

FRESH FOOD FAST

Cook fresh – and have more time for your family. It's possible thanks to advanced Panasonic Microwaves. With their combination of functions and smart Inverter technology, you have delicious meals fast. And they cook your food gently, preserving vital vitamins and nutrients for healthy eating.

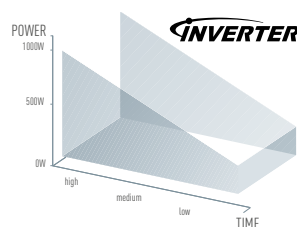

UNIQUE PANASONIC TECHNOLOGY

OLD HABITS

Traditional microwaves heat food at maximum power output without considering the vital nutrients inside. If the meal requires just 600 watts of energy for cooking, the appliance heats the food in intervals – constantly emitting or withholding energy, and resulting in unevenly cooked meals, meaning fine cooking control and ideal results are not possible.

INNOVATIVE SOLUTIONS

With inverter technology you can prepare meals the gentle way – just like you want to. Because inverter technology enables total control of the microwave power level for more gentle, fine cooking. So rather than stopping and starting at high power, the cooking runs smoothly at a specific level. This preserves valuable nutrients in your food.

TURBO STEAM

Powerful steam is injected from the highly efficient boiler, which is housed in the side of the unit, directly into the upper area of the oven, which is divided by the glass shelf. Healthy steam cooking is quickly achieved while preserving the natural flavour of the ingredients.

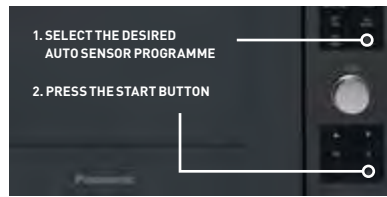

STYLISH DESIGN MEETS INTELLIGENT TECHNOLOGY

Each Panasonic Steam Combination and Combination Microwave features a range of easy functions wrapped in style and convenience to complement any kitchen.

LESS IS MORE

Your food is prepared up to 30% faster while being heated gently. That means you have more time to enjoy the delicious meal. At the same time, the advanced Inverter technology saves up to 30% in energy – and even 50% in standby mode – which is good for the environment and your wallet.

COMBINATION COOKING

Combination cooking is ideal for a variety of foods. The microwave power cooks the food quickly, while the oven, grill or both give the food its traditional browning and crispness. All this happens simultaneously, resulting in most meals being cooked in half or even two thirds the time of conventional cooking methods.

FLATBED DESIGN

Use dishes of any shape and size thanks to the innovative Flatbed design, which gives you a cooking area that is 61% bigger when compared to conventional turntable models.

SENSOR COOKING

Just select the food type and press start: the humidity sensor in the oven detects bursts of steam and adapts the cooking time accordingly. Now you no longer need to set the power, time or weight of food.

2-LEVEL COOKING

Convection lets you cook on two levels simultaneously for more food. An integrated fan circulates the hot air throughout the oven producing a quicker, more even result. Ideal for roasting or baking.

PANA CRUNCH

Provides crunchy and crispy results every time. It is ideal for a variety of foods such as pizza and quiche.

SWIPE & TOUCH

The Panasonic premium combination microwave ovens feature a new, advanced electrostatic touch panel with Swipe & Touch functionality – for smart and easy operation just like with your smartphone.

THE RIGHT COOKING METHOD FOR EVERY MEAL

With clever microwaves from Panasonic, you can not only heat up meals especially fast and easily – you can also grill, bake and steam food too. So you'll enjoy simply delicious and healthy meals with little effort. Prepare crispy pizza, mouth-watering cake, tasty fish or a juicy roast from now on in your microwave – and save lots of time and energy compared to conventional ovens.

STEAM FUNCTION

Powerful steam from a highly efficient boiler is directly injected into the oven for a fast and healthy way of cooking.

CONVECTION

A conventional oven function that incorporates a heating element with a fan makes for perfect roasting and baking.

GRILL + CONVECTION

For cooking or reheating food, with the grill and convection functions working simultaneously, you will enjoy extra-crisp food.

GRILL

The quartz grill system built into the oven provides fast, efficient cooking for a wide variety of foods such as sausage and toast.

MICRO POWER

Micro power penetrates deeply into the food, heating up its water molecules to cook the food from the inside out.

TURBO DEFROST

Unique to Panasonic, this function uses random pulses of power to reduce defrosting time dramatically. At the same time, it eliminates the problem of partially cooked food with frozen spots.

STEAM COMBINATION MICROWAVES

The Turbo Steam function of the Panasonic NN-CS894 Steam Combination Microwave keeps your meals healthier and tastier. There's no need for an extra water connection – the 650ml water tank is built in at the bottom – and by adding the optional Trim Kit, you can seamlessly integrate the microwave into your kitchen cabinetry.

INTEGRATED
WATER TANK

NN-CS894

Steam Combination Microwave

Turbo Steam technology

Inverter microwave with convection and grill

2-level cooking

Easy Touch & Slide control

Trim Kit available

Inverter microwave: 1000W

Quartz grill: 1300W

Fan-assisted convection oven: 1450W (100–230°C)

32-litre cavity (non-stick fluoroc coating) compact body

Humidity sensor

Bottom-hinged door

Child protection

Self-cleaning rear wall

Without glass turntable

Flatbed cooking chamber

Colour: Stainless steel

 Optional Trim Kits NN-TKF71S in stainless steel
 for NN-CF771 and NN-TKF70M in silver for NN-CF760

TRIM KITS FOR THE NN-CF771, NN-CF760 AND NN-CS894 MICROWAVES

Thanks to a dedicated Trim Kit, some Panasonic Combi Microwaves can be perfectly integrated into your kitchen. Optional Trim Kits are available for the following models:

Microwave	Trim Kit
NN-CF771	NN-TKF71S
NN-CF760	NN-TKF70M
NN-CS894	NN-TK816

BUILT-IN MICROWAVE

When you opt for the Trim Kit, the safety clearance provided in the owner's manual is no longer valid, as the supply and return air is now led through airways in the cupboard. Thus, the cupboard's opening must have the adequate dimensions.

TRIM KIT

For some appliances, the owner's manual states that the microwave's right side should have a clearance of 40cm. This solely serves to guarantee that the appliance does not interfere with your radio or TV.

GRILL MICROWAVE OVENS

NN-GD371/361/ 351/342

Grill Microwave Oven

Inverter microwave with grill

ICON GLOSSARY

MICROWAVES

STEAM FUNCTION

Unique Turbo Steam technology injects high-density steam into the oven for quick and healthy cooking.

CONVECTION

Hot air can be used for cooking all kinds of meals that would normally be cooked in a traditional oven.

GRILL

The grill can be used for preparing pizza and grilled chicken.

MICRO POWER

The microwave can be used for simple cooking such as heating up a meal.

TURBO DEFROST

Turbo Defrost defrosts evenly and dramatically reduces defrosting times.

COMBINATION COOKING

The combination of microwave and grill power means that food cooks quickly and becomes nicely crisp and browned.

TURBO COOKING

Turbo Cooking reduces cooking time at the press of a button during Combination Cooking.

AUTO PROGRAMMES

Easy and fast preparation of meals with the press of a single button.

HUMIDITY SENSOR

The humidity sensor enables the oven to calculate the cooking time automatically.

PANA CRUNCH

Pana Crunch provides crunchy and crispy results every time. It is ideal for a variety of foods such as pizza and quiche.

DOUBLE HEATER

Double Heater (top and bottom heater) delivers the same crispy results you get with a traditional oven.

FLATBED

The innovative Flatbed design is easier to clean and provides more usable space for larger dishware of varying shapes.

LED CAVITY LIGHTING

The LED light inside the cavity saves power while providing more brightness.

CAVITY CAPACITY

The amount of space inside the microwave, measured in litres.

INVERTER

Inverter technology provides constant cooking energy on medium and low power settings. It provides an even cooking process for your food, preserving full texture and flavour.
