INTRODUCTION

Florida's stormwater regulatory program requires the use of Best Management Practices (BMPs) during and after construction to minimize erosion and sedimentation and to properly manage runoff for both stormwater quantity and quality. However, insufficient staffing among regulatory agencies, combined with lack of awareness among contractors, has resulted in a low rate of compliance.

To improve this situation the Department of Environmental Protection has developed a training program curriculum on the use, installation, and maintenance of erosion, sedimentation, and stormwater BMPs. The training program is primarily directed towards inspectors and contractors, however, permit reviewers and public works personnel will also benefit from this program.

This manual is designed to be a comprehensive reference source for the conduct of your daily professional duties. Do not attempt to memorize this entire manual. Instead, become familiar enough to know where to find information quickly. Review the manual periodically to improve and maintain your technical and personal skills. Refer to this manual when facing a new situation or when in doubt. Try to keep this manual with you while conducting your duties.

Mission Statement

The objectives of this training and certification program are:

- to assure that the desired benefits of stormwater management systems are being achieved.
- to assure that both the public and private sectors have enough inspectors trained in the proper installation and maintenance of BMPs during and after construction.
- to assure a consistent level of technical expertise and professional conduct for all individuals responsible for inspecting erosion and sediment controls and stormwater management systems.

The Stormwater Inspector's Creed

As a Stormwater Inspector, I dedicate my professional knowledge and skill to the advancement and betterment of the environment, especially the protection and enhancement of Florida's water resources for future generations.

I Pledge:

- To give the utmost effort in my personal performance.
- To participate in none but honest enterprise.
- To live and work according to the laws of humanity and the highest standards of professional conduct.
- To work in partnership with all segments of Florida's citizenry toward the common goals of compliance.
- To provide consistent and impartial implementation of the rules and regulations.
- To place service before profit, the honor and standing of the profession before personal advantage, and the public welfare and environment above all other considerations.
- To provide beneficial services which enhance the quality of life for Florida's citizens and visitors.
- To generate growth of the profession through marketing, promotion, advertising, and implementation of sound environmental management practices.
- To continue to monitor performance and maintenance of environmental management systems for the betterment of humankind.
- To inspect environmental management systems using timely and adequate documentation, so that all apparent violations may be immediately investigated for necessary remedial action.
