Supplementing for Success

Who is using supplements? Everyone!

I use them for adding **more practice** in a specific area, like spelling in an ELA program, or multiplication in a math curriculum.

I have used them to provide **parallel instruction** to our curriculum. They often have streamlined examples and practice to complement your main program in an area where kids are struggling.

My students like to **make their own** supplements, such as vocabulary note cards. They will color-code them for grammar too — red borders for nouns, green for verbs, blue for adjectives, etc.

I use them to meet the needs of different **learning styles** with games, songs, manipulatives, or videos.

A supplement is perfect for **test prep**, focusing on just those areas that need work.

I used them with my student who **left a traditional school** at an awkward time, when it's not practical to purchase a year-long program.

They can often be done with **little supervision**.

Supplements are great for hitting the high points over the **summer**, whether for remediation, or to introduce new skills and get a jump on the coming school year.
