3) DVD Playback and Control

➢ **How to Start Playing**
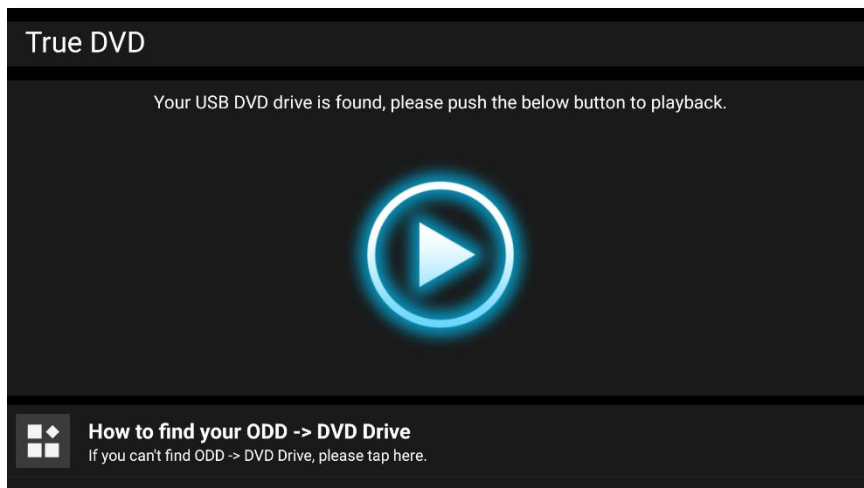

① Connect DVD drive and your Android TV with USB cable provided in the package.
② Insert a DVD-Video disc into the DVD drive.
③ Select and launch "True DVD for Android TV" app on your Android TV home screen, to start DVD playback.

True DVD for Android TV
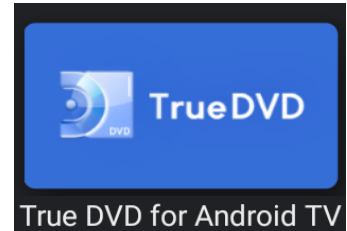

※ When below message appears, select "OK".

True DVD for Android TV

Allow True DVD for Android TV to access Portable Super Multi Drive?

CANCEL   OK

※ If playback does not start, select " " on the screen using remote control, and press [OK] button on the remote control.

True DVD

Your USB DVD drive is found, please push the below button to playback.

How to find your ODD -> DVD Drive
If you can't find ODD -> DVD Drive, please tap here.

4. How to Use "True DVD for Android TV" App

※ To end playback, press the [Back] button twice on the remote control to return to the app's main screen.

※ End playback before ejecting the disc. If disc is ejected before ending playback, video may still play for a few more seconds even after ejection.

※ To play a DVD, the region code of the DVD disc must match the region code of the DVD drive.

If the region codes of the DVD disc and the drive doesn't match, a dialog will appear for changing the code of the drive.

Drive and disc regions do not match. 3 opportunities to change remain until permanent. Do you want to change the region to play this DVD?

Region 1

Yes   No

・ The maximum number of region code changes is limited to 5 times. You can not change the region code again after the 5th change. Refer to DVD region code at the bottom of this page for region code.

・ If the DVD region code is not matched, the DVD can not be played.

・ If the region code has been changed up to 5 times, it is fixed with the region code that was changed for the last 5th time. And it is unable to restore.

5. Troubleshooting

➢ **Recommended latest software updates**

   • Please update your Android device(TV/TV BOX(STB)) OS and
     app to the latest version to use this product without effort.
   • Depending on the installation environment and hardware
     performance of your Android device, functionality of this product can
     not work well.

➢ **If your DVD doesn't play**

   • When the video doesn't play, try ejecting and inserting the disc again.
   • Turn off the app and restart.

➢ **If the app is not responding**

   • If the app is not responding, turn off the app manually and restart.
     (At Home screen – Go to "Setting" (Gear icon) – "App"
       – Select "True DVD for Android TV" or "Disc Link Platinum" -
       Select "Force Stop")

➢ **To check the app version**

   • At Home screen – Go to "Setting" (Gear icon) – "App"
     – Select "True DVD for Android TV" or "Disc Link Platinum"
     - You can check the app version.

➢ **To prevent app from starting automatically when connecting the DVD drive?**

   • At Home screen – Go to "Setting" (Gear icon) – "App"
       – Select "True DVD for Android TV" or "Disc Link Platinum"
       - Select "Clear defaults"
       - App will not start automatically.

➢ **If   data disc can't be playable**

   • If you record and play a UHD (4K) level movie on a CD disc,
     exceeding Bit rate can cause playback delays or stops.
   • In this case, it is recommended that you use it only for data backup
     purposes.

5. Troubleshooting

➢ **If video transition is delayed while playing DVD video**

- During chapter or menu transition in DVD video disc playback, please understand that it can be delayed a little bit due to the search operation.

➢ **What codec does Disc Link Platinum support?**

- Disc Link uses external Player / Codec for playback compatibility.
  1) DVD video, Audio CD : Playback using Player / Codec embedded in Disc Link
  2) General Video/Music files: Playback using external apps such as VLC player and MX player
- In case of an issue that does not support the codec, select another player to play

➢ **What is DVD video region code?**

- This is the code specified by each region of the world where DVD video is sold and used.
- When playing DVD video, change the region code via Disc Link / True DVD for Android TV. If the screen related on the region code does not appear, there is no need to change it.

Region code	Region
1	U.S.A, Canada
2	Europe, Japan, South Africa, Middle East
3	Southeast Asia, South Korea
4	South America, Oceania
5	Africa, Central Asia, Russia, North Korea
6	China
