, there is in reality but very little difference. Moreover, as every adept in cis-Himalayan or trans-Himalayan India, of the Patanjali, the Aryasanga or the Mahayana schools, has to become a Raja Yogi, he must, therefore, accept the Taraka Raja classification in principle and theory whatever classification he resorts to for practical and occult purposes. Thus, it matters very little whether one speaks of the three Upadhis with their three aspects and Atma, the eternal and immortal synthesis, or calls them the "seven principles."

For the benefit of those who may not have read, or, if they have, may not have clearly understood, in Theosophical writings, the doctrine of the septenary chains of worlds in the Solar Kosmos, the teaching is briefly thus:--

1. Everything in the metaphysical as in the physical Universe is septenary. Hence every sidereal body, every planet, whether visible

[[Vol. 1, Page]] 159 THE TRANSMIGRATIONS OF THE EGO.

or invisible, is credited with six companion globes. (See Diagram No. 3, after verse 6 of this commentary.) The evolution of life proceeds on these seven globes or bodies from the 1st to the 7th in Seven ROUNDS or Seven Cycles.

2. These globes are formed by a process which the Occultists call the "rebirth of planetary chains (or rings)." When the seventh and last Round of one of such rings has been entered upon, the highest or first globe "A," followed by all the others down to the last, instead of entering upon a certain time of rest -- or "obscuration," as in their previous Rounds -- begins to die out. The "planetary" dissolution (pralaya) is at hand, and its hour has struck; each globe has to transfer its life and energy to another planet. (See diagram No. 2 infra, "The Moon and the Earth.")

3. Our Earth, as the visible representative of its invisible superior fellow globes, its "lords" or "principles" (see diagram No. 1), has to live, as have the others, through seven Rounds. During the first three, it forms and consolidates; during the fourth it settles and hardens; during the last three it gradually returns to its first ethereal form: it is spiritualised, so to say.

4. Its Humanity develops fully only in the Fourth -- our present Round. Up to this fourth Life-Cycle, it is referred to as "humanity" only for lack of a more appropriate term. Like the grub which becomes chrysalis and butterfly, Man, or rather that which becomes man, passes through all the forms and kingdoms during the first Round and through all the human shapes during the two following Rounds. Arrived on our Earth at the commencement of the Fourth in the present series of life-cycles and races, MAN is the first form that appears thereon, being preceded only by the mineral and vegetable kingdoms -- even the latter having to develop and continue its further evolution through man. This will be explained in Book II. During the three Rounds to come, Humanity, like the globe on which it lives, will be ever tending to reassume its primeval form, that of a Dhyana Chohanian Host. Man tends to become a God and then -- GOD, like every other atom in the Universe.

"Beginning so early as with the 2nd round, Evolution proceeds already on quite a different plan. It is only during the 1st round that (heavenly) man becomes a human being on globe A (rebecomes) a mineral, a plant, an animal, on globe B and C, etc. The process changes

[[Vol. 1, Page]] 160 THE SECRET DOCTRINE.

entirely from the second round -- but you have learned prudence . . . and I advise you to say nothing before the time for saying it has come. . ." (Extract from the Teacher's letters on various topics.)

5. Every life-cycle on Globe D (our Earth)* is composed of seven root-races. They commence with the Ethereal and end with the spiritual on the double line of physical and moral evolution -- from the beginning of the terrestrial round to its close. (One is a "planetary round" from Globe A to Globe G, the seventh; the other, the "globe round," or the terrestrial).

This is very well described in "Esoteric Buddhism" and needs no further elucidation for the time being.

6. The first root-race, i.e., the first "men" on earth (irrespective of form) were the progeny of the "celestial men," called rightly in Indian philosophy the "Lunar Ancestors" or the Pitris, of which there are seven classes or Hierarchies. As all this will be sufficiently explained in the following sections and in Book II., no more need be said of it here.

But the two works already mentioned, both of which treat of subjects from the occult doctrine, need particular notice. "Esoteric Buddhism" is too well known in Theosophical circles, and even to the outside world, for it to be necessary to enter at length upon its merits here. It is an excellent book, and has done still more excellent work. But this does not alter the fact that it contains some mistaken notions, and that it has led many Theosophists and lay-readers to form an erroneous conception of the Secret Eastern Doctrines. Moreover it seems, perhaps, a little too materialistic.

"MAN," which came later, was an attempt to present the archaic doctrine from a more ideal standpoint, to translate some visions in and from the Astral Light, to render some teachings partly gathered from a Master's thoughts, but unfortunately misunderstood. This work also speaks of the evolution of the early Races of men on Earth, and contains some excellent pages of a philosophical character. But so far it is only an interesting little mystical romance. It has failed in its mission, because the conditions required for a correct

translation of these visions were not present. Hence the reader must not wonder if our Volumes contradict these earlier descriptions in several particulars.

[[Footnote(s)]] -----

* We are not concerned with the other Globes in this work except incidentally.

[[Vol. 1, Page]] 161 A RE-ADJUSTMENT OF FACTS.

Esoteric "Cosmogony" in general, and the evolution of the human Monad especially, differ so essentially in these two books and in other Theosophical works written independently by beginners, that it becomes impossible to proceed with the present work without special mention of these two earlier volumes, for both have a number of admirers -- "Esoteric Buddhism" especially. The time has arrived for the explanation of some matters in this direction. Mistakes have now to be checked by the original teachings and corrected. If one of the said works has too pronounced a bias toward materialistic science, the other is decidedly too idealistic, and is, at times, fantastic.

From the doctrine -- rather incomprehensible to western minds -- which deals with the periodical "obscurations" and successive "Rounds" of the Globes along their circular chains, were born the first perplexities and misconceptions. One of such has reference to the "Fifth-" and even "Sixth-Rounders." Those who knew that a Round was preceded and followed by a long Pralaya, a pause of rest which created an impassable gulf between two Rounds until the time came for a renewed cycle of life, could not understand the "fallacy" of talking about "fifth and sixth Rounders" in our Fourth Round. Gautama Buddha, it was held, was a Sixth-Rounder, Plato and some other great philosophers and minds, "Fifth-Rounders." How could it be? One Master taught and affirmed that there were such "Fifth-Rounders" even now on Earth; and though understood to say that mankind was yet "in the Fourth Round," in another place he seemed to say that we were in the Fifth. To this an "apocalyptic answer" was returned by another Teacher:-- "A few drops of rain do not make a Monsoon, though they presage it." . . . "No, we are not in the Fifth Round, but Fifth Round men have been coming in for the last few thousand years." This was worse than the riddle of the Sphinx! Students of Occultism subjected their brains to the wildest work of speculation. For a considerable time they tried to outvie OEdipus and reconcile the two statements. And as the Masters kept as silent as the stony Sphinx herself, they were accused of inconsistency, "contradiction," and "discrepancies." But they were simply allowing the speculations to go on, in order to teach a lesson which the Western mind sorely needs. In their conceit and arrogance, as in their habit of materializing every metaphysical conception and term without allowing any margin for Eastern

[[Vol. 1, Page]] 162 THE SECRET DOCTRINE.

metaphor and allegory, the Orientalists have made a jumble of the Hindu exoteric philosophy, and the Theosophists were now doing the same with regard to esoteric teachings. To this day it is evident that the latter have utterly failed to understand the meaning of the term "Fifth and Sixth Rounders." But it is simply this: every "Round" brings about a new development and even an entire change in the mental, psychic, spiritual and physical constitution of man, all these principles evolving on an ever ascending scale. Thence it follows that those persons who, like Confucius and Plato, belonged psychically, mentally and spiritually to the higher planes of evolution, were in our Fourth Round as the average man will be in the Fifth Round, whose mankind is destined to find itself, on this scale of Evolution, immensely higher than is our present humanity. Similarly Gautama Buddha -- Wisdom incarnate -- was still higher and greater than all the men we have mentioned, who are called Fifth Rounders, while Buddha and Sankaracharya are termed Sixth Rounders, allegorically. Thence again the concealed wisdom of the remark, pronounced at the time "evasive" -- that a few drops of rain do not make the Monsoon, though they presage it."

And now the truth of the remark made in "Esoteric Buddhism" by its author will be fully apparent:--

"It is impossible, when the complicated facts of an entirely unfamiliar science are being presented to untrained minds for the first time, to put them forward with all their appropriate qualifications . . . and abnormal developments. . . . We must be content to take the broad rules first and deal with the exceptions afterwards, and especially is this the case with study, in connection with which the traditional methods of teaching, generally followed, aim at impressing every fresh idea on the memory by provoking the perplexity it at last relieves."

As the author of the remark was himself, as he says, "an untrained mind" in Occultism, his own inferences, and his better knowledge of modern astronomical speculations than of archaic doctrines led him quite naturally, and as unconsciously to himself, to commit a few mistakes of detail rather than of any "broad rule." One such will now be noticed. It is a trifling one, still it is calculated to lead many a beginner into erroneous conceptions. But as the mistaken notions of the earlier editions were corrected in the annotations of the fifth edition, so the sixth may be revised and perfected. There were several reasons

[[Vol. 1, Page]] 163 LIKE QUESTIONS, LIKE ANSWERS.

for such mistakes. (1) They were due to the necessity under which the teachers laboured of giving what were considered as "evasive answers": the questions being too persistently pressed to be left unnoticed, while, on the other hand, they could only be partially answered. (2) This position notwithstanding, the confession that "half a loaf is better than no bread" was but too often misunderstood and hardly appreciated as it ought to have been. As a result thereof gratuitous speculations were sometimes indulged in by the European lay-chelas. Among such were (a) the "Mystery of the Eighth Sphere" in its relation to the Moon; and (b) the erroneous

statement that two of the superior Globes of the terrestrial chain were two of our well-known planets: "besides the Earth . . . there are only two other worlds of our chain which are visible. . . . Mars and Mercury. . . ." (Esoteric Buddhism; p. 136.)

This was a great mistake. But the blame for it is to be attached as much to the vagueness and incompleteness of the Master's answer as to the question of the learner itself, which was equally vague and indefinite.

It was asked: "What planets, of those known to ordinary science, besides Mercury, belong to our system of worlds?" Now if by "System of Worlds" our terrestrial chain or "string" was intended in the mind of the querist, instead of the "Solar System of Worlds," as it should have been, then of course the answer was likely to be misunderstood. For the reply was: "Mars, etc., and four other planets of which astronomy knows nothing. Neither A, B, nor YZ are known nor can they be seen through physical means however perfected." This is plain: (a) Astronomy as yet knows nothing in reality of the planets, neither the ancient ones, nor those discovered in modern times. (b) No companion planets from A to Z, i.e., no upper globes of any chain in the Solar System, can be seen.* As to Mars, Mercury, and "the four other planets," they bear

[[Footnote(s)]] -----

* With the exception of course of all the planets which come fourth in number, as our earth, the moon, etc., etc. Copies of all the letters ever received or sent, with the exception of a few private ones -- "in which there was no teaching" the Master says -- are with the writer. As it was her duty, in the beginning, to answer and explain certain points not touched upon, it is more than likely that notwithstanding the many annotations on these copies, the writer, in her ignorance of English and her fear of saying too much, may have bungled the information given. She takes the whole blame for it upon herself in any and every case. But it is impossible for her to allow students to remain any longer under erroneous impressions, or to believe that the fault lies with the esoteric system.

[[Vol. 1, Page]] 164 THE SECRET DOCTRINE.

a relation to Earth of which no master or high Occultist will ever speak, much less explain the nature.*

Let it now be distinctly stated, then, that the theory broached is impossible, with or without the additional evidence furnished by modern Astronomy. Physical Science can supply corroborative, though still very uncertain, evidence, but only as regards heavenly bodies on the same plane of materiality as our objective Universe. Mars and Mercury, Venus and Jupiter, like every hitherto discovered planet (or those still to be discovered), are all, per se, the representatives on our plane of such chains. As distinctly stated in one of the numerous letters of Mr. Sinnett's "Teacher," "there are other and innumerable Manvantaric chains of globes which bear intelligent Beings both in and outside our solar system." But neither Mars nor Mercury belong to our chain. They are, along with the other planets, septenary Units in the great host of "chains" of our system, and all are as visible as their upper globes are invisible.

If it is still argued that certain expressions in the Teacher's letters were liable to mislead, the answer comes:-- Amen; so it was. The author of "Esoteric Buddhism" understood it well when he wrote that such are "the traditional modes of teaching . . . by provoking the perplexity" . . . they do, or do not relieve -- as the case may be. At all events, if it is urged that this might have been explained earlier, and the true nature of the planets given out as they now are, the answer comes that: "it was not found expedient to do so at the time, as it would have opened the way to a series of additional questions which could never be answered on account of their esoteric nature, and thus would only become embarrassing." It had been declared from the first and has been repeatedly asserted since that (1st) no Theosophist, not even as an accepted chela -- let alone lay students -- could expect to have the secret teachings explained to him thoroughly and completely, before he had irretrievably pledged himself to the Brotherhood and passed through at least one initiation, because no figures and numbers could be given to the public, for figures and numbers are the key to the esoteric system. (2.) That

[[Footnote(s)]] -----

* In this same letter the impossibility is distinctly stated:-- . . . "Try to understand that you are putting me questions pertaining to the highest initiation; that I can give you (only) a general view, but that I dare not nor will I enter upon details . . ." wrote one of the Teachers to the author of "Esoteric Buddhism."

[[Vol. 1, Page]] 165 AN AUTHORITATIVE LETTER.

what was revealed was merely the esoteric lining of that which is contained in almost all the exoteric Scriptures of the world-religions - pre-eminently in the Brahmanas, and the Upanishads of the Vedas and even in the Puranas. It was a small portion of what is divulged far more fully now in the present volumes; and even this is very incomplete and fragmentary.

When the present work was commenced, the writer, feeling sure that the speculation about Mars and Mercury was a mistake, applied to the Teachers by letter for explanation and an authoritative version. Both came in due time, and verbatim extracts from these are now given.

". . . . It is quite correct that Mars is in a state of obscurity at present, and Mercury just beginning to get out of it. You might add that Venus is in her last Round. If neither Mercury nor Venus have satellites, it is because of the reasons . . . (vide footnote supra, where those reasons are given), and also because Mars has two satellites to which he has no right. . . . Phobos, the supposed INNER satellite, is no satellite at all. As remarked long ago by Laplace and now by Faye (see COMPTE'S RENDUS, Tome

XC., p. 569), Phobos keeps a too short periodic time, and therefore there 'must exist some defect in the mother idea of the theory' as Faye justly observes. . . . Again, both (Mars and Mercury) are septenary chains, as independent of the Earth's sidereal lords and superiors as you are independent of the 'principles' of Daumling (Tom Thumb) -- which were perhaps his six brothers, with or without night-caps. . . . 'Gratification of curiosity is the end of knowledge for some men,' was said by Bacon, who was as right in postulating this truism, as those who were familiar with it before him were right in hedging off WISDOM from Knowledge, and tracing limits to that which is to be given out at one time. . . . Remember:--

' knowledge dwells
In heads replete with thoughts of other men,
Wisdom in minds attentive to their own. . . . '

You can never impress it too profoundly on the minds of those to whom you impart some of the esoteric teachings. . . "

Again, here are more extracts from another letter written by the same authority. This time it is in answer to some objections laid before the Teachers. They are based upon extremely scientific, and as

[[Vol. 1, Page]] 166 THE SECRET DOCTRINE.

futile, reasonings about the advisability of trying to reconcile the Esoteric theories with the speculations of Modern Science, and were written by a young Theosophist as a warning against the "Secret Doctrine" and in reference to the same subject. He had declared that if there were such companion Earths "they must be only a wee bit less material than our globe." How then was it that they could not be seen? The answer was:--

". . . . Were psychic and spiritual teachings more fully understood, it would become next to impossible to even imagine such an incongruity. Unless less trouble is taken to reconcile the irreconcilable -- that is to say, the metaphysical and spiritual sciences with physical or natural philosophy, 'natural' being a synonym to them (men of science) of that matter which falls under the perception of their corporeal senses -- no progress can be really achieved. Our Globe, as taught from the first, is at the bottom of the arc of descent, where the matter of our perceptions exhibits itself in its grossest form. . . . Hence it only stands to reason that the globes which overshadow our Earth must be on different and superior planes. In short, as Globes, they are in CO-ADUNITION but not IN CONSUBSTANTIALITY WITH OUR EARTH and thus pertain to quite another state of consciousness. Our planet (like all those we see) is adapted to the peculiar state of its human stock, that state which enables us to see with our naked eye the sidereal bodies which are co-essential with our terrene plane and substance, just as their respective inhabitants, the Jovians, Martians and others can perceive our little world: because our planes of consciousness, differing as they do in degree but being the same in kind, are on the same layer of differentiated matter. . . . What I wrote was 'The minor Pralaya concerns only our little STRINGS OF GLOBES.' (We called chains 'Strings' in those days of lip-confusion.) . . . 'To such a string our Earth belongs.' This ought to have shown plainly that the other planets were also 'strings' or CHAINS. . . If he (meaning the objector) would perceive even the dim silhouette of one of such 'planets' on the higher planes, he has to first throw off even the thin clouds of the astral matter that stands between him and the next plane. . . . "

It becomes patent why we could not perceive, even with the help of the best earthly telescopes, that which is outside our world of matter. Those alone, whom we call adepts, who know how to direct their mental vision and to transfer their consciousness -- physical and psychic both --

[[Vol. 1, Page]] 167 PRICELESS ADVICE, NEGLECTED.

to other planes of being, are able to speak with authority on such subjects. And they tell us plainly:--

"Lead the life necessary for the acquisition of such knowledge and powers, and Wisdom will come to you naturally. Whenever you are able to attune your consciousness to any of the seven chords of 'Universal Consciousness,' those chords that run along the sounding-board of Kosmos, vibrating from one Eternity to another; when you have studied thoroughly 'the music of the Spheres,' then only will you become quite free to share your knowledge with those with whom it is safe to do so. Meanwhile, be prudent. Do not give out the great Truths that are the inheritance of the future Races, to our present generation. Do not attempt to unveil the secret of being and non-being to those unable to see the hidden meaning of Apollo's HEPTACHORD -- the lyre of the radiant god, in each of the seven strings of which dwelleth the Spirit, Soul and Astral body of the Kosmos, whose shell only has now fallen into the hands of Modern Science. . . . Be prudent, we say, prudent and wise, and above all take care what those who learn from you believe in; lest by deceiving themselves they deceive others . . . for such is the fate of every truth with which men are, as yet, unfamiliar. . . . Let rather the planetary chains and other super- and sub-cosmic mysteries remain a dreamland for those who can neither see, nor yet believe that others can. . . . "

It is to be regretted that few of us have followed the wise advice; and that many a priceless pearl, many a jewel of wisdom, has been cast to an enemy unable to understand its value and who has turned round and rent us.

" 'Let us imagine,' wrote the same Master to his two 'lay chelas,' as he called the author of 'Esoteric Buddhism' and another gentleman, his co-student for some time -- 'let us imagine THAT OUR EARTH IS ONE OF A GROUP OF SEVEN PLANETS OR MAN-BEARING WORLDS. . . . (The SEVEN planets are the sacred planets of antiquity, and are all septenary.) Now the life-impulse reaches A, or rather that which is destined to become A, and which so far is but cosmic dust (a "laya centre") . . . etc.' "

In these early letters, in which the terms had to be invented and words coined, the "Rings" very often became "Rounds," and the "Rounds" life-cycles, and vice versa. To a correspondent who called a "Round" a "World-Ring," the Teacher wrote: "I believe this will lead to a further confusion. A Round we are agreed to call the passage

[[Vol. 1, Page]] 168 THE SECRET DOCTRINE.

of a monad from Globe A to Globe G or Z. . . The 'World-Ring' is correct. . . Advise Mr. . . . strongly, to agree upon a nomenclature before going any further. . . "

Notwithstanding this agreement, many mistakes, owing to this confusion, crept into the earliest teachings. The Races even were occasionally mixed up with the "Rounds" and "Rings," and led to similar mistakes in "Man." From the first the Master had written --

"Not being permitted to give you the whole truth, or divulge the number of isolated fractions . . . I am unable to satisfy you."

This in answer to the questions, "If we are right, then the total existence prior to the man-period is 637," etc., etc. To all the queries relating to figures, the reply was, "Try to solve the problem of 777 incarnations. . . . Though I am obliged to withhold information . . . yet if you should work out the problem by yourself, it will be my duty to tell you so."

But they never were so worked out, and the results were -- never-ceasing perplexity and mistakes.

Even the teaching about the Septenary constitution of the sidereal bodies and of the macrocosm -- from which the septenary division of the microcosm, or Man -- has until now been among the most esoteric. In olden times it used to be divulged only at the Initiation and along with the most sacred figures of the cycles. Now, as stated in one of the Theosophical journals,* the revelation of the whole system of Cosmogony had not been contemplated, nor even thought for one moment possible, at a time when a few bits of information were sparingly given out in answer to letters written by the author of "Esoteric Buddhism," in which he put forward a multiplicity of questions. Among these were questions on such problems as no MASTER, however high and independent he might be, would have the right to answer, thus divulging to the world the most time-honoured and archaic of the mysteries of the ancient college-temples. Hence only a few of the doctrines were revealed in their broad outlines, while details were constantly withheld, and all the efforts made to elicit more information about them were systematically eluded from the beginning. This is perfectly natural. Of the four Vidyas -- out of the seven branches of Knowledge mentioned in the Puranas -- namely, "Yajna-Vidya" (the performance of religious rites in order to

[[Footnote(s)]] -----

* "Lucifer," May, 1888.

[[Vol. 1, Page]] 169 THE SEVEN BRANCHES OF THE TREE OF KNOWLEDGE.

produce certain results); "Maha-Vidya," the great (Magic) knowledge, now degenerated into Tantrika worship; "Guhya-Vidya," the science of Mantras and their true rhythm or chanting, of mystical incantations, etc. -- it is only the last one, "Atma-Vidya," or the true Spiritual and Divine wisdom, which can throw absolute and final light upon the teachings of the three first named. Without the help of Atma-Vidya, the other three remain no better than surface sciences, geometrical magnitudes having length and breadth, but no thickness. They are like the soul, limbs, and mind of a sleeping man: capable of mechanical motions, of chaotic dreams and even sleep-walking, of producing visible effects, but stimulated by instinctual not intellectual causes, least of all by fully conscious spiritual impulses. A good deal can be given out and explained from the three first-named sciences. But unless the key to their teachings is furnished by Atma-Vidya, they will remain for ever like the fragments of a mangled text-book, like the adumbrations of great truths, dimly perceived by the most spiritual, but distorted out of all proportion by those who would nail every shadow to the wall.

Then, again, another great perplexity was created in the minds of students by the incomplete exposition of the doctrine of the evolution of the Monads. To be fully realised, both this process and that of the birth of the Globes must be examined far more from their metaphysical aspect than from what one might call a statistical standpoint, involving figures and numbers which are rarely permitted to be broadly used. Unfortunately, there are few who are inclined to handle these doctrines only metaphysically. Even the best of the Western writers upon our doctrine declares in his work that "on pure metaphysics of that sort we are not now engaged," when speaking of the evolution of the Monads ("Esoteric Buddhism," p. 46). And in such case, as the Teacher remarks in a letter to him, "Why this preaching of our doctrines, all this uphill work and swimming in adversum flumen? Why should the West . . . learn . . . from the East . . . that which can never meet the requirements of the special tastes of the aesthetics?" And he draws his correspondent's attention "to the formidable difficulties encountered by us (the Adepts) in every attempt we make to explain our metaphysics to the Western mind."

And well he may; for outside of metaphysics no occult philosophy, no esotericism is possible. It is like trying to explain the aspirations and affections, the love and hatred, the most private and sacred workings in

[[Vol. 1, Page]] 170 THE SECRET DOCTRINE.

the soul and mind of the living man, by an anatomical description of the chest and brain of his dead body.

Let us now examine two tenets mentioned above and hardly alluded to in "Esoteric Buddhism," and supplement them as far as lies in our power.

ADDITIONAL FACTS AND EXPLANATIONS CONCERNING THE GLOBES AND THE MONADS.

Two statements made in "Esoteric Buddhism" must be noticed and the author's opinions quoted. On p. 47 (fifth edition) it is said:--

" . . . the spiritual monads . . . do not fully complete their mineral existence on Globe A, then complete it on Globe B, and so on. They pass several times round the whole circle as minerals, and then again several times round as vegetables, and several times as animals. We purposely refrain for the present from going into figures," etc., etc.

This was a wise course to adopt in view of the great secrecy maintained with regard to figures and numbers. This reticence is now partially relinquished; but it would perhaps have been better had the real numbers concerning Rounds and evolutionary gyrations been either entirely divulged at the time, or as entirely withheld. Mr. Sinnett understood this difficulty well when saying (p. 140) that: "For reasons which are not easy for the outsider to divine, the possessors of occult knowledge are especially reluctant to give out facts relating to Cosmogony, though it is hard for the uninitiated to understand why they should be withheld."

That there were such reasons is evident. Nevertheless, it is to this reticence that most of the confused ideas of some Eastern as well as Western pupils are due. The difficulties in the way of the acceptance of the two particular tenets under consideration seemed great, just because of the absence of any data to go upon. But there it was. For the figures belonging to the Occult calculations cannot be given -- as the Masters have many times declared -- outside the circle of pledged chelas, and not even these can break the rules.

To make things plainer, without touching upon the mathematical aspects of the doctrine, the teaching given may be expanded and some obscure

[[Vol. 1, Page]] 171 THE MYSTERY OF THE MOON, UNVEILED.

points solved. As the evolution of the Globes and that of the Monads are so closely interblended, we will make of the two teachings one. In reference to the Monads, the reader is asked to bear in mind that Eastern philosophy rejects the Western theological dogma of a newly-created soul for every baby born, as being as unphilosophical as it is impossible in the economy of Nature. There must be a limited number of Monads evolving and growing more and more perfect through their assimilation of many successive personalities, in every new Manvantara. This is absolutely necessary in view of the doctrines of Rebirth, Karma, and the gradual return of the human Monad to its source -- absolute Deity. Thus, although the hosts of more or less progressed Monads are almost incalculable, they are still finite, as is everything in this Universe of differentiation and finiteness.

As shown in the double diagram of the human "principles" and the ascending Globes of the world-chains, there is an eternal concatenation of causes and effects, and a perfect analogy which runs through, and links together, all the lines of evolution. One begets the other -- globes as personalities. But, let us begin at the beginning.

The general outline of the process by which the successive planetary chains are formed has just been given. To prevent future misconceptions, some further details may be offered which will also throw light on the history of humanity on our own chain, the progeny of that of the Moon.

In the diagrams on p. 172, Fig. 1 represents the "lunar-chain" of seven planets at the outset of its seventh or last Round; while Fig. 2 represents the "earth-chain" which will be, but is not yet in existence. The seven Globes of each chain are distinguished in their cyclic order by the letters A to G, the Globes of the Earth-chain being further marked by a cross -- + -- the symbol of the Earth.

Now, it must be remembered that the Monads cycling round any septenary chain are divided into seven classes or hierarchies according to their respective stages of evolution, consciousness, and merit. Let us follow, then, the order of their appearance on planet A, in the first Round. The time-spaces between the appearances of these hierarchies on any one Globe are so adjusted that when Class 7, the last, appears on Globe A, Class 1, the first, has just passed on to Globe B, and so on, step by step, all round the chain.

Again, in the Seventh Round on the Lunar chain, when Class 7, the

[[Vol. 1, Page]] 172 THE SECRET DOCTRINE.

last, quits Globe A, that Globe, instead of falling asleep, as it had done in previous Rounds, begins to die (to go into its planetary pralaya);* and in dying it transfers successively, as just said, its "principles," or life-elements and energy, etc., one after the other to a new "laya-centre," which commences the formation of Globe A of the Earth Chain. A similar process takes place for each of the Globes of the "lunar chain" one after the other, each forming a fresh Globe of the "earth-chain." Our Moon was the fourth Globe of the series, and was

on the same plane of perception as our Earth. But Globe A of the lunar chain is not fully "dead" till the first Monads of the first class have passed from Globe G or Z, the last of the "lunar chain," into the Nirvana

[[Footnote(s)]] -----

* Occultism divides the periods of Rest (Pralaya) into several kinds; there is the individual pralaya of each Globe, as humanity and life pass on to the next; seven minor Pralayas in each Round; the planetary Pralaya, when seven Rounds are completed; the Solar Pralaya, when the whole system is at an end; and finally the Universal Maha -- or Brahma -- Pralaya at the close of the "Age of Brahma." These are the three chief pralayas or "destruction periods." There are many other minor ones, but with these we are not concerned at present.

[[Vol. 1, Page]] 173 THE EARTH, THE CHILD OF THE MOON.

which awaits them between the two chains; and similarly for all the other Globes as stated, each giving birth to the corresponding globe of the "earth-chain."

Further, when Globe A of the new chain is ready, the first class or Hierarchy of Monads from the Lunar chain incarnate upon it in the lowest kingdom, and so on successively. The result of this is, that it is only the first class of Monads which attains the human state of development during the first Round, since the second class, on each planet, arriving later, has not time to reach that stage. Thus the Monads of Class 2 reach the incipient human stage only in the Second Round, and so on up to the middle of the Fourth Round. But at this point -- and on this Fourth Round in which the human stage will be fully developed -- the "Door" into the human kingdom closes; and henceforward the number of "human" Monads, i.e., Monads in the human stage of development, is complete. For the Monads which had not reached the human stage by this point will, owing to the evolution of humanity itself, find themselves so far behind that they will reach the human stage only at the close of the seventh and last Round. They will, therefore, not be men on this chain, but will form the humanity of a future Manvantara and be rewarded by becoming "Men" on a higher chain altogether, thus receiving their Karmic compensation. To this there is but one solitary exception, for very good reasons, of which we shall speak farther on. But this accounts for the difference in the races.

It thus becomes apparent how perfect is the analogy between the processes of Nature in the Kosmos and in the individual man. The latter lives through his life-cycle, and dies. His "higher principles," corresponding in the development of a planetary chain to the cycling Monads, pass into Devachan, which corresponds to the "Nirvana" and states of rest intervening between two chains. The Man's lower "principles" are disintegrated in time and are used by Nature again for the formation of new human principles, and the same process takes place in the disintegration and formation of Worlds. Analogy is thus the surest guide to the comprehension of the Occult teachings.

This is one of the "seven mysteries of the Moon," and it is now revealed. The seven "mysteries" are called by the Japanese Yamaboosis, the mystics of the Lao-Tze sect and the ascetic monks of Kioto, the Dzenodoo -- the "seven jewels." Only the Japanese and the Chinese

[[Vol. 1, Page]] 174 THE SECRET DOCTRINE.

Buddhist ascetics and Initiates are, if possible, even more reticent in giving out their "Knowledge" than are the Hindus.

But the reader must not be allowed to lose sight of the Monads, and must be enlightened as to their nature, as far as permitted, without trespassing upon the highest mysteries, of which the writer does not in any way pretend to know the last or final word.

The Monadic Host may be roughly divided into three great classes:--

1. The most developed Monads (the Lunar Gods or "Spirits," called, in India, the Pitris), whose function it is to pass in the first Round through the whole triple cycle of the mineral, vegetable, and animal kingdoms in their most ethereal, filmy, and rudimentary forms, in order to clothe themselves in, and assimilate, the nature of the newly formed chain. They are those who first reach the human form (if there can be any form in the realm of the almost subjective) on Globe A in the first Round. It is they, therefore, who lead and represent the human element during the second and third Rounds, and finally evolve their shadows at the beginning of the Fourth Round for the second class, or those who come behind them.
2. Those Monads that are the first to reach the human stage during the three and a half Rounds, and to become men.*

[[Footnote(s)]] -----

* We are forced to use here the misleading word "Men," and this is a clear proof of how little any European language is adapted to express these subtle distinctions.

It stands to reason that these "Men" did not resemble the men of to-day, either in form or nature. Why then, it may be asked, call them "Men" at all? Because there is no other term in any Western language which approximately conveys the idea intended. The word "Men" at least indicates that these beings were "MANUS," thinking entities, however they differed in form and intellection from ourselves. But in reality they were, in respect of spirituality and intellection, rather "gods" than "Men."

The same difficulty of language is met with in describing the "stages" through which the Monad passes. Metaphysically speaking, it is of course an absurdity to talk of the "development" of a Monad, or to say that it becomes "Man." But any attempt to preserve metaphysical accuracy of language in the use of such a tongue as the English would necessitate at least three extra volumes of this work, and would entail an amount of verbal repetition which would be wearisome in the extreme. It stands to reason that a MONAD cannot either progress or develop, or even be affected by the changes of states it passes through. It is not of this world or plane, and may be compared only to an indestructible star of divine light and fire, thrown down on to our [[Footnote continued on next page]]

[[Vol. 1, Page]] 175 THE CLASSIFICATION OF THE MONADS.

3. The laggards; the Monads which are retarded, and which will not reach, by reason of Karmic impediments, the human stage at all during this cycle or Round, save one exception which will be spoken of elsewhere as already promised.

Now the evolution of the external form or body round the astral is produced by the terrestrial forces, just as in the case of the lower kingdoms; but the evolution of the internal or real MAN is purely spiritual. It is now no more a passage of the impersonal Monad through many and various forms of matter -- endowed at best with instinct and consciousness on quite a different plane -- as in the case of external evolution, but a journey of the "pilgrim-soul" through various states of not only matter but Self-consciousness and self-perception, or of perception from apperception. (See "Gods, Monads and Atoms.")

The MONAD emerges from its state of spiritual and intellectual unconsciousness; and, skipping the first two planes -- too near the ABSOLUTE to permit of any correlation with anything on a lower plane -- it gets direct into the plane of Mentality. But there is no plane in the whole universe with a wider margin, or a wider field of action in its almost endless gradations of perceptive and apperceptive qualities, than this plane, which has in its turn an appropriate smaller plane for every "form," from the "mineral" monad up to the time when that monad blossoms forth by evolution into the DIVINE MONAD. But all the time it is still one and the same Monad, differing only in its incarnations, throughout its ever succeeding cycles of partial or total obscuration of spirit, or the partial or total obscuration of matter -- two polar antitheses -- as it ascends into the realms of mental spirituality, or descends into the depths of materiality.

To return to "Esoteric Buddhism." It is there stated with regard to the enormous period intervening between the mineral epoch on Globe A, and the man-epoch,* that: "The full development of the

[[Footnote(s)]] -----

[[Footnote continued from previous page]] Earth as a plank of salvation for the personalities in which it indwells. It is for the latter to cling to it; and thus partaking of its divine nature, obtain immortality. Left to itself the Monad will cling to no one; but, like the "plank," be drifted away to another incarnation by the unresting current of evolution.

* The term "Man epoch" is here used because of the necessity of giving a name to that fourth kingdom which follows the animal. But in truth the "Man" on Globe A during the First Round is no Man, but only his prototype or dimensionless image from the astral regions.

[[Vol. 1, Page]] 176 THE SECRET DOCTRINE.

mineral epoch on Globe A, prepares the way for the vegetable development, and, as soon as this begins, the mineral life-impulse overflows into Globe B. Then, when the vegetable development on Globe A is complete and the animal development begins, the

vegetable life-impulse overflows to Globe B, and the mineral impulse passes on to Globe C. Then finally comes the human life-impulse on Globe A." (Page 49.)

And so it goes on for three Rounds, when it slackens, and finally stops at the threshold of our Globe, at the Fourth Round; because the human period (of the true physical men to be), the seventh, is now reached. This is evident, for as said, ". . . there are processes of evolution which precede the mineral kingdom, and thus a wave of evolution, indeed several waves of evolution, precede the mineral wave in its progress round the spheres" (ibid).

And now we have to quote from another article, "The Mineral Monad" in "Five Years of Theosophy," p. 273 et seq.

"There are seven kingdoms. The first group comprises three degrees of elementals, or nascent centres of forces -- from the first stage of differentiation of (from) Mulaprakriti (or rather Pradhana, primordial homogeneous matter) to its third degree -- i.e., from full unconsciousness to semi-perception; the second or higher group embraces the kingdoms from vegetable to man; the mineral kingdom thus forming the central or turning point in the degrees of the "Monadic Essence," considered as an evolving energy. Three stages (sub-physical) on the elemental side; the mineral kingdom; three stages on the objective physical* side -- these are the (first or preliminary) seven links of the evolutionary chain."

"Preliminary" because they are preparatory, and though belonging in fact to the natural, they yet would be more correctly described as sub-natural evolution. This process makes a halt in its stages at the Third, at the threshold of the Fourth stage, when it becomes, on the plane of the natural evolution, the first really manward stage, thus forming with the three elemental kingdoms, the ten, the Sephirothal number. It is at this point that begins:--

"A descent of spirit into matter equivalent to an ascent in physical

[[Footnote(s)]] -----

* "Physical" here means differentiated for cosmical purposes and work; that "physical side," nevertheless, if objective to the apperception of beings from other planes, is yet quite subjective to us on our plane.

[[Vol. 1, Page]] 177 AS ABOVE, SO BELOW, IS THE LAW.

evolution; a re-ascent from the deepest depths of materiality (the mineral) towards its status quo ante, with a corresponding dissipation of concrete organism -- up to Nirvana, the vanishing point of differentiated matter." ("Five Years of Theosophy," p. 276.)

Therefore it becomes evident why that which is pertinently called in Esoteric Buddhism "Wave of Evolution," and mineral-, vegetable-, animal- and man-"impulse," stops at the door of our Globe, at its Fourth cycle or Round. It is at this point that the Cosmic Monad (Buddhi) will be wedded to and become the vehicle of the Atmic Ray, i.e., it (Buddhi) will awaken to an apperception of it (Atman); and thus enter on the first step of a new septenary ladder of evolution, which will lead it eventually to the tenth (counting from the lowest upwards) of the Sephirothal tree, the Crown.

Everything in the Universe follows analogy. "As above, so below"; Man is the microcosm of the Universe. That which takes place on the spiritual plane repeats itself on the Cosmic plane. Concretion follows the lines of abstraction; corresponding to the highest must be the lowest; the material to the spiritual. Thus, corresponding to the Sephirothal Crown (or upper triad) there are the three elemental Kingdoms, which precede the Mineral (see diagram on p. 277 in Five Years of Theosophy), and which, using the language of the Kabbalists, answer in the Cosmic differentiation to the worlds of Form and Matter from the Super-Spiritual to the Archetypal.

Now what is a "Monad?" And what relation does it bear to an Atom? The following reply is based upon the explanations given in answer to these questions in the above-cited article: "The Mineral Monad," written by the author.

"None whatever," is answered to the second question, "to the atom or molecule as existing in the scientific conception at present. It can neither be compared with the microscopic organism, once classed among polygastric infusoria, and now regarded as vegetable, and classed among Algae; nor is it quite the Monas of the Peripatetics. Physically or constitutionally the mineral monad differs, of course, from the human monad, which is neither physical nor can its constitution be rendered by chemical symbols and elements." In short, as the spiritual Monad is One, Universal, Boundless and Impartite, whose rays, nevertheless, form what we, in our ignorance, call the "Individual Monads" of men,

[[Vol. 1, Page]] 178 THE SECRET DOCTRINE.

so the Mineral Monad -- being at the opposite point of the circle -- is also One -- and from it proceed the countless physical atoms, which Science is beginning to regard as individualized.

Otherwise how could one account for and explain mathematically the evolutionary and spiral progress of the Four Kingdoms? The "Monad" is the combination of the last two "principles" in man, the 6th and the 7th, and, properly speaking, the term "human monad" applies only to the dual soul (Atma-Buddhi), not to its highest spiritual vivifying Principle, Atma, alone. But since the Spiritual Soul, if divorced from the latter (Atma) could have no existence, no being, it has thus been called . . . Now the Monadic, or rather Cosmic, Essence (if such a term be permitted) in the mineral, vegetable, and animal, though the same throughout the series of cycles from the

lowest elemental up to the Deva Kingdom, yet differs in the scale of progression. It would be very misleading to imagine a Monad as a separate Entity trailing its slow way in a distinct path through the lower Kingdoms, and after an incalculable series of transformations flowering into a human being; in short, that the Monad of a Humboldt dates back to the Monad of an atom of hornblende. Instead of saying a "Mineral Monad," the more correct phraseology in physical Science, which differentiates every atom, would of course have been to call it "the Monad manifesting in that form of Prakriti called the Mineral Kingdom." The atom, as represented in the ordinary scientific hypothesis, is not a particle of something, animated by a psychic something, destined after aeons to blossom as a man. But it is a concrete manifestation of the Universal Energy which itself has not yet become individualized; a sequential manifestation of the one Universal Monas. The ocean (of matter) does not divide into its potential and constituent drops until the sweep of the life-impulse reaches the evolutionary stage of man-birth. The tendency towards segregation into individual Monads is gradual, and in the higher animals comes almost to the point. The Peripatetics applied the word Monas to the whole Kosmos, in the pantheistic sense; and the Occultists, while accepting this thought for convenience sake, distinguish the progressive stages of the evolution of the concrete from the abstract by terms of which the "Mineral, Vegetable, Animal, (etc.), Monad" are examples. The term merely means that the tidal wave of spiritual evolution is passing through that arc of its circuit. The "Monadic

[[Vol. 1, Page]] 179 THE LUNAR MONADS.

Essence" begins to imperceptibly differentiate towards individual consciousness in the Vegetable Kingdom. As the Monads are un-compounded things, as correctly defined by Leibnitz, it is the spiritual essence which vivifies them in their degrees of differentiation, which properly constitutes the Monad -- not the atomic aggregation, which is only the vehicle and the substance through which thrill the lower and the higher degrees of intelligence.

Leibnitz conceived of the Monads as elementary and indestructible units endowed with the power of giving and receiving with respect to other units, and thus of determining all spiritual and physical phenomena. It is he who invented the term apperception, which together with nerve- (not perception, but rather) -- sensation, expresses the state of the Monadic consciousness through all the Kingdoms up to Man.

Thus it may be wrong on strictly metaphysical lines to call Atma-Buddhi a MONAD, since in the materialistic view it is dual and therefore compound. But as Matter is Spirit, and vice versa; and since the Universe and the Deity which informs it are unthinkable apart from each other; so in the case of Atma-Buddhi. The latter being the vehicle of the former, Buddhi stands in the same relation to Atma, as Adam-Kadmon, the Kabalistic Logos, does to En-Soph, or Mulaprakriti to Parabrahm.

A few words more of the Moon.

What, it may be asked, are the "Lunar Monads," just spoken of? The description of the seven classes of Pitris will come later, but now some general explanations may be given. It must be plain to everyone that they are Monads, who, having ended their life-cycle on the lunar chain, which is inferior to the terrestrial chain, have incarnated on this one. But there are some further details which may be added, though they border too closely on forbidden ground to be treated of fully. The last word of the mystery is divulged only to the adepts, but it may be stated that our satellite is only the gross body of its invisible principles. Seeing then that there are 7 Earths, so there are 7 Moons, the last one alone being visible; the same for the Sun, whose visible body is called a Maya, a reflection, just as man's body is. "The real Sun and the real Moon are as invisible as the real man," says an occult maxim.

And it may be remarked en passant that those ancients were not so foolish after all who first started the idea of "the seven moons." For though

[[Vol. 1, Page]] 180 THE SECRET DOCTRINE.

this conception is now taken solely as an astronomical measure of time, in a very materialised form, yet underlying the husk there can still be recognised the traces of a profoundly philosophical idea.

In reality the Moon is only the satellite of the Earth in one respect, viz., that physically the Moon revolves round the Earth. But in every other respect it is the Earth which is the satellite of the Moon, and not vice versa. Startling as the statement may seem it is not without confirmation from scientific knowledge. It is evidenced by the tides, by the cyclic changes in many forms of disease which coincide with the lunar phases; it can be traced in the growth of plants, and is very marked in the phenomena of human gestation and conception. The importance of the Moon and its influence on the Earth were recognized in every ancient religion, notably the Jewish, and have been remarked by many observers of psychical and physical phenomena. But, so far as Science knows, the Earth's action on the Moon is confined to the physical attraction, which causes her to circle in her orbit. And should an objector insist that this fact alone is sufficient evidence that the Moon is truly the Earth's satellite on other planes of action, one may reply by asking whether a mother, who walks round and round her child's cradle keeping watch over the infant, is the subordinate of her child or dependent upon it; though in one sense she is its satellite, yet she is certainly older and more fully developed than the child she watches.

It is, then, the Moon that plays the largest and most important part, as well in the formation of the Earth itself, as in the peopling thereof with human beings. The "Lunar Monads" or Pitris, the ancestors of man, become in reality man himself. They are the "Monads" who enter on the cycle of evolution on Globe A, and who, passing round the chain of planets, evolve the human form as has just been shown. At the beginning of the human stage of the Fourth Round on this Globe, they "ooze out" their astral doubles from the "ape-like" forms which they had evolved in Round III. And it is this subtle, finer form, which serves as the model round which Nature builds physical man. These "Monads" or "divine sparks" are thus the "Lunar" ancestors, the Pitris themselves. For these "Lunar

Spirits" have to become "Men" in order that their "Monads" may reach a higher plane of activity and self-consciousness, i.e., the plane of the Manasa-Putras, those who

[[Vol. 1, Page]] 181 A TRIPLE EVOLUTION IN NATURE.

endow the "senseless" shells, created and informed by the Pitris, with "mind" in the latter part of the Third Root-Race.

In the same way the "Monads" or Egos of the men of the seventh Round of our Earth, after our own Globes A, B, C, D, et seq., parting with their life-energy, will have informed and thereby called to life other laya-centres destined to live and act on a still higher plane of being -- in the same way will the Terrene "Ancestors" create those who will become their superiors.

It now becomes plain that there exists in Nature a triple evolutionary scheme, for the formation of the three periodical Upadhis; or rather three separate schemes of evolution, which in our system are inextricably interwoven and interblended at every point. These are the Monadic (or spiritual), the intellectual, and the physical evolutions. These three are the finite aspects or the reflections on the field of Cosmic Illusion of ATMA, the seventh, the ONE REALITY.

1. The Monadic is, as the name implies, concerned with the growth and development into still higher phases of activity of the Monad in conjunction with:--

2. The Intellectual, represented by the Manasa-Dhyanis (the Solar Devas, or the Agnishwatta Pitris) the "givers of intelligence and consciousness" to man and:--

3. The Physical, represented by the Chhayas of the lunar Pitris, round which Nature has concreted the present physical body. This body serves as the vehicle for the "growth" (to use a misleading word) and the transformations through Manas and -- owing to the accumulation of experiences -- of the finite into the INFINITE, of the transient into the Eternal and Absolute.

Each of these three systems has its own laws, and is ruled and guided by different sets of the highest Dhyanis or "Logoi." Each is represented in the constitution of man, the Microcosm of the great Macrocosm; and it is the union of these three streams in him which makes him the complex being he now is.

"Nature," the physical evolutionary Power, could never evolve intelligence unaided -- she can only create "senseless forms," as will be seen in our "ANTHROPOGENESIS." The "Lunar Monads" cannot progress, for they have not yet had sufficient touch with the forms

[[Footnote(s)]] -----

* Vide CONCLUSION in Part II. of this Book.

[[Vol. 1, Page]] 182 THE SECRET DOCTRINE.

created by "Nature" to allow of their accumulating experiences through its means. It is the Manasa-Dhyanis who fill up the gap, and they represent the evolutionary power of Intelligence and Mind, the link between "Spirit" and "Matter" -- in this Round.

Also it must be borne in mind that the Monads which enter upon the evolutionary cycle upon Globe A, in the first Round, are in very different stages of development. Hence the matter becomes somewhat complicated. . . . Let us recapitulate.

The most developed Monads (the lunar) reach the human germ-stage in the first Round; become terrestrial, though very ethereal human beings towards the end of the Third Round, remaining on it (the globe) through the "obscuration" period as the seed for future mankind in the Fourth Round, and thus become the pioneers of Humanity at the beginning of this, the Fourth Round. Others reach the Human stage only during later Rounds, i.e., in the second, third, or first half of the Fourth Round. And finally the most retarded of all, i.e., those still occupying animal forms after the middle turning-point of the Fourth Round -- will not become men at all during this Manwantara. They will reach to the verge of humanity only at the close of the seventh Round to be, in their turn, ushered into a new chain after pralaya -- by older pioneers, the progenitors of humanity, or the Seed-Humanity (Sishta), viz., the men who will be at the head of all at the end of these Rounds.

The student hardly needs any further explanation on the part played by the fourth Globe and the fourth Round in the scheme of evolution.

From the preceding diagrams, which are applicable, mutatis mutandis, to Rounds, Globes or Races, it will be seen that the fourth member of a series occupies a unique position. Unlike the others, the Fourth has no "sister" Globe on the same plane as itself, and it thus forms the fulcrum of the "balance" represented by the whole chain. It is the sphere of final evolutionary adjustments, the world of Karmic scales, the Hall of Justice, where the balance is struck which determines the future course of the Monad during the remainder of its incarnations in the cycle. And therefore it is, that, after this central turning-point has been passed in the Great Cycle, -- i.e., after the middle point of the Fourth Race in the Fourth Round on our Globe -- no more Monads can enter the human kingdom. The door is closed for this Cycle and the balance struck. For were it otherwise -- had there been a new soul

[[Vol. 1, Page]] 183 MAN, THE OLDEST SON OF THE EARTH.

created for each of the countless milliards of human beings that have passed away, and had there been no reincarnation -- it would become difficult indeed to provide room for the disembodied "Spirits;" nor could the origin and cause of suffering ever be accounted for. It is the ignorance of the occult tenets and the enforcement of false conceptions under the guise of religious education, which have created materialism and atheism as a protest against the asserted divine order of things.

The only exceptions to the rule just stated are the "dumb races," whose Monads are already within the human stage, in virtue of the fact that these "animals" are later than, and even half descended from man, their last descendants being the anthropoid and other apes. These "human presentments" are in truth only the distorted copies of the early humanity. But this will receive full attention in the next Book.

As the Commentary, broadly rendered, says:--

1. "Every form on earth, and every speck (atom) in Space strives in its efforts towards self-formation to follow the model placed for it in the 'HEAVENLY MAN.' . . . Its (the atom's) involution and evolution, its external and internal growth and development, have all one and the same object -- man; man, as the highest physical and ultimate form on this earth; the MONAD, in its absolute totality and awakened condition -- as the culmination of the divine incarnations on Earth."
2. "The Dhyanis (Pitris) are those who have evolved their BHUTA (doubles) from themselves, which RUPA (form) has become the vehicle of monads (seventh and sixth principles) that had completed their cycle of transmigration in the three preceding Kalpas (Rounds). Then, they (the astral doubles) became the men of the first Human Race of the Round. But they were not complete, and were senseless."

This will be explained in the Books that follow. Meanwhile man -- or rather his Monad -- has existed on the earth from the very beginning of this Round. But, up to our own Fifth Race, the external shapes which covered those divine astral doubles changed and consolidated with every sub-race; the form and physical structure of the fauna changing at the same time, as they had to be adapted to the ever-changing conditions of life on this globe during the geological periods of its formative cycle. And thus shall they go on changing with every

[[Vol. 1, Page]] 184 THE SECRET DOCTRINE.

Root Race and every chief sub-race down to the last one of the Seventh in this Round.

3. "The inner, now concealed, man, was then (in the beginnings) the external man. The progeny of the Dhyanis (Pitris), he was 'the son like unto his father.' Like the lotus, whose external shape assumes gradually the form of the model within itself, so did the form of man in the beginning evolve from within without. After the cycle in which man began to procreate his species after the fashion of the present animal kingdom, it became the reverse. The human foetus follows now in its transformations all the forms that the physical frame of man had assumed throughout the three Kalpas (Rounds) during the tentative efforts at Plastic formation around the monad by senseless, because imperfect, matter, in her blind wanderings. In the present age, the physical embryo is a plant, a reptile, an animal, before it finally becomes man, evolving within himself his own ethereal counterpart, in his turn. In the beginning it was that counterpart (astral man) which, being senseless, got entangled in the meshes of matter."

But this "man" belongs to the fourth Round. As shown, the MONAD had passed through, journeyed and been imprisoned in, every transitional form throughout every kingdom of nature during the three preceding Rounds. But the monad which becomes human is not the Man. In this Round -- with the exception of the highest mammals after man, the anthropoids destined to die out in this our race, when their monads will be liberated and pass into the astral human forms (or the highest elementals) of the Sixth* and the Seventh Races, and then into lowest human forms in the fifth Round -- no units of either of the kingdoms are animated any longer by monads destined to become human in their next stage, but only by the lower Elementals of their respective realms.**

The last human Monad incarnated before the beginning of the 5th

[[Footnote(s)]] -----

* Nature never repeats herself, therefore the anthropoids of our day have not existed at any time since the middle of the Miocene period; when, like all cross breeds, they began to show a tendency, more and more marked as time went on, to return to the type of their first parent, the black and yellow gigantic Lemuro-Atlantean. To search for the "Missing Link" is useless. To the scientists of the closing sixth Root-race, millions and millions of years hence, our modern races, or rather their fossils, will appear as those of small insignificant apes -- an extinct species of the genus homo.

** These "Elementals" will become human Monads, in their turn, only at the next great planetary Manvantara.

[[Vol. 1, Page]] 185 THE MAN, OR THE APE; WHICH THE FIRST?

Root-Race.* The cycle of metempsychosis for the human monad is closed, for we are in the Fourth Round and the Fifth Root-Race. The reader will have to bear in mind -- at any rate one who has made himself acquainted with "Esoteric Buddhism" -- that the Stanzas

which follow in this Book and Book II speak of the evolution in our Fourth Round only. The latter is the cycle of the turning-point, after which, matter,

[[Footnote(s)]] -----

* Such anthropoids form an exception because they were not intended by Nature, but are the direct product and creation of "senseless" man. The Hindus give a divine origin to the apes and monkeys because the men of the Third Race were gods from another plane who had become "senseless" mortals. This subject had already been touched upon in "Isis Unveiled" twelve years ago as plainly as was then possible. On pp. 278-279, the reader is referred "to the Brahmins, if he would know the reason of the regard they have for the monkeys. For then he (the reader) would perhaps learn -- were the Brahman to judge him worthy of an explanation -- that the Hindu sees in the ape but what Manu desired he should: the transformation of species most directly connected with that of the human family, a bastard branch engrafted on their own stock before the final perfection of the latter. He might learn, further, that in the eyes of the educated 'heathen' the spiritual or inner man is one thing, and his terrestrial physical casket another. That physical nature, the great combination of physical correlations of forces, ever creeping onward towards perfection, has to avail herself of the material at hand; she models and remodels as she proceeds, and finishing her crowning work in man, presents him alone as a fit tabernacle for the overshadowing of the divine Spirit."

Moreover, a German scientific work is mentioned in a footnote on the same page. It says that a Hanoverian scientist had recently published a Book entitled "Ueber die Auflosung der Arten durch Naturliche Zucht-wahl," in which he shows, with great ingenuity, that Darwin was wholly mistaken in tracing man back to the ape. On the contrary, he maintains that it is the ape which is evolved from man. He shows that, in the beginning, mankind were morally and physically the types and prototypes of our present Race, and of our human dignity, by their beauty of form, regularity of feature, cranial development, nobility of sentiments, heroic impulses, and grandeur of ideal conception. This is a purely Brahmanic, Buddhistic and Kabalistic philosophy. The Book is copiously illustrated with diagrams, tables, etc. It asserts that the gradual debasement and degradation of man, morally and physically, can be readily traced throughout the ethnological transformation down to our time. And, as one portion has already degenerated into apes, so the civilized man of the present day will at last, under the action of the inevitable law of necessity, be also succeeded by like descendants. If we may judge of the future by the actual Present, it certainly does seem possible that so unspiritual and materialistic a body should end as Simia rather than as Seraphs. But though the apes descend from man, it is certainly not the fact that the human Monad, which has once reached the level of humanity, ever incarnates again in the form of an animal.

[[Vol. 1, Page]] 186 THE SECRET DOCTRINE.

having reached its lowest depths, begins to strive onward and to get spiritualized with every new Race and with every fresh cycle. Therefore the student must take care not to see contradiction where there is none, as in "Esoteric Buddhism" Rounds are spoken of in general, while here only the Fourth, or our present Round, is meant. Then it was the work of formation; now it is that of reformation and evolutionary perfection.

Finally, to close this chapter anent various, but unavoidable misconceptions, we must refer to a statement in "Esoteric Buddhism" which has produced a very fatal impression upon the minds of many Theosophists. One unfortunate sentence from the work just referred to is constantly brought forward to prove the materialism of the doctrine. On p. 48, 5th Edition, the Author, referring to the progress of organisms on the Globes, says that "the mineral kingdom will no more develop the vegetable . . . than the Earth was able to develop man from the ape, till it received an impulse."

Whether this sentence renders literally the thought of the author, or is simply (as we believe it is) a lapsus calami, may remain an open question.

It is really with surprise that we have ascertained the fact that "Esoteric Buddhism" was so little understood by some Theosophists, as to have led them into the belief that it thoroughly supported Darwinian evolution, and especially the theory of the descent of man from a pithecoïd ancestor. As one member writes: "I suppose you realise that three-fourths of Theosophists and even outsiders imagine that, as far as the evolution of man is concerned, Darwinism and Theosophy kiss one another." Nothing of the kind was ever realised, nor is there any great warrant for it, so far as we know, in "Esoteric Buddhism." It has been repeatedly stated that evolution as taught by Manu and Kapila was the groundwork of the modern teachings, but neither Occultism nor Theosophy has ever supported the wild theories of the present Darwinists -- least of all the descent of man from an ape. Of this, more hereafter. But one has only to turn to p. 47 of "Esoteric Buddhism," 5th edition, to find there the statement that "Man belongs to a kingdom distinctly separate from that of the animals." With such a plain and unequivocal statement before him, it is very strange that any careful student should have been so misled unless he is prepared to charge the author with a gross contradiction.

[[Vol. 1, Page]] 187 AN ERRONEOUS OPINION.

Every Round repeats on a higher scale the evolutionary work of the preceding Round. With the exception of some higher anthropoids, as just mentioned, the Monadic inflow, or inner evolution, is at an end till the next Manvantara. It can never be too often repeated, that the full-blown human Monads have to be first disposed of, before the new crop of candidates appears on this Globe at the beginning of the next cycle. Thus there is a lull; and this is why, during the Fourth Round, man appears on Earth earlier than any animal creation, as will be described.

But it is still urged that the author of "Esoteric Buddhism" has "preached Darwinism" all along. Certain passages would undoubtedly seem to lend countenance to this inference. Besides which the Occultists themselves are ready to concede partial correctness to the Darwinian hypothesis, in later details, bye-laws, of Evolution, and after the midway point of the Fourth Race. Of that which has taken place, physical science can really know nothing, for such matters lie entirely outside of its sphere of investigation. But what the Occultists have never admitted, nor will they ever admit, is that man was an ape in this or in any other Round; or that he ever could be one, however much he may have been "ape-like." This is vouched for by the very authority from whom the author of "Esoteric Buddhism" got his information.

Thus to those who confront the Occultists with these lines from the above-named volume: "It is enough to show that we may as reasonably -- and that we must, if we would talk about these matters at all -- conceive a life-impulse giving birth to mineral form, as of the same sort of impulse concerned to raise a race of apes into a race of rudimentary men." To those who bring this passage forward as showing "decided Darwinism," the Occultists answer by pointing to the explanation of the Master (Mr. Sinnett's "teacher") which would contradict these lines, were they written in the spirit attributed to them. A copy of this letter was sent to the writer, together with others, two years ago (1886), with additional marginal remarks, to quote from, in the "Secret Doctrine." It begins by considering the difficulty experienced by the Western student, in reconciling some facts, previously given, with the evolution of man from the animal, i.e., from the mineral, vegetable and animal kingdoms, and advises the student to hold to the doctrine of analogy and correspondences. Then it touches upon the mystery of the Devas,

[[Vol. 1, Page]] 188 THE SECRET DOCTRINE.

and even Gods, having to pass through states which it was agreed to refer to as "Inmetallization, Inherbation, Inzoization and finally Incarnation," and explains this by hinting at the necessity of failures even in the ethereal races of Dhyana Chohans. Concerning this it says:

"Still, as these 'failures' are too far progressed and spiritualized to be thrown back forcibly from Dhyana Chohanship into the vortex of a new primordial evolution through the lower kingdoms. . . ." After which only a hint is given about the mystery contained in the allegory of the fallen Asuras, which will be expanded and explained in Book II. When Karma has reached them at the stage of human evolution, "they will have to drink it to the last drop in the bitter cup of retribution. Then they become an active force and commingle with the Elementals, the progressed entities of the pure animal kingdom, to develop little by little the full type of humanity."

These Dhyana Chohans, as we see, do not pass through the three kingdoms as do the lower Pitris; nor do they incarnate in man until the Third Root Race. Thus, as the teaching stands:

"Man in the First Round and First Race on Globe D, our Earth, was an ethereal being (a Lunar Dhyani, as man), non-intelligent but superspiritual; and correspondingly, on the law of analogy, in the First Race of the Fourth Round. In each of the subsequent races and sub-races . . . he grows more and more into an encased or incarnate being, but still preponderatingly ethereal. . . . He is sexless, and, like the animal and vegetable he develops monstrous bodies correspondent with his coarser surroundings.

"II. Round. He (Man) is still gigantic and ethereal but growing firmer and more condensed in body, a more physical man. Yet still less intelligent than spiritual (1), for mind is a slower and more difficult evolution than is the physical frame . . ."

"III. Round. He has now a perfectly concrete or compacted body, at first the form of a giant-ape, and now more intelligent, or rather cunning, than spiritual. For, on the downward arc, he has now reached a point where his primordial spirituality is eclipsed and overshadowed by nascent mentality (2). In the last half of the Third Round his gigantic stature decreases, and his body improves in texture, and he becomes a more rational being, though still more an ape than a

[[Vol. 1, Page]] 189 A MASTER'S LETTER.

Deva. . . . (All this is almost exactly repeated in the third Root-Race of the Fourth Round.)

"IV. Round. Intellect has an enormous development in this Round. The (hitherto) dumb races acquire our (present) human speech on this globe, on which, from the Fourth Race, language is perfected and knowledge increases. At this half-way point of the Fourth Round (as of the Fourth Root, or Atlantean, race) humanity passes the axial point of the minor Manvantara cycle . . . the world teeming with the results of intellectual activity and spiritual decrease . . ."

This is from the authentic letter; what follows are the later remarks and additional explanations traced by the same hand in the form of footnotes.

(1.) . . . The original letter contained general teaching -- a 'bird's eye view' -- and particularized nothing. . . . To speak of 'physical man' while limiting the statement to the early Rounds would be drifting back to the miraculous and instantaneous 'coats of skin.' . . . The first 'Nature,' the first 'body,' the first 'mind' on the first plane of perception, on the first Globe in the first Round, is what was meant. For Karma and evolution have --

' . . . centred in our make such strange extremes!
From different Natures* marvellously mixed . . .'

(2.) "Restore: he has now reached the point (by analogy, and as the Third Root Race in the Fourth Round) where his ("the angel"-man's) primordial spirituality is eclipsed and overshadowed by nascent human mentality, and you have the true version on your thumb-nail. . . ."

These are the words of the Teacher -- text, words and sentences in brackets, and explanatory footnotes. It stands to reason that there must be an enormous difference in such terms as "objectivity" and "subjectivity," "materiality" and "spirituality," when the same terms are applied to different planes of being and perception. All this must be taken in its relative sense. And therefore there is little to be wondered at, if, left to his own speculations, an author, however eager to learn, yet quite inexperienced in these abstruse teachings, has fallen

[[Footnote(s)]] -----

* The Natures of the seven hierarchies or classes of Pitris and Dhyān Chohans which compose our nature and Bodies are here meant.

[[Vol. 1, Page]] 190 THE SECRET DOCTRINE.

into an error. Neither was the difference between the "Rounds" and the "Races" sufficiently defined in the letters received, nor was there anything of the kind required before, as the ordinary Eastern disciple would have found out the difference in a moment. Moreover, to quote from a letter of the Master's (188-), "the teachings were imparted under protest. . . . They were, so to say, smuggled goods . . . and when I remained face to face with only one correspondent, the other, Mr. . . . , had so far tossed all the cards into confusion, that little remained to be said without trespassing upon law." Theosophists, "whom it may concern," will understand what is meant.

The outcome of all this is that nothing had ever been said in the "letters" to warrant the assurance that the Occult doctrine has ever taught, or any Adept believed in, the preposterous modern theory of the descent of man from a common ancestor with the ape -- an anthropoid of the actual animal kind, unless metaphorically. To this day the world is more full of "ape-like men" than the woods are of "men-like apes." The ape is sacred in India because its origin is well known to the Initiates, though concealed under a thick veil of allegory. Hanuman is the son of Pavana (Vayu, "the god of the wind") by Anjana, a monster called Kesari, though his genealogy varies. The reader who bears this in mind will find in Book II. passim, the whole explanation of this ingenious allegory. The "Men" of the Third Race (who separated) were "Gods" by their spirituality and purity, though senseless, and as yet destitute of mind, as men.

These "Men" of the Third Race -- the ancestors of the Atlanteans -- were just such ape-like, intellectually senseless giants as were those beings, who, during the Third Round, represented Humanity. Morally irresponsible, it was these third Race "men" who, through promiscuous connection with animal species lower than themselves, created that missing link which became ages later (in the tertiary period only) the remote ancestor of the real ape as we find it now in the pithecoïd family.*

[[Footnote(s)]] -----

* And if this is found clashing with that other statement which shows the animal later than man, then the reader is asked to bear in mind that the placental mammal only is meant. In those days there were animals of which zoology does not even dream in our own; and the modes of reproduction were not identical with the notions which modern physiology has upon the subject. It is not altogether convenient to touch upon such questions in public, but there is no contradiction or impossibility in this whatever.

[[Vol. 1, Page]] 191 THE PRELIMINARY CREATION OF MAN.

Thus the earlier teachings, however unsatisfactory, vague and fragmentary, did not teach the evolution of "man" from the "ape." Nor does the author of "Esoteric Buddhism" assert it anywhere in his work in so many words; but, owing to his inclination towards modern science, he uses language which might perhaps justify such an inference. The man who preceded the Fourth, the Atlantean race, however much he may have looked physically like a "gigantic ape" -- "the counterfeit of man who hath not the life of a man" -- was still a thinking and already a speaking man. The "Lemuro-Atlantean" was a highly civilized race, and if one accepts tradition, which is better history than the speculative fiction which now passes under that name, he was higher than we are with all our sciences and the degraded civilization of the day: at any rate, the Lemuro-Atlantean of the closing Third Race was so.

And now we may return to the Stanzas.

STANZA VI. -- Continued.

5. AT THE FOURTH (Round, or revolution of life and being around "the seven smaller wheels") (a), THE SONS ARE TOLD TO CREATE THEIR IMAGES. ONE THIRD REFUSES. TWO (thirds) OBEY.

The full meaning of this sloka can be fully comprehended only after reading the detailed additional explanations in the "Anthropogenesis" and its commentaries, in Book II. Between this Sloka and the last, Sloka 4 in this same Stanza, extend long ages; and there now gleams the dawn and sunrise of another aeon. The drama enacted on our planet is at the beginning of its fourth act, but for a clearer comprehension of the whole play the reader will have to turn back before he can proceed onward. For this verse

belongs to the general Cosmogony given in the archaic volumes, whereas Book II. will give a detailed account of the "Creation" or rather the formation, of the first human beings, followed by the second humanity, and then by the third; or, as they are called, "the first, second, and the third Root-Races." As the solid Earth began by being a ball of liquid fire, of fiery dust and its protoplasmic phantom, so did man.

[[Vol. 1, Page]] 192 THE SECRET DOCTRINE.

(a) That which is meant by the qualification the "Fourth" is explained as the "fourth Round" only on the authority of the Commentaries. It can equally mean fourth "Eternity" as "Fourth Round," or even the fourth (our) Globe. For, as will repeatedly be shown, it is the fourth Sphere on the fourth or lowest plane of material life. And it so happens that we are in the Fourth Round, at the middle point of which the perfect equilibrium between Spirit and Matter had to take place.* Says the Commentary explaining the verse:--

"The holy youths (the gods) refused to multiply and create species after their likeness, after their kind. They are not fit forms (rupas) for us. They have to grow. They refuse to enter the chhayas (shadows or images) of their inferiors. Thus had selfish feeling prevailed from the beginning, even among the gods, and they fell under the eye of the Karmic Lipikas."

They had to suffer for it in later births. How the punishment reached the gods will be seen in the second volume.

STANZA VI. -- Continued.

6. THE CURSE IS PRONOUNCED (a): THEY WILL BE BORN IN THE FOURTH (Race), SUFFER AND CAUSE SUFFERING (b). THIS IS THE FIRST WAR (c).

(a) It is a universal tradition that, before the physiological "Fall," propagation of one's kind, whether human or animal, took place through the WILL of the Creators, or of their progeny. It was the Fall of Spirit into generation, not the Fall of mortal man. It has already been stated that, to become a Self-Conscious Spirit, the latter must pass through every cycle of being, culminating in its highest point on earth in Man.

[[Footnote(s)]] -----

* It was, as we shall see, at this period -- during the highest point of civilization and knowledge, as also of human intellectuality, of the fourth, Atlantean Race -- that, owing to the final crisis of physiologico-spiritual adjustment of the races, humanity branched off into its two diametrically opposite paths: the RIGHT- and the LEFT-hand paths of knowledge or of Vidya. "Thus were the germs of the White and the Black Magic sown in those days. The seeds lay latent for some time, to sprout only during the early period of the Fifth (our Race)." (Commentary.)

[[Vol. 1, Page]] 193 THE FIRST CAUSE OF SIN.

Spirit per se is an unconscious negative ABSTRACTION. Its purity is inherent, not acquired by merit; hence, as already shown, to become the highest Dhyani Chohan it is necessary for each Ego to attain to full self-consciousness as a human, i.e., conscious Being, which is synthesized for us in Man. The Jewish Kabalists arguing that no Spirit could belong to the divine hierarchy unless Ruach (Spirit) was united to Nephesh (living Soul), only repeat the Eastern Esoteric teaching. "A Dhyani has to be an Atma-Buddhi; once the Buddhi-Manas breaks loose from its immortal Atma of which it (Buddhi) is the vehicle, Atman passes into NON-BEING, which is absolute Being." This means that the purely Nirvanic state is a passage of Spirit back to the ideal abstraction of Be-ness which has no relation to the plane on which our Universe is accomplishing its cycle.

(b) "The curse is pronounced" does not mean, in this instance, that any personal Being, god, or superior Spirit, pronounced it, but simply that the cause which could but create bad results had been generated, and that the effects of a Karmic cause could lead the "Beings" that counteracted the laws of Nature, and thus impeded her legitimate progress, only to bad incarnations, hence to suffering.

(c) "There were many wars" refers to several struggles of adjustment, spiritual, cosmical, and astronomical, but chiefly to the mystery of the evolution of man as he is now. Powers -- pure Essences -- "that were told to create" is a sentence that relates to a mystery explained, as already said, elsewhere. It is not only one of the most hidden secrets of Nature -- that of generation, over whose solution the Embryologists have vainly put their heads together -- but likewise a divine function that involves that other religious, or rather dogmatic, mystery, the "Fall" of the Angels, as it is called. Satan and his rebellious host would thus prove, when the meaning of the allegory is explained, to have refused to create physical man, only to become the direct Saviours and the Creators of "divine Man." The symbolical teaching is more than mystical and religious, it is purely scientific, as will be seen later on. For, instead of remaining a mere blind, functioning medium, impelled and guided by fathomless LAW, the "rebellious" Angel claimed and enforced his right of independent judgment and will, his

[[Vol. 1, Page]] 194 THE SECRET DOCTRINE.

right of free-agency and responsibility, since man and angel are alike under Karmic Law.*

"And there was war in Heaven. . . . Michael and his angels fought against the Dragon; and the Dragon fought and his angels, and prevailed not; neither was their place found any more in Heaven. And the Dragon was cast out, that old serpent, called the devil and Satan, which deceiveth the whole world."

The Kabalistic version of the same story is given in the Codex Nazareus, the scripture of the Nazarenes, the real mystic Christians of John the Baptist and the Initiates of Christos. Bahak-Zivo, the "Father of the Genii," is ordered to construct creatures (to create). But, as he is "ignorant of Orcus," he fails to do so, and calls in Fetahil, a still purer spirit, to his aid, who fails still worse. This is a repetition of the failure of the "Fathers," the lords of light who fail one after the other. (Book II, Sloka 17.)

We will now quote from our earlier Volumes:--

"Then steps on the stage of creation the spirit** (of the Earth so-called, or the Soul, Psyche, which St. James calls 'devilish') the lower portion the Anima Mundi or Astral Light. (See the close of this Sloka). With the Nazarenes and the Gnostics this Spirit was

[[Footnote(s)]] -----

* Explaining Kabalistic views, the author of the "New Aspects of Life" says of the Fallen Angels that, "According to the symbolical teaching, Spirit, from being simply a functionary agent of God, became volitional in its developed and developing action; and, substituting its own will for the Divine desire in its regard, so fell. Hence the Kingdom and reign of Spirits and spiritual action, which flow from and are the product of Spirit-volition, are outside, and contrasted with, and in contradiction to the Kingdom of Souls and Divine action." So far, so good; but what does the Author mean by saying, "When man was created, he was human in constitution, with human affections, human hopes and aspirations. From this state he fell -- into the brute and savage"? This is diametrically opposite to our Eastern teaching, and even to the Kabalistic notion so far as we understand it, and to the Bible itself. This looks like Corporealism and Substantialism colouring positive philosophy, though it is rather hard to feel quite sure of the Author's meaning (see p. 235). A FALL, however, "from the natural into the supernatural and the animal" -- supernatural meaning the purely spiritual in this case -- means what we suggest.

** On the authority of Irenaeus, of Justin Martyr and the "Codex" itself, Dunlap shows that the Nazarenes regarded "Spirit" as a female and Evil Power in its connection with our Earth. (Dunlap: "Sod," the Son of the Man, p. 52).

[[Vol. 1, Page]] 195 THE CODEX REPEATS THE ALLEGORY.

feminine. Thus the spirit of the Earth perceiving that for Fetahil,* the newest man (the latest), the splendour was 'changed,' and that for splendour existed 'decrease and damage,' she awakes Karabtanos,** 'who was frantic and without sense and judgment,' and says to him:-- 'Arise, see, the splendour (light) of the newest man (Fetahil) has failed (to produce or create men), the decrease of this splendour is visible. Rise up, come with thy MOTHER (the Spiritus) and free thee from limits by which thou art held, and those more ample than the whole world.' After which follows the union of the frantic and blind matter, guided by the insinuations of the spirit (not the Divine breath but the Astral spirit, which by its double essence is already tainted with matter); and the offer of the MOTHER being accepted, the Spiritus conceives "Seven Figures," and the seven stellars (planets) which represent also the seven capital sins, the progeny of an astral soul separated from its divine source (spirit) and matter, the blind demon of concupiscence. Seeing this, Fetahil extends his hand towards the abyss of matter, and says:-- 'Let the Earth exist, just as the abode of the powers has existed.' Dipping his hand in the chaos, which he condenses, he creates our planet.****

"Then the Codex proceeds to tell how Bahak-Zivo was separated from the Spiritus, and the Genii or angels from the rebels.**** Then Mano***** (the greatest), who dwells with the greatest FERHO, call Kebar-Zivo (known also by the name of Nebat-lavar bar Iufin Ifafin), Helm and Vine of the food of life,***** he being the third life, and commiserating the rebellious and foolish Genii, on account of the magnitude of their ambition, says: 'Lord of the Genii***** (AEons), see what the Genii, the

[[Footnote(s)]] -----

* Fetahil is identical with the host of the Pitris who "created Man" as only a "shell." He was, with the Nazarenes, the king of light, and the creator; but in this instance he is the unlucky Prometheus, who fails to get hold of the Living Fire necessary for the formation of the divine Soul, as he is ignorant of the secret name, the ineffable or incommunicable name of the Kabalists.

** The spirit of Matter and Concupiscence; "Kamarupa" minus "Manas," Mind.

*** See Franck's "Codex Nazaraeus," and Dunlap's "Sod, the Son of the Man."

**** Codex Nazaraeus, ii., 233.

***** This Mano of the Nazarenes strangely resembles the Hindu Manu, the Heavenly Man of the "Rig Vedas."

***** "I am the true Vine, and my father is the husbandman." (John xv., 1.)

***** With the Gnostics, Christ, as well as Michael who is identical with him in some respects, was the "Chief of the AEons."

[[Vol. 1, Page]] 196 THE SECRET DOCTRINE.

rebellious angels do, and about what they are consulting.* They say, 'Let us call for the world, and let us call the 'powers' into existence.' The Genii are the Principes, the "Sons of Light," but thou art the "Messenger of Life."**

And in order to counteract the influence of the seven "badly disposed" principles, the progeny of Spiritus, CABAR-ZIO, the mighty Lord of Splendor, produces seven other lives (the cardinal virtues) who shine in their own form and light "from on high"*** and thus re-establish the balance between good and evil, light and darkness.

Here one finds a repetition of the early allegorical, dual systems, as the Zoroastrian, and detects a germ of the dogmatic and dualistic religions of the future, a germ which has grown into such a luxuriant tree in ecclesiastical Christianity. It is already the outline of the two "Supremes" -- God and Satan. But in the Stanzas no such idea exists.

Most of the Western Christian Kabalists -- pre-eminently Eliphas Levi -- in their desire to reconcile the Occult Sciences with Church dogmas, did their best to make of the "Astral Light" only and preeminently the Pleroma of early Church Fathers, the abode of the Hosts of the Fallen Angels, of the "Archons" and "Powers." But the Astral Light, while only the lower aspect of the Absolute, is yet dual. It is the Anima Mundi, and ought never to be viewed otherwise, except for Kabalistic purposes. The difference which exists between its "light" and its "Living Fire" ought to be ever present in the mind of the Seer and the "Psychic." The higher aspect, without which only creatures of matter from that Astral Light can be produced, is this Living Fire, and it is the Seventh Principle. It is said in "Isis Unveiled," in a complete description of it:--

"The Astral Light or Anima Mundi is dual and bisexual. The (ideal) male part of it is purely divine and spiritual, it is the Wisdom, it is Spirit or Purusha; while the female portion (the Spiritus of the Nazarenes) is tainted, in one sense, with matter, is indeed matter, and therefore is evil already. It is the life-principle of every living creature, and furnishes the astral soul, the fluidic perisprit, to men, animals, fowls of the air, and everything living. Animals have only the latent germ of the highest immortal soul in them. . . . This latter will develop

[[Footnote(s)]] -----

* Codex Nazaraeus, i, 135.

** Ibid.

*** See the Cosmogony of Pherecydes.

[[Vol. 1, Page]] 197 ILDA-BAOTH-JEHOVAH.

only after a series of countless evolutions; the doctrine of which evolution is contained in the Kabalistic axiom: 'A stone becomes a plant; a plant, a beast; a beast, a man; a man, a spirit; and the spirit, a god.'" (Vol. I., p. 301, note.)

The seven principles of the Eastern Initiates had not been explained when "Isis" was written, but only the three Kabalistic Faces of the semi-exoteric Kabala.* But these contain the description of the mystic natures of the first group of Dhyana Chohans in the regimen ignis, the region and "rule (or government) of fire," which group is divided into three classes, synthesized by the first, which makes four or the "Tetraktis." (See Comments on Stanza VII. Book I.) If one studies the Comments attentively he will find the same progression in the angelic natures, viz., from the passive down to the active, the last of these Beings being as near to the Ahankara element (the region or plane wherein Egoism or the feeling of I-am-ness is beginning to be defined) as the first ones are near to the undifferentiated essence. The former are Arupa, incorporeal; the latter, Rupa, corporeal.

In Volume II. of Isis (p. 183 et seq.) the philosophical systems of the Gnostics and the primitive Jewish Christians, the Nazarenes and the Ebionites, are fully considered. They show the views held in those days -- outside the circle of Mosaic Jews -- about Jehovah. He was identified by all the Gnostics with the evil, rather than with the good principle. For them, he was Ilda-Baoth, "the son of Darkness," whose mother, Sophia Achamoth, was the daughter of Sophia, the Divine Wisdom (the female Holy Ghost of the early Christians) -- Akasa;** while Sophia Achamoth personified the lower Astral Light or Ether. Ilda-Baoth,*** or Jehovah, is simply one of the Elohim, the seven

[[Footnote(s)]] -----

* They are found, however, in the Chaldean Book of Numbers.

** The astral light stands in the same relation to Akasa and Anima Mundi, as Satan stands to the Deity. They are one and the same thing seen from two aspects: the spiritual and the psychic -- the super-ethereal or connecting link between matter and pure spirit, and the physical. See for the difference between nous, the higher divine wisdom, and psyche, the lower and terrestrial (St. James iii. v. 15-17). Vide "Demon est Deus inversus," Part II. of this volume.

*** Ilda-Baath is a compound name made up of Ilda, [[hebrew]], "a child," and Baath; both from [[hebrew]] the egg, and [[hebrew]] Baath, "chaos," emptiness, void, or desolation; or the child born in the egg of Chaos, like Brahma.

[[Vol. 1, Page]] 198 THE SECRET DOCTRINE.

creative Spirits, and one of the lower Sephiroth. He produces from himself seven other Gods, "Stellar Spirits" (or the lunar ancestors*), for they are all the same.** They are all in his own image (the "Spirits of the Face"), and the reflections one of the other, and have become darker and more material as they successively receded from their originator. They also inhabit seven regions disposed like a ladder, as its rungs slope up and down the scale of spirit and matter.*** With Pagans and Christians, with Hindus and Chaldeans, with the Greek as with the Roman Catholics -- with a slight variation of the texts in their interpretations -- they all were the Genii of the seven planets, as of the seven planetary spheres of our septenary chain, of which Earth is the lowest. (See Isis, Vol. II. p. 186.) This connects the "Stellar" and "Lunar" Spirits with the higher planetary Angels and the Saptarishis (the seven Rishis of the Stars) of the Hindus -- as subordinate Angels (Messengers) to these "Rishis," the emanations, on the descending scale, of the former. Such, in the opinion of the philosophical Gnostics, were the God and the Archangels now worshipped by the Christians! The "Fallen Angels" and the legend of the "War in Heaven" is thus purely pagan in its origin and comes from India via Persia and Chaldea. The only reference to it in the Christian canon is found in Revelations xii., as quoted a few pages back.

Thus "SATAN," once he ceases to be viewed in the superstitious, dogmatic, unphilosophical spirit of the Churches, grows into the grandiose image of one who made of terrestrial a divine MAN; who gave him, throughout the long cycle of Maha-kalpa the law of the Spirit of Life, and made him free from the Sin of Ignorance, hence of death. (See the Section On Satan in Part II. Vol. II.)

[[Footnote(s)]] -----

* Jehovah's connection with the moon in the Kabala is well known to students.

** About the Nazarenes see Isis, Vol. II. p. 131 and 132; the true followers of the true Christos were all Nazarenes and Christians, and were the opponents of the later Christians.

*** Vide supra, the diagram of the lunar ring of seven worlds, where, as in our or any other chain, the upper worlds are spiritual, while the lowest, whether Moon, Earth, or any planet, is dark with matter.

[[Vol. 1, Page]] 199 THE SEVEN PLANES.

STANZA VI. -- Continued.

6. THE OLDER WHEELS ROTATED DOWNWARD AND UPWARD (a) . . . THE MOTHER'S SPAWN FILLED THE WHOLE (Kosmos).* THERE WERE BATTLES FOUGHT BETWEEN THE CREATORS AND THE DESTROYERS, AND BATTLES FOUGHT FOR SPACE; THE SEED APPEARING AND REAPPEARING CONTINUOUSLY (b).**

(a) Here, having finished for the time being with our side-issues -- which, however they may break the flow of the narrative, are necessary for the elucidation of the whole scheme -- the reader must return once more to Cosmogony. The phrase "Older wheels" refers to the worlds or Globes of our chain as they were during the "previous Rounds." The present Stanza, when explained esoterically, is found embodied entirely in the Kabalistic works. Therein will be found the very history of the evolution of those countless Globes which evolve after a periodical Pralaya, rebuilt from old material into new forms. The previous Globes disintegrate and reappear transformed and perfected for a new phase of life. In the Kabala, worlds are compared to sparks which fly from under the hammer of the great Architect -- LAW, the law which rules all the smaller Creators.

The following comparative diagram shows the identity between the two systems, the Kabalistic and the Eastern. The three upper are the three higher planes of consciousness, revealed and explained in both schools only to the Initiates, the lower ones represent the four lower planes -- the lowest being our plane, or the visible Universe.

These seven planes correspond to the seven states of consciousness in man. It remains with him to attune the three higher states in himself to the three higher planes in Kosmos. But before he can attempt to attune, he must awaken the three "seats" to life and activity. And how many are capable of bringing themselves to even a superficial comprehension of Atma-Vidya (Spirit-Knowledge), or what is called by the Sufis, Rohanee! In Section the VIth of this Book, in Sub-section 3,

[[Footnote(s)]] -----

* The reader is reminded that Kosmos often means in our Stanzas only our own Solar System, not the Infinite Universe.

** This is purely astronomical.

[[Vol. 1, Page]] 200 THE SECRET DOCTRINE.

the reader will find a still clearer explanation of the above in the Commentary upon Saptaparna -- the man-plant. See also the Section of that name in Part II.

[[Footnote(s)]] -----

* The Arupa or "formless," there where form ceases to exist, on the objective plane.

** The word "Archetypal" must not be taken here in the sense that the Platonists gave to it, i.e., the world as it existed in the Mind of the Deity; but in that of a world made as a first model, to be followed and improved upon by the worlds which succeed it physically -- though deteriorating in purity.

*** These are the four lower planes of Cosmic Consciousness, the three higher planes being inaccessible to human intellect as developed at present. The seven states of human consciousness pertain to quite another question.

[[-----]]

(b) "The Seed appears and disappears continuously." Here "Seed" stands for "the World-germ," viewed by Science as material particles in a highly attenuated condition, but in Occult physics as "Spiritual particles," i.e., supersensuous matter existing in a state of primeval

[[Vol. 1, Page]] 201 NO SHADOW, NO LIGHT.

differentiation.* In theogony, every Seed is an ethereal organism, from which evolves later on a celestial being, a God.

In the "beginning," that which is called in mystic phraseology "Cosmic Desire" evolves into absolute Light. Now light without any shadow would be absolute light -- in other words, absolute darkness -- as physical science seeks to prove. That shadow appears under the form of primordial matter, allegorized -- if one likes -- in the shape of the Spirit of Creative Fire or Heat. If, rejecting the poetical form and allegory, science chooses to see in this the primordial Fire-Mist, it is welcome to do so. Whether one way or the other, whether Fohat or the famous FORCE of Science, nameless, and as difficult of definition as our Fohat himself, that Something "caused the Universe to move with circular motion," as Plato has it; or, as the Occult teaching expresses it:

"The Central Sun causes Fohat to collect primordial dust in the form of balls, to impel them to move in converging lines and finally to approach each other and aggregate." (Book of Dzyan) "Being scattered in Space, without order or system, the world-germs come into frequent collision until their final aggregation, after which they become wanderers (Comets). Then the battles and struggles begin. The older (bodies) attract the younger, while others repel them. Many perish, devoured by their stronger companions. Those that escape become worlds."**

[[Footnote(s)]] -----

* To see and appreciate the difference -- the immense gulf that separates terrestrial matter from the finer grades of supersensuous matter -- every astronomer, every chemist and physicist ought to be a psychometer, to say the least; he ought to be able to sense for

himself that difference in which he now refuses to believe. Mrs. Elizabeth Denton, one of the most learned, and also one of the most materialistic and sceptical women of her age -- the wife of Professor Denton, the well-known American geologist and the author of "The Soul of Things" -- was, nevertheless, one of the most wonderful psychometers some years ago. This is what she described in one of her experiments; with a particle of a meteorite placed on her forehead, in an envelope, the lady, not being aware of what it contained, said:

"What a difference between that which we recognise as matter here and that which seems like matter there! In the one, the elements are so coarse and so angular, I wonder that we can endure it all, much more that we can desire to continue our present relations to it; in the other, all the elements are so refined, they are so free from those great, rough angularities, which characterize the elements here, that I can but regard that as by so much the more than this, the real existence." (Vol. III. p. 345-6.)

** When carefully analysed and reflected upon, this will be found as scientific as Science could make it, even at our late period.

[[Vol. 1, Page]] 202 THE SECRET DOCTRINE.

We have been assured that there exist several modern works of speculative fancy upon such struggles for life in sidereal heaven, especially in the German language. We rejoice to hear it, for ours is an Occult teaching lost in the darkness of archaic ages. We have treated of it fully in "Isis Unveiled," and the idea of Darwinian-like evolution, of struggle for life and supremacy, and of the "survival of the fittest" among the Hosts above as the Hosts below, runs throughout both the volumes of our earlier work, written in 1876 (See Index in "Isis Unveiled" at the words "Evolution" -- "Darwin" -- "Kapila" -- "Battle of Life," etc. etc.) But the idea was not ours, it is that of antiquity. Even the Puranic writers have ingeniously interwoven allegory with Cosmic facts and human events. Any symbologist may discern the astro-cosmical allusion even though he be unable to grasp the whole meaning. The great "Wars in Heaven," in the Puranas; the wars of the Titans, in Hesiod and other classical writers; the "struggles," also in the Egyptian legend between Osiris and Typhon, and even those in the Scandinavian legends, all refer to the same subject. Northern Mythology refers to it as the battle of the Flames, the sons of Muspel who fought on the field of Wigred. All these relate to Heaven and Earth, and have a double and often even a triple meaning, and esoteric application to things above as to things below. They relate severally to astronomical, theogonical and human struggles; to the adjustment of orbs, and the supremacy among nations and tribes. The "Struggle for Existence" and the "Survival of the Fittest" reigned supreme from the moment that Kosmos manifested into being, and could hardly escape the observant eye of the ancient Sages. Hence the incessant fights of Indra, the god of the Firmament, with the Asuras -- degraded from high gods into Cosmic demons; and with Vritri or Ah-hi; the battles fought between stars and constellations, between Moon and planets -- later on incarnated as kings and mortals. Hence also the War in Heaven of Michael and his Host against the Dragon (Jupiter and Lucifer-Venus), when a third of the stars of the rebellious host was hurled down into Space, and "its place was found no more in Heaven." As said long ago -- "This is the basic and fundamental stone of the secret cycles. It shows that the Brahmins and Tanaim . . . speculated on the creation and development of the world quite in a Darwinian way, both anticipating him and his school in the natural selection of species, the survival of the fittest,

[[Vol. 1, Page]] 203 THE BIRTH OF THE WORLDS.

and transformation. . . . There were old worlds that perished conquered by the new," etc., etc. ("Isis Unveiled," Vol. II., p. 260.) The assertion that all the worlds (Stars, planets, etc.) -- as soon as a nucleus of primordial substance in the laya (undifferentiated) state is informed by the freed principles, of a just deceased sidereal body -- become first comets, and then Suns to cool down to inhabitable worlds, is a teaching as old as the Rishis.

Thus the Secret Books distinctly teach, as we see, an astronomy that would not be rejected even by modern speculation could the latter thoroughly understand its teachings.

For, archaic astronomy, and the ancient, physical and mathematical sciences, expressed views identical with those of modern science, and many of far more momentous import. A "struggle for life" as a "survival of the fittest" in the worlds above, as on our planet here below, are distinctly taught. This teaching, however, although it would not be "entirely rejected" by Science, is sure to be repudiated as an integral whole. For it avers that there are only seven Self-born primordial "gods" emanated from the trinitarian ONE. In other words, it means that all the worlds or sidereal bodies (always on strict analogy) are formed one from the other, after the primordial manifestation at the beginning of the "Great Age" is accomplished. The birth of the celestial bodies in Space is compared to a crowd or multitude of "pilgrims" at the festival of the "Fires." Seven ascetics appear on the threshold of the temple with seven lighted sticks of incense. At the light of these the first row of pilgrims light their incense sticks. After which every ascetic begins whirling his stick around his head in space, and furnishes the rest with fire. Thus with the heavenly bodies. A laya-centre is lighted and awakened into life by the fires of another "pilgrim," after which the new "centre" rushes into space and becomes a comet. It is only after losing its velocity, and hence its fiery tail, that the "Fiery Dragon" settles down into quiet and steady life as a regular respectable citizen of the sidereal family. Therefore it is said:--

Born in the unfathomable depths of Space, out of the homogeneous Element called the World-Soul, every nucleus of Cosmic matter, suddenly launched into being, begins life under the most hostile circumstances. Through a series of countless ages, it has to conquer

[[Vol. 1, Page]] 204 THE SECRET DOCTRINE.

for itself a place in the infinitudes. It circles round and round between denser and already fixed bodies, moving by jerks, and pulling towards some given point or centre that attracts it, trying to avoid, like a ship drawn into a channel dotted with reefs and sunken rocks, other bodies that draw and repel it in turn; many perish, their mass disintegrating through stronger masses, and, when born within a system, chiefly within the insatiable stomachs of various Suns. (See Comm. to Stanza IV). Those which move slower and are propelled into an elliptic course are doomed to annihilation sooner or later. Others moving in parabolic curves generally escape destruction, owing to their velocity.

Some very critical readers will perhaps imagine that this teaching, as to the cometary stage passed through by all heavenly bodies, is in contradiction with the statements just made as to the moon being the mother of the earth. They will perhaps fancy that intuition is needed to harmonize the two. But no intuition is in truth required. What does Science know of Comets, their genesis, growth, and ultimate behaviour? Nothing -- absolutely nothing! And what is there so impossible that a laya centre -- a lump of cosmic protoplasm, homogeneous and latent, when suddenly animated or fired up -- should rush from its bed in Space and whirl throughout the abysmal depths in order to strengthen its homogeneous organism by an accumulation and addition of differentiated elements? And why should not such a comet settle in life, live, and become an inhabited globe!

"The abodes of Fohat are many," it is said. "He places his four fiery (electro-positive) Sons in the "Four circles"; these Circles are the Equator, the Ecliptic, and the two parallels of declination, or the tropics -- to preside over the climates of which are placed the Four mystical Entities. Then again: "Other seven (sons) are commissioned to preside over the seven hot, and seven cold lokas (the hells of the orthodox Brahmans) at the two ends of the Egg of Matter (our Earth and its poles). The seven lokas are also called the "Rings," elsewhere, and the "Circles." The ancients made the polar circles seven instead of two, as Europeans do; for Mount Meru, which is the North Pole, is said to have seven gold and seven silver steps leading to it.

The strange statement made in one of the Stanzas: "The Songs of Fohat and his Sons were radiant as the noon-tide Sun and the Moon combined;" and that the four Sons on the middle four-fold

[[Vol. 1, Page]] 205 SEEING SOUND, HEARING COLOURS.

Circle "saw their father's songs and heard his Solar-selenic radiance;" is explained in the Commentary in these words: "The agitation of the Fohatic Forces at the two cold ends (North and South Poles) of the Earth which resulted in a multicoloured radiance at night, have in them several of the properties of Akasa (Ether) colour and sound as well." "Sound is the characteristic of Akasa (Ether): it generates air, the property of which is Touch; which (by friction) becomes productive of Colour and Light." (Vishnu Purana.)

Perhaps the above will be regarded as archaic nonsense, but it will be better comprehended, if the reader remembers the Aurora Borealis and Australis, both of which take place at the very centres of terrestrial electric and magnetic forces. The two poles are said to be the store-houses, the receptacles and liberators, at the same time, of Cosmic and terrestrial Vitality (Electricity); from the surplus of which the Earth, had it not been for these two natural "safety-valves," would have been rent to pieces long ago. At the same time it is now a theory that has lately become an axiom, that the phenomenon of polar lights is accompanied by, and productive of, strong sounds, like whistling, hissing, and cracking. (But see Professor Trumholdt's works on the Aurora Borealis, and his correspondence regarding this moot question.)

STANZA VI. -- Continued.

7. MAKE THY CALCULATIONS, O LANOO, IF THOU WOULDST LEARN THE CORRECT AGE OF THY SMALL WHEEL (chain). ITS FOURTH SPOKE IS OUR MOTHER (Earth) (a). REACH THE FOURTH "FRUIT" OF THE FOURTH PATH OF KNOWLEDGE THAT LEADS TO NIRVANA, AND THOU SHALT COMPREHEND, FOR THOU SHALT SEE (b).

(a) The "small wheel" is our chain of spheres, and the fourth spoke is our Earth, the fourth in the chain. It is one of those on which the "hot (positive) breath of the Sun" has a direct effect.*

[[Footnote(s)]] -----

* The seven fundamental transformations of the globes or heavenly spheres, or rather of their constituent particles of matter, is described as follows: (1) The homogeneous; (2) the aeriform and radiant (gaseous); (3) Curd-like (nebulous); (4) Atomic, Ethereal
[[Footnote continued on next page]]

[[Vol. 1, Page]] 206 THE SECRET DOCTRINE.

To calculate its age, however, as the pupil is asked to do in the Stanza, is rather difficult, since we are not given the figures of the Great Kalpa, and are not allowed to publish those of our small Yugas, except as to the approximate duration of these. "The older wheels rotated for one Eternity and one half of an Eternity," it says. We know that by "Eternity" the seventh part of 311,040,000,000,000 years, or an age of Brahma is meant. But what of that? We also know that, to begin with, if we take for our basis the above figures, we have first of all to eliminate from the 100 years of Brahma (or 311,040,000,000,000 years) two years taken up by the Sandhyas (twilights), which leaves 98, as we have to bring it to the mystical combination 14 x 7. But we have no knowledge at what time precisely the evolution and formation of our little earth began. Therefore it is impossible to calculate its age, unless the

time of its birth is given -- which the TEACHERS refuse to do, so far. At the close of this Book and in Book II., however, some chronological hints will be given. We must remember, moreover, that the law of Analogy holds good for the worlds, as it does for man; and that as "The ONE (Deity) becomes Two (Deva or Angel) and Two becomes Three (or man)," etc., etc., so we are taught that the Curds (world-stuff) become wanderers, (Comets), these become stars, and the stars (the centres of vortices) our sun and planets -- to put it briefly.*

(b) There are four grades of initiation mentioned in exoteric works, which are known respectively in Sanskrit as "Srotapanna," "Sagardagan," "Anagamin," and "Arhan" -- the four paths to Nirvana, in this, our fourth Round, bearing the same appellations. The Arhan, though he can see the Past, the Present, and the Future, is not yet the highest Initiate; for the Adept himself, the initiated candidate, becomes chela (pupil) to a higher Initiate. Three further higher grades have to be conquered by the Arhan who would reach the apex of the ladder of Arhatship. There are those who have reached it even in this fifth race of ours, but the faculties necessary for the attainment of these higher

[[Footnote(s)]] -----

[[Footnote continued from previous page]] (beginning of motion, hence of differentiation); (5) Germinal, fiery, (differentiated, but composed of the germs only of the Elements, in their earliest states, they having seven states, when completely developed on our earth); (6) Four-fold, vapoury (the future Earth); (7) Cold and depending (on the Sun for life and light).

* This cannot be so very unscientific, since Descartes thought also that "the planets rotate on their axes because they were once lucid stars, the centres of Vortices."

[[Vol. 1, Page]] 207 THE TREE FROM WHICH THE ADEPTS GROW.

grades will be fully developed in the average ascetic only at the end of this Root-Race, and in the Sixth and Seventh. Thus there will always be Initiates and the Profane till the end of this minor Manvantara, the present life-cycle. The Arhats of the "fire-mist" of the 7th rung are but one remove from the Root-Base of their Hierarchy -- the highest on Earth, and our Terrestrial chain. This "Root-Base" has a name which can only be translated by several compound words into English" -- "the ever-living-human-Banyan." This "Wondrous Being" descended from a "high region," they say, in the early part of the Third Age, before the separation of the sexes of the Third Race.

This Third Race is sometimes called collectively "the Sons of Passive Yoga," i.e., it was produced unconsciously by the second Race, which, as it was intellectually inactive, is supposed to have been constantly plunged in a kind of blank or abstract contemplation, as required by the conditions of the Yoga state. In the first or earlier portion of the existence of this third race, while it was yet in its state of purity, the "Sons of Wisdom," who, as will be seen, incarnated in this Third Race, produced by Kriyasakti a progeny called the "Sons of Ad" or "of the Fire-Mist," the "Sons of Will and Yoga," etc. They were a conscious production, as a portion of the race was already animated with the divine spark of spiritual, superior intelligence. It was not a Race, this progeny. It was at first a wondrous Being, called the "Initiator," and after him a group of semi-divine and semi-human beings. "Set apart" in Archaic genesis for certain purposes, they are those in whom are said to have incarnated the highest Dhyanis, "Munis and Rishis from previous Manvantaras" -- to form the nursery for future human adepts, on this earth and during the present cycle. These "Sons of Will and Yoga" born, so to speak, in an immaculate way, remained, it is explained, entirely apart from the rest of mankind.

The "BEING" just referred to, which has to remain nameless, is the Tree from which, in subsequent ages, all the great historically known Sages and Hierophants, such as the Rishi Kapila, Hermes, Enoch, Orpheus, etc., etc., have branched off. As objective man, he is the mysterious (to the profane -- the ever invisible) yet ever present Personage about whom legends are rife in the East, especially among the Occultists and the students of the Sacred Science. It is he who changes form, yet remains ever the same. And it is he again who holds spiritual sway over the

[[Vol. 1, Page]] 208 THE SECRET DOCTRINE.

initiated Adepts throughout the whole world. He is, as said, the "Nameless One" who has so many names, and yet whose names and whose very nature are unknown. He is the "Initiator," called the "GREAT SACRIFICE." For, sitting at the threshold of LIGHT, he looks into it from within the circle of Darkness, which he will not cross; nor will he quit his post till the last day of this life-cycle. Why does the solitary Watcher remain at his self-chosen post? Why does he sit by the fountain of primeval Wisdom, of which he drinks no longer, as he has naught to learn which he does not know -- aye, neither on this Earth, nor in its heaven? Because the lonely, sore-footed pilgrims on their way back to their home are never sure to the last moment of not losing their way in this limitless desert of illusion and matter called Earth-Life. Because he would fain show the way to that region of freedom and light, from which he is a voluntary exile himself, to every prisoner who has succeeded in liberating himself from the bonds of flesh and illusion. Because, in short, he has sacrificed himself for the sake of mankind, though but a few Elect may profit by the GREAT SACRIFICE.

It is under the direct, silent guidance of this MAHA -- (great) -- GURU that all the other less divine Teachers and instructors of mankind became, from the first awakening of human consciousness, the guides of early Humanity. It is through these "Sons of God" that infant humanity got its first notions of all the arts and sciences, as well as of spiritual knowledge; and it is they who have laid the first foundation-stone of those ancient civilizations that puzzle so sorely our modern generation of students and scholars.*

[[Footnote(s)]] -----

* Let those who doubt this statement explain the mystery of the extraordinary knowledge possessed by the ancients -- alleged to have developed from lower and animal-like savages, the cave-men of the Palaeolithic age -- on any other equally reasonable grounds. Let them turn to such works as those of Vitruvius Pollio of the Augustan age, on architecture, for instance, in which all the rules of proportion are those taught anciently at initiations, if he would acquaint himself with the truly divine art, and understand the deep esoteric significance hidden in every rule and law of proportion. No man descended from a Palaeolithic cave-dweller could ever evolve such a science unaided, even in millenniums of thought and intellectual evolution. It is the pupils of those incarnated Rishis and Devas of the third Root Race, who handed their knowledge from one generation to another, to Egypt and Greece with its now lost canon of proportion; as it is the Disciples of the Initiates of the 4th, the Atlanteans, who handed it over to their Cyclopes, the "Sons of Cycles" or of the "Infinite," from whom the name passed to the still later generations of Gnostic priests. "It is owing to the divine perfection [[Footnote continued on next page]]

[[Vol. 1, Page]] 209 THE SACRED ISLAND.

Although these matters were barely hinted at in "Isis Unveiled," it will be well to remind the reader of what was said in Vol. I., pp. 587 to 593, concerning a certain Sacred Island in Central Asia, and to refer him for further details to the chapter in Book II. on "The Sons of God and the Sacred Island." A few more explanations, however, though thrown out in a fragmentary form, may help the student to obtain a glimpse into the present mystery.

To state at least one detail concerning these mysterious "Sons of God" in plain words. It is from them, these Brahmaputras, that the high Dwijas, the initiated Brahmins of old justly claimed descent, while the modern Brahmin would have the lowest castes believe literally that they issued direct from the mouth of Brahma. This is the esoteric teaching, which adds moreover that, although these descendants (spiritually of course) from the "sons of Will and Yoga," became in time divided into opposite sexes, as their "Kriyasakti" progenitors did themselves, later on; yet even their degenerate descendants have down to the present day retained a veneration and respect for the creative

[[Footnote(s)]] -----

[[Footnote continued from previous page]] of those architectural proportions that the Ancients could build those wonders of all the subsequent ages, their Fanes, Pyramids, Cave-Temples, Cromlechs, Cairns, Altars, proving they had the powers of machinery and a knowledge of mechanics to which modern skill is like a child's play, and which that skill refers to itself as the 'works of hundred-handed giants.'" (See "Book of God," Kenealy.) Modern architects may not altogether have neglected those rules, but they have superadded enough empirical innovations to destroy those just proportions. It is Vitruvius who gave to posterity the rules of construction of the Grecian temples erected to the immortal gods; and the ten books of Marcus Vitruvius Pollio on Architecture, of one, in short, who was an initiate, can only be studied esoterically. The Druidical circles, the Dolmen, the Temples of India, Egypt and Greece, the Towers and the 127 towns in Europe which were found "Cyclopean in origin" by the French Institute, are all the work of initiated Priest-Architects, the descendants of those primarily taught by the "Sons of God," justly called "The Builders." This is what appreciative posterity says of those descendants. "They used neither mortar nor cement, nor steel nor iron to cut the stones with; and yet they were so artfully wrought that in many places the joints are not seen, though many of the stones, as in Peru, are 18 ft. thick, and in the walls of the fortress of Cuzco there are stones of a still greater size." (Acosta, vi., 14.) "Again, the walls of Syene, built 5,400 years ago, when that spot was exactly under the tropic, which it has now ceased to be, were so constructed that at noon, at the precise moment of the solar solstice, the entire disc of the Sun was seen reflected on their surface -- a work which the united skill of all the astronomers of Europe would not now be able to effect." -- (Kenealy, "Book of God.")

[[Vol. 1, Page]] 210 THE SECRET DOCTRINE.

function, and still regard it in the light of a religious ceremony, whereas the more civilized nations consider it as a mere animal function. Compare the western views and practice in these matters with the Institutions of Manu in regard to the laws of Grihasta and married life. The true Brahmin is thus indeed "he whose seven forefathers have drunk the juice of the moon-plant (Soma)," and who is a "Trisuparna," for he has understood the secret of the Vedas.

And, to this day, such Brahmins know that, during its early beginnings, psychic and physical intellect being dormant and consciousness still undeveloped, the spiritual conceptions of that race were quite unconnected with its physical surroundings. That divine man dwelt in his animal -- though externally human -- form; and, if there was instinct in him, no self-consciousness came to enlighten the darkness of the latent fifth principle. When, moved by the law of Evolution, the Lords of Wisdom infused into him the spark of consciousness, the first feeling it awoke to life and activity was a sense of solidarity, of one-ness with his spiritual creators. As the child's first feeling is for its mother and nurse, so the first aspirations of the awakening consciousness in primitive man were for those whose element he felt within himself, and who yet were outside, and independent of him. DEVOTION arose out of that feeling, and became the first and foremost motor in his nature; for it is the only one which is natural in our heart, which is innate in us, and which we find alike in human babe and the young of the animal. This feeling of irrepresible, instinctive aspiration in primitive man is beautifully, and one may say intuitionally, described by Carlyle. "The great antique heart," he exclaims, "how like a child's in its simplicity, like a man's in its earnest solemnity and depth! heaven lies over him wheresoever he goes or stands on the earth; making all the earth a mystic temple to him, the earth's business all a kind of worship. Glimpses of bright creatures flash in the common sunlight; angels yet hover, doing God's messages among men Wonder, miracle, encompass the man; he lives in an element of miracle* A great law of duty, high as these two infinitudes (heaven and hell), dwarfing all else, annihilating all else -- it was a reality, and it is one: the garment

[[Footnote(s)]] -----

* That which was natural in the sight of primitive man has become only now miracle to us; and that which was to him a miracle could never be expressed in our language.

[[Vol. 1, Page]] 211 THE SONS OF WISDOM.

only of it is dead; the essence of it lives through all times and all eternity!"

It lives undeniably, and has settled in all its ineradicable strength and power in the Asiatic Aryan heart from the Third Race direct through its first "mind-born" sons, -- the fruits of Kriyasakti. As time rolled on the holy caste of Initiates produced but rarely, and from age to age, such perfect creatures: beings apart, inwardly, though the same as those who produced them, outwardly.

While in the infancy of the third primitive race:--

"A creature of a more exalted kind
Was wanting yet, and therefore was designed;
Conscious of thought, of more capacious breast
For empire formed and fit to rule the rest. . . ."

It was called into being, a ready and perfect vehicle for the incarnating denizens of higher spheres, who took forthwith their abodes in these forms born of Spiritual WILL and the natural divine power in man. It was a child of pure Spirit, mentally unalloyed with any tincture of earthly element. Its physical frame alone was of time and of life, as it drew its intelligence direct from above. It was the living tree of divine wisdom; and may therefore be likened to the Mundane Tree of the Norse Legend, which cannot wither and die until the last battle of life shall be fought, while its roots are gnawed all the time by the dragon Nidhogg; for even so, the first and holy Son of Kriyasakti had his body gnawed by the tooth of time, but the roots of his inner being remained for ever undecaying and strong, because they grew and expanded in heaven not on earth. He was the first of the FIRST, and he was the seed of all the others. There were other "Sons of Kriyasakti" produced by a second Spiritual effort, but the first one has remained to this day the Seed of divine Knowledge, the One and the Supreme among the terrestrial "Sons of Wisdom." Of this subject we can say no more, except to add that in every age -- aye, even in our own -- there have been great intellects who have understood the problem correctly.

How comes our physical body to the state of perfection it is found in now? Through millions of years of evolution, of course, yet never through, or from, animals, as taught by materialism. For, as Carlyle says:-- ". . . The essence of our being, the mystery in us that calls itself 'I,' -- what words have we for such things? -- it is a breath of Heaven,

[[Vol. 1, Page]] 212 THE SECRET DOCTRINE.

the highest Being reveals himself in man. This body, these faculties, this life of ours, is it not all as a vesture for the UNNAMED?"

The breath of heaven, or rather the breath of life, called in the Bible Nephesh, is in every animal, in every animate speck as in every mineral atom. But none of these has, like man, the consciousness of the nature of that highest Being,* as none has that divine harmony in its form which man possesses. It is, as Novalis said, and no one since has said it better, as repeated by Carlyle:--

"There is but one temple in the universe, and that is the body of man. Nothing is holier than that high form . . . We touch heaven when we lay our hand on a human body!" "This sounds like a mere flourish of rhetoric," adds Carlyle, "but it is not so. If well meditated it will turn out to be a scientific fact; the expression . . . of the actual truth of the thing. We are the miracle of miracles, -- the great inscrutable Mystery."

[[Footnote(s)]] -----

* There is no nation in the world in which the feeling of devotion or of religious mysticism is more developed and prominent than in the Hindu people. See what Max Muller says of this idiosyncrasy and national feature in his works. This is direct inheritance from the primitive conscious men of the Third Race.

[[Vol. 1, Page]] 213 THE CREATIVE POWERS.

STANZA VII.

1. BEHOLD THE BEGINNING OF SENTIENT FORMLESS LIFE (a).

FIRST, THE DIVINE (vehicle) (b), THE ONE FROM THE MOTHER-SPIRIT (Atman); THEN THE SPIRITUAL -- (Atma-Buddhi, Spirit-soul)* (c); (again) THE THREE FROM THE ONE (d), THE FOUR FROM THE ONE (e), AND THE FIVE (f), FROM WHICH THE THREE,

THE FIVE AND THE SEVEN (g) -- THESE ARE THE THREE-FOLD AND THE FOUR-FOLD DOWNWARD; THE "MIND-BORN SONS OF THE FIRST LORD (Avalokiteswara) THE SHINING SEVEN (the "Builders").** IT IS THEY WHO ARE THOU, ME, HIM, O LANOO; THEY WHO WATCH OVER THEE AND THY MOTHER, BHUMI (the Earth).

(a) The hierarchy of Creative Powers is divided into seven (or 4 and 3) esoteric, within the twelve great Orders, recorded in the twelve signs of the Zodiac; the seven of the manifesting scale being connected, moreover, with the Seven Planets. All this is subdivided into numberless groups of divine Spiritual, semi-Spiritual, and ethereal Beings.

The Chief Hierarchies among these are hinted at in the great Quaternary, or the "four bodies and the three faculties" of Brahma exoterically, and the Panchasyam, the five Brahmas, or the five Dhyani-Buddhas in the Buddhist system.

The highest group is composed of the divine Flames, so-called, also spoken of as the "Fiery Lions" and the "Lions of Life," whose esotericism is securely hidden in the Zodiacal sign of Leo. It is the nucleole of the superior divine World (see Commentary in first pages of Addendum). They are the formless Fiery Breaths, identical in one aspect with the upper Sephirothal TRIAD, which is placed by the Kabalists in the "Archetypal World."

The same hierarchy, with the same numbers, is found in the Japanese system, in the "Beginnings" as taught by both the Shinto and the Buddhist sects. In this system, Anthropogenesis precedes Cosmogogenesis, as the Divine merges into the human, and creates --

[[Footnote(s)]] -----

* This relates to the Cosmic principles.

** The seven creative Rishis now connected with the constellation of the Great Bear

[[Vol. 1, Page]] 214 THE SECRET DOCTRINE.

midway in its descent into matter -- the visible Universe. The legendary personages -- remarks reverentially Omoie -- "having to be understood as the stereotyped embodiment of the higher (secret) doctrine, and its sublime truths." To state it at full length, however, would occupy too much of our space, but a few words on this old system cannot be out of place. The following is a short synopsis of this Anthro-Cosmogogenesis, and it shows how closely the most separated notions echoed one and the same Archaic teaching.

When all was as yet Chaos (Kon-ton) three spiritual Beings appeared on the stage of future creation: (1) Ame no ani naka nushi no Kami, "Divine Monarch of the Central Heaven"; (2) Taka mi onosubi no Kami, "Exalted, imperial Divine offspring of Heaven and the Earth"; and (3) Kamu mi musubi no Kami, "Offspring of the Gods," simply.

These were without form or substance (our arupa triad), as neither the celestial nor the terrestrial substance had yet differentiated, "nor had the essence of things been formed."

In the Zohar -- which, as now arranged and re-edited by Moses de Leon, with the help of Syrian and Chaldean Christian Gnostics in the XIIIth century, and corrected and revised still later by many Christian hands, is only a little less exoteric than the Bible itself -- this divine "Vehicle" no longer appears as it does in the "Chaldean Book of Numbers." True enough, Ain-Soph, the ABSOLUTE ENDLESS NO-THING, uses also the form of the ONE, the manifested "Heavenly man" (the FIRST CAUSE) as its chariot (Mercabah, in Hebrew; Vahan, in Sanskrit) or vehicle to descend into, and manifest through, in the phenomenal world. But the Kabalists neither make it plain how the ABSOLUTE can use anything, or exercise any attribute whatever, since, as the Absolute, it is devoid of attributes; nor do they explain that in reality it is the First Cause (Plato's Logos) the original and eternal IDEA, that manifests through Adam Kadmon, the Second Logos, so to speak. In the "Book of Numbers" it is explained that EN (or Ain, Aior) is the only self-existent, whereas its "Depth" (Bythos or Buthon of the Gnostics, called Propator) is only periodical. The latter is Brahm as differentiated from Brahma or Parabrahm. It is the Depth, the Source of Light, or Propator, which is the unmanifested Logos or the abstract Idea, and not Ain-Soph, whose ray uses Adam-Kadmon or the manifested Logos (the objective Universe) "male and female" -- as a chariot through which to manifest. But in the Zohar we read the following incongruity: "Senior

[[Vol. 1, Page]] 215 ONE PARENT FLAME, COUNTLESS FLAMES.

occultatus est et absconditus; Microprosopus manifestus est, et non manifestus." (Rosenroth; Liber Mysterii, IV., 1.) This is a fallacy, since Microprosopus or the microcosm, can only exist during its manifestations, and is destroyed during the Maha-Pralayas. Rosenroth's Kabala is no guide, but very often a puzzle.

(b) As in the Japanese system, in the Egyptian, and every old cosmogony -- at this divine FLAME, The "One," are lit the three descending groups. Having their potential being in the higher group, they now become distinct and separate Entities. These are called the "Virgins of Life," the "Great Illusion," etc., etc., and collectively the "Six-pointed Star." The latter is the symbol, in almost every religion, of the Logos as the first emanation. It is that of Vishnu in India (the Chakra, or wheel), and the glyph of the Tetragrammaton, the "He of the four letters" or -- metaphorically -- "the limbs of Microprosopus" in the Kabala, which are ten and six respectively. The later Kabalists however, especially the Christian mystics, have played sad havoc with this magnificent symbol.* For the "ten limbs" of the Heavenly Man are the ten Sephiroth; but the first Heavenly Man is the unmanifested Spirit of the Universe, and ought never to be degraded into Microprosopus -- the lesser Face or Countenance, the prototype of man on the terrestrial plane.** Of

this, however, later on. The six-pointed Star refers to the six Forces or Powers of Nature, the six planes, principles, etc., etc., all synthesized by the seventh, or the central point in the Star. All these, the upper and lower hierarchies included, emanate from the "Heavenly or Celestial Virgin,"*** the great mother in all religions, the Androgyne, the

[[Footnote(s)]] -----

* Indeed, the Microprosopus -- who is, philosophically speaking, quite distinct from the unmanifested eternal Logos "one with the Father," -- has been finally brought, by centuries of incessant efforts, of sophistry and paradoxes, to be considered as one with Jehovah, or the ONE living God (!), whereas Jehovah is no better than Binah, a female Sephiroth. This fact cannot be too frequently impressed upon the reader.

** The Microprosopus is, as just said, the Logos manifested, and of such there are many.

*** Sephira is the Crown, KETHER, in the abstract principle only, as a mathematical x (the unknown quantity). On the plane of differentiated nature she is the female counterpart of Adam Kadmon -- the first Androgyne. The Kabala teaches that the word "Fiat Lux" (Genesis ch. i.) referred to the formation and evolution of the Sephiroth, and not to light as opposed to darkness. Rabbi Simeon says: "Oh com- [[Footnote continued on next page]]

[[Vol. 1, Page]] 216 THE SECRET DOCTRINE.

Sephira-Adam-Kadmon. In its Unity, primordial light is the seventh, or highest, principle, Daivi-prakriti, the light of the unmanifested Logos. But in its differentiation it becomes Fohat, or the "Seven Sons." The former is symbolised by the Central point in the double-Triangle; the latter by the hexagon itself, or the "six limbs" of the Microprosopus the Seventh being Malkuth, the "Bride" of the Christian Kabalists, or our Earth. Hence the expressions:

"The first after the 'One' is divine Fire; the second, Fire and AEther; the third is composed of Fire, AEther and Water; the fourth of Fire, AEther, Water, and Air."** The One is not concerned with Man-bearing globes, but with the inner invisible Spheres. "The 'First-Born' are the LIFE, the heart and pulse of the Universe; the Second are its MIND or Consciousness,"**

as said in the Commentary.

(c) The second Order of Celestial Beings, those of Fire and AEther (corresponding to Spirit and Soul, or the Atma-Buddhi) whose names are legion, are still formless, but more definitely "substantial." They are the first differentiation in the Secondary Evolution or "Creation" -- a misleading word. As the name shows, they are the prototypes of the incarnating Jivas or Monads, and are composed of the Fiery Spirit of Life. It is through these that passes, like a pure solar beam, the ray which is furnished by them with its future vehicle, the Divine Soul, Buddhi. These are directly concerned with the Hosts of the higher world of our system. From these twofold Units emanate the threefold.

In the cosmogony of Japan, when, out of the chaotic mass, an egglike nucleus appears, having within itself the germ and potency of all the universal as well as of all terrestrial life, it is the "three-fold" just named, which differentiates. "The male aethereal" (Yo) principle

[[Footnote(s)]] -----

[[Footnote continued from previous page]] panions, companions, man as an emanation was both man and woman, Adam Kadmon verily, and this is the sense of the words 'Let there be Light, and it was Light.' And this is the two-fold man." (Auszuge aus dem Zohar, pp. 13-15.)

* See next footnote. These elements of Fire, Air, etc., are not our compound elements.

** This "Consciousness" has no relation to our consciousness. The consciousness of the "One manifested," if not absolute, is still unconditioned. Mahat (the Universal Mind) is the first production of the Brahma-Creator, but also of the Pradhana (undifferentiated matter).

[[Vol. 1, Page]] 217 TEACHINGS CONTRASTED.

ascends and the female grosser or more material principle (In) is precipitated into the Universe of substance, when a separation occurs between the celestial and the terrestrial. From this the female, the mother, the first rudimentary objective being is born. It is ethereal, without form or sex, and yet it is from this and the mother that the Seven Divine Spirits are born, from whom will emanate the seven creations, just as in the Codex Nazaraeus from Karabtanos and the Mother Spiritus the seven evilly disposed (material) spirits are born. It would be too long to give here the Japanese names, but once translated they stand in this order:--

(1.) The "Invisible Celibate," which is the creative logos of the noncreating "father," or the creative potentiality of the latter made manifest.

(2.) "The Spirit (or the God) of the rayless depths" (of Chaos); which becomes differentiated matter, or the world-stuff; also the mineral realm.

(3.) "The Spirit of the Vegetable Kingdom," of the "Abundant Vegetation."

(4.) This one is of dual nature, being at the same time "The Spirit of the Earth" and "the Spirit of the Sands," the former containing the potentiality of the male element, the latter that of the female element, the two forming a combined nature.

These two were ONE; yet unconscious of being two.

In this duality were contained (a) the male, dark and muscular Being, Isu no gai no Kami; and (b) Eku gai no Kami, the female, fair and weaker or more delicate Being. Then, the:--

(5th and 6th.) Spirits who were androgynous or dual-sexed, and, finally:--

(7.) The Seventh Spirit, the last emanated from the "mother," appears as the first divine human form distinctly male and female. It was the seventh creation, as in the Puranas, wherein man is the seventh creation of Brahma.

These, Tsanagi-Tsanami, descended into the Universe by the celestial Bridge (the milky way), and "Tsanagi, perceiving far below a chaotic mass of cloud and water, thrust his jewelled spear into the depths, and dry land appeared." Then the two separated to explore Onokoro, the newly-created island-world; etc., etc. (Omoie).

[[Vol. 1, Page]] 218 THE SECRET DOCTRINE.

Such are the Japanese exoteric fables, the rind that conceals the kernel of the same one truth of the Secret Doctrine. Turning back to the esoteric explanations in every cosmogony:--

(d) The Third order corresponds to the Atma-Buddhi-Manas: Spirit, Soul and Intellect, and is called the "Triads."

(e) The Fourth are substantial Entities. This is the highest group among the Rupas (Atomic Forms*). It is the nursery of the human, conscious, spiritual Souls. They are called the "Imperishable Jivas," and constitute, through the order below their own, the first group of the first septenary** host -- the great mystery of human conscious and

[[Footnote(s)]] -----

* It is worthy of notice that, while rejecting as a superstition of Occultism, and religion too, the theory of substantial and invisible Beings called Angels, Elementals, etc. -- without, of course, having ever looked into the philosophy of these incorporeal Entities, or thought over them -- modern chemistry, owing to observation and discovery, should have unconsciously been forced to adopt and recognize the same ratio of progression and order in the evolution of chemical atoms as Occultism does, both for its Dhyanis and Atoms -- analogy being its first law. As seen above, the very first group of the Rupa Angels is quaternary, an element being added to each in descending order. So are the atoms, adopting the phraseology of chemistry, monatomic, diatomic, and tetratomic, progressing downwards. Let it be remembered that Fire, Water, and Air, or the "Elements of primary Creation" so-called, are not the compound Elements they are on Earth, but noumenal homogeneous Elements -- the Spirits thereof. Then follow the septenary groups or hosts. Placed on parallel lines in a diagram with Atoms, the Natures of those Beings would be seen to correspond in their downward scale of progression to composite elements in a mathematically identical manner, as to analogy. This refers, of course, only to diagrams made by the Occultists; for were the scale of Angelic Beings to be placed on a parallel line with the scale of the chemical atoms of Science -- from the hypothetical Helium down to Uranium -- they would of course be found to differ. For these have, as correspondents on the Astral plane, only the four lowest orders -- the higher three principles in the atom, or rather molecule or chemical element, being perceptible only to the initiated Dangma's eye. But then, if Chemistry desired to find itself on the right path, it would have to correct its tabular arrangement by that of the Occultists -- which it may refuse to do. In Esoteric Philosophy, every physical particle corresponds to and depends on its higher noumenon -- the Being to whose essence it belongs; and above as below, the Spiritual evolves from the Divine, the psycho-mental from the Spiritual -- tainted from its lower plane by the astral -- the whole animate and (seemingly) inanimate Nature evolving on parallel lines, and drawing its attributes from above as well as from below.

** The number seven does not imply only seven Entities, but seven groups or Hosts, as explained before. The highest group, the Asuras born in Brahma's first body -- [[Footnote continued on next page]]

[[Vol. 1, Page]] 219 THE HIERARCHIES OF SPIRITS.

intellectual Being. For the latter are the field wherein lies concealed in its privation the germ that will fall into generation. That germ will become the spiritual potency in the physical cell that guides the development of the embryo, and which is the cause of the hereditary transmission of faculties and all the inherent qualities in man. The Darwinian theory, however, of the transmission of acquired faculties, is neither taught nor accepted in Occultism. Evolution, in it, proceeds on quite other lines; the physical, according to esoteric teaching, evolving gradually from the spiritual, mental, and psychic. This inner soul of the physical cell -- this "spiritual plasm" that dominates the germinal plasm -- is the key that must open one day the gates of the terra incognita of the Biologist, now called the dark mystery of Embryology. (See text and note infra.)

(f) The Fifth group is a very mysterious one, as it is connected with the Microcosmic Pentagon, the five-pointed star representing man. In India and Egypt these Dhyanis were connected with the Crocodile, and their abode is in Capricornus. These are convertible terms in Indian astrology, as this (tenth) sign of the Zodiac is called Makara, loosely translated "crocodile." The word itself is occultly interpreted in various ways, as will be shown further on. In Egypt the defunct man -- whose symbol is the pentagram or the five-pointed star, the points of which represent the limbs of a man -- was shown emblematically transformed into a crocodile: Sebakh or Sevekh "or seventh," as Mr. Gerald Massey says, showing it as having been the type of intelligence, is a dragon in reality, not a crocodile. He is the "Dragon of Wisdom" or Manas, the "Human Soul," Mind, the Intelligent principle, called in our esoteric philosophy the "Fifth" principle.

Says the defunct "Osirified" in ch. lxxxviii., "Book of the Dead," or the Ritual, under the glyph of a mummiform god with a crocodile's head:--

(1) "I am the god (crocodile) presiding at the fear . . . at the arrival of his Soul among men. I am the god-crocodile brought for destruction" (an allusion to the destruction of divine spiritual purity

[[Footnote(s)]] -----

[[Footnote continued from previous page]] which turned into "Night" -- are septenary, i.e., divided like the Pitris into seven classes, three of which are arupa (bodiless) and four with bodies. (See Vishnu Purana, Book I.) They are in fact more truly our Pitris (ancestors) than the Pitris who projected the first physical men. (See Book II.)

[[Vol. 1, Page]] 220 THE SECRET DOCTRINE.

when man acquires the knowledge of good and evil; also to the "fallen" gods, or angels of every theogony).

(2) "I am the fish of the great Horus (as Mankara is the "crocodile," the vehicle of Varuna). I am merged in Sekten."

This last sentence gives the corroboration of, and repeats the doctrine of, esoteric Buddhism, for it alludes directly to the fifth principle (Manas), or the most spiritual part of its essence rather, which merges into, is absorbed by, and made one with Atma-Buddhi after the death of man. For Se-khen is the residence or loka of the god Khem (Horus-Osiris, or Father and Son), hence the "Devachan" of Atma-Buddhi. In the Ritual of the Dead the defunct is shown entering into Sekhem with Horus-Thot and "emerging from it as pure spirit" (lxiv., 29). Thus the defunct says (v. 130): "I see the forms of (myself, as various) men transforming eternally . . . I know this (chapter). He who knows it . . . takes all kinds of living forms." . . .

And in verse 35, addressing in magic formula that which is called, in Egyptian esotericism, the "ancestral heart," or the re-incarnating principle, the permanent EGO, the defunct says:--

"Oh my heart, my ancestral heart necessary for my transformations, do not separate thyself from me before the guardian of the Scales. Thou art my personality within my breast, divine companion watching over my fleshs (bodies)."

It is in Sekhem that lies concealed "the Mysterious Face," or the real man concealed under the false personality, the triple-crocodile of Egypt, the symbol of the higher Trinity or human Triad, Atma, Buddhi and Manas.* In all the ancient papyri the crocodile is called Sebek (Seventh), while the water is the fifth principle esoterically; and, as already stated, Mr. Gerald Massey shows that the crocodile was "the Seventh Soul, the supreme one of seven -- the Seer unseen." Even exoterically Sekhem is the residence of the god Khem, and Khem is Horus avenging the death of his father Osiris, hence punishing the Sins of man when he becomes a disembodied Soul. Thus the defunct

[[Footnote(s)]] -----

* One of the explanations of the real though hidden meaning of this Egyptian religious glyph is easy. The crocodile is the first to await and meet the devouring fires of the morning sun, and very soon came to personify the solar heat. When the sun arose, it was like the arrival on earth and among men "of the divine soul which informs the Gods." Hence the strange symbolism. The mummy donned the head of a crocodile to show that it was a soul arriving from the earth.

[[Vol. 1, Page]] 221 CORRELATION OF BEINGS.

"Osirified" became the god Khem, who "gleans the field of Aanroo," i.e., he gleans either his reward or punishment, as that field is the celestial locality (Devachan) where the defunct is given wheat, the food of divine justice. The fifth group of the celestial Beings is supposed to contain in itself the dual attributes of both the spiritual and physical aspects of the Universe; the two poles, so to say, of Mahat the Universal Intelligence, and the dual nature of man, the spiritual and the physical. Hence its number Five, multiplied and made into ten, connecting it with Makara, the 10th sign of Zodiac.

(g) The sixth and seventh groups partake of the lower qualities of the Quaternary. They are conscious, ethereal Entities, as invisible as Ether, which are shot out like the boughs of a tree from the first central group of the four, and shoot out in their turn numberless side groups, the lower of which are the Nature-Spirits, or Elementals of countless kinds and varieties; from the formless and unsubstantial --

the ideal THOUGHTS of their creators -- down to the Atomic, though, to human perception, invisible organisms. The latter are considered as the "Spirits of Atoms" for they are the first remove (backwards) from the physical Atom -- sentient, if not intelligent creatures. They are all subject to Karma, and have to work it out through every cycle. For, as the doctrine teaches, there are no such privileged beings in the universe, whether in our or in other systems, in the outer or the inner worlds,* as the angels of the Western Religion and the Judean. A Dhyana Chohan has to become one; he cannot be born or appear suddenly on the plane of life as a full-blown angel. The Celestial Hierarchy of the present Manvantara will find itself transferred in the next cycle of life into higher, superior worlds, and will make room for a new hierarchy, composed of the elect ones of our mankind. Being is an endless cycle within the one absolute eternity, wherein move numberless inner cycles finite and conditioned. Gods, created as such, would evince no personal merit in being gods. Such a class of beings, perfect only by virtue of the special immaculate nature inherent in them, in the face of suffering and struggling humanity, and even of the lower creation, would be the

[[Footnote(s)]] -----

* A world when called "a higher world" is not higher by reason of its location, but because it is superior in quality or essence. Yet such a world is generally understood by the profane as "Heaven," and located above our heads.

[[Vol. 1, Page]] 222 THE SECRET DOCTRINE.

symbol of an eternal injustice quite Satanic in character, an ever present crime. It is an anomaly and an impossibility in Nature. Therefore the "Four" and the "Three" have to incarnate as all other beings have. This sixth group, moreover, remains almost inseparable from man, who draws from it all but his highest and lowest principles, or his spirit and body, the five middle human principles being the very essence of those Dhyanis.* Alone, the Divine Ray (the Atman) proceeds directly from the One. When asked how that can be? How is it possible to conceive that those "gods," or angels, can be at the same time their own emanations and their personal selves? Is it in the same sense in the material world, where the son is (in one way) his father, being his blood, the bone of his bone and the flesh of his flesh? To this the teachers answer "Verily it is so." But one has to go deep into the mystery of BEING before one can fully comprehend this truth.

STANZA VII. -- Continued.

2. THE ONE RAY MULTIPLIES THE SMALLER RAYS. LIFE PRECEDES FORM, AND LIFE SURVIVES THE LAST ATOM (of Form, Sthula-sarira, external body). THROUGH THE COUNTLESS RAYS THE LIFE-RAY, THE ONE, LIKE A THREAD THROUGH MANY BEADS (pearls) (a).

(a) This sloka expresses the conception -- a purely Vedantic one, as already explained elsewhere -- of a life-thread, Sutratma, running through successive generations. How, then, can this be explained? By resorting to a simile, to a familiar illustration, though necessarily imperfect, as all our available analogies must be. Before resorting to it, however, I would ask whether it seems unnatural, least of all "supernatural," to any one of us, when we consider that process known as the growth and development of a foetus into a healthy baby weighing several pounds evolves from what? From the segmentation of an infinitesimally small ovum and a spermatozoon; and afterwards we see that baby develop into a six-foot man! This refers to the atomic and physical

[[Footnote(s)]] -----

* Paracelsus calls them the Flagae; the Christians, the "Guardian Angels;" the Occultist, the "Ancestors, the Pitris;" they are the sixfold Dhyana Chohans, having the six spiritual Elements in the composition of their bodies -- in fact, men, minus the physical body.

[[Vol. 1, Page]] 223 THE MYSTERY OF BEING.

expansion from the microscopically small into something very large, from the -- to the naked eye -- unseen, into the visible and objective. Science has provided for all this; and, I dare say, her theories, embryological, biological, and physiological, are correct enough so far as exact observation of the material goes. Nevertheless, the two chief difficulties of the science of embryology -- namely, what are the forces at work in the formation of the foetus, and the cause of "hereditary transmission" of likeness, physical, moral or mental -- have never been properly answered; nor will they ever be solved till the day when scientists condescend to accept the Occult theories.* But if this physical pheno-

[[Footnote(s)]] -----

* The materialists and the evolutionists of the Darwinian school would be ill-advised to accept the newly worked-out theories of Professor Weissmann, the author of Beitrage zur Descendenzlehre, with regard to one of the two mysteries of Embryology, as above specified, which he seems to have solved -- as he thinks. For, when it is solved, Science will have stepped over into the domain of the truly occult, and stepped for ever out of the realm of transformation, as taught by Darwin. The two are irreconcilable, from the standpoint of materialism. Regarded from that of the Occultists, it solves all these mysteries. Those who are not acquainted with the new discovery of Professor Weissman -- at one time a fervent Darwinist -- ought to hasten to repair the deficiency. The German Embryologist-philosopher shows -- thus stepping over the heads of the Greek Hippocrates and Aristotle, right back into the teachings of the old Aryans -- one infinitesimal cell, out of millions of others at work in the formation of an organism, determining alone and

unaided, by means of constant segmentation and multiplication, the correct image of the future man (or animal) in its physical, mental, and psychic characteristics. It is that cell which impresses on the face and form of the new individual the features of the parents or of some distant ancestor; it is that cell again which transmits to him the intellectual and mental idiosyncracies of his sires, and so on. This Plasm is the immortal portion of our bodies -- simply through the process of successive assimilations. Darwin's theory, viewing the embryological cell as an essence or the extract from all other cells, is set aside; it is incapable of accounting for hereditary transmission. There are but two ways of explaining the mystery of heredity; either the substance of the germinal cell is endowed with the faculty of crossing the whole cycle of transformations that lead to the construction of a separate organism and then to the reproduction of identical germinal cells; or, those germinal cells do not have their genesis at all in the body of the individual, but proceed directly from the ancestral germinal cell passed from father to son through long generations. It is the latter hypothesis that Weissmann accepted and has worked upon; and it is to this cell that he traces the immortal portion of man. So far, so good; and when this almost correct theory is accepted, how will Biologists explain the first appearance of this everlasting cell? Unless man "grew" like the "immortal Topsy," and was not born at all, but fell from the clouds, how was that embryological cell born in him?

[[Vol. 1, Page]] 224 THE SECRET DOCTRINE.

menon astonishes no one, except in so far as it puzzles the Embryologists, why should our intellectual and inner growth, the evolution of the human-spiritual to the Divine-Spiritual, be regarded as, or seem, more impossible than the other? Now to the simile.

Complete the physical plasm, mentioned in the last foot-note, the "Germinal Cell" of man with all its material potentialities, with the "spiritual plasm," so to say, or the fluid that contains the five lower principles of the six-principled Dhyana -- and you have the secret, if you are spiritual enough to understand it.

"When the seed of the animal man is cast into the soil of the animal woman, that seed cannot germinate unless it has been fructified by the five virtues (the fluid of, or the emanation from the principles) of the six-fold Heavenly man. Wherefore the Microcosm is represented as a Pentagon, within the Hexagon Star, the "Macrocosm." ("[[Anthropos]],") a work on Occult Embryology, Book I.). Then: "The functions of Jiva on this Earth are of a five-fold character. In the mineral atom it is connected with the lowest principles of the Spirits of the Earth (the six-fold Dhyanis); in the vegetable particle, with their second -- the Prana (life); in the animal, with all these plus the third and the fourth; in man, the germ must receive the fruition of all the five. Otherwise he will be born no higher than an animal"; namely, a congenital idiot. Thus in man alone the Jiva is complete. As to his seventh principle, it is but one of the Beams of the Universal Sun. Each rational creature receives only the temporary loan of that which has to return to its source; while his physical body is shaped by the lowest terrestrial lives, through physical, chemical, and physiological evolution. "The Blessed Ones have nought to do with the purgations of matter." (Kabala, Chaldean Book of Numbers).

It comes to this: Mankind in its first prototypal, shadowy form, is the offspring of the Elohim of Life (or Pitris); in its qualitative and physical aspect it is the direct progeny of the "Ancestors," the lowest Dhyanis, or Spirits of the Earth; for its moral, psychic, and spiritual nature, it is indebted to a group of divine Beings, the name and characteristics of which will be given in Book II. Collectively, men are the handiwork of hosts of various spirits; distributively, the tabernacles of those hosts; and occasionally and singly, the vehicles of some of them. In our present all-material Fifth Race, the earthly Spirit of the

[[Vol. 1, Page]] 225 SPIRIT FALLING INTO MATTER.

Fourth is still strong in us; but we are approaching the time when the pendulum of evolution will direct its swing decidedly upwards, bringing Humanity back on a parallel line with the primitive third Root-Race in Spirituality. During its childhood, mankind was composed wholly of that Angelic Host, who were the indwelling Spirits that animated the monstrous and gigantic tabernacles of clay of the Fourth Race built by (as they are now also) and composed of countless myriads of lives.* This sentence will be explained later on in the present Commentary. The "tabernacles" have improved in texture and symmetry of form, growing and developing with the globe that bore them; but the physical improvement took place at the expense of the spiritual inner man and nature. The three middle principles in earth and man became with every race more material; the Soul stepping back to make room for the physical intellect; the essence of elements becoming the material and composite elements now known.

Man is not, nor could he ever be, the complete product of the "Lord God"; but he is the child of the Elohim, so arbitrarily changed into the singular masculine gender. The first Dhyanis, commissioned to "create" man in their image, could only throw off their shadows, like a delicate model for the Nature Spirits of matter to work upon. (See Book II.) Man is, beyond any doubt, formed physically out of the dust of the Earth, but his creators and fashioners were many. Nor can it be said that the "Lord God breathed into his nostrils the breath of life," unless that God is identified with the "ONE LIFE," Omnipresent though invisible, and unless the same operation is attributed to "God" on behalf of every living Soul -- or Nephesh, which is the vital Soul, not the divine Spirit or Ruach, which ensures to man alone a divine degree of immortality, that no animal, as such, could ever attain in this cycle of incarnation. It is the inadequate distinctions made by the Jews, and now by our Western metaphysicians, who, not knowing of, and being unable to understand, hence to accept, more than a triune man -- Spirit, Soul,

[[Footnote(s)]] -----

* Science, dimly perceiving the truth, may find Bacteria and other infinitesimals in the human body, and see in them but occasional and abnormal visitors to which diseases are attributed. Occultism -- which discerns a life in every atom and molecule, whether in a mineral or human body, in air, fire or water -- affirms that our whole body is built of such lives, the smallest bacteria under the microscope being to them in comparative size like an elephant to the tiniest infusoria.

Body -- thus confuse the "breath of life" with immortal Spirit.* This applies also directly to the Protestant theologians, who, in translating verse 8 of Ch. III. in the Fourth Gospel, have entirely perverted the meaning. Indeed the verse is made to say "The wind bloweth where it listeth," instead of "the Spirit goeth where it willetth," as in the original and also in the translation of the Greek Eastern Church.

Thus the philosophy of psychic, spiritual, and mental relations with man's physical functions is in almost inextricable confusion. Neither the old Aryan, nor the Egyptian psychology are now properly understood. Nor can they be assimilated without accepting the esoteric septenary, or, at any rate, the Vedantic quinquartite division of the human inner principles. Failing which, it will be for ever impossible to understand the metaphysical and purely psychic and even physiological relations between the Dhyan-Chohans, or Angels, on the one plane, and humanity on the other. No Eastern (Aryan) esoteric works are so far published, but we possess the Egyptian papyri which speak clearly

[[Footnote(s)]] -----

* The learned and very philosophical author of "New Aspects of Life" would impress upon his reader that the Nephesh chaiah (living soul), according to the Hebrews, "proceeded from, or was produced by, the infusion of the Spirit or Breath of Life into the quickening body of man, and was to supersede and take the place of that spirit in the thus constituted self, so that the spirit passed into, was lost sight of, and disappeared in the living Soul." The human body, he thinks, ought to be viewed as a matrix in which, and from which, the Soul (which he seems to place higher than the spirit) is developed -- considered functionally and from the standpoint of activity, the Soul stands undeniably higher in this finite and conditioned world of Maya -- the Soul, he says, "is ultimately produced from the animated body of man." Thus the author identifies "Spirit" (Atma) simply with "the breath of life." The Eastern Occultists will demur to this statement, for it is based on the erroneous conception that Prana and Atma or Jivatma are one and the same thing. The author supports the argument by showing that with the ancient Hebrews, Greeks and even Latins, Ruach, Pneuma and Spiritus -- with the Jews undeniably, and with the Greeks and Romans very probably -- meant Wind; the Greek word Anemos (wind) and the Latin Anima "Soul" having a suspicious relation.

This is very far fetched. A legitimate battle-field for deciding this question is hardly to be found, since Mr. Pratt seems to be a practical, matter-of-fact metaphysician, a kind of Kabalist-Positivist, and the Eastern metaphysicians, especially the Vedantins, are all Idealists. The Occultists are also of the extreme esoteric Vedantin school, and they call the One Life (Parabrahm), the Great Breath and the Whirlwind; but they disconnect the seventh principle entirely from matter or any relation to, or connection with it.

of the seven principles or the "Seven Souls of Man."** The Book of the Dead gives a complete list of the "transformations" that every defunct undergoes, while divesting himself, one by one, of all those principles -- materialised for the sake of clearness into ethereal entities or bodies. We must, moreover, remind those who try to prove that the ancient Egyptians knew nothing of and did not teach Reincarnation, that the "Soul" (the Ego or Self) of the defunct is said to be living in Eternity: it is immortal, "co-eval with, and disappearing with the Solar boat," i.e., for the cycle of necessity. This "Soul" emerges from the Tiaou (the realm of the cause of life) and joins the living on Earth by day, to return to Tiaou every night. This expresses the periodical existences of the Ego. (Book of the Dead, cvxlili.)

The shadow, the astral form, is annihilated, "devoured by the Uraeus" (cxlix., 51), the Manes will be annihilated; the two twins (the 4th and 5th principles) will be scattered; but the Soul-bird, "the divine Swallow -- and the Uraeus of Flame" (Manas and Atma-Buddhi) will live in the eternity, for they are their mother's husbands.**

Like alone produces like. The Earth gives Man his body, the gods (Dhyanis) his five inner principles, the psychic Shadow, of which those gods are often the animating principle. SPIRIT (Atman) is one -- and indiscrete. It is not in the Tiaou.

For what is the Tiaou? The frequent allusion to it in the "Book of the Dead" contains a mystery. Tiaou is the path of the Night Sun, the inferior hemisphere, or the infernal region of the Egyptians, placed by them on the concealed side of the moon. The human being, in their

[[Footnote(s)]] -----

* Vide in Part II., Book II., "The Seven Souls of Man," the divisions made respectively by Messrs. Gerald Massey and Franz Lambert.

** Another suggestive analogy between the Aryan or Brahmanical and the Egyptian esotericism. The former call the Pitris "the lunar ancestors" of men; and the Egyptians made of the Moon-God, Taht-Esmun, the first human ancestor. This "moon-god" "expressed the Seven nature-powers that were prior to himself, and were summed up in him as his seven souls, of which he was the manifestor as the eighth one (hence the eighth sphere). The seven rays of the Chaldean Heptakis or Iao, on the Gnostic stones indicate the same septenary of souls." . . . "The first form of the mystical SEVEN was seen to be figured in heaven, by the seven large stars of the Great Bear, the constellation assigned by the Egyptians to the Mother of Time, and of the seven elemental powers." (See The Seven Souls,

etc.) As well known to every Hindu, this same constellation represents in India the Seven Rishis, and as such is called Riksha, and Chitra-Sikhandinas.

[[Vol. 1, Page]] 228 THE SECRET DOCTRINE.

esotericism, came out from the moon (a triple mystery -- astronomical, physiological, and psychical at once); he crossed the whole cycle of existence and then returned to his birth-place before issuing from it again. Thus the defunct is shown arriving in the West, receiving his judgment before Osiris, resurrecting as the god Horus, and circling round the sidereal heavens, which is an allegorical assimilation to Ra, the Sun; then having crossed the Noot (the celestial abyss), returning once more to Tiaou: an assimilation to Osiris, who, as the God of life and reproduction, inhabits the moon. Plutarch (Isis and Osiris, ch. xliii.) shows the Egyptians celebrating a festival called "The Ingress of Osiris into the moon." In chapter xli. life is promised after death; and the renovation of life is placed under the patronage of Osiris-Lunus, because the moon was the symbol of life-renewals or reincarnations, owing to its growth, waning, dying, and reappearance every month. In the Dankmoe, (iv. 5) it is said:-- "Oh, Osiris-Lunus! That renews to thee thy renewal." And Safekh says to Seti I. (Mariette's Abydos, plate 51), "Thou renewest thyself as the god Lunus when a babe." It is still better explained in a Louvre papyrus (P. Pierret, "Etudes Egyptologiques"): "Couplings and conceptions abound when he (Osiris-Lunus) is seen in heaven on that day." Says Osiris: "Oh, sole radiant beam of the moon! I issue from the circulating multitudes (of stars) Open me the Tiaou, for Osiris N. I will issue by day to do what I have to do amongst the living" ("Book of the Dead," ch. ii.), -- i.e., to produce conceptions.

Osiris was "God manifest in generation," because the ancients knew, far better than the moderns, the real occult influences of the lunar body upon the mysteries of conception.* Later on, when the moon became connected with female goddesses** -- with Diana, Isis, Artemis,

[[Footnote(s)]] -----

* In the oldest systems we find the Moon always male. Thus Soma is, with the Hindus, a kind of sidereal Don Juan, a "King," and the father, albeit illegitimate, of Buddha -- Wisdom, which relates to Occult Knowledge, a wisdom gathered through a thorough acquaintance with lunar mysteries including those of sexual generation. (See "Holy of Holies.")

** If instead of being taught in Sunday Schools useless lessons from the Bible, the armies of the ragged and the poor were taught Astrology -- so far, at any rate, as the occult properties of the Moon and its hidden influences on generation are concerned, then there would be little need to fear increase of the population nor to resort to the questionable literature of the Malthusians for its arrest. For it is the Moon and her [[Footnote continued on next page]]

[[Vol. 1, Page]] 229 MANY STREAMS, BUT ONE SOURCE.

Juno, etc., that connection was due to a thorough knowledge of physiology and female nature, physical as much as psychic. But, primarily, the Sun and Moon were the only visible and, so to say, tangible [by their effects] psychic and physiological deities -- the Father and the Son, while Space and air in general, or that expanse of Heaven called Noot by the Egyptians, was the concealed Spirit or Breath of the two. These "Father and Son" were interchangeable in their functions and worked harmoniously together in their effects upon terrestrial nature and humanity; hence they were regarded as ONE, though TWO in personified Entities. They were both males, and both had their distinct and also collaborative work in the causative generation of Humanity. So much from the astronomical and cosmic standpoints viewed and expressed in symbolical language -- which became in our last races theological and dogmatic. But behind this veil of Cosmic and Astrological symbols, there were the Occult mysteries of Anthropography and the primeval genesis of man. And in this, no knowledge of symbols -- or even the key to the post-diluvian symbolical language of the Jews -- will, or can help, save only with reference to that which was laid down in national scriptures for exoteric uses; the sum of which, however cleverly veiled, was only the smallest portion of the real primitive history of each people, often relating, moreover, -- as in the Hebrew Scriptures -- merely to the terrestrial human, not divine life of that nation. That psychic and spiritual element belonged to MYSTERY and INITIATION. There were things never recorded in scrolls, but, as in Central Asia, on rocks and in subterranean crypts.

Nevertheless, there was a time when the whole world was "of one lip and of one knowledge," and Man knew more of his origin than he does now, and thus knew that the Sun and Moon, however large a part they do play in the constitution, growth and development of the human body, were not the direct causative agents of his appearance on Earth;

[[Footnote(s)]] -----

[[Footnote continued from previous page]] conjunctions that regulate conceptions, and every astrologer in India knows it. During the previous and the present races, at least at the beginning of this one, those who indulged in marital relations during certain lunar phases that made those relations sterile were regarded as sorcerers and sinners. But even now those sins of old, based on the Occult knowledge and the abuse of it, would appear preferable to the crimes of to-day, which are perpetrated because of the complete ignorance of, and disbelief in all such occult influences.

[[Vol. 1, Page]] 230 THE SECRET DOCTRINE.

these agents being, in truth, the living and intelligent Powers which the Occultists call Dhyana Chohans.

As to this, a very learned admirer of the Jewish Esotericism tells us that "the Kabala says expressly that Elohim is a 'general abstraction'; what we call in mathematics 'a constant co-efficient' or a 'general function' entering into all construction, not particular; that is, by the general ratio 1 to 31415, (the astro-Dhyanic and) Elohist figures." To this the Eastern Occultist replies: Quite so, it is an abstraction to our physical senses. To our spiritual perceptions, however, and to our inner spiritual eye, the Elohim or Dhyanis are no more an abstraction than our soul and spirit are to us. Reject the one and you reject the other -- since that which is the surviving Entity in us is partly the direct emanation from, and partly those celestial Entities themselves. One thing is sure; the Jews were perfectly acquainted with sorcery and various maleficent forces; but, with the exception of some of their great prophets and seers like Daniel and Ezekiel (Enoch belonging to a far distant race and not to any nation but to all, as a generic character), they knew little of, nor would they deal with, the real divine Occultism, their national character being averse to anything which had no direct bearing upon their own ethnical, tribal, and individual benefits -- witness their own prophets, and the curses thundered by them against the "stiff-necked race." But even the Kabala plainly shows the direct relation between the Sephiroth, or Elohim, and men.

Therefore, when it is proved to us that the Kabalistic identification of Jehovah with Binah, a female Sephiroth, has still another, a sub-occult meaning in it, then and then only the Occultist will be ready to pass the palm of perfection to the Kabalist. Until then, it is asserted that, as Jehovah is in the abstract sense of a "one living God," a single number, a metaphysical figment, and a reality only when put in his proper place as an emanation and a Sephiroth -- we have a right to maintain that the Zohar (as witnessed by the BOOK OF NUMBERS, at any rate), gave out originally, before the Christian Kabalists had disfigured it, and still gives out the same doctrine that we do; i.e., it makes Man emanate, not from one Celestial MAN, but from a Septenary group of Celestial men or Angels, just as in "Pymander, the Thought Divine."

[[Vol. 1, Page]] 231 THE DIFFERENTIATION OF THE "ONE."

STANZA VII. -- Continued.

(3) WHEN THE ONE BECOMES TWO -- THE "THREE-FOLD" APPEARS (a). THE THREE ARE (linked into) ONE; AND IT IS OUR THREAD, O LANOO, THE HEART OF THE MAN-PLANT, CALLED SAPTAPARNA (b).

(a) "When the ONE becomes two, the three-fold appears": to wit, when the One Eternal drops its reflection into the region of Manifestation, that reflection, "the Ray," differentiates the "Water of Space"; or, in the words of the "Book of the Dead"; "Chaos ceases, through the effulgence of the Ray of Primordial light dissipating total darkness by the help of the great magic power of the WORD of the (Central) Sun." Chaos becomes male-female, and Water, incubated through Light, and the "three-fold being issues as its First-born." "Osiris-Ptah (or RA) creates his own limbs (like Brahma) by creating the gods destined to personify his phases" during the Cycle (xvii., 4). The Egyptian Ra, issuing from the DEEP, is the Divine Universal Soul in its manifested aspect, and so is Narayana, the Purusha, "concealed in Akasa and present in Ether."

This is the metaphysical explanation, and refers to the very beginning of Evolution, or, as we should rather say, of Theogony. The meaning of the Stanza when explained from another standpoint in its reference to the mystery of man and his origin, is still more difficult to comprehend. In order to form a clear conception of what is meant by the One becoming two, and then being transformed into the "three-fold," the student has to make himself thoroughly acquainted with what we call "Rounds." If he refers to "Esoteric Buddhism" -- the first attempt to sketch out an approximate outline of archaic Cosmogony -- he will find that by a "Round" is meant the serial evolution of nascent material nature, of the seven globes of our chain* with their mineral,

[[Footnote(s)]] -----

* Several inimical critics are anxious to prove that no seven principles of man nor septenary constitution of our chain were taught in our earlier volume, "Isis Unveiled." Though in that work the doctrine could only be hinted at, there are many passages, nevertheless, in which the septenary constitution of both man and chain is openly mentioned. Speaking of the Elohim in Vol. II., page 420, it is said: "They remain over the seventh heaven (or spiritual world), for it is they who, according to the Kabalists, formed in succession the six material worlds, or rather, attempts at worlds that preceded our own, which, they say, is the seventh." Our globe is, of course, upon the diagram representing the "chain," the seventh and the lowest; though, [[Footnote continued on next page]]

[[Vol. 1, Page]] 232 THE SECRET DOCTRINE.

vegetable, and animal kingdoms (man being there included in the latter and standing at the head of it) during the whole period of a life-cycle. The latter would be called by the Brahmins "a Day of Brahma." It is, in short, one revolution of the "Wheel" (our planetary chain), which is composed of seven globes (or seven separate "Wheels," in another sense this time). When evolution has run downward into matter, from planet A to planet G, or Z, as the Western students call it, it is one Round. In the middle of the Fourth revolution, which is our present "Round": "Evolution has reached its acme of physical development, crowned its work with the perfect physical man, and, from this point, begins its work spirit-ward." All this needs little repetition, as it is well explained in "Esoteric Buddhism." That which was hardly touched upon, and of which the little that was said has misled many, is the origin of man, and it is upon this that a little more light may now be thrown, just enough to make the Stanza more comprehensible, as the process will be fully explained only in its legitimate place, in Book II.

Now every "Round" (on the descending scale) is but a repetition in a more concrete form of the Round which preceded it, as every globe -- down to our fourth sphere (the actual earth) -- is a grosser and more material copy of the more shadowy sphere which

precedes it in their successive order, on the three higher planes. (See diagram in Stanza VI. Comm. 6). On its way upwards on the ascending arc, Evolution spiritualises and etherealises, so to speak, the general nature of all, bringing it on to a level with the plane on which the twin globe on the opposite side is placed; the result being, that when the seventh globe is reached (in whatever Round) the nature of everything that is evolving returns to the condition it was in at its starting point -- plus, every time, a new and superior degree in the states of consciousness. Thus it becomes clear that the "origin of man," so-called, on this our present

[[Footnote(s)]] -----

[[Footnote continued from previous page]] as the evolution on these globes is cyclic, it is the fourth in descending the arc of matter. And again, on page 367, Vol. II., it is written: "In the Egyptian notions, as in those of all other faiths founded on philosophy, man was not merely . . . an union of soul and body; he was a trinity when spirit was added to it; and besides that doctrine made him consist of body, astral form, or shadow, the animal soul, the higher soul, and terrestrial intelligence and a sixth principle, etc., etc. -- the seventh -- SPIRIT." So clearly are these principles mentioned, that even in the Index, one finds on page 683:-- "Six principles of man" -- the seventh being the synthesis of the six, and not a principle but a ray of the Absolute ALL -- in strict truth.

[[Vol. 1, Page]] 233 WHAT INCARNATES IN ANIMAL MAN.

Round, or life-cycle on this planet, must occupy the same place in the same order -- save details based on local conditions and time -- as in the preceding Round. Again, it must be explained and remembered that, as the work of each Round is said to be apportioned to a different group of so-called "Creators" or "Architects," so is that of every globe; i.e., it is under the supervision and guidance of special "Builders" and "Watchers" -- the various Dhyana-Chohans.

The group of the hierarchy which is commissioned to "create" men is a special group, then; yet it evolved shadowy man in this cycle just as a higher and still more spiritual group evolved him in the Third Round. But as it is the Sixth -- on the downward scale of Spirituality -- the last and seventh being the terrestrial Spirits (elementals) which gradually form, build, and condense his physical body -- this Sixth group evolves no more than the future man's shadowy form, a filmy, hardly visible transparent copy of themselves. It becomes the task of the fifth Hierarchy -- the mysterious beings that preside over the constellation Capricornus, Makara, or "Crocodile" in India as in Egypt -- to inform the empty and ethereal animal form and make of it the Rational Man. This is one of those subjects upon which very little may be said to the general public. It is a MYSTERY, truly, but only to him who is prepared to reject the existence of intellectual and conscious spiritual Beings in the Universe, limiting full Consciousness to man alone, and that only as a "function of the Brain." Many are those among the Spiritual Entities, who have incarnated bodily in man, since the beginning of his appearance, and who, for all that, still exist as independently as they did before, in the infinitudes of Space. . . .

To put it more clearly: the invisible Entity may be bodily present on earth without abandoning, however, its status and functions in the supersensuous regions. If this needs explanation, we can do no better than remind the reader of like cases in Spiritualism, though such cases are very rare, at least as regards the nature of the Entity incarnating,**

[[Footnote(s)]] -----

* Creation is an incorrect word to use, as no religion, not even the sect of the Visishta Adwaites in India -- one which anthropomorphises even Parabrahmam -- believes in creation out of nihil as Christians and Jews do, but in evolution out of preexisting materials.

** The so-called "Spirits" that may occasionally possess themselves of the bodies of mediums are not the Monads or Higher Principles of disembodied personalities. Such a "Spirit" can only be either an Elementary, or -- a Nirmanakaya.

[[Vol. 1, Page]] 234 THE SECRET DOCTRINE.

or taking temporary possession of a medium. Just as certain persons -- men and women, reverting to parallel cases among living persons -- whether by virtue of a peculiar organization, or through the power of acquired mystic knowledge, can be seen in their "double" in one place, while the body is many miles away; so the same thing can occur in the case of superior Beings.

Man, philosophically considered, is, in his outward form, simply an animal, hardly more perfect than his pithecoïd-like ancestor of the third round. He is a living body, not a living being, since the realisation of existence, the "Ego-Sum," necessitates self-consciousness, and an animal can only have direct consciousness, or instinct. This was so well understood by the Ancients that the Kabalist even made of soul and body two lives, independent of each other.* The soul, whose body vehicle is the Astral, ethero-substantial envelope, could die and man be still living on earth -- i.e., the soul could free itself from and quit the tabernacle for various reasons -- such as insanity, spiritual and physical depravity, etc.** Therefore, that which living men (Initiates)

[[Footnote(s)]] -----

* On p. 340-351 (Genesis of the Soul) in the "New Aspects of Life," the Author states the Kabalistic teaching: "They held that, functionally, Spirit and Matter of corresponding opacity and density tended to coalesce; and that the resultant created Spirits, in the disembodied state, were constituted on a scale in which the differing opacities and transparencies of Elemental or uncreated Spirit were reproduced. And that these Spirits in the disembodied state attracted, appropriated, digested and assimilated Elemental Spirit and Elemental Matter whose condition was conformed to their own." "They therefore taught that there was a wide difference in the

condition of created Spirits; and that in the intimate association between the Spirit-world and the world of Matter, the more opaque Spirits in the disembodied state were drawn towards the more dense parts of the material world, and therefore tended towards the centre of the Earth, where they found the conditions most suited to their state; while the more transparent Spirits passed into the surrounding aura of the planet, the most rarified finding their home in its satellite."

This relates exclusively to our Elementary Spirits, and has naught to do with either the Planetary, Sidereal, Cosmic or Inter-Etheric Intelligent Forces or "Angels" as they are termed by the Roman Church. The Jewish Kabalists, especially the practical Occultists who dealt with ceremonial magic, busied themselves solely with the spirits of the Planets and the "Elementals" so-called. Therefore this covers only a portion of the Esoteric Teaching.

** The possibility of the "Soul" (i.e., the eternal Spiritual Ego) dwelling in the unseen worlds, while its body goes on living on Earth, is a pre-eminently occult doctrine, especially in Chinese and Buddhist philosophy. See "Isis Unveiled," vol. i., [[Footnote continued on next page]]

[[Vol. 1, Page]] 235 DII SUNT DEMONES INVERSI.

can do, the Dhyanis, who have no physical body to hamper them, can do still better. This was the belief of the Antediluvians, and it is fast becoming that of modern intellectual society, in Spiritualism, besides the Greek and Roman Churches, which teach the ubiquity of their angels. The Zoroastrians regarded their Amshaspends as dual entities (Ferouers), applying this duality -- in esoteric philosophy, at any rate -- to all the spiritual and invisible denizens of the numberless worlds in space which are visible to our eye. In a note of Damascius (sixth century) on the Chaldean oracles, we have a triple evidence of the universality of this doctrine, for he says: "In these oracles the seven Cosmocrates of the world, ('The World-Pillars,') mentioned likewise by St. Paul, are double -- one set being commissioned to rule the superior worlds the spiritual and the sidereal, and the other to guide and watch over the worlds of matter." Such is also the opinion of Jamblichus, who makes an evident distinction between the archangels and the "Archontes." (See "De Mysteriis," sec. ii., ch. 3.) The above may be applied, of course, to the distinction made between the degrees or orders of spiritual beings, and it is in this sense that the Roman Catholic Church tries to interpret and teach the difference; for while the archangels are in her teaching divine and holy, their doubles are denounced by her as devils.* But the word "ferouer" is not to be understood in this sense, for it means simply the reverse or the opposite side of some attribute or quality. Thus when the Occultist says that the "Demon is the lining of God" (evil, the reverse of the medal), he does not mean two separate

[[Footnote(s)]] -----

[[Footnote continued from previous page]] p. 602, for an illustration. Many are the Soulless men among us, for the occurrence is found to take place in wicked materialists as well as in persons "who advance in holiness and never turn back." (See *ibid* and also "Isis," vol. ii., p. 369.)

* This identity between the Spirit and its material "double" (in man it is the reverse) explains still better the confusion, alluded to already in this work, made in the names and individualities, as well as the numbers, of the Rishis and the Prajapatis; especially between those of the Satyayuga and the Mahabharatan period. It also throws additional light on what the Secret Doctrine teaches with regard to the Root and the Seed Manus (see Book ii. "On the primitive Manus of humanity"). Not only those progenitors of our mankind, but every human being, we are taught, has its prototype in the Spiritual Spheres; which prototype is the highest essence of his seventh principle. Thus the seven Manus become 14, the Root Manu being the Prime Cause, and the "Seed-Manu" its effect; and when the latter reach from Satyayuga (the first stage) to the heroic period, these Manus or Rishis become 21 in number.

[[Vol. 1, Page]] 236 THE SECRET DOCTRINE.

actualities, but the two aspects or facets of the same Unity. Now the best man living would appear, side by side with an Archangel -- as described in Theology -- a fiend. Hence a certain reason to depreciate a lower "double," immersed far deeper in matter than its original. But there is still as little cause to regard them as devils, and this is precisely what the Roman Catholics maintain against all reason and logic.

(b) The concluding sentence of this sloka shows how archaic is the belief and the doctrine that man is seven-fold in his constitution. The thread of being which animates man and passes through all his personalities, or rebirths on this Earth (an allusion to Sutratma), the thread on which moreover all his "Spirits" are strung -- is spun from the essence of the "threefold," the "fourfold" and the "fivefold"; which contain all the preceding. Panchasikha, agreeably to Bhagavata Purana (V. XX. 25-28), is one of the seven Kumaras who go to Sveta-Dvipa to worship Vishnu. We shall see further on, what connection there is between the "celibate" and chaste sons of Brahma, who refuse "to multiply," and terrestrial mortals. Meanwhile it is evident that "the Man-Plant," Saptaparna, thus refers to the seven principles, and man is compared to the seven-leaved plant of this name* so sacred among Buddhists.

For further details as to Saptaparna and the importance of the number seven in occultism, as well as in symbology, the reader is referred to Part II., Book II., on Symbolism: Sections on "Saptaparna," "The Septenary in the Vedas," etc. etc.

[[Footnote(s)]] -----

* The Egyptian allegory in the "Book of the Dead" already mentioned, the hymn that relates to the reward "of the Soul," is as suggestive of our Septenary Doctrine as it is poetical. The deceased is allotted a piece of land in the field of Aanroo, wherein the

Manes, the deified shades of the dead, glean, as the harvest they have sown by their actions in life, the corn seven cubits high, which grows in a territory divided into 14 and 7 portions. This corn is the food on which they live and prosper, or that will kill them, in Amenti, the realm of which the Aanroo field is a domain. For, as said in the hymn, (see chap. xxxii. 9) the deceased is either destroyed therein, or becomes pure spirit for the Eternity, in consequence of the "Seven times seventy-seven lives" passed or to be passed on Earth. The idea of the corn reaped as the "fruit of our actions" is very graphic.

[[Vol. 1, Page]] 237 THE IMMORTAL ROOT.

STANZA VII. -- Continued.

4. IT IS THE ROOT THAT NEVER DIES, THE THREE-TONGUED FLAME OF THE FOUR WICKS* (a) . . . THE WICKS ARE THE SPARKS, THAT DRAW FROM THE THREE-TONGUED FLAME (their upper triad) SHOT OUT BY THE SEVEN, THEIR FLAME; THE BEAMS AND SPARKS OF ONE MOON REFLECTED IN THE RUNNING WAVES OF ALL THE RIVERS OF THE EARTH ("Bhumi," or "Prithivi")** (b).

(a) The "Three-tongued flame" that never dies is the immortal spiritual triad -- the Atma-Buddhi and Manas -- the fruition of the latter assimilated by the first two after every terrestrial life. The "four wicks" that go out and are extinguished, are the four lower principles, including the body.

"I am the three-wicked Flame and my wicks are immortal," says the defunct. "I enter into the domain of Sekhem (the God whose arm sows the seed of action produced by the disembodied soul) and I enter the region of the Flames who have destroyed their adversaries," i.e., got rid of the sin-creating "four wicks." (See chap. i., vii., "Book of the Dead," and the "Mysteries of Ro-stan.")

(b) Just as milliards of bright sparks dance on the waters of an ocean above which one and the same moon is shining, so our evanescent personalities -- the illusive envelopes of the immortal MONAD-EGO -- twinkle and dance on the waves of Maya. They last and appear, as the thousands of sparks produced by the moon-beams, only so long as the Queen of the Night radiates her lustre on the running waters of life: the period of a Manvantara; and then they disappear, the beams -- symbols of our eternal Spiritual Egos -- alone surviving, re-merged in, and being, as they were before, one with the Mother-Source.

[[Footnote(s)]] -----

* The three-tongued flame of the four wicks corresponds to the four unities and the three Binaries of the Sephirothal tree (see Commentary on Stanza VI.).

** Useless to repeat again that the terms given here are Sanskrit translations; for the original terms, unknown and unheard of in Europe, would only puzzle the reader more, and serve no useful purpose.

[[Vol. 1, Page]] 238 THE SECRET DOCTRINE.

STANZA VII. -- Continued.

(5) THE SPARK HANGS FROM THE FLAME BY THE FINEST THREAD OF FOHAT. IT JOURNEYS THROUGH THE SEVEN WORLDS OF MAYA (a). IT STOPS IN THE FIRST (Kingdom), AND IS A METAL AND A STONE; IT PASSES INTO THE SECOND (Kingdom), AND BEHOLD -- A PLANT; THE PLANT WHIRLS THROUGH SEVEN FORMS AND BECOMES A SACRED ANIMAL; (the first shadow of the physical man) (b).

FROM THE COMBINED ATTRIBUTES OF THESE, MANU (man), THE THINKER, IS FORMED.

WHO FORMS HIM? THE SEVEN LIVES; AND THE ONE LIFE (c). WHO COMPLETES HIM? THE FIVEFOLD LHA. AND WHO PERFECTS THE LAST BODY? FISH, SIN, AND SOMA (the moon) (d).

(a) The phrase "through the seven Worlds of Maya" refers here to the seven globes of the planetary chain and the seven rounds, or the 49 stations of active existence that are before the "Spark" or Monad, at the beginning of every "Great Life-Cycle" or Manvantara. The "thread of Fohat" is the thread of life before referred to.

This relates to the greatest problem of philosophy -- the physical and substantial nature of life, the independent nature of which is denied by modern science because that science is unable to comprehend it. The reincarnationists and believers in Karma alone dimly perceive that the whole secret of Life is in the unbroken series of its manifestations: whether in, or apart from, the physical body. Because if --

"Life, like a dome of many-coloured glass,
Stains the white radiance of Eternity" --

yet it is itself part and parcel of that Eternity; for life alone can understand life.

What is that "Spark" which "hangs from the flame?" It is JIVA, the MONAD in conjunction with MANAS, or rather its aroma -- that which remains from each personality, when worthy, and hangs from Atma-Buddhi, the Flame, by the thread of life. In whatever way interpreted, and into whatever number of principles the human being is divided, it may easily be shown that this doctrine is supported by all the ancient

[[Vol. 1, Page]] 239 CHALDEAN METAPHYSICS.

religions, from the Vedic to the Egyptian, from the Zoroastrian to the Jewish. In the case of the last-mentioned, the Kabalistic works offer abundant proof of this statement. The entire system of the Kabalistic numerals is based on the divine septenary hanging from the Triad (thus forming the Decade) and its permutations 7, 5, 4, and 3, which, finally, all merge into the ONE itself: an endless and boundless Circle.

"The Deity (the ever Invisible Presence)," says the Zohar, "manifests itself through the ten Sephiroth which are its radiating witnesses. The Deity is like the Sea from which outflows a stream called WISDOM, the waters of which fall into a lake named Intelligence. From the basin, like seven channels, issue the Seven Sephiroth. . . . For ten equal seven: the Decade contains four Unities and three Binaries." The ten Sephiroth correspond to the limbs of MAN. "When I framed Adam Kadmon," the Elohim are made to say, "the Spirit of the Eternal shot out of his Body like a sheet of lightning that radiated at once on the billows of the Seven millions of skies, and my ten splendours were his limbs." But neither the Head nor the shoulders of Adam-Kadmon can be seen; therefore we read in the Sephra Dzenioutha (the "Book of the Concealed Mystery")--

"In the beginning of Time, after the Elohim (the "Sons of Light and Life," or the "Builders") had shaped out of the eternal Essence the Heavens and the Earth, they formed the worlds six by six, the seventh being Malkuth, which is our Earth (see Mantuan Codex) on its plane, and the lowest on all the other planes of conscious existence. The Chaldean Book of Numbers contains a detailed explanation of all this. "The first triad of the body of Adam Kadmon (the three upper planes of the seven") cannot be seen before the soul stands in the presence of the Ancient of Days." The Sephiroth of this upper triad are:-- "1, Kether (the Crown) represented by the brow of Macroprosopus; 2, Chochmah (Wisdom, a male Principle) by his right shoulder; and 3, Binah (Intelligence, a female Principle) by the left shoulder." Then come the seven limbs (or Sephiroth) on the planes of manifestation, the totality of these four planes being represented by Microprosopus (the

[[Footnote(s)]] -----

* The formation of the "living Soul" or man, would render the idea more clearly. "A Living Soul" is a synonym of man in the Bible. These are our seven "Principles."

[[Vol. 1, Page]] 240 THE SECRET DOCTRINE.

lesser Face) or Tetragrammaton, the "four-lettered" Mystery. "The seven manifested and the three concealed limbs are the Body of the Deity."

Thus our Earth, Malkuth, is both the Seventh and the Fourth world, the former when counting from the first globe above, the latter if reckoned by the planes. It is generated by the sixth globe or Sephiroth called Yezod, "foundation," or as said in the Book of Numbers "by Yezod, He (Adam Kadmon) fecundates the primitive Heva" (Eve or our Earth). Rendered in mystic language this is the explanation why Malkuth, called "the inferior Mother," Matrona, Queen, and the Kingdom of the Foundation, is shown as the Bride of Tetragrammaton or Microprosopus (the 2nd Logos) the Heavenly Man. When free from all impurity she will become united with the Spiritual Logos, i.e., in the 7th Race of the 7th Round -- after the regeneration, on the day of "SABBATH." For the "seventh day" has again an occult significance undreamt of by our theologians.

"When Matronitha, the Mother, is separated and brought face to face with the King, in the excellence of the Sabbath, all things become one body," says verse 746, in chapter xxii. of "Ha Idra Zuta Kadisha." "Becomes one body" means that all is reabsorbed once more into the one element, the spirits of men becoming Nirvanees and the elements of everything else becoming again what they were before -- protyle or undifferentiated substance. "Sabbath" means rest or Nirvana. It is not the seventh day after six days but a period the duration of which equals that of the seven "days" or any period made up of seven parts. Thus a pralaya is equal in duration to the manwantara, or a night of Brahma is equal to this "day." If the Christians will follow Jewish customs they ought to adopt the spirit and not the dead letter thereof: i.e., to work one week of seven days and rest seven days. That the word "Sabbath" had a mystic significance is shown in the contempt shown by Jesus for the Sabbath day, and by what is said in Luke xviii. 12. Sabbath is there taken for the whole week. (See Greek text where the week is called Sabbath. "I fast twice in the Sabbath.") Paul, an Initiate, knew it well when referring to the eternal rest and felicity in heaven, as Sabbath; "and their happiness will be eternal, for they will ever be (one) with the Lord and will enjoy an eternal Sabbath." (Hebrew iv. 2.)

[[Vol. 1, Page]] 241 THE TRUE AND THE FALSE KABALA.

The difference between the two systems, taking the Kabala as contained in the Chaldean Book of Numbers, not as misrepresented by its now disfigured copy, the Kabala of the Christian mystics --the Kabala and the archaic esoteric Vidya, is very small indeed, being confined to unimportant divergences of form and expression. Thus Eastern occultism refers to our earth as the fourth world, the lowest of the chain, above which run upward on both its sides the six globes, three on each side. The Zohar, on the other hand, calls the

earth the lower, or the Seventh, adding that upon the six depend all things which are in it, "Microprosopus." The "smaller face," smaller because manifested and finite, "is formed of six Sephiroth," says the same work. "Seven kings come and die in the thrice-destroyed world" -- (Malkuth our earth, destroyed after each of the three rounds which it has gone through). "And their reign (of the seven kings) will be broken up." (Book of Numbers, 1. viii., 3.) This relates to the Seven Races, five of which have already appeared, and two more have still to appear in this Round.

The Shinto allegorical accounts of Cosmogony and the origin of man in Japan hint at the same belief.

Captain C. Pfoundes studied for nearly nine years in the monasteries of Japan the religion underlying the various sects of the land. . . . "The Shinto idea of creation," he says, "is as follows: Out of chaos (Konton) the earth (in) was the sediment precipitated, and the Heavens (yo) the ethereal essences which ascended: Maa (jin) appeared between the two. The first man was called Kuni-to ko tatchi-no-mikoto, and five other names were given to him, and then the human race appeared, male and female. Isanagi and Isanami begat Tenshoko doijin, the first of the five gods of the Earth." These "gods" are simply our five races, Isanagi and Isanami being the two kinds of the "ancestors," the two preceding races which give birth to animal and to rational man.

It will be shown (Vol. II. Pt. II.) that the number seven, as well as the doctrine of the septenary constitution of man, was pre-eminent in all the secret systems. It plays as important a part in Western Kabala as in Eastern Occultism. Eliphas Levi calls the number seven "the key to the Mosaic creation and the symbols of every religion." He shows the Kabala following faithfully even the septenary division of man, as the diagram he gives in his "Clef des Grands Mysteres" is septenary. This

[[Vol. 1, Page]] 242 THE SECRET DOCTRINE.

may be seen at a glance on page 389, "Une prophetic et diverses pensees de Paracelse," however cleverly the correct thought is veiled. One needs also only to look at the diagram (Plate VII. in Mr. Mathers' Kabala) "the formation of the Soul"* from the same "Key of the Great Mysteries" by Levi to find the same, though with a different interpretation.

Thus it stands with both the Kabalistic and the Occult names attached:--

7 Neschanah [--] Pure Spirit [--] Atma
6 Ruach [--] Spiritual Soul [--] Buddhi
5 Nephesch [--] Plastic Mediator [--] Manas

N. B. -- Please remark that this triad is disconnected with the lower Quaternary, as it disconnects itself always after death.

THE UPPER TRIAD [--] The Immortal. E. Levi calls Nephesch what we name Manas, and vice versa.*

4 Samael [--] Seat of Passion & Animal Desires [--] Kama
3 Mikael [--] the Sun Principle [--] whence Life Prana
2 Image of man [--] Astral Body [--] or Linga Sarira
1 Image of the Creators [--] Physical Body [--] Sthula Sarira [--] Rupa

The lower Quaternary: the Transitory and the mortal.

Nephesch. -- The Breath of animal life in man -- the breath of life instinctual in the animal: and Manas is the 3rd Soul -- the human in its light side, -- animal, in its connection with Samael or Kama.

[[Footnote(s)]] -----

* Nephesch is the "breath of (animal) life" breathed into Adam, the man of dust; it is consequently the Vital Spark, the informing element. Without Manas, or what is miscalled in Levi's diagram Nephesch instead of Manas, "the reasoning Soul," or mind, Atma-Buddhi are irrational on this plane and cannot act. It is Buddhi which is the plastic mediator, not Manas, "the intelligent medium between the upper Triad and the lower Quaternary." But there are many such strange and curious transformations to be found in the Kabalistic works -- a convincing proof that its literature has become a sad jumble. We do not accept the classification except in this one particular, in order to show the points of agreement.

[[Vol. 1, Page]] 243 OCCULT AND KABALISTIC DOCTRINES.

We will now give in tabular form what the very cautious Eliphas Levi says in explanation of his diagram, and what the Esoteric Doctrine teaches -- and compare the two. Levi, too, makes a distinction between Kabalistic and Occult Pneumatics. (See "Histoire de la Magic," pp. 388, 389.)

[[first column]]

Says Eliphas Levi, the Kabalist:--

KABALISTIC PNEUMATICS.

1. The Soul (or EGO) is a clothed light; and this light is triple.
2. Neschamah -- "pure Spirit."
3. Ruach -- the Soul or Spirit.
4. Nephesch -- plastic mediator.**
5. The garment of the Soul is the rind (body) of the image (astral Soul).
6. The image is double, because it reflects the good as the bad.
7. Imago, body.

OCCULT PNEUMATICS.

As given by Eliphas Levi.

1. Nephesh is immortal because it renews its life by the destruction of forms.
[But Nephesh, the "breath of

[[first column continued on next page]]

[[second column]]

Say the Theosophists:--

ESOTERIC PNEUMATICS.

1. Ditto, for it is Atma-Buddhi-Manas.
2. Ditto.*
3. Spiritual Soul.
4. Mediator between Spirit and its Man, the Seat of Reason, the Mind, in man.
5. Correct.
6. Too uselessly apocalyptic. Why not say that the astral reflects the good as well as the bad man; man, who is ever tending to the upper triangle, or else disappears with the Quaternary.
7. Ditto, the earthly image.

OCCULT PNEUMATICS.

As given by the Occultists.

1. Manas is immortal, because after every new incarnation it adds to Atma-Buddhi something of itself, and

[[second column continued on next page]]

[[Footnote(s))] -----

* Eliphas Levi has, whether purposely or otherwise, confused the numbers: with us his No. 2 is No. 1. (Spirit); and by making of Nephesch both the plastic mediator and Life, he thus makes in reality only six principles, because he repeats the first two.

** Esotericism teaches the same. But Manas is not Nephesch; nor is the latter the astral, but the 4th principle, if also the 2nd prana, for Nephesch is the "breath of life" in man, as in beast or insect, of physical, material life, which has no spirituality in it.

[[Vol. 1, Page]] 244 THE SECRET DOCTRINE.

[[first column continued from previous page]]

life," is a misnomer and a useless puzzle to the student.]

2. Ruach progresses by the evolution of ideas (! ?).
3. Neschamah is progressive without oblivion and destruction.
4. The soul has three dwellings.
5. These dwellings are: the plane of the mortals: the Superior Eden; and the Inferior Eden.
6. The image (man) is a sphinx that offers the riddle of birth.
7. The fatal image (the astral) endows Nephesch with its aptitudes; but Ruach is able to substitute for this (vitiating) Nephesch the image

[[first column continued on next page]]

[[second column continued from previous page]]

thus, assimilating itself to the Monad, shares its immortality.

2. Buddhi becomes conscious by the accretions it gets from Manas after every new incarnation and the death of man.

3. Atma neither progresses, forgets, nor remembers. It does not belong to this plane: it is but the ray of light eternal which shines upon and through the darkness of matter -- when the latter is willing.

4. The Soul (collectively, as the upper Triad) lives on three planes, besides its fourth, the terrestrial sphere; and it exists eternally on the highest of the three.

5. These dwellings are: Earth for the physical man, or the animal Soul; Kama-loka (Hades, the Limbo) for the disembodied man, or his Shell; Devachan for the higher Triad.

6. Correct.

7. The astral through Kama (desire) is ever drawing Manas down into the sphere of material passions and desires. But if the better man

[[second column continued on next page]]

[[Vol. 1, Page]] 245 OCCULTISTS AND KABALISTS DIFFER.

[[first column continued from previous page]]

conquered in accordance with the inspirations of Neschamah.

[[second column continued from previous page]]

or Manas tries to escape the fatal attraction and turns its aspirations to Atma -- Spirit -- then Buddhi (Ruach) conquers, and carries Manas with it to the realm of eternal Spirit.

It is very evident that the French Kabalist either did not know sufficiently the real tenet, or distorted it to suit himself and his object. Thus he says again, treating upon the same subject, and we, Occultists, answer the late Kabalist and his admirers:--

[[first column]]

1. The body is the mould of Nephesch; Nephesch the mould of Ruach; Ruach the mould of the garments of Neschamah.

2. Light (the Soul) personifies in clothing itself (with a body); and personality endures only when the garment is perfect.

3. The angels aspire to become men; a perfect man, a man-god is above all the angels.

4. Every 14,000 years the soul rejuvenates and rests in the jubilean sleep of oblivion.

[[second column]]

1. The body follows the whims, good or bad, of Manas; Manas tries to follow the light of Buddhi, but often fails. Buddhi is the mould of the "garments" of Atma, because Atma is no body, or shape, or anything, and because Buddhi is its vehicle only figuratively.

2. The Monad becomes a personal ego when it incarnates; and something remains of that personality through Manas, when the latter is perfect enough to assimilate Buddhi. 3. Correct.

4. Within a period, "a great age" or a day of Brahrna, 14 Manus reign; after which comes Pralaya when all the Souls rest in Nirvana. (Souls = Egos).

[[Vol. 1, Page]] 246 THE SECRET DOCTRINE.

Such are the distorted copies of the esoteric doctrine in the Kabala. But see also "The Primeval Manus of Humanity" in Book II.

To return to Stanza VII.

(b) The well-known Kabalistic aphorism runs:-- "A stone becomes a plant; a plant, a beast; the beast, a man; a man a spirit; and the spirit a god." The "spark" animates all the kingdoms in turn before it enters into and informs divine man, between whom and his predecessor, animal man, there is all the difference in the world. Genesis begins its anthropology at the wrong end (evidently for a blind) and lands nowhere.* Had it begun as it ought, one would have found in it, first, the celestial Logos, the "Heavenly Man," which evolves as a Compound Unit of Logoi, out of whom after their pralayaic sleep -- a sleep that gathers the cyphers scattered on the Mayavic plane into One, as the separate globules of quicksilver on a plate blend into one mass -- the Logoi appear in their totality as the first "male and female" or Adam Kadmon, the "Fiat Lux" of the Bible, as we have already seen. But this transformation did not take place on our Earth, nor on any material plane, but in the Spacial Depths of the first differentiation of the eternal Root-matter. On

our nascent globe things proceed differently. The Monad or Jiva, as said in "Isis Unveiled," vol. i., p. 302, is, first of all, shot down by the law of Evolution into the lowest form of matter -- the mineral. After a sevenfold gyration encased in the stone (or that which will become mineral and stone in the Fourth Round), it creeps out of it, say, as a lichen. Passing thence, through all the forms of vegetable matter, into what is termed animal matter, it has now reached the point in which it has become the germ, so to speak, of the

[[Footnote(s)]] -----

* The introductory chapters of Genesis were never meant to represent even a remote allegory of the creation of our Earth. They embrace a metaphysical conception of some indefinite period in the eternity, when successive attempts were being made by the law of evolution at the formation of universes. The idea is plainly stated in the Zohar: "There were old worlds, which perished as soon as they came into existence, were formless, and were called Sparks. Thus, the smith, when hammering the iron, lets the sparks fly in all directions. The sparks are the primordial worlds, which could not continue because the Sacred Aged (Sephira) had not as yet assumed its form (of androgyne, or opposite sexes) of King and Queen (Sephira and Kadmon), and the Master was not yet at his work." See Zohar, "Idra Suta," Book iii., p. 292, b. The Supreme consulting with the Architect of the world -- his Logos -- about creation. ("Isis Unveiled," vol. ii., p. 421.)

[[Vol. 1, Page]] 247 SPIRIT ALONE IS HELPLESS ON EARTH.

animal, that will become the physical man. All this, up to the Third Round, is formless, as matter, and senseless, as consciousness. For the Monad or Jiva per se cannot be even called spirit: it is a ray, a breath of the ABSOLUTE, or the Absoluteness rather, and the Absolute Homogeneity, having no relations with the conditioned and relative finiteness, is unconscious on our plane. Therefore, besides the material which will be needed for its future human form, the monad requires (a) a spiritual model, or prototype, for that material to shape itself into; and (b) an intelligent consciousness to guide its evolution and progress, neither of which is possessed by the homogeneous monad, or by senseless though living matter. The Adam of dust requires the Soul of Life to be breathed into him: the two middle principles, which are the sentient life of the irrational animal and the Human Soul, for the former is irrational without the latter. It is only when, from a potential androgyne, man has become separated into male and female, that he will be endowed with this conscious, rational, individual Soul, (Manas) "the principle, or the intelligence, of the Elohim," to receive which, he has to eat of the fruit of Knowledge from the Tree of Good and Evil. How is he to obtain all this? The Occult doctrine teaches that while the monad is cycling on downward into matter, these very Elohim -- or Pitris, the lower Dhyana-Chohans -- are evolving pari passu with it on a higher and more spiritual plane, descending also relatively into matter on their own plane of consciousness, when, after having reached a certain point, they will meet the incarnating senseless monad, encased in the lowest matter, and blending the two potencies, Spirit and Matter, the union will produce that terrestrial symbol of the "Heavenly Man" in space -- PERFECT MAN. In the Sankhya philosophy, Purusha (spirit) is spoken of as something impotent unless he mounts on the shoulders of Prakriti (matter), which, left alone, is -- senseless. But in the secret philosophy they are viewed as graduated. Though one and the same thing in their origin, Spirit and Matter, when once they are on the plane of differentiation, begin each of them their evolutionary progress in contrary directions -- Spirit falling gradually into matter, and the latter ascending to its original condition, that of a pure spiritual substance. Both are inseparable, yet ever separated. In polarity, on the physical plane, two like poles will always repel each other, while the negative and the positive are mutually attracted, so do Spirit and Matter stand to each other -- the two poles of the same homogeneous substance, the root-principle of the universe.

[[Vol. 1, Page]] 248 THE SECRET DOCTRINE.

Therefore, when the hour strikes for Purusha to mount on Prakriti's shoulders for the formation of the Perfect Man -- rudimentary man of the first 2 1/2 Races being only the first, gradually evolving into the most perfect of mammals -- the Celestial "Ancestors" (Entities from preceding worlds, called in India the Sishta) step in on this our plane, as the Pitris had stepped in before them for the formation of the physical or animal-man, and incarnate in the latter. Thus the two processes -- for the two creations: the animal and the divine man -- differ greatly. The Pitris shoot out from their ethereal bodies, still more ethereal and shadowy similitudes of themselves, or what we should now call "doubles," or "astral forms," in their own likeness.* This furnishes the Monad with its first dwelling, and blind matter with a model around and upon which to build henceforth. But Man is still incomplete. From Swayambhuva Manu (in Manu, Book I.), from whom descended the seven primitive Manus or Prajapati, each of whom gave birth to a primitive race of men, down to the Codex Nazareus, in which Karabtanos or Fetahil (blind concupiscent matter) begets on his Mother, "Spiritus," seven figures, each of which stands as the progenitor of one of the primaeval seven races -- this doctrine has left its impress on every Archaic Scripture.

"Who forms Manu (the Man) and who forms his body? The LIFE and the LIVES. Sin** and the MOON." Here Manu stands for the spiritual, heavenly man, the real and non-dying EGO in us, which is the direct emanation of the "One Life" or the Absolute Deity. As to our outward physical bodies, the house of the tabernacle of the Soul, the Doctrine teaches a strange lesson; so strange that unless thoroughly explained and as rightly comprehended, it is only the exact Science of the future that is destined to vindicate the theory fully.

It has been stated before now that Occultism does not accept anything inorganic in the Kosmos. The expression employed by Science, "inorganic substance," means simply that the latent life slumbering in the molecules of so-called "inert matter" is incognizable. ALL IS LIFE, and every atom of even mineral dust is a LIFE, though beyond our comprehension and perception, because it is outside the range of the

[[Footnote(s)]] -----

* Read in Isis, vol. ii., pp. 297-303, the doctrine of the Codex Nazaraeus -- every tenet of our teaching is found there under a different form and allegory.

** The word "Sin" is curious, but has a particular Occult relation to the Moon, besides being its Chaldean equivalent.

[[Vol. 1, Page]] 249 MATTER, LIFE AND SUBSTANCE.

laws known to those who reject Occultism. "The very Atoms," says Tyndall, "seem instinct with a desire for life." Whence, then, we would ask, comes the tendency "to run into organic form"? Is it in any way explicable except according to the teachings of Occult Science?

"The worlds, to the profane," says a Commentary, "are built up of the known Elements. To the conception of an Arhat, these Elements are themselves collectively a divine Life; distributively, on the plane of manifestations, the numberless and countless crores of lives.* Fire alone is ONE, on the plane of the One

[[Footnote(s)]] -----

* Is Pasteur unconsciously taking the first step toward Occult Science in declaring that, if he dared express his full idea upon this subject, he would say that the Organic cells are endowed with a vital potency that does not cease its activity with the cessation of a current of Oxygen towards them, and does not, on that account, break off its relations with life itself, which is supported by the influence of that gas? "I would add," goes on Pasteur, "that the evolution of the germ is accomplished by means of complicated phenomena, among which we must class processes of fermentation"; and life, according to Claude Bernard and Pasteur, is nothing else than a process of fermentation. That there exist in Nature Beings or Lives that can live and thrive without air, even on our globe, was demonstrated by the same men of science. Pasteur found that many of the lower lives, such as Vibriones, and some microbes and bacteria, could exist without air, which, on the contrary, killed them. They derived the oxygen necessary for their multiplication from the various substances that surround them. He calls them AERobes, living on the tissues of our matter when the latter has ceased to form a part of an integral and living whole (then called very unscientifically by science "dead matter"), and Anaerobes. The one kind binds oxygen, and contributes vastly to the destruction of animal life and vegetable tissues, furnishing to the atmosphere materials which enter later on into the constitution of other organisms; the other destroys, or rather annihilates finally, the so-called organic substance; ultimate decay being impossible without their participation. Certain germ-cells, such as those of yeast, develop and multiply in air, but when deprived of it, they will adapt themselves to life without air and become ferments, absorbing oxygen from substances coming in contact with them, and thereby ruining the latter. The cells in fruit, when lacking free oxygen, act as ferments and stimulate fermentation. "Therefore the vegetable cell manifests in this case its life as an anaerobic being. Why, then, should an organic cell form in this case an exception"? asks Professor Bogolubof. Pasteur shows that in the substance of our tissues and organs, the cell, not finding sufficient oxygen for itself, stimulates fermentation in the same way as the fruit-cell, and Claude Bernard thought that Pasteur's idea of the formation of ferments found its application and corroboration in the fact that Urea increases in the blood during strangulation: LIFE therefore is everywhere in the Universe, and, Occultism teaches us, it is also in the atom. Also see infra, at the close of this Section.

[[Vol. 1, Page]] 250 THE SECRET DOCTRINE.

Reality: on that of manifested, hence illusive, being, its particles are fiery lives which live and have their being at the expense of every other life that they consume. Therefore they are named the "DEVOURERS." . . . "Every visible thing in this Universe was built by such LIVES, front conscious and divine primordial man down to the unconscious agents that construct matter." . . . "From the ONE LIFE formless and Uncreate, proceeds the Universe of lives. First was manifested from the Deep (Chaos) cold luminous fire (gaseous light?) which formed the curds in Space." (Irresolvable nebulae, perhaps?). . . . " . . . These fought, and a great heat was developed by the encountering and collision, which produced rotation. Then came the first manifested MATERIAL, Fire, the hot flames, the wanderers in heaven (comets); heat generates moist vapour; that forms solid water (?); then dry mist, then liquid mist, watery, that puts out the luminous brightness of the pilgrims (comets?) and forms solid watery wheels (MATTER globes). Bhumi (the Earth) appears with six sisters.* These produce by their continuous motion the inferior fire, heat, and an aqueous mist, which yields the third World-Element -- WATER; and from the breath of all (atmospheric) AIR is born. These four are the four lives of the first four periods (Rounds) of Manvantara. The three last will follow."

This means that every new Round develops one of the Compound Elements, as now known to Science, -- which rejects the primitive nomenclature, preferring to subdivide them into constituents. If Nature is the "Ever-becoming" on the manifested plane, then those Elements are to be regarded in the same light: they have to evolve, progress, and increase to the Manvantaric end. Thus the First Round, we are taught, developed but one Element, and a nature and humanity in what may be called one aspect of Nature -- called by some, very unscientifically, though it may be so de facto, "One-dimensional Space."

[[Footnote(s)]] -----

* It is a Vedic teaching that "there are three Earths corresponding to three Heavens, and our Earth (the fourth) is called Bhumi." This is the explanation given by our exoteric Western Orientalists. But the esoteric meaning and allusion to it in the Vedas is that it refers to our planetary chain, three "Earths" on the descending arc, and three "heavens" which are the three Earths or globes also, only far more ethereal, on the ascending or spiritual arc: by the first three we descend into matter, by the other three we ascend into Spirit; the

lower one, Bhumi, our Earth, forming the turning point, so to say, and containing potentially as much of Spirit as it does of Matter. We shall treat of this hereafter.

[[Vol. 1, Page]] 251 THE FOUR DIMENSIONS OF SPACE.

The Second Round brought forth and developed two Elements -- Fire and Earth -- and its humanity, adapted to this condition of Nature, if we can give the name Humanity to beings living under conditions unknown to men, was -- to use again a familiar phrase in a strictly figurative sense (the only way in which it can be used correctly) -- "a two-dimensional species." The processes of natural development which we are now considering will at once elucidate and discredit the fashion of speculating on the attributes of the two, three, and four or more "dimensional Space;" but in passing, it is worth while to point out the real significance of the sound but incomplete intuition that has prompted -- among Spiritualists and Theosophists, and several great men of Science, for the matter of that* -- the use of the modern expression, "the fourth dimension of Space." To begin with, of course, the superficial absurdity of assuming that Space itself is measurable in any direction is of little consequence. The familiar phrase can only be an abbreviation of the fuller form -- the "Fourth dimension of MATTER in Space."** But it is an unhappy phrase even thus expanded, because while it is perfectly true that the progress of evolution may be destined to introduce us to new characteristics of matter, those with which we are already familiar are really more numerous than the three dimensions. The faculties, or what is perhaps the best available term, the characteristics of matter, must clearly bear a direct relation always to the senses of man. Matter has extension, colour, motion (molecular motion), taste, and smell, corresponding to the existing senses of man, and by the time that it fully develops the next characteristic -- let us call it for the moment PERMEABILITY -- this will correspond to the next sense of man -- let us call it "NORMAL CLAIRVOYANCE;" thus, when some bold thinkers have been thirsting for a fourth dimension to explain the passage of matter through matter, and the production of knots upon an endless cord, what they were really in want of, was a sixth characteristic of matter. The three dimensions belong really but to one attribute or characteristic of matter -- extension; and

[[Footnote(s)]] -----

* Professor Zollner's theory has been more than welcomed by several Scientists --who are Spiritualists -- Professors Butlerof and Wagner, of St. Petersburg, for instance.

** "The giving reality to abstractions is the error of Realism. Space and Time are frequently viewed as separated from all the concrete experiences of the mind, instead of being generalizations of these in certain aspects." (Bain, Logic, Part II., p. 389.)

[[Vol. 1, Page]] 252 THE SECRET DOCTRINE.

popular common sense justly rebels against the idea that under any condition of things there can be more than three of such dimensions as length, breadth, and thickness. These terms, and the term "dimension" itself, all belong to one plane of thought, to one stage of evolution, to one characteristic of matter. So long as there are foot-rules within the resources of Kosmos, to apply to matter, so long will they be able to measure it three ways and no more; and from the time the idea of measurement first occupied a place in the human understanding, it has been possible to apply measurement in three directions and no more. But these considerations do not militate in any way against the certainty that in the progress of time -- as the faculties of humanity are multiplied -- so will the characteristics of matter be multiplied also. Meanwhile, the expression is far more incorrect than even the familiar one of the "Sun rising or setting."

We now return to the consideration of material evolution through the Rounds. Matter in the second Round, it has been stated, may be figuratively referred to as two-dimensional. But here another caveat must be entered. That loose and figurative expression may be regarded -- in one plane of thought, as we have just seen -- as equivalent to the second characteristic of matter corresponding to the second perceptive faculty or sense of man. But these two linked scales of evolution are concerned with the processes going on within the limits of a single Round. The succession of primary aspects of Nature with which the succession of Rounds is concerned, has to do, as already indicated, with the development of the "Elements" (in the Occult sense) -- Fire, Air, Water,* Earth. We are only in the fourth Round, and our catalogue so far stops short. The centres of consciousness (destined to develop into humanity as we know it) of the third Round arrived at a perception of the third Element Water.** Those of the fourth Round have added

[[Footnote(s)]] -----

* The order in which these Elements are placed above is the correct one for esoteric purposes and in the Secret Teachings. Milton was right when he spoke of the "Powers of Fire, Air, Water, Earth"; the Earth, such as we know it now, had no existence before the 4th Round, hundreds of million years ago, the commencement of our geological Earth. The globe was "fiery, cool and radiant as its ethereal men and animals during the first Round," says the Commentary, uttering a contradiction or paradox in the opinion of our present Science; "luminous and more dense and heavy during the second Round; watery during the Third!" Thus are the elements reversed.

** If we had to frame our conclusions according to the data furnished to us by the [[Footnote continued on next page]]

[[Vol. 1, Page]] 253 THE GREAT ARCHAEUS.

earth as a state of matter to their stock as well as the three other elements in their present transformation. In short, none of the so-called elements were, in the three preceding Rounds, as they are now. For all we know, FIRE may have been pure AKASA, the first Matter of the Magnum Opus of the Creators and "Builders," that Astral Light which the paradoxical Eliphas Levi calls in one breath "the body of the Holy Ghost," and in the next "Baphomet," the "Androgyne Goat of Mendes"; AIR, simply

[[Footnote(s)]] -----

[[Footnote continued from previous page]] geologists, then we would say that there was no real water -- even during the Carboniferous period. We are told that gigantic masses of carbon, which existed formerly spread in the atmosphere as Carbonic Acid, were absorbed by plants, while a large proportion of that gas was mixed in the water. Now, if this be so, and we have to believe that all the Carbonic Acid which went to compose those plants that formed bituminous coal, lignite, etc., and went towards the formation of limestone, and so on, that all this was at that period in the atmosphere in gaseous form, then, there must have been seas and oceans of liquid carbonic acid? But how then could the carboniferous period be preceded by the Devonian and Silurian ages -- those of Fishes and Molluscs -- on that assumption? Barometric pressure, moreover, must have exceeded several hundred times the pressure of our present atmosphere. How could organisms, even so simple as those of certain fishes and molluscs, stand that? There is a curious work by Blanchard, on the Origin of Life, wherein he shows some strange contradictions and confusions in the theories of his colleagues, and which we recommend to the reader's attention.

* Eliphas Levi shows it very truly "a force in Nature," by means of which "a single man who can master it . . . might throw the world into confusion and transform its face"; for it is the "great Arcanum of transcendent Magic." Quoting the words of the great Western Kabbalist in their translated form (see *The Mysteries of Magic*, by A. E. Waite), we may explain them perhaps the better by the occasional addition of a word or two to show the difference between Western and Eastern explanations of the same subject. The Author says of the great Magic Agent -- "This ambient and all-penetrating fluid, this ray detached from the (Central or 'Spiritual') Sun's splendour . . . fixed by the weight of the atmosphere (!) and the power of central attraction . . . the Astral Light, this electromagnetic ether, this vital and luminous caloric, is represented on ancient monuments by the girdle of Isis which twines round two poles and in ancient theogonies by the serpent devouring its own tail, emblem of prudence and of Saturn" -- emblem of infinity, immortality, and Kronos -- "Time" -- not the god Saturn or the planet. "It is the winged dragon of Medea, the double serpent of the caduceus, and the tempter of Genesis; but it is also the brazen snake of Moses encircling the Tau lastly, it is the devil of exoteric dogmatism, and is really the blind force (it is not blind, and Levi knew it), which souls must conquer in order to detach themselves from the chains of Earth; 'for if they should not,' they will be absorbed by the same power which first produced them and will return to the central and eternal fire." This great archæus is now discovered by, and only for one man -- Mr. J. W. Keeley, of [[Footnote continued on next page]]

[[Vol. 1, Page]] 254 THE SECRET DOCTRINE.

Nitrogen, "the breath of the Supporters of the Heavenly Dome," as the Mohammedan mystics call it; WATER, that primordial fluid which was required, according to Moses, to make a living soul with. And this may account for the flagrant discrepancies and unscientific statements found in Genesis. Separate the first from the second chapter; read the former as a scripture of the Elohist, and the latter as that of the far younger Jehovist; still one finds, if one reads between the lines, the same order in which things created appear -- namely, Fire (light), Air, Water, and MAN (or the Earth). For the sentence: "In the beginning God created Heaven and Earth" is a mistranslation; it is not "Heaven and Earth," but the duplex or dual Heaven, the upper and the lower Heavens, or the separation of primordial substance that was light in its upper and dark in its lower portions -- or the manifested Universe -- in its duality of the invisible (to the senses) and the visible to our perceptions. God divided the light from the Darkness (v. 4); and then made the firmament, air (5), "a firmament in the midst of the waters, and let it divide the waters from the waters," (6), i.e., "the waters which were under the firmament (our manifested visible Universe) from the waters above the firmament," or the (to us) invisible planes of being. In the second chapter (the Jehovistic), plants and herbs are created before water, just as in the first, light is produced before the Sun. "God made the Earth and the Heavens and every plant of the field before it was in the Earth and every herb of the field before it grew; for the Elohim ('gods') had not caused it to rain upon the earth, etc." (v. 5) -- an absurdity unless the esoteric explanation is accepted. The plants were created before they were in the earth -- for there was no earth then such as it is now; and the herb of the field was in existence before it grew as it does now in the fourth Round.

Discussing and explaining the nature of the invisible Elements and the "primordial fire" mentioned above, Eliphas Levi calls it invariably the "Astral Light." It is the "grand Agent Magique" with him; undeniably it is so, but -- only so far as Black Magic is concerned, and

[[Footnote(s)]] -----

[[Footnote continued from previous page]] Philadelphia. For others, however, it is discovered, yet must remain almost useless. "So far shalt thou go. . . ."

All the above is as practical as it is correct, save one error, which we will explain in the text further on. Eliphas Levi commits a great blunder in always identifying the Astral Light with what we call Akasa. What it really is will be given in Part II. of Vol. II.

[[Vol. 1, Page]] 255 BUT WHY SLANDER THE INDIAN HIEROPHANTS?

on the lowest planes of what we call Ether, the noumenon of which is Akasa; and even this would be held incorrect by orthodox Occultists. The "Astral Light" is simply the older "sidereal Light" of Paracelsus; and to say that "everything which exists has been

evolved from it, and it preserves and reproduces all forms," as he writes, is to enunciate truth only in the second proposition. The first is erroneous; for if all that exists was evolved through (or via) it, it is not the astral light. The latter is not the container of all things but only the reflector, at best, of this all. Eliphas Levi writes:--

"The great Magic agent is the fourth emanation of the life principle (we say -- it is the first in the inner, and the second in the outer (our) Universe), of which the Sun is the third form . . . for the day-star (the sun) is only the reflection and material shadow of the Central Sun of truth, which illuminates the intellectual (invisible) world of Spirit and which itself is but a gleam borrowed from the ABSOLUTE."

So far he is right enough. But when the great authority of the Western Kabalists adds that nevertheless, "it is not the immortal Spirit as the Indian Hierophants have imagined" -- we answer that he slanders the said Hierophants, as they have said nothing of the kind; while even the Puranic exoteric writings flatly contradict the assertion. No Hindu has ever mistaken Prakriti -- the Astral Light being only above the lowest plane of Prakriti, the material Kosmos -- for the "immortal Spirit." Prakriti is ever called Maya, illusion, and is doomed to disappear with the rest, the gods included, at the hour of the Pralaya; for it is shown that Akasa is not even the Ether, least of all then, we imagine, can it be the Astral Light. Those unable to penetrate beyond the dead letter of the Puranas, have occasionally confused Akasa with Prakriti, with Ether, and even with the visible Sky! It is true also that those who have invariably translated the term Akasa by "Ether" (Wilson, for instance), finding it called "the material cause of sound" possessing, moreover, this one single property (Vishnu Purana), have ignorantly imagined it to be "material," in the physical sense. True, again, that if the characteristics are accepted literally, then, since nothing material or physical, and therefore conditioned and temporary can be immortal -- according to metaphysics and philosophy -- it would follow that Akasa is neither infinite nor immortal. But all this is erroneous, since both the words Pradhana

[[Vol. 1, Page]] 256 THE SECRET DOCTRINE.

(primeval matter) and sound, as a property, have been misunderstood; the former term (Pradhana) being certainly synonymous with Mulaprakriti and Akasa, and the latter (sound) with the Verbum, the Word or the Logos. This is easy to demonstrate; for it is shown in the following sentences in Vishnu Purana: "In the beginning there was neither day nor night, nor sky, nor earth, nor darkness, nor light. . . . Save only ONE, unapprehensible by intellect, or that which is Brahma and Pums (Spirit) and Pradhana (primordial matter)." . . . (Book I., ch. ii.).

Now, what is Pradhana, if it is not Mulaprakriti, the root of all, in another aspect? For Pradhana, though said further on to merge into the Deity as everything else does, in order to leave the ONE absolute during the Pralaya, yet is held as infinite and immortal. The Commentator describes the Deity as: "One Pradhanika Brahma Spirit: THAT, was," and interprets the compound term as a substantive, not as a derivative word used attributively, i.e., like something conjoined with Pradhana.* Hence Pradhana even in the Puranas is an aspect of Parabrahmam, not an evolution, and must be the same as the Vedantic Mulaprakriti. "Prakriti in its primary state is Akasa," says a Vedantin scholar (see "Five Years of Theosophy," p. 169). It is almost abstract Nature.

Akasa, then, is Pradhana in another form, and as such cannot be Ether, the ever-invisible agent, courted even by physical Science. Nor is it Astral Light. It is, as said, the noumenon of the seven-fold differentiated Prakriti** -- the ever immaculate "Mother" of the fatherless Son, who becomes "Father" on the lower manifested plane. For MAHAT is the first product of Pradhana, or Akasa, and Mahat -- Universal intelligence "whose characteristic property is Buddhi" -- is no other than the Logos, for he is called "Eswara" Brahma, Bhava, etc. (See Linga Purana, sec. lxx. 12 et seq.; and Vayu Purana, but especially the former Purana -- prior, section viii., 67-74). He is, in short, the "Creator" or the divine mind in creative operation, "the cause of all things." He is

[[Footnote(s)]] -----

* The student has to note, moreover, that the Purana is a dualistic system, not evolutionary, and that, in this respect, far more will be found, from an esoteric standpoint, in Sankhya, and even in the Manava-dharma-Sastra, however much the latter differs from the former.

** In the Sankhya philosophy, the seven Prakritis or "productive productions" are Mahat, Ahamkara, and the five tanmatras. See "Sankhya-karika," III., and the Commentary thereon.

[[Vol. 1, Page]] 257 AKASA IS NOT ETHER.

the "first-born" of whom the Puranas tell us that "Mahat and matter are the inner and outer boundaries of the Universe," or, in our language, the negative and the positive poles of dual nature (abstract and concrete), for the Purana adds: "In this manner -- as were the seven forms (principles) of Prakriti reckoned from Mahat to Earth -- so at the time of pralaya (pratyahara) these seven successively re-enter into each other. The egg of Brahma (Sarva-mandala) is dissolved with its seven zones (dwipa), seven oceans, seven regions, etc." (Vishnu Purana, Book vi., ch. iv.)*

These are the reasons why the Occultists refuse to give the name of Astral Light to Akasa, or to call it Ether. "In my Father's house are many mansions," may be contrasted with the occult saying, "In our Mother's house there are seven mansions," or planes, the lowest of which is above and around us -- the Astral Light.

The elements, whether simple or compound, could not have remained the same since the commencement of the evolution of our chain. Everything in the Universe progresses steadily in the Great Cycle, while incessantly going up and down in the smaller cycles. Nature is never stationary during manvantara, as it is ever becoming,** not simply being; and mineral, vegetable, and human life are always adapting their organisms to the then reigning Elements, and therefore those Elements were then fitted for them, as they are now for the life of present humanity. It will only be in the next, or fifth, Round that the fifth Element, Ether -- the gross body of Akasa, if it can be called even that --

[[Footnote(s)]] -----

* No use to say so to the Hindus, who know their Puranas by heart, but very useful to remind our Orientalists and those Westerners who regard Wilson's translations as authoritative, that in his English translation of the Vishnu Purana he is guilty of the most ludicrous contradictions and errors. So on this identical subject of the seven Prakritis or the seven zones of Brahma's egg, the two accounts differ totally. In Vol. 1, page 40, the egg is said to be externally invested by seven envelopes -- Wilson comments: "by Water, Air, Fire, Ether, and Ahankara" (which last word does not exist in the Sanskrit texts); and in vol. v., p. 198, of the same Vishnu Purana it is written, "in this manner were the seven forms of nature (Prakriti) reckoned from Mahat to Earth" (?). Between Mahat or Maha-Buddhi and "Water, etc.," the difference is very considerable.

** According to the great metaphysician Hegel also. For him Nature was a perpetual becoming. A purely esoteric conception. Creation or Origin, in the Christian sense of the term, is absolutely unthinkable. As the above-quoted thinker said: "God (the Universal Spirit) objectivises himself as Nature, and again rises out of it."

[[Vol. 1, Page]] 258 THE SECRET DOCTRINE.

will, by becoming a familiar fact of Nature to all men, as air is familiar to us now, cease to be as at present hypothetical, and also an "agent" for so many things. And only during that Round will those higher senses, the growth and development of which Akasa subserves, be susceptible of a complete expansion. As already indicated, a partial familiarity with the characteristic of matter -- permeability -- which should be developed concurrently with the sixth sense, may be expected to develop at the proper period in this Round. But with the next element added to our resources in the next Round, permeability will become so manifest a characteristic of matter, that the densest forms of this will seem to man's perceptions as obstructive to him as a thick fog, and no more.

Let us return to the life-cycle now. Without entering at length upon the description given of the higher LIVES, we must direct our attention at present simply to the earthly beings and the earth itself. The latter, we are told, is built up for the first Round by the "Devourers" which disintegrate and differentiate the germs of other lives in the Elements; pretty much, it must be supposed, as in the present stage of the world, the aerobes do, when, undermining and loosening the chemical structure in an organism, they transform animal matter and generate substances that vary in their constitutions. Thus Occultism disposes of the so-called Azoic age of Science, for it shows that there never was a time when the Earth was without life upon it. Wherever there is an atom of matter, a particle or a molecule, even in its most gaseous condition, there is life in it, however latent and unconscious. "Whatsoever quits the Laya State, becomes active life; it is drawn into the vortex of MOTION (the alchemical solvent of Life); Spirit and Matter are the two States of the ONE, which is neither Spirit nor Matter, both being the absolute life, latent." (Book of Dzyan, Comm. III., par. 18). . . . "Spirit is the first differentiation of (and in) SPACE; and Matter the first differentiation of Spirit. That, which is neither Spirit nor matter -- that is IT -- the Causeless CAUSE of Spirit and Matter, which are the Cause of Kosmos. And THAT we call the ONE LIFE or the Intra-Cosmic Breath."

Once more we will say -- like must produce like. Absolute Life cannot produce an inorganic atom whether single or complex, and there is life

[[Vol. 1, Page]] 259 ATOMS ARE INVISIBLE LIVES.

even in laya just as a man in a profound cataleptic state -- to all appearance a corpse -- is still a living being.

When the "Devourers" (in whom the men of science are invited to see, with some show of reason, atoms of the Fire-Mist, if they will, as the Occultist will offer no objection to this); when the "Devourers," we say, have differentiated "the fire-atoms" by a peculiar process of segmentation, the latter become life-germs, which aggregate according to the laws of cohesion and affinity. Then the life-germs produce lives of another kind, which work on the structure of our globes. * * * *

Thus, in the first Round, the globe, having been built by the primitive fire-lives, i.e., formed into a sphere -- had no solidity, nor qualifications, save a cold brightness, nor form nor colour; it is only towards the end of the First Round that it developed one Element which from its inorganic, so to say, or simple Essence became now in our Round the fire we know throughout the system. The Earth was in her first rupa, the essence of which is the Akasic principle named *** "that which is now known as, and very erroneously termed, Astral Light, which Eliphas Levi calls "the imagination of Nature,"*** probably to avoid giving it its correct name, as others do.

"It is through and from the radiations of the seven bodies of the seven orders of Dhyanis, that the seven discrete quantities (Elements), whose motion and harmonious Union produce the manifested Universe of Matter, are born." (Commentary.)

[[Footnote(s)]] -----

** Speaking of it in his Preface to the "History of Magic" Eliphas Levi says: "It is through this Force that all the nervous centres secretly communicate with each other; from it -- that sympathy and antipathy are born; from it -- that we have our dreams; and that the phenomena of second sight and extra-natural visions take place. . . . Astral Light, acting under the impulsion of powerful wills, destroys, coagulates, separates, breaks, gathers in all things. . . . God created it on that day when he said: Fiat Lux, and it is directed by the Egregores, i.e., the chiefs of the souls who are the spirits of energy and action." Eliphas Levi ought to have added that the astral light, or primordial substance, if matter at all, is that which, called Light, LUX, esoterically explained, is the body of those Spirits themselves, and their very essence. Our physical light is the manifestation on our plane and the reflected radiance of the Divine Light emanating from the collective body of those who are called the "LIGHTS" and the "FLAMES." But no other Kabalist has ever had the talent of heaping up one contradiction on the other, of making one paradox chase another in the same sentence and in such flowing language, as Eliphas Levi. He leads his reader through the most lovely, gorgeously blooming valleys, to strand him after all on a desert and barren rocky island.

[[Vol. 1, Page]] 260 THE SECRET DOCTRINE.

The Second Round brings into manifestation the second element AIR, that element, the purity of which would ensure continuous life to him who would use it. There have been two occultists only in Europe who have discovered and even partially applied it in practice, though its composition has always been known among the highest Eastern Initiates. The ozone of the modern chemists is poison compared with the real universal solvent which could never be thought of unless it existed in nature. "From the second Round, Earth -- hitherto a foetus in the matrix of Space -- began its real existence: it had developed individual sentient life, its second principle. The second corresponds to the sixth (principle); the second is life continuous, the other, temporary."

The Third Round developed the third Principle -- WATER; while the Fourth transformed the gaseous fluids and plastic form of our globe into the hard, crusted, grossly material sphere we are living on. "Bhumi" has reached her fourth principle. To this it may be objected that the law of analogy, so much insisted upon, is broken. Not at all. Earth will reach her true ultimate form -- (inversely in this to man) -- her body shell -- only toward the end of the manvantara after the Seventh Round. Eugenius Philalethes was right when he assured his readers on his word of honour that no one had yet seen the Earth (i.e., MATTER in its essential form). Our globe is, so far, in its Kamarupic state -- the astral body of desires of Ahamkara, dark Egotism, the progeny of Mahat, on the lower plane. . . .

It is not molecularly constituted matter -- least of all the human body (sthulasarira) -- that is the grossest of all our "principles," but verily the middle principle, the real animal centre; whereas our body is but its shell, the irresponsible factor and medium through which the beast in us acts all its life. Every intellectual theosophist will understand my real meaning. Thus the idea that the human tabernacle is built by countless lives, just in the same way as the rocky crust of our Earth was, has nothing repulsive in it for the true mystic. Nor can Science oppose the occult teaching, for it is not because the microscope will ever fail to detect the ultimate living atom or life, that it can reject the doctrine.

(c) Science teaches us that the living as well as the dead organism of both man and animal are swarming with bacteria of a hundred various

[[Vol. 1, Page]] 261 THE OCCULT CHEMISTRY.

kinds; that from without we are threatened with the invasion of microbes with every breath we draw, and from within by leucomaines, aerobes, anaerobes, and what not. But Science never yet went so far as to assert with the occult doctrine that our bodies, as well as those of animals, plants, and stones, are themselves altogether built up of such beings; which, except larger species, no microscope can detect. So far, as regards the purely animal and material portion of man, Science is on its way to discoveries that will go far towards corroborating this theory. Chemistry and physiology are the two great magicians of the future, who are destined to open the eyes of mankind to the great physical truths. With every day, the identity between the animal and physical man, between the plant and man, and even between the reptile and its nest, the rock, and man -- is more and more clearly shown. The physical and chemical constituents of all being found to be identical, chemical science may well say that there is no difference between the matter which composes the ox and that which forms man. But the Occult doctrine is far more explicit. It says:--- Not only the chemical compounds are the same, but the same infinitesimal invisible lives compose the atoms of the bodies of the mountain and the daisy, of man and the ant, of the elephant, and of the tree which shelters him from the sun. Each particle -- whether you call it organic or inorganic -- is a life. Every atom and molecule in the Universe is both life-giving and death-giving to that form, inasmuch as it builds by aggregation universes and the ephemeral vehicles ready to receive the transmigrating soul, and as eternally destroys and changes the forms and expels those souls from their temporary abodes. It creates and kills; it is self-generating and self-destroying; it brings into being, and annihilates, that mystery of mysteries -- the living body of man, animal, or plant, every second in time and space; and it generates equally life and death, beauty and ugliness, good and bad, and even the agreeable and disagreeable, the beneficent and maleficent sensations. It is that mysterious LIFE, represented collectively by countless myriads of lives, that follows in its own sporadic way, the hitherto incomprehensible law of Atavism; that copies family resemblances as well as those it finds impressed in the aura of the generators of every future human being, a mystery, in short, that will receive fuller attention elsewhere. For the present, one instance may be cited in illustration. Modern science begins to find out that ptomaine (the alkaloid poison generated by decaying matter and corpses -- a life also) extracted

[[Vol. 1, Page]] 262 THE SECRET DOCTRINE.

with the help of volatile ether, yields a smell as strong and equal to that of the freshest orange-blossoms; but that free from oxygen, these alkaloids yield either a most sickening, disgusting smell, or the most agreeable aroma which recalls that of the most delicately scented flowers. And it is suspected that such blossoms owe their agreeable smell to the poisonous ptomaine; the venomous essence of certain mushrooms (fungi) being nearly identical with the venom of the cobra of India, the most deadly of serpents.* Thus, having discovered the effects, Science has to find their PRIMARY CAUSES; and this it can never do without the help of the old sciences, of alchemy, occult botany and physics. We are taught that every physiological change, in addition to pathological phenomena; diseases -- nay, life itself -- or rather the objective phenomena of life, produced by certain conditions and changes in the tissues of the body which allow and force life to act in that body; that all this is due to those unseen CREATORS and DESTROYERS that are called in such a loose and general way, microbes.** Such

[[Footnote(s)]] -----

* The French savants Arnaud, Gautier, and Villiers, have found in the saliva of living men the same venomous alkaloid as in that of the toad, the salamander, the cobra, and the trigonocephalus of Portugal. It is proven that venom of the deadliest kind, whether called ptomaine, or leucomaine, or alkaloid, is generated by living men, animals, and plants. The same savant, Gautier, discovered an alkaloid in the fresh meat of an ox and in its brains, and a venom which he calls Xanthocreatinine similar to the substance extracted from the poisonous saliva of reptiles. It is the muscular tissues, as being the most active organ in the animal economy, that are suspected of being the generators or factors of venoms, having the same importance as carbonic acid and urea in the functions of life, which venoms are the ultimate products of inner combustion. And though it is not yet fully determined whether poisons can be generated by the animal system of living beings without the participation and interference of microbes, it is ascertained that the animal does produce venomous substances in its physiological or living state.

** It might be supposed that these "fiery lives" and the microbes of science are identical. This is not true. The "fiery lives" are the seventh and highest subdivision of the plane of matter, and correspond in the individual with the One Life of the Universe, though only on that plane. The microbes of science are the first and lowest sub-division on the second plane -- that of material prana (or life). The physical body of man undergoes a complete change of structure every seven years, and its destruction and preservation are due to the alternate function of the fiery lives as "destroyers" and "builders." They are "builders" by sacrificing themselves in the form of vitality to restrain the destructive influence of the microbes, and, by supplying the microbes with what is necessary, they compel them under that restraint to build up the material body and its cells. They are "destroyers" also when that restraint is [[Footnote continued on next page]]

[[Vol. 1, Page]] 263 PARACELSUS DIED TOO EARLY.

experimenters as Pasteur are the best friends and helpers of the Destroyers and the worst enemies of the Creators -- if the latter were not at the same time destroyers too. However it may be, one thing is sure in this: The knowledge of these primary causes and of the ultimate essence of every element, of its lives, their functions, properties, and conditions of change -- constitutes the basis of MAGIC. Paracelsus was, perhaps, the only Occultist in Europe, during the last centuries since the Christian era, who was versed in this mystery. Had not a criminal hand put an end to his life, years before the time allotted him by Nature, physiological Magic would have fewer secrets for the civilized world than it now has.

(d) But what has the Moon to do in all this? we may be asked. What have "Fish, Sin and Moon" in the apocalyptic saying of the Stanza to do in company with the "Life-microbes"? With the latter nothing, except availing themselves of the tabernacle of clay prepared by them; with divine perfect man everything, since "Fish, Sin and Moon" make conjointly the three symbols of the immortal Being.

This is all that can be given. Nor does the writer pretend to know more of this strange symbol than may be inferred about it from exoteric religions; from the mystery perhaps, which underlies the Matsya (fish)

[[Footnote(s)]] -----

[[Footnote continued from previous page]] removed and the microbes, unsupplied with vital constructive energy, are left to run riot as destructive agents. Thus, during the first half of a man's life (the first five periods of seven years each) the "fiery lives" are indirectly engaged in the process of building up man's material body; life is on the ascending scale, and the force is used in construction and increase. After this period is passed the age of retrogression commences, and, the work of the "fiery lives" exhausting their strength, the work of destruction and decrease also commences.

An analogy between cosmic events in the descent of spirit into matter for the first half of a manvantara (planetary as human) and its ascent at the expense of matter in the second half, may here be traced. These considerations have to do solely with the plane of matter, but the restraining influence of the "fiery lives" on the lowest sub-division of the second plane -- the microbes -- is confirmed by the fact mentioned in the foot-note on Pasteur (vide supra) that the cells of the organs, when they do not find sufficient oxygen for themselves, adapt themselves to that condition and form ferments, which, by absorbing oxygen from substances coming in contact with them, ruin the latter. Thus the process is commenced by one cell robbing its neighbour of the source of its vitality when the supply is insufficient; and the ruin so commenced steadily progresses.

[[Vol. 1, Page]] 264 THE SECRET DOCTRINE.

Avatar of Vishnu, the Chaldean Oannes -- the Man-Fish, recorded in the imperishable sign of the Zodiac, Pisces, and running throughout the two Testaments in the personages of Joshua "Son of the Fish (Nun)" and Jesus; the allegorical "Sin" or Fall of Spirit into matter, and the Moon -- in so far as it relates to the "Lunar" ancestors, the Pitris.

For the present it may be as well to remind the reader that while the Moon-goddesses were connected in every mythology, especially the Grecian, with child-birth, because of the lunar influence on women and conception, the occult and actual connection of our satellite with fecundation is to this day unknown to physiology, which regards every popular practice in this reference as gross superstition. As it is useless to discuss them in detail, we may only stop at present to discuss the lunar symbology casually, to show that the said superstition belongs to the most ancient beliefs, and even to Judaism -- the basis of Christianity. With the Israelites, the chief function of Jehovah was child-giving, and the esotericism of the Bible, interpreted Kabalistically, shows undeniably the Holy of Holies in the temple to be only the symbol of the womb. This is now proven beyond doubt and cavil, by the numerical reading of the Bible in general, and of Genesis especially. This idea must certainly have been borrowed by the Jews from the Egyptians and Indians, whose Holy of Holies was, and with the latter is to this day, symbolised by the King's chamber in the Great Pyramid (see "Source of Measures") and the Yoni symbols of exoteric Hinduism. To make the whole clearer and to show at the same time the enormous difference in the spirit of interpretation and the original meaning of the same symbols between the ancient Eastern Occultists and the Jewish Kabalists we refer the reader to Book II., "The Holy of Holies."*

STANZA VII. -- Continued.

6. FROM THE FIRST-BORN (primitive, or the first man) THE THREAD BETWEEN THE SILENT WATCHER AND HIS SHADOW BECOMES MORE

[[Footnote(s)]] -----

* Phallic worship has developed only with the loss of the keys to the true meaning of the symbols. It was the last and most fatal turning point from the highway of truth and divine knowledge into the side path of fiction, raised into dogma through human falsification and hierarchic ambition.

[[Vol. 1, Page]] 265 MAN, THE SHADOW OF HIS PROTOTYPE.

STRONG AND RADIANT WITH EVERY CHANGE (re-incarnation) (a). THE MORNING SUN-LIGHT HAS CHANGED INTO NOON-DAY GLORY

(a) This sentence: "The thread between the silent watcher and his shadow (man) becomes stronger" -- with every re-incarnation -- is another psychological mystery, that will find its explanation in Book II. For the present it will suffice to say that the "Watcher" and his "Shadows" -- the latter numbering as many as there are re-incarnations for the monad -- are one. The Watcher, or the divine prototype, is at the upper rung of the ladder of being; the shadow, at the lower. Withal, the Monad of every living being, unless his moral turpitude breaks the connection and runs loose and "astray into the lunar path" -- to use the Occult expression -- is an individual Dhyana Chohan, distinct from others, a kind of spiritual individuality of its own, during one special Manvantara. Its Primary, the Spirit (Atman) is one, of course, with Paramatma (the one Universal Spirit), but the vehicle (Vahan) it is enshrined in, the Buddhi, is part and parcel of that Dhyana-Chohan Essence; and it is in this that lies the mystery of that ubiquity, which was discussed a few pages back. "My Father, that is in Heaven, and I -- are one," -- says the Christian Scripture; in this, at any rate, it is the faithful echo of the esoteric tenet.

STANZA VII. -- Continued.

7. THIS IS THY PRESENT WHEEL -- SAID THE FLAME TO THE SPARK. THOU ART MYSELF, MY IMAGE AND MY SHADOW. I HAVE CLOTHED MYSELF IN THEE, AND THOU ART MY VAHAN (vehicle) TO THE DAY, "BE WITH US," WHEN THOU SHALT RE-BECOME MYSELF AND OTHERS, THYSELF AND ME (a), THEN THE BUILDERS, HAVING DONNED THEIR FIRST CLOTHING, DESCEND ON RADIANT EARTH, AND REIGN OVER MEN -- WHO ARE THEMSELVES (b).

(a) The day when "the spark will re-become the Flame (man will merge into his Dhyana Chohan) myself and others, thyself and me," as the Stanza has it -- means this: In Paranirvana -- when Pralaya will have reduced not only material and psychical bodies, but even the spiritual Ego(s) to their original principle -- the Past, Present, and even Future

[[Vol. 1, Page]] 266 THE SECRET DOCTRINE.

Humanities, like all things, will be one and the same. Everything will have re-entered the Great Breath. In other words, everything will be "merged in Brahma" or the divine unity.

Is this annihilation, as some think? Or Atheism, as other critics -- the worshippers of a personal deity and believers in an unphilosophical paradise -- are inclined to suppose? Neither. It is worse than useless to return to the question of implied atheism in

that which is spirituality of a most refined character. To see in Nirvana annihilation amounts to saying of a man plunged in a sound dreamless sleep -- one that leaves no impression on the physical memory and brain, because the sleeper's Higher Self is in its original state of absolute consciousness during those hours -- that he, too, is annihilated. The latter simile answers only to one side of the question -- the most material; since re-absorption is by no means such a "dreamless sleep," but, on the contrary, absolute existence, an unconditioned unity, or a state, to describe which human language is absolutely and hopelessly inadequate. The only approach to anything like a comprehensive conception of it can be attempted solely in the panoramic visions of the soul, through spiritual ideations of the divine monad. Nor is the individuality -- nor even the essence of the personality, if any be left behind -- lost, because re-absorbed. For, however limitless -- from a human standpoint -- the paranirvanic state, it has yet a limit in Eternity. Once reached, the same monad will re-emerge therefrom, as a still higher being, on a far higher plane, to recommence its cycle of perfected activity. The human mind cannot in its present stage of development transcend, scarcely reach this plane of thought. It totters here, on the brink of incomprehensible Absoluteness and Eternity.

(b) The "Watchers" reign over man during the whole period of Satya Yuga and the smaller subsequent yugas, down to the beginning of the Third Root Race; after which it is the Patriarchs, Heroes, and the Manes (see Egyptian Dynasties enumerated by the priests to Solon), the incarnated Dhyanis of a lower order, up to King Menes and the human kings of other nations; all were recorded carefully. In the views of symbologists this Mythopoeic Age is of course only regarded as a fairy tale. But since traditions and even Chronicles of such dynasties of divine Kings -- of gods reigning over men followed by dynasties of Heroes or Giants -- exist in the annals of every nation, it is difficult to understand how all the peoples under the sun, some of whom are separated by vast

[[Vol. 1, Page]] 267 EARTH, PEOPLED FROM HEAVEN.

oceans and belong to different hemispheres, such as the ancient Peruvians and Mexicans, as well as the Chaldeans, could have worked out the same "fairy tales" in the same order of events.* However, as the Secret Doctrine teaches history -- which, for being esoteric and traditional, is none the less more reliable than profane history -- we are as entitled to our beliefs as anyone else, whether religionist or sceptic. And that Doctrine says that the Dhyanis-Buddhas of the two higher groups, namely, the "Watchers" or the "Architects," furnished the many and various races with divine kings and leaders. It is the latter who taught humanity their arts and sciences, and the former who revealed to the incarnated Monads that had just shaken off their vehicles of the lower Kingdoms -- and who had, therefore, lost every recollection of their divine origin -- the great spiritual truths of the transcendental worlds. (See Book II., "Divine Dynasties.")

Thus, as expressed in the Stanza, the Watchers descended on Earth and reigned over men -- "who are themselves." The reigning kings had finished their cycle on Earth and other worlds, in the preceding Rounds. In the future manvantaras they will have risen to higher systems than our planetary world; and it is the Elect of our Humanity, the Pioneers on the hard and difficult path of Progress, who will take the places of their predecessors. The next great Manvantara will witness the men of our own life-cycle becoming the instructors and guides of a mankind whose Monads may now yet be imprisoned -- semi-conscious -- in the most intellectual of the animal kingdom, while their lower principles will be animating, perhaps, the highest specimens of the Vegetable world.

Thus proceed the cycles of the septenary evolution, in Septennial nature; the Spiritual or divine; the psychic or semi-divine; the intellectual, the passionate, the instinctual, or cognitional; the semi-corporeal and the purely material or physical natures. All these evolve and progress cyclically, passing from one into another, in a double, centrifugal and centripetal way, one in their ultimate essence, seven in their aspects. The lowest, of course, is the one depending upon and subservient to

[[Footnote(s)]] -----

* See the "Sacred Mysteries among the Mayas and the Quiches, 11,500 years ago," by Auguste le Plongeon, who shows the identity between the Egyptian rites and beliefs and those of the people he describes. The ancient hieratic alphabets of the Maya and the Egyptians are almost identical.

[[Vol. 1, Page]] 268 THE SECRET DOCTRINE.

our five physical senses.* Thus far, for individual, human, sentient, animal and vegetable life, each the microcosm of its higher macrocosm. The same for the Universe, which manifests periodically, for purposes of the collective progress of the countless lives, the outbreathings of the One Life; in order that through the Ever-Becoming, every cosmic atom in this infinite Universe, passing from the formless and the intangible, through the mixed natures of the semi-terrestrial, down to matter in full generation, and then back again, reascending at each new period higher and nearer the final goal; that each atom, we say, may reach through individual merits and efforts that plane where it re-becomes the one unconditioned ALL. But between the Alpha and the Omega there is the weary "Road" hedged in by thorns, that "goes down first, then --

Winds up hill all the way
Yes, to the very end"

Starting upon the long journey immaculate; descending more and more into sinful matter, and having connected himself with every atom in manifested Space -- the Pilgrim, having struggled through and suffered in every form of life and being, is only at the bottom of the valley of matter, and half through his cycle, when he has identified himself with collective Humanity. This, he has made in his own image. In order to progress upwards and homewards, the "God" has now to ascend the weary uphill path of the Golgotha of Life. It is the martyrdom of self-conscious existence. Like Visvakarman he has to sacrifice himself to himself in order to redeem all creatures,

to resurrect from the many into the One Life. Then he ascends into heaven indeed; where, plunged into the incomprehensible absolute Being and Bliss of Paranirvana he reigns unconditionally, and whence he will re-descend again at the next "coming," which one portion of humanity expects in its dead-letter sense as the second advent, and the other as the last "Kalki Avatar."

[[Footnote(s)]] -----

* Which are in truth seven as shown later, on the authority of the oldest Upanishads.

[[Vol. 1, Page]] 269 THE FIRST CHAPTER OF CREATION.

SUMMING UP.

"The History of Creation and of this world from its beginning up to the present time is composed of seven chapters. The seventh chapter is not yet written."

(T. Subba Row, Theosophist, 1881.)

THE first of these Seven chapters has been attempted and is now finished. However incomplete and feeble as an exposition, it is, at any rate, an approximation -- using the word in a mathematical sense -- to that which is the oldest basis for all the subsequent Cosmogonies. The attempt to render in a European tongue the grand panorama of the ever periodically recurring Law -- impressed upon the plastic minds of the first races endowed with Consciousness by those who reflected the same from the Universal Mind -- is daring, for no human language, save the Sanskrit -- which is that of the Gods -- can do so with any degree of adequacy. But the failures in this work must be forgiven for the sake of the motive.

As a whole, neither the foregoing nor what follows can be found in full anywhere. It is not taught in any of the six Indian schools of philosophy, for it pertains to their synthesis -- the seventh, which is the Occult doctrine. It is not traced on any crumbling papyrus of Egypt, nor is it any longer graven on Assyrian tile or granite wall. The Books of the Vedanta (the last word of human knowledge) give out but the metaphysical aspect of this world-Cosmogony; and their priceless thesaurus, the Upanishads -- Upa-ni-shad being a compound word meaning "the conquest of ignorance by the revelation of secret, spiritual knowledge" -- require now the additional possession of a Master-key to enable the student to get at their full meaning. The reason for this I venture to state here as I learned it from a Master.

The name, "Upanishads," is usually translated "esoteric doctrine." These treatises form part of the Sruti or "revealed knowledge," Revelation, in short, and are generally attached to the Brahmana

[[Vol. 1, Page]] 270 THE SECRET DOCTRINE.

portion of the Vedas,* as their third division. There are over 150 Upanishads enumerated by, and known to, Orientalists, who credit the oldest with being written probably about 600 years B.C.; but of genuine texts there does not exist a fifth of the number. The Upanishads are to the Vedas what the Kabala is to the Jewish Bible. They treat of and expound the secret and mystic meaning of the Vedic texts. They speak of the origin of the Universe, the nature of Deity, and of Spirit and Soul, as also of the metaphysical connection of mind and matter. In a few words: They CONTAIN the beginning and the end of all human knowledge, but they have now ceased to REVEAL it, since the day of Buddha. If it were otherwise, the Upanishads could not be called esoteric, since they are now openly attached to the Sacred Brahmanical books, which have, in our present age, become accessible even to the Mlechchhas (out-castes) and the European Orientalists. One thing in them -- and this in all the Upanishads -- invariably and constantly points to their ancient origin, and proves (a) that they were written, in some of their portions, before the caste system became the tyrannical institution which it still is; and (b) that half of their contents have been eliminated, while some of them were rewritten and abridged. "The great Teachers of the higher Knowledge and the Brahmins are continually represented as going to Kshatriya (military caste) kings to become their pupils." As Cowell pertinently remarks, the Upanishads "breathe an entirely different spirit" (from other Brahmanical writings), "a freedom of thought unknown in any earlier work except in the Rig Veda hymns themselves." The second fact is explained by a tradition recorded in one of the MSS. on Buddha's life. It says that the Upanishads were originally attached to their Brahmanas after the beginning of a reform, which led to the exclusiveness of the present caste system among the Brahmins, a few centuries after the invasion of India by the "twice-born." They were complete in those days, and were used for the instruction of the chelas who were preparing for their initiation.

[[Footnote(s)]] -----

* . . . "The Vedas have a distinct dual meaning -- one expressed by the literal sense of the words, the other indicated by the metre and the swara -- intonation -- which are as the life of the Vedas. . . . Learned pundits and philologists of course deny that swara has anything to do with philosophy or ancient esoteric doctrines; but the mysterious connection between swara and light is one of its most profound secrets." (T. Subba Row, Five Years of Theosophy, p. 154.)

[[Vol. 1, Page]] 271 OCCULTISM IN THE UPANISHADS.

This lasted so long as the Vedas and the Brahmanas remained in the sole and exclusive keeping of the temple-Brahmins -- while no one else had the right to study or even read them outside of the sacred caste. Then came Gautama, the Prince of Kapilavastu. After

learning the whole of the Brahmanical wisdom in the Rahasya or the Upanishads, and finding that the teachings differed little, if at all, from those of the "Teachers of Life" inhabiting the snowy ranges of the Himalaya,* the Disciple of the Brahmins, feeling indignant because the sacred wisdom was thus withheld from all but the Brahmins, determined to save the whole world by popularizing it. Then it was that the Brahmins, seeing that their sacred knowledge and Occult wisdom was falling into the hands of the "Mlechchhas," abridged the texts of the Upanishads, originally containing thrice the matter of the Vedas and the Brahmanas together, without altering, however, one word of the texts. They simply detached from the MSS. the most important portions containing the last word of the Mystery of Being. The key to the Brahmanical secret code remained henceforth with the initiates alone, and the Brahmins were thus in a position to publicly deny the correctness of Buddha's teaching by appealing to their Upanishads, silenced for ever on the chief questions. Such is the esoteric tradition beyond the Himalayas.

Sri Sankaracharya, the greatest Initiate living in the historical ages, wrote many a Bhashya on the Upanishads. But his original treatises, as there are reasons to suppose, have not yet fallen into the hands of the Philistines, for they are too jealously preserved in his maths (monasteries, mathams). And there are still weightier reasons to believe that the priceless Bhashyas (Commentaries) on the esoteric doctrine of the Brahmins, by their greatest expounder, will remain for ages yet a dead letter to most of the Hindus, except the Smartava Brahmins. This sect, founded by Sankaracharya, (which is still very powerful in Southern India) is now almost the only one to produce students who have preserved sufficient knowledge to comprehend the

[[Footnote(s) -----]]

* Also called "the Sons of Wisdom," and of the "Fire-Mist" and the "Brothers of the Sun" in the Chinese records. Si-dzang (Tibet) is mentioned in the MSS. of the sacred library of the province of Fo-Kien, as the great seat of Occult learning from time immemorial, ages before Buddha. The Emperor Yu, the "great" (2,207 years B.C.), a pious mystic and great adept, is said to have obtained his knowledge from the "great teachers of the Snowy Range" in Si-dzang.

[[Vol. 1, Page]] 272 THE SECRET DOCTRINE.

dead letter of the Bhashyas. The reason of this is that they alone, I am informed, have occasionally real Initiates at their head in their mathams, as for instance, in the "Sranga-giri," in the Western Ghats of Mysore. On the other hand, there is no sect in that desperately exclusive caste of the Brahmins, more exclusive than is the Smartava; and the reticence of its followers to say what they may know of the Occult sciences and the esoteric doctrine, is only equalled by their pride and learning.

Therefore the writer of the present statement must be prepared beforehand to meet with great opposition and even the denial of such statements as are brought forward in this work. Not that any claim to infallibility, or to perfect correctness in every detail of all that which is herein said, was ever put forward. Facts are there, and they can hardly be denied. But, owing to the intrinsic difficulties of the subjects treated, and the almost insurmountable limitations of the English tongue (as of all other European languages) to express certain ideas, it is more than probable that the writer has failed to present the explanations in the best and in the clearest form; yet all that could be done was done under every adverse circumstance, and this is the utmost that can be expected of any writer.

Let us recapitulate and show, by the vastness of the subjects expounded, how difficult, if not impossible, it is to do them full justice.

(1.) The Secret Doctrine is the accumulated Wisdom of the Ages, and its cosmogony alone is the most stupendous and elaborate system: e.g., even in the exotericism of the Puranas. But such is the mysterious power of Occult symbolism, that the facts which have actually occupied countless generations of initiated seers and prophets to marshal, to set down and explain, in the bewildering series of evolutionary progress, are all recorded on a few pages of geometrical signs and glyphs. The flashing gaze of those seers has penetrated into the very kernel of matter, and recorded the soul of things there, where an ordinary profane, however learned, would have perceived but the external work of form. But modern science believes not in the "soul of things," and hence will reject the whole system of ancient cosmogony. It is useless to say that the system in question is no fancy of one or several isolated individuals. That it is the uninterrupted record covering thousands of generations of Seers whose respective experiences were made to test and to verify the

[[Vol. 1, Page]] 273 THE PITH AND MARROW OF OCCULTISM.

traditions passed orally by one early race to another, of the teachings of higher and exalted beings, who watched over the childhood of Humanity. That for long ages, the "Wise Men" of the Fifth Race, of the stock saved and rescued from the last cataclysm and shifting of continents, had passed their lives in learning, not teaching. How did they do so? It is answered: by checking, testing, and verifying in every department of nature the traditions of old by the independent visions of great adepts; i.e., men who have developed and perfected their physical, mental, psychic, and spiritual organisations to the utmost possible degree. No vision of one adept was accepted till it was checked and confirmed by the visions -- so obtained as to stand as independent evidence -- of other adepts, and by centuries of experiences.

(2.) The fundamental Law in that system, the central point from which all emerged, around and toward which all gravitates, and upon which is hung the philosophy of the rest, is the One homogeneous divine SUBSTANCE-PRINCIPLE, the one radical cause.

. . . "Some few, whose lamps shone brighter, have been led
From cause to cause to nature's secret head,
And found that one first Principle must be. . . ."

It is called "Substance-Principle," for it becomes "substance" on the plane of the manifested Universe, an illusion, while it remains a "principle" in the beginningless and endless abstract, visible and invisible SPACE. It is the omnipresent Reality: impersonal, because it contains all and everything. Its impersonality is the fundamental conception of the System. It is latent in every atom in the Universe, and is the Universe itself. (See in chapters on Symbolism, "Primordial Substance, and Divine Thought.")

(3.) The Universe is the periodical manifestation of this unknown Absolute Essence. To call it "essence," however, is to sin against the very spirit of the philosophy. For though the noun may be derived in this case from the verb esse, "to be," yet IT cannot be identified with a being of any kind, that can be conceived by human intellect. IT is best described as neither Spirit nor matter, but both. "Parabrahmam and Mulaprakriti" are One, in reality, yet two in the Universal conception of the manifested, even in the conception of the One Logos, its first manifestation, to which, as the able lecturer in the "Notes on the Bhagavadgita" shows, IT appears from the objective standpoint of

[[Vol. 1, Page]] 274 THE SECRET DOCTRINE.

the One Logos as Mulaprakriti and not as Parabrahmam; as its veil and not the one REALITY hidden behind, which is unconditioned and absolute.

(4.) The Universe is called, with everything in it, MAYA, because all is temporary therein, from the ephemeral life of a fire-fly to that of the Sun. Compared to the eternal immutability of the ONE, and the changelessness of that Principle, the Universe, with its evanescent ever-changing forms, must be necessarily, in the mind of a philosopher, no better than a will-o'-the-wisp. Yet, the Universe is real enough to the conscious beings in it, which are as unreal as it is itself.

(5.) Everything in the Universe, throughout all its kingdoms, is CONSCIOUS: i.e., endowed with a consciousness of its own kind and on its own plane of perception. We men must remember that because we do not perceive any signs -- which we can recognise -- of consciousness, say, in stones, we have no right to say that no consciousness exists there. There is no such thing as either "dead" or "blind" matter, as there is no "Blind" or "Unconscious" Law. These find no place among the conceptions of Occult philosophy. The latter never stops at surface appearances, and for it the noumenal essences have more reality than their objective counterparts; it resembles therein the mediaeval Nominalists, for whom it was the Universals that were the realities and the particulars which existed only in name and human fancy.

(6.) The Universe is worked and guided from within outwards. As above so it is below, as in heaven so on earth; and man -- the microcosm and miniature copy of the macrocosm -- is the living witness to this Universal Law, and to the mode of its action. We see that every external motion, act, gesture, whether voluntary or mechanical, organic or mental, is produced and preceded by internal feeling or emotion, will or volition, and thought or mind. As no outward motion or change, when normal, in man's external body can take place unless provoked by an inward impulse, given through one of the three functions named, so with the external or manifested Universe. The whole Kosmos is guided, controlled, and animated by almost endless series of Hierarchies of sentient Beings, each having a mission to perform, and who -- whether we give to them one name or another, and call them Dhyana-Chohans or Angels -- are "messengers" in the sense only that they are the agents of Karmic and Cosmic Laws. They vary infinitely in their

[[Vol. 1, Page]] 275 THE NATURE OF THE CELESTIAL MEN.

respective degrees of consciousness and intelligence; and to call them all pure Spirits without any of the earthly alloy "which time is wont to prey upon" is only to indulge in poetical fancy. For each of these Beings either was, or prepares to become, a man, if not in the present, then in a past or a coming cycle (Manvantara). They are perfected, when not incipient, men; and differ morally from the terrestrial human beings on their higher (less material) spheres, only in that they are devoid of the feeling of personality and of the human emotional nature -- two purely earthly characteristics. The former, or the "perfected," have become free from those feelings, because (a) they have no longer fleshly bodies -- an ever-numbing weight on the Soul; and (b) the pure spiritual element being left untrammelled and more free, they are less influenced by maya than man can ever be, unless he is an adept who keeps his two personalities -- the spiritual and the physical -- entirely separated. The incipient monads, having never had terrestrial bodies yet, can have no sense of personality or EGO-ism. That which is meant by "personality," being a limitation and a relation, or, as defined by Coleridge, "individuality existing in itself but with a nature as a ground," the term cannot of course be applied to non-human entities; but, as a fact insisted upon by generations of Seers, none of these Beings, high or low, have either individuality or personality as separate Entities, i.e., they have no individuality in the sense in which a man says, "I am myself and no one else;" in other words, they are conscious of no such distinct separateness as men and things have on earth. Individuality is the characteristic of their respective hierarchies, not of their units; and these characteristics vary only with the degree of the plane to which those hierarchies belong: the nearer to the region of Homogeneity and the One Divine, the purer and the less accentuated that individuality in the Hierarchy. They are finite, in all respects, with the exception of their higher principles -- the immortal sparks reflecting the universal divine flame -- individualized and separated only on the spheres of Illusion by a differentiation as illusive as the rest. They are "Living Ones," because they are the streams projected on the Kosmic screen of illusion from the ABSOLUTE LIFE; beings in whom life cannot become extinct, before the fire of ignorance is extinct in those who sense these "Lives." Having sprung into being under the quickening influence of the uncreated beam, the reflection of the great Central Sun that

[[Vol. 1, Page]] 276 THE SECRET DOCTRINE.

radiates on the shores of the river of Life, it is the inner principle in them which belongs to the waters of immortality, while its differentiated clothing is as perishable as man's body. Therefore Young was right in saying that

"Angels are men of a superior kind"

and no more. They are neither "ministering" nor "protecting" angels; nor are they "Harbingers of the Most High" still less the "Messengers of wrath" of any God such as man's fancy has created. To appeal to their protection is as foolish as to believe that their sympathy may be secured by any kind of propitiation; for they are, as much as man himself is, the slaves and creatures of immutable Karmic and Kosmic law. The reason for it is evident. Having no elements of personality in their essence they can have no personal qualities, such as attributed by men, in their exoteric religions, to their anthropomorphic God -- a jealous and exclusive God who rejoices and feels wrathful, is pleased with sacrifice, and is more despotic in his vanity than any finite foolish man. Man, as shown in Book II., being a compound of the essences of all those celestial Hierarchies may succeed in making himself, as such, superior, in one sense, to any hierarchy or class, or even combination of them. "Man can neither propitiate nor command the Devas," it is said. But, by paralyzing his lower personality, and arriving thereby at the full knowledge of the non-separateness of his higher SELF from the One absolute SELF, man can, even during his terrestrial life, become as "One of Us." Thus it is, by eating of the fruit of knowledge which dispels ignorance, that man becomes like one of the Elohim or the Dhyanis; and once on their plane the Spirit of Solidarity and perfect Harmony, which reigns in every Hierarchy, must extend over him and protect him in every particular.

The chief difficulty which prevents men of science from believing in divine as well as in nature Spirits is their materialism. The main impediment before the Spiritualist which hinders him from believing in the same, while preserving a blind belief in the "Spirits" of the Departed, is the general ignorance of all, except some Occultists and Kabalists, about the true essence and nature of matter. It is on the acceptance or rejection of the theory of the Unity of all in Nature, in its ultimate Essence, that mainly rests the belief or unbelief in the existence around us of other conscious beings besides the Spirits of the Dead.

[[Vol. 1, Page]] 277 MANY BODIES BUT ONE SOUL.

It is on the right comprehension of the primeval Evolution of Spirit-Matter and its real essence that the student has to depend for the further elucidation in his mind of the Occult Cosmogony, and for the only sure clue which can guide his subsequent studies.

In sober truth, as just shown, every "Spirit" so-called is either a disembodied or a future man. As from the highest Archangel (Dhyan Chohan) down to the last conscious "Builder" (the inferior class of Spiritual Entities), all such are men, having lived aeons ago, in other Manvantaras, on this or other Spheres; so the inferior, semi-intelligent and non-intelligent Elementals -- are all future men. That fact alone -- that a Spirit is endowed with intelligence -- is a proof to the Occultist that that Being must have been a man, and acquired his knowledge and intelligence throughout the human cycle. There is but one indivisible and absolute Omniscience and Intelligence in the Universe, and this thrills throughout every atom and infinitesimal point of the whole finite Kosmos which hath no bounds, and which people call SPACE, considered independently of anything contained in it. But the first differentiation of its reflection in the manifested World is purely Spiritual, and the Beings generated in it are not endowed with a consciousness that has any relation to the one we conceive of. They can have no human consciousness or Intelligence before they have acquired such, personally and individually. This may be a mystery, yet it is a fact, in Esoteric philosophy, and a very apparent one too.

The whole order of nature evinces a progressive march towards a higher life. There is design in the action of the seemingly blindest forces. The whole process of evolution with its endless adaptations is a proof of this. The immutable laws that weed out the weak and feeble species, to make room for the strong, and which ensure the "survival of the fittest," though so cruel in their immediate action -- all are working toward the grand end. The very fact that adaptations do occur, that the fittest do survive in the struggle for existence, shows that what is called "unconscious Nature"* is in reality an aggregate of forces mani-

[[Footnote(s) -----]]

* Nature taken in its abstract sense, cannot be "unconscious," as it is the emanation from, and thus an aspect (on the manifested plane) of the ABSOLUTE consciousness. Where is that daring man who would presume to deny to vegetation and even to minerals a consciousness of their own. All he can say is, that this consciousness is beyond his comprehension.

[[Vol. 1, Page]] 278 THE SECRET DOCTRINE.

pulated by semi-intelligent beings (Elementals) guided by High Planetary Spirits, (Dhyan Chohans), whose collective aggregate forms the manifested verbum of the unmanifested LOGOS, and constitutes at one and the same time the MIND of the Universe and its immutable LAW.

Three distinct representations of the Universe in its three distinct aspects are impressed upon our thought by the esoteric philosophy: the PRE-EXISTING (evolved from) the EVER-EXISTING; and the PHENOMENAL -- the world of illusion, the reflection, and shadow thereof. During the great mystery and drama of life known as the Manvantara, real Kosmos is like the object placed behind the white screen upon which are thrown the Chinese shadows, called forth by the magic lantern. The actual figures and things remain invisible, while the wires of evolution are pulled by the unseen hands; and men and things are thus but the reflections, on the white field, of the realities behind the snares of Mahamaya, or the great Illusion. This was taught in every philosophy, in every religion, ante as well as post diluvian, in India and Chaldea, by the Chinese as by the Grecian Sages. In the former countries these three Universes were allegorized, in exoteric teachings, by the three trinities emanating from the Central eternal germ and forming with it a Supreme Unity:

the initial, the manifested, and the Creative Triad, or the three in One. The last is but the symbol, in its concrete expression, of the first ideal two. Hence Esoteric philosophy passes over the necessarianism of this purely metaphysical conception, and calls the first one, only, the Ever Existing. This is the view of every one of the six great schools of Indian philosophy -- the six principles of that unit body of WISDOM of which the "gnosis," the hidden knowledge, is the seventh.

The writer hopes that, superficially handled as may be the comments on the Seven Stanzas, enough has been given in this cosmogonic portion of the work to show Archaic teachings to be more scientific (in the modern sense of the word) on their very face, than any other ancient Scriptures left to be regarded and judged on their exoteric aspect. Since, however, as confessed before, this work withholds far more than it gives out, the student is invited to use his own intuitions. Our chief care is to elucidate that which has already been given out, and, to our regret, very incorrectly at times; to supplement the knowledge hinted at -- whenever and wherever possible -- by addi-

[[Vol. 1, Page]] 279 HERMES, OR ARISTOTLE?

tional matter; and to bulwark our doctrines against the too strong attacks of modern Sectarianism, and more especially against those of our latter-day Materialism, very often miscalled Science, whereas, in reality, the words "Scientists" and "Sciolists" ought alone to bear the responsibility for the many illogical theories offered to the world. In its great ignorance, the public, while blindly accepting everything that emanates from "authorities," and feeling it to be its duty to regard every dictum coming from a man of Science as a proven fact -- the public, we say, is taught to scoff at anything brought forward from "heathen" sources. Therefore, as materialistic Scientists can be fought solely with their own weapons -- those of controversy and argument -- an Addendum is added to every Book contrasting our respective views and showing how even great authorities may often err. We believe that this can be done effectually by showing the weak points of our opponents, and by proving their too frequent sophisms -- made to pass for scientific dicta -- to be incorrect. We hold to Hermes and his "Wisdom" -- in its universal character; they -- to Aristotle as against intuition and the experience of the ages, fancying that Truth is the exclusive property of the Western world. Hence the disagreement. As Hermes says, "Knowledge differs much from sense; for sense is of things that surmount it, but Knowledge (gyi) is the end of sense" -- i.e., of the illusion of our physical brain and its intellect; thus emphasizing the contrast between the laboriously acquired knowledge of the senses and mind (manas), and the intuitive omniscience of the Spiritual divine Soul -- Buddhi.

Whatever may be the destiny of these actual writings in a remote future, we hope to have proven so far the following facts:

(1) The Secret Doctrine teaches no Atheism, except in the Hindu sense of the word nastika, or the rejection of idols, including every anthropomorphic god. In this sense every Occultist is a Nastika.

(2) It admits a Logos or a collective "Creator" of the Universe; a Demi-urgos -- in the sense implied when one speaks of an "Architect" as the "Creator" of an edifice, whereas that Architect has never touched one stone of it, but, while furnishing the plan, left all the manual labour to the masons; in our case the plan was furnished by the Ideation of the Universe, and the constructive labour was left to the Hosts of intelligent Powers and Forces. But that Demiurgos is no

[[Vol. 1, Page]] 280 THE SECRET DOCTRINE.

personal deity, -- i.e., an imperfect extra-cosmic god, -- but only the aggregate of the Dhyan-Chohans and the other forces.

As to the latter --

(3) They are dual in their character; being composed of (a) the irrational brute energy, inherent in matter, and (b) the intelligent soul or cosmic consciousness which directs and guides that energy, and which is the Dhyan-Chohan thought reflecting the Ideation of the Universal mind. This results in a perpetual series of physical manifestations and moral effects on Earth, during manvantaric periods, the whole being subservient to Karma. As that process is not always perfect; and since, however many proofs it may exhibit of a guiding intelligence behind the veil, it still shows gaps and flaws, and even results very often in evident failures -- therefore, neither the collective Host (Demiurgos), nor any of the working powers individually, are proper subjects for divine honours or worship. All are entitled to the grateful reverence of Humanity, however, and man ought to be ever striving to help the divine evolution of Ideas, by becoming to the best of his ability a co-worker with nature in the cyclic task. The ever unknowable and incognizable Karana alone, the Causeless Cause of all causes, should have its shrine and altar on the holy and ever untrodden ground of our heart -- invisible, intangible, unmentioned, save through "the still small voice" of our spiritual consciousness. Those who worship before it, ought to do so in the silence and the sanctified solitude of their Souls; making their spirit the sole mediator between them and the Universal Spirit, their good actions the only priests, and their sinful intentions the only visible and objective sacrificial victims to the Presence. (See Part II., "On the Hidden Deity.")

(4) Matter is Eternal. It is the Upadhi (the physical basis) for the One infinite Universal Mind to build thereon its ideations. Therefore, the Esotericists maintain that there is no inorganic or dead matter in nature, the distinction between the two made by Science being as unfounded as it is arbitrary and devoid of reason.

[[Footnote(s) -----]]

* "When thou prayest, thou shalt not be as the hypocrites are . . . but enter into thine inner chamber and having shut thy door, pray to thy Father which is in secret." Matt. vi.). Our Father is within us "in Secret," our 7th principle, in the "inner chamber" of our Soul

perception. "The Kingdom of Heaven" and of God "is within us" says Jesus, not outside. Why are Christians so absolutely blind to the self-evident meaning of the words of wisdom they delight in mechanically repeating?

[[Vol. 1, Page]] 281 MATTER IS THE SHADOW OF SPIRIT.

Whatever Science may think, however -- and exact Science is a fickle dame, as we all know by experience -- Occultism knows and teaches differently, from time immemorial -- from Manu and Hermes down to Paracelsus and his successors.

Thus Hermes, the thrice great Trismegistus, says: "Oh, my son, matter becomes; formerly it was; for matter is the vehicle of becoming."* Becoming is the mode of activity of the uncreate deity. Having been endowed with the germs of becoming, matter (objective) is brought into birth, for the creative force fashions it according to the ideal forms. Matter not yet engendered had no form; it becomes when it is put into operation." (The Definitions of Asclepius, p. 134, "Virgin of the World.")

"Everything is the product of one universal creative effort. . . . There is nothing dead, in Nature. Everything is organic and living, and therefore the whole world appears to be a living organism." (Paracelsus, "Philosophia ad Athenienses," F. Hartmann's translations, p. 44.)

(5.) The Universe was evolved out of its ideal plan, upheld through Eternity in the unconsciousness of that which the Vedantins call Parabrahm. This is practically identical with the conclusions of the highest Western Philosophy -- "the innate, eternal, and self-existing Ideas" of Plato, now reflected by Von Hartmann. The "unknowable" of Herbert Spencer bears only a faint resemblance to that transcendental Reality believed in by Occultists, often appearing merely a personification of a "force behind phenomena" -- an infinite and eternal Energy

[[Footnote(s) -----]]

* To this the late Mrs. (Dr.) Kingsford, the able translator and compiler of the Hermetic Fragments (see "The Virgin of the World") remarks in a foot-note; "Dr. Menard observes that in Greek the same word signifies to be born and to become. The idea here is that the material of the world is in its essence eternal, but that before creation or 'becoming' it is in a passive and motionless condition. Thus it 'was' before being put into operation; now it 'becomes,' that is, it is mobile and progressive." And she adds the purely Vedantic doctrine of the Hermetic philosophy that "Creation is thus the period of activity (Manvantara) of God, who, according to Hermetic thought (or which, according to the Vedantin) has two modes -- Activity or Existence, God evolved (Deus explicitus); and Passivity of Being (Pralaya) God involved (Deus implicitus). Both modes are perfect and complete, as are the waking and sleeping states of man. Fichte, the German philosopher, distinguished Being (Seyn) as One, which we know only through existence (Dasein) as the Manifold. This view is thoroughly Hermetic. The 'Ideal Forms' are the archetypal or formative ideas of the Neo-Platonists; the eternal and subjective concepts of things subsisting in the divine mind prior to 'becoming'" (p. 134).

[[Vol. 1, Page]] 282 THE SECRET DOCTRINE.

from which all things proceed, while the author of the "Philosophy of the Unconscious" has come (in this respect only) as near to a solution of the great Mystery as mortal man can. Few were those, whether in ancient or mediaeval philosophy, who have dared to approach the subject or even hint at it. Paracelsus mentions it inferentially. His ideas are admirably synthesized by Dr. F. Hartmann, F.T.S., in his "Life of Paracelsus."

All the Christian Kabalists understood well the Eastern root idea: The active Power, the "Perpetual motion of the great Breath" only awakens Kosmos at the dawn of every new Period, setting it into motion by means of the two contrary Forces,* and thus causing it to become objective on the plane of Illusion. In other words, that dual motion transfers Kosmos from the plane of the Eternal Ideal into that of finite manifestation, or from the Noumenal to the Phenomenal plane. Everything that is, was, and will be, eternally IS, even the countless forms, which are finite and perishable only in their objective, not in their ideal Form. They existed as Ideas, in the Eternity,** and, when they pass away, will exist as reflections. Neither the form of man, nor that of any animal, plant or stone has ever been created, and it is only on this plane of ours that it commenced "becoming," i.e., objectivising into its present materiality, or expanding from within outwards, from the most sublimated and supersensuous essence into its grossest appearance. Therefore our human forms have existed in the Eternity as astral or ethereal prototypes; according to which models, the Spiritual Beings (or Gods) whose duty it was to bring them into objective being and terrestrial Life, evolved the protoplasmic forms of the future Egos from their own essence. After which, when this human Upadhi, or basic mould was ready, the natural terrestrial Forces began to work on those supersensuous moulds which contained, besides their own, the elements of all the past vegetable and future animal forms of this globe in them. Therefore, man's outward shell passed through every vegetable and animal body before it assumed the human shape. As this will be fully

[[Footnote(s) -----]]

* The centripetal and the centrifugal forces, which are male and female, positive and negative, physical and spiritual, the two being the one Primordial Force.

** Occultism teaches that no form can be given to anything, either by nature or by man, whose ideal type does not already exist on the subjective plane. More than this; that no such form or shape can possibly enter man's consciousness, or evolve in his imagination, which does not exist in prototype, at least as an approximation.

[[Vol. 1, Page]] 283 PARACELSUS ANTICIPATED TYNDALL.

described in Book II., with the Commentaries thereupon, there is no need to say more of it here.

According to the Hermetico-Kabalistic philosophy of Paracelsus, it is Yliaster -- the ancestor of the just-born Protyle, introduced by Mr. Crookes in chemistry -- or primordial Protomateria that evolved out of itself the Kosmos.

"When Evolution took place the Yliaster divided itself. . . . melted and dissolved, developing from within itself the Ideos or Chaos, called respectively *Mysterium magnum*, *Iliados*, *Limbus Major*, or *Primordial Matter*. This *Primordial essence* is of a monistic nature, and manifests itself not only as vital activity, a spiritual force, an invisible, incomprehensible, and indescribable power, but also as vital matter of which the substance of living beings consists." In this *Ideos* of primordial matter, or the *proto-ilos* -- which is the matrix of all created things -- is contained the substance from which everything is formed. It is the *Chaos* . . . out of which the *Macrocosm*, and, later on, by evolution and division in *Mysteria Specialia*,* each separate being, came into existence. "All things and all elementary substances were contained in it in *potentia* but not in *actu*" -- which makes the translator, Dr. F. Hartmann, justly observe that "it seems that Paracelsus anticipated the modern discovery of the 'potency of matter' three hundred years ago" (P. 42).

This *Magnus Limbus*, then, or *Yliaster* of Paracelsus, is simply our old friend "Father-Mother," within, before it appeared in *Space*, of the second and other *Stanzas*. It is the universal matrix of *Kosmos*, personified in the dual character of *Macro-* and *Microcosm* (or the *Universe* and our *Globe*)** by *Aditi-Prakriti*, the *Spiritual* and the *physical nature*. For we find it explained in Paracelsus that "the *Magnus Limbus* is the nursery out of which all creatures have grown, in the same sense as a tree grows out of a small seed; with the difference, however, that the great *Limbus* takes its origin from the *Word*, while the *Limbus minor* (the *terrestrial seed* or *sperm*) takes it from the *earth*.

[[Footnote(s) -----]]

* This word is explained by Dr. Hartmann from the original texts of Paracelsus before him, as follows. According to this great Rosicrucian: "*Mysterium* is everything out of which something may be developed, which is only germinally contained in it. A seed is the '*Mysterium*' of a plant, an egg that of a living bird, etc."

** It is only the mediaeval Kabalists who, following the Jewish and one or two Neo-Platonists, applied the term *Microcosm* to man. Ancient philosophy called the *Earth* the *Microcosm* of the *Macrocosm*, and man the outcome of the two.

[[Vol. 1, Page]] 284 THE SECRET DOCTRINE.

The great *Limbus* is the seed out of which all beings have come, and the little *Limbus* is each ultimate being that reproduces its form, and that has itself been produced by the 'great.' The latter possesses all the qualifications of the great one, in the same sense as a son has an organization similar to that of his father." (See Comment. Book II. para. iii.) . . . "As *Yliaster* dissolved, *Ares*, the dividing, differentiating, and individualising power (*Fohat*, another old friend,) . . . began to act. All production took place in consequence of separation. There were produced out of the *Ideos*, the elements of *Fire*, *Water*, *Air* and *Earth*, whose birth, however, did not take place in a material mode, or by simple separation," but by spiritual and dynamical, not even complex, combinations -- e.g., mechanical mixture as opposed to chemical combination -- just as fire may come out of a pebble, or a tree out of a seed, although there is originally no fire in the pebble, nor a tree in the seed. *Spirit* is living, and *Life* is *Spirit*, and *Life* and *Spirit* (*Prakriti Purusha*) (?) produce all things, but they are essentially one and not two. . . . The elements too, have each one its own *Yliaster*, because all the activity of matter in every form is only an effluvium of the same fount. But as from the seed grow the roots with their fibres, and after that the stalk with its branches and leaves, and lastly the flowers and seeds; likewise all beings were born from the elements, and consist of elementary substances out of which other forms may come into existence, bearing the characteristics of their parents." ("This doctrine, preached 300 years ago," remarks the translator, "is identical with the one that has revolutionized modern thought, after having been put into new shape and elaborated by Darwin. It was still more elaborated by *Kapila* in the *Sankhya* philosophy") . . . The elements as the mothers of all creatures are of an invisible, spiritual nature, and have souls.* They all spring from the "*Mysterium Magnum*." (*Philosophia ad Athenienses*.)

Compare this with *Vishnu Purana*.

"From *Pradhana* (primordial substance) presided over by *Kshetrajna* (embodied Spirit?) proceeds the evolution of those qualities. . . . From the great Principle *Mahat* (Universal Intellect, or mind) . . . proceeds

[[Footnote(s) -----]]

* The Eastern Occultist says -- "are guided and informed by the *Spiritual Beings*" the *Workmen* in the invisible worlds and behind the veil of *Occult nature*, or nature in *Abscondito*.

[[Vol. 1, Page]] 285 HERMES CHRISTIANIZED.

the origin of the subtle elements and from these the organs of sense (Book I., ii.).

Thus it may be shown that all the fundamental truths of nature were universal in antiquity, and that the basic ideas upon spirit, matter, and the universe, or upon God, Substance, and man, were identical. Taking the two most ancient religious philosophies on the globe, Hinduism and Hermetism, from the scriptures of India and Egypt, the identity of the two is easily recognisable.

This becomes apparent to one who reads the latest translation and rendering of the "Hermetic Fragments" just mentioned, by our late lamented friend, Dr. Anna Kingsford. Disfigured and tortured as these have been in their passage through Sectarian Greek and Christian hands, the translator has most ably and intuitively seized the weak points and tried to remedy them by means of explanations and foot-notes. And she says:..... The creation of the visible world by the 'working gods' or Titans, as agents of the Supreme God,* is a thoroughly Hermetic idea, recognisable in all religious systems, and in accordance with modern scientific research (?), which shows us everywhere the Divine power operating through natural Forces."

"That Universal Being, that contains all, and which is all, put into motion the Soul and the World, all that nature comprises, says Hermes. In the manifold unity of universal life, the innumerable individualities distinguished by their variations, are, nevertheless, united in such a manner that the whole is one, and that everything proceeds from Unity." (Asclepius, Part I.)

"God is not a mind, but the cause that the mind is; not a spirit, but the cause that the Spirit is; not light, but the cause that the Light is." (Divine Pymander, Book IX., v. 64.)

The above shows plainly that "Divine Pymander," however much distorted in some passages by Christian "smoothing," was nevertheless written by a philosopher, while most of the so-called "hermetic Fragments" are the production of sectarian pagans with a tendency towards an anthropomorphic Supreme Being. Yet both are the echo of the Esoteric philosophy and the Hindu Puranas.

Compare two invocations, one to the Hermetic "Supreme All," the

[[Footnote(s) -----]]

* A frequent expression in the said Fragments, to which we take exception. The Universal Mind is not a Being or "God."

[[Vol. 1, Page]] 286 THE SECRET DOCTRINE.

other to the "Supreme All" of the later Aryans. Says a Hermetic Fragment cited by Suidas (see Mrs. Kingsford's "The Virgin of the World"): -

"I adjure thee, Heaven, holy work of the great God; I adjure thee, Voice of the Father, uttered in the beginning when the universal world was framed; I adjure thee by the word, only Son of the Father who upholds all things; be favourable, be favourable."

This just preceded by the following: "Thus the Ideal Light was before the Ideal Light, and the luminous Intelligence of Intelligence was always, and its unity was nothing else than the Spirit enveloping the Universe. Out of whom is neither God nor Angels, nor any other essentials, for He (It?) is the Lord of all things and the power and the Light; and all depends on Him (It) and is in Him (It), etc." (Fragments of the writings of Hermes to Ammon.)

This is contradicted by the very same Trismegistos, who is made to say: "To speak of God is impossible. For corporeal cannot express the incorporeal. . . . That which has not any body nor appearance, nor form, nor matter, cannot be apprehended by sense. I understand, Tatios, I understand, that which it is impossible to define -- that is God." (Physical Eclogues, Florilegium of Stobaeus.)

The contradiction between the two passages is evident; and this shows (a) that Hermes was a generic nom-de-plume used by a series of generations of mystics of every shade, and (b) that a great discernment has to be used before accepting a Fragment as esoteric teaching only because it is undeniably ancient. Let us now compare the above with a like invocation in the Hindu Scriptures -- undoubtedly as old, if not far older. Here it is Parasara, the Aryan "Hermes" who instructs Maitreya, the Indian Asclepius, and calls upon Vishnu in his triple hypostasis.

"Glory to the unchangeable, holy, eternal Supreme Vishnu, of one universal nature, the mighty over all; to him who is Hiranyagarbha, Hari, and Sankara (Brahma, Vishnu, and Siva), the creator, the preserver, and the destroyer of the world; to Vasudeva, the liberator (of his worshippers); to him whose essence is both single and manifold; who is both subtle and corporeal, indiscreet and discreet; to Vishnu the cause of final emancipation, the cause of the creation, existence, the

[[Vol. 1, Page]] 287 ALONE THE ETERNAL IS REST.

end of the world; who is the root of the world, and who consists of the world." (Vish. Purana, Book L.)

This is a grand invocation, full of philosophical meaning underlying it; but, for the profane masses, as suggestive as is the first of an anthropomorphic Being. We must respect the feeling that dictated both; but we cannot help finding it in full disharmony with its inner meaning, even with that which is found in the same Hermetic treatise where it is said:

"Reality is not upon the earth, my son, and it cannot be thereon. . . . Nothing on earth is real, there are only appearances. . . He (man) is not real, my son, as man. The real consists solely in itself and remains what it is. . . Man is transient, therefore he is not real, he is but appearance, and appearance is the supreme illusion.

Tatios: Then the celestial bodies themselves are not real, my father, since they also vary?

Trismegistos: That which is subject to birth and to change is not real. . . . There is in them a certain falsity, seeing that they too are variable.....

Tatios: And what then is the primordial Reality?

Trismeg.: That which is one and alone, O Tatios; That which is not made of matter, nor in any body. Which has neither colour nor form, which changes not nor is transmitted but which always is."

This is quite consistent with the Vedantic teaching. The leading thought is Occult; and many are the passages in the Hermetic Fragments that belong bodily to the Secret Doctrine.

The latter teaches that the whole universe is ruled by intelligent and semi-intelligent Forces and Powers, as stated from the very beginning. Christian Theology admits and even enforces belief in such, but makes an arbitrary division and refers to them as "Angels" and "Devils." Science denies the existence of such, and ridicules the very idea. Spiritualists believe in the Spirits of the Dead, and, outside these, deny entirely any other kind or class of invisible beings. The Occultists and Kabalists are thus the only rational expounders of the ancient traditions, which have now culminated in dogmatic faith on the one hand, and dogmatic denials on the other. For, both belief and unbelief embrace but one small corner each of the infinite horizons of spiritual and physical manifestations; and thus both are right from

[[Vol. 1, Page]] 288 THE SECRET DOCTRINE.

their respective standpoints, and both are wrong in believing that they can circumscribe the whole within their own special and narrow barriers; for -- they can never do so. In this respect Science, Theology, and even Spiritualism show little more wisdom than the ostrich does, when it hides its head in the sand at its feet, feeling sure that there can be thus nothing beyond its own point of observation and the limited area occupied by its foolish head.

As the only works now extant upon the subject under consideration within reach of the profane of the Western "civilized" races are the above-mentioned Hermetic Books, or rather Hermetic Fragments, we may contrast them in the present case with the teachings of Esoteric philosophy. To quote for this purpose from any other would be useless, since the public knows nothing of the Chaldean works which are translated into Arabic and preserved by some Sufi initiates. Therefore the "Definitions of Asclepius," as lately compiled and glossed by Mrs. A. Kingsford, F.T.S., some of which sayings are in remarkable agreement with the Esoteric Eastern doctrine, have to be resorted to for comparison. Though not a few passages show a strong impression of some later Christian hand, yet on the whole the characteristics of the genii* and gods are those of eastern teachings, while concerning other things there are passages which differ widely in our doctrines. The following are a few:--

[[Footnote(s) -----]]

* The Hermetic philosophers called Theoi, gods, Genii and Daimones (in the original texts), those Entities whom we call Devas (gods), Dhyani Chohans, Chitkala (Kwan-yin, the Buddhists call them), and by other names. The Daimones are -- in the Socratic sense, and even in the Oriental and Latin theological sense -- the guardian spirits of the human race; "those who dwell in the neighbourhood of the immortals, and thence watch over human affairs," as Hermes has it. In Esoteric parlance, they are called Chitkala, some of which are those who have furnished man with his fourth and fifth Principles from their own essence; and others the Pitris so-called. This will be explained when we come to the production of the complete man. The root of the name is Chiti, "that by which the effects and consequences of actions and kinds of knowledge are selected for the use of the soul," or conscience the inner Voice in man. With the Yogis, the Chiti is a synonym of Mahat, the first and divine intellect; but in Esoteric philosophy Mahat is the root of Chiti, its germ; and Chiti is a quality of Manas in conjunction with Buddhi, a quality that attracts to itself by spiritual affinity a Chitkala when it develops sufficiently in man. This is why it is said that Chiti is a voice acquiring mystic life and becoming Kwan-Yin.

[[Vol. 1, Page]] 289 A FEW OCCULT APHORISMS.

EXTRACTS FROM A PRIVATE COMMENTARY,* hitherto secret:--

(xvii.) "The Initial Existence in the first twilight of the Maha-Manwantara (after the MAHA-PRALAYA that follows every age of Brahma) is a CONSCIOUS SPIRITUAL QUALITY. In the manifested WORLDS (solar systems) it is, in its OBJECTIVE SUBJECTIVITY, like the film from a Divine Breath to the gaze of the entranced seer. It spreads as it issues from LAYA** throughout infinity as a colourless spiritual fluid. It is on the SEVENTH PLANE, and in its SEVENTH STATE in our planetary world.***

(xviii.) "It is Substance to OUR spiritual sight. It cannot be called so by men in their WAKING STATE; therefore they have named it in their ignorance 'God-Spirit.'

(xix.) "It exists everywhere and forms the first UPADHI (foundation) on which our World (solar system) is built. Outside the latter it is to be found in its pristine purity only between (the solar systems or) the Stars of the Universe, the worlds already formed or forming; those in LAYA resting meanwhile in its bosom. As its substance is of a different kind from that known on earth, the inhabitants of the latter, seeing THROUGH IT, believe in their illusion and ignorance that it is empty space. There is not one finger's breath (ANGULA) of void Space in the whole Boundless (Universe).....

(xx.) "Matter or Substance is septenary within our World, as it is so beyond it. Moreover, each of its states or principles is graduated into seven degrees of density. SURYA (the Sun), in its visible reflection, exhibits the first, or lowest state of the seventh, the highest state of the Universal PRESENCE, the pure of the pure, the first manifested Breath of the ever Unmanifested SAT (Be-ness). All the Central physical or objective Suns are in their substance the lowest state of the first Principle of the BREATH. Nor are any of these any more than the REFLECTIONS of their PRIMARIES which are concealed from the gaze of all but the Dhyana Chohans, whose Corporeal substance belongs to the fifth division of the seventh Principle of the Mother substance, and is,

[[Footnote(s) -----]]

* This (teaching) does not refer to Prakriti-Purusha beyond the boundaries of our small universe.

** The ultimate quiescent state: the Nirvana condition of the seventh Principle.

*** The teaching is all given from our plane of consciousness.

[[Vol. 1, Page]] 290 THE SECRET DOCTRINE.

therefore, four degrees higher than the solar reflected substance. As there are seven Dhatu (principal substances in the human body) so there are seven Forces in Man and in all Nature.

(xxi.) "The real substance of the concealed (Sun) is a nucleus of Mother substance.* It is the heart and the matrix of all the living and existing Forces in our solar universe. It is the Kernel from which proceed to spread on their cyclic journeys all the Powers that set in action the atoms in their functional duties, and the focus within which they again meet in their SEVENTH ESSENCE every eleventh year. He who tells thee he has seen the sun, laugh at him** as if he had said that the sun moves really onward on his diurnal path . . .

(xxiii.) "It is on account of his septenary nature that the Sun is spoken of by the ancients as one who is driven by seven horses equal to the metres of the Vedas; or, again, that, though he is identified with the SEVEN "GAINA" (classes of being) in his orb, he is distinct from them,*** as he is, indeed; as also that he has SEVEN RAYS, as indeed he has . . .

(xxv.) "The Seven Beings in the Sun are the Seven Holy Ones, Self-born from the inherent power in the matrix of Mother substance. It is they who send the Seven Principal Forces, called rays, which at the beginning of Pralaya will centre into seven new Suns for the next Manvantara. The energy from which they spring into conscious existence in every Sun, is what some people call Vishnu (see foot-note below), which is the Breath of the ABSOLUTENESS.

We call it the One manifested life -- itself a reflection of the Absolute.....

(xxvi.) "The latter must never be mentioned in words or speech LEST IT SHOULD TAKE AWAY SOME OF OUR SPIRITUAL ENERGIES THAT ASPIRE towards ITS state, gravitating ever onward unto IT spiritually, as the whole physical universe gravitates towards ITS manifested centre -- cosmically.

(xxvii.) "The former -- the Initial existence -- which may be called while in

[[Footnote(s) -----]]

* Or the "dream of Science," the primeval really homogeneous matter, which no mortal can make objective in this Race or Round either.

** "Vishnu in the form of the Solar active energy, neither ever rises nor sets, and is at once, the sevenfold Sun and distinct from it," says Vishnu Purana (Book II., Chap. 11).

*** "In the same manner as a man approaches a mirror placed upon a stand, beholds in it his own image, so the energy or reflection of Vishnu (the Sun) is never disjoined but remains in the Sun as in a mirror that is there stationed" ("Vishnu Purana").

[[Vol. 1, Page]] 291 OCCULT APHORISMS.

this state of being the ONE LIFE, is, as explained, a FILM for creative or formative Purposes. It manifests in seven states, which, with their septenary sub-divisions, are the FORTY-NINE Fires* mentioned in sacred books

(xxix.) "The first is the . . . 'Mother' (prima MATERIA). Separating itself into its primary seven states, it proceeds down cyclically; when** having consolidated itself in its LAST principle as GROSS MATTER, it revolves around itself and informs, with the seventh emanation of the last, the first and the lowest element (the Serpent biting its own tail). In a hierarchy, or order of being, the seventh emanation of her last principle is:--

(a) In the mineral, the spark that lies latent in it, and is called to its evanescent being by the POSITIVE awakening the NEGATIVE (and so forth)

(b) In the plant it is that vital and intelligent Force which informs the seed and develops it into the blade of grass, or the root and sapling. It is the germ which becomes the UPADHI of the seven principles of the thing it resides in, shooting them out as the latter grows and develops.

(c) In every animal it does the same. It is its life principle and vital power; its instinct and qualities; its characteristics and special idiosyncrasies

(d) To man, it gives all that it bestows on all the rest of the manifested units in nature; but develops, furthermore, the reflection of all its FORTY-NINE FIRES in him. Each of his seven principles is an heir in full to, and a partaker of, the seven principles of the "great Mother." The breath of her first principle is his spirit (Atma). Her second principle is BUDDHI (soul). We call it, erroneously, the seventh. The third furnishes him with (a) the brain stuff on the physical plane, and (b) with the MIND that moves it [which is the human soul. -- H. P. B.] -- according to his organic capacities.

(e) It is the guiding Force in the Cosmic and terrestrial elements. It resides in the Fire provoked out of its latent into active being; for the whole of the seven subdivisions of the * * * principle reside in the terrestrial Fire. It whirls in the breeze, blows with the hurricane, and sets the air in motion, which element participates in one of its principles also. Proceeding cyclically, it regulates the motion

[[Footnote(s) -----]]

* In "Vishnu" and other Puranas.

** See the Hermetic "Nature," "Going down cyclically into matter when she meets 'heavenly man.' "

[[Vol. 1, Page]] 292 THE SECRET DOCTRINE.

of the water, attracts and repels the waves* according to fixed laws of which its seventh principle is the informing soul.

(f) Its four higher principles contain the germ that develops into the Cosmic Gods; its three lower ones breed the lives of the Elements (Elementals).

(g) In our Solar world, the One Existence is Heaven and the Earth, the Root and the flower, the Action and the Thought. It is in the Sun, and is as present in the glow-worm. Not an atom can escape it. Therefore, the ancient Sages have wisely called it the manifested God in Nature. . . ."

It may be interesting, in this connection, to remind the reader of what Mr. Subba Row said of the Forces -- mystically defined. See "Five Years of Theosophy" and "The Twelve Signs of the Zodiac." Thus he says:

"Kanya (the sixth sign of the Zodiac, or Virgo) means a Virgin, and represents Sakti or Mahamaya. The sign . . . is the 6th Rasi or division, and indicates that there are six primary forces in Nature (synthesized by the Seventh)" . . . These Sakti stand as follows: -

(1.) PARASAKTI. Literally the great or Supreme Force or power. It means and includes the powers of light and heat.

(2.) JNANASAKTI. . . . The power of intellect, of real Wisdom or Knowledge. It has two aspects:

The following are some of its manifestations when placed under the influence or control of material conditions. (a) The power of the mind in interpreting our sensations. (b) Its power in recalling past ideas (memory) and raising future expectation. (c) Its power as exhibited in what are called by modern psychologists "the laws of association," which enables it to form persisting connections between various groups of sensations and possibilities of sensations, and thus generate the notion or idea of an external object. (d) Its power in connecting our ideas together by the mysterious link of memory, and thus generating the notion of self or individuality; some of its manifestations when liberated from the bonds of matter are -- (a) Clairvoyance, (b) Psychometry.

(3.) ITCHASAKTI -- the power of the Will. Its most ordinary manifesta-

[[Footnote(s) -----]]

* The writers of the above knew perfectly well the physical cause of the tides, of the waves, etc. It is the informing Spirit of the whole Cosmic solar body that is meant here, and which is referred to whenever such expressions are used from the mystic point of view.

tion is the generation of certain nerve currents which set in motion such muscles as are required for the accomplishment of the desired object.

(4.) KRIYASAKTI. The mysterious power of thought which enables it to produce external, perceptible, phenomenal results by its own inherent energy. The ancients held that any idea will manifest itself externally if one's attention is deeply concentrated upon it. Similarly an intense volition will be followed by the desired result.

A Yogi generally performs his wonders by means of Itchasakti and Kriyasakti.

(5.) KUNDALINI SAKTI. The power or Force which moves in a curved path. It is the Universal life-Principle manifesting everywhere in nature. This force includes the two great forces of attraction and repulsion. Electricity and magnetism are but manifestations of it. This is the power which brings about that "continuous adjustment of internal relations to external relations" which is the essence of life according to Herbert Spencer, and that "continuous adjustment of external relations to internal relations" which is the basis of transmigration of souls, punar janman (re-birth) in the doctrines of the ancient Hindu philosophers. A Yogi must thoroughly subjugate this power before he can attain Moksham. . . .

(6.) MANTRIKA-SAKTI. The force or power of letters, speech or music. The Mantra Shastra has for its subject-matter this force in all its manifestations..... The influence of melody is one of its ordinary manifestations. The power of the ineffable name is the crown of this Sakti.

Modern Science has but partly investigated the first, second and fifth of the forces above named, but is altogether in the dark as regards the remaining powers. The six forces are in their unity represented by the "Daiviprakriti" (the Seventh, the light of the LOGOS).

The above is quoted to show the real Hindu ideas on the same. It is all esoteric, though not covering the tenth part of what might be said. For one, the six names of the Six Forces mentioned are those of the six Hierarchies of Dhyan Chohans synthesized by their Primary, the seventh, who personify the Fifth Principle of Cosmic Nature, or of the "Mother" in its Mystical Sense. The enumeration alone of the yogi Powers would require ten volumes. Each of these Forces has a living Conscious Entity at its head, of which entity it is an emanation.

But let us compare with the commentary just cited the words of Hermes, the "thrice great":--

"The creation of Life by the Sun is as continuous as his light; nothing arrests or limits it. Around him, like an army of Satellites, are innumerable choirs of genii. These dwell in the neighbourhood of the Immortals, and thence watch over human things. They fulfil the will of the gods (Karma) by means of storms, tempests, transitions of fire and earthquakes; likewise by famines and wars, for the punishment of impiety.* . . . It is the sun who preserves and nourishes all creatures; and even as the Ideal World which environs the sensible world fills this last with the plenitude and universal variety of forms, so also the Sun, enfolding all in his light, accomplishes everywhere the birth and development of creatures." . . . "Under his orders is the choir of Genii, or rather the choirs, for there are many and diverse, and their number corresponds to that of the stars. Every star has its genii, good and evil by nature, or rather by their operation, for operation is the essence of the genii. . . . All these Genii preside over mundane affairs,** they shake and overthrow the constitution of States and of individuals; they imprint their likeness on our Souls, they are present in our nerves, our marrow, our veins, our arteries, and our very brain-substance . . . at the moment when each of us receives life and being, he is taken in charge by the genii (Elementals) who preside over births,*** and who are classed beneath the astral powers (Superhuman astral Spirits.) They change perpetually, not always identically, but revolving in circles.**** They permeate by the body two parts of the Soul, that it may receive from each the impress of his own energy. But the reasonable part of the Soul is not subject to the genii; it is designed

[[Footnote(s) -----]]

* See Stanzas III. and IV. and the Commentaries thereupon, especially the Comments on Stanza IV. "the Lipika and the four Maharajas," the agents of Karma.

** And "Gods" or Dhyanis, too, not only the genii or "guided Forces."

*** The meaning of this is that as man is composed of all the Great Elements: Fire, Air, Water, Earth and Ether -- the ELEMENTALS which belong respectively to these Elements feel attracted to man by reason of their co-essence. That element which predominates in a certain constitution will be the ruling element throughout life. For instance, if man has a preponderance of the Earthly, gnomie element, the gnomes will lead him towards assimilating metals -- money and wealth, and so on. "Animal man is the son of the animal elements out of which his Soul (life) was born, and animals are the mirrors of man," says Paracelsus (De Fundamento Sapientiae). Paracelsus was cautious, and wanted the Bible to agree with what he said, and therefore did not say all.

**** Cyclic progress in development.

for the reception of (the) God,* who enlightens it with a sunny ray. Those who are thus illumined are few in number, and from them the genii abstain: for neither genii nor Gods have any power in the presence of a single ray of God.** But all other men, both soul and body, are directed by genii, to whom they cleave, and whose operations they affect..... The genii have then the control of mundane things and our bodies serve them as instruments.....

The above, save a few sectarian points, represents that which was a universal belief common to all nations till about a century or so back. It is still as orthodox in its broad outlines and features among pagans and Christians alike, if one excepts a handful of materialists and men of Science.

For whether one calls the genii of Hermes and his "Gods," "Powers of Darkness" and "Angels," as in the Greek and Latin Churches; or "Spirits of the Dead," as in Spiritualism or, again, Bhoots and Devas, Shaitan or Djin, as they are still called in India and Mussulman countries -- they are all one and the same thing -- ILLUSION. Let not this, however, be misunderstood in the sense into which the great philosophical doctrine of the Vedantists has been lately perverted by Western schools.

All that which is, emanates from the ABSOLUTE, which, from this qualification alone, stands as the one and only reality -- hence, everything extraneous to this Absolute, the generative and causative Element, must be an illusion, most undeniably. But this is only so from the purely metaphysical view. A man who regards himself as mentally sane, and is so regarded by his neighbours, calls the visions of an insane brother -- whose hallucinations make the victim either happy or supremely wretched, as the case may be -- illusions and fancies likewise. But, where is that madman for whom the hideous shadows in his deranged mind, his illusions, are not, for the time being, as actual and as real as the things which his physician or keeper may see? Everything is relative in this Universe, everything is an illusion. But

[[Footnote(s) -----]]

* The God in man and often the incarnation of a God, a highly Spiritual Dhyana Chohan in him, besides the presence of his own seventh Principle.

** Now, what "god" is meant here? Not God "the Father," the anthropomorphic fiction; for that god is the Elohim collectively, and has no being apart from the Host. Besides, such a god is finite and imperfect. It is the high Initiates and Adepts who are meant here by those men "few in number." And it is precisely those men who believe in "gods" and know no "God," but one Universal unrelated and unconditioned Deity.

the experience of any plane is an actuality for the percipient being, whose consciousness is on that plane; though the said experience, regarded from the purely metaphysical standpoint, may be conceived to have no objective reality. But it is not against metaphysicians, but against physicists and materialists that Esoteric teachings have to fight, and for these Vital Force, Light, Sound, Electricity, even to the objectively pulling force of magnetism, have no objective being, and are said to exist merely as "modes of motion," "sensations and affections of matter."

Neither the Occultists generally, nor the Theosophists, reject, as erroneously believed by some, the views and theories of the modern scientists, only because these views are opposed to Theosophy. The first rule of our Society is to render unto Caesar what is Caesar's. The Theosophists, therefore, are the first to recognize the intrinsic value of science. But when its high priests resolve consciousness into a secretion from the grey matter of the brain, and everything else in nature into a mode of motion, we protest against the doctrine as being unphilosophical, self-contradictory, and simply absurd, from a scientific point of view, as much and even more than from the occult aspect of the esoteric knowledge.

For truly the astral light of the derided Kabbalists has strange and weird secrets for him who can see in it; and the mysteries concealed within its incessantly disturbed waves are there, the whole body of Materialists and scoffers notwithstanding.* These secrets, along with

[[Footnote(s) -----]]

* The astral light of the Kabbalists is very incorrectly translated by some "AEther;" the latter is confused with the hypothetical Ether of Science, and both are referred to by some theosophists as synonymous with Akasa. This is a great mistake.

"A characteristic of Akasa will serve to show how inadequately it is represented by Ether," writes the author of Rational Refutations, thus unconsciously helping Occultism. "In dimension it is infinite; it is not made up of parts; and colour, taste, smell, and tangibility do not appertain to it. So far forth it corresponds exactly to time, space, Isvara, ("The Lord," but rather creative potency and soul -- anima mundi). Its speciality, as compared therewith, consists in its being the material cause of sound. Except for its being so, one might take it to be one with vacuity" (p. 120.)

It is vacuity, no doubt, especially for Rationalists. At any rate Akasa is sure to produce vacuity in the brain of a materialist. Nevertheless, though Akasa is not that Ether of Science, not even the Ether of the Occultist, who defines the latter as one of the principles of Akasa only, it is as certainly, together with its primary, the cause of sound, only a physical and spiritual, not a material cause by any means. The relations [[Footnote continued on next page]]

many other mysteries, will remain non-existent to the materialists of our age, in the same way as America was a non-existent myth for Europeans during the early part of the mediaeval ages, whereas Scandinavians and Norwegians had actually reached and settled in that very old "New World" several centuries before. But, as a Columbus was born to re-discover, and to force the Old World to believe in Antipodal countries, so will there be born scientists who will discover the marvels now claimed by Occultists to exist in the regions of Ether, with their varied and multiform denizens and conscious Entities. Then, nolens volens, Science will have to accept the old "Superstition," as it has several others. And having been once forced to accept it -- judging from past experience -- its learned professors will, in all probability, as in the case of MESMERISM and Magnetism, now re-baptised Hypnotism, father the thing and reject its name. The choice of the new appellation will depend, in its turn, on the "modes of motion," the new name for the older "automatic physical processes among the nerve fibrils of the (Scientific) brain" of Moleschott; as also, very likely, upon the last meal of the namer; since, according to the Founder of the new Hylo-Idealistic Scheme, "Cerebration is generically the same as chylification."* Thus, were one to believe this preposterous proposition, the new name of the archaic thing would have to take its chance, on the inspiration of the namer's liver, and then only would these truths have a chance of becoming scientific!

But TRUTH, however distasteful to the generally blind majorities, has always had her champions, ready to die for her, and it is not the Occultists who will protest against its adoption by Science under whatever new name. But, until absolutely forced on the notice and acceptance of Scientists, many an Occult truth will be tabooed, as the phenomena of the Spiritualists and other psychic manifestations were, to be finally appropriated by its ex-traducers without the least acknowledgment or thanks. Nitrogen has added considerably to chemical knowledge, but its discoverer, Paracelsus, is to this day called a "quack."

[[Footnote(s) -----]]

[[Footnote continued from previous page]] of Ether to Akasa may be defined by applying to both Akasa and Ether the words said of the god in the Vedas, "So himself was indeed (his own) son," one being the progeny of the other and yet itself. This may be a difficult riddle to the profane, but very easy to understand for any Hindu -- though not even a mystic.

* National Reformer, January 9th, 1887. Article "Phreno-Kosmo-Biology," by Dr. Lewins.

How profoundly true are the words of H. T. Buckle, in his admirable "History of Civilization" (Vol. I., p. 256), when he says:--

"Owing to circumstances still unknown (Karmic provision, H.P.B.) there appear from time to time great thinkers, who, devoting their lives to a single purpose, are able to anticipate the progress of mankind, and to produce a religion or a philosophy by which important effects are eventually brought about. But if we look into history we shall clearly see that, although the origin of a new opinion may be thus due to a single man, the result which the new opinion produces will depend on the condition of the people among whom it is propagated. If either a religion or a philosophy is too much in advance of a nation it can do no present service but must bide its time* until the minds of men are ripe for its reception. . . . Every science, every creed has had its martyrs. According to the ordinary course of affairs, a few generations pass away, and then there comes a period when these very truths are looked upon as commonplace facts, and a little later there comes another period in which they are declared to be necessary, and even the dullest intellect wonders how they could ever have been denied."

It is barely possible that the minds of the present generations are not quite ripe for the reception of Occult truths. Such will be the retrospect furnished to the advanced thinkers of the Sixth Root Race of the history of the acceptance of Esoteric Philosophy -- fully and unconditionally. Meanwhile the generations of our Fifth Race will continue to be led away by prejudice and preconceptions. Occult Sciences will have the finger of scorn pointed at them from every street corner, and everyone will seek to ridicule and crush them in the name, and for the greater glory, of Materialism and its so-called Science. The Addendum which completes the present Book shows, however, in an anticipatory answer to several of the forthcoming Scientific objections, the true and mutual positions of the defendant and plaintiff. The Theosophists and Occultists stand arraigned by public opinion, which still holds high the banner of the inductive Sciences. The latter have, then, to be examined; and it must be shown how far their achievements and discoveries in the realm of natural laws are opposed, not so much to our claims, as to the facts in nature. The hour has now struck to ascertain whether the

[[Footnote(s) -----]]

* This is Cyclic law, but this law itself is often defied by human stubbornness.

walls of the modern Jericho are so impregnable that no blast of the Occult trumpet is ever likely to make them crumble.

The so-called Forces, with Light and Electricity heading them, and the constitution of the Solar orb must be carefully examined; as also Gravitation and the Nebular theories. The Natures of Ether and of other Elements must be discussed: thus contrasting scientific with other Occult teachings, while revealing some of the hitherto secret tenets of the latter. (Vide Addendum.)

Some fifteen years ago, the writer was the first to repeat, after the Kabalists, the wise Commandments in the Esoteric Catechism. "Close thy mouth, lest thou shouldst speak of this (the mystery), and thy heart, lest thou shouldst think aloud; and if thy heart has escaped thee, bring it back to its place, for such is the object of our alliance." (Sepher Jezireh, Book of Creation.) And again:-- "This is a secret which gives death: close thy mouth lest thou shouldst reveal it to the vulgar; compress thy brain lest something should escape from it and fall outside." (Rules of Initiation.)

A few years later, a corner of the Veil of Isis had to be lifted; and now another and a larger rent is made. . . .

But old and time-honoured errors -- such as become with every day more glaring and self-evident -- stand arrayed in battle-order now, as they did then. Marshalled by blind conservatism, conceit and prejudice, they are constantly on the watch, ready to strangle every truth, which, awakening from its age-long sleep, happens to knock for admission. Such has been the case ever since man became an animal. That this proves in every case moral death to the revealers, who bring to light any of these old, old truths, is as certain as that it gives LIFE and REGENERATION to those who are fit to profit even by the little that is now revealed to them.

§ I.

SYMBOLISM AND IDEOGRAPHS.

"A symbol is ever, to him who has eyes for it, some dimmer or clearer revelation of the God-like. Through all there glimmers something of a divine idea; nay, the highest ensign that men ever met and embraced under the cross itself, had no meaning, save an accidental extrinsic one." CARLYLE.

THE study of the hidden meaning in every religious and profane legend, of whatsoever nation, large or small -- pre-eminently the traditions of the East -- has occupied the greater portion of the present writer's life. She is one of those who feel convinced that no mythological story, no traditional event in the folk-lore of a people has ever been, at any time, pure fiction, but that every one of such narratives has an actual, historical lining to it. In this the writer disagrees with those symbolologists, however great their reputation, who find in every myth nothing save additional proofs of the superstitious bent of mind of the ancients, and believe that all mythologies sprung from and are built upon solar myths. Such superficial thinkers were admirably disposed of by Mr. Gerald Massey, the poet and Egyptologist, in a lecture on "Lunolatry, Ancient and Modern." His pointed criticism is worthy of reproduction in this part of this work, as it echoes so well our own feelings, expressed openly so far back as 1875, when "Isis Unveiled" was written.

"For thirty years past Professor Max Muller has been teaching in his books and lectures, in the Times and various magazines, from the platform of the Royal Institution, the pulpit of Westminster Abbey, and his chair at Oxford, that mythology is a disease of language, and that the ancient symbolism was a result of something like a primitive aberration.

"'We know,' says Renouf, echoing Max Muller, in his Hibbert lectures, 'we know that mythology is the disease which springs up at a peculiar stage of human culture.' Such is the shallow explanation of the non-evolutionists, and such explanations are still accepted by the British public, that gets its think-

[[Vol. 1, Page]] 304 THE SECRET DOCTRINE.

ing done by proxy. Professor Max Muller, Cox, Gubernatis, and other propounders of the Solar Mythos, have portrayed the primitive myth-maker for us as a sort of Germanised-Hindu metaphysician, projecting his own shadow on a mental mist, and talking ingeniously concerning smoke, or, at least, cloud; the sky overhead becoming like the dome of dreamland, scribbled over with the imagery of aboriginal nightmares! They conceive the early man in their own likeness, and look upon him as perversely prone to self-mystification, or, as Fontenelle has it, 'subject to beholding things that are not there.' They have misrepresented primitive or archaic man as having been idiotically misled from the first by an active but untutored imagination into believing all sorts of fallacies, which were directly and constantly contradicted by his own daily experience; a fool of fancy in the midst of those grim realities that were grinding his experience into him, like the grinding icebergs making their imprints upon the rocks submerged beneath the sea. It remains to be said, and will one day be acknowledged, that these accepted teachers have been no nearer to the beginnings of mythology and language than Burns' poet Willie had been near to Pegasus. My reply is, 'Tis but a dream of the metaphysical theorist that mythology was a disease of language, or of anything else except his own brain. The origin and meaning of mythology have been missed altogether by these solarites and weather-mongers! Mythology was a primitive mode of thinking the early thought. It was founded on natural facts, and is still verifiable in phenomena. There is nothing insane, nothing irrational in it, when considered in the light of evolution, and when its mode of expression by sign-language is thoroughly understood. The insanity lies in mistaking it for human history or Divine Revelation.* Mythology is the repository of man's most ancient science, and what concerns us chiefly is this -- when truly interpreted once more, it is destined to be the death of those false theologies to which it has unwittingly given birth.** In modern phraseology a statement is sometimes said to be mythical in proportion to its being untrue; but the ancient mythology was not a system or mode of falsifying in that sense. Its fables were the means of conveying facts; they were neither forgeries nor fictions. . . . For example, when the Egyptians portrayed the moon as a Cat, they were not ignorant enough to suppose that the moon was a cat; nor did their wandering fancies see any likeness in the moon to a cat; nor was a cat-myth any mere expansion of verbal metaphor; nor had they any intention of making puzzles or riddles. . . . They had observed the simple fact that the cat saw in the dark, and that her eyes became full-orbed, and grew most luminous by night. The moon was the seer by night in heaven, and the cat was its equivalent on the earth; and so the familiar cat was adopted as a representative, a natural sign, a living pictograph of the lunar orb. . . . And so it

followed that the sun which saw down in the under-world at night could also be called the cat, as it was, because it also saw in the dark. The name of the

[[Footnote(s)]] -----

* As far as divine revelation is concerned, we agree. Not so with regard to "human history." . . . For there is "history" in most of the allegories and "myths" of India, and events, real actual events, are concealed under them.

** When the "false theologies" disappear, then true prehistoric realities will be found, contained especially in the mythology of the Aryans -- ancient Hindoos, and even the pre-Homeric Hellenes.

[[Vol. 1, Page]] 305 EMBLEM AND SYMBOL DIFFER.

cat in Egyptian is mau, which denotes the seer, from mau, to see. One writer on mythology asserts that the Egyptians 'imagined a great cat behind the sun, which is the pupil of the cat's eye.' But this imagining is all modern. It is the Mullerite stock in trade. The moon as cat was the eye of the sun, because it reflected the solar light, and because the eye gives back image in its mirror. In the form of the goddess Pasht, the cat keeps watch for the sun, with her paw holding down and bruising the head of the serpent of darkness, called his eternal enemy. . . ."

This is a very correct exposition of the lunar-mythos from its astronomical aspect. Selenography, however, is the least esoteric of the divisions of lunar Symbology. To master thoroughly -- if one is permitted to coin a new word -- Selenognosis, one must become proficient in more than its astronomical meaning. The moon (vide § VII. Deus Lunus) is intimately related to the Earth, as shown in Stanza VI. of Book I., and is more directly concerned with all the mysteries of our globe than is even Venus-Lucifer, the occult sister and alter-ego of the Earth.

The untiring researches of Western, and especially German, symbologists, during the last and the present centuries, have brought every Occultist and most unprejudiced persons to see that without the help of symbology (with its seven departments, of which the moderns know nothing) no ancient Scripture can ever be correctly understood. Symbology must be studied from every one of its aspects, for each nation had its own peculiar methods of expression. In short, no Egyptian papyrus, no Indian tolla, no Assyrian tile, or Hebrew scroll, should be read and accepted literally.

This every scholar now knows. The able lectures of Mr. G. Massey alone are sufficient in themselves to convince any fair-minded Christian that to accept the dead-letter of the Bible is equivalent to falling into a grosser error and superstition than any hitherto evolved by the brain of the savage South Sea Islander. But the point to which even the most truth-loving and truth-searching Orientalists -- whether Aryanists or Egyptologists -- seem to remain blind, is the fact that every symbol in papyrus or olla is a many-faced diamond, each of whose facets not merely bears several interpretations, but relates likewise to several sciences. This is instanced in the just quoted interpretation of the moon symbolized by the cat -- an example of sidero-terrestrial imagery; the moon bearing many other meanings besides this with other nations.

As a learned Mason and Theosophist, the late Mr. Kenneth Mackenzie, has shown in his Royal Masonic Cyclopaedia, there is a great difference between emblem and symbol. The former "comprises a larger series of thoughts than a symbol, which may be said rather to illustrate some single special idea." Hence, the symbols (say lunar, or solar) of several countries, each illustrating such a special idea, or series of ideas, form collectively an esoteric emblem. The latter is "a concrete visible

[[Vol. 1, Page]] 306 THE SECRET DOCTRINE.

picture or sign representing principles, or a series of principles, recognizable by those who have received certain instructions" (initiates). To put it still plainer, an emblem is usually a series of graphic pictures viewed and explained allegorically, and unfolding an idea in panoramic views, one after the other. Thus the Puranas are written emblems. So are the Mosaic and Christian Testaments, or the Bible, and all other exoteric Scriptures. As the same authority shows:--

"All esoteric Societies have made use of emblems and symbols, such as the Pythagorean Society, the Eleusinian, the Hermetic Brethren of Egypt, the Rosicrucians, and the Freemasons. Many of these emblems it is not proper to divulge to the general eye, and a very minute difference may make the emblem or symbol differ widely in its meaning. The magical sigillae, being founded on certain principles of numbers, partake of this character, and although monstrous or ridiculous in the eyes of the uneducated, convey a whole body of doctrine to those who have been trained to recognise them."

The above enumerated societies are all comparatively modern, none dating back earlier than the middle ages. How much more proper, then, that the students of the oldest Archaic School should be careful not to divulge secrets of far more importance to humanity (in the sense of being dangerous in the hands of the latter) than any of the so-called "Masonic Secrets," which have now become, as the French say, those of "Polichinelle!" But this restriction can apply only to the psychological or rather psycho-physiological and Cosmical significance of symbol and emblem, and even to that only partially. An adept must refuse to impart the conditions and means that lead to a correlation of elements, whether psychic or physical, that may produce a hurtful result as well as a beneficent one. But he is ever ready to impart to the earnest student the secret of the ancient thought in anything that regards history concealed under mythological symbolism, and thus to furnish a few more land-marks towards a retrospective view of the past, as containing useful information with regard to the origin of man, the evolution of the races and geognosy; yet it is the crying

complaint of to-day, not only among theosophists, but also among the few profane interested in the subject. "Why do not the adepts reveal that which they know?" To this, one might answer, "Why should they, since one knows beforehand that no man of science will accept, even as an hypothesis, let alone as a theory or axiom, the facts imparted. Have you so much as accepted or believed in the A B C of the Occult philosophy contained in the Theosophist, "Esoteric Buddhism," and other works and periodicals? Has not even the little which was given, been ridiculed and derided, and made to face the "animal" and "ape theory" of Huxley -- Haeckel, on one hand, and the rib of Adam and the apple on the other? Notwithstanding such an unenviable prospect, a mass of facts is given in the present work. And now the origin of man, the evolution of the globe and

[[Vol. 1, Page]] 307 MAGIC POTENCY OF SOUND.

the races, human and animal, are as fully treated here as the writer is able to treat them.

The proofs brought forward in corroboration of the old teachings are scattered widely throughout the old scriptures of ancient civilizations. The Puranas, the Zendavesta, and the old classics are full of them; but no one has ever gone to the trouble of collecting and collating together those facts. The reason for this is, that all such events were recorded symbolically; and that the best scholars, the most acute minds, among our Aryanists and Egyptologists, have been too often darkened by one or another preconception; still oftener, by one-sided views of the secret meaning. Yet even a parable is a spoken symbol: a fiction or a fable, as some think; an allegorical representation, we say, of life-realities, events, and facts. And, as a moral was ever drawn from a parable, that moral being an actual truth and fact in human life, so an historical, real event was deduced -- by those versed in the hieratic sciences -- from certain emblems and symbols recorded in the ancient archives of the temples. The religious and esoteric history of every nation was embedded in symbols; it was never expressed in so many words. All the thoughts and emotions, all the learning and knowledge, revealed and acquired, of the early races, found their pictorial expression in allegory and parable. Why? Because the spoken word has a potency unknown to, unsuspected and disbelieved in, by the modern "sages." Because sound and rhythm are closely related to the four Elements of the Ancients; and because such or another vibration in the air is sure to awaken corresponding powers, union with which produces good or bad results, as the case may be. No student was ever allowed to recite historical, religious, or any real events in so many unmistakable words, lest the powers connected with the event should be once more attracted. Such events were narrated only during the Initiation, and every student had to record them in corresponding symbols, drawn out of his own mind and examined later by his master, before they were finally accepted. Thus was created in time the Chinese Alphabet, as, before that, the hieratic symbols were fixed upon in old Egypt. In the Chinese language, the alphabet of which may be read in any language,* and which is only a little less ancient than the Egyptian alphabet of Thoth, every word has its corresponding symbol conveying the word needed in a pictorial form. The language possesses many thousands of such symbol letters, or logograms, each meaning a whole word; for letters proper, or an alphabet, do not exist in the Chinese language any more than they did in the Egyptian till a far later period.

[[Footnote(s)]] -----

* Thus, a Japanese who does not understand one word of Chinese, meeting with a Chinaman who has never heard the language of the former, will communicate in writing with him, and they will understand each other perfectly -- because the writing is symbolical.

[[Vol. 1, Page]] 308 THE SECRET DOCTRINE.

The explanation of the chief symbols and emblems is now attempted, as Book II., which treats of Anthropogenesis, would be most difficult to understand without a preparatory acquaintance with the metaphysical symbols at least.

Nor would it be just to enter upon an esoteric reading of symbolism without giving due honour to one who has rendered it the greatest service in this century, by discovering the chief key to ancient Hebrew symbology, interwoven strongly with metrology, one of the keys to the once universal mystery language. Mr. Ralston Skinner, of Cincinnati, the author of "The Hebrew-Egyptian Mystery and the Source of Measures" has our thanks. A mystic and a Kabbalist by nature, he has laboured for many years in this direction, and his efforts were certainly crowned with great success. In his own words:--

"The writer is quite certain that there was an ancient language which modernly and up to this time appears to have been lost, the vestiges of which, however, abundantly exist. . . . The author discovered that this (integral ratio in numbers of diameter to circumference of a circle) geometrical ratio was the very ancient, and probably the divine origin of linear measures. . . . It appears almost proven that the same system of geometry, numbers, ratio, and measures were known and made use of on the continent of North America, even prior to the knowledge of the same by the descending Semites. . . ."

"The peculiarity of this language was that it could be contained in another, concealed and not to be perceived, save through the help of special instruction; letters and syllabic signs possessing at the same time the powers or meaning of numbers, of geometrical shapes, pictures, or ideographs and symbols, the designed scope of which would be determinatively helped out by parables in the shape of narratives or parts of narratives; while also it could be set forth separately, independently, and variously, by pictures, in stone work, or in earth construction."

"To clear up an ambiguity as to the term language: Primarily the word means the expression of ideas by human speech; but, secondarily, it may mean the expression of ideas by any other instrumentality. This old language is so composed in the Hebrew text, that by the use of the written characters, which will be the language first defined, a distinctly separated series of ideas may be intentionally communicated, other than those ideas expressed by the reading of the sound signs. This secondary language sets forth, under a veil, series of ideas, copies in imagination of things sensible, which may be pictured, and of things which may be classed as

real without being sensible; as, for instance, the number 9 may be taken as a reality, though it has no sensible existence, so also a revolution of the moon, as separate from the moon itself by which that revolution has been made, may be taken as giving rise to, or causing a real idea, though such a revolution has no substance. This idea-language may consist of symbols restricted to arbitrary terms and signs, having a very limited range of conceptions, and quite valueless, or it may be a reading of nature in some of her manifestations of a value almost immeasurable, as regards human civilization. A picture of something natural may give rise to ideas of co-ordina-

[[Vol. 1, Page]] 309 MYSTERY LANGUAGE.

tive subject-matter, radiating out in various and even opposing directions, like the spokes of a wheel, and producing natural realities in departments very foreign to the apparent tendency of the reading of the first or starting picture. Notion may give rise to connected notion, but if it does, then, however apparently incongruous, all resulting ideas must spring from the original picture and be harmonically connected, or related. . . . Thus with a pictured idea radical enough, the imagination of the Cosmos itself even in its details of construction might result. Such a use of ordinary language is now obsolete, but it has become a question with the writer whether at one time, far back in the past, it, or such, was not the language of the world and of universal use, possessed, however, as it became more and more moulded into its arcane forms, by a select class or caste. By this I mean that the popular tongue or vernacular commenced even in its origin to be made use of as the vehicle of this peculiar mode of conveying ideas. Of this the evidences are very strong; and, indeed, it would seem that in the history of the human race there happened, from causes which at present, at any rate, we cannot trace, a lapse or loss from an original perfect language and a perfect system of science -- shall we say perfect because they were of divine origin and importation?"

"Divine origin" does not mean here a revelation from an anthropomorphic god on a mount amidst thunder and lightning; but, as we understand it, a language and a system of science imparted to the early mankind by a more advanced mankind, so much higher as to be divine in the sight of that infant humanity. By a "mankind," in short, from other spheres; an idea which contains nothing supernatural in it, but the acceptance or rejection of which depends upon the degree of conceit and arrogance in the mind of him to whom it is stated. For, if the professors of modern knowledge would only confess that, though they know nothing of the future of the disembodied man -- or rather will accept nothing -- yet this future may be pregnant with surprises and unexpected revelations to them, once their Egos are rid of their gross bodies -- then materialistic unbelief would have fewer chances than it has. Who of them knows, or can tell, what may happen when once the life cycle of this globe is run down and our mother earth herself falls into her last sleep? Who is bold enough to say that the divine Egos of our mankind -- at least the elect out of the multitudes passing on to other spheres -- will not become in their turn the "divine" instructors of a new mankind generated by them on a new globe, called to life and activity by the disembodied "principles" of our Earth? (See Stanza VI., Book I., Part 1.) All this may have been the experience of the PAST, and these strange records lie embedded in the "Mystery language" of the prehistoric ages, the language now called SYMBOLISM.

[[Vol. 1, Page]] 310 THE SECRET DOCTRINE.

§ II.
THE MYSTERY LANGUAGE AND ITS KEYS.

RECENT discoveries made by great mathematicians and Kabalists thus prove, beyond a shadow of doubt, that every theology, from the earliest and oldest down to the latest, has sprung not only from a common source of abstract beliefs, but from one universal esoteric, or "Mystery" language. These scholars hold the key to the universal language of old, and have turned it successfully, though only once, in the hermetically closed door leading to the Hall of Mysteries. The great archaic system known from prehistoric ages as the sacred Wisdom Science, one that is contained and can be traced in every old as well as in every new religion, had, and still has, its universal language -- suspected by the Mason Ragon -- the language of the Hierophants, which has seven "dialects," so to speak, each referring, and being specially appropriated, to one of the seven mysteries of Nature. Each had its own symbolism. Nature could thus be either read in its fulness, or viewed from one of its special aspects.

The proof of this lies, to this day, in the extreme difficulty which the Orientalists in general, the Indianists and Egyptologists especially, experience in interpreting the allegorical writings of the Aryans and the hieratic records of old Egypt. This is because they will never remember that all the ancient records were written in a language which was universal and known to all nations alike in days of old, but which is now intelligible only to the few. Like the Arabic figures which are plain to a man of whatever nation, or like the English word and, which becomes et for the Frenchman, and for the German, and so on, yet which may be expressed for all civilized nations in the simple sign & -- so all the words of that mystery language signified the same thing to each man of whatever nationality. There have been several men of note who have tried to re-establish such a universal and philosophical tongue: Delgarme, Wilkins, Leibnitz; but Demaimieux, in his Pasigraphie, is the only one who has proven its possibility. The scheme of Valentinius, called the "Greek Kabala," based on the combination of Greek letters, might serve as a model.

The many-sided facets of the mystery language have led to the adoption of widely varied dogmas and rites in the exotericism of the Church rituals. It is they, again, which are at the origin of most of the dogmas of the Christian Church, e.g., the seven Sacraments, the Trinity, the Resurrection; the seven capital Sins and the seven Virtues. The seven keys to the mystery tongue, however, having always been in

[[Vol. 1, Page]] 311 EGYPT'S MANY RELIGIONS.

the keeping of the highest among the initiated Hierophants of antiquity, it is only the partial use of a few out of the seven which passed, through the treason of some early Church Fathers -- ex-initiates of the Temples -- into the hands of the new sect of the Nazarenes. Some of the early Popes were Initiates, but the last fragments of their knowledge have now fallen into the power of the Jesuits, who have turned them into a system of sorcery.

It is maintained that INDIA (not in its present limits, but including its ancient boundaries) is the only country in the world which still has among her sons adepts, who have the knowledge of all the seven sub-systems and the key to the entire system. Since the fall of Memphis, Egypt began to lose those keys one by one, and Chaldea had preserved only three in the days of Berosus. As for the Hebrews, in all their writings they show no more than a thorough knowledge of the astronomical, geometrical and numerical systems of symbolizing all the human, and especially the physiological functions. They never had the higher keys.

"Every time I hear people talking of the religion of Egypt," writes M. Gaston Maspero, the great French Egyptologist and the successor of Mariette Bey, "I am tempted to ask which of the Egyptian religions they are talking about? Is it of the Egyptian religion of the 4th Dynasty, or of the Egyptian religion of the Ptolemaic period? Is it of the religion of the rabble, or of that of the learned men? Of that which was taught in the schools of Heliopolis, or of that other which was in the minds and conceptions of the Theban sacerdotal class? For, between the first tomb of Memphis, which bears the cartouche of a king of the third dynasty, and the last stones at Esneh under Caesar-Philippus, the Arabian, there is an interval of at least five thousand years. Leaving aside the invasion of the Shepherds, the Ethiopian and Assyrian dominions, the Persian conquest, Greek colonization, and the thousand revolutions of its political life, Egypt has passed during those five thousand years through many vicissitudes of life, moral and intellectual. Chapter XVII. of the Book of the Dead which seems to contain the exposition of the system of the world as it was understood at Heliopolis during the time of the first dynasties, is known to us only by a few copies of the eleventh and twelfth dynasties. Each of the verses composing it was already at the time interpreted in three or four different ways; so different, indeed, that according to this or another school, the Demiurge became the solar fire -- Ra-shoo, or the primordial water. Fifteen centuries later, the number of readings had increased considerably. Time had, in its course, modified the ideas about the universe and the forces that ruled it. During the hardly 18 centuries that Christianity exists, it has worked,

[[Vol. 1, Page]] 312 THE SECRET DOCTRINE.

developed and transformed most of its dogmas; how many times, then, might not the Egyptian clergy have altered its dogmas during those fifty centuries that separate Theodosius from the King Builders of the Pyramids?"

Here we believe the eminent Egyptologist is going too far. The exoteric dogmas may often have been altered, the esoteric never. He does not take into account the sacred immutability of the primitive truths, revealed only during the mysteries of initiation. The Egyptian priests have forgotten much, they altered nothing. The loss of a good deal of the primitive teaching was due to the sudden deaths of the great Hierophants, who passed away before they had time to reveal all to their successors; mostly, to the absence of worthy heirs to the knowledge. Yet they have preserved in their rituals and dogmas the principal teachings of the secret doctrine. Thus, in the seventeenth chapter mentioned by Maspero, one finds (1) Osiris saying he is Toum (the creative force in nature, giving form to all Beings, spirits and men), self-generated and self-existent, issued from Noun, the celestial river, called Father-mother of the gods, the primordial deity, which is chaos or the Deep, impregnated by the unseen spirit. (2) He has found Shoo (solar force) on the staircase in the City of the Eight (the two cubes of good and Evil), and he has annihilated the evil principles in Noun (chaos) the children of Rebellion. (3) He is the Fire and Water, i.e., Noun the primordial parent, and he created the gods out of his limbs -- 14 gods (twice seven) seven dark and seven light gods (the seven Spirits of the Presence of the Christians and the Seven dark Evil Spirits). (4) He is the Law of existence and Being (v. 10), the Bennoo (or phoenix, the bird of resurrection in Eternity), in whom night follows the day, and day the night -- an allusion to the periodical cycles of cosmic resurrection and human re-incarnation; for what can this mean? "The wayfarer who crosses millions of years, in the name of One, and the great green (primordial water or Chaos) the name of the other" (v. 17), one begetting millions of years in succession, the other engulfing them, to restore them back. (5) He speaks of the Seven Luminous ones who follow their Lord, who confers justice (Osiris in Amenti).

All this is now shown to have been the source and origin of Christian dogmas. That which the Jews had from Egypt, through Moses and other initiates, was confused and distorted enough in later days; and that which the Church got from both, is still more misinterpreted.

Yet their system is now proven identical in this special department of symbology -- the key, namely, to the mysteries of astronomy as connected with those of generation and conception -- with those ideas of ancient religions, the theology of which has developed the phallic element. The Jewish system of sacred measures applied to religious symbols is the same,

[[Vol. 1, Page]] 313 THE JEWS, AND THEIR SYSTEM.

so far as geometrical and numerical combinations go, as those of Chaldea, Greece, and Egypt, having been adopted by the Jews during the centuries of their slavery and captivity with those nations.* What was that system? It is the intimate conviction of the author of "The Source of Measures" that "the Mosaic Books were intended, by a mode of art speech, to set forth a geometrical and numerical system of exact science, which should serve as an origin of measures." Piazzzi Smyth believes likewise. This system and these measures are found by some scholars to be identical with those used in the construction of the great pyramid -- but this is only partially so. "The foundation of these measures was the Parker ratio," says Mr. R. Skinner, in "The Source of Measures."

The author of this very extraordinary work has found it out, he says, in the use of the integral ratio in numbers of diameter to circumference of a circle, discovered by John Parker, of New York. This ratio is 6,561 for diameter, and 20,612 for circumference. Furthermore, that this geometrical ratio was the very ancient (and probably) the divine origin of what have now become through exoteric handling and practical application the British linear measures, "the underlying unit of which, viz., the inch, was likewise the base of one of the royal Egyptian cubits and of the Roman foot. He also found out that there was a modified form of the ratio, viz., 113-355 (explained in his work); and that while this last ratio pointed through its origin to the exact integral pi, or to 6,561 to 20,612, it also served as a base for astronomical calculations. The author discovered that a system of exact science, geometrical, numerical, and astronomical, founded on these ratios and to be found in use in the construction of the Great Egyptian Pyramid, was in part the burden of this language as contained in, and concealed under, the verbiage of the Hebrew text of the Bible. The inch and the two-foot rule of 24 inches interpreted for use through the elements of the circle (see first pages of Book I.) and the ratios mentioned, were found to be at the basis or foundation of this natural and Egyptian and Hebrew system of science, while, moreover, it seems evident enough that the system itself was looked upon as of divine origin and of divine revela-

[[Footnote(s)]] -----

* As we said in Isis (Vol. II. p. 438-9), "To the present moment, in spite of all controversies and researches, History and Science remain as much as ever in the dark as to the origin of the Jews. They may be as well the exiled Tchandalas of old India, the 'bricklayers' mentioned by Vina-Svata, Veda-Vyasa and Manu, as the Phoenicians of Herodotus, or the Hyk-Sos of Josephus, or descendants of Pali shepherds, or a mixture of all these. The Bible names the Tyrians as a kindred people, and claims dominion over them. . . . Yet whatever they may have been, they became a hybrid people, not long after Moses, as the Bible shows them freely intermarrying not alone with the Canaanites, but with every other nation or race they came in contact with."

[[Vol. 1, Page]] 314 THE SECRET DOCTRINE.

tion. . . ." But let us see what is said by the opponents of Prof. Piazz Smyth's measurements of the Pyramid.

Mr. Petrie seems to deny them, and to have made short work altogether of Piazz Smyth's calculations in their Biblical connection. So does Mr. Proctor, the champion "Coincidentalist" for many years past in every question of ancient arts and sciences. Speaking of "the multitude of relations independent of the Pyramid, which have turned up while the Pyramidalists have been endeavouring to connect the pyramid with the solar system . . . these coincidences," he says, "are altogether more curious than any coincidence between the Pyramid and astronomical numbers: the former are as close and remarkable as they are real" (i.e., those "coincidences" that would remain if even the pyramid had no existence); "the latter which are only imaginary (?) have only been established by the process which schoolboys call 'fudging,' and now new measures have left the work to be done all over again" (Petrie's letter to the Academy, Dec. 17, 1881.) To this Mr. Staniland Wake justly observes in his work on "The Origin and Significance of the Great Pyramid" (London, 1882): "They must, however, have been more than mere coincidences, if the builders of the Pyramid had the astronomical knowledge displayed in its perfect orientation and in its other admitted astronomical features."

They had it; and it is on this "knowledge" that the programme of the MYSTERIES and of the series of Initiations was based: thence, the construction of the Pyramids, the everlasting record and the indestructible symbol of these Mysteries and Initiations on Earth, as the courses of the stars are in Heaven. The cycle of Initiation was a reproduction in miniature of that great series of Cosmic changes to which astronomers have given the name of tropical or sidereal year. Just as, at the close of the cycle of the sidereal year [25,868 years], the heavenly bodies return to the same relative positions as they occupied at its outset, so at the close of the cycle of Initiation the inner man has regained the pristine state of divine purity and knowledge from which he set out on his cycle of terrestrial incarnation.

Moses, an Initiate into the Egyptian Mystagogy, based the religious mysteries of the new nation which he created, upon the same abstract formula derived from this sidereal cycle, which he symbolised under the form and measurements of the tabernacle, that he is supposed to have constructed in the wilderness. On these data, the later Jewish High Priests constructed the allegory of Solomon's Temple -- a building which never had a real existence, any more than had King Solomon himself, who is simply, and as much a solar myth as is the still later Hiram Abif, of the Masons, as Ragon has well demonstrated. Thus, if the measurements of this allegorical temple, the symbol of the cycle of

[[Vol. 1, Page]] 315 PIAZZA SMYTH AND PETRIE DISAGREE.

Initiation, coincide with those of the Great Pyramid, it is due to the fact that the former were derived from the latter through the Tabernacle of Moses.

That our author has undeniably discovered one and even two of the keys is fully demonstrated in the work just quoted. One has but to read it to feel a growing conviction that the hidden meaning of the allegories and parables of both Testaments is now unveiled. But that he owes this discovery far more to his own genius than to Parker and Piazz Smyth, is as certain, if not more so. For, as just shown, whether the measures of the great Pyramid taken and adopted as the correct ones by the Biblical "Pyramidalists" are beyond suspicion, is not so sure. A proof of this is the work called "The Pyramids and Temples of Gizeh," by Mr. F. Petrie, besides other works written quite recently to oppose the said calculations, which were called biased. We gather that nearly every one of Piazz Smyth's measurements differs from the later and more carefully made measurements of Mr. Petrie, who concludes the Introduction to his work with this sentence:

"As to the results of the whole investigation, perhaps many theories will agree with an American who was a warm believer in Pyramid theories when he came to Gizeh. I had the pleasure of his company there for a couple of days, and at our last meal together he said to me in a saddened tone -- 'Well, Sir! I feel as if I had been to a funeral. By all means let the old theories have a decent burial, though we should take care that in our haste none of the wounded ones are buried alive.'"

As regards the late J. Parker's calculation in general, and his third proposition especially, we have consulted some eminent mathematicians, and this is the substance of what they say:

Parker's reasoning rests on sentimental, rather than mathematical, considerations, and is logically inconclusive.

Proposition III., namely, that --

"The circle is the natural basis or beginning of all area, and the square being made so in mathematical science, is artificial and arbitrary --"

-- is an illustration of an arbitrary proposition, and cannot safely be relied upon in mathematical reasoning. The same observation applies, even more strongly, to Proposition VII., which states that:

"Because the circle is the primary shape in nature, and hence the basis of area; and because the circle is measured by, and is equal to the square only in ratio of half its circumference by the radius, therefore, circumference and radius, and not the square of diameter, are the only natural and legitimate elements of area, by which all regular shapes are made equal to the square, and equal to the circle."

Proposition IX. is a remarkable example of faulty reasoning, and it is the one on which Mr. Parker's Quadrature mainly rests. Here it is:-

[[Vol. 1, Page]] 316 THE SECRET DOCTRINE.

"The circle and the equilateral triangle are opposite to one another in all the elements of their construction, and hence the fractional diameter of one circle, which is equal to the diameter of one square, is in the opposite duplicate ratio to the diameter of an equilateral triangle whose area is one," etc., etc.

Granting, for the sake of argument, that a triangle can be said to have a radius in the sense in which we speak of the radius of a circle, -- for what Parker calls the radius of the triangle is the radius of a circle inscribed in the triangle and therefore not the radius of the triangle at all, -- and granting for the moment the other fanciful and mathematical propositions united in his premises, why must we conclude that if the triangle and circle are opposite in all the elements of their construction, the diameter of any defined circle is in the opposite duplicate ratio of the diameter of any given equivalent triangle? What necessary connection is there between the premises and the conclusion? The reasoning is of a kind not known in geometry, and would not be accepted by strict mathematicians.

Whether the Archaic esoteric system originated the British inch or not, is of little consequence, however, to the strict and true metaphysician. Nor does Mr. Ralston Skinner's esoteric reading of the Bible become incorrect, merely because the measurements of the Pyramid will not be found to agree with those of Solomon's temple, the ark of Noah, etc.; or because Mr. Parker's Quadrature of the Circle is rejected by mathematicians. For Mr. Skinner's reading depends first of all on the Kabalistic methods and the Rabbinical value of the Hebrew letters. But it is extremely important to ascertain whether the measures used in the evolution and building of the Aryan symbolic religion, in the construction of their temples, the figures given in the Puranas, and especially in their chronology, their astronomical symbols, the duration of the cycles, and other computations, were, or were not, the same as those used in the Biblical measurements and glyphs. For this will prove that the Jews, unless they took their sacred cubit and measurements from the Egyptians (Moses being an initiate of the Priests) must have got those notions from India. At any rate they passed them to the early Christians. Hence, it is the Occultists and Kabalists who are the "true" heirs to the KNOWLEDGE, or the secret wisdom which is still found in the Bible; for they alone now understand its real meaning, whereas profane Jews and Christians cling to the husks and dead letter thereof. That it is the system of measures which led to the invention of the God-names Elohim and Jehovah, and their adaptation to phallicism, and that Jehovah is a not very flattered copy of Osiris, is now demonstrated by the author of the "Source of Measures." But the latter and Mr. Piazzi Smyth both seem to labour under the impression that (a) the priority of the system belongs to the Israelites,

[[Vol. 1, Page]] 317 TRUTH MUST PREVAIL AT LAST.

the Hebrew language being the divine language, and that (b) this universal language belongs to direct revelation!

The latter hypothesis is correct only in the sense shown in the last paragraph of the preceding §; but we have yet to agree as to the nature and character of the divine "Revealer." With regard to priority, this, to the profane, will of course depend on (a) the internal and external evidence of the revelation, and (b) on each scholar's individual preconception. This, however, cannot prevent either the theistic Kabalist, or the Pantheistic Occultist, from believing each in his way; neither of the two convincing the other. The data furnished by history are too meagre and unsatisfactory for either of them to prove to the sceptic which of them is right.

On the other hand, the proofs afforded by tradition are too constantly rejected for us to hope to settle the question in our present age. Meanwhile, materialistic science will be laughing impartially at both Kabalists and Occultists. But the said vexed question of priority once laid aside, Science, in its departments of philology and comparative religion, will find itself finally taken to task, and be compelled to admit the common claim.* Its greatest scholars, instead of pooh-poohing that supposed

[[Footnote(s)]] -----

* One by one the claims become admitted, as one Scientist after another is compelled to recognize the facts given out from the Secret Doctrine -- though he rarely, if ever, recognizes that he has been anticipated in his statements. Thus, in the palmy days of Mr. Piazzi Smyth's authority on the Pyramid of Gizeh, his theory was, that the porphyry sarcophagus of the King's Chamber "is the unit of measure for the two most enlightened nations of the earth, England and America," and was no better than a "corn bin." This was vehemently denied by us in *Isis Unveiled* just published at that time. Then the New York press arose in arms (the "Sun" and the "World" chiefly) against our presuming to correct or find fault with such a star of learning. On p. 519, vol. I., we had said, that Herodotus when treating of that Pyramid "might have added that, externally it symbolized the creative principle of Nature, and illustrated also the principles of geometry, mathematics, astrology, and astronomy. Internally, it was a majestic fane, in whose sombre recesses were performed the mysteries, and whose walls had often witnessed the initiation-scenes of members of the royal family. The porphyry sarcophagus, which Professor Piazzi Smyth, Astronomer Royal of Scotland, degrades into a corn-bin, was the baptismal font, upon emerging from which the neophyte was "born again" and became an adept."

Our statement was laughed at in those days. We were accused of having got our ideas from the "craze" of Shaw, an English writer who had maintained that the Sarcophagus had been used for the celebration of the Mysteries of Osiris; (we had never heard of that writer!). And now, six or seven years later, this is what Mr. Staniland Wake writes on p. 93 of his paper, on "The Origin and Significance of the Great Pyramid."

"The so-called King's Chamber, of which an enthusiastic pyramidist says, 'The polished walls, fine materials, grand proportions, and exalted place, eloquently tell of glories yet to come -- if not, the chamber of perfections of Cheops' tomb, was probably the place to which the initiate was admitted after he had passed through the narrow upward passage and the grand gallery, with its lowly termination, which gradually prepared him for the [[Footnote continued on next page]]

[[Vol. 1, Page]] 318 THE SECRET DOCTRINE.

"farrago of absurd fiction and superstitions," as the Brahminical literature is generally termed, will endeavour to learn the symbolical universal language with its numerical and geometrical keys. But here again they will hardly be successful if they share the belief that the Jewish Kabalistic system contains the key to the whole mystery: for, it does not. Nor does any other Scripture at present possess it in its entirety, for even the Vedas are not complete. Every old religion is but a chapter or two of the entire volume of archaic primeval mysteries -- Eastern Occultism alone being able to boast that it is in possession of the full secret, with its seven keys. Comparisons will be instituted, and as much as possible will be explained in this work -- the rest is left to the student's personal intuition. For in saying that Eastern Occultism has the secret, it is not as if a "complete" or even an approximate knowledge was claimed by the writer, which would be absurd. What I know, I give out; that which I cannot explain, the student must find out for himself.

But while supposing that the whole cycle of the universal mystery language will not be mastered for whole centuries to come, even that which has been hitherto discovered in the Bible by some scholars is quite sufficient to demonstrate the claim -- mathematically. Judaism having availed itself of two keys out of the seven, and these two keys having been now rediscovered, it becomes no longer a matter of individual speculation and hypothesis, least of all of "coincidence," but one of a correct reading of the Bible texts, as anyone acquainted with arithmetic and verifies an addition or total.* A few years longer and this system will kill the dead letter of the Bible, as it will that of all the other exoteric faiths, by showing the dogmas in their real, naked meaning.

And then this undeniable meaning, however incomplete, will unveil the mystery of Being, besides changing entirely the modern scientific systems of Anthropology, Ethnology and especially that of Chronology. The element of Phallicism, found in every God-name and narrative in the Old (and to some degree in the New) Testament, may also in time considerably change modern materialistic views in Biology and Physiology.

Divested of their modern repulsive crudeness, such views of nature and man, on the authority of the celestial bodies and their mysteries,

[[Footnote(s)]] -----

[[Footnote continued from previous page]] final stage of the SACRED MYSTERIES." Had Mr. Staniland Wake been a Theosophist, he might have added that the narrow upward passage leading to the King's chamber had a "narrow gate" indeed; the same "strait gate" which "leadeth unto life," or the new spiritual re-birth alluded to by Jesus in Matthew vii. 13 et seq; and that it is this gate in the Initiation temple, that the writer who recorded the words alleged to have been spoken by an Initiate, was thinking of.

* All we have said in *Isis* is now found corroborated in the "Egyptian Mystery; or The Source of Measures," by those readings of the Bible with the numerical and geometrical keys thereto.

[[Vol. 1, Page]] 319 MOSES COPIED FROM SARGON.

will unveil the evolutions of the human mind and show how natural was such a course of thought. The so-called phallic symbols have become offensive only because of the element of materiality and animality in them. As they originated with the archaic races, which, issuing to their personal knowledge from an androgyne ancestry, were the first phenomenal manifestations in their own sight of the separation of sexes and the ensuing mystery of creating in their turn -- such symbols were but natural. If later races have degraded them, especially the "chosen people," this does not affect the origin of those symbols. The little Semitic tribe -- one of the smallest branchlets from the commingling of the 4th and 5th sub-races (the Mongolo-Turanian and the Indo-European, so-called, after the sinking of the great Continent) -- could only accept its symbology in the spirit which was given to it by the nations from which it was derived. Perchance, in the Mosaic beginnings, that symbology was not as crude as it became later under the handling of Ezra, who remodelled the whole Pentateuch. For the glyph of Pharaoh's daughter (the woman), the Nile (the Great Deep and Water), and the baby-boy found floating therein in the ark of rushes, has not been primarily composed for, or by, Moses. It has been found anticipated in the Babylonian fragments on the tiles, in the story of King Sargon,* who lived far earlier than Moses. Now, what is the logical inference? Most assuredly that which gives us the right to say that the story told of Moses by Ezra had been learned by him while at Babylon,

[[Footnote(s)]] -----

* On page 224 of Assyrian Antiquities Mr. George Smith says: "In the palace of Sennacherib at Kouyunjik I found another fragment of the curious history of Sargon. . . . published in my translation in the Transactions of the Society of Biblical Archaeology, vol. I. part I. p. 46." The capital of Sargon, the Babylonian Moses, "was the great city of Agadi, called by the Semitics Akkad -- mentioned in Genesis as the capital of Nimrod." (Gen. x. 10) . . . "Akkad lay near the City of Sippara on the Euphrates and North of Babylon." (See Isis, vol. II. p. 442-3.) Another strange coincidence is found in the fact that the name of the neighbouring above-mentioned City of Sippara is the same as the name of the wife of Moses -- Zipporah (Exodus ii.). Of course the story is a clever addition by Ezra, who could not be ignorant of it. This curious story is found on fragments of tablets from Kouyunjik, and reads as follows:--

1. Sargona, the powerful king, the king of Akkad am I.
2. My mother was a princess, my father I did not know; a brother of my father ruled over the country.
3. In the city of Azupiran, which is by the side of the River Euphrates.
4. My mother, the princess, conceived me; in difficulty she brought me forth.
5. She placed me in an ark of rushes, with bitumen my exit she sealed up.
6. She launched me in the river, which did not drown me.
7. The river carried me, to Akki the water-carrier it brought me.
8. Akki, the water-carrier, in tenderness of bowels, lifted me, etc., etc.

And now Exodus (ii): "And when she (Moses' mother) could not longer hide him, she took for him an ark of bulrushes, and daubed it with slime and with pitch, and put the child therein, and she laid it in the flags by the river's brink."

[[Vol. 1, Page]] 320 THE SECRET DOCTRINE.

and that he applied the allegory told of Sargon to the Jewish lawgiver. In short, that Exodus was never written by Moses, but re-fabricated from old materials by Ezra.

And if so, then why should not other symbols and glyphs far more crude in their phallic element have been added by this adept in the later Chaldean and Sabaean phallic worship? We are taught that the primeval faith of the Israelites was quite different from that which was developed centuries later by the Talmudists, and before them by David and Hezekiah.

All this, notwithstanding the exoteric element, as now found in the two Testaments, is quite sufficient to class the Bible among esoteric works, and to connect its secret system with Indian, Chaldean, and Egyptian symbolism. The whole cycle of biblical glyphs and numbers as suggested by astronomical observations -- astronomy and theology being closely connected -- is found in Indian exoteric, as well as esoteric, systems. These figures and their symbols, the signs of the Zodiac, the planets, their aspects and nodes -- the last term having now passed even into our modern botany to distinguish male and female plants (the unisexual, polygamous, monoecious, dioecious, etc., etc.) -- are known in astronomy as sextiles, quartiles and so on, and have been used for ages and aeons by the archaic nations, and in one sense have the same meaning as the Hebrew numerals. The earliest forms of elementary geometry must have certainly been suggested by the observation of the heavenly bodies and their groupings. Hence the most archaic symbols in Eastern Esotericism are a circle, a point, a triangle, a plane, a cube, a pentacle, and a hexagon, and plane figures with various sides and angles. This shows the knowledge and use of geometrical symbology to be as old as the world.

Starting from this, it becomes easy to understand how nature herself could have taught primeval mankind, even without the help of its divine instructors, the first principles of a numerical and geometrical symbol language.* Hence one finds numbers and figures used as an

[[Footnote(s)]] -----

[[Footnote continued from previous page]] "The story," says Mr. G. Smith, "is supposed to have happened about 1600 B.C. rather earlier than the supposed age of Moses. As we know that the fame of Sargon reached Egypt, it is quite likely that this account had a connection with the event related in Exodus ii., for every action, when once performed, has a tendency to be repeated." But now, when Professor Sayce has had the courage to push back the dates of the Chaldean and Assyrian Kings by two thousand years more,

Sargon must have preceded Moses by 2,000 years at the least. (See Professor Sayce's Lectures on the subject.) The confession is suggestive, but the figures lack a cypher or two.

* As a reminder how the Esoteric religion of Moses was crushed several times, and the worship of Jehovah, as re-established by David, put in its place, by Hezekiah for one, read pp. 436-42, vol. II., in Isis Unveiled. Surely there must have been some very [[Footnote continued on next page]]

[[Vol. 1, Page]] 321 THE CROSS, A PHALLIC SYMBOL.

expression and a record of thought in every archaic symbolical Scripture. They are ever the same, with only certain variations growing out of the first figures. Thus the evolution and correlation of the mysteries of Kosmos, of its growth and development -- spiritual and physical, abstract and concrete -- were first recorded in geometrical changes of shape. Every Cosmogony began with a circle, a point, a triangle, and a cube, up to number 9, when it was synthesized by the first line and a circle -- the Pythagorean mystic Decade, the sum of all, involving and expressing the mysteries of the entire Kosmos; recorded a hundred times more fully in the Hindu system, for him who can understand its mystic language. The numbers 3 and 4, in their blending of 7, as those of 5, 6, 9, and 10, are the very corner-stone of Occult Cosmogonies. This decade and its thousand combinations are found in every portion of the globe. One recognizes them in the caves and rock-cut temples of Hindostan and Central Asia, as in the pyramids and lithoi of Egypt and America; in the Catacombs of Ozimandyas, in the mounds of the Caucasian snowcapped fastnesses, in the ruins of Palenque, in Easter Island, everywhere whither the foot of ancient man has ever journeyed. The 3 and the 4, the triangle and the cube, or the male and female universal glyph, showing the first aspect of the evolving deity, is stamped for ever in the Southern Cross in the Heavens, as in the Egyptian Crux-Ansata. As well expressed, "The Cube unfolded is in display a cross of the tau, or Egyptian form, or of the Christian cross form. . . . A circle attached to the first, gives the ansated cross. . . numbers 3 and 4 counted on the cross, showing a form of the (Hebrew) golden candlestick (in the Holy of Holies), and of the 3 + 4 = 7, and 6 + 1 = 7, days in the circle of the week, as 7 lights of the sun. So also as the week of 7 lights gave origin to the month and year, so it is the time marker of birth. . . . The cross form being shown, then, by the connected use of the form 113 : 355, the symbol is completed by the attachment of a man to the cross.* This kind of measure was made to co-ordinate with the idea of the origin of human life, and hence the phallic form.**"

The Stanzas show the cross and these numbers playing a prominent part in archaic cosmogony. Meanwhile we may profit by the evidence collected by the same author to show the identity of symbols and their esoteric meaning all over the globe, which he calls rightly the "primordial vestiges of these symbols."

[[Footnote(s)]] -----

[[Footnote continued from previous page]] good reasons why the Sadducees, who furnished almost all the high Priests of Judea, held to the Laws of Moses and spurned the alleged "Books of Moses," the Pentateuch of the Synagogue and the Talmud.

* Once more, remember the Hindu Wittoba crucified in space; the significance of the "sacred sign," the Swastica; Plato's Decussated man in Space, etc., etc.

** "Source of Measures."

[[Vol. 1, Page]] 322 THE SECRET DOCTRINE.

"Under the general view taken of the nature of the number forms. . . it becomes a matter of research of the utmost interest as to when and where their existence and their use first became known. Has it been a matter of revelation in what we know as the historic age -- a cycle exceedingly modern when the age of the human race is contemplated? It seems, in fact, as to the date of its possession by man, to have been farther removed in the past from the old Egyptians than are the old Egyptians from us.

"The Easter Isles in 'mid Pacific' present the feature of the remaining peaks of the mountains of a submerged continent, for the reason that these peaks are thickly studded with Cyclopean statues, remnants of the civilization of a dense and cultivated people, who must have of necessity occupied a widely extended area. On the back of these images is to be found the 'ansated cross' and the same modified to the outlines of the human form. A full description, with plate showing the land, with the thickly planted statues, also with copies of the images, is to be found in the January number 1870 of the London Builder.

"In the 'Naturalist,' published at Salem, Massachusetts, in one of the early numbers, is to be found a description of some very ancient and curious carving on the crest walls of the mountains of South America, older by far, it is averred, than the races now living. The strangeness of these tracings is in that they exhibit the outlines of a man stretched out on a cross,* by a series of drawings, by which from the form of a man that of a cross springs, but so done that the cross may be taken as the man, or the man as the cross; thus exhibiting a symbolic display of the interdependency of the forms set forth.

"It is known that tradition among the Aztecs has handed down a very perfect account of the deluge. . . . Baron Humboldt says that we are to look for the country of Aztalan, the original country of the Aztecs, as high up at least as the 42nd parallel north; whence, journeying, they at last arrived in the vale of Mexico. In that vale the earthen mounds of the far north become the elegant stone pyramidal and other structures whose remains are now found. The correspondences between the Aztec remains and those of the Egyptians are well known. . . . Atwater, from examination of hundreds of them, is convinced that they had a knowledge of astronomy. As to one of the most perfect of the pyramidal structures among the Aztecs, Humboldt gives a description to the following effect:

"The form of this pyramid (of Papantla) which has seven stories, is more tapering than any other monument of this kind yet discovered, but its height is not remarkable, being but 57 feet, its base but 25 feet on each side. However, it is remarkable on one account: it is built entirely of hewn stones, of an extraordinary size, and very beautifully shaped. Three staircases lead to the top, the steps of which are decorated with hieroglyphical sculptures and small niches arranged with great symmetry. The number of these niches seems to allude to the 318 simple and compound signs of the days of their civil calendar."

"318 is the Gnostic value of Christ," remarks the author, "and the famous number of the trained or circumcised servants of Abraham. When it is consi-

[[Footnote(s)]] -----

[[Vol. 1, Page]] 323 IDENTITY OF THE ANCIENT SYMBOLS.

dered that 318 is an abstract value, and universal, as expressive of a diameter value to a circumference of unity, its use in the composition of the civil calendar becomes manifest."

Identical glyphs, numbers and esoteric symbols are found in Egypt, Peru, Mexico, Easter Island, India, Chaldea, and Central Asia. Crucified men, and symbols of the evolution of races from gods; and yet behold Science repudiating the idea of a human race other than one made in our image; theology clinging to its 6,000 years of Creation; anthropology teaching our descent from the ape; and the Clergy tracing it from Adam 4,004 years B.C.!!

Shall one, for fear of incurring the penalty of being called a superstitious fool, and even a liar, abstain from furnishing proofs -- as good as any -- only because that day, when all the SEVEN KEYS shall be delivered unto Science, or rather the men of learning and research in the symbolological department, has not yet dawned? In the face of the crushing discoveries of Geology and Anthropology with regard to the antiquity of man, shall we -- in order to avoid the usual penalty that awaits every one who strays outside the beaten paths of either Theology or Materialism -- hold to the 6,000 years and "special creation," or accept in submissive admiration our genealogy and descent from the ape? Not so, as long as it is known that the secret records hold the said SEVEN keys to the mystery of the genesis of man. Faulty, materialistic, and biassed as the scientific theories may be, they are a thousand times nearer the truth than the vagaries of theology. The latter are in their death agony for every one but the most uncompromising bigot and fanatic.* Hence we have no choice but either to blindly accept the deductions of Science, or to cut adrift from it, and withstand it fearlessly to its face, stating what the Secret Doctrine teaches us, being fully prepared to bear the consequences.

But let us see whether Science in its materialistic speculations, and even theology in its death-rattle and supreme struggle to reconcile the 6,000 years since Adam with Sir Charles Lyell's "Geological Evidences of the Antiquity of Man," do not themselves give us unconsciously a helping hand. Ethnology, on the confession of some of its very learned votaries, finds it already impossible to account for the varieties in the human race, unless the hypothesis of the creation of several Adams be accepted. They speak of "a white Adam and a black Adam, a red

[[Footnote(s)]] -----

* Some of its defenders must have lost their reason, one would rather say. For what can one think when, in the face of the dead-letter absurdities of the Bible, these are still supported, publicly and as fiercely as ever, and one finds its theologians maintaining that though "the Scriptures carefully refrain (?) from making any direct contribution to scientific knowledge, they have never stumbled upon any statement which will not abide the light of ADVANCING SCIENCE"!!! -- ("Primeval Man," p. 14).

[[Vol. 1, Page]] 324 THE SECRET DOCTRINE.

Adam and a yellow Adam.** Were they Hindus enumerating the rebirths of Vamadeva from the Linga Purana, they could say little more. For, enumerating the repeated births of Siva, the latter show him in one Kalpa of a white complexion, in another of a black colour, in still another of a red colour, after which the Kumara becomes "four youths of a yellow colour." This strange coincidence, as Mr. Proctor would say, speak only in favour of scientific intuition, as Siva-Kumara represents only allegorically the human races during the genesis of man. But it led to another intuitional phenomenon -- in the theological ranks this time. The unknown author of "Primeval Man" in a desperate effort to screen the divine Revelation from the merciless and eloquent discoveries of geology and anthropology, remarking that "it would be unfortunate if the defenders of the Bible should be driven into the position of either surrendering the inspiration of Scripture, or denying the conclusions of geologists" -- finds a compromise. Nay, he devotes a thick volume to proving this fact: "Adam was not the first man** created upon this earth." . . . The exhumed relics of pre-Adamic man, "instead of shaking our confidence in Scripture, supply additional proof of its veracity" (p. 194). How so? In the simplest way imaginable; for the author argues that, henceforth "we" (the clergy) "are enabled to leave scientific men to pursue their studies without attempting to coerce them by the fear of heresy" . . . (this must be a relief indeed to Messrs. Huxley, Tyndall, and Sir C. Lyell). . . . "The Bible narrative does not commence with creation, as is commonly supposed, but with the formation of Adam and Eve, millions of years after our planet had been created. Its previous history, so far as Scripture is concerned, is yet unwritten." . . . "There may have been not one, but twenty different races upon the earth before the time of Adam, just as there may be twenty different races

of men on other worlds" (p. 55). . . . Who, then, or what were those races, since the author still maintains that Adam is the first man of our race? It was THE SATANIC RACE AND RACES! "Satan (was) never in heaven, Angels and men (being) one species." It was the pre-Adamic race of "Angels that sinned." Satan was "the first Prince of this world," we read. Having died in consequence of his rebellion, he remained on earth as a disembodied Spirit, and tempted Adam and Eve. "The earlier ages of the Satanic race, and more especially during the life-time of Satan (!!!) may have been a period

[[Footnote(s)]] -----

** Especially in the face of the evidence furnished by the authorized Bible itself in ch. iv. of Genesis, v. 16 and 17, which shows Cain going to the land of Nod and there marrying a wife.

[[Vol. 1, Page]] 325 THE IMPARTIALITY OF SCIENTIFIC DENIALS.

of patriarchal civilization and comparative repose -- a time of Tubal-Cains and Jubals, when both Sciences and arts attempted to strike their roots into the accursed ground. . . . What a subject for an epic. . . . (when) there are inevitable incidents which must have occurred. We see before us . . . the gay primeval lover wooing his blushing bride at dewy eve under the Danish oaks, that then grew where now no oaks will grow . . . the grey primeval patriarch . . . the primeval offspring innocently gambolling by his side. . . . A thousand such pictures rise before us! . . . (pp. 206-207).

The retrospective glance at this Satanic "blushing bride" in the days of Satan's innocence, does not lose in poetry as it gains in originality. Quite the reverse. The modern Christian bride -- who does not often blush nowadays before her gay modern lovers -- might even derive a moral lesson from this daughter of Satan, in the exuberant fancy of her first human biographer. These pictures -- and to appreciate them at their true value they must be examined in the volume that describes them -- are all suggested with a view to reconcile the infallibility of revealed Scripture with Sir C. Lyell's "Antiquity of Man" and other damaging scientific works. But this does not prevent truth and fact appearing at the foundation of these vagaries, which the author has never dared to sign with his own, or even a borrowed name. For, his pre-Adamic races -- not Satanic but simply Atlantic, and the Hermaphrodites before the latter -- are mentioned in the Bible when read esoterically, as they are in the Secret Doctrine. The SEVEN KEYS open the mysteries, past and future, of the seven great Root Races, as of the seven Kalpas. Though the genesis of man, and even the esoteric geology, will surely be rejected by Science just as much as the Satanic and pre-Adamic races, yet if having no other way out of their difficulties the Scientists have to choose between the two, we feel certain that, Scripture notwithstanding, once the mystery language is approximately mastered, it is the archaic teaching that will be accepted.

§ III.
PRIMORDIAL SUBSTANCE AND DIVINE THOUGHT.

"As it would seem irrational to affirm that we already know all existing causes, permission must be given to assume, if need be, an entirely new agent.

"Assuming, what is not strictly accurate as yet, that the undulatory hypothesis accounts for all the facts, we are called on to decide whether the existence of an undulating Ether is thereby proved. We cannot positively affirm

[[Vol. 1, Page]] 326 THE SECRET DOCTRINE.

that no other supposition will explain the facts. Newton's corpuscular hypothesis is admitted to have broken down on Interference; and there is, at the present day, no rival. Still, it is extremely desirable in all such hypotheses to find some collateral confirmation, some evidence aliunde, of THE SUPPOSED ETHER. . . . Some Hypotheses consist of assumptions as to the minute structure and operations of bodies. From the nature of the case, these assumptions can never be proved by direct means. Their only merit is their suitability to express the phenomena. They are REPRESENTATIVE FICTIONS." -- ("Logic," by Alexander Bain, LL.D., Part II., p. 133)

Ether, this hypothetical Proteus, one of the "representative Fictions" of modern Science -- which, nevertheless, was so long accepted -- is one of the lower "principles" of what we call PRIMORDIAL SUBSTANCE (Akasa, in Sanskrit), one of the dreams of old, and which has now become again the dream of modern science. It is the greatest, just as it is the boldest, of the surviving speculations of ancient philosophers. For the Occultists, however, both ETHER and the Primordial Substance are a reality. To put it plainly, ETHER is the Astral Light, and the Primordial Substance is AKASA, the Upadhi of DIVINE THOUGHT.

In modern language, the latter would be better named COSMIC IDEATION -- Spirit; the former, COSMIC SUBSTANCE, Matter. These, the Alpha and the Omega of Being, are but the two facets of the one Absolute Existence. The latter was never addressed, or even mentioned, by any name in antiquity, except allegorically. In the oldest Aryan race, the Hindu, the worship of the intellectual classes never consisted (as with the Greeks) in a fervent adoration of marvellous form and art, which led later on to anthropomorphism. But while the Greek philosopher adored form, and the Hindu sage alone "perceived the true relation of earthly beauty and eternal truth" -- the uneducated of every nation understood neither, at any time.

They do not understand it even now. The evolution of the GOD-IDEA proceeds apace with man's own intellectual evolution. So true it is that the noblest ideal to which the religious Spirit of one age can soar, will appear but a gross caricature to the philosophic mind in a succeeding epoch! The philosophers themselves had to be initiated into perceptive mysteries, before they could grasp the correct idea of the ancients in relation to this most metaphysical subject. Otherwise -- outside such initiation -- for every thinker there will be a "Thus far shalt thou go and no farther," mapped out by his intellectual capacity, as clearly and as unmistakeably as there is for the progress of any nation or race in its cycle by the law of Karma. Outside of initiation, the ideals of contemporary religious thought must always have their wings clipped and remain unable to soar higher; for idealistic as well as realistic thinkers, and even free-thinkers, are but the outcome and the natural product of their respective environments and periods. The ideals of both are only

[[Vol. 1, Page]] 327 DIVINE THOUGHT, OR CINERITIOUS MATTER.

the necessary results of their temperaments, and the outcome of that phase of intellectual progress to which a nation, in its collectivity, has attained. Hence, as already remarked, the highest flights of modern (Western) metaphysics have fallen far short of the truth. Much of current Agnostic speculation on the existence of the "First Cause" is little better than veiled materialism -- the terminology alone being different. Even so great a thinker as Mr. Herbert Spencer speaks of the "Unknowable" occasionally in terms that demonstrate the lethal influence of materialistic thought, which, like the deadly Sirocco, has withered and blighted all current ontological speculation.*

From the early ages of the Fourth Race, when Spirit alone was worshipped and the mystery was made manifest, down to the last palmy days of Grecian art at the dawn of Christianity -- the Hellenes alone had dared to raise publicly an altar to the UNKNOWN GOD. Whatever St. Paul may have had in his profound mind when declaring to the Athenians that this "unknown," ignorantly worshipped by them, was the true God announced by himself -- that Deity was not "Jehovah" (see "The Holy of Holies"), nor was he "The Maker of the world and all things." For it is not the "God of Israel" but the "Unknown" of the ancient and modern Pantheist that "dwelleth not in temples made with hands" (Acts xviii., 23-4).

Divine thought cannot be defined, or its meaning explained, except by the numberless manifestations of Cosmic Substance in which the former is sensed spiritually by those who can do so. To say this, after having defined it as the Unknown Deity, abstract, impersonal, sexless, which must be placed at the root of every Cosmogony and its subsequent evolution, is equivalent to saying nothing at all. It is like attempting a transcendental equation of conditions for the true values of a set, having in hand for deducing them only a number of unknown quantities. Its place is found in the old primitive Symbolic charts, in which, as shown in the text, it is represented by a boundless darkness, on the ground of which appears the first central point in white -- thus symbolising coeval and co-eternal SPIRIT-MATTER making its appearance in the phenomenal world, before its first differentiation. When "the one becomes two," it may then be

[[Footnote(s)]] -----

* For instance, when he terms the "First Cause" -- the UNKNOWABLE -- a "power manifesting through phenomena," and "an infinite eternal Energy" (?) it is clear that he has grasped solely the physical aspect of the mystery of Being -- the Energies of Cosmic Substance only. The co-eternal aspect of the ONE REALITY -- Cosmic Ideation -- (as to its noumenon, it seems non-existent in the mind of the great thinker) is absolutely omitted from consideration. Without doubt, this one-sided mode of dealing with the problem is due largely to the pernicious Western practice of subordinating consciousness, or regarding it as a "by-product" of molecular motion.

[[Vol. 1, Page]] 328 THE SECRET DOCTRINE.

referred to as Spirit and matter. To "Spirit" is referable every manifestation of consciousness, reflective or direct, and of unconscious purposiveness (to adopt a modern expression used in Western philosophy, so-called) as evidenced in the Vital Principle, and Nature's submission to the majestic sequence of immutable law. "Matter" must be regarded as objectivity in its purest abstraction -- the self-existing basis whose septenary manvantaric differentiations constitute the objective reality underlying the phenomena of each phase of conscious existence. During the period of Universal Pralaya, Cosmic Ideation is nonexistent; and the variously differentiated states of Cosmic Substance are resolved back again into the primary state of abstract potential objectivity.

Manvantaric impulse commences with the re-awakening of Cosmic Ideation (the "Universal Mind") concurrently with, and parallel to the primary emergence of Cosmic Substance -- the latter being the manvantaric vehicle of the former -- from its undifferentiated pralayaic state. Then, absolute wisdom mirrors itself in its Ideation; which, by a transcendental process, superior to and incomprehensible by human Consciousness, results in Cosmic Energy (Fohat). Thrilling through the bosom of inert Substance, Fohat impels it to activity, and guides its primary differentiations on all the Seven planes of Cosmic Consciousness. There are thus Seven Protyles (as they are now called), while Aryan antiquity called them the Seven Prakriti, or Natures, serving, severally, as the relatively homogeneous basis, which in the course of the increasing heterogeneity (in the evolution of the Universe) differentiate into the marvellous complexity presented by phenomena on the planes of perception. The term "relatively" is used designedly, because the very existence of such a process, resulting in the primary segregations of undifferentiated Cosmic Substance into its septenary bases of evolution, compels us to regard the protyle* of each plane as only a mediate phase assumed by Substance in its passage from abstract, into full objectivity.

Cosmic Ideation is said to be non-existent during Pralayaic periods, for the simple reason that there is no one, and nothing, to perceive its effects. There can be no manifestation of Consciousness, semi-consciousness, or even "unconscious purposiveness," except through the

[[Footnote(s)]] -----

* The term Protyle is due to Mr. Crookes, the eminent chemist, who has given that name to pre-Matter, if one may so call primordial and purely homogeneous substances, suspected, if not actually yet found, by Science in the ultimate composition of the atom. But the incipient segregation of primordial matter into atoms and molecules takes its rise subsequent to the evolution of the Seven Protyles. It is the last of these -- having recently detected the possibility of its existence on our plane -- that Mr. Crookes is in search of.

[[Vol. 1, Page]] 329 THE UNIVERSAL ILLUSION.

vehicle of matter; that is to say, on this our plane, wherein human consciousness in its normal state cannot soar beyond what is known as transcendental metaphysics, it is only through some molecular aggregation or fabric that Spirit wells up in a stream of individual or sub-conscious subjectivity. And as Matter existing apart from perception is a mere abstraction, both of these aspects of the ABSOLUTE -- Cosmic Substance and Cosmic Ideation -- are mutually inter-dependent. In strict accuracy -- to avoid confusion and misconception -- the term "Matter" ought to be applied to the aggregate of objects of possible perception, and "Substance" to noumena; for inasmuch as the phenomena of our plane are the creation of the perceiving Ego -- the modifications of its own subjectivity -- all the "states of matter representing the aggregate of perceived objects" can have but a relative and purely phenomenal existence for the children of our plane. As the modern Idealists would say, the co-operation of Subject and Object results in the Sense-object or phenomenon. But this does not necessarily lead to the conclusion that it is the same on all other planes; that the co-operation of the two on the planes of their septenary differentiation results in a septenary aggregate of phenomena which are likewise non-existent per se, though concrete realities for the Entities of whose experience they form a part, in the same manner as the rocks and rivers around us are real from the stand-point of a physicist, though unreal illusions of sense from that of the metaphysician. It would be an error to say, or even conceive such a thing. From the stand-point of the highest metaphysics, the whole Universe, gods included, is an illusion; but the illusion of him who is in himself an illusion differs on every plane of consciousness; and we have no more right to dogmatise about the possible nature of the perceptive faculties of an Ego on, say, the sixth plane, than we have to identify our perceptions with, or make them a standard for, those of an ant, in its mode of consciousness. The pure object apart from consciousness* is unknown to us, while living on the plane of our three-dimensional World; as we know only the mental states it excites in the perceiving Ego. And, so long as the contrast of Subject and Object endures -- to wit, as long as we enjoy our five senses and no more, and do not know how to divorce our all-perceiving Ego (the Higher Self) from the thralldom of these senses -- so long will it be impossible for the personal Ego to break through the barrier which separates it from a

[[Footnote(s)]] -----

* Cosmic Ideation focussed in a principle or upadhi (basis) results as the consciousness of the individual Ego. Its manifestation varies with the degree of upadhi, e.g., through that known as Manas it wells up as Mind-Consciousness; through the more finely differentiated fabric (sixth state of matter) of the Buddhi resting on the experience of Manas as its basis -- as a stream of spiritual INTUITION.

[[Vol. 1, Page]] 330 THE SECRET DOCTRINE.

knowledge of things in themselves (or Substance). That Ego, progressing in an arc of ascending subjectivity, must exhaust the experience of every plane. But not till the Unit is merged in the ALL, whether on this or any other plane, and Subject and Object alike vanish in the absolute negation of the Nirvanic State (negation, again, only from our plane), is scaled that peak of Omniscience -- the Knowledge of things-in-themselves; and the solution of the yet more awful riddle approached, before which even the highest Dhyana Chohan must bow in silence and ignorance -- the unspeakable mystery of that which is called by the Vedantins, the PARABRAHMAN.

Therefore, such being the case, all those who sought to give a name to the incognizable Principle have simply degraded it. Even to speak of Cosmic Ideation -- save in its phenomenal aspect -- is like trying to bottle up primordial Chaos, or to put a printed label on ETERNITY.

What, then, is the "primordial Substance," that mysterious object of which Alchemy was ever talking, and which became the subject of philosophical speculation in every age? What can it be finally, even in its phenomenal pre-differentiation? Even that is ALL in manifested Nature and -- nothing to our senses. It is mentioned under various names in every Cosmogony, referred to in every philosophy, and shown to be, to this day, the ever grasp-eluding PROTEUS in Nature. We touch and do not feel it; we look at it without seeing it; we breathe it and do not perceive it; we hear and smell it without the smallest cognition that it is there; for it is in every molecule of that which in our illusion and ignorance we regard as Matter in any of its states, or conceive as a feeling, a thought, an emotion. . . . In short, it is the "upadhi," or vehicle, of every possible phenomenon, whether physical, mental, or psychic. In the opening sentences of Genesis, as in the Chaldean Cosmogony; in the Puranas of India, and in the Book of the Dead of Egypt, it opens everywhere the cycle of manifestation. It is termed "Chaos," and the face of the waters, incubated by the Spirit proceeding from the Unknown, under whatever name. (See "Chaos, Theos, Kosmos.")

The authors of the sacred Scriptures in India go deeper into the origin of things evolved than Thales or Job, for they say:--

"From INTELLIGENCE (called MAHAT in the Puranas) associated with IGNORANCE (Iswar, as a personal deity) attended by its projective power, in which the quality of dulness (tamas, insensibility) predominates, proceeds Ether -- from ether, air; from air, heat;

from heat, water; and from water, earth "with everything on it." "From THIS, from this same SELF, was the Ether produced," says the Veda. (Taittiriya Upanishad II. 1).

It becomes thus evident that it is not this Ether -- sprung at the fourth

[[Vol. 1, Page]] 331 ETHER, AS ITS NOUMENON.

remove from an Emanation of Intelligence "associated with Ignorance" -- which is the high principle, the deific Entity worshipped by the Greeks and Latins under the name of "Pater omnipotens Aether," and "Magnus Aether" in its collective aggregates. The septenary gradation, and the innumerable subdivisions and differences, made by the ancients between the powers of Ether collectively, from its outward fringe of effects, with which our Science is so familiar, up to the "Imponderable Substance," once admitted as the "Ether of Space," now about to be rejected, has been ever a vexing riddle for every branch of knowledge. The mythologists and symbologists of our day, confused by this incomprehensible glorification, on the one hand, and degradation on the other, of the same deified entity and in the same religious systems, are often driven to the most ludicrous mistakes. The Church, firm as a rock in each and all of her early errors of interpretation, has made of Ether the abode of her Satanic legions.* The whole hierarchy of the "Fallen" angels is there; the Cosmocratores -- or the "world bearers," (according to Bossuet); Mundi Tenentes -- the "world holders," as Tertullian calls them; and Mundi Domini "world dominations," or rather dominators, the Curbati, or "Curved," etc., who thus make of the stars and celestial orbs in their course -- Devils!

The difference made between the seven states of Ether (itself one of the Seven Cosmic principles), while the Aether of the Ancients is universal Fire, may be seen in the injunctions by Zoroaster and Psellus, respectively. The former said: "Consult it only when it is without form or figure," absque forma et figura, which means without flames or burning coals. "When it has a form -- heed it not," teaches Psellus; "but when it is formless, obey it, for it is then sacred fire, and all it will reveal thee, shall be true."** This proves that Ether, itself an aspect of Akasa, has in its turn several aspects or "principles."

All the ancient nations deified Aether in its imponderable aspect and potency. Virgil calls Jupiter, Pater omnipotens Aether, "the great Aether."*** The Hindus have also placed it among their deities; under the name of Akasa (the synthesis of Aether). And the author of the Homoiomerian

[[Footnote(s)]] -----

* For it is thus that the Church has interpreted verse 12 in the VI. Chapter to the Ephesians. "For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world." Further on St. Paul mentions the spiritual malices ("wickedness" in English texts) SPREAD IN THE AIR -- "Spiritualia nequitiae coelestibus," the Latin texts giving various names to these "malices," the innocent "Elementals." But the Church is right this time, though wrong in calling them all devils. The ASTRAL LIGHT or lower Ether is full of conscious and semi-conscious and unconscious entities; only the church has less power over them than over invisible microbes or mosquitoes.

[[Vol. 1, Page]] 332 THE SECRET DOCTRINE.

System of philosophy, Anaxagoras of Clazomenae, firmly believed that the spiritual prototypes of all things, as well as their elements, were to be found in the boundless Ether where they were generated, whence they evolved, and whither they returned -- an Occult teaching.

It thus becomes clear that it is from Ether in its highest synthetic aspect, once anthropomorphised, that sprung the first idea of a personal creative deity. With the philosophical Hindus the elements are Tamas, i. e., "unenlightened by intellect, which they obscure."

We have now to exhaust the question of the mystical meaning of "Primordial Chaos" and of the Root-Principle, and show how they were connected in the ancient philosophies with Akasa, wrongly translated Aether, and also with Maya (illusion) -- of which Ishwara is the male aspect. We shall speak further on of the intelligent "principle," or rather of the invisible immaterial properties, in the visible and material elements, that "sprung from the primordial Chaos."

For, "What is the primordial Chaos but Aether?" it is asked in "ISIS UNVEILED." Not the modern Ether; not such as is recognised now, but such as was known to the ancient philosophers long before the time of Moses; but Aether, with all its mysterious and occult properties, containing in itself the germs of universal creation. Upper Aether or Akasa, is the celestial virgin and mother of every existing form and being, from whose bosom, as soon as "incubated" by the Divine Spirit, are called into existence Matter and Life, Force and Action. Aether is the Aditi of the Hindus, and it is Akasa. Electricity, magnetism, heat, light, and chemical action are so little understood even now that fresh facts are constantly widening the range of our knowledge. Who knows where ends the power of this protean giant -- Aether; or whence its mysterious origin? Who, we mean, that denies the spirit that works in it, and evolves out of it all visible forms?

It will be an easy task to show that the cosmogonical legends all over the world are based on a knowledge by the ancients of those sciences, which have allied themselves in our days in support of the doctrine of evolution; and that further research may demonstrate that those ancients were far better acquainted with the fact of evolution itself, embracing both its physical and spiritual aspects, than we are now. "With the old philosophers, evolution was a universal theorem, a doctrine embracing the whole, and an established principle; while our modern evolutionists are enabled to present us merely with speculative theoretics; with particular, if not wholly negative theorems. It is idle for the representatives of our modern wisdom to close the debate and pretend that the question is settled, merely because the obscure phraseology of the Mosaic, far later, account clashes with the definite exegesis of 'Exact Science' ("Isis Unveiled").

[[Vol. 1, Page]] 333 WHAT MANU SAYS OF THIS.

If one turns to the "Laws (or Ordinances) of Manu," one finds the prototype of all these ideas. Mostly lost (to the Western world) in their original form, disfigured by later interpolations and additions, they have, nevertheless, preserved quite enough of their ancient Spirit to show its character. "Removing the darkness, the Self-existent Lord" (Vishnu, Narayana, etc.) becoming manifest, and "wishing to produce beings from his Essence, created, in the beginning, water alone. In that he cast seed. . . . That became a golden Egg." (V. 6, 7, 8, 9.) Whence this Self-existent Lord? It is called THIS, and is spoken of as "Darkness, imperceptible, without definite qualities, undiscoverable as if wholly in sleep." (V. 5.) Having dwelt in that Egg for a whole divine year, he "who is called in the world Brahma," splits that Egg in two, and from the upper portion he forms the heaven, from the lower the earth, and from the middle the sky and "the perpetual place of waters." (12, 13.)

But there is, directly following these verses, something more important for us, as it corroborates entirely our esoteric teachings. From verse 14 to 36, evolution is given in the order described in the Esoteric philosophy. This cannot be easily gainsaid. Even Medhatithi, the son of Viraswamin, and the author of the Commentary, "the Manubhasya," whose date, according to the western Orientalists, is 1,000 A.D., helps us with his remarks to the elucidation of the truth. He showed himself either unwilling to give out more, because he knew that truth which has to be kept from the profane, or else he was really puzzled. Still, what he does give out makes the septenary principle in men and nature plain enough.

Let us begin with Chapter 1. of the "Ordinances" or "Laws" after the Self-existent Lord, the unmanifesting Logos of the Unknown "Darkness," becomes manifested in the golden Egg. It is from this "Egg," from ----

(11.) That which is the undiscrete (undifferentiated) cause, eternal, which Is and Is not, from It issued that male who is called in the world Brahma. . . .

Here we find, as in all genuine philosophical systems, even the "Egg" or the Circle (or Zero), boundless Infinity, referred to as IT,* and Brahma, the first unit only, referred to as the male god, i.e., the fructifying Principle. It is [[diagram]] or 10 (ten) the Decade. On the plane of the Septenary or our World only, it is called Brahma. On that of the Unified Decade in the realm of Reality, this male Brahma is an illusion.

(14.) "From Self (atmanah) he created mind, (1) which is and is not;

[[Footnote(s)]] -----

* The ideal apex of the Pythagorean triangle: vide Sections in Vol. II., "Cross and Circle," and the "Earliest Symbolics of the Cross."

[[Vol. 1, Page]] 334 THE SECRET DOCTRINE.

(2) and from mind, Ego-ism (Self-Consciousness) the ruler; (3) the Lord."

(1.) The mind is Manas. Medhatithi, the commentator, justly observes here that it is the reverse of this and shows already interpolation and rearranging; for it is Manas that springs from Ahamkara or (Universal) Self-Consciousness, as Manas in the microcosm springs from Mahat, or Maha-Buddhi (Buddhi, in man). For Manas is dual, and as shown and translated by Colebrooke, "is serving both for sense and action, is an organ by affinity, being cognate with the rest." "The rest" means, here, that Manas, our fifth principle (the fifth, because the body was named the first, which is the reverse of the true philosophical order)* is in affinity both with Atma-Buddhi and with the lower four principles. Hence, our teaching: namely, that Manas follows Atma-Buddhi to Devachan, and that the lower (dregs, the residue of) Manas remains with Kama rupa, in Limbus, or Kama-loka, the abode of the "Shells."

(2.) Such is the meaning of Manas, which "is, and is not."

(3.) Medhatithi translates it as "the one conscious of the I," or Ego, not "ruler," as the Orientalists do. Thus they translate verse 16: "He also, having made the subtle parts of those six (the Great Self and the five organs of sense) of unmeasured brightness, to enter into the elements of Self (Atmamatrasu) created all beings."

When, according to Medhatithi, it ought to read matra-Chit instead of "Atmamatrasu," and thus be made to say:--

"He having pervaded the subtle parts of those six, of unmeasured brightness, by elements of self, created all beings."

This latter reading must be the correct one, since he, the Self, is what we call Atma, and thus constitutes the seventh principle, the synthesis of the "six." Such is also the opinion of the editor of Manava-dharma Shastra, who seems to have intuitively entered far deeper into the spirit of the philosophy than has the translator of the "Ordinances of Manu," the late Dr. Burnell. For he hesitates little between the text of Kulluka and the Commentaries of Medhatithi. Rejecting the tanmatra, or subtle elements, and the atmamatra of Kulluka, he says, applying the principles to the Cosmic Self: "The six appear rather to be the manas plus the five principles of Ether, air, fire, water, earth"; "having united five portions of these six with the spiritual element (the seventh) he (thus) created all existing things;" atmamatra is therefore the spiritual atom as opposed to the elementary, not reflective "elements of himself." Thus he corrects the translation of verse -- "17. As the subtle elements of bodily forms of This One depend on these six, so

[[Footnote(s)]] -----

* Vide A. Coke Burnell's translation, edited by Ed. W. Hopkins, Ph.D.

[[Vol. 1, Page]] 335 THE SEVEN PRAKRITIS.

the wise call his form carira" (sharira) -- and he says that "Elements" mean here portions or parts (or principles), which reading is borne out by verse 19, which says:--

"19. This non-eternal (Universe) arises then from the Eternal, by means of the subtle elements of forms of those seven very glorious principles" (purusha).

Commenting upon which, according to Medhatithi, the Editor remarks that "the five elements plus mind (Manas) and Self-Consciousness (Ahamkara)* are meant;" "subtle elements," as before (meaning) "five portions of form" (or principles). For verse 20 shows it, when saying of these (five elements, or "five portions of form" (rupa, plus Manas and Self-Consciousness) that they constitute the "seven purusha," or principles, called in the Puranas the "Seven Prakritis."

Moreover, these "five elements" or "five portions" are spoken of in verse 27 as "those which are called the atomic destructible portions" -- therefore "distinct from the atoms of the nyaya."

This creative Brahma, issuing from the mundane or golden egg, unites in himself both the male and the female principles. He is, in short, the same as all the creative Protologoi. Of Brahma, however, it could not be said, as of Dionysos: "[[protogonon diphue trigonon Baccheion Hanakta Hagrion arreton kruphion dikerota dimorphon]]" -- a lunar Jehovah -- Bacchus truly, with David dancing nude before his symbol in the ark -- because no licentious Dionysia were ever established in his name and honour. All such public worship was exoteric, and the great universal symbols were distorted universally, as those of Krishna are now by the Vallabacharyas of Bombay, the followers of the infant god. But are these popular gods the true Deity? Are they the Apex and synthesis of the sevenfold creation, man included? Never! Each and all are one of the rungs of that septenary ladder of Divine Consciousness, pagan as Christian. For Ain-Soph also is said to manifest through the Seven Letters of Jehovah's name who, having usurped the place of the Unknown Limitless, was given by his devotees his Seven Angels of the Presence -- his Seven Principles. Yet they are mentioned in almost every school. In the pure Sankhya philosophy mahat, ahamkara and the five tanmatras are called the seven Prakritis (or Natures), and they are counted from Maha-Buddhi or Mahat down to Earth. (See Sankhya Karika III. and Commentaries.)

Nevertheless, however disfigured for Rabbinical purposes is the original Elohist version by Ezra, however repulsive at times even the

[[Footnote(s)]] -----

* Ahamkara, as universal Self-Consciousness, has a triple aspect, as also Manas. For this conception of "I," or one's Ego, is either sattwa, "pure quietude," or appears as rajas, "active," or remains tamas, "stagnant," in darkness. It belongs to Heaven and Earth, and assumes the properties of either.

[[Vol. 1, Page]] 336 THE SECRET DOCTRINE.

esoteric meaning in the Hebrew scrolls, which is far more so than its outward veil or cloaking may be* -- once the Jehovistic portions are eliminated, the Mosaic books are found full of purely occult and priceless knowledge, especially in the first six chapters.

Read by the aid of the Kabala one finds a matchless temple of occult truths, a well of deeply concealed beauty hidden under a structure, the visible architecture of which, its apparent symmetry notwithstanding, is unable to stand the criticism of cold reason, or to reveal its age, for it belongs to all the ages. There is more wisdom concealed under the exoteric fables of Puranas and Bible than in all the exoteric facts and science in the literature of the world, and more OCCULT true Science, than there is of exact knowledge in all the academies. Or, in plainer and stronger language, there is as much esoteric wisdom in some portions of the exoteric Puranas and Pentateuch, as there is of nonsense and of designed childish fancy in it, when read only in the dead-letter murderous interpretations of great dogmatic religions, and especially of sects.

Let anyone read the first verses of chapter i. of Genesis and reflect upon them. There "God" commands to another "god," who does his bidding -- even in the cautious English Protestant translation of James the First's authorised edition.

In the "beginning," the Hebrew language having no word to express the idea of Eternity,** "God" fashions the heaven and the Earth; and the latter is "without form and void," while the former is no Heaven in fact, but the "Deep," Chaos, with darkness upon its face.***

"And the Spirit of GOD moved upon the face of the Waters" (v. 2), or the great Deep of the Infinite Space. And this Spirit is Nara-yana, or Vishnu.

[[Footnote(s)]] -----

* See "The Holy of Holies."

** The word "eternity," by which Christian theologians interpret the term "for ever and ever," does not exist in the Hebrew tongue -- either as a word or meaning. Oulam, says Le Clerc, only imports a time when beginning or end is not known. It does not mean "infinite duration," and the word for ever in the Old Testament, only signifies a "long time." Nor is the term "eternity" used in the Christian sense in the Puranas. For in Vishnu Purana, it is clearly stated that by Eternity and Immortality only "existence to the end of the Kalpa" is meant (Book II. chap. viii.).

*** Orphic theogony is purely Oriental and Indian in its Spirit. The successive transformations it has undergone, have now separated it widely from the spirit of ancient Cosmogony, as may be seen by comparing it even with Hesiod's theogony. Yet the truly Aryan Hindu spirit breaks forth everywhere in both Hesiod's and the Orphic theogony. (See the remarkable work of James Darmesteter, Cosmogonies Aryennes, in his Essais Orientaux.) Thus the original Greek conception of Chaos is that of the Secret Wisdom Religion. In Hesiod, therefore, Chaos is infinite, boundless, endless and beginningless in duration, an abstraction at the same time as a visible presence. SPACE filled with darkness, which is primordial matter in its precosmic state. For in its etymological sense, Chaos is Space, according to Aristotle, and Space is the ever Unseen and Unknowable Deity in our philosophy.

[[Vol. 1, Page]] 337 DARKNESS, IS LIGHT.

"And God said, Let there be a firmament. . ." (v. 6), and "God," the second, obeyed and "made the firmament" (v. 7). "And God said let there be light," and "there was light." Now the latter does not mean light at all, but in the Kabala, the androgyne "Adam Kadmon," or Sephira (Spiritual light), for they are one; or, according to the Chaldean "Book of Numbers," the secondary angels, the first being the Elohim who are the aggregate of that "fashioning" god. For to whom are those words of command addressed? And who is it who commands? That which commands is the eternal Law, and he who obeys, the Elohim, the known quantity acting in and with x, or the coefficient of the unknown quantity, the Forces of the ONE Force. All this is Occultism, and is found in the archaic STANZAS. It is perfectly immaterial whether we call these "Forces" the Dhyana Chohans, or the Ophanim, as St. John does.

"The one Universal Light, which to Man is Darkness, is ever existent," says the Chaldean "Book of Numbers." From it proceeds periodically the ENERGY, which is reflected in the "Deep" or Chaos, the store-house of future worlds, and, once awakened, stirs up and fructifies the latent Forces, which are the ever present eternal potentialities in it. Then awake anew the Brahmas and Buddhas -- the co-eternal Forces -- and a new Universe springs into being. . . .

In the Sepher Jezireh, the Kabalistic Book of Creation, the author has evidently repeated the words of Manu. In it, the Divine Substance is represented as having alone existed from the eternity, boundless and absolute; and as having emitted from itself the Spirit.* "One is the Spirit of the living God, blessed be ITS name, which liveth for ever! Voice, Spirit, and Word, this is the Holy Spirit;*** and this is the Kabalistic abstract Trinity, so unceremoniously anthropomorphised by the Christian Fathers. From this triple ONE emanated the whole Kosmos. First from ONE emanated number TWO, or Air (the Father), the creative element; and then number THREE, Water (the Mother), proceeded from the air; Ether or Fire completes the mystic four, the Arba-il.*** "When the Concealed of the Concealed wanted to reveal Himself, he first made a point (primordial point, or the first Sephiroth, air, or Holy Ghost), shaped into a sacred form (the ten Sephiroth, or the Heavenly man), and covered it with a rich and splendid garment, that is the world."*****

[[Footnote(s)]] -----

* The manifested Spirit; Absolute, Divine Spirit is one with absolute Divine Substance: Parabrahm and Mulaprakriti are one in essence. Therefore, Cosmic Ideation and Cosmic Substance in their primal character are one also.

** "Sepher Jezireh," chap. 1, Mishna ix.

*** Ibid. It is from Arba that Abram is made to come.

**** "Zohar," I., 2a.

[[Vol. 1, Page]] 338 THE SECRET DOCTRINE.

"He maketh the wind His messengers, flaming Fire His servants," says the Jezireh, showing the cosmical character of the later euhemerised Elements,* and that the Spirit permeates every atom in Kosmos.

This "primordial Substance" is called by some Chaos: Plato and the Pythagoreans named it the Soul of the World after it had been impregnated by the Spirit of that which broods over the Primeval Waters, or Chaos. It is by being reflected in it, say the Kabalists, that the brooding Principle created the phantasmagoria of a visible, manifested Universe. Chaos, before -- Ether, after, the "reflection;" it is still the deity that pervades all Space and things. It is the invisible, imponderable Spirit of things and the invisible, but too tangible fluid that radiates from the fingers of the healthy magnetizer, for it is Vital Electricity -- LIFE itself. Called in derision by the Marquis de Mirville "the nebulous Almighty," it is termed by the Theurgists and Occultists to this day "the living Fire"; and there is not a Hindu who practises at dawn a certain kind of meditation but knows its effects.** It is the "Spirit of

[[Footnote(s)]] -----

* "Sepher Jezireh," Mishna ix., 10. Everywhere throughout the Acts, Paul calls the invisible Kosmic Beings the "Elements." (See Greek Texts.) But now the Elements are degraded into and limited to atoms of which nothing is known, so far, and which are only "children of necessity" as Ether is too -- as we said in "ISIS." "The poor primordial elements have long been exiled, and our ambitious physicists run races to determine who shall add one more to the fledgling brood of the sixty and odd elementary substances." Meanwhile there rages a war in modern chemistry about terms. We are denied the right to call these substances "chemical elements," for they are not "primordial principles of self-existing essences out of which the universe was fashioned," according to Plato. Such ideas associated with the word element were good enough for the "old Greek philosophy," but modern science rejects them; for, as Professor Crookes says, "they are unfortunate terms," and experimental science will have "nothing to do with any kind of essences except those which it can see, smell, or taste. It leaves others to the metaphysicians. . . ." We must feel grateful even for so much.

** Writing upon this subject in Isis Unveiled we said of it that it was: "The Chaos of the ancients, the Zoroastrian sacred fire, or the Atash-Behram of the Parsees; the Hermes-fire, the Elmes-fire of the ancient Germans; the lightning of Cybele; the burning torch of Apollo; the flame on the altar of Pan; the inextinguishable fire in the temple on the Acropolis, and in that of Vesta; the fire-flame of Pluto's helm; the brilliant sparks on the hats of the Dioscuri, on the Gorgon head, the helm of Pallas, and the staff of Mercury; the Egyptian Phtha-Ra; the Grecian Zeus Cataibates (the descending) of Pausanias; the pentacostal fire-tongues; the burning bush of Moses; the pillar of fire of the Exodus, and the "burning lamp" of Abram, the eternal fire of the "bottomless pit"; the Delphic oracular vapours; the Sidereal light of the Rosicrucians; the AKASA of the Hindu adepts; the Astral Light of Eliphas Levi; the nerve-aura and the fluid of the magnetists; the od of the Reichenbach; the Psychod and ectenic force of Thury; the psychic force of Sergeant Cox, and the atmospheric magnetism of some naturalists; galvanism; and finally, electricity -- all these are but various names for many different manifestations or effects of the same mysterious, all-pervading cause, the Greek Archeus." We now add -- it is all this and much more.

[[Vol. 1, Page]] 339 THE MYSTIC FIRE.

Light" and Magnes. As truly expressed by an opponent, Magus and magnes are two branches growing from the same trunk and shooting forth the same resultants. And in this appellation of "living fire" we may also discover the meaning of the puzzling sentence in the Zend-Avesta saying that there is "a fire that gives knowledge of the future. Science and amiable speech," i.e., develops an extraordinary eloquence in the sybil, the sensitive, and even some orators.

This "fire" is spoken of in all the Hindu Books, as also in the Kabalistic works. The Zohar explains it as the "white hidden fire, in the Resha trivrah" (the White Head), whose Will causes the fiery fluid to flow in 370 currents in every direction of the universe. It is identical with the "Serpent that runs with 370 leaps" of the Siphrah Dzenioota, which, when the "Perfect Man," the Metatron, is raised, i.e., when the divine man indwells in the animal man, it, the Serpent, becomes three spirits, that is to say, is Atma-Buddhi-Manas, in our theosophical phraseology. (Vide Part II. in Vol. II., §§ 3, "The Many Meanings of the War in Heaven.")

Spirit, then, or Cosmic Ideation, and Cosmic Substance -- one of whose principles is Ether -- are one, and include the ELEMENTS, in the sense St. Paul attaches to them. These Elements are the veiled Synthesis standing for Dhyān Chohans, Devas, Sephiroth, Amshaspendis, Archangels, etc., etc. The Ether of science -- the Illus of Berosus, or the Protyle of Chemistry -- constitutes, so to speak, the rude material (relatively) out of which the above-named "Builders," following the plan traced out for them eternally in the DIVINE THOUGHT, fashion the systems in the Cosmos. They are "myths," we are told. "No more so than Ether and the Atoms," we answer. The two latter are absolute necessities of physical science; the "Builders" are as absolute a necessity of metaphysics. We are twitted with: "You never saw them." We ask the materialists: "Have you ever seen Ether, or your Atoms, or, again, your FORCE?" Moreover, one of the greatest Western Evolutionists of our modern day, the coadjutor of Darwin, Mr. A. R. Wallace, when discussing the inadequacy of Natural Selection alone to account for the physical form of Man, admits the guiding action of "higher intelligences" as a "necessary part of the great laws which govern the material Universe" ("Contributions to Theory of Natural Selection").

These "higher intelligences" are the Dhyān Chohans of the Occultists.

Indeed, there are few Myths in any religious system worthy of the name, but have an historical as well as a scientific foundation. "Myths," justly observes Pockocke, "are now proved to be fables, just in proportion as we misunderstand them; truths, in proportion as they were once understood."

The one prevailing, most distinct idea -- found in all ancient teaching,

[[Vol. 1, Page]] 340 THE SECRET DOCTRINE.

with reference to Cosmic Evolution and the first "creation" of our Globe with all its products, organic and inorganic (strange word for an Occultist to use) -- is that the whole Kosmos has sprung from the DIVINE THOUGHT. This thought impregnates matter, which is co-eternal with the ONE REALITY; and all that lives and breathes evolves from the emanations of the ONE Immutable -- Parabrahm = Mulaprakriti, the eternal one-root. The former of these is, so to say, the aspect of the central point turned inward into regions quite inaccessible to human intellect, and is absolute abstraction; whereas, in its aspect as Mulaprakriti -- the eternal root of all, -- it gives one some hazy comprehension at least of the Mystery of Being.

"Therefore, it was taught in the inner temples that this visible universe of spirit and matter is but the concrete image of the ideal abstraction; it was built on the model of the first DIVINE IDEA. Thus our universe existed from Eternity in a latent state. The soul animating this purely spiritual universe is the central sun, the highest deity itself. It was not the One who built the concrete form of the idea, but the first-begotten; and as it was constructed on the geometrical figure of the dodecahedron,* the first-begotten 'was pleased to employ twelve thousand years in its creation.' The latter number is expressed in the Tyrrhenian cosmogony,** which shows man created in the sixth millennium. This agrees with the Egyptian theory of 6,000 'years'*** and with the Hebrew computation. But it is the exoteric form of it. The secret computation explains that the 'twelve thousand and the 6,000 years' are YEARS OF BRAHMA -- one day of Brahma being equal to 4,320,000,000 years. Sanchoniathon**** in his Cosmogony, declares that when the wind (spirit) became enamoured of its own principles (the chaos), an intimate union took place, which connection was called pothos, and from this sprang the seed of all. And the chaos knew not its own production, for it was senseless; but from its embrace with the wind was generated Mot, or the ilus (mud).***** From this proceeded the spores of creation and the generation of the universe.

"Zeus-Zen (aether), and Chthonia (the chaotic earth) and Metis (the water), his wives; Osiris and Isis-Latona -- the former god also representing ether -- the first emanation of the Supreme Deity, Amun, the primeval source of light; the goddess earth and water again; Mithras,***** the rock-born god, the symbol of the male mundane-fire, or the personified primordial light, and Mithra, the fire-goddess, at once his mother and his wife: the pure element of fire (the active or male principle) regarded as light and heat, in conjunction with earth and water, or matter (female, or passive, elements of Cosmical generation)

[[Footnote(s)]] -----

* Plato: "Timaeus."

** "Suidas" v. Tyrrhenia."

*** The reader will understand that by "years" is meant "ages," not mere periods of thirteen lunar months each.

**** See the Greek translation by Philo Byblus.

***** Cory: "Ancient Fragment."

***** Mithras was regarded among the Persians as the Theos ekpetros -- god of the rock.

[[Vol. 1, Page]] 341 ONE TREE OF KNOWLEDGE.

Mithras is the son of Bordj, the Persian mundane mountain,* from which he flashed out as a radiant ray of light. Brahma, the fire-god, and his prolific consort; and the Hindu Agni, the refulgent deity from whose body issue a thousand streams of glory and seven tongues of flame, and in whose honour certain Brahmans preserve to this day a perpetual fire; Siva, personated by the mundane mountain of the Hindus, the Meru: these terrific fire-gods, who are said in the legend to have descended from heaven, like the Jewish Jehovah, in a pillar of fire, and a dozen other Archaic double-sexed deities, all loudly proclaim their hidden meaning. And what could these dual myths mean but the psychochemical principle of primordial creation? The first Evolution in its triple manifestation of spirit, force and matter; the divine correlation at its starting point, allegorized as the marriage of Fire and water, products of electrifying spirit, union of the male active principle with the female passive element, which become the parents of their tellurian child, cosmic matter, the prima materia, whose soul is AEther, and whose shadow is the ASTRAL LIGHT!" (ISIS UNVEILED).

The fragments of the systems that have now reached us are rejected as absurd fables. Nevertheless, occult Science -- having survived even the great Flood that submersed the antediluvian giants and with them their very memory, save in the Secret Doctrine, the Bible and other Scriptures -- still holds the Key to all the world problems.

Let us apply that Key to the rare fragments of long-forgotten cosmogonies and try by their scattered parts to re-establish the once Universal Cosmogony of the Secret Doctrine. The Key fits them all. No one can study ancient philosophies seriously without perceiving that the striking similitude of conception between all -- in their exoteric form very often, in their hidden spirit invariably -- is the result of no mere coincidence, but of a concurrent design: and that there was, during the youth of mankind, one language, one knowledge, one universal religion, when there were no churches, no creeds or sects, but when every man was a priest unto himself. And, if it is shown that already in those ages which are shut out from our sight by the exuberant growth of tradition, human religious thought developed in uniform sympathy in every portion of the globe; then, it becomes evident that, born under whatever latitude, in the cold North or the burning South, in the East or West, that thought was inspired by the same revelations, and man was nurtured under the protecting shadow of the same TREE OF KNOWLEDGE.

[[Footnote(s)]] -----

* Bordj is called a fire-mountain -- a volcano; therefore it contains fire, rock, earth and water: the male, or active and the female, or passive, elements. The myth is suggestive.

[[Vol. 1, Page]] 342 THE SECRET DOCTRINE.

§ IV.
CHAOS -- THEOS -- KOSMOS.

THESE three are the containment of Space; or, as a learned Kabalist has defined it, "Space, the all containing uncontained, is the primary embodiment of simply Unity. . . . boundless extension."* But, he asks again, "boundless extension of what?" -- and makes the correct reply -- "The unknown container of all, the Unknown FIRST CAUSE." This is a most correct definition and answer, most esoteric and true, from every aspect of occult teaching.

SPACE, which, in their ignorance and iconoclastic tendency to destroy every philosophic idea of old, the modern wiseacres have proclaimed "an abstract idea" and a void, is, in reality, the container and the body of the Universe with its seven principles. It is a body of limitless extent, whose PRINCIPLES, in Occult phraseology -- each being in its turn a septenary -- manifest in our phenomenal world only the grossest fabric of their sub-divisions. "No one has ever seen the Elements in their fulness," the Doctrine teaches. We have to search for our Wisdom in the original expressions of the primeval people and in their synonyms. Even the latest of them -- the Jews -- show in their Kabalistic teachings this idea, e.g., the seven-headed Serpent of Space, called "the great Sea." "In the beginning, the Alhim created the heavens and the earth; the 6 (Sephiroth). . . . They created six, and on these all things are based. And those (six) depend upon the seven forms of the cranium up to Dignity of all Dignities (Siphrah Dzenioota, i, § 16), see part ii., vol. ii. "Ancient Divisions and the Mystic Numbers."

Now Wind, Air and Spirit have ever been synonymous with every nation. Pneuma (Spirit) and Anemos (the wind) with the Greeks, Spiritus and Ventus with the Latins, were convertible terms even if dissociated from the original idea of the breath of life. In the "Forces" of Science we see but the material effect of the spiritual affect of one or the other of the four primordial Elements, transmitted to us by the 4th Race, as we shall transmit Ether (or rather the gross subdivision of it) in its fulness to the Sixth Root Race. This is explained in the text of this and the following Book.

"Chaos" is called senseless by the ancients, because it represented and contained in itself (Chaos and Space being synonymous) all the Elements in their rudimentary, undifferentiated State. They made of Ether, the fifth element, the synthesis of the other four; for the AEther of the Greek philosophers is not its dregs -- of which indeed they knew more

[[Footnote(s)]] -----

* "New Aspects of Life," by Henry Pratt, M.D.

[[Vol. 1, Page]] 343 THE UNION OF CHAOS AND SPIRIT.

than science does now -- which are rightly enough supposed to act as an agent for many forces that manifest on Earth. Their AEther was the Akasa of the Hindus; the Ether accepted in physics is but one of its subdivisions, on our plane, -- the Astral Light of the Kabalists with all its evil as well as good effects.

On account of the Essence of AEther, or the Unseen Space, being held divine as the supposed veil of Deity, it was regarded as the medium between this life and the next one. The ancients considered that when the directing active "Intelligences" (the gods) retired from any portion of Ether in our Space -- the four realms which they superintend -- then that particular place was left in the possession of evil, so called by reason of the absence of the Good from it.

"The existence of spirit in the common mediator, the ether, is denied by materialism; while theology makes of it a personal god. But the Kabalist holds that both are wrong, saying that in ether, the elements represent but matter -- the blind cosmic forces of nature; while Spirit represents the intelligence which directs them. The Aryan, Hermetic, Orphic, and Pythagorean cosmogonical doctrines, as well as those of Sanchroniathon and Berosus, are all based upon one irrefutable formula, viz., that the aether and chaos, or, in the Platonic language, mind and matter, were the two primeval and eternal principles of the universe, utterly independent of anything else. The former was the all-vivifying intellectual principle; the chaos, a shapeless liquid principle, without 'form or sense,' from the union of which two sprung into existence the universe, or rather the universal world, the first androgynous deity -- the chaotic matter becoming its body, and ether its soul. According to the phraseology of a Fragment of Hermias, 'chaos, from this union with spirit, obtaining sense, shone with pleasure, and thus was produced the Protogonos (the first-born) light.'* This is the universal trinity, based on the metaphysical conceptions of the ancients, who, reasoning by analogy, made of man, who is a compound of intellect and matter, the microcosm of the macrocosm, or great universe." (Isis Unveiled.)

"Nature abhors Vacuum" said the Peripatetics, who comprehended perhaps, though materialists in their way, why Democritus, with his instructor Leucippus, taught that the first principles of all things contained in the Universe were atoms and a vacuum. The latter means simply latent Deity or force; which, before its first manifestation when it became WILL -- communicating the first impulse to these atoms -- was the great Nothingness, Ain-Soph, or NO-THING; was, therefore, to every sense, a Void -- or CHAOS.

That Chaos, however, became the "Soul of the World," according to Plato and the Pythagoreans. According to Hindu teaching, Deity in the shape of AETHER (Akasa) pervades all things; and it was called there-

[[Footnote(s)]] -----

* Damascius, in the "Theogony," calls it Dis, "the disposer of all things." Cory, "Ancient Fragments," p. 314.

[[Vol. 1, Page]] 344 THE SECRET DOCTRINE.

fore by the theurgists "the living fire," the "Spirit of Light," and sometimes Magnes. It was the highest Deity itself which, according to Plato, built the Universe in the geometrical form of the Dodecahedron; and its "first begotten" was born of Chaos and Primordial Light (the Central Sun). This "First-Born," however, was only the aggregate of the Host of the "Builders," the first constructive Forces, who are called in ancient Cosmogonies the Ancients (born of the Deep, or Chaos) and the "First Point." He is the Tetragrammaton, so-called, at the head of the Seven lower Sephiroth. This was the belief of the Chaldees. "These Chaldeans," writes Philo, the Jew, speaking very flippantly of the first instructors of his ancestors, "were of opinion that the Kosmos, among the things that exist (?) is a single point, either being itself God (Theos) or that in it is God, comprehending the soul of all things." (See his "Migration of Abraham," 32.)

Chaos-Theos-Kosmos are but the three aspects of their synthesis -- SPACE. One can never hope to solve the mystery of this Tetraktis by holding to the dead-letter even of the old philosophies, as now extant. But, even in these CHAOS-THEOS-KOSMOS = SPACE, are identified in all Eternity, as the One Unknown Space, the last word about which will, perhaps, never be known before our seventh Round. Nevertheless, the allegories and metaphysical symbols about the primeval and perfect CUBE, are remarkable even in the exoteric Puranas.

There, also, Brahma is the Theos, evolving out of Chaos, or the great "Deep," the waters, over which Spirit = SPACE, personified by ayana -- the Spirit moving over the face of the future boundless Kosmos -- is silently hovering, in the first hour of re-awakening. It is also Vishnu, sleeping on Ananta-Sesha, the great Serpent of Eternity, of which Western theology, ignorant of the Kabala, the only key that opens the secrets of the Bible, has made -- the Devil. It is the first triangle or the Pythagorean triad, the "God of the three Aspects," before it is transformed through its perfect quadrature of the infinite Circle into the "four-faced Brahma."

"Of him who is and yet is not, from the not-being, Eternal Cause, is born the Being-Purusha," says Manu, the legislator.

In Isis Unveiled, it is said that:--

"In the Egyptian mythology, Kneph, the Eternal Unrevealed God, is represented by a snake emblem of Eternity encircling a water urn, with its head hovering over the waters, which it incubates with its breath. In this case the serpent is the Agathodaemon, the good spirit: in its opposite aspect, it is the Kakodaemon -- the bad one. In the Scandinavian Eddas, the honey dew, the fruit of the gods and of the creative busy Yggdrasil (bees), falls during the hours of night, when the atmosphere is impregnated with humidity; and in the Northern mythologies, as the passive principle of creation, it typifies the

[[Vol. 1, Page]] 345 THE BIRTH OF MIND.

creation of the universe out of water; this dew is the astral light in one of its combinations, and possesses creative as well as destructive properties. In the Chaldean legend of Berosus, Oannes or Dagon, the man-fish, instructing the people, shows the infant world created out of water, and all beings originating from this prima materia. Moses teaches that only earth and water can bring a living soul: and we read in the Scriptures that herbs could not grow until the Eternal caused it to rain upon earth. In the Mexican Popol-Vuh, man is created out of mud or clay (terre glaise), taken from under the water. Brahma creates the great Muni (or first man) seated on his lotus, only after having called into being spirits who thus enjoyed over mortals a priority of existence, and he creates him out of water, air and earth. Alchemists claim that the primordial or pre-Adamic earth, when reduced to its first substance, is in its second stage of transformation like clear water, the first being the alkahest proper. This primordial substance is said to contain within itself the essence of all that goes to make up man; it has not only all the elements of his physical being, but even the "breath of life" itself in a latent state, ready to be awakened. This it derives from the "incubation" of the "Spirit of God" upon the face of the waters -- CHAOS: in fact, this substance is chaos itself. From this it was that Paracelsus claimed to be able to make his "homunculi;" and this is why Thales, the great natural philosopher, maintained that water was the principle of all things in nature.* . . . Job says, in chap. xxvi. 5, that "dead things are formed from under the waters, and inhabitants thereof." In the original text, instead of "dead things," it is written dead Rephaim (giants or mighty primitive men), from whom "Evolution" may one day trace our present race."

"In the primordial state of the creation," says Polier's Mythologie des Indous, "the rudimental universe, submerged in water, reposed in the bosom of Vishnu. Sprung from this chaos and darkness, Brahma, the architect of the world, poised on a lotus-leaf, floated (moved) upon the waters, unable to discern anything but water and darkness." Perceiving such a dismal state of things, Brahma soliloquises in consternation: "Who am I? Whence came I?" Then he hears a voice:** "Direct your thoughts to Bhagavat." Brahma, rising from his natatory position, seats himself upon the lotus in an attitude of contemplation, and reflects upon the Eternal, who, pleased with this evidence of piety, disperses the primeval darkness and opens his understanding. "After this Brahma issues from the universal egg (infinite chaos) as light, for his understanding is now opened, and he sets himself to work: he moves on the eternal waters, with the spirit of God within himself; and in his capacity of mover of the waters he is Vishnu, or Narayana." This is

[[Footnote(s)]] -----

* With the Greeks, the "River-gods," all of them the Sons of the primeval ocean (Chaos in its masculine aspect), were the respective ancestors of the Hellenic races. For them the OCEAN was the father of the Gods; and thus they had anticipated in this connection the theories of Thales, as rightly observed by Aristotle (Metaph. I., 3, 5).

** The "Spirit," or hidden voice of the Mantras, the active manifestation of the latent Force, or occult potency.

[[Vol. 1, Page]] 346 THE SECRET DOCTRINE.

exoteric, of course, yet in its main idea as identical as possible with the Egyptian cosmogony, which shows in its opening sentences Athor,* or Mother Night (which represents illimitable darkness), as the primeval element which covered the infinite abyss, animated by water and the universal spirit of the Eternal, dwelling alone in Chaos. Similarly in the Jewish Scriptures, the history of the creation opens with the spirit of God and his creative emanation -- another Deity.**

The Zohar teaches that it is the primordial elements -- the trinity of Fire, Air and Water -- the four cardinal points, and all the Forces of Nature, which form collectively the VOICE of the WILL Memrab, or the "Word," the Logos of the Absolute Silent ALL. "The indivisible point, limitless and unknowable" spreads itself over the endless space, and thus forms a veil (the Mulaprakriti of Parabraham) which conceals this Absolute point. (Vide infra).

In the cosmogonies of all the nations it is the "Architects" synthesized by Demiurgos (in the Bible the "Elohim"), who fashion Kosmos out of Chaos, and who are the collective Theos, "male-female," Spirit and matter. "By a series (yom) of foundations (hasoth) the Alhim caused earth and heaven to be" (Gen. ii., 4). In the Bible it is first Alhim, then Jahva-Alhim, and finally Jehovah --after the separation of the sexes in chapter iv. of Genesis. It is noticeable that nowhere, except in the later, the last Cosmogonies of our Fifth race, is the ineffable and unutterable NAME*** -- the symbol of the Unknown Deity, which was used only in the MYSTERIES -- used in connection with the "Creation" of the Universe. It is the "Movers," the "Runners," the theoi (from [[theein]], "to run"), who do the work of formation, the "Messengers" of the manvantaric law, who have now become in Christianity the "messengers" (malachim); and it seems the same in Hinduism or early Brahmanism. For it is not Brahma who creates in the Rig Veda, but the Prajapati, the "Lords of Being," who are the Rishis; the word Rishi (according to Professor Mahadeo Kunte) being connected with the word to move, to lead on, applied to them in their terrestrial character, when, as Patriarchs, they lead their hosts on the Seven Rivers.

Moreover, the very word "God" in the singular, embracing all the gods -- or theos from theoi -- came to the "superior" civilized nations from a strange source, one entirely and as pre-eminently phallic as the

[[Footnote(s)]] -----

** We do not mean the current or accepted Bible, but the real Jewish one, now explained kabalistically.

*** It is "unutterable" for the simple reason that it is non-existent. It never was a name, nor any word at all, but an Idea that could not be expressed. A substitute was created for it in the century preceding our era.

[[Vol. 1, Page]] 347 THE MYSTIC ELEMENTS.

sincere, open-spoken lingam of India. The attempt to derive God from the Anglo-Saxon synonym "good" is an abandoned idea, for in no other language, in all of which the term varies more or less, from the Persian Khoda down to the Latin Deus, has an instance been found of a name of God being derived from the attribute of Goodness. To the Latin races it comes from the Aryan Dyaus (the Day); to the Slavonian, from the Greek Bacchus (Bagh-bog); and to the Saxon races directly from the Hebrew Yodh or Jod. The latter is [[diagram]], the number-letter 10, male and female, and Jod the phallic hook:-- hence the Saxon Godh, the Germanic Gott, and the English God. This symbolic term may be said to represent the Creator of physical "Humanity," on the terrestrial plane; but surely it had nothing to do with the formation or "Creation" of Spirit, gods, or Kosmos!

Chaos-Theos-Kosmos, the triple deity, is all in all. Therefore, it is said to be male and female, good and evil, positive and negative: the whole series of contrasted qualities. When latent (in pralaya) it is incognizable and becomes the unknowable Deity. It can be known only in its active functions; hence as matter-Force and living Spirit, the correlations and outcome, or the expression, on the visible plane, of the ultimate and ever-to-be unknown UNITY.

In its turn this triple unit is the producer of the four primary "Elements,"* which are known in our visible terrestrial nature as the seven (so far the five) Elements, each divisible into forty-nine (or seven times seven) sub-elements, with about seventy of which Chemistry is acquainted. Every Cosmical Element such as Fire, Air, Water, Earth, partaking of the qualities and defects of their Primaries, are in their nature Good and Evil, Force (or Spirit) and Matter, etc., etc.; and each, therefore, is at one and the same time Life and Death, Health and Disease, Action and Reaction. (See Section XIV., "The Four Elements.") They are ever and constantly forming matter under the never-ceasing impulse of the ONE Element (the incognizable), represented in the world of phenomena by 'AEther, or "the immortal gods who give birth and life to all."

In "the Philosophical writings of Solomon Ben Yehudah Ibn Gebirol" (translated in Mr. Isaac Myer's Kabbalah, just published) it is said on the structure of the Universe, "R. Yehudah began, it is written:-- 'Elohim said: Let there be a firmament in the midst of the waters.' Come, see, at the time that the Holy. . . . created the World, He

[[Footnote(s)]] -----

* The Cosmic Tabernacle of Moses, erected by him in the Desert, was square, representing the four cardinal points and the four Elements, as Josephus tells his readers (Antiq. 1, viii ch., xxii.) It is the idea taken from the pyramids in Egypt and in Tyre, where the pyramids became pillars, the Genii, or Angels have their abodes in the four respective points (See § xiv.; "The Four Elements.")

[[Vol. 1, Page]] 348 THE SECRET DOCTRINE.

created 7 heavens above, 7 earths below, 7 seas, 7 days, 7 rivers, 7 weeks, 7 years, 7 times, and 7,000 years that the world has been. The Holy is the seventh of all," etc. (p. 415).

This, besides showing a strange identity with the cosmogony of the Puranas (e.g., Vishnu Purana 1st Book), corroborates with regard to number seven, all our teachings as briefly given in "Esoteric Buddhism."

The Hindus have an endless series of allegories to express this idea. In the primordial Chaos, before it became developed into the Seven Oceans (Sapta Samudra) -- emblematical of the seven gunas (conditioned qualities) composed of trigunas (Satwa, Rajas and Tamas, see Puranas) -- lie latent both Amrita (immortality) and Visha (poison, death, evil). This allegory is found in the "Churning of the Ocean" by the gods. Amrita is beyond any guna, for it is UNCONDITIONED per se; yet when fallen into the phenomenal creation it got mixed up with EVIL, Chaos, with latent theos in it, and before Kosmos was evolved. Hence, one finds Vishnu -- standing here for eternal Law -- periodically calling forth Kosmos into activity -- "churning out of the primitive Ocean (boundless Chaos) the Amrita of Eternity, reserved only for the gods and devas; and he has to employ in the task Nagas and Asuras -- demons in exoteric Hinduism. The whole allegory is highly philosophical, and we find it repeated in every philosophical System. Plato, having fully embraced the ideas of Pythagoras -- who had brought them from India -- compiled and published them in a form more intelligible than the mysterious numerals of the Greek Sage. Thus the Kosmos is "the Son" with Plato, having for his father and mother the Divine Thought and Matter.*

"The Egyptians," says Dunlap,** "distinguish between an older and younger Horus; the former the brother of Osiris, the latter the son of Osiris and Isis." The first is the Idea of the world remaining in the Demiurgic Mind, "born in darkness before the creation of the world." The second Horus is this "Idea" going forth from the Logos, becoming clothed with matter, and assuming an actual existence.***

"The Mundane God, eternal, boundless, young and old, of winding form,"**** say the Chaldean oracles.

This "winding form" is a figure to express the vibratory motion of the Astral Light, with which the ancient priests were perfectly well acquainted, though its name was invented by the Martinists.

Now Cosmolatry has the finger of scorn pointed at its superstitions by modern Science, which ought, however, as advised by a French

[[Vol. 1, Page]] 349 THE MANY ARE ONE.

savant, before laughing at it "to remodel entirely its own system of cosmo-pneumatological education." Satis eloquentiae, sapientiae parvum. Cosmolatry like Pantheism may be made to yield in its ultimate expression the words applied to Vishnu "He is only the ideal Cause of the Potencies to be created in the work of creation; and from him proceed the potencies to be created, after they have become the real cause. Save that one ideal cause, there is no other to which the world can be referred. . . . Through the potency of that cause, every created thing comes by its proper nature." (Original Sanskrit Texts, Part iv., pp. 32, 33.)

§ V.
ON THE HIDDEN DEITY, ITS SYMBOLS AND GLYPHS.

THE Logos or Creative deity, the "Word made Flesh," of every religion, has to be traced to its ultimate source and Essence. In India, it is a Proteus of 1,008 divine names and aspects in each of its personal transformations, from Brahma-Purusha down through the Seven

divine Rishis and ten semi-divine Prajapati (also Rishis) to the divine-human Avatars. The same puzzling problem of the "One in many" and the multitude in One, is found in other Pantheons, in the Egyptian, the Greek and the Chaldeo-Judaic, the latter having made confusion still more confused by presenting its Gods as euhemerizations, in the shapes of Patriarchs. The latter are now accepted by those who reject Romulus as a myth, and are represented as living and historical Entities. Verbum satis sapienti.

In the Zohar, En-Soph is also the ONE, and the infinite Unity. This was known to the very few learned Fathers of the Church, who were aware that Jehovah was but a third rate potency and no "highest" God. But while complaining bitterly of the Gnostics and saying . . . "our Heretics hold . . . that PROPATOR is known but to the Only begotten Son* (who is Brahma among the rest) that is to the mind" (nous), Irenaeus never mentioned that the Jews did the same in their real secret books. Valentinus, "the profoundest doctor of the Gnosis," held that "there was a perfect AION who existed before Bythos, or Buthon (the first father of unfathomable nature, which is the second Logos) called Propator." It is thus AION, who springs as a Ray from Ain-Soph (who does not create), and AION, who creates, or through whom, rather, everything is created, or evolves.

[[Footnote(s)]] -----

* As Mulaprakriti is known only to Iswar, the LOGOS, as he is called now by Mr. T. Subba Row, of Madras. (See his Bhagavadgita Lectures.)

[[Vol. 1, Page]] 350 THE SECRET DOCTRINE.

For, as the Basilidians taught, "there was a supreme god, Abraxas, by whom was created mind" (Mahat, in Sanskrit, Nous in Greek). "From Mind proceeded the word, Logos, from the word, Providence (Divine Light, rather), then from it Virtue and Wisdom in Principalities, Powers, Angels, etc., etc." By these (Angels) the 365 AEons were created. "Amongst the lowest, indeed, and those who made this world, he (Basilides) sets last of all the God of the Jews, whom he denies to be God (and very rightly), affirming he is one of the angels" (Ibid.). Here, then, we find the same system as in the Puranas, wherein the Incomprehensible drops a seed, which becomes the golden egg, from which Brahma is produced. Brahma produces Mahat, etc., etc. True Esoteric philosophy, however, speaks neither of "creation" nor of "evolution" in the sense the exoteric religions do. All these personified Powers are not evolutions from one another, but so many aspects of the one and sole manifestation of the ABSOLUTE all. The same system as the gnostic prevails in the Sephirothal aspects of Ain-Soph, yet, as these aspects are in Space and Time, a certain order is maintained in their successive appearances. Therefore, it becomes impossible not to take notice of the great changes that the Zohar has undergone under the handling of generations of Christian Mystics. For, even in the metaphysics of the Talmud, the "lower Face" (or "Lesser Countenance"), the microprosopus, in fact, could never be placed on the plane of the same abstract ideal as the Higher, or "Greater Countenance," macroprosopus. The latter is, in the Chaldean Kabala, a pure abstraction; the Word or LOGOS, or DABAR (in Hebrew), which Word, though it becomes in fact a plural number, or "Words" -- D(a)B(a)RIM, when it reflects itself, or falls into the aspect of a Host (of angels, or Sephiroth, "numbers") is still collectively ONE, and on the ideal plane a nought -- 0, a "No-thing." IT is without form or being, "with no likeness with anything else." (Franck, "Die Kabbala," p. 126.) And even Philo calls the Creator, the Logos who stands next God, "the SECOND GOD," and "the second God who is his (Highest God's) WISDOM" (Philo. Quaest. et Solut). Deity is not God. It is NOTHING, and DARKNESS. It is nameless, and therefore called Ain-Soph -- "the word Ayin meaning nothing." See Franck "Die Kabbala," p. 153. See also Section XII., "Theogony of the Creative Gods." The "Highest God" (the unmanifested LOGOS) is its Son.

Nor are most of the gnostic systems, which come down to us mutilated by the Church Fathers, anything better than the distorted shells of the original speculations. Nor were they open to the public or reader, at any time; i.e., had their hidden meaning or esotericism been revealed, it would have been no more an esoteric teaching, and this could never be. Alone Marcus (the chief of the Marcosians, 2nd century), who taught

[[Vol. 1, Page]] 351 THE Gnostic IDEA.

that deity had to be viewed under the symbol of four syllables, gave out more of the esoteric truths than any other Gnostic. But even he was never well understood. For it is only on the surface or dead letter of his Revelation that it appears that God is a quaternary, to wit: "the Ineffable, the Silence, the Father, and Truth," -- in reality it is quite erroneous, and divulges only one more esoteric riddle. This teaching of Marcus was that of the early Kabalists and ours. For he makes of Deity, the number 30 in 4 syllables, which, translated esoterically, means a Triad or Triangle, and a Quaternary or a square, in all seven, which, on the lower plane made the seven divine or secret letters of which the God-name is composed. This requires demonstration. In his "Revelation," speaking of divine mysteries expressed by means of letters and numbers, Marcus narrates how the "Supreme Tetrad came down unto me (him) from the region which cannot be seen nor named, in a female form, because the world would have been unable to bear her appearing under a male figure," and revealed to him "the generation of the universe, untold before to either gods or men."

This first sentence already contains a double meaning. Why should a female figure be more easily borne or listened to by the world than a male figure? On the very face of it this appears nonsensical. Withal it is quite simple and clear to one who is acquainted with the mystery-language. Esoteric Philosophy, or the Secret Wisdom, was symbolized by a female form, while a male figure stood for the Unveiled mystery. Hence, the world not being ready to receive, could not bear it, and the Revelation of Marcus had to be given allegorically. Then he writes:

"When first the Inconceivable, the Beingless and Sexless (the Kabalistic Ain-Soph) began to be in labour (i.e., when the hour of manifesting Itself had struck) and desired that Its Ineffable should be born (the first LOGOS, or AEon, or Aion), and its invisible should

be clothed with form, its mouth opened and uttered the word like unto itself. This word (logos) manifested itself in the form of the Invisible One. The uttering of the (ineffable) name (through the word) came to pass in this manner. He (the Supreme Logos) uttered the first word of his name, which is a syllable of four letters. Then the second syllable was added, also of four letters. Then the third, composed of ten letters; and after this the fourth, which contains twelve letters. The whole name consists thus of thirty letters and of four syllables. Each letter has its own accent and way of writing, but neither understands nor ever beholds that form of the whole Name, -- no; not even the power of the letter that stands next to Itself (to the Beingless and the Inconceivable.)* All these sounds when united are the collective Beingless,

[[Footnote(s)]] -----

* Iswara, or the Logos, cannot see Parabrahmam, but only Mulaprakriti, says the lecturer, in the Four Lectures on Bhagavatgita. (See Theosophist, Feb., 1887.)

[[Vol. 1, Page]] 352 THE SECRET DOCTRINE.

unbegotten AEon, and these are the Angels that are ever beholding the face of the Father* (the Logos, the "second God," who stands next God, "the Inconceivable," according to Philo).

This is as plain as ancient esoteric secrecy would make it. It is as Kabalistic, but less veiled than the Zohar in which the mystic names or attributes are also four syllabled, twelve, forty-two, and even seventy-two syllabled words! The Tetrad shows to Marcus the TRUTH in the shape of a naked woman, and letters every limb of that figure, calling her head [[omega]], her neck [[psi]], shoulders and hands [[gamma]], and [[chi]], etc., etc. In this Sephira is easily recognised, the Crown (Kether) or head being numbered one; the brain or Chochmah, 2; the heart, or Intelligence (Binah), 3; and the other seven Sephiroth representing the limbs of the body. The Sephirothal Tree is the Universe, and Adam Kadmon represents it in the West as Brahma represents it in India.

Throughout, the 10 Sephiroth are represented as divided into the three higher, or the spiritual Triad, and the lower Septenary. The true Esoteric meaning of the sacred number seven is cleverly veiled in the Zohar; yet was betrayed by the double way of writing "in the beginning" or Be-resheeth, and Be-raishath, the latter the "Higher, or Upper Wisdom." As shown by Mr. Macgregor Mathers in his Kabbalah (p. 47), and in the Qabbalah of Mr. T. Myer (p. 233), both of these Kabalists being supported by the best ancient authorities, these words have a dual and secret meaning. Braisheeth bara Elohim means that the six, over which stands the seventh Sephiroth, belong to the lower material class, or, as the author says: "Seven . . . are applied to the Lower Creation, and three to the spiritual man, the Heavenly Prototypic or first Adam."

When the Theosophists and Occultists say that God is no BEING, for IT is nothing, No-Thing, they are more reverential and religiously respectful to the Deity than those who call God a HE, and thus make of Him a gigantic MALE.

He who studies the Kabala will soon find the same idea in the ultimate thought of its authors, the earlier and great Hebrew Initiates, who got this secret Wisdom at Babylonia from the Chaldean Hierophants, while Moses got his in Egypt. The Zohar cannot well be judged by its after translations in Latin and other tongues, as all those ideas were, of course, softened and made to fit in with the views and policy of its Christian arrangers; but in truth its ideas are identical with those of all other religious systems. The various Cosmogonies show that the Archaic Universal Soul was held by every nation as the "Mind" of the Demiurgic Creator; and that it

[[Footnote(s)]] -----

* The "Seven Angels of the Face," with the Christians.

[[Vol. 1, Page]] 353 THE EGYPTIAN VERSION.

was called the "Mother," Sophia with the Gnostics (or the female Wisdom), the Sephira with the Jews, Saraswati or Vach, with the Hindus, the Holy Ghost being a female Principle.

Hence, born from it, the Kurios or Logos was, with the Greeks, the "God, mind" (nous). "Now Koros (Kurios) signifies the pure and unmixed nature of intellect -- wisdom," says Plato in "Cratylus"; and Kurios is Mercury, the Divine Wisdom, and "mercury is the Sol" (Sun) ("Arnobius" vi., xii.), from whom Thot-Hermes received this divine Wisdom. While, then, the Logoi of all countries and religions are correlative (in their sexual aspects) with the female Soul of the World or the "Great Deep;" the deity, from which these two in one have their being, is ever concealed and called the "Hidden One," connected only indirectly with Creation,* as it can act only through the Dual Force emanating from the Eternal Essence. Even AEsculapius, called the "Saviour of all," is identical, according to ancient classics, with Phta, the Egyptian Creative Intellect (or Divine Wisdom), and with Apollo, Baal, Adonis and Hercules (see Dunlap's "Mystery of Adonis," pp. 23 and 95); and Phta is, in one of its aspects, the "Anima Mundi," the Universal Soul of Plato, the "Divine Spirit" of the Egyptians, the "Holy Ghost" of the early Christians and Gnostics, and the Akasa of the Hindus, and even, in its lower aspect, the Astral Light. For Phta was originally the "God of the Dead," he in whose bosom they were received, hence the Limbus of the Greek Christians, or the Astral Light. It is far later that Phta was classed with the Sun-gods, his name signifying "he who opens," as he is shown to be the first to unveil the face of the dead mummy, to call the soul to life in his bosom. (See Maspero's "Bulaq Museum.") KNEPH, the Eternal Unrevealed, is represented by the snake-emblem of eternity encircling a water-urn, with its head hovering over the "waters" which it incubates with its breath -- another form of one and the same idea of "Darkness," its ray moving on the waters, &c. As "Logos-Soul," this permutation is called Phta; as Logos-Creator, he becomes Imhot-pou, his son, "the god of the

handsome face." In their primitive characters these two were the first Cosmic Duad, Noot, "space or Sky," and Noo, "the primordial Waters," the Androgyne Unity, above whom was the Concealed BREATH of Kneph. And all of them had the aquatic animals and plants sacred to them, the ibis, the swan, the goose, the crocodile, and the lotus.

Returning to the Kabalistic deity, this Concealed Unity is then [[hebrew]] = [[to pan]] = [[apeiros]], Endless, Boundless, non-Existent, [[hebrew]] so

[[Footnote(s)]] -----

* We use the term as one accepted and sanctioned by use, and therefore more comprehensible to the reader.

[[Vol. 1, Page]] 354 THE SECRET DOCTRINE.

long as the Absolute is within Oulom,* the boundless and termless time, as such, En-Soph cannot be the Creator or even the modeller of the Universe, nor can he be Aur (light). Therefore En-Soph is also Darkness. The immutably Infinite and the absolutely Boundless can neither will, think, nor act. To do this it has to become finite, and it does so, by its ray penetrating into the mundane egg -- infinite space -- and emanating from it as a finite god. All this is left to the ray latent in the one. When the period arrives, the absolute will expand naturally the force within it, according to the Law of which it is the inner and ultimate Essence. The Hebrews did not adopt the egg as a symbol, but they substituted for it the "Duplex heavens," for, translated correctly, the sentence "God made the heavens and the earth" would read:-- "In and out of his own essence as a womb (the mundane egg), God created the two heavens." But the Christians have chosen as the symbol of their Holy Ghost, the dove.

"Whosoever acquaints himself with [[hebrew]] the Mercaba and the lahghash (secret speech or incantation), will learn the secret of secrets." Lahghash is nearly identical in meaning with Vach, the hidden power of the Mantras.

When the active period has arrived, from within the eternal essence of Ain-Soph, comes forth Sephira, the active Power, called the Primordial Point, and the Crown, Kether. It is only through her that the "Un-bounded Wisdom" could give a concrete form to the abstract Thought. Two sides of the upper triangle by which the ineffable Essence and the universe -- its manifested body -- are symbolized, the right side and the base are composed of unbroken lines; the third, the left side, is dotted. It is through the latter that emerges Sephira. Spreading in every direction, she finally encompasses the whole triangle. In this emanation the triple triad is formed. From the invisible Dew falling from the higher Uni-triad (thus leaving 7 sephiroths only), the "Head" Sephira creates primeval waters, i.e., Chaos takes shape. It is the first stage towards the solidification of spirit which through various modifications will produce earth. "It requires earth and water to make a living soul," says Moses. It requires the image of an aquatic bird to connect it with water, the female element of procreation with the egg and the bird that fecundates it.

When Sephira emerges like an active power from within the latent Deity, she is female; when she assumes the office of a creator, she becomes a male; hence, she is androgyne. She is the "Father and

[[Footnote(s)]] -----

* With the ancient Jews, as shown by Le Clerc, the word Oulom meant only a time whose beginning or end is not known. The term "eternity," properly speaking, did not exist in the Hebrew tongue with the meaning, for instance, applied by the Vedantins to Parabrahm.

[[Vol. 1, Page]] 355 INTERNATIONAL CORRELATION OF GODS.

Mother Aditi," of the Hindu Cosmogony and of the Secret Doctrine. If the oldest Hebrew scrolls had been preserved, the modern Jehovah-worshipper would have found that many and uncomely were the symbols of the creative god. The frog in the moon, typical of his generative character, was the most frequent. All the birds and animals now held "unclean" in the Bible had been the symbols of the Deity in days of old. It was because they were too sacred that a mask of uncleanness was placed over them, in order to preserve them from destruction. The brazen serpent was not a bit more poetical than the goose or swan, if symbols are to be accepted a la lettre.

In the words of the Zohar: "The Indivisible Point, which has no limit and cannot be comprehended because of its purity and brightness, expanded from without, forming a brightness that served the indivisible Point as a veil;" yet the latter also "could not be viewed in consequence of its immeasurable light. It too expanded from without, and this expansion was its garment. Thus through a constant upheaving (motion) finally the world originated" (Zohar I. 20a). The Spiritual substance sent forth by the Infinite Light is the first Sephira or Shekinah: Sephira exoterically contains all the other nine Sephiroths in her. Esoterically she contains but two,* Chochmah or Wisdom, "a masculine, active potency whose divine name is Jah ([[diagram]])," and BINAH, a feminine passive potency, Intelligence, represented by the divine name Jehovah ([[diagram]]); which two potencies form, with Sephira the third, the Jewish trinity or the Crown, KETHER. These two Sephiroths called Father, Abba, and Mother Amona, are the duad or the double-sexed logos from which issued the other seven Sephiroths. (See Zohar.) This first Jewish triad (Sephira, Chochmah, and Binah) is the Hindu Trimurti.* However veiled, even in the Zohar, and more still in the exoteric Pantheon of India, every particular connected with one is reproduced in the other. The Prajapati are the Sephiroths. Ten with Brahma they dwindle to seven, when the Trimurti, and the Kabalistic triad, are separated from the rest. The seven Builders (Creators) become the seven Prajapati, or the seven Rishis, in the same order as the Sephiroths become the Creators; then the Patriarchs, etc. In both Secret Systems, the One Universal Essence is

incomprehensible and inactive in its absoluteness, and can be connected with the building of the Universe only in an indirect way. In both, the primeval Malefemale or androgynous Principle, and their ten and seven Emanations (Brahma-Viraj and Aditi-Vach on the one part and the Elohim-Jehovah, or Adam-Adami (Adam Kadmon) and Sephira Eve on the

[[Footnote(s)]] -----

* In the Indian Pantheon the double-sexed Logos is Brahma, the Creator, whose seven "mind born" sons are the primeval Rishis -- the "Builders."

[[Vol. 1, Page]] 356 THE SECRET DOCTRINE.

other), with their Prajapati and Sephiroths, represent in their totality, first of all the Archetypal man, the Proto-logos; and only in their secondary aspect do they become Cosmic powers, and astronomical or sidereal bodies. If Aditi is the mother of the gods, Deva-Matri, Eve is the mother of all living; they are the Sakti or generative power in their female aspect of the "Heavenly man," and they are all compound Creators. Says a "Gupta Vidya" Sutra: "In the beginning, a ray issuing from Paramarthika (the one and only true existence), it became manifested in Vyavaharika (conventional existence) which was used as a Vahan to descend into the Universal Mother, and to cause her to expand (swell, brih)." And in the Zohar it is stated: "The Infinite Unity, formless and without similitude, after the form of the heavenly man was created, used it. The Unknown Light* (Darkness) used the [[hebrew]](heavenly form) as a chariot [[hebrew]] through which to descend, and wished to be called by this form, which is the sacred name Jehovah."

As the Zohar says: "In the beginning was the Will of the King, prior to any other existence. . . . It (the Will) sketched the forms of all things that had been concealed but now came into view. And there went forth as a sealed secret from the head of Ain Soph, a nebulous spark of matter, without shape or form. . . . Life is drawn from below, and from above the source renews itself, the sea is always full and spreads its waters everywhere." Thus the deity is compared to a shoreless sea, to water which is "the fountain of life" (Zohar iii., 290). "The seventh palace, the fountain of life, is the first in the order from above" (ii. 261). Hence the Kabalistic tenet on the lips of the very Kabalistic Solomon, who says in Proverbs ix., 1: "Wisdom hath builded her house; it hath hewn out its seven pillars."

Whence then, all this identity of ideas, if there was no primeval UNIVERSAL Revelation? The few points shown are like a few straws in a hayrick, in comparison to that which will be shown as the work proceeds. If we turn to that most hazy of all Cosmogonies -- the Chinese, even there the same idea is found. Tsi-tsai (the Self-Existent) is the unknown Darkness, the root of the Wuliang-sheu (Boundless Age), Amitabhe, and Tien (heaven) come later on. The "great Extreme" of Confucius gives the same idea, his "straws" notwithstanding. The latter are a source of great amusement to the missionaries. These laugh at every "heathen" religion, despise and hate that of their

[[Footnote(s)]] -----

* Says Rabbi Simeon: "Ah, companions, companions, man as an emanation was both man and woman, as well on the side of the 'Father' as on the side of the 'Mother.' And this is the sense of the words: 'And Elohim spoke; Let there be Light, and it was Light' . . . and this is the two-fold man." ("Auszuge aus dem Sohar," p. 13, 15.) Light, then, in Genesis stood for the Androgyne Ray or "Heavenly Man."

[[Vol. 1, Page]] 357 ORNITHOLOGICAL SYMBOLS.

brother Christians of other denominations, and yet one and all accept a la lettre their own Genesis. If we turn to Chaldea we find in it Anu, the concealed deity, the One, whose name, moreover, shows it to be of Sanskrit origin. Anu, which means in Sanskrit "atom," aniyamsam aniyasam (smallest of the small), is a name of Parabrahm in the Vedantic philosophy; Parabrahm being described as smaller than the smallest atom, and greater than the greatest sphere or universe: "Anagraniyam and Mahatorvatav." This is what George Smith gives as the first verses of the Akkadian Genesis as found in the Cuneiform Texts on the "Lateras Coctiles." There also, we find Anu the passive deity or En-Soph, Bel, the Creator, the Spirit of God (Sephira) moving on the face of the waters, hence water itself, and Hea, the Universal Soul or wisdom of the three combined.

The first eight verses read thus:

1. When above, were not raised the heavens;
2. And below on the earth a plant had not grown up.
3. The abyss had not broken its boundaries.
4. The chaos (or water) Tiamat (the sea) was the producing mother of the whole of them. (This is the Cosmical Aditi and Sephira.)
5. Those waters at the beginning were ordained but --
6. A tree had not grown, a flower had not unfolded.
7. When the gods had not sprung up, any one of them.
8. A plant had not grown, and order did not exist.

This was the chaotic or ante-genetic period -- the double Swan and the Dark Swan, which becomes white, when Light is created.*

The symbol chosen for the majestic ideal of the Universal Principle will seem little calculated to answer its sacred character. A goose, or even a swan, may appear unfit, no doubt, to represent the grandeur of the Spirit. Nevertheless, it must have had some deep occult meaning, since it figures not only in every cosmogony and world religion, but even was chosen by the mediaeval Christians, the Crusaders, as the vehicle of the Holy Ghost supposed to lead the army to Palestine, to wrench the Tomb of the Saviour from the hands of the Saracen. If we are to credit Professor Draper's statement in his "Intellectual Development of Europe," the Crusaders, led on by Peter the Hermit, were preceded, at the head of the army, by the Holy Ghost under the shape of a white gander in company of a goat. The Egyptian God of Time, Seb, carries a goose on his head. Jupiter assumes the form of a swan and Brahma also, because the root of all this is that mystery of mysteries -- the MUNDANE EGG. (See preceding §).

[[Footnote(s)]] -----

* The Seven Swans that are believed to land from Heaven into Lake Mansarovara, are in the popular fancy the Seven Rishis of the Great Bear, who assume that form to visit the locality where the Vedas were written.

[[Vol. 1, Page]] 358 THE SECRET DOCTRINE.

One has to learn the reason of a symbol before one depreciates it. The dual element of Air and Water is that of the ibis, swan, goose and pelican, of crocodiles and frogs, lotus flowers and water lilies, &c.; and the result is the choice of the most unseemly symbols among the modern as much as the ancient mystics. Pan, the great god of nature, was generally figured in connection with aquatic birds, geese especially, and so were other gods. If, later on, with the gradual degeneration of religion, the gods to whom geese were sacred, became Priapic deities, it does not stand to reason that water fowls were made sacred to Pan and other Phallic deities as some scoffers even of antiquity would have it (see Petronii Satyrice, cxxxvi.); but that the abstract and divine power of procreative nature had become grossly anthropomorphized. Nor does the Swan of Leda show "Priapic doings and her enjoyment thereof," as Mr. Hargrave Jennings chastely expresses it -- for the myth is but another version of the same philosophical idea of cosmogony. Swans are frequently found associated with Apollo, as they are the emblems of water and fire (sun-light also), before the separation of the Elements.

Our modern symbologists might profit by some remarks made by a well-known writer, Mrs. Lydia Maria Child. "From time immemorial an emblem has been worshipped in Hindostan as the type of creation, or the origin of life. . . . Siva or the Mahadeva being not only the reproducer of human forms, but also the fructifying principle, the generative power that pervades the Universe. The maternal emblem is likewise a religious type. This reverence for the production of life, introduced into the worship of Osiris the sexual emblems. Is it strange that they regarded with reverence the great mystery of human birth? Were they impure thus to regard it? Or are we impure that do not so regard it? But no clean and thoughtful mind could so regard them. . . . We have travelled far, and unclean have been the paths, since those old Anchorites first spoke of God and the soul in the solemn depths of their first sanctuaries. Let us not smile at their mode of tracing the infinite and the incomprehensible Cause throughout all the mysteries of nature, lest by so doing we cast the shadow of our own grossness on their patriarchal simplicity." ("Progress of Religious Ideas," Vol. 1, p. 17, et seq.)

[[Vol. 1, Page]] 359 THE EGG-BORN GOD.

§ VI.
THE MUNDANE EGG.

WHENCE this universal symbol? The Egg was incorporated as a sacred sign in the cosmogony of every people on the Earth, and was revered both on account of its form and its inner mystery. From the earliest mental conceptions of man, it was known as that which represented most successfully the origin and secret of being. The gradual development of the imperceptible germ within the closed shell; the inward working, without any apparent outward interference of force, which from a latent nothing produced an active something, needing nought save heat; and which, having gradually evolved into a concrete, living creature, broke its shell, appearing to the outward senses of all a self-generated, and self-created being -- must have been a standing miracle from the beginning.

The secret teaching explains the reason for this reverence by the Symbolism of the prehistoric races. The "First Cause" had no name in the beginnings. Later it was pictured in the fancy of the thinkers as an ever invisible, mysterious Bird that dropped an Egg into Chaos, which Egg becomes the Universe. Hence Brahm was called Kalahansa, "the swan in (Space and) Time." He became the "Swan of Eternity," who lays at the beginning of each Mahamanvantara a "Golden Egg." It typifies the great Circle, or O, itself a symbol for the universe and its spherical bodies.

The second reason for its having been chosen as the symbolical representation of the Universe, and of our earth, was its form. It was a Circle and a Sphere; and the ovi-form shape of our globe must have been known from the beginning of symbology, since it was so universally adopted. The first manifestation of the Kosmos in the form of an egg was the most widely diffused belief of antiquity. As Bryant shows (iii., 165), it was a symbol adopted among the Greeks, the Syrians, Persians, and Egyptians. In chap. liv. of the Egyptian Ritual, Seb, the god of Time and of the Earth, is spoken of as having laid an egg, or the Universe, "an egg conceived at the hour of the great one of the Dual Force" (Sec. V., 2, 3, etc.).

Ra is shown like Brahma gestating in the Egg of the Universe. The deceased is "resplendent in the Egg of the land of mysteries" (xxii., 1). For, this is "the Egg to which is given life among the gods" (xlii., 11). "It is the Egg of the great clucking Hen, the Egg of Seb, who issues from it like a hawk" (lxiv., 1, 2, 3; lxxvii., 1).

With the Greeks the Orphic Egg is described by Aristophanes, and was part of the Dionysiac and other mysteries, during which

[[Vol. 1, Page]] 360 THE SECRET DOCTRINE.

the Mundane Egg was consecrated and its significance explained; Porphyry showing it a representation of the world, [[Ermenenei de to oon kosmon]]. Faber and Bryant have tried to show that the egg typified the ark of Noah, which, unless the latter is accepted as purely allegorical and symbolical, is a wild belief. It can have typified the ark only as a synonym of the moon, the argha which carries the universal seed of life; but had surely nothing to do with the ark of the Bible. Anyhow, the belief that the universe existed in the beginning in the shape of an egg was general. And as Wilson has it: "A similar account of the first aggregation of the elements in the form of an egg is given in all the (Indian) Puranas, with the usual epithet Haima or Hiranya, 'golden' as it occurs in Manu." Hiranya, however, means "resplendent," "shining," rather than "golden," as proven by the great Indian scholar, the late Swami Dayanand Sarasvati, in his unpublished polemics with Professor Max Muller. As said in the Vishnu Purana: "Intellect (Mahat) . . . the (unmanifested) gross elements inclusive, formed an egg . . . and the lord of the Universe himself abided in it, in the character of Brahma. In that egg, O Brahman, were the continents, and seas and mountains, the planets and divisions of the universe, the gods, the demons and mankind." (Book i., ch. 2.) Both in Greece and in India the first visible male being, who united in himself the nature of either sex, abode in the egg and issued from it. This "first born of the world" was Dionysius, with some Greeks; the god who sprang from the mundane egg, and from whom the mortals and immortals were derived. The god Ra is shown in the Ritual (Book of the Dead, xvii., 50) beaming in his egg (the Sun), and he starts off as soon as the god Shoo (the Solar energy) awakens and gives him the impulse. "He is in the Solar egg, the egg to which is given life among the gods" (Ibid., xlii., 13). The Solar god exclaims: "I am the creative soul of the celestial abyss. None sees my nest, none can break my egg, I am the Lord!" (Ibid., LXXXV.).

In view of this circular form, the "I" issuing from the "[[diagram]]," or the egg, or the male from the female in the androgyne, it is strange to find a scholar saying -- on the ground that the most ancient Indian MSS. show no trace of it -- that the ancient Aryans were ignorant of the decimal notation. The 10, being the sacred number of the universe, was secret and esoteric, both as the unit and cipher, or zero, the circle. Moreover, Professor Max Muller says that "the two words cipher and zero, which are but one, are sufficient to prove that our figures are borrowed from the Arabs.* Cipher is the Arabic "cifron," and means

[[Footnote(s)]] -----

* See Max Muller's "Our Figures."

[[Vol. 1, Page]] 361 WHENCE OUR FIGURES?

empty, a translation of the Sanscrit name of nought "sunya," he says.* The Arabs had their figures from Hindustan, and never claimed the discovery for themselves.** As to the Pythagoreans, we need but turn to the ancient manuscripts of Boethius's Geometry, composed in the sixth century, to find among the Pythagorean numerals*** the 1 and the nought, as the first and final ciphers. And Porphyry, who quotes from the Pythagorean Moderatus,**** says that the numerals of Pythagoras were "hieroglyphical symbols, by means whereof he explained ideas concerning the nature of things," or the origin of the universe.

Now, if, on the other hand, the most ancient Indian manuscripts show as yet no trace of decimal notation in them, and Max Muller states very clearly that until now he has found but nine letters (the initials of the Sanscrit numerals) in them; on the other hand, we have records as ancient to supply the wanted proof. We speak of the sculptures and the sacred imagery in the most ancient temples of the far East. Pythagoras derived his knowledge from India; and we find Professor Max Muller corroborating this statement, at least so far as to allow the Neo-Pythagoreans to have been the first teachers of "ciphering," among the Greeks and Romans; that "they at Alexandria, or in Syria, became acquainted with the Indian figures, and adapted them to the Pythagorean abacus" (our figures). This cautious admission implies that Pythagoras himself was acquainted with but nine figures. Thus we might reasonably answer that, although we possess no certain proof (exoterically) that the decimal notation was known by Pythagoras, who lived on the very close of the archaic ages,***** we have yet sufficient evidence to show that the full numbers, as given by Boethius, were known to the Pythagoreans, even before Alexandria was built.***** This evidence we find in Aristotle, who says that "some philosophers hold that ideas and numbers are of the same nature, and amount to TEN in all."***** This, we believe, will be sufficient to show that the decimal notation was known among them at least as early as four centuries B.C., for Aristotle does not seem to treat the question as an innovation of the "Neo-Pythagoreans."

[[Footnote(s)]] -----

* A Kabbalist would be rather inclined to believe that as the Arabic cifron was taken from the Indian Synya, nought, so the Jewish Kabbalistic Sephiroth (Sephirim) were taken from the word cipher, not in the sense of emptiness but the reverse -- that of creation by number and degrees in their evolution. And the Sephiroth are 10 or [[diagram]].

[[Vol. 1, Page]] 362 THE SECRET DOCTRINE.

But we know more than that: we know that the decimal system must have been known to the mankind of the earliest archaic ages, since the whole astronomical and geometrical portion of the secret sacerdotal language was built upon the number 10, or the combination of the male and female principles, and since the Pyramid of "Cheops" is built upon the measures of this decimal notation, or rather upon the digits and their combinations with the nought. Of this, however, sufficient was said in *Isis Unveiled*, and it is useless to repeat and return to the same subject.

The symbolism of the Lunar and Solar Deities is so inextricably mixed up, that it is next to impossible to separate such glyphs as the egg, the lotus, and the "sacred" animals from each other. The ibis, for instance, sacred to Isis, who is often represented with the head of that bird, sacred also to Mercury or Thoth, because that god assumed its form while escaping from Typhon, -- the ibis was held in the greatest veneration in Egypt. There were two kinds of ibises, Herodotus tells us (Lib. II. c. 75 et seq.) in that country: one quite black, the other black and white. The former is credited with fighting and exterminating the winged serpents which came every spring from Arabia and infested the country. The other was sacred to the moon, because the latter planet is white and brilliant on her external side, dark and black on that side which she never turns to the earth. Moreover, the ibis kills land serpents, and makes the most terrible havoc amongst the eggs of the crocodile, and thus saves Egypt from having the Nile infested by those horrible Saurians. The bird is credited with doing so in the moonlight, and thus being helped by Isis, as the moon, her sidereal symbol. But the nearer esoteric truth underlying these popular myths is, that Hermes, as shown by Abenephius (*De cultu Egypt.*), watched under the form of that bird over the Egyptians, and taught them the occult arts and sciences. This means simply that the *ibis religiosa* had and has "magical" properties in common with many other birds, the albatross pre-eminently, and the mythical white swan, the swan of Eternity or Time, the KALAHANSA.

Were it otherwise, indeed, why should all the ancient peoples, who were no more fools than we are, have had such a superstitious dread of killing certain birds? In Egypt, he who killed an ibis, or the golden hawk -- the symbol of the Sun and Osiris -- risked and could hardly escape death. The veneration of some nations for birds was such that Zoroaster, in his precepts, forbids their slaughter as a heinous crime. We laugh in our age at every kind of divination. Yet why should so many generations have believed in divination by birds, and even in zoomancy, said by Suidas to have been imparted by Orpheus, who taught how to perceive in the yoke and white of

[[Vol. 1, Page]] 363 EGG-BORN LOGOI.

the egg, under certain conditions, that which the bird born from it would have seen around it during its short life. This occult art, which demanded 3,000 years ago the greatest learning and the most abstruse mathematical calculations, has now fallen into the depths of degradation: it is old cooks and fortune-tellers who read their future to servant-girls in search of husbands, by means of the white of an egg in a glass.

Nevertheless, even Christians have to this day their sacred birds; for instance, the dove, the symbol of the Holy Ghost. Nor have they neglected the sacred animals. The Evangelical zoolatry -- the Bull, the Eagle, the Lion, and the Angel (in reality the Cherub, or Seraph, the fiery-winged Serpent), is as much pagan as that of the Egyptians or the Chaldeans. These four animals are, in reality, the symbols of the four elements, and of the four lower principles in man. Nevertheless, they correspond physically and materially to the four constellations that form, so to speak, the suite or cortege of the Solar God, and occupy during the winter solstice the four cardinal points of the zodiacal circle. These four "animals" may be seen in many of the Roman Catholic New Testaments where the portraits of the evangelists are given. They are the animals of Ezekiel's Mercabah.

As truly stated by Ragon, "the ancient Hierophants have combined so cleverly the dogmas and symbols of their religious philosophies, that these symbols can be fully explained only by the combination and knowledge of all the keys." They can be only approximately interpreted, even if one finds out three out of these seven systems: the anthropological, the psychic, and the astronomical. The two chief interpretations, the highest and the lowest, the spiritual and the physiological, they preserved in the greatest secrecy until the latter fell into the dominion of the profane. Thus far, with regard only to the pre-historic Hierophants, with whom that which has now become purely (or impurely) phallic, was a science as profound and as mysterious as biology and physiology are now. This was their exclusive property, the fruit of their studies and discoveries. The other two were those which dealt with the creative gods (theogony), and with creative man, i.e., the ideal and the practical mysteries. These interpretations were so cleverly veiled and combined, that many were those who, while arriving at the discovery of one meaning, were baffled in understanding the significance of the others, and could never unriddle them sufficiently to commit dangerous indiscretions. The highest, the first and the fourth -- theogony in relation to anthropogony -- were almost impossible to fathom. We find the proofs of this in the Jewish "Holy Writ."

It is owing to the serpent being oviparous, that it became a symbol of wisdom and an emblem of the Logoi, or the self-born. In the temple of Philoe in Upper Egypt, an egg was artificially prepared of clay made of

various incenses, and it was made to hatch by a peculiar process, when a cerastes (the horned viper) was born. The same was done in antiquity for the cobra in the Indian temples. The creative God emerges from the egg that issues from the mouth of Kneph -- as a winged serpent -- because the Serpent is the symbol of the All-wisdom. With the Hebrews he is glyphed by the "flying or fiery serpents" of the Wilderness and Moses, and with the Alexandrian mystics he becomes the Ophio-Christos, the Logos of the Gnostics. The Protestants try to show that the allegory of the Brazen Serpent and of the "fiery serpents" has a direct reference to the mystery of Christ and Crucifixion*; but it has a far nearer relation, in truth, to the mystery of generation, when dissociated from the egg with the central germ, or the circle with its central point. The brazen Serpent had no such holy meaning as that; nor was it, in fact, glorified above the "fiery serpents" for the bite of which it was only a natural remedy. The symbolical meaning of the word "brazen" being the feminine principle, and that of fiery, or "gold," the male one.**

In the Book of the Dead, as just shown, reference is often made to the Egg. Ra, the mighty one, remains in his Egg, during the struggle between the "children of the rebellion" and Shoo (the Solar Energy and the Dragon of Darkness) (ch. xvii.). The deceased is resplendent in his

[[Footnote(s)]] -----

* And this only because the brazen serpent was lifted on a pole! It had rather a reference to Mico the Egyptian egg standing upright supported by the sacred Tau; since the Egg and the Serpent are inseparable in the old worship and symbology of Egypt, and since both the Brazen and "fiery" serpents were Saraphs, the "burning fiery" messengers, or the serpent Gods, the nagas of India. It was a purely phallic symbol without the egg, while when associated with it -- it related to cosmic creation.

** "Brass was a metal symbolizing the nether world . . . that of the womb where life should be given . . . The word for serpent was in Hebrew Nakash, but this is the same term for brass." It is said in Numbers (xxi.) that the Jews complained of the Wilderness where there was no water (v. 5); after which "the Lord sent fiery serpents" to bite them, when, to oblige Moses, he gives him as a remedy the brazen serpent on a pole to look at; after which "any man when he beheld the serpent of brass . . . lived" (?). After that the "Lord," gathering the people together at the well of Beer, gives them water, (14-16), and grateful Israel sang this song, "Spring up, O Well," (v. 17). When, after studying symbology, the Christian reader comes to understand the innermost meaning of these three symbols -- water, brazen, the serpent, and a few more -- in the sense given to them in the Holy Bible, he will hardly like to connect the sacred name of his Saviour with the "Brazen Serpent" incident. The Seraphim [[hebrew]] (fiery winged serpents) are no doubt connected with, and inseparable from, the idea "of the serpent of eternity -- God," as explained in Kenealy's Apocalypse. But the word cherub also meant serpent, in one sense, though its direct meaning is different; because the Cherubim and the Persian winged [[gruphes]] "griffins" -- the guardians of the golden mountain -- are the same, and their compound name shows their character, as it is formed of [[hebrew]] (kr) circle, and [[hebrew]] "aub," or ob -- serpent -- therefore, a "serpent in a circle." And this settles the phallic character of the Brazen Serpent, and justifies Hezekiah for breaking it. (See II. Kings, 18, 4). Verbum sat. sapienti.

Egg when he crosses to the land of mystery (xxii. i.). He is the Egg of Seb (liv. 1-3). . . . The Egg was the symbol of life in immortality and eternity; as also the glyph of the generative matrix; and the tau, associated with it, only of life and birth in generation. The Mundane Egg was placed in Khnoom, the "Water of Space," or the feminine abstract principle (Khnoom becoming, with the fall of mankind into generation and phallicism, Ammon, the creative God); and when Phtah, the "fiery god," carries the Mundane egg in his hand, then the symbolism becomes quite terrestrial and concrete in its significance. In conjunction with the hawk, the symbol of Osiris-Sun, the symbol is dual: it relates to both lives -- the mortal and the immortal. In Kircher's OEdipus Egyptiacus (vol. iii., p. 124) one can see, on the papyrus engraved in it, an egg floating above the mummy. This is the symbol of hope and the promise of a second birth for the Osirified dead; his Soul, after due purification in the Amenti, will gestate in this egg of immortality, to be reborn from it into a new life on earth. For this Egg, in the esoteric Doctrine, is the Devachan, the abode of Bliss; the winged scarabeus being alike a symbol of it. The "winged globe" is but another form of the egg, and has the same significance as the scarabeus, the Khopiroo (from the root Khoproo "to become," "to be reborn,") which relates to the rebirth of man, as well as to his spiritual regeneration.

In the Theogony of Mochus, we find AEther first, and then the air, from which Ulom, the intelligible ([[noetos]]) deity (the visible Universe of Matter) is born out of the Mundane Egg. (Mover's Phoinizer, p. 282.)

In the Orphic Hymns, the Eros-Phanes evolves from the divine Egg, which the AEthereal Winds impregnate, wind being "the Spirit of the unknown Darkness" -- "the spirit of God" (as explains K. O. Muller, 236); the divine "Idea," says Plato, "who is said to move AEther."

In the Hindu Katakopanishad, Purusha, the divine spirit, already stands before the original matter, "from whose union springs the great soul of the world," Maha-Atma, Brahma, the Spirit of Life,* etc., etc.** Besides this there are many charming allegories on this subject scattered through the sacred books of the Brahmins. In one place it is the female creator who is first a germ, then a drop of heavenly dew, a pearl, and then an egg. In such cases -- of which there are too many to enumerate them separately -- the Egg gives birth to the four elements within the fifth, Ether, and is covered with seven coverings, which become later on the seven upper and the seven lower worlds. Breaking in two, the shell becomes the heaven, and the meat in the egg the earth, the white forming the terres-

[[Footnote(s)]] -----

* The latter appellations are all identical with Anima Mundi, or the "Universal Soul," the astral light of the Kabalist and the Occultist, or the "Egg of Darkness."

** Weber, "Akad Vorles," pp. 213, 214 et seq.

[[Vol. 1, Page]] 366 THE SECRET DOCTRINE.

trial waters. Then again, it is Vishnu who emerges from within the egg with a lotus in his hand. Vinata, a daughter of Daksha and wife of Kasyapa ("the Self-born sprung from Time," one of the seven "creators" of our world), brought forth an egg from which was born Garuda, the vehicle of Vishnu, the latter allegory having a relation to our Earth only, as Garuda is the Great Cycle.

The egg was sacred to Isis; the priests of Egypt never ate eggs on that account.*

Diodorus Siculus states that Osiris was born from an Egg, like Brahma. From Leda's Egg Apollo and Latona were born, as also Castor and Pollux -- the bright Gemini. And though the Buddhists do not attribute the same origin to their Founder, yet, no more than the ancient Egyptians or the modern Brahmins, do they eat eggs, lest they should destroy the germ of life latent in them, and commit thereby Sin. The Chinese believe that their first man was born from an egg, which Tien, a god, dropped down from heaven to earth into the waters.** This symbol is still regarded by some as representing the idea of the origin of life, which is a scientific truth, though the human ovum is invisible to the naked eye. Therefore we see respect shown to it from the remotest past, by the Greeks, Phoenicians, Romans, the Japanese, and the Siamese, the North and South American tribes, and even the savages of the remotest islands.

With the Egyptians, the concealed god was Ammon (Mon). All their gods were dual: the scientific reality for the Sanctuary; its double, the fabulous and mythical Entity, for the masses. For instance, as observed in "Chaos, Theos, Kosmos," the older Horus was the Idea of the world remaining in the demiurgic mind "born in Darkness before the creation of the world;" the second Horus*** was the same Idea going forth from the Logos, becoming clothed with matter and assuming an actual existence. (Compare Mover's "Phoinizer," p. 268.) The same with Khnoum and Ammon;**** both are represented ram-headed, and both often confused, though their functions are different. Khnoum is "the modeller of men," fashioning men and things out of the Mundane Egg on a potter's wheel;

[[Footnote(s)]] -----

* Isis is almost always represented holding a lotus in one hand and in the other a circle and the Cross (crux ansata), the Egg being sacred to her.

** The Chinese seem to have thus anticipated Sir William Thomson's theory that the first living germ had dropped to the Earth from some passing comet. Query! why should this be called scientific and the Chinese idea a superstitious, foolish theory?

*** Horus -- the "older," or Haroiri, is an ancient aspect of the solar god, contemporary with Ra and Shoo; Haroiri is often mistaken for Hor (Horsusi), Son of Osiris and Isis. The Egyptians very often represented the rising Sun under the form of Hor the older, rising from a full-blown lotus, the Universe, when the solar disc is always found on the hawk-head of that god. Haroiri is Khnoum.

**** Ammon or Mon, the "hidden," the Supreme Spirit.

[[Vol. 1, Page]] 367 THE SCANDINAVIAN LOGOS.

Ammon-Ra, the generator, is the secondary aspect of the concealed deity. Khnoum was adored at Elephanta and Philoe,* Ammon at Thebes. But it is Emept, the One, Supreme Planetary principle, who blows the egg out of his mouth, and who is, therefore, Brahma. The shadow of the deity, Kosmic and universal, of that which broods over and permeates the egg with its vivifying Spirit until the germ contained in it is ripe, was the mystery god whose name was unpronounceable. It is Phtah, however, "he who opens," the opener of life and Death,** who proceeds from the egg of the world to begin his dual work. (Book of Numbers.)

According to the Greeks, the phantom form of the Chemis (Chemi, ancient Egypt) which floats on the ethereal waves of the Empyrean Sphere, was called into being by Horus-Apollo, the Sun god, who caused it to evolve out of the Mundane egg.***

In the Scandinavian Cosmogony -- placed by Professor Max Muller, in point of time, as "far anterior to the Vedas" in the poem of Voluspá (the song of the prophetess), the Mundane egg is again discovered in the phantom-germ of the Universe, which is represented as lying in the Ginnungagap -- the cup of illusion (Maya) the boundless and void abyss. In this world's matrix, formerly a region of night and desolation, Nebelheim (the mist-place, the nebular as it is called now, in the astral light) dropped a ray of cold light which overflowed this cup and froze in it. Then the Invisible blew a scorching wind which dissolved the frozen waters and cleared the mist. These waters (chaos), called the streams of Elivagar, distilling in vivifying drops, fell down and created the earth and the giant Ymir, who only had "the semblance of man" (the Heavenly man), and the cow, Audhumla (the "mother" or astral light, Cosmic Soul) from whose udder flowed four streams of milk (the four cardinal points: the four heads of the four rivers of Eden, etc., etc.) and which "four" allegorically are symbolized by the cube in all its various and mystical meanings.

The Christians -- especially the Greek and Latin Churches -- have fully adopted the symbol, and see in it a commemoration of life eternal,

[[Footnote(s)]] -----

* His triadic goddesses are Sati and Anouki.

** Phtah was originally the god of death, of destruction, like Siva. He is a solar god only by virtue of the sun's fire killing as well as vivifying. He was the national god of Memphis, the radiant and "fair-faced God." (See Saqqarah Bronzes, Saitic Epoch.)

*** The Brahmanda Purana contains the mystery about Brahma's golden egg fully; and this is why, perhaps, it is inaccessible to the Orientalists, who say that this Purana, like the Skanda, is "no longer procurable in a collective body," but "is represented by a variety of Khandas and Mahatmyas professing to be derived from it." The "Brahmanda Purana" is described as "that which is declared in 12,200 verses, the magnificence of the egg of Brahma, and in which an account of the future Kalpas is contained as revealed by Brahma." Quite so, and much more, perchance.

[[Vol. 1, Page]] 368 THE SECRET DOCTRINE.

of salvation and of resurrection. This is found in and corroborated by the time-honoured custom of exchanging "Easter Eggs." From the anguinum, the "Egg" of the "pagan" Druid, whose name alone made Rome tremble with fear, to the red Easter Egg of the Slavonian peasant, a cycle has passed. And yet, whether in civilized Europe, or among the abject savages of Central America, we find the same archaic, primitive thought; if we only search for it and do not disfigure -- in the haughtiness of our fancied mental and physical superiority -- the original idea of the symbol.

§ VII.

THE DAYS AND NIGHTS OF BRAHMA.

THIS is the name given to the Periods called MANVANTARA (Manvantara, or between the Manus) and PRALAYA (Dissolution); one referring to the active periods of the Universe, the other to its times of relative and complete rest -- according to whether they occur at the end of a "Day," or an "Age" (a life) of Brahma. These periods, which follow each other in regular succession, are also called Kalpas, small and great, the minor and the Maha Kalpa; though, properly speaking, the Maha Kalpa is never a "day," but a whole life or age of Brahma, for it is said in the Brahma Vaivarta: "Chronologers compute a Kalpa by the Life of Brahma; minor Kalpas, as Samvarta and the rest, are numerous." In sober truth they are infinite; as they have never had a commencement, i.e., there never was a first Kalpa, nor will there ever be a last one, in Eternity.

One Parardha -- in the ordinary acceptation of this measure of time -- or half of the existence of Brahma (in the present Maha Kalpa) has already expired; the last Kalpa was the Padma, or that of the Golden Lotos; the present one being Varaha* (the "boar" incarnation, or Avatar).

[[Footnote(s)]] -----

* There is a curious piece of information in the Buddhist esoteric traditions. The exoteric or allegorical biography of Gautama Buddha shows this great Sage dying of an indigestion of pork and rice, a very prosaic end, indeed, having little of the solemn element in it. This is explained as an allegorical reference to his having been born in the "Boar," or Varaha-Kalpa when Brahma assumed the form of that animal to raise the Earth out of the "Waters of Space." And as the Brahmins descend direct from Brahma and are, so to speak, identified with him; and as they are at the same time the mortal enemies of Buddha and Buddhism, we have the curious allegorical hint and combination. Brahminism (of the Boar, or Varaha Kalpa) has slaughtered the religion of Buddha in India, swept it away from its face; therefore Buddha, identified with his philosophy, is said to have died from the effects of eating of the flesh of a wild hog.

[[Footnote continued on next page]]

[[Vol. 1, Page]] 369 HUMAN GODS AND DIVINE MEN.

By the scholar who studies the Hindu religion from the Puranas, one thing is to be especially noted. He must not take literally, and in one sense only, the statements therein found; since those which especially concern the Manvantaras or Kalpas have to be understood in their several references. So, for instance, these periods relate in the same language to both the great and the small periods, to Maha Kalpas and to minor Cycles. The Matsya, or Fish Avatar, happened before the Varaha or Boar Avatar; the allegories, therefore, must relate to both the Padma and the present manvantara, and also to the minor cycles which took place since the reappearance of our Chain of Worlds and Earth. And, as the Matsya Avatar of Vishnu and Vaivasvata's Deluge are correctly connected with an event that happened on our Earth during this Round, it is evident that while it may relate to pre-cosmic events (in the sense of our Kosmos or Solar system) it has reference in our case to a distant geological period. Not even Esoteric philosophy can claim to know, except by analogical inference, that which took place before the reappearance of our Solar System and previous to the last Maha Pralaya. But it teaches distinctly that after the first geological disturbance in the Earth's axis which ended in the sweeping down to the bottom of the Seas of the whole second Continent, with its primeval races -- of which successive "Earths" or Continents Atlantis was the fourth -- there came another disturbance by the axis resuming as rapidly its previous degree of inclination; when the Earth was indeed raised

once more out of the Waters, and -- as above so it is below; and vice versa. There were "gods" on Earth in those days -- gods, and not men, as we know them now, says the tradition. As will be shown in Book II., the computation of periods in exoteric Hinduism refers to both the great cosmic and the small terrestrial events and cataclysms, and the same may be shown for names. For instance Yudishthira -- the first King of the Sacea, who opens the Kali Yuga era, which has to last 432,000 years -- "an actual King and man who lived 3,102 years B.C.," applies also, name and all, to the great Deluge at the time of the first sinking of Atlantis. He is the "Yudishthira" born on the mountain of the hundred peaks at the extremity of

[[Footnote(s)]] -----

[[Footnote continued from previous page]] The idea alone of one who established the most rigorous vegetarianism and respect for animal life -- even to refusing to eat eggs as vehicles of a latent future life -- dying of a meat indigestion, is absurdly contradictory and has puzzled more than one Orientalist. But this explanation, unveiling the allegory, explains all the rest. The Varaha, however, is no simple boar, and seems to have meant at first some antediluvian lacustrine animal "delighting to sport in water." (Vayu Purana.)

* According to Colonel Wilford, the conclusion of the "Great War" was B.C. 1370. (See A. R., Vol.9, p. 116); according to Bentley, 575 B.C.!! We may hope, perhaps, that before the end of this century, the Mahabharatean epics will be found and proclaimed identical with the wars of the great Napoleon.

[[Vol. 1, Page]] 370 THE SECRET DOCTRINE.

the world beyond which nobody can go" and "immediately after the flood." (See Royal Asiat. Soc., Vol. 9, p. 364.) We know of no "Flood" 3,102 years B.C. -- not even that of Noah, for, agreeably with Judaeo-Christian chronology, it took place 2,349 years B.C.

This relates to an esoteric division of time and a mystery explained elsewhere, and may therefore be left aside for the present. Suffice to remark at this juncture that all the efforts of imagination of the Wilfords, Bentleys, and other would-be OEdipuses of esoteric Hindu Chronology have sadly failed. No computation of either the Four Ages, or the Manvantaras, has ever been unriddled by our very learned Orientalists, who have therefore cut the Gordian Knot by proclaiming the whole "a figment of the Brahmanical brain." So be it, and may the great scholars rest in peace. This "figment" is given in the Preliminary Sections which preface Anthropogenesis in Book II., and with esoteric additions.

Let us see, however, what were the three kinds of pralayas, and what is the popular belief about them. For once it agrees with Esotericism.

Of the pralaya before which fourteen Manvantaras elapse, having over them as many presiding Manus, and at whose close occurs the "incidental" or Brahma's dissolution, it is said in Vishnu Purana, in condensed form, that "at the end of a thousand periods of four ages, which complete a day of Brahma, the earth is almost exhausted. The eternal Avyaya (Vishnu) assumes then the character of Rudra (the destroyer, Siva) and re-unites all his creatures to himself. He enters the Seven rays of the Sun and drinks up all the waters of the globe; he causes the moisture to evaporate, thus drying up the whole Earth. Oceans and rivers, torrents and small streams, are all exhaled. Thus fed with abundant moisture the seven solar rays become seven suns by dilation, and they finally set the world on fire. Hari, the destroyer of all things, who is 'the flame of time, Kalagni,' finally consumes the Earth. Then Rudra, becoming Janardana, breathes clouds and rain."

There are many kinds of Pralaya, but three chief ones are specially mentioned in old Hindu books; and of these, as Wilson shows:-- The first is called NAIMITTIKA* "occasional" or "incidental," caused by the intervals of "Brahma's Days;" it is the destruction of creatures, of all that lives and has a form, but not of the substance which remains in statu quo till the new DAWN in that "Night." The

[[Footnote(s)]] -----

* In the Vedanta and Nyaya "nimitta" (from which "Naimittika") is rendered as the efficient cause, when antithesized with upadana the physical or material cause. In the Sankhya pradhana is a cause inferior to Brahma, or rather Brahma being himself a cause, is superior to Pradhana. Hence "incidental" is wrongly translated, and ought to be translated, as shown by some scholars, "Ideal" cause, and even real cause would have been better.

[[Vol. 1, Page]] 371 THE RE-BIRTH OF GODS.

other is called PRAKRITIKA -- and occurs at the end of the Age or Life of Brahma, when everything that exists is resolved into the primal element, to be remodelled at the end of that longer night. But the third, Atyantika, does not concern the Worlds or the Universe, but only the individualities of some people; it is thus individual pralaya or NIRVANA; after having reached which, there is no more future existence possible, no rebirth till after the Maha Pralaya. The latter night, lasting as it does 311,040,000,000,000 years, and having the possibility of being almost doubled in case the lucky Jivanmukti reaches Nirvana at an early period of a Manvantara, is long enough to be regarded as eternal, if not endless. The Bhagavata (XII., iv, 35) speaks of a fourth kind of pralaya, the Nitya or constant dissolution, and explains it as the change which takes place imperceptibly in everything in this Universe from the globe down to the atom -- without cessation. It is growth and decay (life and death).

When the Maha Pralaya arrives, the inhabitants of Swar-loka (the upper sphere) disturbed by the conflagration, seek refuge "with the Pitris, their progenitors, the Manus, the Seven Rishis, the various orders of celestial Spirits and the Gods, in Maharloka." When the

latter is reached also, the whole of the above enumerated beings migrate in their turn from Maharloka, and repair to Jana-loka in "their subtle forms, destined to become re-embodied, in similar capacities as their former, when the world is renewed at the beginning of the succeeding Kalpa;" (Vayu Purana).

". . . . These clouds, mighty in size, and loud in thunder, fill up all space (Nabhas-tala)," goes on Vishnu Purana. -- (Book VI., ch. iii.) "Showering down torrents of water, these clouds quench the dreadful fires, and then they rain uninterruptedly for a hundred (divine) years, and deluge the whole world (Solar System). Pouring down, in drops as large as dice, these rains overspread the earth, and fill the middle region (Bhuvaloka) and inundate heaven. The world is now enveloped in darkness, and all things animate, or inanimate, having perished, the clouds continue to pour down their waters" . . . "and the Night of Brahma reigns supreme over the scene of desolation"

This is what we call in the Esoteric Doctrine a "Solar Pralaya" . . . When the waters have reached the region of the Seven Rishis, and the world (our Solar System) is one ocean, they stop. The breath of Vishnu becomes a strong wind, which blows for another hundred (divine) years until all clouds are dispersed. The wind is then reabsorbed: and "THAT, of which all things are made, the Lord by whom all things exist, He who is inconceivable, without beginning, the beginning of the universe, reposes, sleeping upon Sesha (the Serpent of Infinity) in the midst of the deep. The Adikrit

[[Vol. 1, Page]] 372 THE SECRET DOCTRINE.

(Creator?) Hari, sleeps upon the ocean of Space in the form of Brahma -- glorified by Sanaka* and the Siddha (Saints) of Jana-loka, and contemplated by the holy denizens of Brahma-loka, anxious for final liberation, involved in mystic slumber, the celestial personification of his own illusions. . . ." This is the Pratisanchara (dissolution?) termed incidental because Hari is its incidental (ideal) Cause. . . .** When the Universal Spirit wakes, the world revives; when he closes his eyes, all things fall upon the bed of mystic slumber. In like manner, as 1,000 great ages constitute a Day of Brahma (in the original it is Padma-yoni, the same as Abjayoni -- "lotos-born," not Brahma), so his Night consists of the same period. "Awaking at the end of his night, the unborn . . . creates the Universe anew. . . ." (Vishnu Purana.)

This is "incidental" pralaya; what is the Elemental Dissolution? "When by dearth and fire," says Parasara to Maitreya, "all the worlds and Patalas (hells) are withered up . . .*** the progress of elemental dissolution is begun. Then, first the waters swallow up the property of Earth (which is the rudiment of smell), and earth deprived of this property proceeds to destruction -- and becomes one with water . . . when the Universe is thus pervaded by the waves of the watery Element, its rudimentary flavour is locked up by the elements of fire . . . on account of which the waters themselves are destroyed . . . and become one with fire; and the Universe is therefore, entirely filled with flame (ethereal) which gradually overspreads the whole world. While Space is one flame, the element of wind seizes upon the rudimental property or form, which is the cause of light, and that being withdrawn (pralina) all becomes of the nature of air. The rudiment of form being destroyed, and Vibhavasu (fire?) deprived of its rudiment, air extinguishes fire and spreads over space, which is deprived of light when fire merges into air. Air, then, accompanied by sound, which is the source of Ether, extends everywhere throughout the ten regions . . . until Ether seizes upon cohesion (Sparsa -- Touch?) its rudimental property, by the loss of which, air is destroyed, and KHA remains unmodified; devoid of form, flavour, touch (Sparsa), and smell, it exists, embodied (murtimat) and vast, and pervades the whole Space. Akasa, whose characteristic property and rudiment is sound (the "Word"), occupies the whole containment of Space. Then the origin (Noumenon?) of the Elements (Bhutadi), devours sound (collective Demiurgos); and the hosts of Dhyan Chohans, and all the existing

[[Footnote(s)]] -----

* The chief Kumara or Virgin-god (a Dhyan Chohan) who refuses to create. A prototype of St. Michael, who refuses to do the same.

** See concluding lines in Section, "Chaos, Theos, Kosmos."

*** This prospect would hardly suit Christian theology, which prefers an eternal, everlasting hell for its followers.

[[Vol. 1, Page]] 373 THE DISSOLUTION OF THE EGG.

Elements* are at once merged into their original. The primary Element, Consciousness, combined with tamasa (spiritual darkness) is itself disintegrated by MAHAT (the Universal Intellect), whose characteristic property is Buddhi, and earth and Mahat are the inner and outer boundaries of the Universe." Thus as (in the beginning) "were the seven forms of Prakriti (nature) reckoned from Mahat to earth, so these seven successively re-enter into each other."***

"The Egg of Brahma (Sarva-mandala) is dissolved in the waters that surround it, with its seven zones (dwpas) seven oceans, seven regions, and their mountains; the investiture of water is drunk by the fire; the (stratum of) fire is absorbed by (that of) air; air blends itself with ether (Akasa); the Bhutadi (the origin, or rather the cause, of the primary element) devours the ether and is (itself) destroyed by Mahat (the Great, the Universal mind), which along with all these is seized upon by Prakriti and disappears. The Prakriti is essentially the same, whether discrete or indiscrete; only that which is discrete is finally absorbed by and lost in the indiscrete. PUMS (Spirit) also, which is one, pure, imperishable, eternal, all-pervading, is a portion of that Supreme spirit which is all things. That Spirit (Sarvesa) which is other than (embodied) Spirit, and in which there are no attributes of name, species (naman and jati, or rupa, hence body rather than species), or the like -- remains as the sole existence (SATTA). . . Prakriti and Purusha both resolving finally into SUPREME SPIRIT. . . ." (From Vishnu Purana, Wilson's mistakes being here corrected, and original words put in brackets).

This is the final PRALAYA*** -- the Death of Kosmos -- after which its Spirit rests in Nirvana, or in THAT for which there is neither Day nor Night. All the other pralayas are periodical and follow, in regular succession, the Manvantaras, as the night follows the day of every human creature, animal, and plant. The cycle of creation of the lives of Kosmos is run down, the energy of the manifested "Word" having

[[Footnote(s)]] -----

* The term "Elements" must be understood here to mean not only the visible and physical Elements, but also that which St. Paul calls Elements -- the spiritual, intelligent Potencies -- Angels and Demons in their Manvantaric form.

** When this description is correctly understood by Orientalists in its esoteric significance then it will be found that this Cosmic correlation of World-Elements may explain the correlation of physical forces better than those now known. At any rate, theosophists will perceive that Prakriti has seven forms, or principles, "reckoned from Mahat to Earth." The "Waters" mean here the Mystic "mother"; the Womb of abstract nature, in which the manifested Universe is conceived. The Seven "zones" have reference to the Seven Divisions of that Universe, or the Noumena of the Forces that bring it into being. It is all allegorical.

*** As it is the Maha, the Great, or so-called final PRALAYA which is here described, every thing is re-absorbed into its original ONE Element -- the "Gods themselves, Brahma and the rest" being said to die and disappear during that long NIGHT.

[[Vol. 1, Page]] 374 THE SECRET DOCTRINE.

its growth, culmination, and decrease, as have all things temporary, however long their duration. The Creative Force is Eternal as Noumenon; as a phenomenal manifestation in its aspects, it has a beginning and must, therefore, have an end. During that interval it has its periods of activity and its periods of rest. And these are the "Days and the nights of Brahma." But Brahma, the Noumenon, never rests, as IT never changes and ever IS, though IT cannot be said to be anywhere. . . .

The Jewish Kabalists felt this necessity of immutability in an eternal, infinite Deity, and therefore applied the same thought to the anthropomorphic god. The idea is poetical and very appropriate in its application. In the Zohar we read as follows:--

"As Moses was keeping a vigil on Mount Sinai, in company with the deity, who was concealed from his sight by a cloud, he felt a great fear overcome him, and suddenly asked: 'Lord, where art thou . . . sleepest thou, O Lord? . . .' And the Spirit answered him: 'I never sleep: were I to fall asleep for a moment BEFORE MY TIME, all the creation would crumble into dissolution in one instant.' "

"Before my time" is very suggestive. It shows the God of Moses to be only a temporary substitute, like Brahma the male, a substitute and an aspect of THAT which is immutable, and which therefore can take no part in the "days," or in the "nights," nor have any concern whatever with reaction or dissolution.

While the Eastern Occultists have seven modes of interpretation, the Jews have only four -- namely, the real-mystical; the allegorical; the moral; and the literal or Pashut. The latter is the key of the exoteric Churches and not worth discussion. Read in the first, or mystical key, here are several sentences which show the identity of the foundations of construction in every Scripture. It is given in Mr. T. Myer's excellent book on the Kabalistic works he seems to have well studied. I quote verbatim. "B'raisheeth barah elohim ath hash ama yem v'ath haa'retz -- i.e., 'In the beginning the God(s) created the heavens and the earth;' (the meaning of which is:) the six Sephiroth of Construction,* over which B'raisheeth stands, all belong Below. It created six (and) on these stand all Things. And those depend upon the seven forms of the Cranium up to the Dignity of all Dignities. And the second 'Earth' does not come into calculation, therefore it has been said: 'And from it (that Earth) which underwent the curse, came it forth.' . . . 'It (the Earth) was without form and void; and darkness was over the face of the Abyss, and the Spirit of elohim . . . was breathing (me' racha 'phath) -- i.e., hovering, brooding over, moving. . . . Thirteen depend on thirteen

[[Footnote(s)]] -----

* The "Builders" of the Stanzas.

[[Vol. 1, Page]] 375 ARCHAIC SYMBOLISM.

(forms) of the most worthy Dignity. Six thousand years hang (are referred to) in the first six words. The seventh (thousand, the millennium) above it (the cursed Earth) is that which is strong by Itself. And it was rendered entirely desolate during twelve hours (one . . . Day) as is written. . . . In the thirteenth, It (the Deity) shall restore all . . . and everything shall be renewed as before; and all those six shall continue . . . etc." (Qabbalah, p. 233, from Siphrah Dzeniuta, c. i., § 16, s. 9.)

The "Sephiroth of Construction" are the six Dhyan Chohans, or Manus, or Prajapati, synthesized by the seventh "B'raisheeth (the First Emanation or Logos), and who are called, therefore, the Builders of the Lower or physical Universe" all belong Below. These six [[diagram]] whose essence is of the Seventh -- are the Upadhi, the base or fundamental stone on which the objective Universe is built, the noumenoi of all things. Hence they are, at the same time, the Forces of nature, the Seven Angels of the Presence, the sixth and seventh principles in man; the spirito-psycho-physical spheres of the Septenary chain, the Root Races, etc., etc. They all "depend upon the Seven forms of the Cranium" up to the highest. The "second Earth" "does not come into calculation" because it is no Earth,

but the Chaos or Abyss of Space in which rested the paradigmatic, or model universe in ideation of the OVER-SOUL brooding over it. The term "Curse" is here very misleading, for it means simply doom or destiny, or that fatality which sent it forth into the objective state. This is shown by that "Earth" under the "Curse" being described as "without form and void," in whose abysmal depths the "Breath" of the Elohim (collective Logoi) produced or photographed the first divine IDEATION of the things to be. This process is repeated after every Pralaya before the beginnings of a new Manvantara, or period of sentient individual being. "Thirteen depend on thirteen forms," refers to the thirteen periods personified by the thirteen Manus, with Swayambhuva the fourteenth (13, instead of 14, being an additional veil): those fourteen Manus who reign within the term of a Mahayuga, a "Day" of Brahma. These (thirteen-fourteen) of the objective Universe depend on the thirteen (fourteen) paradigmatic, ideal forms. The meaning of the "Six thousand years" which "hang in the first six words," has again to be sought in the Indian Wisdom. They refer to the primordial six (seven) "Kings of Edom" who typify the worlds (or spheres) of our chain during the first Round, as well as the primordial men of this Round. They are the septenary pre-Adamic (or before the Third, Separated Race) first Root-race. As they were shadows, and senseless (they had not eaten yet of the fruit of the Tree of Knowledge), they could not see the

[[Vol. 1, Page]] 376 THE SECRET DOCTRINE.

Parguphim, or "Face could not see Face" (primeval men were unconscious), "therefore, the primordial (seven) Kings died," i.e., were destroyed (vide Sepherah Djenioutha). Now, who are they? They are the Kings who are "the Seven Rishis, certain (secondary) divinities, Sakra (Indra), Manu, and the Kings his Sons, who are created and perish at one period," as said in Vishnu Purana (Book I. chap. iii.). For the seventh ("thousand") (not the millennium of exoteric Christianity, but that of Anthropogenesis) represents both the "seventh period of creation," that of physical man (Vishnu Purana), and the seventh Principle -- both macrocosmic and microcosmic, -- as also the pralaya after the Seventh period, the "Night" which has the same duration as the "Day" of Brahma. "It was rendered entirely desolate during twelve hours, as is written." It is in the Thirteenth (twice six and the Synthesis) that everything shall be restored "and the six will continue."

Thus the author of the Qabalah remarks quite truly that "Long before his (Ibn Gebirol's) time . . . many centuries before the Christian era, there was in Central Asia a 'Wisdom Religion;' fragments of which subsequently existed among the learned men of the archaic Egyptians, the ancient Chinese, Hindus, etc. . . ." and that . . . "The Qabalah most likely originally came from Aryan sources, through Central Asia, Persia, India and Mesopotamia, for from Ur and Haran came Abraham and many others into Palestine" (p. 221). And such was the firm conviction of C. W. King, the author of "The Gnostics and their Remains."

Vamadeva Modelyar (Modely) describes the coming "night" most poetically. Though it is given in Isis Unveiled, it is worthy of repetition.

"Strange noises are heard, proceeding from every point . . . These are the precursors of the Night of Brahma; dusk rises at the horizon, and the Sun passes away behind the thirteenth degree of Macara (sign of the Zodiac), and will reach no more the sign of the Minas (zodiacal pisces, or fish). The gurus of the pagodas appointed to watch the rasichakr (Zodiac), may now break their circle and instruments, for they are henceforth useless.

"Gradually light pales, heat diminishes, uninhabited spots multiply on the earth, the air becomes more and more rarified; the springs of waters dry up, the great rivers see their waves exhausted, the ocean shows its sandy bottom and plants die. Men and animals decrease in size daily. Life and motion lose their force, planets can hardly gravitate in space; they are extinguished one by one, like a lamp which the hand of the chakra (servant) neglects to replenish. Surya (the Sun) flickers and goes out, matter falls into dissolution (pralaya), and Brahma merges back into Dayus, the Unrevealed God, and, his task being

[[Vol. 1, Page]] 377 THE PURANIC PROPHECY.

accomplished, he falls asleep. Another day is passed, night sets in, and continues until the future dawn.

"And now again he re-enters into the golden egg of His Thought, the germs of all that exist, as the divine Manu tells us. During His peaceful rest, the animated beings, endowed with the principles of action, cease their functions, and all feeling (manas) becomes dormant. When they are all absorbed in the SUPREME SOUL, this Soul of all the beings sleeps in complete repose till the day when it resumes its form, and awakes again from its primitive darkness."*

As the "Satya-yuga" is always the first in the series of the four ages or Yugas, so the Kali ever comes the last. The Kali yuga reigns now supreme in India, and it seems to coincide with that of the Western age. Anyhow, it is curious to see how prophetic in almost all things was the writer of Vishnu Purana when foretelling to Maitreya some of the dark influences and sins of this Kali Yug. For after saying that the "barbarians" will be masters of the banks of the Indus, of Chandrabhaga and Kasmera, he adds:

"There will be contemporary monarchs, reigning over the earth -- kings of churlish spirit, violent temper, and ever addicted to falsehood and wickedness. They will inflict death on women, children, and cows; they will seize upon the property of their subjects, and be intent upon the wives of others; they will be of unlimited power, their lives will be short, their desires insatiable. . . . People of various countries intermingling with them, will follow their example; and the barbarians being powerful (in India) in the patronage of the princes, while purer tribes are neglected, the people will perish (or, as the Commentator has it, 'The Mlechchhas will be in the centre and the Aryas in the end.')

** Wealth and piety will decrease until the world will be wholly depraved. Property alone will confer rank; wealth will be the only source of devotion; passion will be the sole bond of union between the sexes; falsehood will be the only means of success in litigation; and women will be objects merely of sensual gratification. . . . External types will be the only

distinction of the several orders of life; a man if rich will be reputed pure; dishonesty (anyaya) will be the universal means of subsistence, weakness the cause of dependence, menace and presumption will be substituted for learning; liberality will be devotion; mutual assent, marriage; fine clothes, dignity. He who is the strongest will reign; the people, unable to bear the heavy burthen, Khara bhara (the load of taxes) will take refuge among the valleys. . . . Thus, in the Kali age will decay constantly proceed, until

[[Footnote(s)]] -----

* See Jacquolliot's "Les Fils de Dieu"; l'Inde des Brahmes, p. 230.

** If this is not prophetic, what is?

[[Vol. 1, Page]] 378 THE SECRET DOCTRINE.

the human race approaches its annihilation (pralaya) When the close of the Kali age shall be nigh, a portion of that divine being which exists, of its own spiritual nature . . . shall descend on Earth . . . (Kalki Avatar) endowed with the eight superhuman faculties. . . . He will re-establish righteousness on earth, and the minds of those who live at the end of Kali Yuga shall be awakened and become as pellucid as crystal. The men who are thus changed . . . shall be the seeds of human beings, and shall give birth to a race who shall follow the laws of the Krita age, the age of purity. As it is said, 'When the sun and moon and the lunar asterism Tishya and the planet Jupiter are in one mansion, the Krita (or Satya) age shall return.' "

". . . . Two persons, Devapi, of the race of Kuru and Moru, of the family of Ikshwaku, continue alive throughout the four ages, residing at Kalapa.* They will return hither in the beginning of the Krita age . . . Moru** the son of Sighru through the power of Yoga is still living and will be the restorer of the Kshatriya race of the Solar dynasty."*** (Vayu Purana, Vol. III, p. 197).

Whether right or wrong with regard to the latter prophecy, the blessings of Kali Yuga are well described, and fit in admirably even with that which one sees and hears in Europe and other civilized and Christian lands in full XIXth, and at the dawn of the XXth century of our great era of ENLIGHTENMENT.

[[Footnote(s)]] -----

* Matsya Purana gives Katapa.

** Max Muller translates the name as Morya, of the Morya dynasty, to which Chandragupta belonged (see Sanscrit Literature). In Matsya Purana, chapter cclxxii, the dynasty of ten Moryas (or Maureyas) is spoken of. In the same chapter, cclxxii, it is stated that the Moryas will one day reign over India, after restoring the Kshatriya race many thousand years hence. Only that reign will be purely Spiritual and "not of this world." It will be the kingdom of the next Avatar. Colonel Tod believes the name Morya (or Maureyas) a corruption of Mori, a Rajpoot tribe, and the commentary on Mahavansa thinks that some princes have taken their name Maurya from their town called Mori, or, as Professor Max Muller gives it, Morya-Nagara, which is more correct, after the original Mahavansa. Vachaspattya, we are informed by our Brother, Devan Badhadur R. Ragoonath Rao, of Madras, a Sanscrit Encyclopedia, places Katapa (Kalapa) on the northern side of the Himalayas, hence in Tibet. The same is stated in chapter xii. (Skanda) of Bhagavat, Vol. III, p. 325.

*** The Vayu Purana declares that Moru will re-establish the Kshatriya in the Nineteenth coming Yuga. (See "Five years of Theosophy," p. 483. "The Moryas and Koothoomi.")

[[Vol. 1, Page]] 379 LOTUS AND LILY.

§ VIII.
THE LOTUS, AS A UNIVERSAL SYMBOL.

THERE are no ancient symbols, without a deep and philosophical meaning attached to them; their importance and significance increasing with their antiquity. Such is the LOTUS. It is the flower sacred to nature and her Gods, and represents the abstract and the Concrete Universes, standing as the emblem of the productive powers of both spiritual and physical nature. It was held sacred from the remotest antiquity by the Aryan Hindus, the Egyptians, and the Buddhists after them; revered in China and Japan, and adopted as a Christian emblem by the Greek and Latin Churches, who made of it a messenger as the Christians do now, who replace it with the water lily.* It had, and still has, its mystic meaning which is identical with every nation on the earth. We refer the reader to Sir William Jones.** With the Hindus, the lotus is the emblem of the productive power of nature, through the agency of fire and water (spirit and matter). "Eternal!" says a verse in the Bhagavad Gita, "I see Brahm the creator enthroned in thee above the lotus!"; and Sir W. Jones shows, as noted in the Stanzas, that the seeds of the lotus contain, even before they germinate, perfectly-formed leaves, the miniature shapes of what one day, as perfected plants, they will become. The lotus, in India, is the symbol of prolific earth, and what is more, of Mount Meru. The four angels or genii of the four quarters of Heaven (the Maharajahs, see Stanzas) stand each on a lotus. The lotus is the two-fold type of the Divine and human hermaphrodite, being of dual sex, so to say.

The spirit of Fire (or Heat), which stirs up, fructifies, and develops into concrete form everything (from its ideal prototype), which is born of WATER or primordial Earth, evolved Brahma -- with the Hindus. The lotus flower, represented as growing out of Vishnu's navel -- that God resting on the waters of space and his Serpent of Infinity -- is the most graphic allegory ever made: the Universe evolving from the central Sun, the POINT, the ever-concealed germ. Lakshmi, who is the

[[Footnote(s)]] -----

* In the Christian religion Gabriel, the Archangel, holding in his hand a spray of water lilies, appears to the Virgin Mary in every picture of the Annunciation. This spray typifying fire and water, or the idea of creation and generation, symbolizes precisely the same idea as the lotus in the hand of the Bodhisat who announces to Maha-Maya, Gautama's mother, the birth of the world's Saviour, Buddha. Thus also, Osiris and Horus were represented by the Egyptians constantly in association with the lotus-flower, the two being Sun-gods or Fire (the Holy Ghost being still typified by "tongues of fire"), (Acts).

** See Sir William Jones' "Dissertations Relating to Asia."

[[Vol. 1, Page]] 380 THE SECRET DOCTRINE.

female aspect of Vishnu,* and who is also called Padma, the lotus, is likewise shown floating at "Creation," on a lotus flower, and during the "churning of the ocean" of space, springing from the "sea of milk," like Venus from the froth.

". . . Then seated on a lotus
Beauty's bright goddess, peerless Sri, arose
Out of the waves . . . "

sings an English Orientalist and poet (Sir Monier Williams).

The underlying idea in this symbol is very beautiful, and it shows, furthermore, its identical parentage in all the religious systems. Whether in the lotus or water-lily shape it signifies one and the same philosophical idea -- namely, the emanation of the objective from the subjective, divine Ideation passing from the abstract into the concrete or visible form. For, as soon as DARKNESS -- or rather that which is "darkness" for ignorance -- has disappeared in its own realm of eternal Light, leaving behind itself only its divine manifested Ideation, the creative Logoi have their understanding opened, and they see in the ideal world (hitherto concealed in the divine thought) the archetypal forms of all, and proceed to copy and build or fashion upon these models forms evanescent and transcendent.

At this stage of action, the Demiurge** is not yet the Architect. Born in the twilight of action, he has yet to first perceive the plan, to realise the ideal forms which lie buried in the bosom of Eternal Ideation, as the future lotus-leaves, the immaculate petals, are concealed within the seed of that plant. . . .

In chapter lxxxi. of the Ritual (Book of the Dead), called "Transformation into the Lotus," a head emerging from this flower, the god exclaims: "I am the pure lotus, emerging from the Luminous one. . . . I carry the messages of Horus. I am the pure lotus which comes from the Solar Fields. . . ."

The lotus-idea may be traced even in the Elohist chapter, the 1st of Genesis, as stated in Isis.

[[Footnote(s)]] -----

* Lakshmi is Venus -- Aphrodite, and, like the latter, she sprang from the froth of the ocean with a lotus in her hand. In the Ramayana she is called Padma.

** In Esoteric philosophy the Demiurge or Logos, regarded as the CREATOR, is simply an abstract term, an idea, like "army." As the latter is the all-embracing term for a body of active forces or working units -- soldiers -- so is the Demiurge the qualitative compound of a multitude of Creators or Builders. Burnouf, the great Orientalist, has seized the idea perfectly when saying that Brahma does not create the earth, any more than the rest of the universe. "Having evolved himself from the soul of the world, once separated from the first cause, he evaporates with, and emanates all nature out of himself. He does not stand above it, but is mixed up with it; Brahma and the universe form one Being, each particle of which is in its essence Brahma himself, who proceeded out of himself."

[[Vol. 1, Page]] 381 THE EXOTERIC AND THE ESOTERIC.

It is in this idea that we must look for the origin and explanation of the verse in the Jewish cosmogony, which reads: "And God said, Let the earth bring forth . . . the fruit-tree yielding fruit after his kind, whose seed is in itself." In all the primitive religions, the "Son of the Father" is the creative God -- i.e., His thought made visible; and before the Christian era, from the Trimurti of the Hindus down to the three kabalistic heads of the scriptures as explained by the Jews, the triune godhead of each nation was fully defined and substantiated in its allegories.

Such is the cosmic and ideal significance of this great symbol with the Eastern peoples. But, applied to practical and exoteric worship -- which had also its esoteric symbology -- the lotus became in time the carrier and container of a more terrestrial idea. No dogmatic

religion has ever escaped the sexual element in it; and to this day it soils the moral beauty of the root idea. The following is quoted from the same Kabalistic MSS. already mentioned:--

"Pointing to like signification was the lotus growing in the waters of the Nile. Its mode of growth peculiarly fitted it as a symbol of the generative activities. The flower of the lotus, which is the bearer of the seed for reproduction, as the result of its maturing, is connected by its placenta-like attachment with mother-earth, or the womb of Isis, through the water of the womb, that is, the river Nile, by means of the long cord-like stalk, the umbilicus. Nothing can be plainer than the symbol, and to make it perfect in its intended signification, a child is sometimes represented as seated in or issuing from the flower.* Thus Osiris and Isis, the children of Chronos, or time without end, in the development of their nature-forces, in this picture become the parents of man under the name Horus. . ." (See § X., "Deus Lunus.")

"We cannot lay too great stress upon the use of this generative function as a basis for a symbolical language and a scientific art-speech. Thought upon the idea leads at once to reflection upon the subject of creative cause. In its workings Nature is observed to have fashioned a wonderful piece of living mechanism governed by an added living soul; the life development and history of which soul, as to its whence, its present, and its whither, surpasses all efforts of the human intellect.** The new born is an ever-recurring miracle, an evidence that

[[Footnote(s)]] -----

* In Indian Puranas it is Vishnu, the first, and Brahma, the second logos, or the ideal and practical creators, who are respectively represented, one as manifesting the lotus, the other as issuing from it.

** Not the "efforts" of the trained psychic faculties of an Initiate into Eastern metaphysics, and the mysteries of creative Nature. It is the profane of the past ages who have degraded the pure ideal of cosmic creation into an emblem of mere human reproduction and sexual functions: it is the esoteric teachings, and the initiates of the Future, whose mission it is, and will be, to redeem and ennoble once more the primitive conception so sadly profaned by its crude and gross application to exoteric dogmas and personations by theological and ecclesiastical religionists. The silent worship of abstract or noumenal Nature, the only divine manifestation, is the one ennobling religion of Humanity.

[[Vol. 1, Page]] 382 THE SECRET DOCTRINE.

within the workshop of the womb an intelligent creative power has intervened to fasten a living soul to a physical machine. The amazing wonderfulness of the fact attaches a holy sacredness to all connected with the organs of reproduction, as the dwelling and place of evident constructive intervention of deity."

This is a correct rendering of the underlying ideas of old, of the purely pantheistic conceptions, impersonal and reverential, of the archaic philosophers of the prehistoric ages. Not so, however, when applied to sinful humanity, to the gross ideas attached to personality. Therefore, no pantheistic philosopher would fail to find the remarks that follow the above and which represent the anthropomorphism of Judean symbology, other than dangerous for the sacredness of true religion, and fitting only our materialistic age, which is the direct outcome and result of that anthropomorphic character. For this is the key-note to the entire spirit and essence of the Old Testament. "Therefore," goes on the MSS., treating of the symbolism of art-speech of the Bible:--

"The locality of the womb is to be taken as the MOST HOLY PLACE, the SANCTUM SANCTORUM, and the veritable TEMPLE OF THE LIVING GOD.* With man the possession of the woman has always been considered as an essential part of himself, to make one out of two, and jealously guarded as sacred. Even the part of the ordinary house or home consecrated to the dwelling of the wife was called the penetralia, the secret or sacred, and hence the metaphor of the Holy of Holies of sacred constructions taken from the idea of the sacredness of the organs of generation. Carried to the extreme of description** by metaphor, this part of the house is described in the Sacred Books as the "between the thighs of the house," and sometimes the idea is carried out constructively in the great door-opening of Churches placed inward between flanking buttresses."

No such thought "carried to the extreme" ever existed among the old primitive Aryans. This is proven by the fact that in the Vedic period their women were not placed apart from men in penetralia, or "Zenanas." Their seclusion began when the Mahomedans -- the next heirs to Hebrew symbolism after Christian ecclesiasticism -- had conquered the land and gradually enforced their ways and customs upon the Hindus. The pre- and post-Vedic woman was as free as man; and no impure terrestrial thought was ever mixed with the religious symbo-

[[Footnote(s)]] -----

* Surely the words of the old Initiate into the primitive mysteries of Christianity, "Know ye not ye are the Temple of God" (I Corinth. iii. 16) could not be applied in this sense to men? The meaning may have been, and was so, undeniably, in the minds of the Hebrew compilers of the Old Testament. And here is the abyss that lies between the symbolism of the New Testament and the Jewish canon. This gulf would have remained and ever widened, had not Christianity -- especially and most glaringly the Latin Church -- thrown a bridge over it? Modern Popery has now spanned it entirely, by its dogma of the two immaculate conceptions, and the anthropomorphic and at the same time idolatrous character it has conferred upon the Mother of its God.

** It was so carried only in the Hebrew Bible, and its servile copyist, Christian theology.

[[Vol. 1, Page]] 383 THE PURITY OF EARLY PHALLICISM.

logy of the early Aryans. The idea and application are purely Semitic. This is corroborated by the writer of the said intensely learned and Kabalistic revelation himself, when he closes the above-quoted passages by adding:--

"If to these organs as symbols of creative cosmic agencies the idea of the origin of measures as well as of time-periods can be attached, then indeed, in the constructions of the Temples as Dwellings of Deity, or of Jehovah, that part designated as the Holy of Holies, or the Most Holy place, should borrow its title from the recognised sacredness of the generative organs, considered as symbols of measures as well as of creative cause. With the ancient WISE, there was no name and no idea, and no symbol of A FIRST CAUSE."

Most decidedly not. Rather never give a thought to it and leave it for ever nameless, as the early Pantheists did, than degrade the sacredness of that Ideal of Ideals, by dragging down its symbols into such anthropomorphic forms! Here again one perceives the immense chasm between Aryan and Semitic religious thought: two opposite poles -- Sincerity and Concealment. With the Brahmins, who have never invested with an "original Sin" element the natural procreative functions of mankind, it is a religious duty to have a son. A Brahmin, in days of old, having accomplished his mission of human creator, retired to the jungle and passed the rest of his days in religious meditations. He had accomplished his duty to nature as mortal man and its co-worker, and henceforth gave all his thoughts to the spiritual immortal portion in himself, regarding the terrestrial as a mere illusion, an evanescent dream -- which it is. With the Semite, it was different. He invented a temptation of flesh in a garden of Eden; showed his God (esoterically, the Tempter and the Ruler of Nature) CURSING for ever an act, which was in the logical programme of that nature.* All this exoterically, as in the cloak and dead letter of Genesis and the rest; and at the same time esoterically he regarded the supposed sin and FALL as an act so sacred, as to choose the organ, the perpetrator of the original sin, as the fittest and most sacred symbol to represent that God, who is shown as branding its entering into function as disobedience and everlasting SIN!

Who can ever fathom the paradoxical depths of the Semitic mind? And this paradoxical element, minus its innermost significance, has now passed entirely into Christian theology and dogma!

Whether the early Fathers of the Church knew the esoteric meaning of the Hebrew (Old) Testament, or whether only a few of them were aware of it, while the others remained ignorant of the secret, is for

[[Footnote(s)]] -----

* The same idea is carried out exoterically in the incidents of Egypt. The Lord God tempts sorely Pharaoh and "plagues him with great plagues," lest the king should escape punishment, and thus afford no pretext for one more triumph to his "Chosen people."

[[Vol. 1, Page]] 384 THE SECRET DOCTRINE.

posterity to decide. One thing is certain, at any rate. As the esotericism of the New Testament agrees perfectly with that of the Hebrew Mosaic Books; and since, at the same time, a number of purely Egyptian symbols and pagan dogmas in general -- the Trinity for example -- have been copied by, and incorporated into, the Synoptics and St. John, it becomes evident that the identity of those symbols was known to the writers of the New Testament, whoever they were. They must have been aware also of the priority of the Egyptian esotericism, since they have adopted several such symbols that typify purely Egyptian conceptions and beliefs -- in their outward and inward meaning -- and which are not to be found in the Jewish Canon. One of such is the water-lily in the hands of the Archangel in the early representations of his appearance to the Virgin Mary; and these symbolical images are preserved to this day in the iconography of the Greek and Roman Churches. Thus water, fire, the Cross, as well as the Dove, the Lamb, and other sacred animals, with all their combinations, yield esoterically an identical meaning, and must have been accepted as an improvement upon Judaism pure and simple.

For the Lotus and Water are among the oldest symbols, and in their origin are purely Aryan, though they became common property during the branching-off of the fifth race. Let us give an example. Letters, as much as numbers, were all mystic, whether in combination or each taken separately. The most sacred of all is the letter M. It is both feminine and masculine, or androgyne, and is made to symbolize WATER, the great deep, in its origin. It is mystic in all the languages, Eastern and Western, and stands as a glyph for the waves, thus: [[diagram]]. In the Aryan Esotericism, as in the Semitic, this letter has always stood for the waters; e.g., in Sanskrit MAKARA -- the tenth sign of the Zodiac -- means a crocodile, or rather an aquatic monster associated always with water. The letter MA is equivalent to and corresponds with number 5 -- composed of a binary, the symbol of the two sexes separated, and of the ternary, symbol of the third life, the progeny of the binary. This, again, is often symbolised by a Pentagon, the latter being a sacred sign, a divine Monogram. MAITREYA is the secret name of the Fifth Buddha, and the Kalki Avatar of the Brahmins -- the last MESSIAH who will come at the culmination of the Great Cycle. It is also the initial letter of the Greek Metis or Divine Wisdom; of Mimra, the "word" or Logos; and of Mithras (the Mihr), the Monad, Mystery. All these are born in, and from, the great Deep, and are the Sons of Maya -- the Mother; in Egypt, Mouth, in Greece Minerva (divine wisdom), Mary, or Miriam, Myrrha, etc.; of the Mother of the Christian Logos, and of Maya, the mother of Buddha. Madhava and Madhavi are the titles of the most important gods and goddesses of the Hindu Pantheon. Finally, Mandala is in

[[Vol. 1, Page]] 385 THE EGYPTIAN LOTUS.

Sanskrit "a circle," or an orb (the ten divisions of the Rig Veda). The most sacred names in India begin with this letter generally -- from Mahat, the first manifested intellect, and Mandara, the great mountain used by the gods to churn the Ocean, down to Mandakin, the heavenly Ganga (Ganges), Manu, etc., etc.

Shall this be called a coincidence? A strange one it is then, indeed, when we find even Moses -- found in the water of the Nile -- having the symbolical consonant in his name. And Pharaoh's daughter "called his name Moses . . . because," she said, "I drew him out of WATER" (Exod. ii., 10.)* Besides which the Hebrew sacred name of God applied to this letter M is Meborach, the "Holy" or the "Blessed," and the name for the water of the Flood is M'bul. A reminder of the "three Maries" at the Crucifixion and their connection with Mar, the Sea, or Water, may close this example. This is why in Judaism and Christianity the Messiah is always connected with Water, Baptism, the Fishes (the sign of the Zodiac called Meenam in Sanskrit), and even with the Matsya (fish) Avatar, and the Lotus -- the symbol of the womb, or the water-lily, which is the same.

In the relics of ancient Egypt, the greater the antiquity of the votive symbols and emblems of the objects exhumed, the oftener are the lotus flowers and the water found in connection with the Solar Gods. The god Khnoom -- the moist power -- water, as Thales taught it, being the principle of all things, sits on a throne enshrined in a lotus (Saitic epoch, Serapeum). The god Bes stands on a lotus, ready to devour his progeny. (Ibid, Abydos.) Thot, the god of mystery and Wisdom, the sacred Scribe of Amenti, wearing the Solar disc as head gear, sits with a bull's head (the sacred bull of Mendes being a form of Thot) and a human body, on a full blown lotus. (IVth Dynasty.) Finally it is the goddess Hiquet, under her shape of a frog, who rests on the lotus, thus showing her connection with water. And it is this frog-symbol, undeniably the most ancient of their Egyptian deities, from whose unpoetical shape the Egyptologists have been vainly trying to unravel her mystery and functions. Its adoption in the Church by the early Christians shows that they knew it better than our modern Orientalists. The "frog or toad goddess" was one of the chief cosmic deities connected with creation, on account of her amphibious nature, and chiefly because of her apparent resurrection, after long ages of solitary life enshrined in old walls, in rocks, etc. She not only participated in the organization of the world, together with Khnoom, but was also connected with the

[[Footnote(s)]] -----

* Even to the seven daughters of the Midian priest, who, coming to draw the water, had Moses water their flock, for which service the Midian gives to Moses Zipporah (sippara = the shining wave) as wife (Exod. ii.) All this has the same secret meaning.

[[Vol. 1, Page]] 386 THE SECRET DOCTRINE.

dogma of resurrection.* There must have been some very profound and sacred meaning attached to this symbol, since, notwithstanding the risk of being charged with a disgusting form of zoolatry, the early Egyptian Christians adopted it in their Churches. A frog or toad enshrined in a lotus flower, or simply without the latter emblem, was the form chosen for the Church lamps, on which were engraved the words "I am the resurrection" "[[ego eimi anastasis]]."*** These frog goddesses are also found on all the mummies.

§ IX
THE MOON, DEUS LUNUS, PHOEBE.

THIS archaic symbol is the most poetical of all symbols, as also the most philosophical. The ancient Greeks brought it into prominence, and the modern poets have worn it threadbare. The Queen of Night, riding in the majesty of her peerless light in heaven, throwing all, even Hesperos, into darkness, and spreading her silver mantle over the whole sidereal world, has ever been a favourite theme with all the poets of Christendom, from Milton and Shakespeare down to the latest versifier. But the refulgent lamp of night, with her suite of stars unnumbered, spoke only to the imagination of the profane. Until lately, Religion and Science had nought to do with the beautiful mythos. Yet, the cold chaste moon, she, in the words of Shelley --

. . . . "Who makes all beautiful on which she smiles
That wandering shrine of soft, yet icy flame,
Which ever is transformed, yet still the same,
And warms, but not illumines."

stands in closer relations to Earth than any other sidereal orb. The Sun is the giver of life to the whole planetary system; the Moon is the giver of life to our globe; and the early races understood and knew it, even in their infancy. She is the Queen and she is the King, and was King Soma before she became transformed into Phoebe and the chaste Diana. She is pre-eminently the deity of the Christians, through the Mosaic and Kabalistic Jews, though the civilized world may have remained ignorant of the fact for long ages; in fact, ever since the

[[Footnote(s)]] -----

* With the Egyptians it was the resurrection in rebirth after 3,000 years of purification, either in Devachan or "the fields of bliss."

** Such "frog-goddesses" may be seen at Bulaq, in the Cairo Museum. For the statement about the Church lamps and inscriptions it is the learned ex-director of the Bulaq Museum, Mr. Gaston Maspero, who must be held responsible. (See his "Guide du Visiteur au Musee de Bulaq," p. 146.)

[[Vol. 1, Page]] 387 A GLANCE AT THE LUNAR MYTH.

last initiated Father of the Church died, carrying with him into his grave the secrets of the pagan temples. For the "Fathers" -- such as Origen or Clemens Alexandrinus -- the Moon was Jehovah's living symbol: the giver of Life and the giver of Death, the disposer of being -- in our World. For, if Artemis was Luna in Heaven, and, with the Greeks, Diana on Earth, who presided over child-birth and life: with the Egyptians, she was Hekat (Hecate) in Hell, the goddess of Death, who ruled over magic and enchantments. More than this: as the personified moon, whose phenomena are triadic, Diana-Hecate-Luna is the three in one. For she is Diva triformis, tergemina, triceps -- three heads on one neck,* like Brahma-Vishnu-Siva. Hence she is the prototype of our Trinity, which has not always been entirely male. The number seven, so prominent in the Bible, so sacred in its seventh (Sabbath) day, came to the Jews from Antiquity, deriving its origin from the four-fold number 7 contained in the 28 days of the lunar month, each septenary portion thereof being typified by one quarter of the moon.

It is worth the trouble of presenting in this work a bird's-eye view of the origin and development of the lunar myth and worship in historical antiquity, on our side of the globe. Its earlier origin is untraceable by exact science, rejecting as it does tradition; while for Theology, which, under the guidance of the crafty Popes, has put a brand on every fragment of literature that does not bear the imprimatur of the Church of Rome, its archaic history is a sealed book. Whether the Egyptian or the Aryan Hindu religious philosophy is the more ancient -- and the Secret Doctrine says it is the latter -- does not much matter in this instance, as the lunar and solar "worship" are the most ancient in the world. Both have survived, and prevail to this day throughout the whole world, with some openly, with others -- e.g., in Christian symbolics -- secretly. The cat, a lunar symbol, was sacred to Isis, herself the Moon in one sense, as Osiris was the Sun. The cat is often seen on the top of the Sistrum in the hand of the goddess. This animal was held in great veneration in the city of Bubaste, which went into deep mourning after the death of every sacred cat, because Isis, as the Moon, was particularly worshipped in this city of mysteries. The astronomical symbolism connected with it has already been given in Section I. of "Symbolism," and no one has better described it than Mr. G. Massey, in his Lectures and in "The Natural Genesis." The eye of the cat, it is said, seems to follow the lunar phases in its growth and decline, and its orbs shine like two stars in the darkness of night. Hence the mythological allegory which shows Diana hiding under the shape of a cat in the Moon, when, in company with other deities, she was seeking to

[[Footnote(s)]] -----

* The goddess [[Trimorphos]] in the statuary of Alcamenes.

[[Vol. 1, Page]] 388 THE SECRET DOCTRINE.

escape the pursuit of Typhon (Vide the Metamorphoses of Ovid). The moon in Egypt was both the "Eye of Horus" and the "Eye of Osiris," the Sun.

The same with the Cynocephalus. The dog-headed ape was a glyph to symbolise the sun and moon, in turn, though the Cynocephalus is more a Hermetic than a religious symbol. For it is the hieroglyph of Mercury, the planet, as of the Mercury of the Alchemical philosophers, "as," say the Alchemists, "Mercury has to be ever near Isis, as her minister, as without Mercury neither Isis nor Osiris can accomplish anything in the GREAT WORK." Cynocephalus, whenever represented with the Caduceus, the Crescent, or the Lotus, is a glyph of the "philosophical" Mercury; but when seen with a reed, or a roll of parchment, he stands for Hermes, the secretary and adviser of Isis, as Hanuman filled the same office with Rama.

Though the regular Sun-Worshippers, the Parsis, are few, yet not only is the bulk of the Hindu mythology and history based upon and interblended with these two worships, but so is also the Christian religion itself. From their origin down to our modern day it has coloured the theologies of both the Roman Catholic and Protestant Churches. The difference, indeed, between the Aryan Hindu and the Aryan European faiths is very small, if only the fundamental ideas of both are taken into consideration. Hindus are proud of calling themselves Suryas and Chandravansas (of the Solar and Lunar dynasties). The Christians pretend to regard it as idolatry, and yet they adhere to a religion entirely based upon the solar and lunar worships. It is useless and vain for the Protestants to exclaim against the Roman Catholics for their "Mariolatry," based on the ancient cult of lunar goddesses, when they themselves worship Jehovah, pre-eminently a lunar god, and when both Churches have accepted in their theologies the "Sun"-Christ and the lunar trinity.

What is known of Chaldaean Moon-Worship, of the Babylonian god, Sin, called by the Greeks "Deus Lunus," is very little, and that little is apt to mislead the profane student who fails to grasp the esoteric significance of the symbols. As popularly known to the ancient profane philosophers and writers (for those who were initiated were pledged to silence) the Chaldaea were the worshippers of the moon under her (and his) various names, just as were the Jews, who came after them.

In the unpublished MSS. on the Art Speech, already mentioned, giving a key to the formation of the ancient (symbolical) languages a logical *raison d'etre* is brought forward for this double worship. It is written by a wonderfully well-informed and acute scholar and Mystic, who gives it in the comprehensive form of a hypothesis. The latter, however, becomes forcibly a proven fact in the history of religious

[[Vol. 1, Page]] 389 A KEY NOTE TO THE MOON.

evolution in human thought, to anyone who has ever had a glimpse into the secret of ancient Symbology. Thus, he says:--

"One of the first occupations among men, connected with those of actual necessity, would be the perception of time periods,* marked on the vaulted arch of the heavens sprung and rising over the level floor of the horizon, or the plain of still water. These would come to be marked as those of day and night, of the phases of the moon, of its stellar or synodic revolutions, and of the period of the solar year with recurrence of the seasons, and with the application to such periods of the natural measure of day or night, or of the day divided into the light and the dark. It would also be discovered that there was a longest and shortest solar day, and two solar days of equal day and night, within the period of the solar year; and the points in the year of these could be marked with the greatest precision in the starry groups of the heavens or the constellations, subject to that retrograde movement thereof, which in time would require a correction by intercalation, as was the case in the description of the Flood, where correction of 150 days was made for a period of 600 years, during which confusion of landmarks had increased. . . . This would naturally come to pass . . . with all races in all time; and such knowledge must be taken to have been inherent in the human race, prior to what we call the historic period. . . ."

On this basis, the author seeks for some natural physical function possessed in common by the human race, and connected with the periodical manifestations, such that "the connection between the two kinds of phenomena . . . became fixed in popular usage." He finds it "(a) in the feminine physiological phenomena every lunar month of 28 days, or 4 weeks of 7 days each, so that 13 occurrences of the period should happen in 364 days, which is the solar week year of 52 weeks of 7 days each. (b) The quickening of the foetus is marked by a period of 126 days, or 18 weeks of 7 days each. (c) That period which is called "the period of viability" is one of 210 days, or 30 weeks of 7 days each. (d) The period of parturition is accomplished in 280 days, or a period of 40 weeks of 7 days each, or 10 lunar months of 28 days each, or of 9 calendar months of 31 days each, counting on the royal arch of heavens for the measure of the period of traverse from the darkness of the womb to the light and glory of conscious existence, that continuing inscrutable mystery and miracle . . . Thus the observed periods of time marking the workings of the birth function would naturally become a basis of astronomical calculation . . . We may almost affirm . . . that this was the mode of reckoning among all nations, either independently, or intermediately and indirectly by tuition. It was the mode with the Hebrews, for even to-day they calculate the calendar by means of the 354 and 355 of the lunar year, and we possess a special evidence that it was the mode with the ancient Egyptians, as to which this is the proof:--

[[Footnote(s)]] -----

* Ancient Mythology includes ancient Astronomy as well as Astrology. The planets were the hands pointing out, on the dial of our solar system, the hours of certain periodical events. Thus, Mercury was the messenger appointed to keep time during the daily solar and lunar phenomena, and was otherwise connected with the God and Goddess of Light.

[[Vol. 1, Page]] 390 THE SECRET DOCTRINE.

"The basic idea underlying the religious philosophy of the Hebrews was that God contained all things within himself*; and that man was his image, man including woman . . . The place of the man and woman with the Hebrews was among the Egyptians occupied by the bull and the cow, sacred to Osiris and Isis,** who were represented, respectively, by a man having a bull's head, and a woman having the head of a cow, which symbols were worshipped. Notoriously Osiris was the Sun and the river Nile, the tropical year of 365 days, which number is the value of the word Neilos, and the bull, as he was also the principle of fire and of life-giving force, while Isis was the Moon, the bed of the river Nile, or the Mother Earth, for the parturient energies of which water was a necessity, the lunar year of 354-364 days, the time-maker of the periods of gestation, and the cow marked by, or with, the crescent new moon." . . .

"But the use of the cow of the Egyptians for the women of the Hebrews was not intended as of any radical difference of signification, but a concurrence in the teaching intended, and merely as a substitution of a symbol of common import, which was this, viz., the period of parturition with the cow and the woman was held to be the same, or 280 days, or ten lunar months of four weeks each. And in this period consisted the essential value of this animal symbol, whose mark was that of the crescent moon.*** . . . These parturient and natural periods are found to have been subjects of symbolism all over the world. They were thus used by the Hindus, and are found to be most plainly set forth by the ancient Americans, in the Richardson and Gest tablets, in the Palenque Cross; and manifestly lay at the base of the formation of the calendar forms of the Mayas of Yucatan, the Hindus, the Assyrians, and the ancient Babylonians, as well as the Egyptians and old Hebrews. The natural symbols . . . would be either the phallus or the phallus and yoni, . . . or male and female. Indeed, the words translated by the generalizing terms male and female, in the 27th verse of the 1st chapter of Genesis are . . . sacr and n'cabrah, or literally, phallus and yoni,**** while the representation of the phallic emblems would barely indicate the genital members of the human body, when their functions and the development of the seed-vesicles emanating from them was considered; then would come into indication a mode of measures of lunar time, and, through lunar, of solar time." . . .

This is the physiological or anthropological key to the Moon symbol. The key that opens the mystery of theogony, or the evolution of the Manvantaric gods, is more complicated, and has nothing phallic in it. All is mystical and divine there. But the Jews, beyond connecting Jehovah directly with the Moon as a generative god, preferred to ignore the higher hierarchies, and have made of some of them (zodiacal constellations and planetary gods) their Patriarchs, thus euhemerizing the

[[Footnote(s)]] -----

* A caricatured and dwarfed Vedantin notion of Parabrahmam containing within itself the whole Universe as being that boundless Universe itself, and there existing nothing outside of itself.

** Just as they are to this day in India, the bull of Siva and the cow representing several Sakti -- goddesses.

*** Hence the worship of the moon by the Hebrews.

**** "Male and female, created he them."

[[Vol. 1, Page]] 391 THE TIME PERIODS.

purely theosophical idea and dragging it down to the level of sinful humanity. (See section "Holy of Holies" in the "Symbolism" of Book II.) The MSS. from which the above is extracted explains very clearly to what hierarchy of gods Jehovah belonged, and who this Jewish GOD was; for it shows in clear language that which the writer has always insisted upon -- namely, that the God with which the Christians have burdened themselves was no better than the lunar symbol of the reproductive or generative faculty in nature. They have ever ignored even the Hebrew secret god of the Kabalists, Ain-Soph, as grand as Parabrahmam in the earliest Kabalistic and mystical conceptions. But it is not the Kabala of Rosenroth that can ever give the true original teachings of Simeon-Ben-Iochai, as metaphysical and philosophical as any. And how many are there among the students of the Kabala who knew anything of them except in their distorted Latin translations. Let us glance at the idea which led the ancient Jews to adopt a substitute for the ever UNKNOWABLE, and which has misled the Christians into mistaking the substitute for the reality.

"If to these organs (phallus and yoni) as symbols of creative cosmic agencies the idea of . . . time periods can be attached, then, indeed, in the construction of Temples as Dwellings of Deity, or of Jehovah, that post designated as the Holy of Holies, or the most High Place, should borrow its title from the recognized sacredness of the generative organs, considered as symbols of measures as well as of creative Cause."

"With the ancient wise, there was no name, and no idea, and no symbol, of a First Cause.* With the Hebrews, the indirect conception of such was couched in a term of negation of comprehension -- viz., Ain-Soph, or the Without Bounds. But the symbol of its first comprehensible manifestation, was the conception of a circle with its diameter line. . . . (See the Proem of Book I., Part I.) to carry at once a geometric, phallic, and astronomic idea . . . for the one takes its birth from the nought or the Circle, without which it could not be, and from one, or primal one, spring the nine digits, and, geometrically, all plane shapes. So in the Kabala this Circle, with its diameter line, is the picture of the ten Sephiroth or Emanations, composing the Adam Kadmon, the Archetypal Man, the creative origin of all things. . . . This idea of connecting the circle and its diameter line, that is, number ten, with the signification of the reproductive organs, and the Most Holy Place, was carried out constructively in the King's Chamber, or Holy of Holies, of the great Pyramid, in the Tabernacle of Moses, and in the Holy of Holies of the Temple of Solomon. . . . It is the picture of a double-womb, for in Hebrew the letter he [[diagram]] is at the same time the number 5 and symbol of the womb, and twice 5 is 10, or the phallic number."

This "double womb" also shows the duality of the idea carried from

[[Footnote(s)]] -----

* Because it was too sacred. It is referred to as THAT in the Vedas: it is the "Eternal Cause," and cannot, therefore, be spoken of as a "First Cause," a term implying the absence of any cause, at one time.

[[Vol. 1, Page]] 392 THE SECRET DOCTRINE.

the highest, spiritual, down to the lowest or terrestrial plane; and by the Jews limited to the latter. With them, therefore the number 7 has acquired the most prominent place in their exoteric religion, a cult of external forms and empty rituals; as their Sabbath, for instance, the seventh day sacred to their deity, the moon, symbolical of the generative Jehovah. While with other nations the number seven was typical of theogonic evolution, of cycles, cosmic planes, and the Seven Forces and Occult Powers in Kosmos, as a boundless whole, whose first upper triangle was unreachable to the finite intellect of man -- while other nations, therefore, busied themselves, in their forcible limitation of Kosmos in Space and Time, only with its septenary manifested plane, the Jews centred this member solely in the moon, and based all their sacred calculations thereupon. Hence we find the thoughtful author of the MSS. just quoted, remarking, in reference to the metrology of the Jews that: "If 20,612 be multiplied by 4/3 the product will afford a base for the ascertainment of the mean revolution of the moon, and if this product be again multiplied by 4/3, this continued product will afford a base for finding the exact period of the mean solar year, . . . this form . . . becoming, for the finding of astronomical periods of time, of very great service." This double number (male and female) is symbolized also in some well-known idols: e.g., "Ardanari-Iswara, the Isis of the Hindus, Eridanus, or Ardan, or the Hebrew Jordan, or source of descent. She is standing on a lotus-leaf flowing on the water. But the signification is, that it is androgyne or hermaphrodite, that is phallus and yoni combined, the number 10, the Hebrew letter Jod [[diagram]], the containment of Jehovah. She, or rather she-he, gives the minutes of the same circle of 360 degrees."

"Jehovah," in its best aspect is Binah, "the Upper mediating Mother, the Great Sea or Holy Spirit;" therefore rather a synonym of Mary, the Mother of Jesus, than of his Father; that "Mother, being the Latin Mare" the Sea is here also, Venus, the Stella del Mare, or "Star of the Sea."

The ancestors of the mysterious Akkadians -- the Chandra or Indovansas, the Lunar Kings whom tradition shows reigning at Prayag (Allahabad) ages before our era -- had come from India, and brought with them the worship of their forefathers, of Soma, and his son Budha, which afterwards became that of the Chaldeans. Yet such adoration, apart from popular Astrolatry and Heliolatry, was in no sense idolatry. No more, at any rate, than the modern Roman Catholic symbolism which connects their Virgin Mary -- the Magna Mater of the Syrians and Greeks -- with the Moon.

Of this worship, the most pious Roman Catholics feel quite proud,

[[Vol. 1, Page]] 393 COPIES AND ORIGINALS.

and loudly confess to it. In a Memoire to the French Academy, the Marquis De Mirville says:--

"It is only natural that, as an unconscious prophecy, Ammon-Ra should be his mother's husband, since the Magna Mater of the Christians is precisely the spouse of that son she conceives. . . . We (Christians) can understand now why Neithis throws radiance on the sun, while remaining the Moon, since the VIRGIN, who is the QUEEN OF HEAVEN, as Neith was, clothes herself in her radiance, and clothes in his turn the CHRIST-SUN. "Tu vestis solem et te sol vestit." . . . is sung by the Roman Catholics during their service, and he adds:--

"We (Christians) understand also how it is that the famous inscription at Sais should have stated that 'none has ever lifted my peplum (veil),' considering that this sentence, literally translated, is the summary of what is sung in the Church on the day of the immaculate conception." (ARCHAEOLOGY OF THE VIRGIN MOTHER," p. 117.)

Surely nothing could be more sincere than this! It justifies entirely what Mr. Gerald Massey has said in his Lecture on "Luniatry, Ancient and Modern":--

"The man in the moon (Osiris-Sut, Jehovah-Satan, Christ-Judas, and other Lunar twins) is often charged with bad conduct. . . . In the lunar phenomena the moon was one as the moon, which was two-fold in sex, and three-fold in character -- as mother, child, and adult male. Thus the child of the moon became the consort of his own mother! It could not be helped if there was to be any reproduction. He was compelled to be his own father! These relationships were repudiated by later sociology, and the primitive man in the moon got tabooed. Yet, in its latest, most inexplicable phase, this has become the central doctrine of the grossest superstition the world has seen, for these lunar phenomena and their humanly represented relationships, the incestuous included, are the very foundations of the Christian Trinity in Unity. Through ignorance of the symbolism, the simple representation of early time has become the most profound religious mystery in modern Luniatry. The Roman Church, without being in any wise ashamed of the proof, portrays the Virgin Mary arrayed with the sun, and the horned moon at her feet, holding the lunar infant in her arms -- as child and consort of the mother moon. The mother, child, and adult male, are fundamental."

"In this way it can be proved that our Christology is mummified mythology, and legendary lore, which have been palmed off upon us in the Old Testament and the New, as divine revelation uttered by the very voice of God."

A charming allegory is found in the Zohar, one which unveils better than anything ever did the true character of Jehovah or YHVH in the primitive conception of the Hebrew Kabalists. It is now found in the philosophy of I'bn Gebirol's Kabbalah, translated by Isaac Myer. "In the introduction written by R'Hez'quee-yah, which is very old," says our author, "and forms part of our Brody edition of the Zohar (I, 5b. sq.) is an account of a journey taken by R. El'azar, son of R. Shim-on b. Io'hai, and Rabbi Abbah." They met a man with a heavy burden and asked his name; but he refused to give it and proceeded to explain to them Thorah

[[Vol. 1, Page]] 394 THE SECRET DOCTRINE.

(Law). "They asked: 'Who caused thee thus to walk and carry such a heavy load?' He answered: 'The letter [[diagram]], (Yod, which = 10, and is the symbolical letter of Kether and the essence and germ of the Holy name [[diagram]] YHVH) They said to him: 'If thou wilt tell us the name of thy father, we will kiss the dust of thy feet.' He replied: 'As to my father, he had his dwelling in the Great Sea, and was a fish therein' (like Vishnu and Dagon or Oannes), 'which (first) destroyed the great sea' and he was great and mighty and 'Ancient of Days,' until he swallowed all the other fishes in the (Great) Sea R. El'azar listened and said to him: 'Thou art the Son of the Holy Flame, thou art the Son of Rab Ham -- 'nun-ah Sabah [the old: the fish in Aramaic or Chaldee is nun (noon)] thou art the Son of the Light of the Torah,' (Dharma) etc. Then the author explains that the feminine Sephiroth, Binah, is termed by the Kabalist the great sea: therefore Binah, whose divine names are Jehovah, Yah, and Elohim, is simply the Chaldean Tiamat, the female power, the Thalath of Berosus, who presides over the Chaos, and was made out later by Christian theology to be the serpent and the Devil. She-He (Yah-hovah) is the supernal (Heh, and Eve). This Yah-hovah then or Jehovah, is identical with our Chaos -- Father, Mother, Son, -- on the material plane and in the purely physical World. Demon and Deus at one and the same time; the sun and moon, good and evil, God and Demon.

Lunar magnetism generates life, preserves and destroys it, psychically as well as physically. And if, astronomically, she is one of the seven planets of the ancient world, in theogony she is one of the regents thereof; with Christians now as much as with Pagans, the former referring to her under the name of one of their archangels, and the latter under that of one of their gods.

Therefore the meaning of the "fairy tale" translated by Chwolson from an old Chaldean MSS. translated into Arabic, about Qu-tamy being instructed by the idol of the moon, is easily understood (vide Book III.) Seldenus tells us the secret as well as Maimonides (More Nevochim, Book III., ch. xxx). The worshippers of the Teraphim (the Jewish Oracles) "carved images and claimed that the light of the principal stars (planets) permeating these through and through, the angelic VIRTUES (or the regents of the stars and planets) conversed with them, teaching them many most useful things and arts." And Seldenus explains that the Teraphim were built and composed after the position of certain planets, those which the Greeks called [[stoicheia]], and according to figures that were located

in the sky and called [[alexeteroi]], or the tutelary gods. Those who traced out the [[stoicheia]] were called [[stoicheiomatichoi]], or the diviners by the [[stoicheia]]. (De Diis Syriis, Teraph, II. Synt. p. 31) vide infra, the Teraphim.

It is such sentences, however, in the "Nabathean agriculture," that

[[Vol. 1, Page]] 395 SOLAR-LUNAR WORSHIP IN THE CHURCH.

have frightened the men of science and made them proclaim the work "either an apocrypha or a fairy tale, unworthy of the notice of an Academician." At the same time, as shown, zealous Roman Catholics and Protestants tore it metaphorically to pieces; the former because "it described the worship of demons," the latter because it is "ungodly." They are all wrong, once more. It is not a fairy tale; and as far as regards pious Churchmen, the same worship may be shown in the Scriptures, however disfigured by translation. Solar and Lunar worship, as well as that of the Stars and Elements, are traced, and figure in the Christian theology; defended by Papists, they are stoutly denied by the Protestants only at their own risk and peril. Two instances may be given.

Ammianus Marcellinus teaches that ancient divinations were always accomplished with the help of the Spirits of the Elements, "Spiritus elementorum, and in Greek [[pneumata ton stoicheion]]" (1. I., 21).

But it is found now that the planets, the Elements, and the Zodiac, were figured not only in Heliopolis by the twelve stones called "mysteries of the elements," elementorum arcana, but also in Solomon's temple, and, as pointed out by various writers, in several old Italian churches and even at Notre Dame de Paris where they can be seen to this day.

No symbol -- the sun included -- was more complex in its manifold meanings than the lunar symbol. The sex was, of course, dual. With some it was male, e.g., the Hindu "King Soma," and the Chaldean Sin; with other nations it was female, the beautiful goddesses Diana-Luna, Ilythia, Lucina. In Tauris, human victims were sacrificed to Artemis, a form of the lunar goddess; the Cretans called her Dictynna, and the Medes and Persians Anaitis, as shown by an inscription of Koloe: "[[Artemidi 'Anaaiti]]. But, we are now concerned chiefly with the most chaste and pure of the virgin goddesses, Luna-Artemis, to whom Pamphos was the first to give the surname of [[Kalliste]], and of whom Hippolitus wrote: [[Kallista polu parthenon]]. (See Pausanias viii., 35, 8.) This Artemis-Lochia, the goddess that presided at conception and child-birth (Iliad, Pausanias, etc., etc.), is, in her functions and as the triple Hecate, the Orphic deity, the predecessor of the God of the Rabbins and pre-Christian Kabalists, and his lunar type. The goddess [[Trimorphos]] was the personified symbol of the various and successive aspects represented by the moon in each of her three phases; and this interpretation was already that of the Stoics (Cornut. De Nat, D. 34, 1), while the Orpheans explained the epithet ([[Trimorphos]]) by the three kingdoms of nature over which she reigned. jealous, blood-thirsty, revengeful and exacting, Hecate-Luna is a worthy counterpart of the "Jealous God" of the Hebrew prophets.

[[Vol. 1, Page]] 396 THE SECRET DOCTRINE.

The whole riddle of the solar and lunar worship, as now traced in the churches, hangs indeed on this world-old mystery of lunar phenomena. The correlative forces in the "Queen of Night," that lie latent for modern science, but are fully active to the knowledge of Eastern adepts, explain well the thousand and one images under which the moon was represented by the ancients. It also shows how much more profoundly learned in the Selenic mysteries were the ancients than are now our modern astronomers. The whole Pantheon of the lunar gods and goddesses, Nephtys or Neith, Proserpina, Melytta, Cybele, Isis, Astarte, Venus, and Hecate, on the one hand, and Apollo, Dionysius, Adonis, Bacchus, Osiris, Atys, Thammuz, etc., etc., on the other, all show on the face of their names and titles -- those of "Sons" and "Husbands" of their mothers -- their identity with the Christian Trinity. In every religious system the gods were made to merge their functions as Father, Son, and Husband, into one, and the goddesses were identified as "Wife, Mother, and Sister" of the male God; the former synthesizing the human attributes as the "Sun, the giver of Life," the latter merging all the other titles in the grand synthesis known as Maia, Maya, Maria, etc., a generic name. Maia, in its forced derivation, has come to mean with the Greeks, "mother," from the root ma (nurse), and even gave its name to the month of May, which was sacred to all those goddesses before it became consecrated to Mary.* Its primitive meaning, however, was Maya, Durga, translated by the Orientalists as "inaccessible," but meaning in truth the "unreachable," in the sense of illusion and unreality; as being the source and cause of spells, the personification of ILLUSION.

In religious rites the moon served a dual purpose. Personified as a female goddess for exoteric purposes, or as a male god in allegory and symbol, in occult philosophy our satellite was regarded as a sexless Potency to be well studied, because it was to be dreaded. With the initiated Aryans, Khalidii, Greeks and Romans, Soma, Sin, Artemis Soteira (the hermaphrodite Apollo, whose attribute is the lyre, and the bearded Diana of the bow and arrow), Deus Lunus, and especially Osiris-lunus and Thot-lunus,** were the occult potencies of the moon. But whether male or female, whether Thot or Minerva, Soma or Astoreth, the Moon is the Occult mystery of mysteries, and more a symbol of evil than of good. Her seven phases (original, esoteric division) are divided into three astronomical phenomena and four

[[Footnote(s)]] -----

* The Roman Catholics are indebted for the idea of consecrating the month of May to the Virgin, to the pagan Plutarch, who shows that "May is sacred to Maia ([[Maia]]) or Vesta" (Aulus-Gellius, word Maia) -- our mother-earth, our nurse and nourisher personified.

** Thot-Lunus is "Budha-Soma" of India, or "Mercury and the Moon."

purely psychic phases. That the moon was not always revered is shown in the Mysteries, in which the death of the moon-god (the three phases of gradual waning and final disappearance) was allegorized by the moon standing for the genius of evil that triumphs for the time over the light and life-giving god (the sun), and all the skill and learning of the ancient Hierophants in Magic was required to turn this triumph into a defeat.

It was the most ancient worship of all, that of the third Race of our Round, the Hermaphrodites, to whom the male-moon became sacred, when after the "Fall" so-called, the sexes had become separated. "Deus Lunus" then became an androgyne, male and female in turn; to serve finally, for purposes of sorcery, as a dual power, to the Fourth Root-race, the Atlanteans. With the Fifth (our own) the lunar-solar worship divided the nations into two distinct, antagonistic camps. It led to events described aeons later in the Mahabharatan War, which to the Europeans is the fabulous, to the Hindus and Occultists the historical, strife between the Suryavansas and the Indovansas. Originating in the dual aspect of the moon, the worship of the female and the male principles respectively, it ended in distinct solar and lunar cults. Among the Semitic races, the sun was for a very long time feminine and the moon masculine -- the latter notion being adopted by them from the Atlantean traditions. The moon was called "the Lord of the sun," Bel-Skemesh,* before the Shemesh worship. The ignorance of the incipient reasons for such a distinction, and of occult principles, led the nations into anthropomorphic idol-worship. But the religion of every ancient nation had been primarily based upon the Occult manifestations of a purely abstract Force or Principle now called "God." The very establishment of such worship shows, in its details and rites, that the philosophers who evolved those systems of nature, subjective and objective, possessed profound knowledge, and were acquainted with many facts

[[Footnote(s)]] -----

* During that period which is absent from the Mosaic books -- from the exile of Eden to the allegorical Flood -- the Jews worshipped with the rest of the Semites Dayanisi [[hebrew]] "the Ruler of Men," the "Judge," or the SUN. Though the Jewish canon and Christianity have made the sun become the "Lord God" and Jehovah in the Bible, yet the latter is full of indiscreet traces of the androgyne Deity, which was Jehovah the sun, and Astoreth the moon in its female aspect, and quite free from the present metaphorical element given to it. God is a "consuming fire," appears in, and is encompassed by fire." It was not only in vision that Ezekiel (viii., 16) saw the Jews "worshipping the sun." The Baal of the Israelites (the Shemesh of the Moabites and the Moloch of the Ammonites) was the identical "Sun-Jehovah," and he is till now "the King of the Host of Heaven," the Sun, as much as Astoreth was the "Queen of Heaven" -- or the moon. The "Sun of Righteousness" has become a metaphorical expression only now.

of a scientific nature. For besides being purely Occult, the rites of lunar worship were based, as just shown, upon a knowledge of physiology (quite a modern science with us), psychology, sacred mathematics, geometry and metrology, in their right applications to symbols and figures, which are but glyphs, recording observed natural and scientific facts; in short, upon a most minute and profound knowledge of nature. Lunar magnetism generates life, preserves and kills it. Soma embodies the triple power of the Trimurti, though it passes unrecognized by the profane to this day. The allegory that makes Soma, the moon, produced by the churning of the Ocean of Life (Space) by the gods in another Manvantara (i.e., in the pregenetic day of our planetary system), and that other allegory, which shows "the Rishis milking the earth, whose calf was Soma, the moon," has a deep cosmographical meaning; for it is neither our earth which is milked, nor was the moon, which we know, the calf.* Had our wise men of science known as much of the mysteries of nature as the ancient Aryans did, they would surely never have imagined that the moon was projected from the Earth. Once more, the oldest of permutations in theogony, the Son becoming his own father and the mother generated by the Son, has to be remembered and taken into consideration if the symbolical language of the ancients is to be understood by us. Otherwise mythology will be ever haunting the Orientalists as simply "the disease which springs up at a peculiar stage of human culture!" -- as Renouf gravely observes in a Hibbert lecture.

The ancients taught the, so to speak, auto-generation of the Gods: the one divine essence, unmanifested, perpetually begetting a second-self, manifested, which second-self, androgynous in its nature, gives birth in an immaculate way to everything macro- and micro-cosmical in this universe. This was shown in the Circle and the Diameter, or the Sacred 10, a few pages back.

But our Orientalists, their extreme desire to discover one homogeneous element in nature notwithstanding, will not see it; cramped in their researches by such ignorance, they -- the Aryanists and Egyptologists -- are constantly led astray from truth in their speculations. Thus, de Rouge is unable to understand, in the text which he translates, the meaning of Ammon-Ra saying to King Amenophes (supposed to be Memnon), "Thou art my Son, I have begotten thee"; and as he

[[Footnote(s)]] -----

* The earth flees for her life in the allegory, before Prithu, who pursues her. She assumes the shape of a cow, and, trembling with terror, runs away and hides even in the regions of Brahma. Therefore, it is not our Earth. Again, in every Purana, the calf changes name. In one it is Manu Swayambhuva, in another Indra, in a third the Himavat (Himalayas) itself, while Meru was the milker. This is a deeper allegory than one thinks.

finds the same idea in many a text and under various forms, this very Christian Orientalist is finally compelled to exclaim that "for this idea to have entered the mind of a hierogrammatist, there must have been in their religion a more or less defined doctrine, indicating as a possible fact that might come to pass, a divine and immaculate incarnation under a human form." Precisely. But why throw the explanation on an impossible prophecy, when the whole secret is explained by the later religion copying the earlier?

That doctrine was universal, and it was not the mind of any one hierogrammatist that evolved it; for the Indian avatars are a proof to the contrary. After which, having come "to realize clearer"* what "the Divine Father and Son" were with the Egyptians, de Rouge still fails to account for, and perceive what were the functions attributed to the feminine principle in that primordial generation. He does not find it in the goddess Neith, of Sais. Yet he quotes the sentence of the Commander to Cambyses when introducing that king into the Saitic temple: "I made known to his Majesty the dignity of Sais, which is the abode of Neith, the great (female) producer, genitrix of the Sun, who is the first-born, and who is not begotten, but only brought forth," and hence is the fruit of an immaculate mother.

How much more grandiose, philosophical and poetical is the real distinction -- for whoever is able to understand and appreciate it -- made between the immaculate virgin of the ancient Pagans and the modern Papal conception. With the former, the ever-youthful mother nature, the antitype of her prototypes, the sun and moon, generates and brings forth her "mind-born" son, the Universe. The Sun and Moon, as male-female deities, fructify the earth, the microcosmical mother, and the latter conceives and brings forth, in her turn. With the Christians, "the first-born" (primogenitus) is indeed generated, i.e., begotten, "genitum, non factum," and positively conceived and brought forth -- "Virgo pariet," explains the Latin Church. Thus, she drags down the noble spiritual ideal of the Virgin Mary to the earth, and, making her "of the earth earthy," degrades that ideal to the lowest of the anthropomorphic goddesses of the rabble.

Truly, Neith, Isis, Diana, etc., etc., were each of them "a demiurgical goddess, at once visible and invisible, having her place in Heaven, and helping to the generation of species" -- the moon, in short. Her occult aspects and powers are numberless, and, in one of them, the moon becomes with

[[Footnote(s)]] -----

* His clear realization of it is, that the Egyptians prophesied Jehovah (!) and his incarnated Redeemer (the good serpent), etc., etc.; even to identifying Typhon with the wicked dragon of the garden of Eden, and this passes as serious and sober science.

[[Vol. 1, Page]] 400 THE SECRET DOCTRINE.

the Egyptians Hathor, another aspect of Isis,* and both of these goddesses are shown suckling Horus. Behold in the Egyptian Hall of the British Museum, Hathor worshipped by Pharaoh Thotmes, who stands between her and the Lord of Heavens. The monolith was taken from Karnac; and the same goddess has the following legend inscribed on her throne: "THE DIVINE MOTHER AND LADY, OR QUEEN OF HEAVEN"; also "the MORNING STAR," and the "LIGHT OF THE SEA" (Stella matutina and Lux maris). All the lunar goddesses had a dual aspect -- one divine, the other infernal. All were the virgin mothers of an immaculately born Son -- the SUN. Raoul Rochetti shows the moon-goddess of the Athenians -- Pallas, or Cybele, Minerva, or again Diana -- holding her child-son on the lap, invoked in her festivals as [[Monogenes Theou]], "the one Mother of God," sitting on a lion, and surrounded by twelve personages; in whom the Occultist recognises the twelve great gods, and the pious Christian Orientalist the apostles, or rather the Grecian pagan prophecy thereof.

They are both right, for the immaculate goddess of the Latin Church is a faithful copy of the older pagan goddesses; the number (twelve) of the apostles is that of the twelve tribes, and the latter are a personification of the twelve great gods, and of the twelve signs of the Zodiac. Every detail almost in the Christian dogma is borrowed from the heathens. Semele, the wife of Jupiter and mother of Bacchus, the Sun, is, according to Nonnus, also "carried," or made to ascend to heaven after her death, where she presides between Mars and Venus, under the name of the Queen of the World, or the universe, [[panbasileia]]; "at the names of which, as at the names of Hathor, Hecate, and other infernal goddesses," "tremble all the demons."**

"[[Semelen premousi daimones]]." This Greek inscription on a small temple, reproduced on a stone that was found by somebody, and copied by Montfaucon, as De Mirville tells us (113, *Archaeologie de la Vierge mere*) informs us of the stupendous fact, that the Magna Mater of the old world was an impudent plagiarism, perpetrated by the Demon, of the Immaculate Virgin Mother of his Church. Whether so, or vice versa, is of no importance. That which is interesting to note is the perfect identity between the ARCHAIC COPY and the MODERN ORIGINAL.

Did space permit we might show the inconceivable coolness and unconcern exhibited by certain followers of the Roman Catholic Church, when made to face the revelations of the Past. To Maury's remark that "the Virgin took possession of all the Sanctuaries of Ceres and

[[Footnote(s)]] -----

* Hathor is the infernal Isis, the goddess pre-eminently of the West or the nether world.

** This is De Mirville, who proudly confesses the similarity, and he ought to know.

[[Vol. 1, Page]] 401 ANTE-HISTORICAL CATHOLICISM.

Venus, and that the pagan rites, proclaimed and practised in honour of those goddesses, were in a good measure transferred to the mother of Christ," the advocate of Rome answers:--

"That such is the fact, and that it is just as it should be and quite natural. As the dogma, the liturgy, and the rites professed by the Roman Apostolical Church in 1862 are found engraved on monuments, inscribed on papyri, and cylinders hardly posterior to the Deluge, it does seem impossible to deny the existence of a FIRST ANTE-HISTORICAL (Roman) CATHOLICISM OF WHICH OUR OWN IS BUT THE FAITHFUL CONTINUATION. . . . But while the former was the culmination, the summum of the impudence of demons and Goetic necromancy . . . the latter is divine. If in our (Christian) Revelation (!'Apocalypse), Mary, clothed with the Sun and having the moon under her feet, has nothing more in common with the humble servant of Nazareth (sic.), it is because she has now become the greatest of theological and cosmological powers in our universe." -- (Archaeol. de la Vierge, pp. 116 and 119, and by the Marquis de Mirville).

Verily so, since Pindar's Hymns to Minerva (p. 19) . . . "who sits at the right hand of her Father Jupiter, and who is more powerful than all the other (angels or) gods," are likewise applied to the Virgin. It is St. Bernard, who, quoted by Cornelius a Lapide, is made to address the Virgin Mary in this wise:--

"The Sun-Christ lives in thee and thou livest in him." (Sermon on the Holy Virgin.) . . .

Again the Virgin is admitted to be the MOON by the same unsophisticated holy man. Being the Lucina of the Church, that is in childbirth, the verse of Virgil -- "Casta fove Lucina, tuus jam regnat Apollo" -- is applied to her. Like the moon, the Virgin is the Queen of Heaven," adds the innocent saint; (Apocal., ch. xii., Comm. by Cornelius a Lapide).

This settles the question. The more similarity, according to such writers as De Mirville, there exists between the pagan conceptions and the Christian dogmas, the more divine appears the Christian religion, and the more is it seen to be the only truly inspired one, especially in its Roman Catholic form. The unbelieving scientists and the academicians who think they see in the Latin Church quite the opposite of divine inspiration, and who will not believe in the satanic tricks of plagiarism by anticipation, are severely taken to task. But then "they believe in nothing and reject even the 'Nabathean Agriculture' as a romance and a pack of superstitious nonsense," complains the memorialist. "In their perverted opinion Qu-ta-my's 'idol of the moon' and the statue of the Madonna are one!" A noble Marquis wrote twenty years ago six huge volumes, or, as he calls them "Memoires to the French Academy," with the sole object of showing Roman Catholicism an inspired and revealed faith. As a proof thereof, he furnishes numberless facts, all tending to show that the entire ancient world, ever since

[[Vol. 1, Page]] 402 THE SECRET DOCTRINE.

the deluge, had been, with the help of the devil, systematically plagiarizing the rites, ceremonies, and dogmas of the future Holy Church to be born ages later. What would that faithful son of Rome have said had he heard his co-religionist -- M. Renouf, the distinguished Egyptologist of the British Museum -- declaring, in one of his learned lectures, that "neither Hebrews nor Greeks borrowed any of their ideas from Egypt?"*

But perhaps it is just this that M. Renouf intended to say namely -- that it is the Egyptians, the Greeks, and the Aryans, who borrowed theirs from the Latin Church? And if so, why, in the name of logic, do the Papists reject the additional information which the Occultists may give them on Moon-worship, since it all tends to show their (the Roman Catholic) worship as old as the world -- OF SABAEANISM AND ASTROLATRY?

The reason of early Christian and later Roman Catholic astrolatry, or the symbolical worship of Sun and Moon -- identical with that of the Gnostics, though less philosophical and pure than the "Sun worship" of the Zoroastrians -- is a natural consequence of its birth and origin. The adoption by the Latin Church of such symbols as the water, fire, sun, moon and stars, and a good many other things, is simply a continuation by the early Christians of the old worship of Pagan nations. Thus Odin got his wisdom, power, and knowledge, by sitting at the feet of Mimir, the thrice-wise Jotun, who passed his life by the fountain of primeval Wisdom, the crystalline waters of which increased his knowledge daily. Mimir "drew the highest knowledge from the fountain, because the world was born of water; hence primeval wisdom was to be found in that mysterious element" ("Asgard and the Gods," 86). The eye which Odin had to pledge to acquire that knowledge may be "the Sun, which enlightens and penetrates all things; his other eye being the moon, whose reflection gazes out of the deep, and which at last, when setting, sinks into the Ocean." (Ibid.) But it is something more, besides this. Loki, the fire-god, is said to have hidden in the water, as well as in the moon, the light-giver, whose reflection he found therein; and this belief that the fire finds refuge in the water was not limited to the old Scandinavians. It was shared by all nations and was finally taken up by the early Christians, who symbolized the Holy Ghost under the shape of Fire, "cloven tongues like as fire" -- the breath of the Father-SUN. This "Fire" descends also into the Water or the Sea: Mar, Mary. The dove was the symbol of the Soul with several nations, it was sacred to Venus, the goddess born from the

[[Footnote(s)]] -----

* Quoted in Mr. G. Massey's Lecture.

[[Vol. 1, Page]] 403 IDENTITY OF TYPOLOGY.

sea-foam, and it became later the symbol of the Christian Anima Mundi, or the Holy Spirit.

One of the most occult chapters in the "Book of the Dead" is ch. lxxx., entitled: "To make the transformation into the god giving light to the path of Darkness," wherein "Woman-light of the Shadow" serves Thot in his retreat in the moon. Thot-Hermes is said to hide therein, because he is the representative of the Secret Wisdom. He is the manifested logos of its light side, the concealed deity or "Dark Wisdom" when he is supposed to retire to the opposite hemisphere. Speaking of her power, the moon calls herself repeatedly: "The Light which shineth in Darkness," the "Woman-Light." Hence it became the accepted symbol of all the Virgin-Mother goddesses. As the wicked "evil" spirits warred against the moon in days of yore, so they are supposed to war now, without being able to prevail, however, against the actual Queen of Heaven, Mary, the moon. Hence also the moon was intimately connected in all the Pagan theogonies with the Dragon, her eternal enemy; the Virgin, or Madonna, standing on the mythical Satan under that form, crushed and made powerless, under her feet. This, because the head and tail of the Dragon, which represent in Eastern astronomy to this day the ascending and descending nodes of the moon, were also symbolized in ancient Greece by the two serpents. Hercules kills them on the day of his birth, and so does the babe in his virgin mother's arms. As Mr. Gerald Massey aptly observes in this connection: "All such symbols figured their own facts from the first, and did not pre-figure others of a totally different order. The Iconography (and dogmas, too) had survived in Rome from a period remotely pre-Christian. There was neither forgery nor interpolation of types; nothing but a continuity of imagery with a perversion of its meaning."

§ X.

TREE, SERPENT, AND CROCODILE WORSHIP.

"Object of horror or of adoration, men have for the serpent an implacable hatred, or prostrate themselves before its genius. Lie calls it, Prudence claims it, Envy carries it in its heart, and Eloquence on its caduceus. In hell it arms the whip of the Furies; in heaven Eternity makes of it its symbol."

DE CHATEAUBRIAND.

THE Ophites asserted that there were several kinds of genii, from god to man; that the relative superiority of these was ruled by the degree

[[Vol. 1, Page]] 404 THE SECRET DOCTRINE.

of light that was accorded to each; and they maintained that the serpent had to be constantly called upon and to be thanked for the signal service it had rendered humanity. For it taught Adam that if he ate of the fruit of the tree of knowledge of good and evil, he would raise his being immensely by the learning and wisdom he would thus acquire. Such was the exoteric reason given.

It is easy to see whence the primal idea of this dual, Janus-like character of the Serpent: the good and the bad. This symbol is one of the most ancient, because the reptile preceded the bird, and the bird the mammal. Thence the belief, or rather the superstition, of the savage tribes who think that the souls of their ancestors live under this form, and the general association of the Serpent with the tree. The legends about the various things it represents are numberless; but, as most of them are allegorical, they have now passed into the class of fables based on ignorance and dark superstition. For instance, when Philostratus narrates that the natives of India and Arabia fed on the heart and liver of serpents in order to learn the language of all the animals, the serpent being credited with that faculty, he certainly never meant his words to be accepted literally. (See De Vita Apollonii, lib. 1, c. xiv.) As will be found more than once as we proceed, the "Serpent" and "Dragon" were the names given to the "Wise Ones," the initiated adepts of olden times. It was their wisdom and their learning that were devoured or assimilated by their followers, whence the allegory. When the Scandinavian Sigurd is fabled to have roasted the heart of Fafnir, the Dragon, whom he had slain, becoming thereby the wisest of men, it meant the same thing. Sigurd had become learned in the runes and magical charms; he had received the "word" from an initiate of that name, or from a sorcerer, after which the latter died, as many do, after "passing the word." Epiphanius lets out a secret of the Gnostics while trying to expose their heresies. The Gnostic Ophites, he says, had a reason for honouring the Serpent: it was because he taught the primeval men the Mysteries (Adv. Haeres. 37). Verily so; but they did not have Adam and Eve in the garden in their minds when teaching this dogma, but simply that which is stated above. The Nagas of the Hindu and Tibetan adepts were human Nagas (Serpents), not reptiles. Moreover, the Serpent has ever been the type of consecutive or serial rejuvenation, of IMMORTALITY and TIME.

The numerous and extremely interesting readings, the interpretations and facts about Serpent worship, given in "The Natural Genesis," are very ingenious and scientifically correct. But they are far from covering the whole of the meanings implied. They divulge only the astronomical and physiological mysteries, with the addition of some cosmic phenomena. On the lowest plane of materiality the Serpent was, no doubt,

[[Vol. 1, Page]] 405 THE DEGRADATION OF THE SYMBOL.

"the great mystery in the mysteries," and was, very likely, "adopted as a type of feminine pubescence, on account of its sloughing and self-renewal." It was so, however, only with regard to mysteries concerning terrestrial animal life, for as symbol of "reclotting and rebirth in the (universal) mysteries" its "final phase" -- or shall we rather say its incipient and culminating phases -- they were not of

this plane. They were generated in the pure realm of ideal light, and having accomplished the round of the whole cycle of adaptations and symbolism, the "mysteries" returned from whence they had come -- into the essence of immaterial causality. They belonged to the highest gnosis. And surely this could have never obtained its name and fame solely on account of its penetration into physiological and especially feminine functions!

As a symbol, the Serpent had as many aspects and occult meanings as the Tree itself; the "Tree of Life," with which it was emblematically and almost indissolubly connected. Whether viewed as a metaphysical or a physical symbol, the Tree and Serpent, jointly, or separately, have never been so degraded by antiquity as they are now, in this our age of the breaking of idols, not for truth's sake, but to glorify the more gross matter. The revelations and interpretations in "The Rivers of Life" would have astounded the worshippers of the Tree and Serpent in the days of archaic Chaldean and Egyptian wisdom; and even the early Saivas would have recoiled in horror at the theories and suggestions of the author of the said work. "The notion of Payne Knight and Inman that the cross or Tau is simply a copy of the male organs in a triadic form is radically false," writes Mr. G. Massey, who proves what he says. But this is a statement that could be as justly applied to almost all the modern interpretations of ancient symbols. "The Natural Genesis," a monumental work of research and thought, the most complete on that subject that has ever been published, covering as it does a wider field, and explaining much more than all the symbologists who have hitherto written, does not yet go beyond the "psycho-theistic" stage of ancient thought. Nor were Payne Knight and Inman altogether wrong; except in entirely failing to see that their interpretations of the "Tree of Life," as the cross and phallus, fitted the symbol, and approximated it, only on the lowest and last stage of the evolutionary development of the idea of the GIVER OF LIFE. It was the last and the grossest physical transformation of nature, in animal, insect, bird, and even plant; for biune, creative magnetism, in the form of the attraction of the contraries, or sexual polarization, acts in the constitution of reptile and bird as it does in that of man. Moreover, the modern symbologists and Orientalists -- from first to last --

[[Footnote(s)]] -----

* The Natural Genesis, by Gerald Massey, Vol. 1, p. 340.

[[Vol. 1, Page]] 406 THE SECRET DOCTRINE.

being ignorant of the real mysteries revealed by occultism, can necessarily see but this last stage. If told that this mode of procreation, which the whole world of being has now in common on this earth, is but a passing phase, a physical means of furnishing the conditions to, and producing the phenomena of life which will alter with this, and disappear with the next Root-Race -- they would laugh at such a superstitious and unscientific idea. But the most learned Occultists assert this because they know it. The universe of living beings, of all those which procreate their species, is the living witness to the various modes of procreation in the evolution of animal and human species and races; and the naturalist ought to sense this truth intuitively, even though he is yet unable to demonstrate it. And how could he, indeed, with the present modes of thought! The landmarks of the archaic history of the past are few and scarce, and those that men of science come across are mistaken for finger-posts of our little era. Even so-called "universal" (?) history embraces but a tiny field in the almost boundless space of the unexplored regions of our latest, fifth Root-Race. Hence, every fresh sign-post, every new glyph of the hoary Past that is discovered, is added to the old stock of information, to be interpreted on the same lines of pre-existing conceptions, and without any reference to the special cycle of thought which that particular glyph may belong to. How can Truth ever come to light if this method is never changed!

Thus, in the beginning of their joint existence as a glyph of Immortal Being, the Tree and Serpent were divine imagery, truly. The tree was reversed, and its roots were generated in Heaven and grew out of the Rootless Root of all-being. Its trunk grew and developed, crossing the planes of Pleroma, it shot out crossways its luxuriant branches, first on the plane of hardly differentiated matter, and then downward till they touched the terrestrial plane. Thus, the Asvattha, tree of Life and Being, whose destruction alone leads to immortality, is said in the Bhagavatgita to grow with its roots above and its branches below (ch. xv.). The roots represent the Supreme Being, or First Cause, the LOGOS; but one has to go beyond those roots to unite oneself with Krishna, who, says Arjuna (XI.), is "greater than Brahman, and First Cause . . . the indestructible, that which is, that which is not, and what is beyond them." Its boughs are Hiranyagarbha (Brahma or Brahman in his highest manifestations, say Sridhara and Madhusudana), the highest Dhyani Chohans or Devas. The Vedas are its leaves. He only who goes beyond the roots shall never return, i.e., shall reincarnate no more during this "age" of Brahma.

It is only when its pure boughs had touched the terrestrial mud of the garden of Eden, of our Adamic race, that this Tree got soiled by the contact and lost its pristine purity; and that the Serpent of

[[Vol. 1, Page]] 407 THE SEVEN-HEADED DRAGONS.

Eternity -- the heaven-born LOGOS -- was finally degraded. In days of old -- of the divine Dynasties on Earth -- the now dreaded Reptile was regarded as the first beam of light that radiated from the abyss of divine Mystery. Various were the forms which it was made to assume, and numerous the natural symbols adapted to it, as it crossed aeons of Time: as from Infinite Time itself -- Kala -- it fell into the space and time evolved out of human speculation. These forms were Cosmic and astronomical, theistic and pantheistic, abstract and concrete. They became in turn the Polar Dragon and the Southern Cross, the Alpha Draconis of the Pyramid, and the Hindu-Buddhist Dragon, which ever threatens, yet never swallows the Sun during its eclipses. Till then, the Tree remained ever green, for it was sprinkled by the waters of life; the great Dragon, ever divine, so long as it was kept within the precincts of the sidereal fields. But the tree grew and its lower boughs touched at last the infernal regions -- our Earth. Then the great serpent Nidhogg -- he who devours the corpses of the evil-doers in the "Hall of Misery" (human life), so soon as they are plunged into "Hwergelmir," the roaring

cauldron (of human passions) -- gnawed the World-tree. The worms of materiality covered the once healthy and mighty roots, and are now ascending higher and higher along the trunk; while the Midgard-snake coiled at the bottom of the Seas, encircles the Earth, and, through its venomous breath, makes her powerless to defend herself.

They are all seven-headed, the dragons and serpents of antiquity -- "one head for each race, and every head with seven hairs on it," as the allegory has it. Aye, from Ananta, the Serpent of Eternity which carries Vishnu through the Manvantara, from the original primordial Sessa, whose seven heads become "one thousand heads" in the Puranic fancy, down to the seven-headed Akkadian Serpent. This typifies the Seven principles throughout nature and man; the highest or middle head being the seventh. It is not of the Mosaic, Jewish Sabbath that Philo speaks in his Creation of the World, when saying that the world was completed "according to the perfect nature of number 6." For, "when that reason (nous) which is holy in accordance with the number seven, has entered the soul (rather the living body), the number six is thus arrested, and all the mortal things which that number makes." And again: "Number 7 is the festival day of all the earth, the birthday of the world. I know not whether any one would be able to celebrate the number 7 in adequate terms." . . . (Par. pp. 30 and 419). The author of The Natural Genesis thinks that "the Septenary of Stars seen in the great bear (the Septarshis) and seven-headed Dragon furnished a visible origin for the symbolic seven of time above. The goddess of the seven stars," he adds --

[[Vol. 1, Page]] 408 THE SECRET DOCTRINE.

"Was the mother of time, as Kep; whence Kepti and Sebti for the two times and number seven. So this is the star of the Seven by name. Sevekt (Kronos), the Son of the goddess, has the name of the seven or seventh. So has Sefekh Abu who builds the house on high, as Wisdom (Sophia) built hers with seven pillars. . . The primary Kronotypes were seven, and thus the beginning of time in heaven is based on the number and the name of seven, on account of the starry demonstrators. The seven stars as they turned round annually kept pointing, as it were, with the forefinger of the right hand, and describing a circle in the upper and lower heaven.* The number seven naturally suggested a measure by seven, that led to what may be termed Seveining, and to the marking and mapping out of the circle in seven corresponding divisions which were assigned to the seven great constellations; and thus was formed the celestial heptanomis of Egypt in the heavens. . . . When the stellar heptanomis was broken up and divided into four quarters, it was multiplied by four, and the twenty-eight signs took the place of the primary seven constellations, the lunar zodiac of twenty-eight days being the registered result.** . . . In the Chinese arrangement the four sevens are given to four genii that preside over the four cardinal points. . . ." (In Chinese Buddhism and Esotericism the genii are represented by four Dragons -- the "Maharajahs" of the Stanzas.) "The seven Northern constellations make up the Black Warrior; the seven Eastern (Chinese autumn) constitute the White Tiger; the seven Southern are the Vermilion Bird; and the seven Western (called Vernal) are the Azure Dragon. Each of these four Spirits presides over its heptanomis during one lunar week. The genitive of the first heptanomis (Typhon of the Seven Stars) now took a lunar character; . . . in this phase we find the goddess Sefekh, whose name signifies number 7, is the feminine word, or logos in place of the mother of Time, who was the earlier Word, as goddess of the Seven Stars" ("Typology of Time," Vol. II. p. 313, Nat. Gen.).

The author shows that it was the goddess of the Great Bear and mother of Time who was in Egypt from the earliest times the "Living Word," and that "Sevekh-Kronos, whose type was the Crocodile-Dragon, the pre-planetary form of Saturn, was called her son and consort; he was her Word-Logos" (p. 321, Vol. I.).

The above is quite plain, but it was not the knowledge of astronomy only that led the ancients to the process of Seveining. The primal cause goes far deeper and will be explained in its place.

The above quotations are no digressions. They are brought forward as showing (a) the reason why a full Initiate was called a "Dragon," a "Snake" a "Naga"; and (b) that our septenary division was used by the priests of the earliest dynasties in Egypt, for the same reason and on the same basis as by us. This needs further elucidation, however. As already stated, that which Mr. G. Massey calls the four genii of the four cardinal points; and the Chinese, the Black Warrior, White Tiger, Ver-

[[Footnote(s)]] -----

* For the same reason the division of the principles in man into seven are thus reckoned, as they describe the same circle in the human higher and lower nature.

** Thus the septenary division is the oldest and preceded the four-fold division. It is the root of archaic classification.

[[Vol. 1, Page]] 409 DRAGON AND CROCODILE.

milion Bird, and Azure Dragon, is called in the Secret Books, -- the "Four Hidden Dragons of Wisdom" and the "Celestial Nagas." Now, as shown, the seven-headed or septenary DRAGON-LOGOS had been in course of time split up, so to speak, into four heptanomic parts or twenty-eight portions. Each lunar week has a distinct occult character in the lunar month; each day of the twenty-eight has its special characteristics; as each of the twelve constellations, whether separately or in combination with other signs, has an occult influence either for good or for evil. This represents the sum of knowledge that men can acquire on this earth; yet few are those who acquire it, and still fewer are the wise men who get to the root of knowledge symbolized by the great Root Dragon, the spiritual LOGOS of these visible signs. But those who do, receive the name of "Dragons," and they are the "Arhats of the Four Truths of the 28 Faculties," or attributes, and have always been so called.

The Alexandrian Neo-Platonists asserted that to become real Chaldees or Magi, one had to master the science or knowledge of the periods of the Seven Rectors of the world, in whom is all wisdom. In "Proclus in Timaeus," b. 1, Jamblichus is credited with another version, which does not however, alter, the meaning. He says that "the Assyrians have not only preserved the records of seven and twenty myriads of years, as Hipparchus says they have, but likewise of the whole apocatastases and periods of the Seven Rulers of the World." The legends of every nation and tribe, whether civilized or savage, point to the once universal belief in the great wisdom and cunning of the Serpents. They are "charmers." They hypnotise the bird with their eye, and man himself, very often, does not feel above their fascinating influence; therefore the symbol is a most fitting one.

The crocodile is the Egyptian dragon. It was the dual symbol of Heaven and Earth, of Sun and Moon, and was made sacred, in consequence of its amphibious nature, to Osiris and Isis. According to Eusebius, the Egyptians represented the sun in a ship as its pilot, this ship being carried along by a crocodile "to show the motion of the Sun in the moist (Space)", (Prepar. Evang., 1, 3, c. 3). The crocodile was moreover, the symbol of Egypt herself -- the lower, as being the more swampy of the two countries. The Alchemists claim another interpretation. They say that the symbol of the sun in the ship on the Ether of Space meant that the hermetic matter is the principle, or basis, of gold, or again the philosophical sun; the water, within which the crocodile is swimming, is that water or matter made liquid; the ship herself, finally, representing the vessel of nature, in which the sun, or the sulphuric, igneous principle, acts as a pilot: because it is the sun

[[Vol. 1, Page]] 410 THE SECRET DOCTRINE.

which conducts the work by his action upon the moist or mercury. The above is only for the Alchemists.

The Serpent became the type and symbol of evil, and of the Devil, only during the middle ages. The early Christians -- besides the Ophite Gnostics -- had their dual Logos: the Good and the Bad Serpent, the Agathodaemon and the Kakodaemon. This is demonstrated by the writings of Marcus, Valentinus, and many others, and especially in Pistis Sophia -- certainly a document of the earliest centuries of Christianity. On the marble sarcophagus of a tomb, discovered in 1852 near the Porta Pia, one sees the scene of the adoration of the Magi, "or else," remarks the late C. W. King in "The Gnostics," "the prototype of that scene, the 'Birth of the New Sun.'" The mosaic floor exhibited a curious design which might have represented either (a) Isis suckling the babe Harpocrates, or (b) the Madonna nursing the infant Jesus. In the smaller sarcophagi that surrounded the larger one, eleven leaden plates rolled like scrolls were found, three of which have been deciphered. The contents of these ought to be regarded as final proof of a much-vexed question, for they show that either the early Christians, up to the VIth Century, were bond fide pagans, or that dogmatic Christianity was borrowed wholesale, and passed in full into the Christian Church -- Sun, Tree, Serpent, Crocodile and all.

"On the first is seen Anubis . . . holding out a scroll; at his feet are two female busts; below all are two serpents entwined . . . a corpse swathed up like a mummy. In the second scroll . . . is Anubis, holding out a cross, the "Sign of Life." Under his feet lies the corpse encircled in the numerous folds of a huge serpent, the Agathodaemon, guardian of the deceased. . . . In the third scroll, Anubis bears on his arm . . . the outline of . . . a complete Latin cross . . . At the god's foot is a rhomboid, the Egyptian 'Egg of the World,' towards which crawls a serpent coiled into a circle . . . Under the busts is the letter [[omega]] repeated seven times in a line, reminding one of the 'names' . . . Very remarkable also is the line of characters, apparently Palmyrene, upon the legs of the first Anubis. As for the figure of the serpent, supposing these talismans to emanate not from the Isiac but the newer Ophite creed, it may well stand for that "True and perfect Serpent," who leads forth the souls of all that put their trust in him out of the Egypt of the body, and through the Red Sea of Death into the Land of Promise, saving them on their way from the Serpents of the Wilderness, that is, from the Rulers of the Stars." (King's "Gnostics," p. 366.)

And this "True and Perfect Serpent" is the seven-lettered God who is now credited with being Jehovah, and Jesus One with him. To this Seven-vowelled god the candidate for initiation is sent by Christos, in the Pistis Sophia, a work earlier than St. John's Revelation, and evidently of the same school. "The (Serpent of the) Seven Thunders uttered

[[Vol. 1, Page]] 411 THE MYSTERY OF THE SEVEN THUNDERS.

these seven vowels," but "Seal up those things which the seven thunders uttered, and write them not," says Revelation. "Do ye seek after these mysteries?" inquires Jesus in Pistis Sophia. "No mystery is more excellent than they (the seven vowels): for they shall bring your souls unto the Light of Lights" -- i.e., true Wisdom. "Nothing, therefore, is more excellent than the mysteries which ye seek after, saving only the mystery of the Seven Vowels and their FORTY AND NINE Powers, and the numbers thereof."

In India, it was the mystery of the Seven FIRES and their forty-nine fires or aspects, or "the members thereof," just the same.

These seven vowels are represented by the Swastika signs on the crowns of the seven heads of the Serpent of Eternity, in India, among esoteric Buddhists, in Egypt, in Chaldea, etc. etc., and among the Initiates of every other country. It is on the Seven zones of post mortem ascent, in the Hermetic writings, that the "mortal" leaves, on each, one of his "Souls" (or Principles); until arrived on the plane above all zones he remains as the great Formless Serpent of absolute wisdom -- or the Deity itself. The seven-headed serpent has more than one signification in the Arcane teachings. It is the seven-headed Draco, each of whose heads is a star of the Lesser Bear; but it was also, and pre-eminently, the Serpent of Darkness (i.e., inconceivable and incomprehensible) whose seven heads were the seven Logoi, the reflections of the one and first manifested Light -- the universal LOGOS.

§ XI.

DEMON EST DEUS INVERSUS.

THIS symbolical sentence, in its many-sided forms, is certainly most dangerous and iconoclastic in the face of all the dualistic later religions -- or rather theologies -- and especially so in the light of Christianity. Yet it is neither just nor correct to say that it is Christianity which has conceived and brought forth Satan. As an "adversary," the opposing Power required by the equilibrium and harmony of things in Nature -- like Shadow to throw off still brighter the Light, like Night to bring into greater relief the Day, and like cold to make one appreciate the more the comfort of heat -- SATAN has ever existed. Homogeneity is one and indivisible. But if the homogeneous One and Absolute is no mere figure of speech, and if heterogeneity in its dualistic aspect, is its offspring -- its bifurcous shadow or reflection -- then even that divine Homogeneity must contain in itself the essence of

[[Vol. 1, Page]] 412 THE SECRET DOCTRINE.

both good and evil. If "God" is Absolute, Infinite, and the Universal Root of all and everything in Nature and its universe, whence comes Evil or D'Evil if not from the same "Golden Womb" of the absolute? Thus we are forced either to accept the emanation of good and evil, of Agathodaemon and Kakodaemon as offshoots from the same trunk of the Tree of Being, or to resign ourselves to the absurdity of believing in two eternal Absolutes!

Having to trace the origin of the idea to the very beginnings of human mind, it is but just, meanwhile, to give his due even to the proverbial devil. Antiquity knew of no isolated, thoroughly and absolutely bad "god of evil." Pagan thought represented good and evil as twin brothers, born from the same mother -- Nature; so soon as that thought ceased to be Archaic, Wisdom too became Philosophy. In the beginning the symbols of good and evil were mere abstractions, Light and Darkness; then their types became chosen among the most natural and ever-recurrent periodical Cosmic phenomena -- the Day and the Night, or the Sun and Moon. Then the Hosts of the Solar and Lunar deities were made to represent them, and the Dragon of Darkness was contrasted with the Dragon of Light (See Stanzas V., VII. of Book I.) The Host of Satan is a Son of God, no less than the Host of the B'ni Alhim, these children of God coming to "present themselves before the Lord," their father (see Job ii.). "The Sons of God" become the "Fallen Angels" only after perceiving that the daughters of men were fair, (Genesis vi.) In the Indian philosophy, the Suras are among the earliest and the brightest gods, and become Asuras only when dethroned by Brahminical fancy. Satan never assumed an anthropomorphic, individualized shape, until the creation by man, of a "one living personal god," had been accomplished; and then merely as a matter of prime necessity. A screen was needed; a scape-goat to explain the cruelty, blunders, and but too-evident injustice, perpetrated by him for whom absolute perfection, mercy, and goodness were claimed. This was the first Karmic effect of abandoning a philosophical and logical Pantheism, to build, as a prop for lazy man, "a merciful father in Heaven," whose daily and hourly actions as Natura naturans, the "comely mother but stone cold," belie the assumption. This led to the primal twins, Osiris-Typhon, Ormazd-Ahriman, and finally Cain-Abel and the tutti-quantum of contraries.

Having commenced by being synonymous with Nature, "God," the Creator, ended by being made its author. Pascal settles the difficulty very cunningly: "Nature has perfections, in order to show that she is the image of God: and defects, in order to show that she is only his image," he says.

The further back one recedes into the darkness of the prehistoric

[[Vol. 1, Page]] 413 DEATH IS LIFE.

ages, the more philosophical does the prototypic figure of the later Satan appear. The first "Adversary" in individual human form that one meets with in old Puranic literature is one of her greatest Rishis and Yogis -- Narada, surnamed the "Strife-maker."

And he is a Brahmaputra, a son of Brahma, the male. But of him later on. Who the great "Deceiver" really is, one can ascertain by searching for him with open eyes and an unprejudiced mind, in every old cosmogony and Scripture.

It is the anthropomorphised Demiurge, the Creator of Heaven and Earth, when separated from the collective Hosts of his fellow-Creators, whom, so to speak, he represents and synthesizes. It is now the God of theologies. "The thought is father to the wish." Once upon a time, a philosophical symbol left to perverse human fancy; afterwards fashioned into a fiendish, deceiving, cunning, and jealous God.

Dragons and other fallen angels being described in other parts of this work, a few words upon the much-slandered Satan will be sufficient. That which the student will do well to remember is that, with every people except the Christian nations, the Devil is to this day no worse an entity than the opposite aspect in the dual nature of the so-called Creator. This is only natural. One cannot claim God as the synthesis of the whole Universe, as Omnipresent and Omniscient and Infinite, and then divorce him from evil. As there is far more evil than good in the world, it follows on logical grounds that either God must include evil, or stand as the direct cause of it, or else surrender his claims to absoluteness. The ancients understood this so well that their philosophers -- now followed by the Kabalists -- defined evil as the lining of God or Good: *Demon est Deus inversus*, being a very old adage. Indeed, evil is but an antagonizing blind force in nature; it is reaction, opposition, and contrast, -- evil for some, good for others. There is no malum in se: only the shadow of light, without which light could have no existence, even in our perceptions. If evil disappeared, good would disappear along with it from Earth. The "Old Dragon" was pure spirit before he became matter, passive before he became active. In the Syro-Chaldean magic both Ophis and Ophiomorphos are joined in the Zodiac, at the sign of the Androgyne Virgo-Scorpio. Before its fall on earth the "Serpent" was Ophis-Christos, and after its fall it became Ophiomorphos-CHRESTOS. Everywhere the speculations

of the Kabalists treat of Evil as a FORCE, which is antagonistic, but at the same time essential, to Good, as giving it vitality and existence, which it could never have otherwise. There would be no life possible (in the Mayavic sense) without Death, nor regeneration and reconstruction without destruction. Plants would perish in eternal sunlight, and so would man, who would become an automaton without the exercise of his free will and aspirations

[[Vol. 1, Page]] 414 THE SECRET DOCTRINE.

after that sunlight, which would lose its being and value for him had he nothing but light. Good is infinite and eternal only in the eternally concealed from us, and this is why we imagine it eternal. On the manifested planes, one equilibrates the other. Few are those theists and believers in a personal God, who do not make of Satan the shadow of God; or who, confounding both, do not believe they have a right to pray to that idol asking its help and protection for the exercise and impunity of their evil and cruel deeds. "Lead us not into Temptation" is addressed daily to "our Father, which art in Heaven," and not to the Devil, by millions of human Christian hearts. They do so, repeating the very words put in the mouth of their Saviour, and do not give one thought to the fact that their meaning is contradicted point blank by James "the brother of the Lord." "Let no man say when he is tempted, I am tempted of God: for God cannot be tempted with evil, neither tempteth he any man." -- (The Gen. Ep. of James, i, 13). Why, then, say that it is the Devil who tempts us, when the Church teaches us on the authority of Christ that it is God who does so? Open any pious volume in which the word "temptation" is defined in its theological sense, and forthwith you find two definitions: (1) "Those afflictions and troubles whereby God tries his people;" (2) Those means and enticements which the Devil makes use of to ensnare and allure mankind. (St. James i., 2, 12, and Mat. vi., 13.) If accepted literally, the two teachings of Christ and James contradict each other, and what dogma can reconcile the two if the occult meaning is rejected?

Between the alternative allurements, wise will be that philosopher who will be able to decide where God disappears to make room for the Devil! Therefore when we read that "the Devil is a liar and the father of it," i.e., INCARNATE LIE, and are told in the same breath that Satan -- the Devil -- was a son of God and the most beautiful of his archangels, rather than believe that Father and Son are a gigantic, personified and eternal LIE, we prefer to turn to Pantheism and to Pagan philosophy for information.

Once that the key to Genesis is in our hands, it is the scientific and symbolical Kabala which unveils the secret. The great Serpent of the Garden of Eden and the "Lord God" are identical, and so are Jehovah and Cain ONE -- that Cain who is referred to in theology as the "murderer" and the LIAR to God! Jehovah tempts the King of Israel to number the people, and Satan tempts him to do the same in another place. Jehovah turns into the fiery serpents to bite those he is displeased with; and Jehovah informs the brazen serpent that heals them.

These short, and seemingly contradictory, statements in the Old Testament (contradictory because the two Powers are separated instead of being regarded as the two faces of one and the same thing) are the

[[Vol. 1, Page]] 415 THEOLOGICAL ETYMOLOGIES.

echoes -- distorted out of recognition by exotericism and theology -- of the universal and philosophical dogmas in nature, so well understood by the primitive Sages. We find the same groundwork in several personifications in the Puranas, only far more ample and philosophically suggestive.

Thus Pulastya, a "Son of God" -- one of the first progeny -- is made the progenitor of Demons, the Rakshasas, the tempters and the Devourers of men. Pisacha (female Demon) is a daughter of Daksha, a "Son of God" too, and a God, and the mother of all the Pisachas (Padma Purana). The Demons, so called in the Puranas, are very extraordinary devils when judged from the standpoint of European and orthodox views about these creatures, since all of them -- Danavas, Daityas, Pisachas, and the Rakshasas -- are represented as extremely pious, following the precepts of the Vedas, some of them even being great Yogis. But they oppose the clergy and Ritualism, sacrifices and forms -- just what the full-blown Yogins do to this day in India -- and are no less respected for it, though they are allowed to follow neither caste nor ritual; hence all those Puranic giants and Titans are called Devils. The Missionaries, ever on the watch to show, if they can, the Hindu traditions no better than a reflection of the Jewish Bible, have evolved a whole romance on the alleged identity of Pulastya with Cain, and of the Rakshasas with the Cainites, "the accursed," the cause of the Noachian Deluge. (See the work of Abbe Gorresio, who "etymologises" Pulastya's name as meaning the "rejected," hence Cain, if you please). Pulastya dwells in Kedara, he says, which means a "dug-up place," a mine, and Cain is shown in tradition and the Bible as the first worker in metals and a miner thereof!

While it is very probable that the Gibborim (the giants) of the Bible are the Rakshasas of the Hindus, it is still more certain that both are Atlanteans, and belong to the submerged races. However it may be, no Satan could be more persistent in slandering his enemy, or more spiteful in his hatred, than the Christian theologians are in cursing him as the father of every evil. Compare their vituperations and opinions given about the Devil with the philosophical views of the Puranic sages and their Christ-like mansuetude. When Parasara, whose father was devoured by a Rakshasa, was preparing himself to destroy (magically) the whole race, his grandsire, Vasishtha, says a few extremely suggestive words to him. He shows the irate Sage, on his own confession, that there is Evil and Karma, but no "evil spirits." "Let thy wrath be appeased," he says. "The Rakshasas are not culpable; thy father's death was the work of Karma. Anger is the passion of fools; it becometh not a wise man. By whom, it may be asked, is any one killed? Every man reaps the consequences of his own acts. Anger, my son, is the destruction of

[[Vol. 1, Page]] 416 THE SECRET DOCTRINE.

all that man obtains . . . and prevents the attainment of emancipation. The sages shun wrath. Be not thou, my child, subject to its influence. Let not those unoffending spirits of darkness be consumed; let thy sacrifice cease. Mercy is the might of the righteous" (Vishnu Purana, Book I., ch. I.). Thus, every such "sacrifice" or prayer to God for help is no better than an act of black magic. That which Parasara prayed for, was the destruction of the Spirits of Darkness, for his personal revenge. He is called a Pagan, and the Christians have doomed him as such, to eternal hell. Yet, in what respect is the prayer of sovereigns and generals, who pray before every battle for the destruction of their enemy, any better? Such a prayer is in every case black magic of the worst kind, concealed like a demon "Mr. Hyde" under a sanctimonious "Dr. Jekyll."

In human nature, evil denotes only the polarity of matter and Spirit, a struggle for life between the two manifested Principles in Space and Time, which principles are one per se, inasmuch they are rooted in the Absolute. In Kosmos, the equilibrium must be preserved. The operations of the two contraries produce harmony, like the centripetal and centrifugal forces, which are necessary to each other -- mutually inter-dependent -- "in order that both should live." If one is arrested, the action of the other will become immediately self-destructive.

Since the personification called Satan has been amply analyzed from its triple aspect -- in the Old Testament, Christian theology and the ancient Gentile attitude of thought -- those who would learn more of it are referred to Vol. II. of *ISIS UNVEILED*, chap. x. See also several sections in Book II., Part II. of this work. The present subject is touched upon and fresh explanations attempted for a very good reason. Before we can approach the evolution of physical and divine man, we have first to master the idea of cyclic evolution, to acquaint ourselves with the philosophies and beliefs of the four races which preceded our present race, to learn what were the ideas of those Titans and giants -- giants, verily, mentally as well as physically. The whole of antiquity was imbued with that philosophy which teaches the involution of spirit into matter, the progressive, downward cyclic descent, or active, self-conscious evolution. The Alexandrian Gnostics have sufficiently divulged the secret of initiations, and their records are full of "the sliding down of AEons" in their double qualification of Angelic Beings and Periods: the one the natural evolution of the other. On the other hand, Oriental traditions on both sides of the "black water" -- the oceans that separate the two Easts -- are as full of allegories about the downfall of Pleroma, of that of the gods and Devas. One and all, they allegorized and explained the FALL as the

[[Vol. 1, Page]] 417 THE ANGELS SLANDERED.

desire to learn and acquire knowledge -- to KNOW. This is the natural sequence of mental evolution, the spiritual becoming transmuted into the material or physical. The same law of descent into materiality and re-ascent into spirituality asserted itself during the Christian era, the reaction having stopped only just now, in our own special sub-race.

That which, perhaps ten millenniums ago, was allegorized in Pymander in a triune character of interpretation, meant as a record of an astronomical, anthropological, and even alchemical fact, namely, the allegory of the seven rectorors breaking through the seven circles of fire, was dwarfed into one material and anthropomorphic interpretation -- the rebellion and Fall of the Angels. The multivocal, profoundly philosophical narrative, under its poetical form of the "Marriage of Heaven with Earth," the love of nature for Divine form and the "Heavenly man," enraptured with his own beauty mirrored in nature -- i.e., Spirit attracted into matter -- has now become, under theological handling: "the seven Rectorors disobeying Jehovah, self admiration generating Satanic Pride, followed by their FALL, Jehovah permitting no worship to be lost save upon himself." In short, the beautiful Planet-Angels, the glorious cyclic aeons of the ancients, became henceforward synthesized in their most orthodox shape in Samael, the chief of the Demons in the Talmud, "That great serpent with twelve wings that draws down after himself, in his Fall, the solar system, or the Titans." But Schemal, the alter ego and the Sabeian type of Samael, meant, in his philosophical and esoteric aspect, the "year" in its astrological evil aspect, its twelve months or wings of unavoidable evils, in nature; and in esoteric theogony (see Chwolson in *NABATHEAN AGRICULTURE*, Vol. II., p. 217), both Schemal and Samael represented a particular divinity. With the Kabalists they are "the Spirit of the Earth," the personal god that governs it, identical de facto with Jehovah. For the Talmudists admit themselves that SAMAEEL is a god-name of one of the seven Elohim. The Kabalists, moreover, show the two, Schemal and Samael, as a symbolical form of Saturn, CHRONOS, the twelve wings standing for the 12 months, and the symbol in its collectivity representing a racial cycle. Jehovah and Saturn are also glyphically identical.

This leads in its turn to a very curious deduction from a Roman Catholic dogma. Many renowned writers belonging to the Latin Church admit that a difference exists, and should be made, between the Uranian Titans, the antediluvian giants (also Titans), and those post-diluvian giants in whom they (the Roman Catholics) will see the descendants of the mythical Ham. In clearer words, there is a difference to be made between the Cosmic, primordial opposing Forces -- guided by cyclic law -- the Atlantean human giants, and the post-diluvian great adepts, whether

[[Vol. 1, Page]] 418 THE SECRET DOCTRINE.

of the right or the left hand. At the same time they show that Michael, "the generalissimos of the fighting Celestial Host, the bodyguard of Jehovah," as it would seem (see de Mirville) is also a Titan, only with the adjective of "divine" before the cognomen. Thus those "Uranides" who are called everywhere "divine Titans," and who, having rebelled against Kronos (Saturn), are therefore also shown to be the enemies of Samael (an Elohim, also and synonymous with Jehovah in his collectivity), are identical with Michael and his host. In short, the roles are reversed, all the combatants are confused, and no student is able to distinguish clearly which is which. Esoteric explanation may, however, bring some order into this confusion, in which Jehovah becomes Saturn, and Michael and his army, Satan and the rebellious angels, owing to the indiscreet endeavours of the too faithful zealots to see in every

pagan god a devil. The true meaning is far more philosophical, and the legend of the first "Fall" (of the angels) assumes a scientific colouring when correctly understood.

Kronos stands for endless (hence immovable) Duration, without beginning, without an end, beyond divided Time and beyond Space. Those "Angels," genii, or Devas, who were born to act in space and time, i.e., to break through the seven circles of the superspiritual planes into the phenomenal, or circumscribed, super-terrestrial regions, are said allegorically to have rebelled against Kronos and fought the (then) one living and highest God. In his turn, when Kronos is represented as mutilating Uranus, his father, the meaning of this mutilation is very simple: Absolute Time is made to become the finite and the conditioned; a portion is robbed from the whole, thus showing that Saturn, the father of the gods, has been transformed from Eternal Duration into a limited Period. Chronos cuts down with his scythe even the longest and (to us) seemingly endless cycles, yet, for all that, limited in Eternity, and puts down with the same scythe the mightiest rebels. Aye, not one will escape the scythe of Time! Praise the god or gods, or flout, one or both, and that scythe will not be made to tremble one millionth of a second in its ascending or descending course.

The Titans of Hesiod's Theogony were copied in Greece from the Suras and Asuras of India. These Hesiodic Titans, the Uranides, numbered once upon a time as only six, have been recently discovered to be seven -- the seventh being called Phoreg -- in an old fragment relating to the Greek myth. Thus their identity with the Seven rectoris is fully demonstrated. The origin of the "War in Heaven" and the FALL has, in our mind, to be traced unavoidably to India, and perhaps far earlier than the Puranic accounts thereof. For TARAMAYA was in a later age, and there are three accounts, each of a distinct war, to be traced in almost every Cosmogony.

[[Vol. 1, Page]] 419 THE WAR OF THE GODS.

The first war happened in the night of time, between the gods the (A)-suras, and lasted for the period of one "divine year."** On this occasion the deities were defeated by the Daityas, under the leadership of Hrada. After that, owing to a device of Vishnu, to whom the conquered gods applied for help, the latter defeated the Asuras. In the Vishnu Purana no interval is found between the two wars. In the Esoteric Doctrine, one war takes place before the building of the Solar system; another, on earth, at the "creation" of man; and a third "war" is mentioned as taking place at the close of the 4th Race, between its adepts and those of the 5th Race, i.e., between the Initiates of the "Sacred Island" and the Sorcerers of Atlantis. We shall notice the first contest, as recounted by Parasara, while trying to separate the two accounts, purposely blended together. It is there stated that as the Daityas and Asuras were engaged in the duties of their respective orders (Varna) and followed the paths prescribed by holy writ, practising also religious penance (a queer employment for demons if they are identical with our devils, as it is claimed) -- it was impossible for the gods to destroy them. The prayers addressed by the gods to Vishnu are curious as showing the ideas involved in an anthropomorphic deity. Having, after their defeat, "fled to the Northern shore of the Milky Ocean (Atlantic Ocean),"** the discomfited gods address many supplications "to the first

[[Footnote(s)]] -----

* One "Day of Brahma" lasting 4,320,000,000 years -- multiply this by 365! The Asuras here (no-gods, but demons) are still Suras, gods higher in hierarchy than such secondary gods as are not even mentioned in the Vedas. The duration of the war shows its significance, and that they are only the personified Cosmic powers. It is evidently for sectarian purposes and out of odium theologium that the illusive form assumed by Vishnu Mayamoha, was attributed in later rearrangements of old texts to Buddha and the Daityas, in the Vishnu Purana, unless it was a fancy of Wilson himself. He also fancied he found an allusion to Buddhism in Bhagavatgita, whereas, as proved by K. T. Telang, he had only confused the Buddhists and the older Charvaka materialists. The version exists nowhere in other Puranas if the inference does, as Professor Wilson claims, in the "Vishnu Purana"; the translation of which, especially of Book iii., ch. xviii., where the reverend Orientalist arbitrarily introduces Buddha, and shows him teaching Buddhism to Daityas -- led to another "great war" between himself and Col. Vans Kennedy. The latter charged him publicly with wilfully distorting Puranic texts. "I affirm," wrote the Colonel at Bombay, in 1840, "that the Puranas do not contain what Professor Wilson has stated is contained in them . . . until such passages are produced I may be allowed to repeat my former conclusions, that Professor Wilson's opinion, that the Puranas as now extant are compilations made between the eighth and seventeenth centuries (A.D.!) rests solely on gratuitous assumptions and unfounded assertions, and that his reasoning in support of it is either futile, fallacious, contradictory, or improbable." (See Vishnu Purana, trans. by Wilson, edit. by Fitzedward Hall, Vol. V., Appendix.)

** This statement belongs to the third War, since the terrestrial continents, seas and rivers are mentioned in connection with it.

[[Vol. 1, Page]] 420 THE SECRET DOCTRINE.

of beings, the divine Vishnu," and among others this one: "Glory to thee, who art one with the Saints, whose perfect nature is ever blessed. . . . Glory to thee, who art one with the Serpent-race, double-tongued, impetuous, cruel, insatiate of enjoyment and abounding with wealth. . . . Glory to thee, . . . O Lord, who hast neither colour nor extension, nor size (ghana), nor any predicable qualities, and whose essence (rupa), purest of the pure is appreciable only by holy Paramarshi (greatest of sages or Rishis). We bow to thee, in the nature of Brahma uncreated, undecaying (avyaya), who art in our bodies and in all other bodies, and in all living creatures, and beside whom nothing exists. We glorify that Vasudeva, the lord of all, who is without soil, the seed of all things, exempt from dissolution, unborn, eternal; being in essence Paramapadatmavat (beyond the condition of spirit) and in essence and substance (rupa), the whole of this (Universe)." (Book III., ch. xvii., Vish. Purana.)

The above is quoted as an illustration of the vast field offered by the Puranas to adverse and erroneous criticism, by every European bigot who forms an estimate of an alien religion on mere external evidence. Any man accustomed to subject what he reads to thoughtful analysis, will see at a glance the incongruity of addressing the accepted "Unknowable," the formless, and attributeless

ABSOLUTE, such as the Vedantins define BRAHMA, as being "one with the serpent-race, double-tongued, cruel and insatiable," thus associating the abstract with the concrete, and bestowing adjectives on that which is freed from any limitations, and conditionless. Even Dr. Wilson, who, after living surrounded by Brahmins and Pundits in India for so many years, ought to have known better -- even that scholar lost no opportunity to criticize the Hindu Scriptures on this account. Thus, he exclaims:--*

"The Puranas constantly teach incompatible doctrines! According to this passage, the Supreme being is not the inert cause of creation only, but exercises the functions of an active providence. The Commentator quotes a text of the Veda in support of this view: 'Universal Soul entering into men, governs their conduct.' Incongruities, however, are as frequent in the Vedas as in the Puranas. . . ."

Less frequent, in sober truth, than in the Mosaic Bible. But prejudice is great in the hearts of our Orientalists -- especially in those of "reverend" scholars. UNIVERSAL SOUL is not the inert Cause of Creation or (Para) Brahma, but simply that which we call the sixth principle of intellectual Kosmos, on the manifested plane of being. It is Mahat, or Mahabuddhi, the great Soul, the vehicle of Spirit, the first primeval reflection of the formless CAUSE, and that which is even beyond SPIRIT.

[[Footnote(s)]] -----

* In Book I., chap. xvii., narrating the story of Prahlada -- the Son of Hiranyakasipu, the Puranic Satan, the great enemy of Vishnu, and the King of the three worlds -- into whose heart Vishnu entered.

[[Vol. 1, Page]] 421 THE DECEPTION OF THE GODS.

So much for Professor Wilson's uncalled-for fling. As for the apparently incongruous appeal to Vishnu by the defeated gods, the explanation is there, in the text of Vishnu Purana, if Orientalists would only notice it.* There is Vishnu, as Brahma, and Vishnu in his two aspects, philosophy teaches. There is but one Brahma, "essentially prakriti and Spirit," &c.

Therefore, it is not Vishnu -- "the inert cause of creation" -- which exercised the functions of an active Providence, but the Universal Soul, that which E. Levi calls Astral Light in its material aspect. And this "Soul" is, in its dual aspect of spirit and matter, the true anthropomorphic God of the Theists; as this God is a personification of that Universal Creative Agent, pure and impure both, owing to its manifested condition and differentiation in this Mayavic World -- God and Devil -- truly. But Dr. Wilson failed to see how Vishnu, in this character, closely resembles the Lord God of Israel, "especially in his policy of deception, temptation, and cunning."

In the Vishnu Purana this is made as plain as can be. For it is said there, that "at the conclusion of their prayers (stotra) the gods beheld the Sovereign Deity Hari (Vishnu) armed with the conch, the discus, and the mace, riding on Garuda. ." Now "Garuda" is the manvantaric cycle, as will be shown in its place. Vishnu, therefore, is the deity in space and time; the peculiar God of the Vaishnavas (a tribal or racial God, as they are called in esoteric philosophy): i.e., one of the many Dhyanis or Gods, or Elohim, one of whom was generally chosen for some special reasons by a nation or a tribe, and thus became gradually a "God above all Gods" (2 Chronicles ii. 5,) the "highest God" as Jehovah, Osiris, Bel, or any other of the Seven Regents.

"The tree is known by its fruit," -- the nature of a God by his actions. The latter, we have either to judge by the dead-letter narratives, or to accept allegorically. If we compare the two -- Vishnu, as the defender and champion of the defeated gods; and Jehovah, the defender and champion of the "chosen" people, so called by antiphrasis, no doubt, as it is the Jews who had chosen that "jealous" God -- we shall find that both use deceit and cunning. They do so on the principle of "the end justifying the means," in order to have the best of their

[[Footnote(s)]] -----

* This ignorance is truly and beautifully expressed in the praise of the Yogins to Brahma, "the upholder of the earth" (in Book I., chap. iv. of V. P.), when they say, "Those who have not practised devotion conceive erroneously of the nature of the world. The ignorant who do not perceive that this Universe is of the nature of wisdom, and judge of it as an object of perception only, are lost in the ocean of spiritual ignorance. But they who know true wisdom, and whose minds are pure, behold this whole world as one with divine knowledge, as one with thee, O God! Be favourable, O universal Spirit!"

[[Vol. 1, Page]] 422 THE SECRET DOCTRINE.

respective opponents and foes -- the demons. Thus while (according to the Kabalists) Jehovah assumes the shape of the tempting Serpent in the Garden of Eden; sends Satan with a special mission to tempt Job; and harasses and wearies Pharaoh with Sarai, Abraham's wife, and "hardens" his heart against Moses, lest there should be no opportunity for plaguing his victims "with great plagues" (Genesis xii., Exodus) -- Vishnu is made in his Purana to resort to a trick no less unworthy of any respectable god.

"Have compassion upon us, O Lord, and protect us, who have come to thee for succour from the Daityas (demons)!" pray the defeated Gods. "They have seized upon the three worlds, and appropriated the offerings which are our portion, taking care not to transgress the Precepts of the Veda. Although we, as well as they, are parts of thee.* . . . engaged as they are in the paths prescribed by the holy writ . . . it is impossible for us to destroy them. Do thou, whose wisdom is immeasurable (Ameyatman) instruct us in some device by which we may be able to exterminate the enemies of the gods!"

"When the mighty Vishnu heard their request, he emitted from his body an illusory form (Mayamoha, "the deluder by illusion") which he gave to the Gods and thus spake: "This Mayamoha shall wholly beguile the Daityas, so that being led astray from the path of the Vedas, they may be put to death. . . . Go then and fear not. Let this delusive vision precede you. It shall this day be of great service unto you, O Gods!"

"After this, the great Delusion, Mayamoha, descending to earth, beheld the Daityas engaged in ascetic penances, and approaching them, in the semblance of a Digambara (naked mendicant) with his head shaven . . . he thus addressed them, in gentle accents: "Ho, lords of the Daitya race, wherefore is it that you practise these acts of penances?" etc., etc. (Book II., xviii.)

Finally the Daityas were seduced by the wily talk of Mahamoha, as Eve was seduced by the advice of the Serpent. They became apostates to the Vedas. As Dr. Muir translates the passage:--

"The great Deceiver, practising illusion, next beguiled other Daityas, by means of many other sorts of heresy. In a very short time, these Asuras (-Daityas) deluded by the Deceiver (who was Vishnu) abandoned the entire system founded on the ordinances of the triple Veda. Some reviled the Vedas, others the Gods, others the ceremonial of sacrifice, and others the Brahmans. This, they exclaimed, is a doctrine which will not bear discussion. The slaughter of animals in sacrifice is not conducive to religious merit. To say that oblations of butter consumed in the fire produce any future reward, is the assertion of a child. . . . If it be a fact that a beast slain in sacrifice is exalted to heaven, why does not the worshipper slaughter his own father? . . . Infalible utterances do not, great Asuras, fall from the skies; it is only assertions founded on reasoning that are accepted by me and by other intelligent persons like yourselves! Thus by numerous methods the Daityas were unsettled by the great Deceiver (Reason). . . . When

[[Footnote(s)]] -----

* "There was a day when the Sons of God came before the Lord, and Satan came with his brothers, also before the Lord" (Job ii., Abyss., Ethiopic text).

[[Vol. 1, Page]] 423 THE DECEPTION, AN ALLEGORY.

they had entered on the path of error, the gods mustered all their energies and approached to battle. Then followed a combat between the gods and the Asuras; and the latter, who had abandoned the right road, were smitten by the former. In previous times they had been defended by the armour of righteousness which they bore, but when that had been destroyed they, also, perished." (Journal of the Royal Asiatic Society, Vol. XIX., p. 302.)

Whatever may be thought of Hindus, no enemy of theirs can regard them as fools. A people whose holy men and sages have left to the world the greatest and most sublime philosophies that ever emanated from the minds of men, must have known the difference between right and wrong. Even a savage can discern white from black, good from bad, and deceit from sincerity and truthfulness. Those who had narrated this event in the biography of their god, must have seen that in this case it was that God who was the arch-Deceiver, and the Daityas, who "never transgressed the precepts of the Vedas," who had the sunny side in the transaction, and who were the true "Gods." Thence there must have been, and there is a secret meaning hidden under this allegory. In no class of Society, in no nation, are deceit and craft considered as Divine virtues -- except perhaps in the clerical classes of theologians and modern Jesuitism.

The Vishnu Purana,* like all other works of this kind, has passed at a later period into the hands of the temple-Brahmins, and the old MSS. have, no doubt, been once more tampered with by sectarians. But there was a time when the Puranas were esoteric works, and so they are still for the Initiates who can read them with the key that is in their possession.

Whether the Brahmin Initiates will ever give out the full meaning of these allegories, is a question with which the writer is not concerned. The present object is to show that, while honouring the creative Powers in their multiple forms, no philosopher could, or ever has, accepted the allegory for the true Spirit, except, perhaps, some philosophers belonging to the present "superior and civilized" Christian races. For, as shown, Jehovah is not one whit the superior of Vishnu on the plane of ethics. This is why the Occultists and even some Kabalists, whether they regard or not those creative Forces as living and conscious Entities -- and one does not see why they should not be so accepted -- will never confuse the CAUSE with the effect, and accept the Spirit of the Earth for Parabrahm or Ain-Soph. At all events they know well the true nature of what was called Father-AEther by the Greeks, Jupiter-Titan, etc., etc. They know that the soul of the ASTRAL LIGHT is divine, and

[[Footnote(s)]] -----

* Wilson's opinion that the "Vishnu Purana" is a production of our era, and that in its present form it is not earlier than between the VIIIth and the XVIIth (!) century, is absurd beyond noticing.

[[Vol. 1, Page]] 424 THE SECRET DOCTRINE.

its body (the light-waves on the lower planes) infernal. This Light is symbolized by the "Magic Head" in the Zohar, the double Face on the double Pyramid: the black pyramid rising against a pure white ground, with a white head and face within its black triangle; the white pyramid, inverted -- the reflection of the first in the dark waters, showing the black reflection of the white face. . . .

This is the "Astral Light," or DEMON EST DEUS INVERSUS.

§ XII.

THE THEOGONY OF THE CREATIVE GODS.

TO thoroughly comprehend the idea underlying every ancient cosmology necessitates the study, in a comparative analysis, of all the great religions of antiquity; as it is only by this method that the root idea will be made plain. Exact science -- could the latter soar so high, while tracing the operations of nature to their ultimate and original sources -- would call this idea the hierarchy of Forces. The original, transcendental and philosophical conception was one. But as systems began to reflect with every age more and more the idiosyncracies of nations; and as the latter, after separating, settled into distinct groups, each evolving along its own national or tribal groove, the main idea gradually became veiled with the overgrowth of human fancy. While in some countries the FORCES, or rather the intelligent Powers of nature, received divine honours they were hardly entitled to, in others -- as now in Europe and the civilized lands -- the very thought of any such Force being endowed with intelligence seems absurd, and is proclaimed unscientific. Therefore one finds relief in such statements as are found in the Introduction to "Asgard and the Gods: Tales and Traditions of our Northern Ancestors," by W. S. W. Anson. The author remarks, on p. 3: "Although in Central Asia, or on the banks of the Indus, in the land of the Pyramids, and in the Greek and Italian peninsulas, and even in the North, whither Kelts, Teutons and Slavs wandered, the religious conceptions of the people have taken different forms, yet their common origin is still perceptible. We point out this connection between the stories of the gods, and the deep thought contained in them, and their importance, in order that the reader may see that it is not a magic world of erratic fancy which opens out before him, but that . . . Life and nature formed the basis of the existence and action of these divinities." And though it is impossible for any Occultist or student of Eastern Esotericism to concur in the strange idea that "the religious con-

[[Vol. 1, Page]] 425 MYTH IS ORAL TRADITION.

ceptions of the most famous nations of antiquity are connected with the beginnings of civilization amongst the Germanic races," he is yet glad to find such truths expressed as that: "These fairy tales are not senseless stories written for the amusement of the idle; they embody the profound religion of our forefathers . . ."

Precisely so. Not only their religion, but likewise their History. For a myth, in Greek [[mythos]], means oral tradition, passed from mouth to mouth from one generation to the other; and even in the modern etymology the term stands for a fabulous statement conveying some important truth; a tale of some extraordinary personage whose biography has become overgrown, owing to the veneration of successive generations, with rich popular fancy, but which is no wholesale fable. Like our ancestors, the primitive Aryans, we believe firmly in the personality and intelligence of more than one phenomenon-producing Force in nature.

As time rolled on, the archaic teaching grew dimmer; and those nations more or less lost sight of the highest and One principle of all things, and began to transfer the abstract attributes of the "causeless cause" to the caused effects -- become in their turn causative -- the creative Powers of the Universe: the great nations, out of the fear of profaning the IDEA, the smaller, because they either failed to grasp it or lacked the power of philosophic conception needed to preserve it in all its immaculate purity. But one and all, with the exception of the latest Aryans, now become Europeans and Christians, show this veneration in their Cosmogonies. As Thomas Taylor,* the most intuitional of all the translators of Greek Fragments, shows, no nation has ever conceived the One principle as the immediate creator of the visible Universe, for no sane man would credit a planner and architect with having built the edifice he admires with his own hands. On the testimony of Damascius ([[Peri archon]]) they referred to it as "the Unknown DARKNESS." The Babylonians passed over this principle in silence: "To that god," says Porphyry, in [[Peri apoches empsuchon]], "who is above all things, neither external speech ought to be addressed, nor yet that which is inward. . . ." Hesiod begins his theogony with: "Chaos of all things was the first produced,"** thus allowing the inference that its cause or producer must be passed over in reverential silence. Homer in his poems ascends no higher than Night, whom he represents Zeus as reverencing. According to all the ancient theologians, and to the doctrines of Pythagoras and Plato, Zeus, or the

[[Footnote(s)]] -----

** [[Etoi men protista chaos genet; geneto]] being considered in antiquity as meaning "Was generated" and not simply was. (See "Taylor's Introd. to the Parmenides of Plato," p. 260.)

[[Vol. 1, Page]] 426 THE SECRET DOCTRINE.

immediate artificer of the universe, is not the highest god; any more than Sir Christopher Wren in his physical, human aspect is the MIND in him which produced his great works of art. Homer, therefore, is not only silent with respect to the first principle, but likewise with respect to those two principles immediately posterior to the first, the AETHER and Chaos of Orpheus and Hesiod, and the bound and infinity of Pythagoras and Plato. . . . Proclus says of this highest principle that it is. . . "the Unity of Unities, and beyond the first adyte. . . more ineffable than all silence, and more occult than all Essence. . . concealed amidst the intelligible gods." (Ibid.)

To what was written by Thomas Taylor in 1797 -- namely, that the "Jews appear to have ascended no higher. . . . than the immediate artificer of the universe"; as "Moses introduces a darkness on the face of the deep, without even insinuating that there was any cause of its existence,"** one might add something more. Never have the Jews in their Bible (a purely esoteric, symbolical work) degraded so profoundly their metaphorical deity as have the Christians, by accepting Jehovah as their one living yet personal God.

This first, or rather ONE, principle was called "the circle of Heaven," symbolized by the hierogram of a point within a circle or equilateral triangle, the point being the LOGOS. Thus, in the Rig Veda, wherein Brahma is not even named, Cosmogony is precluded with the Hiranyagarha, "the Golden Egg," and Prajapati (Brahma later on), from whom emanate all the hierarchies of "Creators." The Monad, or point, is the original and is the unit from which follows the entire numeral system. This Point is the First Cause, but THAT from which it emanates, or of which, rather, it is the expression, the Logos, is passed over in silence. In its turn, the universal symbol, the point within the circle, was not yet the Architect, but the cause of that Architect; and the latter stood to it in precisely the same relation as the point itself stood to the circumference of the Circle, which cannot be defined, according to Hermes Trismegistus. Porphyry shows that the Monad and the Duad of Pythagoras are identical with Plato's infinite and finite in "Philebus" -- or what Plato calls the [[apeiron]] and [[peras]]. It is the latter only (the mother) which is substantial, the former being the "cause of all unity and measure of all things" (Vit. Pyth. p. 47); the Duad (Mulaprakriti, the VEIL) being thus shown to be the mother of the Logos and, at the same time, his daughter -- i.e., the object of his perception -- the produced

[[Footnote(s)]] -----

* It is the "bound" confused with the "Infinite," that Kapila overwhelms with sarcasms in his disputations with the Brahman Yogis, who claim in their mystical visions to see the "Highest One."

** See T. Taylor's article in his Monthly Magazine quoted in the Platonist, edited by T. M. Johnson, F.T.S., Osceola, Missouri. (Feb. Number of 1887.)

[[Vol. 1, Page]] 427 THE CREATIVE LOGOI, ANDROGYNOUS.

producer and the secondary cause of it. With Pythagoras, the MONAD returns into silence and Darkness as soon as it has evolved the triad, from which emanate the remaining seven numbers of the 10 (ten) numbers which are at the base of the manifested universe.

In the Norse cosmogony it is again the same. "In the beginning was a great abyss (Chaos), neither day nor night existed; the abyss was Ginnungagap, the yawning gulf, without beginning, without end. ALL FATHER, the Uncreated, the Unseen, dwelt in the depth of the 'Abyss' (SPACE) and willed, and what was willed came into being." (See "Asgard and the Gods.") As in the Hindu cosmogony, the evolution of the universe is divided into two acts: called in India the Prakriti and Padma Creations. Before the warm rays pouring from the "Home of Brightness" awake life in the Great Waters of Space, the Elements of the first creation come into view, and from them is formed the Giant Ymir (also Orgelmir) -- primordial matter differentiated from Chaos (literally seething clay). Then comes the cow Audumla, the nourisher,* from whom is born Buri (the Producer) who, by Bestla, the daughter of the "Frost-Giants" (the sons of Ymir) had three sons, Odin, Willi and We, or "Spirit," "Will," and "Holiness." (Compare the Genesis of the Primordial Races, in this work.) This was when Darkness still reigned throughout Space, when the Ases, the creative Powers (Dhyan Chohans) were not yet evolved, and the Yggdrasil, the tree of the universe of Time and of Life, had not yet grown, and there was, as yet, no Walhalla, or Hall of Heroes. The Scandinavian legends of creation, of our earth and world, begin with time and human life. All that precedes it is for them "Darkness," wherein All-Father, the cause of all, dwells. As observed by the editor of "Asgard and the Gods," though these legends have in them the idea of that ALL-FATHER, the original cause of all, "he is scarcely more than mentioned in the poems," not because, as he thinks, before the preaching of the gospel, the idea "could not rise to distinct conceptions of the Eternal," but on account of its great esoteric character. Therefore, all the creative gods, or personal Deities, begin at the secondary stage of Cosmic evolution. Zeus is born in, and out of Kronos -- Time. So is Brahma the production and emanation of Kala, "eternity and time," Kala being one of the names of Vishnu. Hence we find Odin, the father of the gods and of the Ases, as Brahma is the father of the gods and of the Asuras, and hence also the androgyne character of all the chief creative gods, from the second MONAD of the Greeks down to the Sephiroth Adam Kadmon, the Brahma or Prajapati-Vach of the Vedas, and the androgyne of Plato, which is but another version of the Indian symbol.

[[Footnote(s)]] -----

* Vach -- the "melodious cow, who milks sustenance and water," and yields us "nourishment and sustenance" as described in Rig-Veda.

[[Vol. 1, Page]] 428 THE SECRET DOCTRINE.

The best metaphysical definition of primeval theogony in the spirit of the Vedantins may be found in the "Notes on the Bhagavat-Gita," by Mr. T. Subba Row. (See "Theosophist" for February, 1887.) Parabrahmam, the unknown and the incognisable, as the lecturer tells his audience:

". . . . Is not Ego, it is not non-ego, nor is it consciousness it is not even Atma" "but though not itself an object of knowledge, it is yet capable of supporting and giving rise to every kind of object and every kind of existence which becomes an object of knowledge. It is the one essence from which starts into existence a centre of energy" which he calls Logos.

This Logos is the Sabda Brahmam of the Hindus, which he will not even call Iswara (the "lord" God), lest the term should create confusion in the people's minds. But it is the Avalokiteswara of the Hindus, the Verbum of the Christians in its real esoteric meaning, not in the theological disfigurement.

"It is," he says, "the Gnatha or the Ego in the Kosmos, and every other Ego is but its reflection and manifestation. It exists in a latent condition in the bosom of Parabrahmam at the time of Pralaya. . . ." (During Manvantara) "it has a consciousness and an individuality of its own" (It is a centre of energy, but) such centres of energy are almost innumerable in the bosom of Parabrahmam" "It must not be supposed, that even the logos is the Creator, or that it is but a single centre of energy their number is almost infinite." "This Ego," he adds, "is the first that appears in Kosmos, and is the end of all evolution. It is the abstract Ego" "this is the first manifestation (or aspect) of Parabrahmam." "When once it starts into conscious being from its objective standpoint, Parabrahmam appears to it as Mulaprakriti." "Please bear this in mind," observes the lecturer, "for here is the root of the whole difficulty about Purusha and Prakriti felt by the various writers on Vedantic philosophy. This Mulaprakriti is material to it (the Logos), as any material object is material to us. This Mulaprakriti is no more Parabrahmam than the bundle of attributes of a pillar is the pillar itself; Parabrahmam is an unconditioned and absolute reality, and Mulaprakriti is a sort of veil thrown over it. Parabrahmam by itself cannot be seen as it is. It is seen by the Logos with a veil thrown over it, and that veil is the mighty expanse of Cosmic matter. . . ." "Parabrahmam, after having appeared on the one hand as the Ego, and on the other as Mulaprakriti, acts as the one energy through the Logos."

And the lecturer explains what he means by this acting of something which is nothing, though it is the ALL, by a fine simile. He compares the Logos to the sun through which light and heat radiate, but whose energy, light and heat, exist in some unknown condition in Space and are diffused in Space only as visible light and heat, the sun being only the agent thereof. This is the first triadic hypostasis. The quaternary is made up by the energizing light shed by the Logos.

The Hebrew Kabalists give it in a shape which esoterically is

[[Vol. 1, Page]] 429 THE ONE IS KNOWN BY THE MANY.

identical with the Vedantic. AIN-SOPH, they taught, could not be comprehended, could not be located, nor named, though the causeless cause of all. Hence its name -- AIN-SOPH -- is a term of negation, "the inscrutable, the incognizable, and the unnameable." They made of it, therefore, a boundless circle, a sphere, of which human intellect, with the utmost stretch, could only perceive the vault. In the words of one who has unriddled much in the Kabalistical system, in one of its meanings thoroughly, in its numerical and geometrical esotericism:-- "Close your eyes, and from your own consciousness of perception try and think outward to the extremest limits in every direction. You will find that equal lines or rays of perception extend out evenly in all directions, so that the utmost effort of perception will terminate in the vault of a sphere. The limitation of this sphere will, of necessity, be a great Circle, and the direct rays of thought in any and every direction must be right line radii of the circle. This, then, must be, humanly speaking, the extremest all-embracing conception of the Ain-Soph manifest, which formulates itself as a geometrical figure, viz., of a circle, with its elements of curved circumference and right line diameter divided into radii. Hence, a geometrical shape is the first recognisable means of connection between the Ain-Soph and the intelligence of man."*

This great circle (which Eastern Esotericism reduces to the point within the Boundless Circle) is the Avalokiteswara, the Logos or Verbum of which Mr. Subba Row speaks. But this circle or manifested God is as unknown to us, except through its manifested universe, as the ONE, though easier, or rather more possible to our highest conceptions. This Logos which sleeps in the bosom of Parabrahmam during Pralaya, as our "Ego is latent (in us) at the time of sushupti, sleep"; which cannot cognize Parabrahmam otherwise than as Mulaprakriti -- the latter being a cosmic veil which is "the mighty expanse of cosmic matter" -- is thus only an organ in cosmic creation, through which radiate the energy and wisdom of Parabrahmam, unknown to the Logos, as it is to ourselves. Moreover, as the Logos is as unknown to us as Parabrahmam is unknown in reality to the Logos, both Eastern Esotericism and the Kabala -- in order to bring the Logos within the range of our conceptions -- have resolved the abstract synthesis into concrete images; viz., into the reflections or multiplied aspects of that Logos or Avalokiteswara, Brahma, Ormazd, Osiris, Adam-Kadmon, call it by any of these names -- which aspects or Manvantaric emanations are the Dhyan Chohans, the Elohim, the Devas, the Amshaspendis, &c., &c. Metaphysicians explain the root and germ of the latter, according to Mr. Subba Row, as the first manifestation of Parabrahmam, "the highest trinity that we

[[Footnote(s)]] -----

* From the Masonic Review for June, 1886.

[[Vol. 1, Page]] 430 THE SECRET DOCTRINE.

are capable of understanding," which is Mulaprakriti (the veil), the Logos, and the conscious energy "of the latter," or its power and light*; or -- "matter, force and the Ego, or the one root of self, of which every other kind of self is but a manifestation or a reflection." It is then only in this "light" (of consciousness) of mental and physical perception, that practical Occultism can throw this into visibility by geometrical figures; which, when closely studied, will yield not only a scientific explanation of the real, objective, existence** of the "Seven sons of the divine Sophia," which is this light of the Logos, but show by means of other yet undiscovered keys that, with regard to Humanity, these "Seven Sons" and their numberless emanations, centres of energy personified, are an absolute necessity. Make away with them, and the mystery of Being and Mankind will never be unriddled, not even closely approached.

It is through this light that everything is created. This ROOT of mental SELF is also the root of physical Self, for this light is the permutation, in our manifested world, of Mulaprakriti, called Aditi in the Vedas. In its third aspect it becomes Vach,*** the daughter and the mother of the Logos, as Isis is the daughter and the mother of Osiris, who is Horus; and Mout, the daughter, wife, and mother of Ammon, in the Egyptian Moon-glyph. In the Kabala, Sephira is the same as Shekinah, and is, in another synthesis, the wife, daughter, and mother of the "Heavenly man," Adam Kadmon, and is even identical with him, just as Vach is identical with Brahma, and is called the female Logos. In the Rig-Veda, Vach is "mystic speech," by whom Occult Knowledge and Wisdom are communicated to man, and thus Vach is said to have "entered the Rishis." She is "generated by the gods;" she is the divine Vach -- the "Queen of gods"; and she is associated -- like Sephira with the Sephiroth -- with the Prajapati in their work of creation. Moreover, she is called "the mother of the Vedas," "since it is through her power (as mystic speech) that Brahma revealed them, and also owing to her power that he produced the universe" -- i.e., through speech, and words (synthesized by the "WORD") and numbers.****

But Vach being also spoken of as the daughter of Daksha -- "the god who lives in all the Kalpas" -- her Mayavic character is thereby shown:

[[Footnote(s)]] -----

* Called, in the Bhagavat-Gita, Daiviprakriti.

** Objective -- in the world of Maya, of course; still as real as we are.

*** "In the course of cosmic manifestation, this Daiviprakriti, instead of being the mother of the Logos, should, strictly speaking, be called his daughter." ("Notes on the Bhagavat-Gita," p. 305, Theosophist.)

**** The wise men, like Stanley Jevons amongst the moderns, who invented the scheme which makes the incomprehensible assume a tangible form, could only do so by resorting to numbers and geometrical figures.

[[Vol. 1, Page]] 431 THE FEMALE LOGOI.

during the pralaya she disappears, absorbed in the one, all-devouring Ray.

But there are two distinct aspects in universal Esotericism, Eastern and Western, in all those personations of the female Power in nature, or nature -- the noumenal and the phenomenal. One is its purely metaphysical aspect, as described by the learned lecturer in his "Notes on the Bhagavat-Gita;" the other terrestrial and physical, and at the same time divine from the stand-point of practical human conception and Occultism. They are all the symbols and personifications of Chaos, the "Great Deep" or the Primordial Waters of Space, the impenetrable VEIL between the INCOGNISABLE and the LOGOS of Creation. "Connecting himself through his mind with Vach, Brahma (the Logos) created the primordial waters." In the Kathaka Upanishad it is stated still more clearly: "Prajapati was this Universe. Vach was a second to him. He associated with her . . . she produced these creatures and again re-entered Prajapati."*

And here we may incidentally point out one of the many unjust slurs thrown by the pious and good missionaries in India on the religion of the land. This allegory -- in the "Satapatha Brahmana" -- namely, that Brahma, as the father of men, performed the work of procreation by incestuous intercourse with his own daughter Vach, also called Sandhya (twilight), and Satarupa (the hundred formed), is incessantly thrown into the teeth of the Brahmins, as condemning their "detestable, false religion." Besides the fact, conveniently forgotten by the Europeans, that the Patriarch Lot is shown guilty of the same crime under the human form, whereas Brahma, or rather Prajapati, accomplished the incest under the form of a buck with his daughter, who had that of a hind (rohit), the esoteric reading of Genesis (ch. iii.) shows the same. Moreover, there is certainly a cosmic, not a physiological meaning attached to the Indian allegory, since Vach is a permutation of Aditi and Mulaprakriti (Chaos), and Brahma a permutation of Narayana, the Spirit of God entering into, and fructifying nature; therefore, there is nothing phallic in the conception at all.

As already stated, Aditi-Vach is the female Logos, or the "word," Verbum; and Sephira in the Kabala is the same. These feminine Logoi are all correlations, in their noumenal aspect, of Light, and Sound, and Ether, showing how well-informed were the ancients both in

[[Footnote(s)]] -----

* This connects Vach and Sephira with the goddess Kwan-Yin, the "merciful mother," the divine VOICE of the soul even in Exoteric Buddhism; and with the female aspect of Kwan-Shai-yin, the Logos, the verbum of Creation, and at the same time with the voice that speaks audibly to the Initiate, according to Esoteric Buddhism. Bath Kol, the filia Vocis, the daughter of the divine voice of the Hebrews, responding from the mercy seat within the veil of the temple is -- a result.

[[Vol. 1, Page]] 432 THE SECRET DOCTRINE.

physical science (as now known to the moderns), and as to the birth of that science in the Spiritual and Astral spheres.

"Our old writers said that Vach is of four kinds . . . para, pasyanti, madhyama, vaikhari (a statement found in the Rig-Veda and the Upanishads) . . . Vaikhari Vach is what we utter." It is sound, speech, that again which becomes comprehensive and objective to one of our physical senses and may be brought under the laws of perception. Hence: "Every kind of Vaikhari-Vach exists in its Madhyama .

. . . Pasyanti and ultimately in its Para form. . . . The reason why this Pranava* is called Vach is this, that these four principles of the great Kosmos correspond to these four forms of Vach. . . . The whole Kosmos in its objective form is Vaikhari Vach; the light of the Logos is the madhyama form; and the Logos itself the pasyanti form; while Parabrahmam is the para (beyond the noumenon of all Noumena) aspect of that Vach." (Notes on the Bhagavad-Gita).

Thus Vach, Shekinah, or the "music of the spheres" of Pythagoras, are one, if we take for our example instances in the three most (apparently) dissimilar religious philosophies in the world -- the Hindu, the Greek and the Chaldean Hebrew. These personations and allegories may be viewed under four (chief) and three (lesser) aspects or seven in all, as in Esotericism. The para form is the ever subjective and latent Light and Sound, which exist eternally in the bosom of the INCOGNISABLE; when transferred into the ideation of the Logos, or its latent light, it is called pasyanti, and when it becomes that light expressed, it is madhyama.

Now the Kabala gives the definition thus: "There are three kinds of light, and that (fourth) which interpenetrates the others; (1) the clear and the penetrating, the objective light, (2) the reflected light, and (3) the abstract light. The ten Sephiroth, the three and the Seven, are called in the Kabala the 10 words, D-BRIM (Dabarim), the numbers and the Emanations of the heavenly light, which is both Adam Kadmon and Sephira, or (Brahma) Prajapati-Vach. Light, Sound, Number, are the three factors of creation in the Kabala. Parabrahmam cannot be known except through the luminous Point (the LOGOS), which knows not Parabrahmam but only Mulaprakriti. Similarly Adam Kadmon knew only Shekinah, though he was the vehicle of Ain-Soph. And, as Adam Kadmon, he is in the esoteric interpretation the total of the number ten, the Sephiroth (himself a trinity, or the three attributes of the

[[Footnote(s)]] -----

* Pranava, like Om, is a mystic term pronounced by the Yogis during meditation; of the terms called, according to exoteric Commentators, Vyahritis, or "Om, Bhur, Bhuva, Swar" (Om, earth, sky, heaven) -- Pranava is the most sacred, perhaps. They are pronounced with breath suppressed. See Manu II. 76-81, and Mitakshara commenting on the Yajnavalkya-Suriti, i. 23. But the esoteric explanation goes a great deal further.

[[Vol. 1, Page]] 433 THE PYTHAGOREAN IDEA.

incognisable DEITY in One).* "When the Heavenly man (or LOGOS) first assumed the form of the Crown** (Kether) and identified himself with Sephira, he caused seven splendid lights to emanate from it (the Crown)," which made in their totality ten; so the Brahma-Prajapati, once he became separated from, yet identical with Vach, caused the seven Rishis, the seven Manus or Prajapatis to issue from that crown. In Exotericism one will always find 10 and 7, of either Sephiroth or Prajapati; in Esoteric rendering always 3 and 7, which yield also 10. Only when divided in the manifested sphere into 3 and 7, they form [[diagram]], the androgyne, and [[diagram]], or the figure X manifested and differentiated.

This will help the student to understand why Pythagoras esteemed the Deity (the Logos) to be the centre of unity and "Source of Harmony." We say this Deity was the Logos, not the MONAD that dwelleth in Solitude and Silence, because Pythagoras taught that UNITY being indivisible is no number. And this is also why it was required of the candidate, who applied for admittance into his school, that he should have already studied as a preliminary step, the Sciences of Arithmetic, Astronomy, Geometry and Music, held as the four divisions of Mathematics.*** Again, this explains why the Pythagoreans asserted that the doctrine of Numbers -- the chief of all in Esotericism -- had been revealed to man by the celestial deities; that the world had been called forth out of Chaos by Sound or Harmony, and constructed according to the principles of musical proportion; that the seven planets which rule the destiny of mortals have a harmonious motion "and intervals corresponding to musical diastemes, rendering various sounds, so perfectly consonant, that they produce the sweetest melody, which is inaudible to us, only by reason of the greatness of the sound, which our ears are incapable of receiving." (Censorinus.)

In the Pythagorean Theogony the hierarchies of the heavenly Host and Gods were numbered and expressed numerically. Pythagoras had studied Esoteric Science in India; therefore we find his pupils saying "The monad (the manifested one) is the principle of all things. From the Monad and the indeterminate duad (Chaos), numbers; from

[[Footnote(s)]] -----

* It is this trinity that is meant by the "three steps of Vishnu"; which means: (Vishnu being considered as the Infinite in exotericism) -- that from the Parabrahm issued Mulaprakriti, Purusha (the Logos), and Prakriti: the four forms (with itself, the synthesis) of Vach. And in the Kabala -- Ain-Soph, Shekinah, Adam Kadmon and Sephirah, the four -- or the three emanations being distinct -- yet ONE.

** Chaldean Book of Numbers. In the current Kabala the name Jehovah replaces Adam Kadmon.

*** Justin Martyr tells us that, owing to his ignorance of these four sciences, he was rejected by the Pythagoreans as a candidate for admission into their school.

[[Vol. 1, Page]] 434 THE SECRET DOCTRINE.

numbers, Points; from points, Lines; from lines, Superficies; from superficies, Solids; from these, solid Bodies, whose elements are four -- Fire, Water, Air, Earth; of all which transmuted (correlated), and totally changed, the world consists." -- (Diogenes Laertius in Vit. Pythag.)

And this may also, if it does not unriddle the mystery altogether, at any rate lift a corner of the veil off those wondrous allegories that have been thrown upon Vach, the most mysterious of all the Brahmanical goddesses, she who is termed "the melodious cow who milked forth sustenance and water" (the Earth with all her mystic powers); and again she "who yields us nourishment and sustenance" (physical Earth). Isis is also mystic Nature and also Earth; and her cow's horns identify her with Vach. The latter, after having been recognised in her highest form as para, becomes at the lower or material end of creation -- Vaikhari. Hence she is mystic, though physical, Nature, with all her magic ways and properties.

Again, as goddess of Speech and of Sound, and a permutation of Aditi -- she is Chaos, in one sense. At any rate, she is the "Mother of the gods," and it is from Brahma (Iswara, or the Logos) and Vach, as from Adam Kadmon and Sephira, that the real manifested theogony has to start. Beyond, all is darkness and abstract speculation. With the Dhyana Chohans, or the gods, the Seers, the Prophets and the adepts in general are on firm ground. Whether as Aditi, or the divine Sophia of the Greek Gnostics, she is the mother of the seven sons: the "Angels of the Face," of the "Deep," or the "Great Green One" of the "Book of the Dead." Says the Book of Dzyan (Knowledge through meditation) --

"The great mother lay with , and the |, and the , the second | and the * in her bosom, ready to bring them forth, the valiant sons of the   || (or 4,320,000, the Cycle) whose two elders are the  and the (Point)."

At the beginning of every cycle of 4,320,000, the Seven (or, as some nations had it, eight) great gods, descended to establish the new order of things and give the impetus to the new cycle. That eighth god was the unifying Circle or LOGOS, separated and made distinct from its host, in exoteric dogma, just as the three divine hypostases of the ancient Greeks are now considered in the Churches as three distinct personae. "The MIGHTY ONES perform their great works, and leave behind them everlasting monuments to commemorate their visit, every time they penetrate within our mayavic veil (atmosphere)," says a

[[Footnote(s)]] -----

* 31415, or $[\pi]$. The synthesis, or the Host unified in the Logos and the Point called in Roman Catholicism the "Angel of the Face," and in Hebrew $[\text{hebrew}]$ "who is (like unto, or the same) as God" -- the manifested representation.

[[Vol. 1, Page]] 435 ANTIQUITY OF THE PYRAMIDS.

Commentary.* Thus we are taught that the great Pyramids were built under their direct supervision, "when Dhruva (the then Pole-star) was at his lowest culmination, and the Krittika (Pleiades) looked over his head (were on the same meridian but above) to watch the work of the giants." Thus, as the first Pyramids were built at the beginning of a Sidereal year, under Dhruva (Alpha Polaris), it must have been over 31,000 years (31,105) ago. Bunsen was right in admitting for Egypt an antiquity of over 21,000 years, but this concession hardly exhausts truth and fact in this question. "The stories told by Egyptian priests and others of time-keeping in Egypt, are now beginning to look less like lies in the sight of all who have escaped from biblical bondage," writes the author of "The Natural Genesis." "Inscriptions have lately been found at Sakkarah, making mention of two Sothic cycles . . . registered at that time, now some 6,000 years ago. Thus when Herodotus was in Egypt, the Egyptians had -- as now known -- observed at least five different Sothic cycles of 1,461 years. The priests informed the Greek inquirer that time had been reckoned by them for so long that the sun had twice risen where it then set, and twice set where it then arose. This . . . can only be realized as a fact in nature by means of two cycles of Precession, or a period of 51,736 years," (vol. ii, p. 318. But see in our Book II., "CHRONOLOGY OF THE BRAHMINS.")

Mor Isaac (See Kircher's OEdipus, vol. ii., p. 425) shows the ancient Syrians defining their world of the "Rulers" and "active gods" in the same way as the Chaldeans. The lowest world was the SUBLUNARY -- our own -- watched by the "Angels" of the first or lower order; the one that came next in rank, was Mercury, ruled by the "ARCHANGELS"; then came Venus, whose gods were the PRINCIPALITIES; the fourth was that of the SUN, the domain and region of the highest and mightiest gods of our system, the solar gods of all nations; the fifth was Mars, ruled by the "VIRTUES"; the sixth -- that of Bel or Jupiter -- was governed by the DOMINIONS; the seventh -- the world of Saturn -- by the THRONES. These are the worlds of form. Above come the four higher ones, making seven again, since the three highest are "unmentionable and unpronounceable." The eighth, composed of 1,122 stars, is the domain of the Cherubs; the ninth, belonging to the walking and numberless stars on account of their distance, has the seraphs; as to the tenth -- Kircher, quoting Mor Isaac, says that it is composed "of invisible stars that could be taken, they said, for clouds -- so massed are they in the zone that we call Via Straminis, the

[[Footnote(s)]] -----

* Appearing at the beginning of Cycles, as also of every sidereal year (of 25,868 years) therefore the Kabeiri or Kabarim received their name in Chaldea, as it means the measures of Heaven from Kob -- measure of, and Urim -- heavens.

[[Vol. 1, Page]] 436 THE SECRET DOCTRINE.

Milky Way"; and he hastens to explain that "these are the stars of Lucifer, engulfed with him in his terrible shipwreck." That which comes after and beyond the tenth world (our Quaternary, or the Arupa world), the Syrians could not tell. "All they knew was that it is there that begins the vast and incomprehensible ocean of the infinite, the abode of the true divinity without boundary or end."

Champollion shows the same belief among the Egyptians. Hermes having spoken of the Father-Mother and Son, whose spirit (collectively the DIVINE FIAT) shapes the Universe, says:-- "Seven Agents (mediums) were also formed, to contain the material (or manifested) worlds, within their respective circles and the action of these agents was named DESTINY." He further enumerates seven and ten and twelve orders, which would take too long to detail here.

As the "Rig Vidhana" together with the "Brahmanda Purana" and all such works, whether describing the magic efficacy of the Rig-Vedic Mantras or the future Kalpas, are declared by Dr. Weber and others to be modern compilations "belonging probably only to the time of the Puranas," it is useless to refer the reader to their mystic explanations; and one may as well quote simply from the archaic books utterly unknown to the Orientalists. These works explain that which so puzzles the scholars, namely that the Saptarshi, the "mind-born sons" of Brahma, are referred to in the Satapatha Brahmana under one set of names; in the Mahabharata under another set; and that the Vayu Purana makes even nine instead of seven Rishis, by adding the names of Bhrigu and Daksha to the list. But the same occurs in every exoteric Scripture. The secret doctrine gives a long genealogy of Rishis, but separates them into many classes. Like the Gods of the Egyptians, who were divided into seven, and even twelve, classes, so are the Indian Rishis in their Hierarchies. The first three groups are the Divine, the Cosmical and the Sub-lunary. Then come the Solar Gods of our system, the Planetary, the Sub-Mundane, and the purely human -- the heroes and the Manoushi.

At present, however, we are only concerned with the pre-cosmic, divine gods, the Prajapati or the "Seven Builders." This group is found unmistakably in every Cosmogony. Owing to the loss of Egyptian archaic documents -- since, according to M. Maspero, "the materials and historical data on hand to study the history of the religious evolution in Egypt are neither complete nor very often intelligible" -- in order to have the statements brought forward from the Secret Doctrine corroborated partially and indirectly, the ancient hymns and inscriptions on the tombs must be appealed to. One such, at any rate, shows that Osiris was, like Brahma-Prajapati, Adam Kadmon, Ormazd, and so many other Logoi, the chief and synthesis of the

[[Vol. 1, Page]] 437 COSMIC GODS.

group of "Creators" or Builders. Before Osiris became the "One" and the highest god of Egypt he was worshipped at Abydos as the head or leader of the Heavenly Host of the Builders belonging to the higher of the three orders. The hymn engraved on the votive stela of a tomb from Abydos (3rd register) addresses Osiris thus: "Salutations to thee, Osiris, elder son of Sib; thou the greatest over the six gods issued from the goddess Noo (primordial Water), thou the great favourite of thy father Ra; father of fathers, King of Duration, master in the eternity . . . who, as soon as these issued from thy mother's bosom, gathered all the crowns and attached the Uraeus (serpent or naja)* on thy head; multiform god, whose name is unknown and who has many names in towns and provinces. . ." Coming out from the primordial water crowned with the uraeus, which is the serpent emblem of Cosmic fire, and himself the seventh over the six primary gods issued from Father-Mother, Nou and Nout (the sky), who can Osiris be, but the chief Prajapati, the chief Sephiroth, the chief Amshaspend-Ormazd! That this latter solar and cosmic god stood, in the beginning of religious evolution, in the same position as the archangel "whose name was secret," is certain. This Archangel was the representative on earth of the Hidden Jewish God, Michael, in short: it is his "Face" that is said to have gone before the Jews like a "Pillar of Fire." Burnouf says, "The seven Amshaspends, who are most assuredly our archangels, designate also the personifications of the divine Virtues." (Comment on the Yacna, p. 174.) And these archangels, therefore, are as "certainly" the Saptarishi of the Hindus, though it is next to impossible to class each with its pagan prototype and parallel, since, as in the case of Osiris, they have all so "many names in towns and provinces." Some of the most important, however, will be shown in their order.

One thing is thus undeniably proven. The more one studies their Hierarchies and finds out their identity, the more proofs one acquires that there is not one of the past and present personal gods, known to us from the earliest days of History, that does not belong to the third stage of Cosmic manifestation. In every religion we find the concealed deity forming the ground work; then the ray therefrom, that falls into primordial Cosmic matter (first manifestation); then the androgyne result, the dual Male and Female abstract Force, personified (second stage); this separates itself finally, in the third, into seven Forces, called the creative Powers by all the ancient Religions, and the

[[Footnote(s)]] -----

* This Egyptian word Naja reminds one a good deal of the Indian Naga, the Serpent-God. Brahma and Siva and Vishnu are all crowned with, and connected with Nagas -- a sign of their cyclic and cosmic character.

[[Vol. 1, Page]] 438 THE SECRET DOCTRINE.

"Virtues of God" by the Christians. The later explanation and metaphysical abstract qualifications have never prevented the Roman and Greek Churches from worshipping these "Virtues" under the personifications and distinct names of the seven Archangels. In the Book of Druschim (p. 59, 1st Treatise) in the Talmud, a distinction between these groups is given which is the correct Kabbalistical explanation. It says:

"There are three groups (or orders) of Sephiroth. 1st. The Sephiroth called "the divine attributes" (abstract). 2nd. The physical or sidereal Sephiroth (personal) -- one group of seven, the other of ten. 3rd. The metaphysical Sephiroth, or periphrasis of Jehovah, who are the first three Sephiroth (Kether, Chochma and Binah), the rest of the seven being the (personal) seven spirits of the Presence" (also of the planets).

The same division has to be applied to the primary, secondary and tertiary evolution of gods in every theogony, if one wishes to translate the meaning esoterically. We must not confuse the purely metaphysical personifications of the abstract attributes of Deity, with their reflection -- the sidereal gods. This reflection, however, is in reality the objective expression of the abstraction: living Entities and the models formed on that divine prototype. Moreover, the three metaphysical Sephiroth or "the periphrasis of Jehovah" are not Jehovah; it is the latter himself with the additional titles of Adonai, Elohim, Sabaoth, and the numerous names lavished on him, who is the periphrasis of the Shaddai, [[hebrew]], the Omnipotent. The name is a circumlocution, indeed, a too abundant figure of Jewish rhetoric, and has always been denounced by the Occultists. To the Jewish Kabalists, and even the Christian Alchemists and Rosicrucians, Jehovah was a convenient screen, unified by the folding of its many flaps, and adopted as a substitute: one name of an individual Sephiroth being as good as another name, for those who had the secret. The Tetragrammaton, the Ineffable, the sidereal "Sum Total," was invented for no other purpose than to mislead the profane and to symbolize life and generation.* The real secret and unpronounceable name -- "the word that is no word" -- has to be sought in the seven names of the first seven emanations, or the "Sons of the Fire,"

[[Footnote(s)]] -----

* Says the translator of Avicbron's "Qabbalah" (Mr. Isaac Myer, LL.B., of Philadelphia) of this "Sum Total": "The letter of Kether is [[hebrew]] (Yod), of Binah [[hebrew]](Heh), together Yah, the feminine Name; the third letter, that of Hokhmah, is [[hebrew]] (Vau), making together, [[hebrew]] YHV of [[hebrew]] YHVH, the Tetragrammaton, and really the complete symbols of its efficaciousness. The last [[hebrew]](Heh) of this Ineffable Name being always applied to the Six Lower and the last, together the Seven remaining Sephiroth." . . . Thus the Tetragrammaton is holy only in its abstract synthesis. As a quaternary containing the lower Seven Sephiroth, it is phallic.

[[Vol. 1, Page]] 439 INCREDIBLE, BUT TRUE.

in the secret Scriptures of all the great nations, and even in the Zohar, the Kabalistic lore of that smallest of all, the Jewish. This word, composed of seven letters in each tongue, is found embodied in the architectural remains of every grand building in the world; from the Cyclopean remains on Easter Island (part of a continent buried under the seas nearer four million years ago* than 20,000) down to the earliest Egyptian pyramids.

We shall have to enter more fully upon this subject, and bring practical illustrations to prove the statements made in the text.

For the present it is sufficient to show, by a few instances, the truth of what was asserted at the beginning of this Monograph, namely, that no Cosmogony, the world over, with the sole exception of the Christian, has ever attributed to the One Highest cause, the UNIVERSAL Deific Principle, the immediate creation of our Earth, man, or anything connected with these. This statement holds as good for the Hebrew or Chaldean Kabala as it does for Genesis, had the latter been ever thoroughly understood, and -- what is still more important -- correctly translated.** Everywhere there is either a LOGOS -- a "Light shining

[[Footnote(s)]] -----

* The statement will, of course, be found preposterous and absurd, and simply laughed at. But if one believes in the final submersion of Atlantis 850,000 years ago, as taught in "Esoteric Buddhism" (the gradual first sinking having begun during the Eocene age), one has to accept the statement for the so-called Lemuria, the continent of the Third Root Race, first nearly destroyed by combustion, and then submerged. This is what the Commentary says: "The first earth having been purified by the forty-nine fires, her people, born of Fire and Water, could not die . . . etc.; the Second Earth (with its race) disappeared as vapour vanishes in the air . . . the Third Earth had everything consumed on it after the separation, and went down into the lower Deep (the Ocean). This was twice eighty-two cyclic years ago." Now a cyclic year is what we call a sidereal year, and is founded on the precession of the equinoxes, or 25,868 years each, and this is equal, therefore, in all to 4,242,352 years. More details will be found in the text of Book II. Meanwhile, this doctrine is embodied in the "Kings of Edom."

** The same reserve is found in the Talmud and in every national system of religion whether monotheistic or exoterically polytheistical. From the superb religious poem by the Kabalist Rabbi Solomon Ben Gabirol in "the Kether Malchuth," we select a few definitions given in the prayers of Kippur. . . . "Thou art one, the beginning of all numbers, and the foundation of all edifices; Thou art One, and in the secret of Thy unity the wisest of men are lost, because they know it not. Thou art one, and Thy Unity is never diminished, never extended, and cannot be changed. Thou art one, but not as an element of numeration; for Thy Unity admits not of multiplication, change or form. Thou art existent; but the understanding and vision of mortals cannot attain to thy existence, nor determine for thee the Where, the How, and the Why. Thou art Existent, but in thyself alone, there being none other that can exist with thee. Thou art Existent, before all time and without Place. Thou art Existent, and thy existence is so profound and secret that none can penetrate and discover thy secrecy. Thou art Living, but within no time that can be fixed or known; Thou art Living, but not by a spirit or a soul, for Thou art thyself, THE SOUL OF ALL SOULS," etc., etc. There is [[Footnote continued on next page]]

[[Vol. 1, Page]] 440 THE SECRET DOCTRINE.

in DARKNESS," truly -- or the Architect of the Worlds is esoterically a plural number. The Latin Church, paradoxical as ever, while applying the epithet of Creator to Jehovah alone, adopts a whole Kyriel of names for the working FORCES of the latter, those names betraying the secret. For if the said Forces had nought to do with "Creation" so-called, why call them Elohim (Alhim) in plural; "divine workmen" and Energies ([[Energiea]]), incandescent celestial stones (lapides igniti coelorum), and especially, "supporters of the

World" ([[Kosmokratores]]), governors or RULERS of the World (rectores mundi), the "Wheels" of the World (Rotae), Ophanim, Flames and POWERS, "Sons of God" (B'ne Alhim), "Vigilant COUNSELLORS," etc., etc.

It was often premised (and as unjustly as usual) that China, nearly as old a country as India, had no cosmogony. "It was unknown to Confucius, and the Buddhists extended their Cosmogony without introducing a personal God,"* it is complained. The Yi-King, "the very essence of ancient thought and the combined work of the most venerated sages, fails to show a distinct cosmogony." Nevertheless, there is one, and a very distinct one. Only as Confucius did not admit of a future life** and the Chinese Buddhists reject the idea of One Creator, accepting one cause and its numberless effects, they are misunderstood by the believers in a personal God. The "great Extreme" as the commencement "of changes" (transmigrations) is the shortest and perhaps the most suggestive of all Cosmogonies, for those who, like the Confucianists, love virtue for its own sake, and try to do good unselfishly without perpetually looking to reward and profit. The "great Extreme" of Confucius produces "two figures." These "two" produce in their turn "the four images"; these again "the eight symbols." It is complained that though the Confucianists see in them "Heaven, Earth and man in miniature," . . . we can see in them anything we like. No doubt, and so it is with regard to many symbols, especially in those of the latest religions. But they who know something of Occult numerals, see in these "figures" the symbol, however rude, of a harmonious progressive Evolution of Kosmos and its beings, both the Heavenly and the Terrestrial. And any one who has studied the numerical evolution in the primeval cosmogony of Pythagoras (a contemporary of Confucius) can never fail to find in his Triad, Tetractis and

[[Footnote(s)]] -----

[[Footnote continued from previous page]] a distance between this Kabalistical Deity and the Biblical Jehovah, the spiteful and revengeful God of Abram, Isaac, and Jacob, who tempted the former and wrestled with the last. No Vedantin but would repudiate such a Parabrahm.

* Rev. Joseph Edkins "On Cosmogony," p. 320. And very wisely they have acted.

** If he rejected it, it was on the ground of what he calls the changes -- in other words, rebirths -- of man, and constant transformations. He denied immortality to the personality of man -- as we do -- not to MAN.

[[Vol. 1, Page]] 441 THE SAME IDEA IN CONFUCIANISM.

Decade emerging from the ONE and solitary Monad, the same idea. Confucius is laughed at by his Christian biographer for "talking of divination" before and after this passage, and is represented as saying: "The eight symbols determine good and ill fortune, and these lead to great deeds. There are no imitable images greater than heaven and earth. There are no changes greater than the four seasons (meaning North, South, East and West, et seq.). There are no suspended images brighter than the sun and moon. In preparing things for use, there is none greater than the sage. In determining good and ill-luck there is nothing greater than the divining straws and the tortoise."*

Therefore, the "divining straws" and the "tortoise," the "symbolic sets of lines," and the great sage who looks at them as they become one and two, and two become four, and four become eight, and the other sets "three and six," are laughed to scorn, only because his wise symbols are misunderstood.

So the author and his colleagues will scoff no doubt at the Stanzas given in our text, for they represent precisely the same idea. The old archaic map of Cosmogony is full of lines in the Confucian style, of concentric circles and dots. Yet all these represent the most abstract and philosophical conceptions of the Cosmogony of our Universe. At all events it may answer, perhaps, better to the requirements and the scientific purposes of our age, than the cosmogonical essays of St. Augustine and the "Venerable Bede," though these were published over a millennium later than the Confucian.

Confucius, one of the greatest sages of the ancient world, believed in ancient magic, and practised it himself "if we take for granted the statements of Kin-yu" . . . and "he praised it to the skies in Yi-kin," we are told by his reverend critic. Nevertheless, even in his age -- i.e., 600 B.C., Confucius and his school taught the sphericity of the Earth and even the heliocentric system; while, at about thrice 600 years after the Chinese philosopher, the Popes of Rome threatened and even burnt "heretics" for asserting the same. He is laughed at for speaking of the "Sacred Tortoise." No unprejudiced person can see any great difference between a tortoise and a lamb as candidates for sacredness, as both are symbols and no more. The Ox, the Eagle,** the Lion, and occasionally

[[Footnote(s)]] -----

* He may be laughed at by the Protestants; but the Roman Catholics have no right to mock him, without becoming guilty of blasphemy and sacrilege. For it is over 200 years since Confucius was canonized as a Saint in China by the Roman Catholics, who have thereby obtained many converts among the ignorant Confucianists.

** The animals regarded as sacred in the Bible are not few: the goat for one, the Azazel, or God of Victory. As Aben Ezra says: "If thou art capable of comprehending the mystery of Azazel, thou wilt learn the mystery of His (God's) name, for it has similar associates in Scriptures. I will tell thee by allusion one portion of the mystery; [[Footnote continued on next page]]

[[Vol. 1, Page]] 442 THE SECRET DOCTRINE.

the Dove, are "the sacred animals" of the Western Bible, the first three being found grouped round the Evangelists; and the fourth (the human face) is a Seraph, i.e., a fiery serpent, the Gnostic Agathodaemon probably.* As explained, the "sacred animals" and the Flames or "Sparks" within the "Holy Four" refer to the prototypes of all that is found in the Universe in the Divine Thought, in the ROOT, which is the perfect cube, or the foundation of the Kosmos collectively and individually. They have all an occult reference to primordial Cosmic forms and its first concretions, work, and evolution.

In the earliest Hindu exoteric cosmogonies, it is not even the Demiurge who creates. For it is said in one of the Puranas that: "The great Architect of the World gives the first impulse to the rotatory motion of our planetary system by stepping in turn over each planet and body." It is this action "that causes each sphere to turn around itself, and all around the Sun." After which action, "it is the Brahmandica, the Solar and Lunar Pitris (the Dhyani-Chohans)" who take charge of their respective spheres (earths and planets), to the end of the Kalpa." The Creators are the Rishis; most of whom are credited with the authorship of the mantras or Hymns of the Rig Veda. They are sometimes seven, sometimes ten, when they become prajapati, the "Lord of Beings"; then they rebecome the seven and the fourteen Manus, as the representatives of the seven and fourteen cycles of Existence ("Days of Brahma"); thus answering to the seven AEons, when at the end of the first stage of Evolution they are transformed into the seven stellar Rishis, the Saptarishis; while their human doubles appear as heroes, Kings and Sages on this earth.

[[Footnote(s)]] -----

[[Footnote continued from previous page]] when thou shalt have thirty three years of age thou wilt comprehend me." So with the mystery of the tortoise. Rejoicing over the poetry of Biblical metaphors, associating with the name of Jehovah, "incandescent stones," "sacred animals," etc., and quoting from the Bible de Vence (Vol. XIX. p. 318) a French pious writer says: "Indeed all of them are Elohim like their God; for, these Angels assume, through a holy usurpation, the very divine name of Jehovah each time they represent him." (Pneumatologie, Vol. II., p. 294). No one ever doubted that the NAME must have been assumed, when under the guise of the Infinite, One Incognizable, the Malachim (messengers) descended to eat and drink with men. But if the Elohim (and even lower Beings), assuming the god-name, were and are still worshipped, why should the same Elohim be called devils, when appearing under the names of other Gods?

* The choice is curious, and shows how paradoxical were the first Christians in their selections. For why should they have chosen these symbols of Egyptian paganism, when the eagle is never mentioned in the New Testament save once, when Jesus refers to it as a carrion eater? (Matt. xxiv. 28); and in the Old Testament it is called unclean; that the Lion is made a point of comparison with Satan, both roaring for men to devour; and the oxen are driven out of the Temple. On the other hand the Serpent, brought as an exemplar of wisdom to follow, is now regarded as the symbol of the Devil. The esoteric pearl of Christ's religion degraded into Christian theology, may indeed be said to have chosen a strange and unfitting shell to be born in and evolved from.

[[Vol. 1, Page]] 443 THE MYSTERY OF BLACKNESS.

The Esoteric doctrine of the East having thus furnished and struck the key-note -- which is as scientific as it is philosophical and poetical, as may be seen, under its allegorical garb -- every nation has followed its lead. It is from the exoteric religions that we have to dig out the root-idea before we turn to esoteric truths, lest the latter should be rejected. Furthermore, every symbol -- in every national religion -- may be read esoterically, and the proof furnished for its being correctly read by transliterating it into its corresponding numerals and geometrical forms -- by the extraordinary agreement of all -- however much the glyphs and symbols may vary among themselves. For in the origin those symbols were all identical. Take, for instance, the opening sentences in various cosmogonies: in every case it is either a circle, an egg, or a head. DARKNESS is always associated with this first symbol and surrounds it, -- as shown in the Hindu, the Egyptian, the Chaldeo-Hebrew and even the Scandinavian systems -- hence black ravens, black doves, black waters and even black flames; the seventh tongue of Agni, the fire-god being called "Kali," "the black," as it was a black flickering flame. Two black doves flew from Egypt and settling on the oaks of Dodona, gave their names to the Grecian gods. Noah lets out a black raven after the deluge, which is a symbol for the Cosmic pralaya, after which began the real creation or evolution of our earth and humanity. Odin's black ravens fluttered around the Goddess Saga and "whispered to her of the past and of the future." What is the real meaning of all those black birds? They are all connected with the primeval wisdom, which flows out of the pre-cosmic Source of all, symbolised by the Head, the Circle, the Egg; and they all have an identical meaning and relate to the primordial Archetypal man (Adam Kadmon) the creative origin of all things, which is composed of the Host of Cosmic Powers -- the Creative Dhyani-Chohans, beyond which all is darkness.

Let us inquire of the wisdom of the Kabala -- even veiled and distorted as it now is, -- to explain in its numerical language an approximate meaning, at least of the word "raven." This is its number value as given in the "Source of Measures."

"The term Raven is used but once, and taken as eth-h'orebv [[diagram]], = 678, or 113 x 6; while the Dove is mentioned five times. Its value is 71, and 71 x 5 = 355. Six diameters, or the raven, crossing, would divide the circumference of a circle of 355 into 12 parts or compartments; and 355 subdivided for each unit by 6, would equal 213-0, or the head ("beginning") in the first verse of Genesis. This divided or subdivided, after the same fashion, by 2, or the 355 by 12, would give 213-2, or the word B'rash, [[diagram]], or the first word of Genesis, with its prepositional prefix, signifying the same concentered general form

[[Vol. 1, Page]] 444 THE SECRET DOCTRINE.

astronomically, with the one here intended." Now the secret reading of the first verse of Genesis being: "In Rash (B'rash) or head, developed gods, the Heavens and the Earth" -- it is easy to comprehend the esoteric meaning of the raven, once that the like meaning of the Flood (or Noah's Deluge) is ascertained. Whatever the many other meanings of this emblematical allegory may be, its chief meaning is that of a new cycle and a new Round (our Fourth Round.)* The "Raven," or the Eth-H'Orebv, yields the same numerical value as the "Head," and returned not to the ark, while the dove returned, carrying the olive-branch, when Noah, the new man of the new Race (whose prototype is Vaivasvata Manu), prepared to leave the ark, the womb (or Argha) of terrestrial nature, is the symbol of the purely spiritual, sexless and androgyne man of the first three Races, who vanished from earth for ever. Numerically Jehovah, Adam, Noah, are one in the Kabala: at best, then, it is Deity descending on to Ararat (later on Sinai), to incarnate in man his image, through the natural process, henceforth: the mother's womb, whose symbols are the ark, the mount (Sinai), etc., in Genesis. The Jewish allegory is at once astronomical, and purely physiological rather than anthropomorphic.

And here lies the abyss between the two systems (Aryan and Semitic), though built on the same foundation. As shown by an expounder of the Kabala, "the basic idea underlying the philosophy of the Hebrews was that God contained all things within himself and that man was his image; man, including woman (as Androgynes);" and that "geometry and numbers (and measures applicable to astronomy) are contained in the terms man and woman; and the apparent incongruity of such a mode was eliminated by showing the connection of man and woman with a particular system of numbers and measures and geometry, by the parturient time-periods, which furnished the connecting link between the terms and the facts shown, and perfected the mode used." It is argued that, the primal cause being absolutely incognizable, "the symbol of its first comprehensible manifestation was the conception of a circle with its diameter line, so as at once to carry the idea of geometry, phallicism, and astronomy;" and this was finally applied to the "signification of simply human generative organs."** Hence the whole cycle of events

[[Footnote(s)]] -----

* Bryant is right in saying "Druid Bardesin says of Noah that when he came out of the ark (the birth of a new cycle), after a stay therein of a year and a day, that $364 + 1 = 365$ days, he was congratulated by Neptune upon his birth from the waters of the Flood, who wished him a happy New Year." The "Year," or cycle, esoterically, was the new race of men born from woman after the separation of the sexes, which is the secondary meaning of the allegory: its primary meaning being the beginning of the Fourth Round, or the new Creation.

** Unpubl. MSS. (But see "Source of Measures.")

[[Vol. 1, Page]] 445 GOD IS OUR HIGHER SELF.

from Adam and the Patriarchs down to Noah is made to apply to phallic and astronomical uses, the one regulating the other, as the lunar periods, for instance. Hence, too, their genesis begins after their coming out of the Ark, and the close of the flood -- at the Fourth Race. With the Aryan people it is different.

Eastern Esotericism has never degraded the One Infinite Deity, the container of all things, to such uses; and this is shown by the absence of Brahma from the Rig Veda and the modest positions occupied therein by Rudra and Vishnu, who became the powerful and great Gods, the "Infinities" of the exoteric creeds, ages later. But even they, "Creators" as the three may be, are not the direct creators and "forefathers of men." The latter are shown occupying a still lower scale, and are called Prajapatis, the Pitris (our lunar ancestors), etc., etc. -- never the "One Infinite God." Esoteric philosophy shows only physical man as created in the image of the Deity: but the latter is but "the minor gods." It is the HIGHER-SELF, the real EGO who alone is divine and GOD.

[[Vol. 1, Page]] 445 GOD IS OUR HIGHER SELF.

§ XIII.
THE SEVEN CREATIONS.

"THERE was neither day nor night, nor sky nor earth, nor darkness nor light, nor any other thing save only ONE, unapprehensible by intellect, or THAT which is Brahma and Pumis (Spirit) and Pradhana (crude matter)" (Veda: "Vishnu Purana Commentary"); or literally: "One Pradhanika Brahma Spirit: THAT was." The "Pradhanika Brahma Spirit" is Mulaprakriti and Parabrahmam.

In Vishnu Purana, Parasara says to Maitreya, his pupil:-- "I have thus explained to you, excellent Muni, six creations. . . . the creation of the Arvaksrotas beings was the seventh, and was that of man." Then he proceeds to speak of two additional and very mysterious creations, variously interpreted by the commentators.

Origen, commenting upon the books written by Celsus, his opponent -- books which were all destroyed by the prudent Church Fathers - - evidently answers the objections of his contradictor and reveals his system at the same time. This was evidently septenary. But his theogony, the genesis of the stars or planets, that of sound and colour, all found as an answer satire, and no better. Celsus, you see, "desiring to exhibit his learning," speaks of a ladder of creation with seven gates, and on the top

[[Vol. 1, Page]] 446 THE SECRET DOCTRINE.

of it the eighth -- ever closed. The mysteries of the Persian Mithras are explained and "musical reasons, moreover, are added." And to these again he strives "to add a second explanation connected also with musical considerations,"* -- i.e., with the seven notes of the scale, the Seven Spirits of the Stars, &c., &c.

Valentinus expatiates upon the power of the great Seven, who were called to bring forth this universe after Ar(r)hetos, or the Ineffable, whose name is composed of seven letters, had represented the first hebdomad. This name (Ar(r)hetos) is one to indicate the Sevenfold nature of the One (the logos). "The goddess Rhea," says Proclus in Timaeus (p. 121), "is a Monad, Duad, and Heptad," comprehending in herself all the Titanidae, "who are seven."

The Seven Creations are found in almost every Purana. They are all preceded by what Wilson translates -- "the indiscrete Principle," absolute Spirit independent of any relation with objects of sense. They are -- (1) Mahattattwa, the Universal Soul, Infinite Intellect, or Divine Mind; (2) Bhuta or Bhutasarga, elemental creation, the first differentiation of Universal indiscrete Substance; (3) Indriya or Aindriyaka, organic evolution. "These three were the Prakrita creations, the developments of indiscrete nature preceded by indiscrete principle"; (4) Mukhya, the fundamental creation of perceptible things, was that of inanimate bodies**; (5) Tairyagyonya, or Tiryaksrotas, was that of animals; (6) Urdhwasrotas, or that of divinities*** (?); (7) Arvaksrotas, was that of man. (See Vishnu Purana.)

This is the order given in the exoteric texts. According to esoteric teaching there are seven primary, and seven secondary "creations;" the former being the Forces self-evolving from the one causeless FORCE; the latter, showing the manifested Universe emanating from the already differentiated divine elements.

Esoterically, as well as exoterically, all the above enumerated Creations stand for the (7) periods of Evolution, whether after an "Age" or a "Day" of Brahma. This is the teaching par excellence of Occult Philosophy, which, however, never uses the term "creation," nor even that of evolution, "with regard to primary 'Creation':" but calls all such forces "the aspects of the Causeless Force." In the Bible

[[Footnote(s)]] -----

* Origen contra Celsum, b. vi., chap. xxii.

** The text says: "And the fourth creation is here the primary, for things immovable are emphatically known as primary." (See Fitzedward Hall's Corrections.)

*** How can "divinities" have been created after the animals? The esoteric meaning of the expression "animals" is the germs of all animal life including man. Man is called a sacrificial animal, and an animal that is the only one among animal creation who sacrifices to the gods. Moreover, by the "sacred animals," the 12 signs of the zodiac are often meant in the sacred texts, as already stated.

[[Vol. 1, Page]] 447 THE ORDER OF THE EVOLUTION.

the seven periods are dwarfed into the six days of creation and the seventh day of rest, and the Westerns adhere to the letter. In the Hindu philosophy, when the active Creator has produced the world of gods, the germs of all the undifferentiated elements and the rudiments of future senses (the world of noumena, in short), the Universe remains unaltered for a "Day of Brahma," a period of 4,320,000,000 years. This is the seventh passive period or the "Sabbath day" of Eastern philosophy, that follows six periods of active evolution. In the Satapatha Brahmana "Brahma" (neuter), the absolute Cause of all Causes, radiates the gods. Having radiated the gods (through its inherent nature) the work is interrupted. In the 1st Book of Manu it is said, "At the expiration of each night (pralaya) Brahma, having been asleep, awakes, and, through the sole energy of the motion, CAUSES to emanate from itself the spirit, which in its essence is, and yet is not."

In the Sepher Jezirah, the Kabalistic Book of Creation, the author has evidently repeated the words of Manu. In it the Divine Substance is represented as having alone existed from the eternity, boundless and absolute; and as having emitted from itself the Spirit. "One is the Spirit of the living God, blessed be his Name, who liveth for ever! Voice, Spirit, and Word, this is the Holy Spirit." (Sepher Jezireh, chap. 1, Mishna IX.) And this is the Kabalistic abstract Trinity, so unceremoniously anthropomorphized by the Fathers. From this triple ONE emanated the whole Kosmos. First from ONE emanated number TWO, or Air, the creative element; and then number THREE, Water, proceeded from the air; Ether or Fire complete the mystic four, the Arba-il. (Ibid.) In the Eastern doctrine Fire is the first Element -- Ether, synthesizing the whole (since it contains all of them).

In the Vishnu Purana, the whole seven periods are given, and the progressive Evolution of "Spirit-Soul," and of the seven forms of matter (or principles) are shown. It is impossible to enumerate them in this work. The reader is asked to peruse one of the Puranas.

"R. Yehudah began, it is written: 'Elohim said: Let there be a firmament, in the midst of waters. . . . At the time that the Holy . . . created the world, He (they) created seven heavens Above. He created seven earths Below, seven seas, seven days, seven rivers, seven weeks, seven years, seven times, and 7,000 years that the world has been. . . . the seventh of all the millennium. So here are seven earths Below, they are all inhabited except those which are above, and those . . . below. And . . . between each earth, a heaven (firmament) is spread out between each other. . . . And there are in them (these earths) creatures who look different from each other . . . but if you object and say that all the children of the world came out from Adam,

it is not so. . . . And the lower earths, where do they come from? They are from the chain of the earth, and from the heaven below," etc., etc.*

Irenaeus is our witness (and a very unwilling one, too) that the Gnostics taught the same system, veiling very carefully the true esoteric meaning. This "veiling," however, is identical with that of the Vishnu Purana and others. Thus Irenaeus writes of the Marcosians: "They maintain that first of all the four elements, fire, water, earth and air, were produced after the image of the primary tetrad above, and that then if we add their operations, namely, heat, cold, dryness and moisture, an exact likeness of the ogdoad is presented." (B. i. ch. xvii.)

Only this "likeness" and the ogdoad itself is a blind, just as in the seven creations of the Vishnu Puranas, to which two more are added of which the eighth, termed Anugraha, "possesses both the qualities of goodness and darkness," a Sankhyan more than a Puranic idea. For Irenaeus says again (b. l. xxx. 6) that "they (the Gnostics) had a like eighth creation which was good and bad, divine and human. They affirm that man was formed on the eighth day. Sometimes they affirm that he was made on the sixth day, and at others on the eighth; unless, perchance, they mean that his earthly part was formed on the sixth day and his fleshly part (?) on the eighth day; these two being distinguished by them."

They were so "distinguished," but not as Irenaeus gives it. The Gnostics had a superior Hebdomad, and an inferior one, in Heaven; and a third terrestrial Hebdomad, on the plane of matter. IAO, the mystery god and the Regent of the Moon, as given in Origen's chart, was the chief of these superior "Seven Heavens,"** hence identical with the chief of the lunar Pitris, that name being given by them to the lunar Dhyana-Chohans. "They affirm that these seven heavens are intelligent, and speak of them as being angels," writes the same Irenaeus; and adds that on this account they termed IAO Hebdomas, while his mother was called "Ogdoas," because, as he explains, "she preserved the number of the first begotten and primary Ogdoad of the Pleroma." (Ibid. b. l, v. 2).

This "first begotten Ogdoad" was (a) in theogony the second Logos (the manifested) because he was born of the Seven-fold first Logos, hence he is the eighth on this manifested plane; and (b) in astrology, it was the Sun, Martanda -- the eighth son of Aditi, whom she rejects while preserving her Seven Sons, the planets. For the ancients have never regarded the Sun as a planet, but as a central and fixed Star. This, then, is the second Hebdomad born of the Seven-rayed one, Agni, the Sun

[[Footnote(s)]] -----

* Qabbalah, p. 415-16, by T. Myer, Philadelphia.

** Superior to the Spirits or "Heavens" of the Earth only.

and what not, only not the seven planets, which are Surya's brothers, not his Sons. These Astral gods, whose chief with the Gnostics was Ildabaoth* (from Ilda "child," and Baoth "the egg"), the son of Sophia Achamoth, the daughter of Sophia (Wisdom), whose region is the Pleroma, were his (Ildabaoth's) sons. He produces from himself these six stellar spirits: Jove (Jehovah), Sabaoth, Adonai, Eloï, Osraios, Astaphaios,** and it is they who are the second, or inferior Hebdomad. As to the third, it is composed of the seven primeval men, the shadows of the lunar gods, projected by the first Hebdomad. In this the Gnostics did not, as seen, differ much from the esoteric doctrine except that they veiled it. As to the charge made by Irenaeus, who was evidently ignorant of the true tenets of the "Heretics," with regard to man being created on the sixth day, and man being created on the eighth, this relates to the mysteries of the inner man. It will become comprehensible to the reader only after he has read Book II., and understood well the Anthropogenesis of the Esoteric doctrine.

Ildabaoth is a copy of Manu. The latter boasts, "Oh, best of twice-born men! Know that I (Manu) am he, the creator of all this world, whom that male Viraj . . . spontaneously produced" (I., 33). He first creates the ten lords of Being, the Prajapatis, who, as verse 36 says . . . "produce seven other Manus." (The Ordinances of Manu.) Ildabaoth does likewise: "I am Father and God, and there is no one above me," he exclaims. For which his mother coolly puts him down by saying, "Do not lie, Ildabaoth, for the father of all, the first man (Anthropos) is above thee, and so is Anthropos, the Son of Anthropos" (Irenaeus, b. l, ch. xxx., 6). This is a good proof that there were three Logoi (besides the Seven born of the First), one of these being the Solar Logos. And, again, who was that "Anthropos" himself, so much higher than Ildabaoth? The Gnostic records alone can solve this riddle. In Pistis Sophia the four-vowelled name IEOV is in each case accompanied by the epithet of "the Primal, or First man." This shows again that the gnosis was but an echo of our archaic doctrine. The names answering to Parabrahm, to Brahm, and Manu (the first thinking man) are composed of one-vowelled, three-vowelled and seven-vowelled sounds. Marcus, whose philosophy was certainly more Pythagorean than anything else, speaks of a revelation to him of the seven heavens sounding each one vowel as they pronounced the seven names of the seven (angelic) hierarchies.

When spirit has permeated every minutest atom of the seven principles of Kosmos, then the secondary creation, after the above-mentioned period of rest, begins.

[[Footnote(s)]] -----

* See "Isis Unveiled," Vol. II., p. 183.

** See also King's Gnostics. Other sects regarded Jehovah as Ildabaoth himself King identifies him with Saturn.

[[Vol. 1, Page]] 450 THE SECRET DOCTRINE.

"The creators (Elohim) outline in the second 'hour' the shape of man," says Rabbi Simeon (The Nuctameron of the Hebrews). "There are twelve hours in the day," says the Mishna, "and it is during these that creation is accomplished." The "twelve hours of the day" are again the dwarfed copy, the faint, yet faithful, echo of primitive Wisdom. They are like the 12,000 divine years of the gods, a cyclic blind. Every "Day of Brahma" has 14 Manus, which the Hebrew Kabalists, following, however, in this the Chaldeans, have disguised into 12 "Hours." The Nuctameron of Apollonius of Tyana is the same thing. "The Dodecahedron lies concealed in the perfect Cube," say the Kabalists. The mystic meaning of this is, that the twelve great transformations of Spirit into matter (the 12,000 divine years) take place during the four great ages, or the first Mahayuga. Beginning with the metaphysical and the supra-human, it ends in the physical and purely human natures of Kosmos and man. Eastern philosophy can give the number of mortal years that run along the line of spiritual and physical evolutions of the seen and the unseen, if Western science fails to do so.

Primary Creation is called the Creation of Light (Spirit); and the Secondary -- that of Darkness (matter).** Both are found in Genesis, chap. i., v. 2, and at the beginning of chapter ii. The first is the emanation of self-born gods (Elohim); the second of physical nature.

This is why it is said in the Zohar:-- "Oh, companions, companions, man as emanation was both man and woman; as well on the side of the FATHER as on the side of the MOTHER. And this is the sense of the words:-- And Elohim spoke: 'Let there be Light and it was Light!' . . . And this is the 'two-fold man'" Light, moreover, on our plane, is darkness in the higher spheres.

"Man and woman on the side of the FATHER" (Spirit) refers to Primary Creation; and on the side of the Mother (matter) to the secondary. The two-fold man is Adam Kadmon, the male and female abstract prototype and the differentiated Elohim. Man proceeds from the Dhyan Chohan, and is a "Fallen Angel," a god in exile, as will be shown.

In India these creations were described as follows:--

(I.) Mahat-tattwa creation -- so-called because it was the primordial self-evolution of that which had to become Mahat -- the "divine MIND, conscious and intelligent"; esoterically, "the spirit of the Universal soul." . . . "Worthiest of ascetics, through its potency (the potency of that cause); every produced cause comes by its proper nature." (Vishnu Purana.) "Seeing that the potencies of all beings are under-

[[Footnote(s)]] -----

* Elsewhere, however, the identity is revealed. See supra, the quotation from Ibn-Gabirol and his 7 heavens, 7 earths, etc.

** This must not be confused with precosmic "DARKNESS," the Divine ALL.

[[Vol. 1, Page]] 451 MANY VERSIONS OF THE ONE TRUTH.

stood only through the knowledge of That (Brahma), which is beyond reasoning, creation, and the like, such potencies are referable to Brahma." THAT, then, precedes the manifestation. "The first was Mahat," says Linga Purana; for the ONE (the That) is neither first nor last, but ALL. Exoterically, however, this manifestation is the work of the "Supreme One" (a natural effect, rather, of an Eternal Cause); or, as the Commentator says, it might have been understood to mean that Brahma was then created (?), being identified with Mahat, active intelligence or the operating will of the Supreme. Esoteric philosophy renders it "the operating LAW."

It is on the right comprehension of this tenet in the Brahmanas and Puranas that hangs, we believe, the apple of discord between the three Vedantin Sects: the Advaita, Dwaita, and the Visishtadvaitas. The first arguing rightly that Parabrahman, having no relation, as the absolute all, to the manifested world -- the Infinite having no connection with the finite -- can neither will nor create; that, therefore, Brahma, Mahat, Iswara, or whatever name the creative power may be known by, creative gods and all, are simply an illusive aspect of Parabrahmam in the conception of the conceivers; while the other sects identify the impersonal Cause with the Creator, or Iswara.

Mahat (or Maha-Buddhi) is, with the Vaishnavas, however, divine mind in active operation, or, as Anaxagoras has it, "an ordering and disposing mind, which was the cause of all things," -- [[Nous o diakosmonte kai panton aitios]].

Wilson saw at a glance the suggestive connection between Mahat and the Phoenician Mot, or Mut, who was female with the Egyptians -- the Goddess Mout, the "Mother" -- "which, like Mahat," he says, "was the first product of the mixture (?) of Spirit and matter, and the first rudiment of Creation": "Ex connexione autem ejus spiritus prodidit Mot From whose seed were created all living things" -- repeats Brucker (l., 240) -- giving it a still more materialistic and anthropomorphic colouring.

Nevertheless, the esoteric sense of the doctrine is seen through every exoteric sentence on the very face of the old Sanscrit texts that treat of primordial Creation. "The Supreme Soul, the all permeant (Sarvaga) Substance of the World, having entered (been drawn) into matter (prakriti) and Spirit (purusha), agitated the mutable and the immutable principles the season of Creation (manvantara) having arrived."* . . .

[[Footnote(s)]] -----

* The nous of the Greeks, which is (spiritual or divine) mind, or mens, "Mahat," operates upon matter in the same way; it "enters into" and agitates it:

"Spiritus intus alit, totamque infusa per artus,
Mens agitat molem, et magno se corpore miscet."

In the Phoenician Cosmogony, "Spirit mixing with its own principles gives rise to [[Footnote continued on next page]]

[[Vol. 1, Page]] 452 THE SECRET DOCTRINE.

Esoteric doctrine teaches that the Dhyani Chohans are the collective aggregate of divine Intelligence or primordial mind, and that the first Manus -- the seven "mind-born" Spiritual Intelligences -- are identical with the former. Hence the "Kwan-shi-yin" -- "the golden Dragon in whom are the seven," of Stanza III. -- is the primordial Logos, or Brahma, the first manifested creative Power; and the Dhyani-Energies are the Manus, or Manu-Swayambhuva collectively. The direct connection, moreover, between the "Manus" and "Mahat" is easy to see. Manu is from the root man, "to think"; and thinking proceeds from the mind. It is, in Cosmogony, the pre-nubular period.

(II.) "The second Creation," "Bhuta," was of the rudimental principles (Tanmatras), thence termed the elemental creation (Bhuta-sarga).* It is the period of the first breath of the differentiation of the pre-Cosmic Elements or matter. Bhutadi means literally "the origin of the Elements," and precedes Bhuta-sarga -- the "creation" or differentiation of those Elements in primordial "Akasa" (Chaos or Vacuity).** In the "Vishnu Purana" it is said to proceed along, and belong to, the triple aspect of Ahankara, translated Egotism, but meaning rather that untranslatable term the "I-AM-NESS," that which first issues from "Mahat," or divine mind; the first shadowy outline of Self-hood, for "pure" Ahankara becomes "passionate" and finally "rudimental"

[[Footnote(s)]] -----

[[Footnote continued from previous page]] creation" also; (Brucker, I., 240); the Orphic triad shows an identical doctrine: for there Phanes (or Eros), Chaos, containing crude undifferentiated Cosmic matter, and Chronos (time), are the three co-operating principles, emanating from the Unknowable and concealed point, which produce the work of "Creation." And they are the Hindu Purusha (phanes), Pradhana (chaos), and Kala (Chronos) or time. The good Professor Wilson does not like the idea, as no Christian clergyman, however liberal, would. He remarks that "as presently explained, the mixture (of the Supreme Spirit or Soul) is not mechanical; it is an influence or effect exerted upon intermediate agents which produce effects." The sentence in Vishnu Purana: "As fragrance affects the mind from its proximity merely, and not from any immediate operation upon mind itself, so the Supreme influenced the elements of creation," the reverend and erudite Sanscritist correctly explains . . . : "As perfumes do not delight the mind by actual contact, but by the impression they make upon the sense of smelling, which communicates it to the mind," adding: "The entrance of the Supreme into spirit, as well as matter, is less intelligible than the view elsewhere taken of it, as the infusion of spirit, identified with the supreme, into Prakriti or matter alone." He prefers the verse in Padma Purana: "He who is called the male (spirit) of Prakriti . . . that same divine Vishnu entered into Prakriti." This "view" is certainly more akin to the plastic character of certain verses in the Bible concerning the Patriarchs, such as Lot (Gen. xix., 34-38) and even Adam (iv., v. 1), and others of a still more anthropomorphic nature. But it is just that which led Humanity to Phallicism, Christian religion being honeycombed with it, from the first chapter of Genesis down to the Revelation.

* All these sentences are quoted from "Vishnu Purana," Book I., ch. v.

** Vishnu is both Bhutesa, "Lord of the Elements, and all things," and Viswarupa, "Universal Substance or Soul."

[[Vol. 1, Page]] 453 THE SEVEN CREATIONS.

(initial); it is "the origin of conscious as of all unconscious being," though the Esoteric school rejects the idea of anything being "unconscious" -- save on this (our) plane of illusion and ignorance. At this stage of the Second Creation, the second hierarchy of the Manus appear, the Dhyani Chohans or Devas, who are the origin of Form (rupa): the Chitrasikhandina (bright-crested) or the Riksha -- those Rishis who have become the informing souls of the seven stars (of the Great Bear).* In astronomical and Cosmogonical language this Creation relates to the first stage of Cosmic-life, the Fire-Mist Period after its Chaotic stage,** when atoms issue from Laya.

(III.) The third (the Indriya) was the modified form of Ahankara, the conception of "I," (from "Aham," "I") termed the organic Creation, or creation of the senses (Aindriyaka). "These three were the Prakriti creation, the (discrete) developments of indiscrete nature preceded by the indiscrete principle." "Preceded by," ought to be replaced here with "beginning by," Buddhi; for the latter is neither a discrete nor an indiscrete quantity, but partakes of the nature of both, in man as in Kosmos: a unit -- a human MONAD on the plane of illusion -- when once freed from the three forms of Ahankara and liberated from its terrestrial manas, Buddhi becomes truly a continued quantity, both in duration and extension, because eternal and immortal. Earlier it is stated, that the third Creation "abounding with the quality of goodness, is termed Urdhvasrotas"; and a page or two further the Urdhvasrotas creation is referred to as

"the sixth creation . . . that of the divinities" (p. 75). This shows plainly that earlier as well as later manvantaras have been purposely confused, to prevent the pro-

[[Footnote(s)]] -----

* See concerning their post-types, the Treatise written by Trithemius (Agrippa's master, 16th cent.). "Concerning the seven secondaries, or Spiritual Intelligences, who, after God, actuate the Universe;" giving out, besides secret cycles and several prophecies, certain facts and beliefs about the Genii, or the Elohim, which preside over and guide the septenary stages of the World's Course.

** From the first, the Orientalists have found themselves beset by great difficulties with regard to any possible order in the Puranic Creations. Brahma is very often confused with Brahm, by Wilson, for which he is criticised by his successors. The "Original Sanscrit Texts" are preferred by Mr. Fitzedward Hall for the translation of Vishnu Purana and texts, to those used by Wilson. "Had Professor Wilson enjoyed the advantages which are now at the command of the student of Indian philosophy, unquestionably he would have expressed himself differently," as said by the editor of his works. This reminds one of the answer given by one of Thomas Taylor's admirers to those scholars who criticised his translations of Plato. "Thomas Taylor may have had less knowledge of the Greek than his critics have, but he understood Plato far better than they do," he said. Our present Orientalists disfigure the mystic sense of the Sanskrit texts far more than Wilson ever did, though the latter is undeniably guilty of very gross errors.

[[Vol. 1, Page]] 454 THE SECRET DOCTRINE.

fane from perceiving the truth. This is called "incongruity" and "contradictions" by the Orientalists.*

This "creation" of the immortals, the "Deva-Sarga," is the last of the first series, and has a universal reference; namely, to Evolutions in general, not specifically to our Manvantara; but the latter begins with the same over and over again, showing that it refers to several distinct Kalpas. For it is said "at the close of the past (Padma) Kalpa the divine Brahma awoke from his night of sleep and beheld the universe void." Then Brahma is shown going once more over the "seven creations" in the secondary stage of evolution, repeating the first three on the objective plane.

(IV.) The Mukhya, the Primary as it begins the series of four. Neither the word "inanimate" bodies nor yet immovable things, as translated by Wilson, gives a correct idea of the Sanskrit terms used. Esoteric philosophy is not the only one to reject the idea of any atom being inorganic, for it is found also in orthodox Hinduism. Moreover, Wilson himself says (in his collected Works, vol. iii., p. 381): "All the Hindu systems consider vegetable bodies as endowed with life . . ." Charachara, or the synonymous sthavara and jangama, is, therefore, inaccurately rendered by "animate and inanimate," "sentient beings," and "unconscious," or "conscious and unconscious beings," etc., etc. "Locomotive and fixed" would be better, since trees are considered to possess souls." Mukhya is the "creation" or organic evolution of the vegetable kingdom. In this secondary Period, the three degrees of Elemental or Rudimental Kingdoms are evolved in this world, corresponding inversely in order to the three Prakritic creations during the Primary period of Brahma's activity. As in that period, in the words of "Vishnu Purana": "The first creation was that of Mahat (Intellect), the second, of Tanmatras (rudimental principles), and the third, that of the senses (Aindriyaka)"; in this one, the order of the Elemental Forces stands thus: (1) The nascent centres of Force (intellectual and physical); (2) the rudimental principles -- nerve force, so to say; and (3) nascent apperception, which is the Mahat of the lower kingdoms, especially developed in the third order of Elementals; these are succeeded by the

[[Footnote(s)]] -----

* "The three Creations beginning with Intelligence are elemental, but the six creations which proceed from the series of which Intellect is the first are the work of Brahma" (Vayu-Purana). Here "creations" mean everywhere stages of Evolution. Mahat, "Intellect" or mind (which corresponds with Manas, the former being on the Cosmic, and the latter on the human plane) stands here, too, lower than Buddhi or Supra-divine Intelligence. Therefore, when we read in Linga Purana that "the first Creation was that of Mahat, Intellect being the first in manifestation," we must refer that (specified) creation to the first evolution of our system or even our Earth, none of the preceding ones being discussed in the Puranas, but only occasionally hinted at.

[[Vol. 1, Page]] 455 CREATIONS CONTINUED.

objective kingdom of minerals, in which latter that apperception is entirely latent, to re-develop only in the plants). The mukhya "Creation," then, is the middle point between the three lower and the three higher kingdoms, which represent the seven esoteric kingdoms of Kosmos, as of Earth.

(V.) The Tiryaksrotas (or Tairyagyonya) creation,* that of the "(sacred) animals," corresponding only on Earth, to the dumb animal creation. That which is meant by "animals," in primary Creation, is the germ of awakening consciousness or of apperception, that which is faintly traceable in some sensitive plants on Earth and more distinctly in the protistic monera.** On our globe, during the first round, animal "creation" precedes that of man, while the former (or mammal) evolves from the latter in our fourth round -- on the physical plane: in Round I. the animal atoms are drawn into a cohesion of human physical form; while in Round IV. the reverse occurs according to magnetic conditions developed during life. And this is metempsychosis (See "Mineral Monad" in "Five Years of Theosophy," p. 276). This fifth stage of evolution, called exoterically "Creation," may be viewed in both the Primary and Secondary periods, one as the Spiritual and Cosmic, the other as the material and terrestrial. It is Archibiosis, or life-origination -- "origination," so far, of course, as the manifestation of life on all the seven planes is concerned. It is at this period of Evolution that the absolutely eternal universal motion, or vibration, that which is called in Esoteric language "the GREAT BREATH," differentiates in the

primordial, first manifested ATOM. More and more, as chemical and physical sciences progress, does this occult axiom find its corroboration in the world of knowledge: the scientific hypothesis, that even the simplest elements of matter are identical in nature and differ from each other only owing to the variety of the distributions of atoms in the molecule or speck of substance, or by the modes of its atomic vibration, gains every day more ground.

Thus, as the differentiation of the primordial germ of life has to precede the evolution of the Dhyana Chohan of the third group or hierarchy of Being in Primary Creation, before those "gods" can become rupa (embodied in their first ethereal form), so animal creation has to precede,

[[Footnote(s)]] -----

* Professor Wilson translates it, as though animals were higher on the scale of "creation" than divinities, or angels, although the truth about the devas is very plainly stated further on. This "creation," says the text, is both primary (Prakrita) and secondary (Vaikrita). It is the latter, as regards the origin of the gods from Brahma (the personal anthropomorphic creator of our material universe); it is the former (primary) as affecting Rudra, who is the immediate production of the first principle. Rudra is not alone a title of Siva, but embraces agents of creation, angels and men, as will be shown further on.

** Neither plant nor animal, but an existence between the two.

[[Vol. 1, Page]] 456 THE SECRET DOCTRINE.

for that same reason, divine MAN on earth. And this is why we find in the Puranas: "The fifth, the Tairyagyonya creation, was that of animals, and --

(VI). The Urdhvasrotas creation, or that of divinities (Vishnu Purana Book I. chap. i.). But these (divinities) are simply the prototypes of the First Race, the fathers of their "mind-born" progeny with the soft bones.* It is these who became the Evolvers of the "Sweat-born" -- an expression explained in Book II. Finally, the sixth "Creation" is followed, and "Creation in general, closed by --

(VII.) The evolution of the "Arvaksrotas beings, which was the seventh, and was that of man" (Vishnu Purana, Book I.).

The "eighth creation" mentioned is no Creation at all; it is a blind again, for it refers to a purely mental process: the cognition of the "ninth" creation, which, in its turn, is an effect, manifesting in the secondary of that which was a "Creation" in the Primary (Prakrita) Creation.** The Eighth, then, called Anugraha (the Pratyayasarga or the intellectual creation of the Sankhyas, explained in Karika, v. 46, p. 146), is "that creation of which we have a perception" -- in its esoteric aspect -- and "to which we give intellectual assent (Anugraha) in contradistinction to organic creation." It is the correct perception of our relations to the whole range of "gods" and especially of those we bear to the Kumaras -- the so-called "Ninth Creation" -- which is in reality an aspect of or reflection of the sixth in our manvantara (the Vaivasvata). "There is a ninth, the Kumara Creation, which is both primary and secondary," says Vishnu Purana, the oldest of such texts.*** "The Kumaras," explains an esoteric text,

[[Footnote(s)]] -----

* "Created beings" -- explains Vishnu Purana -- "although they are destroyed (in their individual forms) at the periods of dissolution, yet being affected by the good or evil acts of former existences, are never exempted from their consequences. And when Brahma produces the world anew, they are the progeny of his will . . ." "Collecting his mind into itself (Yoga willing), Brahma creates the four orders of beings, termed gods, demons, progenitors, and MEN" . . . "progenitors" meaning the prototypes and Evolvers of the first Root Race of men. The progenitors are the Pitris, and are of seven classes. They are said in exoteric mythology to be born of Brahma's side, like Eve from the rib of Adam.

** "These notions," remarks Dr. Wilson, "the birth of Rudra and the saints, seem to have been borrowed from the Saivas, and to have been awkwardly engrafted upon the Vaishnava system." The esoteric meaning ought to have been consulted before venturing such a hypothesis.

*** Parasara, the Vedic Rishi, who received the Vishnu Purana from Pulastya and taught it to Maitreya, is placed by the Orientalists at various epochs. As correctly observed, in the Hindu Class. Dict:-- "Speculations as to his era differ widely from 575 B.C. to 1391 B.C., and cannot be trusted." Quite so; but no less, however, than any other date as assigned by the Sanskritists, so famous in this department of arbitrary fancy.

[[Vol. 1, Page]] 457 WHO THE KUMARAS ARE.

"are the Dhyanis, derived immediately from the supreme Principle, who reappear in the Vaivasvata Manu period, for the progress of mankind."* The commentator of the Vishnu Purana corroborates it, by remarking that "these sages live as long as Brahma; and they are only created by him in the first Kalpa, although their generation is very commonly and inconsistently introduced in the Varaha, or Padma Kalpa" (the secondary). Thus, the Kumaras are, exoterically, "the creation of Rudra or Nilalohita, a form of Siva, by Brahma, and of certain other mind-born sons of Brahma. But, in the esoteric teaching, they are the progenitors of the true spiritual SELF in the physical man -- the higher Prajapati, while the Pitris, or lower Prajapati, are no more than the fathers of the model, or type of his

physical form, made "in their image." Four (and occasionally five) are mentioned freely in the exoteric texts, three Kumaras being secret.** (Compare what is said of "The Fallen Angels" in Book II.).

The Exoteric four are: Sanat-Kumara, Sananda, Sanaka, and Sanatana; and the esoteric three are: Sana, Kapila, and Sanat-sujata. Special attention is once more drawn to this class of Dhyana Chohans, for herein lies the mystery of generation and heredity hinted at in Book I. (See the four Orders of Angelic Beings; Comment on Stanza VII.). Book II. explains their position in the divine Hierarchy. Meanwhile, let us see what the exoteric texts say about them.

They do not say much; nothing to him who fails to read between the lines. "We must have recourse, here, to other Puranas for the elucidation of this term," remarks Wilson, who does not suspect for one moment that he is in the presence of the "Angels of Darkness," the mythical "great enemy" of his Church. Therefore, he contrives to elucidate no more than that these (divinities) DECLINING TO CREATE PROGENY*** (and thus rebelling against Brahma), remained, as the name

[[Footnote(s)]] -----

* They may indeed mark a "special" or extra creation, since it is they who, by incarnating themselves within the senseless human shells of the two first Root-races, and a great portion of the Third Root-race -- create, so to speak, a new race: that of thinking, self-conscious and divine men.

** "The four Kumaras (are) the mind-born Sons of Brahma. Some specify seven" (H. Class. Dict.). All these seven Vaidhatra, the patronymic of the Kumaras, "the Maker's Sons," are mentioned and described in Iswara Krishna's "Sankhya Karika" with the Commentary of Gaudapadacharya (Sankaracharya's Paraguru) attached to it. It discusses the nature of the Kumaras, though it refrains from mentioning by name all the seven Kumaras, but calls them instead "the seven sons of Brahma," which they are, as they are created by Brahma in Rudra. The list of names it gives us is: Sanaka, Sanandana, Sanatana, Kapila, Ribhu, and Panchasikha. But these are again all aliases.

*** So untrustworthy are some translations of the Orientalists that in the French Translation of Hari-Vamsa, it is said "The seven Prajapati, Rudra, Skanda (his son) [[Footnote continued on next page]]

[[Vol. 1, Page]] 458 THE SECRET DOCTRINE.

of the first implies, ever boys, Kumaras: that is, ever pure and innocent, whence their creation is also called the "Kumara." (Book I. chap. v., Vishnu Purana.) The Puranas, however, may afford a little more light. "Being ever as he was born, he is here called a youth; and hence his name is well known as Sanat-Kumara" (Linga purana, prior section LXX. 174.) In the Saiva Purana, the Kumaras are always described as Yogins. The Kurma Purana, after enumerating them, says: "These five, O Brahmans, were Yogins, who acquired entire exemption from passion." They are five, because two of the Kumaras fell.

Of all the seven great divisions of Dhyana-Chohans, or Devas, there is none with which humanity is more concerned than with the Kumaras. Imprudent are the Christian Theologians who have degraded them into fallen Angels, and now call them "Satan" and Demons; as among these heavenly denizens who refuse to create, the Archangel Michael -- the greatest patron Saint of Western and Eastern Churches, under his double name of St. Michael and his supposed copy on earth, St. George conquering the DRAGON -- has to be allowed one of the most prominent places. (See Book II., "The Sacred Dragons and their Slayers.")

The Kumaras, the "mind-born Sons" of Brahma-Rudra (or Siva)

[[Footnote(s)]] -----

[[Footnote continued from previous page]] and Sanat-Kumara proceeded to create beings." Whereas, as Wilson shows, the original is: "These seven . . . created progeny; and so did Rudra, but Skanda and Sanat Kumara, restraining their power, abstained from creation." The "four orders of beings" are referred to sometimes as "Ambhamsi," which Wilson renders: "literally Waters," and believes it "a mystic term." It is one, no doubt; but he evidently failed to catch the real esoteric meaning. "Waters" and "water" stand as the symbol for Akasa, the "primordial Ocean of Space," on which Narayana, the self-born Spirit, moves: reclining on that which is its progeny (See Manu). "Water is the body of Nara; thus we have heard the name of water explained. Since Brahma rests on the water, therefore he is termed Narayana" (Linga, Vayu, and Markandeya Puranas). . . . Pure, Purusha created the Waters pure . . ." at the same time Water is the third principle in material Kosmos, and the third in the realm of the Spiritual: Spirit of Fire, Flame, Akasa, Ether, Water, Air, Earth, are the cosmic, sidereal, psychic, spiritual and mystic principles, pre-eminently occult, in every plane of being. "Gods, Demons, Pitris and men," are the four orders of beings to whom the term Ambhamsi is applied (in the Vedas it is a synonym of gods): because they are all the product of WATERS (mystically), of the Akasic Ocean, and of the Third Principle in nature. Pitris and men on earth are the transformations (rebirths) of gods and demons (Spirits) on a higher plane. Water is, in another sense, the feminine principle. Venus Aphrodite is the personified Sea, and the mother of the god of love, the generator of all the gods as much as the Christian Virgin Mary is Mare (the sea), the mother of the Western God of Love, Mercy and Charity. If the student of Esoteric philosophy thinks deeply over the subject he is sure to find out all the suggestiveness of the term Ambhamsi, in its manifold relations to the Virgin in Heaven, to the Celestial Virgin of the Alchemists, and even to the "Waters of Grace" of the modern Baptist.

[[Vol. 1, Page]] 459 THE PATRON-GUIDE OF ISRAEL.

the howling and terrific destroyer of human passions and physical senses, which are ever in the way of the development of the higher spiritual perceptions and the growth of the inner eternal man -- mystically,* are the progeny of Siva, the Mahayogi, the great patron of all the Yogis and mystics of India. They themselves, being the "Virgin-Ascetics," refuse to create the material being MAN. Well may they be suspected of a direct connection with the Christian Archangel Michael, the "Virgin Combatant" of the Dragon Apophis, whose victim is every soul united too loosely to its immortal Spirit, the Angel who, as shown by the Gnostics, refused to create just as the Kumaras did. (See Book II., "The Mystic Dragons and their Slayers.") . . . Does not that patron-Angel of the Jews preside over Saturn (Siva or Rudra), and the Sabbath, the day of Saturn? Is he not shown of the same essence with his father (Saturn), and called the "Son of Time," Kronos, or Kala (time), a form of Brahma (Vishnu and Siva)?" And is not "Old Time" of the Greeks, with its scythe and sand-glass, identical with the "Ancient of Days" of the Kabalists, the latter "Ancient" being one with the Hindu "Ancient of Days," Brahma (in his triune form), whose name is also "Sanat," the Ancient? Every Kumara bears the prefix of Sanat and Sana; and Sanaischara is Saturn, the planet (Sani and Sarra), the King Saturn whose Secretary in Egypt was Thot-Hermes the first. They are thus identified both with the planet and the god (Siva), who are, in their turn, shown the prototypes of Saturn, who is the same as Bel, Baal, Siva, and Jehovah Sabbaoth, The angel of whose face is MIKAEL ([[diagram]]) "who is as God"). He is the patron, and guardian Angel of the Jews, as Daniel tells us (v. 21); and, before the Kumaras were degraded, by those who were ignorant of their very name, into demons and fallen angels, the Greek Ophites, the occultly inclined predecessors and precursors of the Roman Catholic Church after its secession and separation from the primitive Greek Church, had identified Michael with their Ophiomorphos, the rebellious and opposing spirit. This means nothing more than the reverse aspect (symbolically) of Ophis -- divine Wisdom or Christos. In the Talmud, Mikael (Michael) is "Prince of Water" and the chief of the seven Spirits, for the same reason that his prototype (among many others) Sanat-Sujata,

[[Footnote(s)]] -----

* Siva-Rudra is the Destroyer, as Vishnu is the preserver; and both are the regenerators of spiritual as well as of physical nature. To live as a plant, the seed must die. To live as a conscious entity in the Eternity, the passions and senses of man must first DIE before his body does. "To live is to die and to die is to live," has been too little understood in the West. Siva, the destroyer, is the creator and the Saviour of Spiritual man, as he is the good gardener of nature. He weeds out the plants, human and cosmic, and kills the passions of the physical, to call to life the perceptions of the spiritual, man.

[[Vol. 1, Page]] 460 THE SECRET DOCTRINE.

-- the chief of the Kumaras -- is called Ambhamsi, "Waters," -- according to the commentary on Vishnu Purana. Why? Because the "Waters" is another name of the "Great Deep," the primordial Waters of space or Chaos, and also means "Mother," Amba, meaning Aditi and Akasa, the Celestial Virgin-Mother of the visible universe. Furthermore, the "Waters of the flood" are also called "the GREAT DRAGON," or Ophis, Ophio-Morphos.

The Rudras will be noticed in their Septenary character of "Fire-Spirits" in the "Symbolism" attached to the Stanzas in Book II. There we shall also consider the Cross (3 + 4) under its primeval and later forms, and shall use for purposes of comparison the Pythagorean numbers side by side with Hebrew Metrology. The immense importance of the number seven will thus become evident, as the root number of nature. We shall examine it from the standpoints of the Vedas and the Chaldean Scriptures, as it existed in Egypt thousands of years B.C., and as treated in the Gnostic records; we shall show how its importance as a basic number has gained recognition in physical Science; and we shall endeavour to prove that the importance attached to the number seven throughout all antiquity was due to no fanciful imaginings of uneducated priests, but to a profound knowledge of natural law.

§ XIV.
THE FOUR ELEMENTS.

METAPHYSICALLY and esoterically there is but One ELEMENT in nature, and at the root of it is the Deity; and the so-called seven elements, of which five have already manifested and asserted their existence, are the garment, the veil, of that deity; direct from the essence whereof comes MAN, whether physically, psychically, mentally or spiritually considered. Four elements only are generally spoken of in later antiquity, five admitted only in philosophy. For the body of ether is not fully manifested yet, and its noumenon is still "the Omnipotent Father -- AEther, the synthesis of the rest." But what are these "ELEMENTS" whose compound bodies have now been discovered by Chemistry and Physics to contain numberless sub-elements, even the sixty or seventy of which no longer embrace the whole number suspected. (Vide Addenda, §§ XI. and XII., quotations from Mr. Crookes' Lectures.) Let us follow their evolution from the historical beginnings, at any rate.

The four Elements were fully characterized by Plato when he said that they were that "which composes and decomposes the compound bodies."

[[Vol. 1, Page]] 461 ON THE ELEMENTS.

Hence Cosmolatry was never, even in its worst aspect, the fetishism which adores or worships the passive external form and matter of any object, but looked ever to the noumenon therein. Fire, Air, Water, Earth, were but the visible garb, the symbols of the informing, invisible Souls or Spirits -- the Cosmic gods to whom worship was offered by the ignorant, and simple, respectful recognition by the

wiser. In their turn the phenomenal subdivisions of the noumenal Elements were informed by the Elementals, so called, the "Nature Spirits" of lower grades.

In the Theogony of Mochus, we find Ether first, and then the air; the two principles from which Ulom the intelligible ([[noetos]]) God (the visible universe of matter) is born.*

In the Orphic hymns, the Eros-Phanes evolves from the Spiritual Egg, which the AETHEREAL winds impregnate, Wind being "the Spirit of God," who is said to move in AETHER, "brooding over the chaos" -- the Divine "Idea." In the Hindu Katakopanisad, Purusha, the Divine Spirit, already stands before the original matter, from whose union springs the great Soul of the World, "Maha = Atma, Brahm, the Spirit of Life;*** these latter appellations being again identical with the Universal Soul, or Anima Mundi, the Astral Light of the Theurgists and Kabalists, being its last and lowest division."

The [[stoicheia]], (Elements) of Plato and Aristotle, were thus the incorporeal principles attached to the four great divisions of our Cosmic World, and it is with justice that Creuzer defines those primitive beliefs . . . as a species of magism, a psychic paganism, and a deification of potencies; a spiritualization which placed the believers in a close community with these potencies," (Book IX, p. 850). So close, indeed, that the hierarchies of those potencies or Forces have been classified on a graduated scale of seven from the ponderable to the imponderable. They are Septenary, -- not as an artificial aid to facilitate their comprehension -- but in their real Cosmic gradation, from their chemical (or physical) to their purely spiritual composition. Gods -- with the ignorant masses -- gods independent and supreme; daemons with the fanatics, who, intellectual as they often may be, are unable to understand the Spirit of the philosophical sentence, in pluribus unum. With the hermetic philosopher they are FORCES relatively "blind," or "intelligent," according to which of the principles in them he deals with. It required long millenniums before they found themselves, in our cultured age, finally degraded into simple chemical elements.

At any rate, good Christians, and especially the Biblical Protestants,

[[Footnote(s)]] -----

* Movers: "Phoinizer," 282.

** Weber: "Akad. Vorles," 213, 214, etc.

[[Vol. 1, Page]] 462 THE SECRET DOCTRINE.

ought to show more reverence for the four Elements, if they would show any for Moses. For the Bible manifests the consideration and mystic significance in which they were held by the Hebrew Lawgiver, on every page of the Pentateuch. The tent which contained the Holy of Holies " was a Cosmic Symbol, sacred, in one of its meanings, to the Elements, the four cardinal points, and ETHER. Josephus shows it built in white, the colour of Ether. And this explains also why, in the Egyptian and the Hebrew temples -- according to Clemens Alexandrinus -- a gigantic curtain, supported by five pillars, separated the sanctum sanctorum (now represented by the altar in Christian churches) wherein the priests alone were permitted to enter, from the part accessible to the profane. By its four colours the curtain symbolized the four principal Elements, and signified the knowledge of the divine that the five senses of men can enable man to acquire with the help of the four Elements. (See Stromata I., v. § 6).

In Cory's Ancient Fragments, one of the "Chaldean Oracles" expresses ideas about the elements and Ether in language singularly like that of the Unseen Universe, written by two eminent scientists of our day.

It states that "from ether have come all things, and to it all will return; that the images of all things are indelibly impressed upon it; and that it is the store-house of the germs or of the remains of all visible forms, and even ideas. It appears as if this case strangely corroborates our assertion that whatever discoveries may be made in our days will be found to have been anticipated by many thousand years by our 'simple-minded ancestors.' " -- (Isis Unveiled.)

Whence came the four elements and the malachim of the Hebrews? They have been made to merge, by a theological sleight-of-hand on the part of the Rabbins and the later Fathers of the Church into Jehovah, but their origin is identical with that of the Cosmic gods of all other nations. Their symbols, whether born on the shores of the Oxus, on the burning sands of Upper Egypt, or in the wild forests, weird and glacial, which cover the slopes and peaks of the sacred snowy mountains of Thessaly, or again, in the pampas of America, their symbols, we repeat, when traced to their source, are ever one and the same. Whether Egyptian or Pelasgian, Aryan or Semitic, the genius loci, the local god, embraced in its unity all nature; but not especially the four elements any more than one of their creations, such as trees, rivers, mounts or stars. The genius loci -- a very late after-thought of the last sub-races of the Fifth Root-race, when the primitive and grandiose meaning had become nearly lost -- was ever the representative in his accumulated titles of all his colleagues. It was the god of fire, symbolised by thunder, as Jove or Agni; the god of water, symbolised by the fluvial bull or some sacred river or fountain, as Varuna, Neptune, etc.; the god of air, manifesting in the hurricane and tempest, as Vayu and Indra; and the god or spirit

[[Vol. 1, Page]] 463 THE COSMIC GODS.

of the earth, who appeared in earthquakes, like Pluto, Yama, and so many others.

These were the Cosmic gods, ever synthesizing all in one, as found in every cosmogony or mythology. Thus, the Greeks had their Dodonean Jupiter, who included in himself the four elements and the four cardinal points, and who was recognized, therefore, in old Rome under the pantheistic title of Jupiter Mundus; and who now, in modern Rome, has become the Deus Mundus, the one mundane god, who is made to swallow all others in the latest theology -- by the arbitrary decision of his special ministers.

As gods of Fire, Air, Water, they were celestial gods; as gods of the lower region, they were infernal deities: the latter adjective applying simply to the Earth. They were "Spirits of the Earth" under their respective names of Yama, Pluto, Osiris, the "Lord of the lower kingdom, etc., etc.," and their tellurian character proves it sufficiently.* The ancients knew of no worse abode after death than the Kamaloka, the limbus on this Earth. If it is argued that the Dodonean Jupiter was identified with Aidoneus, the king of the subterranean world, and Dis, or the Roman Pluto and the Dionysius Chthonios, the subterranean, wherein, according to Creuzer (I, vi., ch. 1), oracles were rendered, then it will become the pleasure of the Occultists to prove that both Aidoneus and Dionysius are the bases of Adonai, or "Jurbo Adonai," as Jehovah is called in Codex Nazaraeus. "Thou shalt not worship the Sun, who is named Adonai, whose name is also Kadush and El-EI" (Cod. Naz., I, 47; see also Psalm lxxxix., 18), and also "Lord Bacchus." Baal-Adonis of the Sods or Mysteries of the pre-Babylonian Jews became the Adonai by the Massorah, the later-vowelled Jehovah. Hence the Roman Catholics are right. All these Jupiters are of the same family; but Jehovah has to be included therein to make it complete. Jupiter-Aerios or Pan, the Jupiter Ammon, and the Jupiter-Bel-Moloch, are all correlations and one with Yurbo-Adonai, because they are all one cosmic nature. It is that nature and power which create the specific terrestrial symbol, and the physical and material fabric of the latter, which proves the Energy manifesting through it as extrinsic.

For primitive religion was something better than simple pre-occupation about physical phenomena, as remarked by Schilling; and principles, more elevated than we modern Sadducees know of, "were hidden under the transparent veil of such merely natural divinities as thunder,

[[Footnote(s)]] -----

* The Gehenna of the Bible was a valley near Jerusalem, where the monotheistic Jews immolated their children to Moloch, if the prophet Jeremiah is to be believed on his word. The Scandinavian Hel or Hela was a frigid region -- again Kamaloka -- and the Egyptian Amenti a place of purification. (See Isis Unveiled, Vol. II., p. 11.)

[[Vol. 1, Page]] 464 THE SECRET DOCTRINE.

the winds, and rain." The ancients knew and could distinguish the corporeal from the spiritual elements, in the forces of nature.

The four-fold Jupiter, as the four-faced Brahma -- the aerial, the fulgurant, the terrestrial, and the marine god -- the lord and master of the four elements, may stand as a representative for the great Cosmic gods of every nation. While passing power over the fire to Hephaistos-Vulcan, over the sea, to Poseidon-Neptune, and over the Earth, to Pluto-Aidoneus -- the AERIAL Jove was all these; for AETHER, from the first, had pre-eminence over, and was the synthesis of, all the elements.

Tradition points to a grotto, a vast cave in the deserts of Central Asia, whereinto light pours through its four seemingly natural apertures or clefts placed crossways at the four cardinal points of the place. From noon till an hour before sunset that light streams in, of four different colours, as averred -- red, blue, orange-gold, and white -- owing to some either natural or artificially prepared conditions of vegetation and soil. The light converges in the centre around a pillar of white marble with a globe upon it, which represents our earth. It is named the "grotto of Zaratushta."

When included under the arts and sciences of the fourth race, the Atlanteans, the phenomenal manifestation of the four elements, justly attributed by the believers in Cosmic gods to the intelligent interference of the latter, assumed a scientific character. The magic of the ancient priests consisted, in those days, in addressing their gods in their own language. "The speech of the men of the earth cannot reach the Lords. Each must be addressed in the language of his respective element" -- is a sentence which will be shown pregnant with meaning. "The Book of Rules" cited adds as an explanation of the nature of that Element-language: "It is composed of sounds, not words; of sounds, numbers and figures. He who knows how to blend the three, will call forth the response of the superintending Power" (the regent-god of the specific element needed).

Thus this "language" is that of incantations or of MANTRAS, as they are called in India, sound being the most potent and effectual magic agent, and the first of the keys which opens the door of communication between Mortals and the Immortals. He who believes in the words and teachings of St. Paul, has no right to pick out from the latter those sentences only that he chooses to accept, to the rejection of others; and St. Paul teaches most undeniably the existence of cosmic gods and their presence among us. Paganism preached a dual and simultaneous evolution: "creation" -- "spiritualem ac mundanum," as the Roman Church has it -- ages before the advent of that Roman Church. Exoteric phraseology has changed little with respect to divine hierarchies since the most palmy days of Paganism, or "Idolatry." Names alone have changed,

[[Vol. 1, Page]] 465 A CONFESSION OF SCIENCE.

along with claims which have now become false pretences. For when Plato put in the mouth of the Highest Principle -- "Father AEther" or Jupiter -- these words, for instance: "The gods of the gods of whom I am the maker (opifex) as I am the father of all their works (operumque parens)"; he knew the spirit of this sentence as fully, we suspect, as St. Paul did, when saying: "For though there be

that are called gods, whether in heaven or in earth, as there be gods many and lords many," . . . etc. (1 Cor. viii. 5.)* Both knew the sense and the meaning of what they put forward in such guarded terms.

Says Sir W. Grove, F.R.S., speaking of the correlation of forces, "The ancients when they witnessed a natural phenomenon, removed from ordinary analogies, and unexplained by any mechanical action known to them, referred it to a soul, a spiritual or preternatural power. . . . Air and gases were also at first deemed spiritual, but subsequently they became invested with a more material character; and the same words [[pneuma]], spirit, etc., were used to signify the soul or a gas; the very word gas, from geist, a ghost or spirit, affords us an instance of the gradual transmutation of a spiritual into a physical conception" (P. 89.) This, the great man of science (in his preface to the fifth edition of "Correlation of Physical Forces") considers as the only concern of exact science, which has no business to meddle with the CAUSES. "Cause and effect," he explains, "are therefore, in their abstract relation to these forces, words solely of convenience. We are totally unacquainted with the ultimate generating power of each and all of them, and probably shall ever remain so; we can only ascertain the norma of their actions; we must humbly refer their causation to one omnipresent influence, and content ourselves with studying their effects and developing, by experiment, their mutual relations" (p. xiv.).

This policy once accepted, and the system virtually admitted in the above-quoted words, namely, the spirituality of the "ultimate generating power," it would be more than illogical to refuse to recognise this quality which is inherent in the material elements, or rather, in their com-

[[Footnote(s)]] -----

* We cannot be taken to task by the Protestants for interpreting the verse from the Corinthians as we do; for, if the translation in the English Bible is made ambiguous, it is not so in the original texts, and the Roman Catholic Church accepts the words of the Apostle in their true sense. For a proof see the Commentaries on St. Paul's Epistles, by St. John Chrysostom "directly inspired by the Apostle," and "who wrote under his dictation," as we are assured by the Marquis de Mirville, whose works are approved by Rome. And St. Chrysostom says, commenting on that special verse, "And, though there are (in fact) they who are called gods . . . -- for it seems, there are really several gods -- withal, and for all that, the God-principle and the Superior God ceasing to remain essentially one and indivisible." . . . Thus spoke the old Initiates also, knowing that the worship of minor gods could never affect the "God Principle" (See de Mirville, "Des Esprits," vol. ii., 322).

[[Vol. 1, Page]] 466 THE SECRET DOCTRINE.

pounds -- as present in the fire, air, water or earth. The ancients knew these powers so well, that, while concealing their true nature under various allegories, for the benefit (or to the detriment) of the uneducated rabble, they never departed from the multiple object in view, while inverting them. They contrived to throw a thick veil over the nucleus of truth concealed by the symbol, but they ever tried to preserve the latter as a record for future generations, sufficiently transparent to allow their wise men to discern that truth behind the fabulous form of the glyph or allegory. They are accused of superstition and credulity, those ancient sages; and this by those very nations, which, learned in all the modern arts and sciences, cultured and wise in their generation, accept to this day as their one living and infinite God, the anthropomorphic "Jehovah" of the Jews.

What were some of the alleged "superstitions"? Hesiod believed, for instance, that "the winds were the sons of the giant Typhoeus," who were chained and unchained at will by AEolus, and the polytheistic Greeks accepted it along with Hesiod. Why should not they, since the monotheistic Jews had the same beliefs, with other names for their dramatis personae, and since Christians believe in the same to this day? The Hesiodic AEolus, Boreas, etc., etc., were named Kadim, Tzaphon, Daren, and Ruach Hajan by the "chosen people" of Israel. What is, then, the fundamental difference? While the Hellenes were taught that AEolus tied and untied the winds, the Jews believed as fervently that their Lord God, "with smoke coming out of his nostrils and fire out of his mouth, rode upon a cherub and did fly; and was seen upon the wings of the wind" (II. Sam., xxii. 9 and 11). The expressions of the two nations are either both figures of speech, or both superstitions. We think they are neither; but only arise from a keen sense of oneness with nature, and a perception of the mysterious and the intelligent behind every natural phenomenon, which the moderns no longer possess. Nor was it "superstitious" in the Greek pagans to listen to the oracle of Delphi, when, at the approach of the fleet of Xerxes, that oracle advised them to "sacrifice to the Winds," if the same has to be regarded as Divine Worship in the Israelites, who sacrificed as often to the wind and fire -- especially to the latter element. Do they not say that their "God is a consuming fire" (Deut. iv., 24), who appeared generally as Fire and "encompassed by fire"? and did not Elijah seek for him (the Lord) in the "great strong wind, and in the earthquake"? Do not the Christians repeat the same after them? Do not they, moreover, sacrifice to this day, to the same "God of Wind and Water"? They do; because special prayers for rain, dry weather, trade-winds and the calming of storms on the seas exist to this hour in the prayer-books of the three Christian churches; and the several hundred sects of the Protestant religion

[[Vol. 1, Page]] 467 THE FIGHTING GODS.

offer them to their God upon every threat of calamity? The fact that they are no more answered by Jehovah, than they were, probably, by Jupiter Pluvius, does not alter the fact of these prayers being addressed to the Power or Powers supposed to rule over the Elements, or of these Powers being identical in Paganism and Christianity; or have we to believe that such prayers are crass idolatry and absurd "superstition" only when addressed by a Pagan to his idol, and that the same superstition is suddenly transformed into praiseworthy piety and religion whenever the name of the celestial addressee is changed? But the tree is known by its fruit. And the fruit of the Christian tree being no better than that of the tree of Paganism, why should the former command more reverence than the latter.

Thus, when we are told by the Chevalier Drach, a converted Jew, and the Marquis de Mirville, a Roman Catholic fanatic of the French aristocracy, that in Hebrew lightning is a synonym of fury, and is always handled by an evil Spirit; that Jupiter Fulgur or Fulgurans is also called by the Christians oelicius, and denounced as the soul of lightning, its daemon*; we have either to apply the same explanation and definitions to the "Lord God of Israel," under the same circumstances, or renounce our right of abusing the gods and creeds of other nations.

The foregoing statements emanating as they do from two ardent and learned Roman Catholics, are, to say the least, dangerous, in the presence of the Bible and its prophets. Indeed, if Jupiter, the "chief Daemon of the Pagan Greeks," hurled his deadly thunderbolts and lightnings at those who excited his wrath, so did the Lord God of Abraham and Jacob. We find in I. Samuel, that "the Lord thundered from heaven, and the most High uttered his voice, and he sent out arrows (thunder bolts) and scattered them (Saul's armies) with lightning, and discomfited them." (Chap. xxii. 14, 15.)

The Athenians are accused of having sacrificed to Boreas; and this "Demon" is charged with having submerged and wrecked 400 ships of the Persian fleet on the rocks of Mount Pelion, and of having become so furious "that all the Magi of Xerxes could hardly counteract it by offering contra-sacrifices to Tethys" [Herodotus "Polym." cxc]. Very fortunately, no authenticated instance is on the records of Christian wars showing a like catastrophe on the same scale happening to one Christian fleet owing to the "prayers" of its enemy -- another Christian nation. But this is from no fault of theirs, for each prays as ardently to Jehovah for the destruction of the other, as the Athenians prayed to Boreas. Both resorted to a neat little piece of black magic con amore. Such abstinence from divine interference being hardly due to lack of

[[Footnote(s)]] -----

* Cosmolatry, p. 415.

[[Vol. 1, Page]] 468 THE SECRET DOCTRINE.

prayers, sent to a common Almighty God for mutual destruction, where, then, shall we draw the line between Pagan and Christian? And who can doubt that all Protestant England would rejoice and offer thanks to the Lord, if, during some future war, 400 ships of the hostile fleet were to be wrecked owing to such holy prayers. What is, then, the difference, we ask again, between a Jupiter, a Boreas, and a Jehovah? No more than this: The crime of one's own next-of-kin -- say of one's "father" -- is always excused and often exalted, whereas the crime of our neighbour's parent is ever gladly punished by hanging. Yet the crime is the same.

So far the "blessings of Christianity" do not seem to have made any appreciable advance on the morals of the converted Pagans.

The above is not a defence of Pagan gods, nor is it an attack on the Christian deity, nor does it mean belief in either. The writer is quite impartial, and rejects the testimony in favour of either, neither praying to, believing in, nor dreading any such "personal" and anthropomorphic God. The parallels are brought forward simply as one more curious exhibition of the illogical and blind fanaticism of the civilized theologian. For, so far, there is not a very great difference between the two beliefs, and there is none in their respective effects upon morality, or spiritual nature. The "light of Christ" shines upon as hideous features of the animal-man now, as the "light of Lucifer" did in days of old.

"Those unfortunate heathens in their superstition regard even the Elements as something that has comprehension! . . . They still have faith in their idol Vayu -- the god or, rather, Demon of the Wind and Air . . . they firmly believe in the efficacy of their prayers, and in the powers of their Brahmins over the winds and storms. . . ." (The Missionary Lavoisier, of Cochin, in the Journal des Colonies.) In reply to this, we may quote from Luke viii., 24: "And he (Jesus) arose and rebuked the Wind and the raging of the Water, and they ceased and there was a calm." And here is another quotation from a prayer book: . . . "Oh, Virgin of the Sea, blessed Mother and Lady of the Waters, stay thy waves . . ." etc., etc. (prayer of the Neapolitan and Provencal sailors, copied textually from that of the Phoenician mariners to their Virgingoddess Astarte.) The logical and irrepressible conclusion arising from the parallels brought forward, and the denunciation of the Missionary is this: The commands of the Brahmins to their element-gods not remaining "ineffectual," the power of the Brahmins is thus placed on a par with that of Jesus. Moreover, Astarte is shown not a whit weaker in potency than the "Virgin of the Sea" of Christian sailors. It is not enough to give a dog a bad name, and then hang him; the dog has to be proven guilty. Boreas and Astarte may be devils in theological

[[Vol. 1, Page]] 469 PRAYER IS OFTEN SORCERY.

fancy, but, as just remarked, the tree has to be judged by its fruit. And once the Christians are shown as immoral and wicked as the pagans ever were, what benefit has humanity derived from its change of gods and idols?

That, however, which God and the Christian Saints are justified in doing, becomes a crime, if successful, in simple mortals. Sorcery and incantations are regarded as fables now; yet from the day of the Institutes of Justinian down to the laws against witchcraft of England and America -- obsolete but not repealed to this day -- such incantations, even when only suspected, were punished as criminal. Why punish a chimera? And still we read of Constantine, the Emperor, sentencing to death the philosopher Sopatrus for unchaining the winds, and thus preventing ships loaded with grain from arriving in time to put an end to famine. Pausanias, when affirming that he saw with his own eyes "men who by simple prayers and incantations" stopped a strong hail-storm, is derided. This does not prevent modern Christian writers from advising prayer during storm and danger, and believing in its efficacy. Hoppo and Stadlein two magicians and sorcerers -- were sentenced to death for throwing charms on fruit and transferring a harvest by magic arts

from one field to another, hardly a century ago, if we can believe Sprenger, the famous writer, who vouches for it: "Qui fruges excantasset segetem pellicentes incantando."

Let us close by reminding the reader that, without the smallest shadow of superstition, one may believe in the dual nature of every object on Earth -- in the spiritual and the material, the visible and the invisible nature, and that science virtually proves this, while denying its own demonstration. For if, as Sir William Grove has it, the electricity we handle is but the result of ordinary matter affected by something invisible, the "ultimate generating power" of every Force, the "one omnipresent influence," then it only becomes natural that one should believe as the ancients did; namely, that every Element is dual in its nature. "ETHEREAL fire is the emanation of the KABIR proper; the aerial is but the union (correlation) of the former with terrestrial fire, and its guidance and application on our earthly plane belongs to a Kabir of a lesser dignity" -- an Elemental, perhaps, as an Occultist would call it; and the same may be said of every Cosmic Element.

No one will deny that the human being is possessed of various forces: magnetic, sympathetic, antipathetic, nervous, dynamical, occult, mechanical, mental -- every kind of force; and that the physical forces are all biological in their essence, seeing that they intermingle with, and often merge into, those forces that we have named intellectual and moral -- the first being the vehicles, so to say, the upadhi, of the second. No one, who does not deny soul in man, would hesitate in

[[Vol. 1, Page]] 470 THE SECRET DOCTRINE.

saying that their presence and commingling are the very essence of our being; that they constitute the Ego in man, in fact. These potencies have their physiological, physical, mechanical, as well as their nervous, ecstatic, clairaudient, and clairvoyant phenomena, which are now regarded and recognised as perfectly natural, even by science. Why should man be the only exception in nature, and why cannot even the ELEMENTS have their vehicles, their "Vahans" in what we call the PHYSICAL FORCES? And why, above all, should such beliefs be called "superstition" along with the religions of old?

§ XV.
ON KWAN-SHI-YIN AND KWAN-YIN.

LIKE Avalokiteshwara, Kwan-shi-yin has passed through several transformations, but it is an error to say of him that he is a modern invention of the Northern Buddhists, for under another appellation he has been known from the earliest times. The Secret Doctrine teaches that "He who is the first to appear at Renovation will be the last to come before Re-absorption (pralaya)." Thus the logoi of all nations, from the Vedic Visvakarma of the Mysteries down to the Saviour of the present civilised nations, are the "Word" who was "in the beginning" (or the reawakening of the energising powers of Nature) with the One ABSOLUTE. Born of Fire and Water, before these became distinct elements, IT was the "Maker" (fashioner or modeller) of all things; "without him was not anything made that was made"; "in whom was life, and the life was the light of men"; and who finally may be called, as he ever has been, the Alpha and the Omega of manifested Nature. "The great Dragon of Wisdom is born of Fire and Water, and into Fire and Water will all be re-absorbed with him" (Fa-Hwa-King). As this Bodhisatva is said "to assume any form he pleases" from the beginning of a Manvantara to its end, though his special birthday (memorial day) is celebrated according to the Kin-kwang-ming-King ("Luminous Sutra of Golden Light") in the second month on the nineteenth day, and that of "Maitreya Buddha" in the first month on the first day, yet the two are one. He will appear as Maitreya Buddha, the last of the Avatars and Buddhas, in the seventh Race. This belief and expectation are universal throughout the East. Only it is not in the Kali yug, our present terrifically materialistic age of Darkness, the "Black Age," that a new Saviour of Humanity can ever appear. The Kali yug is

[[Vol. 1, Page]] 471 DISEASED IMAGINATION.

"l'Age d'Or" (!) only in the mystic writings of some French pseudo-Occultists. (See "La Mission des Juifs.")

Hence the ritual in the exoteric worship of this deity was founded on magic. The Mantras are all taken from special books kept secret by the priests, and each is said to work a magical effect; as the reciter or reader produces, by simply chanting them, a secret causation which results in immediate effects. Kwan-Shi-Yin is Avalokiteshwara, and both are forms of the seventh Universal Principle; while in its highest metaphysical character this deity is the synthetic aggregation of all the planetary Spirits, Dhyani Chohans. He is the "Self-manifested," in short, the "Son of the Father." Crowned with seven dragons, above his statue there appears the inscription Pu-Tsi-K'iun-ling, "the universal Saviour of all living beings."

Of course the name given in the archaic volume of the Stanzas is quite different, but Kwan-Yin is a perfect equivalent. In a temple of Pu'to, the sacred island of the Buddhists in China, Kwan-Shi-Yin is represented floating on a black aquatic bird (Kala-Hansa), and pouring on the heads of mortals the elixir of life, which, as it flows, is transformed into one of the chief Dhyani-Buddhas -- the Regent of a star called the "Star of Salvation." In his third transformation Kwan-Yin is the informing spirit or genius of Water. In China the Dalai-Lama is believed to be an incarnation of Kwan-Shi-Yin, who in his third terrestrial appearance was a Bodhisattva, while the Teshu Lama is an incarnation of Amitabha Buddha, or Gautama.

It may be remarked en passant that a writer must indeed have a diseased imagination to discover phallic worship everywhere, as do the authors of "China Revealed" (McClatchey) and "Phallicism." The first discovers "the old phallic gods, represented under two evident symbols -- the Khan or Yang, which is the membrum virile, and the Kwan or Yin, the pudendum muliebre." (See "Phallicism,"

p. 273.) Such a rendering seems the more strange as Kwan-Shi-Yin (Avalokiteswara) and Kwan-Yin, besides being now the patron deities of the Buddhist ascetics, the Yogis of Thibet, are the gods of chastity, and are, in their esoteric meaning, not even that which is implied in the rendering of Mr. Rhys Davids' "Buddhism," (p. 202): "The name Avalokiteswara . . . means 'the Lord who looks down from on high.' "Nor is Kwan-Shi-Yin "the Spirit of the Buddhas present in the Church," but, literally interpreted, it means "the Lord that is seen," and in one sense, "the divine SELF perceived by Self" (the human) -- the Atman or seventh principle merged in the Universal, perceived by, or the object of perception to, Buddhi, the sixth principle or divine Soul in man. In a still higher sense, Avalokiteswara = Kwan-Shi-Yin, referred to as the seventh Universal principle, is the Logos

[[Vol. 1, Page]] 472 THE SECRET DOCTRINE.

perceived by the Universal Buddhi -- or Soul, as the synthetic aggregate of the Dhyani-Buddhas: and is not the "Spirit of Buddha present in the Church," but the omnipresent universal Spirit manifested in the temple of Kosmos or Nature. This Orientalistic etymology of Kwan and Yin is on a par with that of "Yogini," which, we are told by Mr. Hargrave Jennings, "is a Sanskrit word, in the dialects pronounced Yogi or Zogee (!), and is equivalent to Sena, and exactly the same as Duti or Duti-Ca' -- i.e., a sacred prostitute of the temple, worshipped as Yoni or Sakti" (p. 60). "The books of morality," in India, "direct a faithful wife to shun the society of Yogini or females who have been adored as Sakti . . . amongst the votaries of a most licentious description." Nothing should surprise us after this. And it is, therefore, with hardly a smile that we find another preposterous absurdity quoted about "Budh," as being a name "which signifies not only the sun as the source of generation but also the male organ (Round Towers of Ireland; quoted by Mr. Hargrave Jennings in "Phallicism," p. 264). Max Muller, in his "False Analogies," says that "the most celebrated Chinese scholar of his time, Abel Remusat," maintains "that the three syllables I Hi Wei (in the fourteenth chapter of the Tao-te-king) were meant for Je-ho-vah (Science of Religion, p. 332); and again, Father Amyot, who "feels certain that the three persons of the Trinity could be recognised" in the same work. And if Abel Remusat, why not Hargrave Jennings? Every scholar will recognise the absurdity of ever seeing in Budh, "the enlightened" and "the awakened," a "phallic symbol."

Kwan-shi-yin, then, is "the Son identical with his Father" mystically, or the Logos -- the word. He is called the "Dragon of Wisdom" in Stanza III., as all the Logoi of all the ancient religious systems are connected with, and symbolised by, serpents. In old Egypt, the God Nahbkoon, "he who unites the doubles," (astral light re-uniting by its dual physiological and spiritual potency the divine human to its purely divine Monad, the prototype "in heaven" or Nature) was represented as a serpent on human legs, either with or without arms. It was the emblem of the resurrection of Nature, as also of Christ with the Ophites, and of Jehovah as the brazen serpent healing those who looked at him; the serpent being an emblem of Christ with the Templars also, (see the Templar degree in Masonry). The symbol of Knouph (Khoum also), or the soul of the world, says Champollion (Pantheon, text 3), "is represented among other forms under that of a huge serpent on human legs; this reptile, being the emblem of the good genius and the veritable Agathodaemon, is sometimes bearded." The sacred animal is thus identical with the serpent of the Ophites, and is figured on a great number of engraved stones, called Gnostic or Basilidean gems. This serpent appears with various heads (human and animal), but its gems

[[Vol. 1, Page]] 473 SNOBS, OR DRAGONS?

are always found inscribed with the name [[CHNOUBIS]] (Chnoubis). This symbol is identical with one which, according to Jamblichus and Champollion, was called "the first of the celestial gods"; the god Hermes, or Mercury with the Greeks, to which god Hermes Trismegistos attributes the invention of, and the first initiation of men into, magic; and Mercury is Budh, Wisdom, Enlightenment, or "Re-awakening" into the divine Science.

To close, Kwan-Shi-Yin and Kwan-Yin are the two aspects (male and female) of the same principle in Kosmos, Nature and Man, of divine wisdom and intelligence. They are the "Christos-Sophia" of the mystic Gnostics -- the Logos and its Sakti. In their longing for the expression of some mysteries never to be wholly comprehended by the profane, the Ancients, knowing that nothing could be preserved in human memory without some outward symbol, have chosen the (to us) often ridiculous images of the Kwan-Yins to remind man of his origin and inner nature. To the impartial, however, the Madonnas in crinolines and the Christs in white kid gloves must appear far more absurd than the Kwan-Shi-Yin and Kwan-Yin in their dragon garb. The subjective can hardly be expressed by the objective. Therefore, since the symbolic formula attempts to characterise that which is above scientific reasoning, and as often far beyond our intellects, it must needs go beyond that intellect in some shape or other, or else it will fade out from human remembrance.

[[Vol. 1, Page]] 477 MUTUAL POSITION DEFINED.

ADDENDA TO BOOK I.

I.
REASONS FOR THESE ADDENDA.

MANY of the doctrines contained in the foregoing Seven Stanzas and Commentaries having been studied and critically examined by some Western Theosophists, certain of the occult teachings have been found wanting from the ordinary stand-point of modern scientific knowledge. They seemed to encounter insuperable difficulties in the way of their acceptance, and to require reconsideration in view of scientific criticism. Some friends have already been tempted to regret the necessity of so often calling in question the

assertions of modern Science. It appeared to them -- and I here repeat only their arguments -- that "to run counter to the teachings of its most eminent exponents, was to court a premature discomfiture in the eyes of the Western World."

It is, therefore, desirable to define once and for all the position which the writer, who does not agree in this with her friends, intends to maintain. So far as Science remains what in the words of Prof. Huxley it is, viz., "organized common sense"; so far as its inferences are drawn from accurate premises -- its generalizations resting on a purely inductive basis -- every Theosophist and Occultist welcomes respectfully and with due admiration its contributions to the domain of cosmological law. There can be no possible conflict between the teachings of occult and so-called exact Science, where the conclusions of the latter are grounded on a substratum of unassailable fact. It is only when its more ardent exponents, over-stepping the limits of observed phenomena in order to penetrate into the arcana of Being, attempt to wrench the formation of Kosmos and its living Forces from Spirit, and attribute all to blind matter, that the Occultists claim the right to dispute and call in question their theories. Science cannot, owing to the very nature of things, unveil the mystery of the universe around us. Science can, it is true, collect, classify, and generalize upon phenomena; but the occultist, arguing from admitted metaphysical data, declares that the daring explorer, who would probe the inmost secrets of Nature, must transcend the narrow limitations of sense, and transfer his consciousness into the region of noumena and the sphere of primal causes. To effect this, he must develop faculties which are absolutely

[[Vol. 1, Page]] 478 THE SECRET DOCTRINE.

dormant -- save in a few rare and exceptional cases -- in the constitution of the off-shoots of our present Fifth Root-race in Europe and America. He can in no other conceivable manner collect the facts on which to base his speculations. Is this not apparent on the principles of Inductive Logic and Metaphysics alike?

On the other hand, whatever the writer may do, she will never be able to satisfy both Truth and Science. To offer the reader a systematic and uninterrupted version of the Archaic Stanzas is impossible. A gap of 43 verses or Slokas has to be left between the 7th (already given) and the 51st, which is the subject of Book II., though the latter are made to run from 1 et seq. for easier reading and reference. The appearance of man on Earth alone occupies as many stanzas, which describe minutely his primal evolution from the human Dhyana Chohans; the state of the globe at that time, etc., etc. A great number of names referring to chemical substances and other compounds, which have now ceased to combine together, and are therefore unknown to the later offshoots of our Fifth Race, occupy a considerable space. As they are simply untranslatable, and would remain in every case inexplicable, they are omitted, along with those which cannot be made public. Nevertheless, even the little that is given will irritate any follower and defender of dogmatic materialistic Science who happens to read this.

Before proceeding to other Stanzas, it is proposed, therefore, to defend those already given. They are not in perfect accord or harmony with modern Science -- this we all know. Had they been, however, as much in agreement with the views of modern knowledge as a lecture by Sir W. Thomson, they would have been rejected all the same. For they teach belief in conscious Powers and Spiritual Entities; in terrestrial, semi-intelligent, and highly intellectual Forces on other planes*; and in Beings that dwell around us in spheres imperceptible, whether through telescope or microscope. Hence the necessity of examining the beliefs of materialistic Science: of comparing its views about the "Elements" with the opinions of the ancients, and of analysing the physical Forces as they exist in modern perception before the Occultists admit themselves to be in the wrong. We shall touch upon the constitution of the Sun and planets, and the occult characteristics of what are called Devas and Genii, and are now termed by Science, Force, or "modes of motion," and see whether esoteric belief is defensible or not (Vide infra, "Gods, Monads, and Atoms"). Notwithstanding the efforts made to the contrary, an unprejudiced mind will discover

[[Footnote(s)]] -----

* Their intellection, of course, being of quite a different nature to any we can conceive of on Earth.

[[Vol. 1, Page]] 479 DUAL NATURE OF THE SUN.

under Newton's "agent, material or immaterial" (of his third letter to Bentley), the agent which causes gravity, and, in his personal working God, one finds just as much of the metaphysical devas and genii, as in Kepler's angelus rector conducting each planet, and the species immateriata by which the celestial bodies were carried along in their courses, according to that astronomer.

We shall have, in Book II., to openly approach dangerous subjects. We must bravely face Science and declare, in the teeth of materialistic learning, of Idealism, Hylo-Idealism, Positivism and all-denying modern Psychology, that the true Occultist believes in "Lords of Light;" that he believes in a Sun, which, far from being simply "a lamp of day" moving in accordance with physical law, and far from being merely one of those Suns, which according to Richter -- ". . . are Sun-flowers of a higher light" -- is, like milliards of other Suns, the dwelling or the vehicle of a god, and a host of gods.

In this question, of course, it is the Occultists who will be worsted. They will be considered on the prima facie aspect of the dispute to be ignoramuses, and labelled with more than one of the usual epithets given to those whom the superficially judging public, itself ignorant of the great underlying truths in nature, accuses of believing in mediaeval superstitions. Let it be so. Submitting beforehand to every criticism in order to go on with their task, they only claim the privilege of showing that the physicists are as much at loggerheads among themselves in their speculations, as the latter are with the teachings of Occultism.

The Sun is matter, and the Sun is Spirit. Our ancestors -- the "heathen," -- along with their modern successors, the Parsis -- were, and are, wise enough in their generation to see in it the symbol of Divinity, and at the same time to sense within, concealed by the physical Symbol, the bright God of Spiritual and terrestrial Light. Such belief is now regarded as a superstition only by rank materialism, which denies Deity, Spirit, Soul, and admits no intelligence outside the mind of man. But if too much of wrong superstition bred by "Churchianity" -- as Lawrence Oliphant calls it -- "renders a man a fool," too much scepticism makes him mad. We prefer the charge of folly in believing too much, to that of a madness which denies everything, as do Materialism and Idealism. Hence, the Occultists are fully prepared to receive their dues from Materialism, and to meet the adverse criticism which will be poured on this work, not for writing it, but for believing in that which it contains.

Therefore the discoveries, hypotheses, and unavoidable objections which will be brought forward by the scientific critics must be anticipated and disposed of. It has also to be shown how far the

[[Vol. 1, Page]] 480 THE SECRET DOCTRINE.

occult teachings depart from real science, and whether the ancient or the modern theories are the most logically and philosophically correct. The unity and mutual relations of all parts of Kosmos were known to the ancients, before they became evident to modern astronomers and philosophers. And if even the external and visible portions of the Universe and their mutual relations cannot be explained in any other terms than those used by the adherents of the mechanical theory of the Universe in physical science, it follows that no materialist, who denies that the Soul of Kosmos (which appertains to metaphysical philosophy) exists, has the right to trespass upon that metaphysical domain. That physical science is trying to, and actually does, encroach upon it, is only one more proof that "might is right," and no more.

Another good reason for these Addenda is this. Since only a certain portion of the Secret teachings can be given out in the present age, if they were published without any explanations or commentary, the doctrines would never be understood even by theosophists. Therefore they must be contrasted with the speculations of modern science. Archaic axioms must be placed side by side with modern hypotheses and comparison left to the sagacious reader.

On the question of the "Seven Governors," as Hermes calls the "Seven Builders," the Spirits which guide the operations of nature, the animated atoms of which are the shadows, in their world, of their Primaries in the astral realms -- this work will, of course, besides the men of Science, have every materialist against it. But this opposition can, at most, be only temporary. People have laughed at everything and scouted every unpopular idea at first, and then ended by accepting it. Materialism and scepticism are evils that must remain in the world as long as man has not quitted his present gross form to don the one he had during the first and second races of this Round. Unless scepticism and our present natural ignorance are equilibrated by intuition and a natural spirituality, every being afflicted with such feelings will see in himself no better than a bundle of flesh, bones, and muscles, with an empty garret inside him which serves the purpose of storing his sensations and feelings. Sir Humphry Davy was a great scientist, as deeply versed in physics as any theorist of our day, yet he loathed materialism. "I heard with disgust," he says, "in the dissecting-rooms, the plan of the physiologist, of the gradual secretion of matter, and its becoming endued with irritability, ripening into sensibility, and acquiring such organs as were necessary, by its own inherent forces, and at last rising into intellectual existence." Nevertheless, physiologists are not the most to be blamed for speaking of that only which they can see and estimate on the evidence of their physical senses.

Astronomers

[[Vol. 1, Page]] 481 THE SONS OF LIGHT.

and physicists are, we consider, far more illogical in their materialistic views than even physiologists, and this has to be proved. Milton's --

. "Light
Ethereal, first of things, quintessence pure,"

has become with the materialists only --

. Prime cheerer, light,
Of all material beings, first and best.

For the occultists it is both Spirit and Matter. Behind the "mode of motion," now regarded as "the property of matter" and nothing more, they perceive the radiant noumenon. It is the "Spirit of Light," the first born of the Eternal pure Element, whose energy (or emanation) is stored in the Sun, the great Life-Giver of the physical world, as the hidden Concealed Spiritual Sun is the Light- and Life-Giver of the Spiritual and Psychic Realms. Bacon was one of the first to strike the key-note of materialism, not only by his inductive method (renovated from ill-digested Aristotle), but by the general tenor of his writings. He inverts the order of mental Evolution when saying that "the first Creation of God was the light of the sense; the last was the light of the reason; and his Sabbath work ever since is the illumination of the Spirit." It is just the reverse. The light of Spirit is the eternal Sabbath of the mystic or occultist, and he pays little attention to that of mere sense. That which is meant by the allegorical sentence, "Fiat Lux" is,-- when esoterically rendered -- "Let there be the 'Sons of Light,'" or the noumena of all phenomena. Thus the Roman Catholics rightly interpret the passage as referring to Angels, and wrongly as meaning Powers created by an anthropomorphic God, whom they personify in the ever thundering and punishing Jehovah.

These beings are the "Sons of Light," because they emanate from, and are self-generated in, that infinite Ocean of Light, whose one pole is pure Spirit lost in the absoluteness of Non-Being, and the other, the matter in which it condenses, crystallizing into a more and more gross type as it descends into manifestation. Therefore matter, though it is, in one sense, but the illusive dregs of that Light whose limbs are the Creative Forces, yet has in it the full presence of the Soul thereof, of that Principle, which none -- not even the "Sons of Light," evolved from its ABSOLUTE DARKNESS -- will ever know. The idea is as beautifully, as it is truthfully, expressed by Milton, who hails the holy Light, which is the --

". . . . Offspring of Heaven, first-born,
And of th' Eternal co-eternal beam;
. . . . Since God is light,
And never but in unapproached Light
Dwelt from Eternity, . dwelt then in thee
Bright effluence, of bright essence increate."

II.
MODERN PHYSICISTS ARE PLAYING AT BLIND MAN'S BUFF.

AND now Occultism puts to Science the question: "Is light a body, or is it not?" Whatever the answer of the latter, the former is prepared to show that, to this day, the most eminent physicists know neither one way nor the other. To know what is light, and whether it is an actual substance or a mere undulation of the "etheral medium," Science has first to learn what are in reality Matter, Atom, Ether, Force. Now, the truth is, that it knows nothing of any of these, and admits it. It has not even agreed what to believe in, as dozens of hypotheses emanating from various and very eminent Scientists on the same subject, are antagonistic to each other and often self-contradictory. Thus their learned speculations may, with a stretch of good-will, be accepted as "working hypotheses" in a secondary sense, as Stallo puts it. But being radically inconsistent with each other, they must finally end by mutually destroying themselves. As declared by the author of "Concepts of Modern Physics":--

"It must not be forgotten that the several departments of Science are simply arbitrary divisions of labour. In these several departments the same physical object may be considered under different aspects. The physicist may study its molecular relations, while the chemist determines its atomic constitution. But when they both deal with the same element or agent, it cannot have one set of properties in physics, and another set contradictory of them, in chemistry. If the physicist and chemist alike assume the existence of ultimate atoms absolutely invariable in bulk and weight, the atom cannot be a cube or oblate spheroid for physical, and a sphere for chemical purposes. A group of constant atoms cannot be an aggregate of extended and absolutely inert and impenetrable masses in a crucible or retort, and a system of mere centres of force as part of a magnet or of a Clamond battery. The universal Ether cannot be soft and mobile to please the chemist, and rigid-elastic to satisfy the physicist; it cannot be continuous at the command of Sir William Thomson and discontinuous on the suggestion of Cauchy or Fresnel."*

The eminent physicist, G. A. Hirn, may likewise be quoted saying the same in the 43rd Volume of the Memoires de l'Academie Royale de Belgique, which we translate from the French, as cited: "When one sees the assurance with which are to-day affirmed doctrines which attribute the collectivity, the universality of the phenomena to the motions alone of the atom, one has a right to expect to find likewise unanimity on the qualities described to this unique being, the foundation of all that exists. Now, from the first examination of the particular systems proposed, one feels the strangest deception; one perceives that the atom of the chemist, the atom of the physicist, that of the metaphysician, and that of the mathematician . . . have absolutely nothing in common but the name! The inevitable result is the existing

[[Footnote(s)]] -----

[[Vol. 1, Page]] 483 NO AGREEMENT AMONG SCIENTISTS.

subdivision of our sciences, each of which, in its own little pigeon-hole, constructs an atom which satisfies the requirements of the phenomena it studies, without troubling itself in the least about the requirements proper to the phenomena of the neighbouring pigeon-hole. The metaphysician banishes the principles of attraction and repulsion as dreams; the mathematician, who analyses the laws of elasticity and those of the propagation of light, admits them implicitly, without even naming them. . . . The chemist cannot explain the grouping of the atoms, in his often complicated molecules, without attributing to his atoms specific distinguishing qualities; for the physicist and the metaphysician, partisans of the modern doctrines, the atom is, on the contrary, always and everywhere the same. What am I saying? THERE IS NO AGREEMENT EVEN IN ONE AND THE SAME SCIENCE AS TO THE PROPERTIES OF THE ATOM. Each constructs an atom to suit his own fancy, in order to explain some special phenomenon with which he is particularly concerned."*

The above is the photographically correct image of modern Science and physics. The "pre-requisite of that incessant play of the 'scientific imagination,' " which is so often found in Professor Tyndall's eloquent discourses, is vivid indeed, as shown by Stallo, and for contradictory variety leaves far behind it any "phantasies" of occultism. However it may be, if physical theories are confessedly "mere formal, explanatory, didactic devices," and if "atomism is only a symbolical graphic system,"** then the occultist can hardly be

regarded as assuming too much, when he places alongside of these devices and "symbolical systems" of modern Science, the symbols and devices of Archaic teachings.

III.

"AN LUMEN SIT CORPUS, NEC NON?"

MOST decidedly Light is not a body, we are told. Physical Sciences say Light is a Force, a vibration, the undulation of ether. It is the property or quality of matter, or even an affection thereof -- never a body!

Just so. For this discovery, the knowledge -- whatever it may be worth -- that light or caloric is not a motion of material particles, Science is chiefly indebted, if not solely, to Sir W. Grove. It was he who was the first in a lecture at the London Institution, in 1842, to show that

"light, heat, etc., etc." are affections of matter itself, and not a distinct ethereal, 'imponderable,' fluid, (a state of matter now) permeating it." (See "Correlation of the Physical Forces," Preface). Yet, perhaps, for some physicists -- as for Oersted, a very eminent Scientist -- FORCE and FORCES were tacitly "Spirit (and hence Spirits) in Nature." What several rather mystical Scientists taught was that light, heat, magnetism, electricity and gravity, etc., were not the final causes of the visible phenomena, including planetary motion, but themselves the Secondary effects of other Causes, for which Science in our day cares very little, but in which Occultism believes, for the Occultists have exhibited proofs of the validity of their claims in every age. And in what age were there no Occultists and no ADEPTS?

Sir Isaac Newton held to the Pythagorean corpuscular theory, and was also inclined to admit its consequences; which made the Count de Maistre hope, at one time, that Newton would ultimately lead Science back to the recognition of the fact that Forces and the Celestial bodies were propelled and guided by Intelligences (Soirees, vol. ii.). But de Maistre counted without his host. The innermost thoughts and ideas of Newton were perverted, and of his great mathematical learning only the mere physical husk was turned to account. Had poor Sir Isaac foreseen to what use his successors and followers would apply his "gravity,"** that pious and religious man would surely have quietly eaten his apple, and never breathed a word about any mechanical ideas connected with its fall.

Great contempt is shown for metaphysics generally and for onto-

[[Footnote(s)]] -----

* Mr. Robert Ward, discussing the questions of Heat and Light in the November Journal of Science, 1881, shows us how utterly ignorant is Science about one of the commonest facts of nature -- the heat of the sun. He says:-- "The question of the temperature of the sun has been the subject of investigation with many scientists: Newton, one of the first investigators of this problem, tried to determine it, and after him all the scientists who have been occupied with calorimetry have followed his example. All have believed themselves successful, and have formulated their results with great confidence. The following, in the chronological order of the publication of the results, are the temperatures (in centigrade degrees) found by each of them: Newton, 1,699,300 deg.; Pouillet, 1,461 deg.; Tollner, 102,200 deg.; Secchi, 5,344,840 deg.; Ericsson, 2,726,700 deg.; Fizeau, 7,500 deg.; Waterston, 9,000,000 deg.; Spieren, 27,000 deg.; Deville, 9,500 deg.; Soret, 5,801,846 deg.; Vicaire, 1,500 deg.; Rosetti, 20,000 deg. The difference is as 1,400 deg. against 9,000,000 deg., or no less than 8,998,600 deg.!! There probably does not exist in science a more astonishing contradiction than that revealed in these figures. And yet without doubt if an Occultist were to give out an estimate, each of these gentlemen would vehemently protest in the name of 'EXACT' Science at the rejection of his special result." (From the Theosophist.)

** According to one atheistic idealist -- Dr. Lewins -- "When Sir Isaac, in 1687 . . . showed mass and atom acted upon . . . by innate activity . . . he effectually disposed of Spirit, Anima, or Divinity, as supererogatory."
