Company Overview

VIZA Valves is China's leading manufacturer of industrial valves. The head office, Suzhou Viza Valve Co., Ltd., is located in Suzhou and has been manufacturing top-quality valves for more than 10 years. From its early days, VIZA Valves has always been an export-oriented manufacturer. All valves are designed, produced, and tested under rigorous international standards such as API, ANSI, ASTM, NACE, ISO, EN, BS, DIN, UNI, MSS, AWWA, and JIS. VIZA Valves products are 100% exported to North America, Western Europe, the Middle East, and Australia, to name a few locations.

Viza Valves has built own manufacturing plants: one is Kunshan Viza Valve Co., Ltd. (refer to Kunshan Viza) locating in Kunshan, nearby Shanghai, is focusing on high and middle pressure valves such as floating and trunnion mounted ball valves, cast steel gate, globe and check valves; another is Tianjin Tanggu Viza Valve Co., Ltd. (refer to Tianjin Viza) locating in Tianjin, nearby Beijing, is focusing on low pressure valves such as butterfly valves, resilient seat gate valves and cast iron valves. All products conform to international standards and are widely used in Oil & Gas, Pipeline Transmission, Refining, Chemical and Petrochemical, Power Generation, Water and Waste Water Treatment industries.

Kunshan Viza is specialized in manufacturing Forged Steel and Cast Steel Trunnion Mounted and Floating type Ball Valves, size from 1/2" to 40", class from 150lbs to 2500lbs, with body materials as A105N, LF2, F304, F304L, F316, F316L, F51, WCB, LCB, LCC, CF8, CF3, CF8M, CF3M & seat materials as PTFE, Nylon, Molon, Delrin, PEEK, etc. All valves are API607/6FA fire safe certified. The factory has strict quality assurance system and is certified by API6D, ISO9001: 2008, PED/CE and ATEX.

VIZA Valves' goal is to produce a zero defect product with a long and reliable service life. Making constant improvements towards this goal minimizes the Total Ownership Costs for all the customers, EPCs, and end-users. VIZA Valves is ready to serve the global energy industry and to work towards a sustainable new world.

- **Fire Safe Seat Sealing**

VIZA floating ball valves' fire safe is designed in accordance with API 607 & API SPEC 6FA. When non-metal resilient seats are destroyed in a fire, the upstream medium pressure push the ball into the downstream metal seat lip to cut off the line fluid and prevent the internal leakage due to a secondary metal-to-metal seals.

- **Blow-out Proof Stem**

The stem is designed with integral T-type shoulder to provide blow-out proof effectively. It is internally inserted as the backseat function to assure stem sealing safety at all pressures.

- **Anti-Static Device**

Antistatic devices between ball & stem and stem & body are assembled by a spring & a stainless steel ball, which ensure all metal valve parts are grounding.

With more and more concern for environment protection in the whole world, low emission valve will be widely used. Low emission valve can prevent poisonous, flammable, explosive medium from leaking to pollute the air; and also important that low emissions valve can minimum fugitive emission of VOC to help solve the problem of "Global Warming".

- **Low Emission Packing**

Because of frequent opening and closing of the valve, normal graphite granule can be drawn by the stem, which will cause leakage. VIZA designed low emissions valve use special low emissions packing to ensure the seal of stem. The cone packing is made of expanding graphite in die-formed rings and has features of heat resistance, less stress relaxation and low creep. With this special structure, it allows for a low-friction on rotary & rising stem valve, therefore providing the stabilized sealing performance for long cycle life. For low temperature service, the standard V shape PTFE packing rings are used for low emissions control.

- **Controlled Stem and Stuffing Box Finish**

It's also a key point to control the stem and stuffing box finish when machining. The stem is made by cold rolling and stem surface finish is controlled by Ra0.4, which can reduce friction for stem moving and ensure the graphite to fill and migrate into the stems micro scratches, and function as a lubricant to reduce stem leakage. The stuffing box surface is controlled within Ra1.6 and Ra3.2 for better holding of the packing ring and results in a better sealing performance.

- **Live Loaded Gland Flange**

In normal case, valve packing is tighten by gland and gland bolting. During the service, the gland load retention will be reduced by long time pressure from medium, which will cause possible leakage with loosened packing. VIZA designed low emissions valve use a set of Belleville springs installed on each gland stud to provide a continuous compressive force on gland, which guarantees permanent load retention for the stem packing to avoid fugitive emissions.

Features

Size: 1/2"~10"
Class: 150~300
Two Pieces Cast Steel Body
Floating Ball, Full & Reduced Bore
Anti-Static Device
Blow-out Proof Stem
Fire Safe Design
Low Emission

- **Severity Service**

Normal soft-seated valve cannot be used for abrasive service or for operation in high temperatures that prohibits the use of a resilient material. VIZA metal-to-metal seated floating ball valve (series FM, range 1/2"~4" class 150lb & 300lb, 1/2"~2" class 600lb) is designed for this type of severity service has seating action provided by the metal-to-metal contact between the ball and the seat rings.

- **General Design**

Blow-out proof stem, anti-static device are designed as standard requirements.

- **Superior Sealing**

High precision machining and seat to ball rubbing, as well as adopt seat spring structure, which push up stream seat tightly against the ball surface, result in superior ball and seat interfacing for reliable sealing conforming to ANSI/FCI 70-2 class V.

- **Stem Seal**

Belleville spring acted gland provides live-loading on stem packing. Equipped with Special low emission packing, the environmental friendly valve is available on request.

- **Reliable Operations**

Spring-loaded seat maintain close contact with the ball ensuring tight sealing even at low pressures. This also results in stable operating torques at high differential pressures over a wide range of temperatures or/and high frequency.

- **Fire Safe**

The combination of the metal seat and graphite seals results in the nature of its features/properties that is capable of passing a fire test.

- **Material Selection**

Various material components are available for a variety of service applicable up to 500°C. For service temperature above 300°C the extension bonnet is required.

- **Applications**

Hard faced ball and seats (TCC as standard, other special coatings are available on request) allow use in more severe services such as slurries, pulp stock, mining and other abrasive media in long life.

Material Specifications

No.	Part	Standard Materials	No.	Part	Standard Materials
1	Body	ASTM A105 or A182-F316	13	Seat Packing	Graphite

7	Push Ring	Stainless Steel	19	Screw	Carbon Steel or Stainless Steel
8	Stem	ASTM A182-F6a or F316	20	Stop Plate	Carbon Steel or Stainless Steel
9	Gland	Stainless Steel	21	Dished Spring	Alloy Steel or Stainless Steel
10	Thrust Washer	Graphite	22	Locked Washer	Carbon Steel or Stainless Steel
11	Body Gasket	316+Graphite	23	Steel Ball	Stainless Steel
12	Stem Packing	Graphite	24	Antistatic Spring	Stainless Steel

Note: 1. TCC: Tungsten Carbide Coating.
 2. Customer shall order the valve according to service condition.

- **General Design**

The ball is fixed by Trunnion Shaft (size 4" and smaller) or Retaining Plate (size 6" and above), and the seat rings are floating, free to move against the ball along the valve centerline. The trunnion shaft / retaining plate together with bearings adsorb the side load created by the pressure acting on the ball. At low pressure, the seat tight sealing is ensured by the preload of the springs acting on the seat rings. Along with the pressure increasing, the process medium pressure pushes the seat rings against the ball to provide additional load for tight sealing.

The ball and stem are independent with each other to minimize the effect of the side thrust generated by the pressure acting on the ball.

4" & Smaller

6" & Larger

- **Ball Seat Alignment**

Mechanical stops are equipped on all valves to ensure the ball is never to be over rotated.

- **AED O-Ring**

When valves are used under high pressure gas applications, e.g. hydrocarbon gas service under class 600lb and above, the gas may be absorbed into the molecular structure of elastomeric O-rings. If the valve is subjected to sudden decompression, the O-rings may be destroyed by the rapidly expanded gas. To avoid this possibility, special AED O-rings or Lip seals, suitable for such service conditions, are available on request.

- **Environment Friendly Valve**

Accurate machining of stem, gland and bonnet sealing surfaces with double sealing (O-ring primary seal plus graphite gasket seal) ensure the low emission which is complying with the most severe pollution-control regulations. The test certifications are available on request.

• Seat Design

Standard seat design is primary soft seal, and secondary metal to metal seal. Seat insert is designed as pressed-in type which is easy for maintenance. (Fig. 1) Optional design with primary metal to metal seal and secondary soft seal seat design is also available upon request. (Fig. 2)

Fig.1

Fig.2

a) Standard: Single Piston Effect Seats (Self Relieving Seats)

Medium pressure, both upstream and downstream, creates a resultant thrust to the seat rings against the ball to assure tight sealing; Medium pressure acting in the body cavity creates a resultant thrust to push the seat rings away from the ball.

The single piston design permits the automatic release of any over pressure in the body cavity when the valve is in the fully open or fully closed position. (Fig. 3, 4)

Fig.3

Fig.4

b) Option 1: Double Piston Effect Seats

Medium pressure, both upstream and downstream as well as in the body cavity, creates a resultant thrust that pushes the seat rings against the ball. Valves with double piston effect seat rings require a cavity pressure relief device to reduce the build-up of over pressure in the body cavity. (Fig. 5, 6)

Fig.5

Fig.6

c) Option 2: Combination Seats

Combination seats design is available on request. That is a standard seat design used for upstream side and a double piston effect seats design used for downstream. The advantage is it can reach double piston effect seats design function without cavity pressure relief device to saves the cost, meanwhile only need a little care to install valve per flow direction arrow. (Fig. 3, 6)

- **Double Block and Bleed**

When the ball is in the closed position, each seat seals off the process medium independently at the same time between the up/down stream and body cavity; it allows bleeding of the trapped cavity pressure (DBB) through drain or vent valve. The double block and bleed function makes it possible to flush the valve under pressure and verify that the seats are sealing properly.(Fig. 7)

Fig.7

- **Blow-out Proof Stem**

The stem is made separately from the ball with integral T-type round shoulder, retained by gland. (other designs are available on request).(Fig. 8)

- **Anti-static Device**

Spring plus graphite type anti-static device are applied between the ball, stem, gland flange and body, to keep the electrical continuity between all the metallic components, and ensure the resistance lower than the most severe service requirement.(Fig. 8)

Fig.8

- **Fire Safe**

- a) External leakage prevention

All the possible external leakage point between stem and gland flange, gland flange and body, body and adapter are sealed with primary O-ring then secondary graphite gasket. When fire burned out the primary O-ring seal, the secondary graphite gasket seal still can prevent the process medium from external leakage.(Fig. 9)

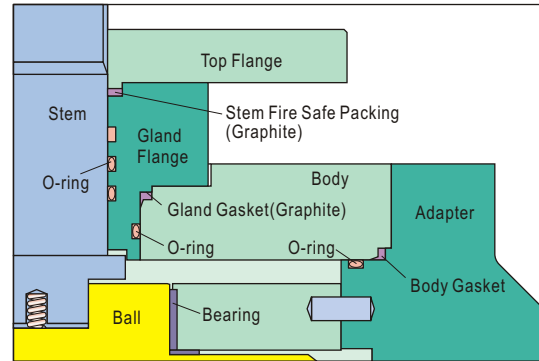

Fig.9

- b) Internal leakage prevention

When fire burned out the primary O-ring seal between the floating seat ring and adapter, also the seat insert between seat ring and ball, the secondary graphite seal between seat ring and adapter, and seat ring & ball metal to metal contact preloaded by spring will minimize the internal process medium leakage. (Fig. 10, 11)

Fig.10

Fig.11

- **Emergency Sealant Injection System**

Each valve of size 6" and larger (or smaller size on request), is equipped with sealant injection located at stem and seats area. The injection is integrated with check valve to provide backup sealing, also a check valve is equipped at front of seat sealant injection to avoid blowing out in case wrong operation. When the soft sealing materials (seat inserts and o-rings) are damaged and leakage happened by fire or other accident, the sealant can be injected through the injection fittings.(Fig. 12)

Fig.12

Features

Size: 2"~40"
Class: 150~2500
Three Pieces Forged Steel Body
Trunnion Mounted Ball, Full & Reduced Bore

Features

Size: 2"~40"
Class: 150~2500
Welded Forged Steel Body
Trunnion Mounted Ball
Anti-Static Device
Blow-out Proof Stem
Fire Safe Design
For Underground Use (On Request)

- **Severity Service**

Normal soft-seated valve cannot be used for abrasive service or/and for operation in high temperatures that prohibits the use of a resilient material. VIZA metal-to-metal seated trunnion mounted ball valve (series TM, range 2"~24" class 150lb~2500lb) is designed for this type of severity service has seating action provided by the metal-to-metal contact between the ball and the seat rings.

- **General Design**

Blow-out proof stem, anti-static device, double block & bleed, self relieving seats, Mechanical stops for ball seat alignment are designed as standard requirements; while for fire safe and sealant injection system will be supplied when service request.

- **Superior Sealing**

High precision machining and seat to ball rubbing result in superior ball and seat interfacing for reliable sealing conforming to ANSI/FCI 70-2 class V.

- **Reliable Operations**

Spring-loaded seats maintain close contact with the ball ensuring tight sealing even at low pressures. This also results in stable operating torques at high differential pressures over a wide range of temperatures or/and high frequency.

- **Material Selection**

Various material components are available for a variety of service applicable up to 500°C. For service temperature above 300°C, the extension bonnet is required.

- **Applications**

Hard faced ball and seats (TCC as standard, other special coatings are available on request) allow use in more severe services such as slurries, pulp stock, mining and other abrasive media in long life.

Series TM Metal to Metal Seat Trunnion Mounted Ball Valve

Note: 1. * Recommended Spare Parts
 2. TCC: Tungsten Carbide Coating.
 3. Customer shall order the valve according to service condition.

- **Cryogenic Service**

Valves are demanded widely in cryogenic applications (-196 ~ -50 °C), including LNG that is fast becoming a better alternative source of clean energy. VIZA developed its cryogenic floating (Series FY) and Trunnion mounted (Series TY) ball valve accordingly.

- **Standards**

ASME B16.34, ASME B16.5
API 6D, BS 5351, BS 6364, Shell MESC 77/200
BS 6755, Shell MESC 77/306

- **Applications**

Ethane:	-89°C
Ethylene:	-104°C
Methane:	-162°C
Liquefied Natural Gas (LNG):	-162°C
Oxygen:	-183°C
Nitrogen:	-196°C

- **Cryogenic Test**

Valves can be tested by in house cryogenic test facility and issue the report on request.

- **General Features**

Extension bonnet gives enough vapour space to maintain the stem packing at a temperature high enough to protect the stem packing against malfunctioning due to freezing;
Cavity pressure relief;
Low operating torque for smoother operations;
Blow-out proof stem, anti-static device and fire safe design;
Double block & Bleed (Series TY);
Low fugitive emission compliance.

- **Technical Data**

Design type:	Floating, Trunnion
Sizes:	1/2"~24"
Pressure:	class 150lb~600lb
Temperature:	-196°C to ambient temperature
Body material:	A351 Gr CF8/CF8M, A182 F304/F316 (-196°C)

Floating Ball Valve Design Torque

Size (inch)	Design Torque (N.m)				
	Class 150	Class 300	Class 600	Class 900	Class 1500
1/2	12	17	30	38	51
3/4	14	23	38	56	71
1	27	48	66	98	130
1-1/2	55	89	120	189	238
2	75	100	160	240	350
2-1/2	125	141	233	390	550
3	162	216	308	610	980
4	234	476	635	---	---
5	546	910	---	---	---
6	804	1338	1944	---	---
8	1410	3100	---	---	---
10	2600	5400	---	---	---

Notes:

1. For FC, FR & FF series valves, torque is the same.
2. All valves are in normal temperature, with PTFE seat for Class 150~300 and Nylon seat for Class 600~1500.
3. For cryogenic ball valve, torque will be 2~2.5 times the above torque.
4. Torque shown in this table is to be used as a guide for actuator selection. A safety factor of 1.5 is recommended for actuator sizing.
5. Torque may be changed according to different medium and trim material.

Ball Valve Flow Coefficient (Cv)

40	139982	139982	139982	---	---	---

Note:

1. The flow coefficient "Cv" of a valve is the flow rate in Gallons /minute of 60°F water through a fully opened valve, at a pressure drop of 1 psi across the valve.
2. All the ball valves are in full bore.

Notes:

1. The above table is for TF, TW&TT series valves, which are with ISO 5211 mounting flange and adaptability for all types actuators mounting.
2. The torque is for valves with PTFE seat or Molon seat as per different size/class selection.
3. The torque value showed in above table is the valve torque at normal temperature. For customer's sizing actuator:
 - a. If medium temperature is -10°C~40°C, the output torque of actuator should be 1.5 times the valve torque;
 - b. If medium temperature is less than -10°C, the output torque of actuator should be 2 or 2.5 times the valve torque.
