

FUJITSU Cloud Service K5 COLMINA Platform
Service Details Instruction Manual
(Version 1.0.1)

IIDP1.0_M001

© FUJITSU LIMITED 2018

<Revision History>

| Version | Description | Date |
|----------------|-----------------------------------|---------------|
| 1.0.0 | First issued | Jan. 26, 2018 |
| 1.0.1 | Correction of additional function | Jun. 29, 2018 |

Preface

Thank you for considering the FUJITSU Cloud Service K5 COLMINA Platform (called "this service" below). This document, the *FUJITSU Cloud Service K5 COLMINA Platform Service Details Instruction Manual* (called "this document" below), is intended for customers who have signed a contract for this service or are deploying this service. We ask for your understanding regarding the following matters.

1. Customers who are considering deploying this service are requested to use this document to help decide whether to deploy this service only.
2. This document and the contents therein are not to be disclosed or provided to any third party.
3. Copying or reproducing the contents of this document without the permission of the provider is prohibited.

This document describes important information for customers deploying this service.

Customers who have signed the service contract are requested to read this document thoroughly before using this service. Please keep this document in a safe place.

Customers opting not to deploy this service are responsible for promptly disposing of this document.

While we have strived to prepare this document with the greatest care in describing tasks in the most easy-to-understand manner possible, we cannot be held responsible for any errors or omissions in the document. This document and the contents therein may change at any time without notice.

Do not copy, reproduce, or modify the contents of this document, in part or in full, without prior permission to do so.

Disclaimers

- Fujitsu does not accept any responsibility for unexpected malfunctions or charge due to a user performing an operation not described in the manuals for this service.
- Fujitsu does not accept any responsibility in the unlikely event that the use of, or inability to use, this service causes any damage (including, but not limited to, damages caused by a suspension of work, corruption/loss of data, accident-related damages, and the potential for liability claims from a third party).

<Terms>

| Term | Description | Remarks |
|---|---|---------|
| K5 | Fujitsu's Cloud Platform. | |
| K5 Authentication Platform | K5's Authentication PaaS. Provides account management and authentication functionalities. | |
| COLMINA | Abbreviation for COLlaborative Monozukuri INnovation Agent. It represents Fujitsu's digital place for manufacturing. | |
| Data visualization powered by Intelligent Dashboard | Fujitsu's solution to support overall optimization and also visualization across entire factories. The optimization will lead to business solutions in the manufacturing industry, and the visualization effectively uses IoT. | |
| Tenant ID | ID for each tenant. It is issued when the contract is signed. | |
| Dashboard screen | Screen displaying Intelligent Dashboard. It can display data hierarchically by unit (country, region, factory, line, facility, etc.) or in a graph. | |
| Drill down | Operation to go down in the level of data aggregation, one by one. It moves from summary data to more detailed data. | |
| Service application number (Service contract ID) | Service application number issued in the moment service contract is established. | |
| Factory ID | ID of a factory to be visualized for use with Intelligent Dashboard. The service user is asked to decide an arbitrary ID when signing the contract. | |
| Factory name | Name of a factory to be visualized for use with Intelligent Dashboard. The service user is asked to decide an arbitrary name when signing the contract. | |
| Sequential performance data | Performance data produced/generated at a factory, etc. | |
| Performance data by minute | Sequential performance data summarized into performance data by minute. | |
| Performance data by hour | Sequential performance data summarized into performance data by hour. | |
| Performance data by shift | Sequential performance data summarized into performance data by shift. | |
| Performance data by day | Sequential performance data summarized into performance data by day. | |
| Performance data by week | Sequential performance data summarized into performance data by week. | |
| Performance data by month | Sequential performance data summarized into performance data by month. | |
| Performance data by fiscal year | Sequential performance data summarized into performance data by fiscal year. | |
| CSV edit tool | Excel tool. It is used during master maintenance in Intelligent Dashboard. You can download it from the K5 portal site. | |
| Default screen | At the beginning of service after the contract is concluded, the screen appearing after login is called a default screen. Some customers may sign a multi-tenant contract. Default screens are template screens commonly provided to tenants. | |
| Detailed card | Screen information displaying the details of an alarm on the screen | |
| TLS TLS 1.2 | Abbreviation for Transport Layer Security. TLS is a protocol for providing the required communications security over a computer network, such as the Internet. The main functions provided by this protocol are authentication of the identity of communicating parties, encryption of the contents of communication, and detection of falsified data. TLS 1.2 can use SHA-256 (encryption scheme) and an authenticated encryption method as the encryption scheme. | |

| | | |
|--|---|--|
| | The COLMINA Platform permits communication only with TLS 1.2. | |

Chapter 1 FUJITSU Cloud Service K5 COLMINA Platform

1.1. Overview

This service provides a platform for total connections from factories to maintenance sites. It is divided into COLMINA Platform and COLMINA Service. Below is an explanation of each service.

1.1.1. COLMINA Platform

1.1.1.1. COLMINA Portal

Provides access to COLMINA Platform and COLMINA Service functionalities. Following operations are available in COLMINA Portal screen:

- User management (add, edit and delete)
 - Data reception status confirm
 - Service usage statistics (disk usage)
 - Access to data visualization service (Intelligent Dashboard)
- * “Data reception setting” and “Stored data confirm” displayed on COLMINA Portal screen are not yet available to use.

1.1.1.2. Data reception

Receive CSV format files through API provided by this service.

A reception number is attributed to each CSV file received and the result of reception process is stored at data arrival record table.

1.1.1.3. Data storage

Files received by data reception service are stored as structured data into data storage area.

1.1.1.4. Authentication

This service can authenticate users based on user name and password.

1.1.2. COLMINA Service

1.1.2.1. Data visualization powered by Intelligent Dashboard

Data received and stored into data storage area can be visualized.

(a) Data visualization

Stored data can be split into layers and displayed in graphs at Dashboard screen. It also can display images uploaded by service user.

1. Layer types examples: Country, region, factory, production line and facility
2. Graph type examples: hourly, yearly, monthly and daily

(b) Alarm

Alarms can be displayed at Dashboard screen based on parameters previously set by user.

(c) Master maintenance

1. Screen design settings

Setup contents (template, graph, alarm, screen transition layer, etc.) and register images to be displayed at Dashboard screen.

2. User access management

Roles and access rights for functions can be defined for each user.

3. Sequential performance and aggregated performance data output

Stored data can be downloaded as CSV files.

For an outline of this service, see "Figure 1.1. Outline Diagram" below.

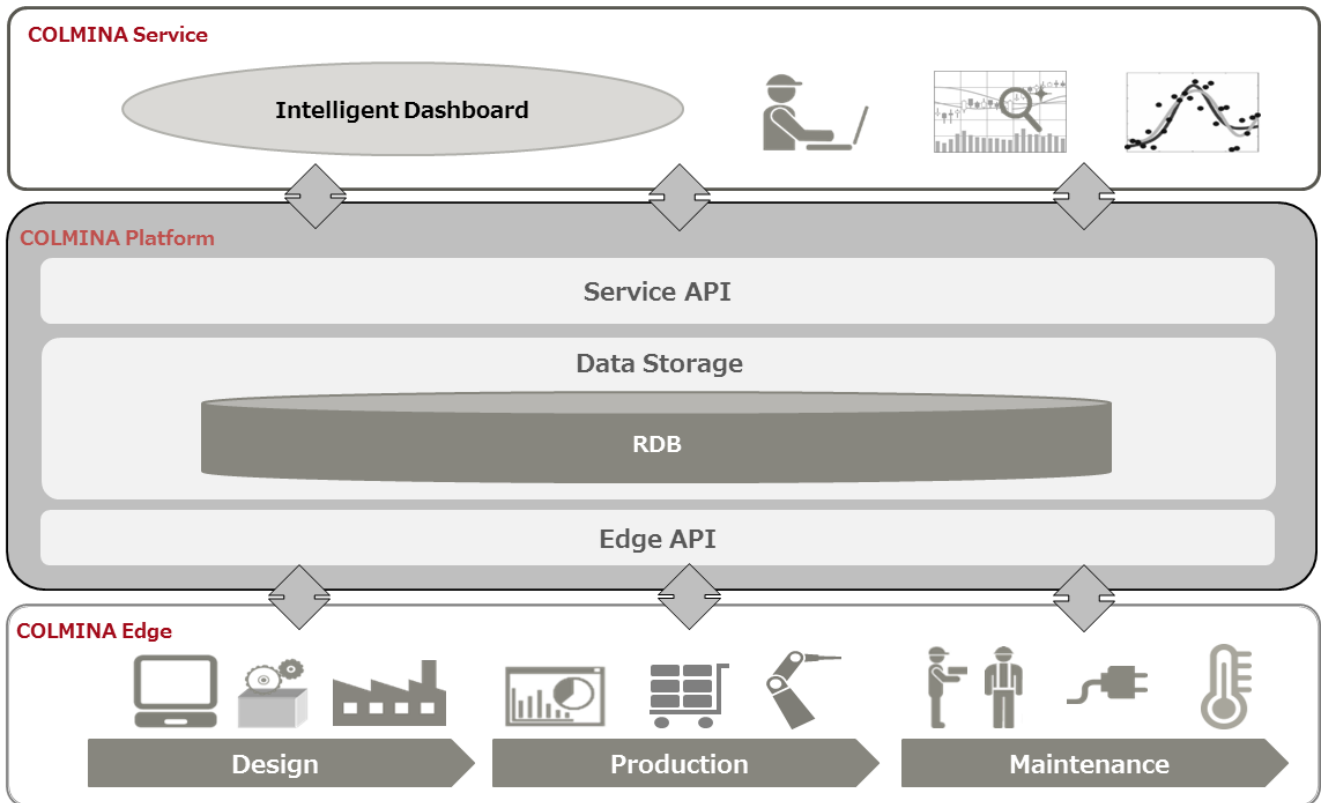

Figure 1.1. Outline Diagram

1.2. Features

A feature of the data reception is cloud storage for the sequential performance data produced or generated in factories and elsewhere. The service user can store the data on the cloud through an API. The user creates a sending program to allow access to the API. When data is received as a CSV file on the cloud, the reception outcome is recorded in the data arrival record table. Even if the data is received as an error for some reason, it is recorded in the data arrival record. The error data is not stored. So the cloud can store just the normal data.

A feature of usage statistics is to obtain tenant's, which logged user belongs to, system usage statistics from server and display on usage statistics verification screen. Used and remaining disk space of structured data's data storage area are available. Also it's possible to select the month and year of the usage statistics.

As a feature of K5 Portal support, this service's new contract application, change contract application and contract cancellation can be managed at K5 Portal.

As a feature of data visualization, this service can visualize normal and abnormal conditions throughout a factory and display alarms in a timely manner. This can, for example, improve the speed of improvement from error occurrence detection to recovery, and enable efficient management of the lines throughout a factory and efficient management by apparatus level.

The service users can define, in detail, what data is visualized and how data is displayed on the screen. The users can define hierarchical levels like country, region, factory, and line for the visualized data. They can prepare a world map, Japan map, factory layout plan, and other diagrams. They can also get graphs displayed on their images. Furthermore, the range of data shown to each user can be defined for the visualized data. The data visualization does not require the service users to prepare complex programs because they can get the necessary definitions by editing various master data with the CSV edit tool and uploading the data.

A feature of data storage is the capability to store structured data (RDB) into data storage area.

1.3. Documents

The following table shows the arrangement of documents for this service.

Table 1.3. Documents

| Manual Name | Description |
|---|--|
| <i>FUJITSU Cloud Service K5 COLMINA Platform Service Details Instruction Manual</i> | Describes the service specifications of this service. (This document) |
| <i>FUJITSU Cloud Service K5 COLMINA Platform User Guide</i> | Support manual for the design and development of applications utilizing this service |
| <i>FUJITSU Cloud Service K5 COLMINA Platform API Reference</i> | Contains information on the APIs provided with this service. |

Chapter 2 Service Specifications

2.1. COLMINA Platform

2.1.1. COLMINA Portal

Portal that provides access to functionalities of COLMINA Platform and COLMINA Service.

For functionalities provided by COLMINA Portal, see following table 2.1.1. COLMINA Portal function list.

Table 2.1.1. COLMINA Portal function list

| No. | Function name | Function overview |
|-----|-------------------------------|---|
| 1 | Usage statistics verification | Provides means to verify resource usage statistics. |
| 2 | User setting | Provides user management functionality. |
| 3 | Data reception status confirm | Provides means to verify data reception status stored in data arrival record table. |
| 4 | Intelligent Dashboard | Provides access to data visualization powered by Intelligent Dashboard service. |

2.1.1.1. Usage Statistics Verification

Initial screen of portal provides statistics about current number of registered users, structured data's disk usage and remaining space. Also there is an option to filter statistics data by year and month.

*Number of Data Lake API (RDB/NoSQL) calls and unstructured data's disk usage and remaining space are displayed but currently not covered by this service.

List of factories allowed to be used in Intelligent Dashboard can be obtained by contacting the help desk. For details, see the *User Guide*.

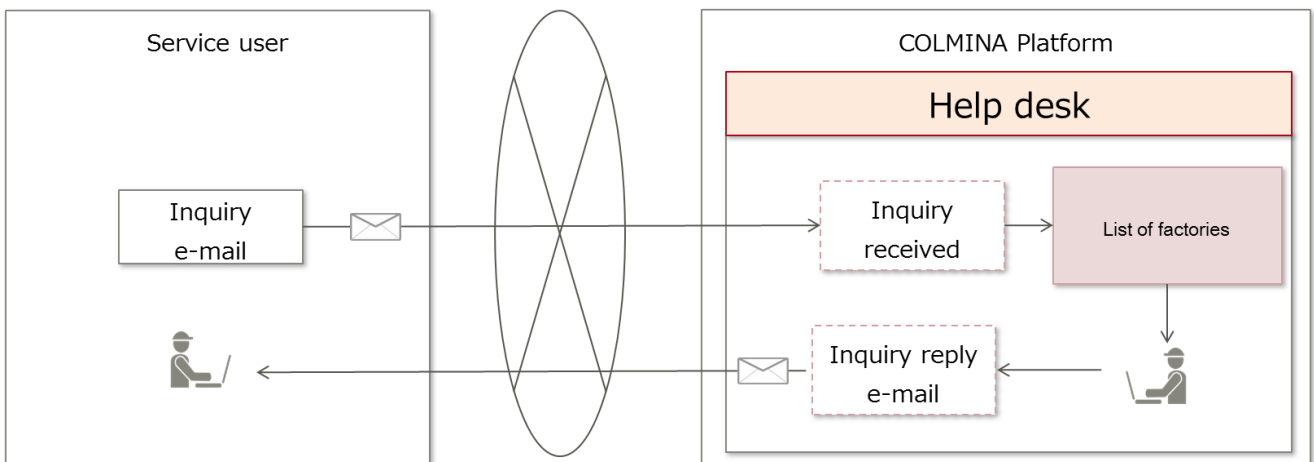

Figure 2.1.1.1. Inquiry List of Factories

2.1.1.2. User Setting

Provides a screen to view, register, edit, delete or unlock users.

New user registration requires a user name, password, utilization period and role.

Only password, utilization period and role can be changed after the user registration. An expiration date is set for the password, so the password must be changed regularly before expiry.

2.1.1.3. Data Reception Status Confirm

Provides a screen to verify the data reception status stored at data arrival records written by data reception process.

Reception number, reception status, reception result, period of data reception are available as search conditions. If reception number is specified, other search conditions won't be applied.

2.1.1.4. Intelligent Dashboard

Provides access to Data Visualization powered by Intelligent Dashboard.

For details, see "2.2.1. Data Visualization powered by Intelligent Dashboard".

2.1.2. Data Reception

Sequential performance data produced or generated in factories and elsewhere can be stored in the cloud through an API.

Service user must implement a sending program to access the API.

A reception number (API receiving date and time + tenant ID + 5-digit sequential number) is added to each instance of receiving, and the reception outcome is recorded in the data arrival record table. Even if the data is received as an error for some reason, it is recorded in the data arrival record. For details on the sending program, see the *API Reference*.

For an outline of data reception, see "Figure 2.1.2. Data Reception" below.

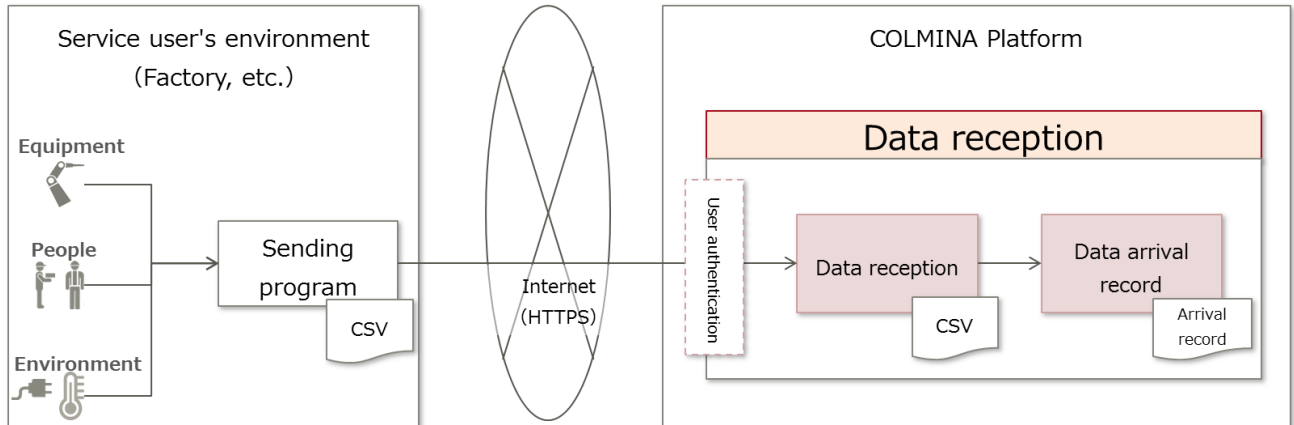

Figure 2.1.2. Data Reception

2.1.3. Data Storage

Converts structured data in CSV format received through data reception ("sequential performance data") into RDB format and stores it in the data storage area. The data is converted into RDB format and stored in the data storage area. Out of the structured data, error data is not stored, and only normal data is stored. Tenant ID, Place ID, time, data type and data element are used as a key for storing the data. If the newly received key is identical to (same as) the existing one, last received data overwrites the existing one.

For an outline of data storage, see "Figure 2.1.3. Data Storage" below.

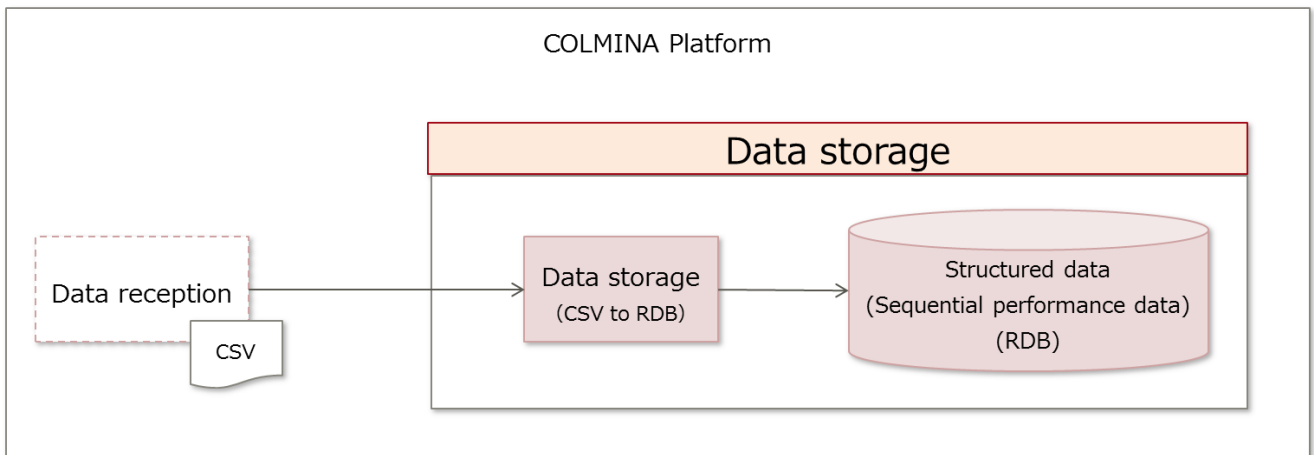

Figure 2.1.3. Data Storage

2.1.4. Authentication Function

When the sending program accesses the API in data reception, the user is authenticated with user name and password

for data sending user. When the user is logging in to Intelligent Dashboard, this user is authenticated with user name and password for Intelligent Dashboard.

You are provided with a user name and temporary password when a new contract is concluded. Before the initial login to start using the service, go to the password change URL to change your temporary password. For details, see the *User Guide*.

For an outline of the authentication function, see "Figure 2.1.4. Authentication Function" below.

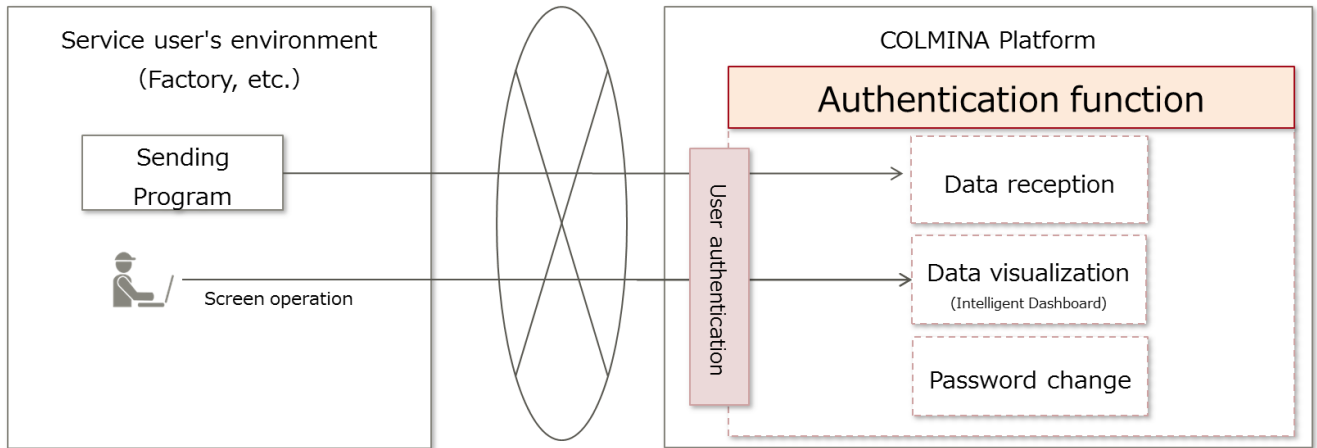

Figure 2.1.4. Authentication Function

2.2. COLMINA Service

2.2.1. Data Visualization powered by Intelligent Dashboard

Intelligent Dashboard is provided as a function for visualizing stored data. Number of factories available for registration on Intelligent Dashboard depends on the contracted plan. (Factories with different names are regarded as different factories.)

For an outline of Intelligent Dashboard, see "Figure 2.2.1. Intelligent Dashboard Outline" below.

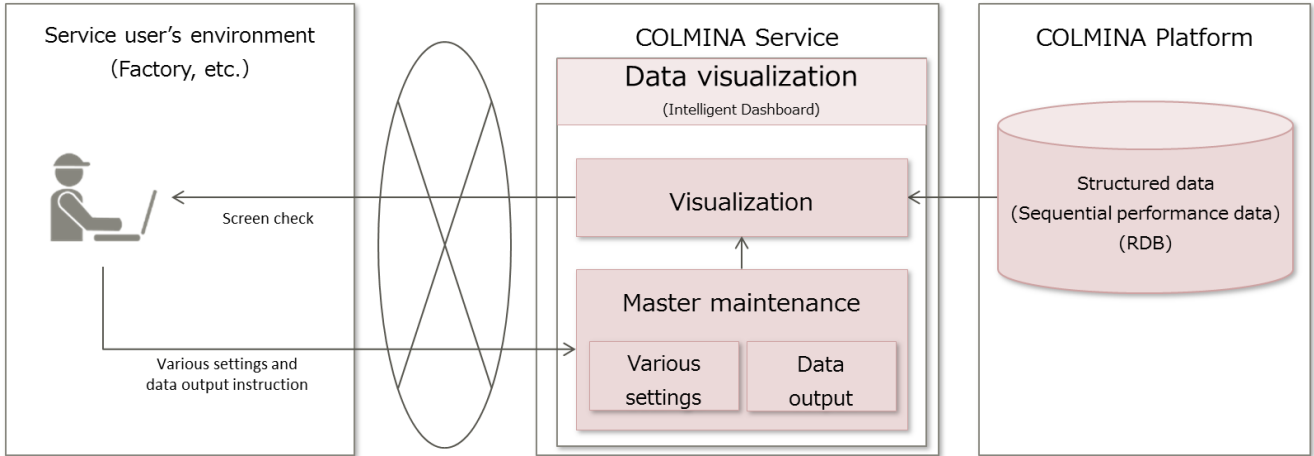

Figure 2.2.1. Intelligent Dashboard Outline

For details on the functions provided by Intelligent Dashboard, see "Table 2.2.1. Intelligent Dashboard Functions" below.

Table 2.2.1. Intelligent Dashboard Functions

| No. | Function Name | Subject | Functional Outline |
|-----|---------------------------------|---------------|---|
| 1 | Visualization | User | You can display the dashboard screen with a hierarchical display, alarm display, graph display, etc. |
| 2 | Alarm history | User | You can search for recorded alarm history or alarm information arbitrarily to display them. |
| 3 | Change the displaying date/time | User | You can have the drawn data displayed on the screen redrawn with data of an arbitrary date and time. |
| 4 | Screen refresh | User | You can have the drawn data displayed on the screen redrawn with the latest data. |
| 5 | Status and comment input | User | You can enter a status for an alarm that has occurred. |
| 6 | Display language switching | User | You can switch the display language on the display screen. |
| 7 | Access log | Administrator | You can search the access status (access date and time, accessing user name, and accessed level), names of accessed screen and messages of users arbitrarily and display them. |
| 8 | Batch aggregation | Administrator | You can create aggregated data grouped by time, location and other forms from stored sequential performance data. However, it is necessary to set the aggregating conditions in the master as it does not aggregate automatically. |
| 9 | Batch log | Administrator | You can arbitrarily search for and display data. The data consists of batch processing times (start year, month, day, and time (hour and minute)), processing result levels (information or error), types (batch name), and messages (information message at processing start, for example, and generated error message). |
| 10 | Master maintenance | Administrator | You can output and register editable master data (user settings, factory settings, authority settings, locale settings, screen design settings, and data aggregation settings), output other data, and register image data. |

2.2.1.1. User Functions

(1) Visualization

The system administrator arbitrarily defines screen and user information in masters on the service user side. The top screen for each logged-in user is displayed from the definitions. Users can display screens by level in a hierarchy, alarms that have occurred, and multiple graphs.

This service provides default screens as template screens. This document describes visualization along the lines of the default screen setting examples.

For examples of screen display with visualization on default screens, see "Table 2.2.1.1.1. Default Screen Examples" below.

Table 2.2.1.1.1. Default Screen Examples

| No. | Default Screen Example | Outline |
|-----|-----------------------------|---|
| 1 | Hierarchical screen display | You can display (drill down) prepared screens at hierarchical levels. |
| 2 | Alarm display | You can display information on an alarm that has occurred, on the screen. |
| 3 | Graph display | You can simultaneously display multiple prepared graphs for a comparison. |

The system administrator arbitrarily defines images and screens suiting a hierarchy (line, facility, etc.) within an actual factory as hierarchical screen. Then, users can display screens at each level in the hierarchy (country to region to factory to line to facility and so on). The screen content is easy to understand and see as a mental picture, so it can be easy to visualize the hierarchical structure in a factory.

To go from top to bottom in the screens prepared as a hierarchy, drill down the hierarchy, level by level. To go from bottom to top, you can use a topic path to jump instantly to a higher level and view the screen.

For an example of a hierarchy in visualization, see "Figure 2.2.1.1.1. Example of a Hierarchy with Visualization" below.

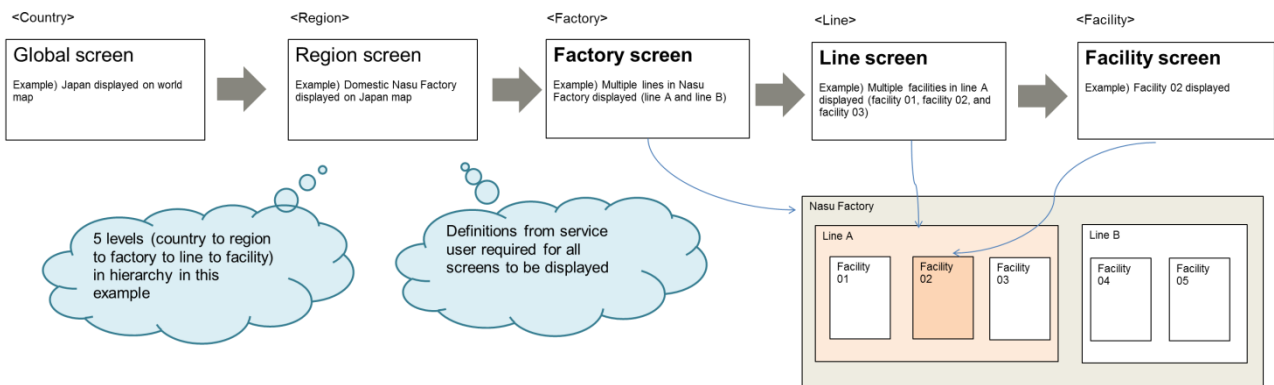

Figure 2.2.1.1.1. Example of a Hierarchy with Visualization

In the alarm display function, by setting in advance a threshold (range) for target place and target data, when an object data enters the threshold range, an alarm is displayed. Depending on the range of the thresholds, you can change the kind of alarm in accordance with definitions of caution, warning, emergency. By defining the target place, it is possible to visually display where the problem is occurring (occurrence of an abnormal value), and by inputting the correspondence situation, it allows the users to deal with the problem leaving records from the occurrence of the abnormality to the countermeasure.

"Figure 2.2.1.1.2. Example of Alarm Display with Visualization" shows an example of alarm display with visualization.

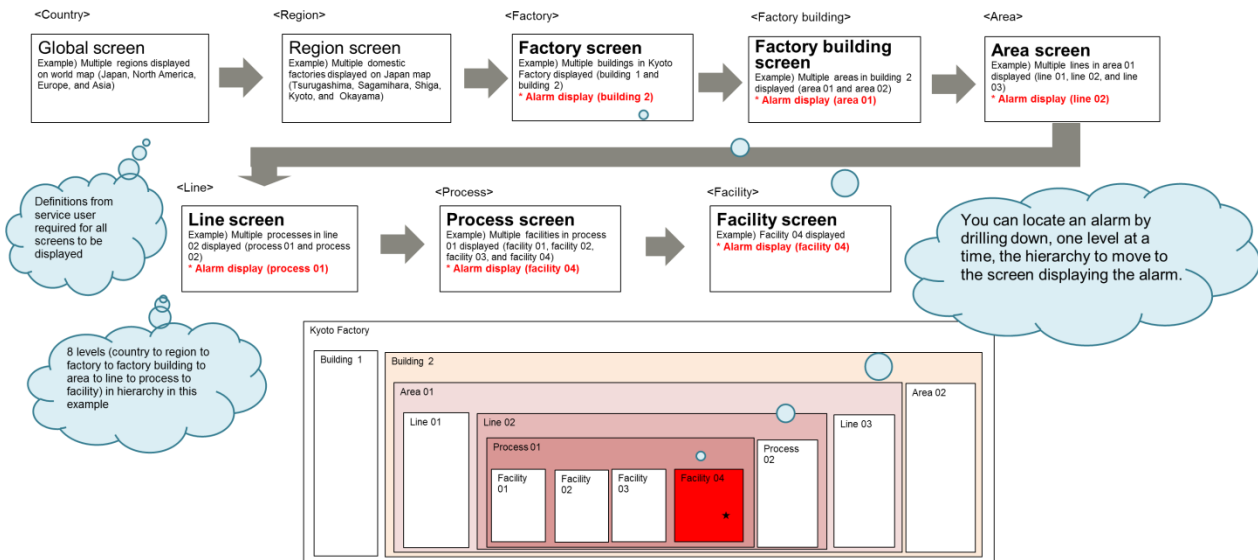

Figure 2.2.1.1.2. Example of Alarm Display with Visualization

The system administrator arbitrarily defines screens that show graphs of the status of multiple factories, multiple lines, and multiple facilities, as screens displaying a graph list. By comparing multiple assorted graphs shown on one screen at the same time, users can look for the cause of a problem to improve quality or increase efficiency.

(2) Alarm History

The states exceeding the thresholds and the input comments and the states in alarm input are recorded. Alarm history is a function for referring to these records. Alarm history can be searched for by time and place of occurrence, alarm level and correspondence situation. Up to 1,000 items (up to 20 items per page) can be listed.

"Table 2.2.1.1.2. Alarm History Search Conditions" shows the alarm history search conditions.

Table 2.2.1.1.2. Alarm History Search Conditions

| No. | Search Item | What is Selected/Entered for Search |
|-----|-----------------------|---|
| 1 | Alarm occurrence time | Start year, month, day, and time (hour and minute) and end time (hour and minute) of alarm occurrence |
| 2 | Place | Unit of the hierarchy defined by the service user, such as line or facility. By selecting from a higher level in the hierarchy, you can drill down to select the lower-level target under the current level. |
| 3 | Alarm level | Attention, Warning, Emergency |
| 4 | Status | Up to ten items can be set arbitrarily (Example: Open, Checking, Investigating, Preparing, Request, Re-Investigation, Ongoing, Closed, etc.) |

(3) Change the Displaying Date/Time

Users can change the displaying date/time of data drawn on the screen configured by the system administrator to an arbitrary date and time. After the displaying date/time is changed, the change stays in effect until the displaying date/time is changed to a different date/time, the screen is refreshed, or the user logs off.

(4) Screen Refresh

Users can redraw, with the latest data, the data drawn on the screen configured by the system administrator.

(5) Status and Comment Input

You can enter a status for the alarm on the comment input window of the detailed card where the alarm occurred. For example, after a person in charge enters or updates the status, a factory manager, a line administrator, and so on can quickly understand the latest status of the alarm.

The maximum entry for a status comment is 256 characters. Each person who responds can add to or delete the entered contents of the status comments.

The entered status comment will also be output to the access log. Only the system administrator can browse the access log.

(6) Display Language Switching

Users can switch display languages. Though the standard display language is English, system administrators can arbitrarily define up to 5 additional combinations of a locale and a language.

2.2.1.2. Administrator Functions

(1) Access Log

The system administrator can check the access status of a user from the access log screen.

For details on access log search conditions, see "Table 2.2.1.2.1. Access Log Search Conditions" below.

Table 2.2.1.2.1. Access Log Search Conditions

| No. | Search Condition | Description |
|-----|----------------------|--|
| 1 | Access date and time | You can specify the access period (start year, month, day, and time (hour and minute) and end year, month, day, and time (hour and minute)). |
| 2 | Log level | You can specify a log level (information or error). |
| 3 | User name | You can specify a user name. |

For details on the items that can be displayed and checked in the access log, see "Table 2.2.1.2.2. Access Log Check Items" below.

Table 2.2.1.2.2. Access Log Check Items

| No. | Display Item | Description |
|-----|----------------------|--|
| 1 | Access date and time | You can display the access period (start year, month, day, and time (hour and minute) and end year, month, day, and time (hour and minute)). |
| 2 | User name | You can display the user name of the accessing user. |
| 3 | Access level | You can display the access level (information or error). |
| 4 | Access type | You can display the screen name of the accessed screen. |
| 5 | Message | You can display information messages, such as that at processing start, and generated error messages. |

(2) Batch Aggregation

By starting batch aggregation on Intelligent Dashboard, you can create aggregated data from the sequential performance data. The methods of processing the aggregation are time aggregation, location aggregation, and other aggregation. You can edit aggregation processing by factory, but batch aggregation processes the aggregation master records of all the factories in timely as one system.

For descriptions of the aggregation processing methods, see "Table 2.2.1.2.3. Aggregation Processing Methods" below.

Table 2.2.1.2.3. Aggregation Processing Methods

| No. | Aggregation Processing Method | Aggregation Description |
|-----|-------------------------------|---|
| 1 | Time aggregation | Summarizes data into data with a larger time unit. For example, this processing summarizes sequential performance data into performance data by minute, or summarizes performance data by minute into performance data by hour. The total is calculated for each data place or data type. |

| | | |
|---|----------------------|---|
| 2 | Location aggregation | Calculates the total as location data at a higher level in the hierarchy. For example, this calculation summarizes facility performance data into process performance data or process performance data into line performance data. Aggregation is done by aggregation time and data type. |
| 3 | Other aggregation | Generates an average value, minimum/maximum value data, and data converted by unit, based on a calculation specifying a calculation method or correction value. |

The sequential performance data stored by this service, various aggregated performance data created by batch aggregation, access log, and batch log are retained. For the retention periods of this data, see "Table 2.2.1.2.4. Target Data Retention Periods" below. The defaults are the recommended maximum values. You can request a reduced data retention period via the help desk. For details, see the *User Guide*.

Table 2.2.1.2.4. Target Data Retention Periods

| No. | Data Subject to Data Retention Period | Retention Period (Default Value (Recommended Maximum Value)) |
|-----|---------------------------------------|--|
| 1 | Sequential performance | 60 days |
| 2 | Performance data by minute | 60 days |
| 3 | Performance data by hour | 365 days |
| 4 | Performance data by shift | 365 days |
| 5 | Performance data by day | 365 days |
| 6 | Performance data by week | 60 months |
| 7 | Performance data by month | 60 months |
| 8 | Performance data by fiscal year | 10 years |
| 9 | Access log | 365 days |
| 10 | Batch log | 365 days |

(3) Batch Log

The system administrator can check the batch aggregation processing status by factory.

For example, suppose that a user notices that data has not updated on a dashboard screen. In this case and others like it, the user then makes an inquiry to the administrator. The administrator can quickly check the status of batch processing about to examine the possibility that the batch abnormally ended as the cause.

For details on the batch log search conditions, see "Table 2.2.1.2.5. Batch Log Search Conditions" below.

Table 2.2.1.2.5. Batch Log Search Conditions

| No. | Search Condition | Description |
|-----|--------------------------------|---|
| 1 | Batch processing date and time | You can specify the batch processing date and time (start year, month, day, and time (hour and minute) and end year, month, day, and time (hour and minute)). |
| 2 | Log level | You can specify a log level (information or error). |

For details on the items that can be displayed and checked in the batch log, see "Table 2.2.1.2.6. Batch Log Display Items" below.

Table 2.2.1.2.6. Batch Log Display Items

| No. | Display Item | Description |
|-----|--------------------------------|---|
| 1 | Batch processing date and time | You can display the batch processing date and time (start year, month, day, and time (hour and minute) and end year, month, day, and time (hour and minute)). |
| 2 | Processing result level | You can display the batch processing result level (information or error). |
| 3 | Batch type | You can display the name of the processed batch. |
| 4 | Message | You can display information messages, such as that at processing start, and generated error messages. |

(4) Master Maintenance

The system administrator can configure and manage various master table data with the master maintenance function.

The master maintenance workflow is as follows.

- Output master table data.
Download a CSV file of the master table data to be edited.
- Edit master table data.
Edit the downloaded master table data in CSV format on the CSV edit tool.
- Register master table data.
Upload the edited master table data in CSV format.

You can download the CSV edit tool from the K5 PaaS portal site. For details on the CSV edit tool, see the *User Guide*.

For a description of the master maintenance function, see "Table 2.2.1.2.7. Master Maintenance Function" below.

Table 2.2.1.2.7. Master Maintenance Function

| No. | Master Maintenance Function Name | Master Table Data Type | Functional Outline |
|-----|--|---------------------------|--|
| 1 | Output master table data | - | - Downloads master table data in a CSV file. |
| 2 | Edit master table data (CSV edit tool used) | User settings | - Sets a COLMINA user as an Intelligent Dashboard user. |
| 3 | | Factory settings | - Sets a factory ID to be used with Intelligent Dashboard. |
| 4 | | Authority settings | - Sets screens to be displayed for each user as display authority. - Sets the users granted administrator authority to execute the master maintenance function. |
| 5 | | Locale settings | - Defines the combination of a default display language and time zone. |
| 6 | | Screen design settings | - Settings for adding a new screen - Settings of common screen elements - Settings of arbitrarily defined screen elements - Screen display authority settings |
| 7 | | Data aggregation settings | - Sets a batch aggregation processing method to aggregate performance data. |
| 8 | | Resource settings | - Sets the text to be displayed on the screen. |
| 9 | Register master table data | - | - Uploads edited master table data in CSV format. |
| 10 | Output data | - | - Downloads sequential performance data as a CSV file. |
| 11 | Register image data | - | - Uploads image data. |

(a) Editing master table data

You can download various editable master table data in a CSV file.

For details on the types of editable master tables, see "Table 2.2.1.2.8. Editable Master Table Data" below.

Table 2.2.1.2.8. Editable Master Table Data

| No. | Master Table Data Type | Main Editing/Setting Target | Key Information |
|-----|------------------------------|--|---|
| 1 | Alarm Master | Alarm type | Tenant ID, Place ID and Alarm ID |
| 2 | D3 Graph Master | Screen design settings | Tenant ID and Object ID |
| 3 | Locale Master | Locale settings | Tenant ID and Locale Category |
| 4 | Language Master | Language settings | Tenant ID, and Language Division |
| 5 | Object Master | Screen design settings | Tenant ID and Object ID |
| 6 | Object Style Master | Screen design settings | Tenant ID and Object ID |
| 7 | Place Master | Factory settings | Tenant ID and Place ID |
| 8 | Place Date Control Master | Aggregation period for each place | Tenant ID and Place ID |
| 9 | Resource Master | Resource settings | Tenant ID, Resource ID and Language Division |
| 10 | Role Master | Factory and authority settings | Tenant ID and Role ID |
| 11 | Screen Master | Authority, screen design and factory settings | Tenant ID and Screen ID |
| 12 | Screen Data Master | Screen design settings | Tenant ID, Screen ID, Component ID, Object Sequential Number |
| 13 | Screen Item Master | Authority and screen design settings | Tenant ID, Screen ID, Component ID, Object Sequential Number |
| 14 | Threshold Master | Alarm judgment condition | Tenant ID, Place ID, Alarm ID, Alarm Level, Time Type, and Time |
| 15 | User Master | User settings | Tenant ID and User ID |
| 16 | User Auth Master | User settings, authority settings | Tenant ID, user ID and Role ID |
| 17 | Totaling master | Data aggregation settings | Tenant ID and Order |
| 18 | Globe Master | Globe attribute settings | Tenant ID, Screen ID and Item ID |
| 19 | Screen Item Extension Master | Setting attributes of circle and cylinder on the globe | Tenant ID, Screen ID, Place ID, and Item ID |

The following tables describe the editable master table items.

Items of "Registering user ID", "Registration Date and Time", "Updating user ID", "Update Date and Time", "Registered Factory ID" are automatically registered in the system for each master table so you can not edit them. However, only the registered factory ID of the screen master can be updated when the system administrator authority user uploads it.

For details on the alarm master table items, see "Table 2.2.1.2.9. Alarm Master Table Items" below.

Table 2.2.1.2.9. Alarm Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-----------|-----------|------------------------------|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | place_id | Place ID | Alphanumeric characters only | | 2 | * Required item Alarm occurrence location (Locale ID of locale master) |
| 3 | alarm_id | Alarm ID | Alphanumeric | | 3 | * Required item |

| | | | | | | |
|----|-----------------------|-------------------------------------|--|---|--|--|
| | | | characters only | | | Unique ID assigned to each alarm type |
| 4 | data_sbt | Data Type | Alphanumeric characters only | | | Data type as alarm |
| 5 | data_cat | Data Element | Alphanumeric characters only | | | Data element as alarm. |
| 6 | alarm_history_reg_kbn | Alarm History Registration Category | Only from 0 to 9 | 1 | | 0: Do not register, 1: Always register, 2: Register at status change |
| 7 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 8 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 9 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 10 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 11 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 12 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the D3 graph master table items, see "Table 2.2.1.2.10. D3 Graph Master Table Items" below.

Table 2.2.1.2.10. D3 Graph Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|------------|------------|------------------------------|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | object_id | Object ID | Alphanumeric characters only | | 2 | * Required item Definition Object (Object ID of object master) |
| 3 | graph_type | Graph type | Alphanumeric characters only | 5 | | Specifies a graph type. 0010: Card format 0020: List format 0030: 2-bar chart 0040: 1-line chart + 1-bar chart 0050: 1-stacked bar + 1-line chart 0060: 1-bar chart + 2-line chart 0070: Graph with 1 to 10 lines 0090: Doughnut graph 0100: Gauge bar graph |

| | | | | | | |
|----|--------------------|---|--|----|--|---|
| | | | | | | 0110: Pie chart 0120: 2-bar chart + 2-line chart 0130: 3-bar chart 0140: Stacked bar chart 0150: Donut chart 0160: Stacked Bar(one) + Line Graph(two) |
| 4 | graph_color | Graph color | Alphanumeric characters and symbols only | | | Graph display color If there are multiple data items, specify colors with comma-separated values. Specify a color name or a hexadecimal color code. |
| 5 | alarm_color | Graph color (alarm) | Alphanumeric characters and symbols only | | | Graph display color at the alarm time Specify a color name or a hexadecimal color code. |
| 6 | radius | Circle radius (inner and outer) | Numerical value (unsigned, without decimal part) | | | Specifies circle radius (inner radius and outer radius in this order) with comma-separated values for a pie chart. |
| 7 | alart_radius | Circle radius (inner and outer) (alarm) | Numerical value (unsigned, without decimal part) | | | Specifies circle radius (inner radius and outer radius in this order) with comma-separated values for a circle. |
| 8 | label_font | Character font in graph | Alphanumeric characters and symbols only | 32 | | Font size of characters displayed in a pie chart, doughnut graph, or gauge graph |
| 9 | alart_label_font | Character font in graph (alarm) | Alphanumeric characters and symbols only | 32 | | Font size of characters displayed in a pie chart, doughnut graph, or gauge graph at the alarm time |
| 10 | label_color | Character color in graph | Alphanumeric characters and symbols only | 20 | | Color of characters displayed in a graph (values, unit, and legend of a pie chart, doughnut graph. or gauge graph) Specify a color name or a hexadecimal color code. |
| 11 | alart_label_color | Character color in graph (alarm) | Alphanumeric characters and symbols only | 20 | | Color of characters displayed in a pie chart, doughnut graph, or gauge graph at the alarm time Specify a color name or a hexadecimal color code. |
| 12 | label_locate | Character display position in graph | Alphanumeric characters and symbols only | 32 | | Position of characters displayed in a pie chart, doughnut graph, or gauge graph Specify the position in the x,y format. |
| 13 | alart_label_locate | Character display position in graph (alarm) | Alphanumeric characters and symbols only | 32 | | Position of characters displayed in a pie chart, doughnut graph, or gauge graph at the alert time Specify the position in the x,y format. |
| 14 | unit | Display unit in graph | Alphanumeric characters and | 32 | | Unit displayed in a pie chart, doughnut graph, or gauge graph |

| | | | | | | |
|----|---------------------|--|--|----|--|--|
| | | | symbols only | | | |
| 15 | bar_width | Bar width in bar chart | Numerical value (unsigned, without decimal part) | 32 | | Bar width in a bar chart |
| 16 | bar_margine | Bar spacing margin | Numerical value (unsigned, without decimal part) | 32 | | Spacing between bars in a multiple-bar chart |
| 17 | x_unit_resource_id | Label resource ID of X-axis unit | Alphanumeric characters and symbols only | 8 | | Unit of X axis (Resource ID of Resource Master). When the time type of Screen data master is 100, specify eight units to be used for each time type, separated by commas [Sequential, minute, hour, shift, day, week, month, year] |
| 18 | x_unit_locate | Label display position of X-axis unit | Alphanumeric characters and symbols only | 20 | | Display position of the X-axis unit Specify the position in the x,y format. |
| 19 | x_scale | X-axis scale interval | Numerical value (unsigned, without decimal part) | 8 | | Number of auxiliary scale units on the X-axis |
| 20 | x_scale_type | X-axis scale type | Alphanumeric characters and symbols only | 20 | | If the X-axis is dates in the yyyy/mm/dd format, specify 1. |
| 21 | x_scale_format | X-axis display format | Alphanumeric characters and symbols only | 20 | | If the X-axis is dates in the yyyy/mm/dd format, specify the display format of the scale, such as "mm/dd". In the case of no input, it is displayed in the following format according to the time type value of the screen data master 010: minutes (0 to 59) 020: minutes (0 to 59) 030: hours(0 to 24) 040: hours (0 to 24) 050: days (1 to 31) 060: days (1 to 31) 070: months (1 to 12) 080: years (yyyy) |
| 22 | y1_unit_resource_id | Unit Label Resource ID of Y Axis | Alphanumeric characters and symbols only | 8 | | Label that will be displayed as leftside unit of Y axis (Resource ID of Resource Master) |
| 23 | y1_unit_location | Leftside Unit Label Display Location of Y axis | Alphanumeric characters and symbols only | 20 | | Display position of the left Y-axis unit Specify the position in the x,y format. |
| 24 | y1_max_val | Max value of leftside Y axis | Numerical value (unsigned, | 15 | | Maximum value on the left Y-axis If not specified, the maximum value |

| | | | | | | |
|----|---------------------|---|--|----|--|--|
| | | | without decimal part) | | | among the data is used. |
| 25 | y1_min_val | Min value of leftside Y axis | Numerical value (unsigned, without decimal part) | 15 | | Minimum value on the left Y-axis If not specified, the minimum value among the data is used. |
| 26 | y1_scale | Number of scale units on left Y-axis | Numerical value (unsigned, without decimal part) | 8 | | Number of auxiliary scale units on the left Y-axis |
| 27 | y1_0axis_view_flg | Display division of Left Y-axis and 0-axis | Numerical value (unsigned, without decimal part) | 1 | | Display specification of 0-axis in Left Y-axis Display 1:0-axis line |
| 28 | y2_unit_resource_id | Label resource ID of right Y-axis unit | Alphanumeric characters and symbols only | 8 | | Resource ID of the right Y-axis unit |
| 29 | y2_unit_location | Label display position of right Y-axis unit | Alphanumeric characters and symbols only | 20 | | Display position of the right Y-axis unit Specify the position in the x,y format. |
| 30 | y2_max_val | Maximum value on right Y-axis | Numerical value (unsigned, without decimal part) | 15 | | Maximum value on the right Y-axis If not specified, it is the maximum value in the data. |
| 31 | y2_min_val | The minimum value of Right Y-axis | Numerical value (unsigned, without decimal part) | 15 | | Minimum value on the right Y-axis If not specified, it is the minimum value in the data. |
| 32 | y2_scale | Number of scale units on right Y-axis | Numerical value (unsigned, without decimal part) | 8 | | Number of auxiliary scale units on the right Y-axis |
| 33 | margine_top | Top margin of graph | Numerical value (unsigned, without decimal part) | 5 | | Size of the margin at the top of the graph |
| 34 | margine_bottom | Bottom margin of graph | Numerical value (unsigned, without decimal part) | 5 | | Size of the margin at the bottom of the graph |
| 35 | margine_left | Left margin of graph | Numerical value (unsigned, without decimal part) | 5 | | Size of the margin on the left side of the graph |
| 36 | margine_right | Right margin of graph | Numerical value (unsigned, without decimal part) | 5 | | Size of the margin on the right side of the graph |
| 37 | graph_dot | Line chart dot display | Alphanumeric characters and symbols only | | | Whether to display dots on a line in the line chart. For multiple lines, specify comma-separated values. |

| | | | | | | |
|----|-------------------------|--|---|---|--|--|
| | | | | | | Specify 1 to display dots. |
| 38 | limit_conditio n_flg | Threshold judgment condition flag | Alphanumeric characters and symbols only | 1 | | Specifies how to judge the threshold. If the flag is 1, values less than or equal to the threshold are judged as an alarm. If the flag is any value other than 1, values equal to or greater than the threshold are judged as an alarm. |
| 39 | limit_data_nu mber | Threshold number | Numerical value (unsigned, without decimal part) | 2 | | Specifies the data number used for a threshold judgment ("1" for the first one). |
| 40 | note_resource _id | Legend resource ID | Alphanumeric characters and symbols only | | | Resource ID for a legend For multiple IDs, specify comma-separated values. |
| 41 | note_locale | Legend display position | Alphanumeric characters and symbols only | | | Position of a placed legend Specify the position in the (x1,y1),(x2,y2) format. |
| 42 | note_setting | Character size of scale/unit/legend | Alphanumeric characters and symbols only | | | Character size of scales, units, and legends |
| 43 | comment_txt | Comment | Arbitrary data | | | Arbitrary comment |
| 44 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Automatically sets the user at the registration time. |
| 45 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Automatically sets the date at the registration time. |
| 46 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Automatically sets the user at the update time. |
| 47 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Automatically sets the date at the update time. |
| 48 | reg_factory_i d | Registering Factory ID | Alphanumeric characters only | | | Factory to register Automatically sets the target factory at the registration time. |

For details on the locale master table items, see "2.2.1.2.11. Locale Master Table Items" below.

Table 2.2.1.2.11. Locale Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|------------|-----------------|--|---------------------|-------------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | locale_kbn | Locale category | Alphanumeric characters and symbols only | 5 | 2 | * Required item Locale setting ID (en_US) |

| | | | | | | |
|----|----------------|-------------------------|--|----|--|--|
| 3 | language_kbn | Language Division | Arbitrary data | | | Language(Language Master ID) |
| 4 | resource_id | Resource ID | Alphanumeric characters only | | | The name of the locale category (Resource ID of resource master) |
| 5 | time_zone | Time zone | Alphanumeric characters and symbols only | 6 | | Time difference value from UTC (United States: -06:00, Tokyo: +09:00,) |
| 6 | date_fmt | Date format | Alphanumeric characters and symbols only | 16 | | YYYY/MM/DD, etc. |
| 7 | time_fmt | Time format | Alphanumeric characters and symbols only | 16 | | HH:MM:SS, etc. |
| 8 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 9 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 10 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 11 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 12 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 13 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the object master table items, see "Table 2.2.1.2.12. Object Master Table Items" below.

Table 2.2.1.2.12. Object Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | object_id | Object ID | Alphanumeric characters only | | 2 | * Required item Screen object ID |
| 3 | object_sbt | Object type | Alphabetical characters only | 3 | | Menu: MNU, Image: IMG, Card: CRD, List: LST, Graph: GRH, Link: LNK, Alarm: ALM, Alarm details: ACD, CMP; Component, LBL; Label, GLB: Globe |
| 4 | disable_flg | Inactive/Active flag | Only from 0 to 9 | 1 | | 0: Active, 1: Inactive |
| 5 | path | Path | Alphabetical characters only | | | Image data file name |
| 6 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 7 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 10 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 11 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the object style master table items, see "Table 2.2.1.2.13. Object Style Master Table Items" below.

Table 2.2.1..2.13. Object Style Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|------------------|------------------|---|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | object_id | Object ID | Alphanumeric characters only | | 2 | * Required item Definition Object (Object ID of object master) |
| 3 | fore_color | Character color | Alphanumeric characters and symbols only | 20 | | Specify by Color Name or hexadecimal color code Specify two colors in the CSV format for objects whose Screen Item Master link mode is 3 (Example Except current time type selection, current time type selection -> white, # 45c2c0) |
| 4 | background_color | Background color | Alphanumeric characters and symbols only | 20 | | Specify by Color Name or hexadecimal color code Specify two colors in the CSV format for objects whose Screen Item Master link mode is 3 (Example Except current time type selection, current time type selection -> white, # 45c2c0) |
| 5 | width | Width | Numerical value (unsigned, without decimal part) | 5 | | Width of a placed object (number of pixels) |
| 6 | height | Height | Numerical value (unsigned, without decimal part) | 5 | | Height of a placed object (number of pixels) |
| 7 | font | Font name | Arbitrary data | 32 | | Font name of displayed characters |
| 8 | font_size | Font size | Numerical value (unsigned, with decimal part) | 5 | | Font size of displayed characters |
| 9 | boarder_style | Border style | Alphanumeric characters only | 20 | | Border style of a placed object Specify an HTML style name. |
| 10 | boarder_color | Border color | Alphanumeric characters and symbols only | 20 | | Border color of a placed object Specify a color name or Hexadecimal color code Border Color of the Object that will be placed Need to be specified by Color Name or hexadecimal color code Specify two colors in the CSV format for objects whose Screen Item Master link mode is 3 (Example Except current time type selection, current time type |

| | | | | | | |
|----|-----------------------|------------------------------------|---|---|--|---|
| | | | | | | selection -> white, # 45c2c0) |
| 11 | glass_rate | Transparency | Numerical value (unsigned, without decimal part) | 3 | | Transparency of a placed object Specify a value from 0 to 100. |
| 12 | max_line | Maximum number of lines | Numerical value (unsigned, without decimal part) | 3 | | Maximum number of displayed lines |
| 13 | max_length | Maximum number of characters | Numerical value (unsigned, without decimal part) | 4 | | The maximum number of display characters |
| 14 | line_cnt_or_newline | Validity Division of newline | Numerical value (unsigned, without decimal part) | 1 | | Display method with specification of the maximum number of characters 1:Newline Display |
| 15 | delimiter_format_flag | Delimiter Format Flag | Alphanumeric characters and symbols only | 1 | | Numeric value according to locale Three-digit delimiter character and decimal point display flag 1: Display (Example: locale is de_DE12345.5 -> 1.234,) Other: Three-digit delimiter is not displayed, the decimal point is a period |
| 16 | decimal_precision | Decimal Precision | Alphanumeric characters and symbols only | 1 | | Minimum number of digits to be displayed after the decimal point specified by 1 to 3 |
| 17 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 18 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 19 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 20 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 21 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 22 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the Place master table items, see "Table 2.2.1.2.14. Place Master Table Items" below.

Table 2.2.1.2.14. Place Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-----------------|-------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | place_id | Place ID | Alphanumeric characters only | | 2 | * Required item ID indicating country / factory / process / apparatus |
| 3 | resource_id | Resource ID | Alphanumeric characters only | | | The name of the locale category (Resource ID of resource master) |
| 4 | locale_kbn | Locale category | Alphanumeric characters and symbols only | 5 | | User's language (country) (Locale category of locale master) |
| 5 | parent_place_id | Parent Place ID | Alphanumeric characters only | | | Parent Place ID (not set for the one at the top) |
| 6 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 7 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 10 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 11 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |
| 12 | route_place | Route Path for Place ID | Alphanumeric characters and symbols only | | | Top most Place ID's route path, automatically created on Master Maintenance including its own Place ID. Route path separator is [/] (Slash). |

For details on the date control master table items by location, see "Table 2.2.1.2.15. Place Date Control Master Table Items " below.

Table 2.2.1.2.15. Place Date Control Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------------------|--|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | place_id | Place ID | Alphanumeric characters only | | 2 | * Required item Alarm occurrence location (Place ID of Place master). |
| 3 | st_biz_hour | Business hours (start) | Only from 0 to 9 | 4 | | Start time of business hours (HH24MI format) |
| 4 | st_biz_dayofweek | Day of week (start) | Only from 0 to 9 | 1 | | 1: Sunday, 2: Monday, 3: Tuesday, 4: Wednesday, 5: Thursday, 6: Friday, 7: Saturday |
| 5 | st_biz_monthday | Fiscal month (start) | Only from 0 to 9 | 2 | | Start date of a fiscal month (DD format) Month boundary by monthly aggregation |
| 6 | st_biz_month | Fiscal year (start) | Only from 0 to 9 | 4 | | Start month of a fiscal year (MMDD format) Year boundary by every year aggregation |
| 7 | st_1 st _period | First quarter (start of first half-year) | Only from 0 to 9 | 4 | | Start month of the first quarter (MMDD format) |
| 8 | st_2 nd _period | Second quarter (start) | Only from 0 to 9 | 4 | | Start month of the second quarter (MMDD format) |
| 9 | st_3 rd _period | Third quarter (start of second half-year) | Only from 0 to 9 | 4 | | Start month of the third quarter (MMDD format) |
| 10 | st_4 th _period | Fourth quarter (start) | Only from 0 to 9 | 4 | | Start month of the fourth quarter (MMDD format) |
| 11 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 12 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 13 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 14 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 15 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 16 | st_1st_shift | Shift 1 (start) | Only from 0 to 9 | 4 | | Start time of the first shift (HH24MI format) |

| | | | | | | |
|----|----------------|------------------------|------------------------------|---|--|--|
| 17 | ed_1st_shift | Shift 1 (end) | Only from 0 to 9 | 4 | | End time of the first shift (HH24MI format) |
| 18 | st_2nd_shift | Shift 2 (start) | Only from 0 to 9 | 4 | | Start time of the second shift (HH24MI format) |
| 19 | ed_2nd_shift | Shift 2 (end) | Only from 0 to 9 | 4 | | End time of the second shift (HH24MI format) |
| 20 | st_3rd_shift | Shift 3 (start) | Only from 0 to 9 | 4 | | Start time of the third shift (HH24MI format) |
| 21 | ed_3rd_shift | Shift 3 (end) | Only from 0 to 9 | 4 | | End time of the third shift (HH24MI format) |
| 22 | st_4th_shift | Shift 4 (start) | Only from 0 to 9 | 4 | | Start time of the fourth shift (HH24MI format) |
| 23 | ed_4th_shift | Shift 4 (end) | Only from 0 to 9 | 4 | | End time of the fourth shift (HH24MI format) |
| 24 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the resource master table items, see "2.2.1.2.16. Resource Master Table Items" below.

Table 2.2.1.2.16. Resource Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-----------------|-------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | resource_id | Resource ID | Alphanumeric characters only | | 2 | * Required item Resource ID |
| 3 | locale_kbn | Locale category | Alphanumeric characters and symbols only | | 3 | * Required item User's language (country) (Locale category of locale master) |
| 4 | message | Message | Arbitrary data | | | Display content |
| 5 | resource_fuc_id | Resource function id | Alphanumeric characters only | 3 | | ID that identifies the purpose of special use in the system |
| 6 | default_pkg_flg | Default package flag | Only from 0 to 9 | 1 | | 1: default package 0: specific to tenant |
| 7 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 8 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 9 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 10 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 11 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and | | | Common master table item |

| | | | | | | |
|----|----------------|------------------------|------------------------------|--|--|---------------------|
| | | | millisecond) | | | |
| 12 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the role master table items, see "Table 2.2.1.2.17. Role Master Table Items" below.

Table 2.2.1.2.17. Role Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-----------------|-------------------------|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | role_id | Role ID | Alphanumeric characters only | | 2 | * Required item ID assigned according to the authority of the user |
| 3 | factory_id | Factory ID | Alphanumeric characters only | | | Factory subject to maintenance with factory administrator authority (Place ID of Place master). |
| 4 | resource_id | Resource ID | Alphanumeric characters only | | | Role name (Resource ID of resource master) |
| 5 | sys_reserve_flg | Admin Flag | Alphanumeric characters and symbols only | 1 | | 0: system administrator 1: factory administrator blank or none of the values above: common user |
| 6 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 7 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 10 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 11 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the screen master table items, see "Table 2.2.1.2.18. Screen Master Table Items" below.

Table 2.2.1.2.18. Screen Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------------|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | screen_id | Screen ID | Alphanumeric characters only | | 2 | * Required item Screen Screen ID of screen master |
| 3 | resource_id | Resource ID | Alphanumeric characters only | | | Screen name (Resource ID of resource master) |
| 4 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 5 | no_menu_flg | System menu hide flag | Alphanumeric characters and symbols only | 1 | | 1: Hide system menu |
| 6 | role_id | Role ID | Alphanumeric characters only | | | Required authority to display this screen (Role ID of role master) |
| 7 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory registered in master maintenance browsed by this screen (Place ID of Place master) * Default value "W00" or ID of the factory defined in application * Editable only by system administrator |
| 8 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 9 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 10 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 11 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |

For details on the screen data master table items, see "Table 2.2.1.2.19. Screen Data Master Table Items" below.

Table 2.2.1.2.19. Screen Data Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|------------------|--------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | screen_id | Screen ID | Alphanumeric characters only | | 2 | * Required item Screen Screen ID of screen master |
| 3 | area_id | Component ID | Alphanumeric characters only | 8 | 3 | In the case of object arranged on the screen directly,specify the fixed value 0 In the case of internal object of Component, specify Parent Component ID |
| 4 | object_seq | Object sequential number | Numerical value (unsigned, without decimal part) | 3 | 4 | Number to identify all the objects in the screen. (Object serial number of screen item master) |
| 5 | time_sbt | Time type | Alphanumeric characters only | 3 | | 010: Timely(Sequential performance), 020: Minutely, 030: Hourly, 040: By shift, 050: Daily, 060: Weekly, 070: Monthly, 080: By fiscal year |
| 6 | scale_sbt_real | Realtime Scale Type | Alphanumeric characters only | | | 0: Time / Calendar scale (= 1 hour at present), 1 or more: specified number * minute past scale (Example 20 → past 20 minutes) |
| 7 | scale_sbt_minute | Per Minute Scale Type | Integer value (unsigned) | | | 0: Time / Calendar scale (= current hour), 1 or more: specified number * minute past scale (Example 20 → past 20 minutes) |
| 8 | scale_sbt_hour | Hourly Scale Type | Integer value (unsigned) | | | 0: Time / Calendar scale (= current day), 1 or more: specified number * hour past scale (Example 20 → past 20 hours) |
| 9 | scale_sbt_shift | Per Shift Scale Type | Integer value (unsigned) | | | 1 or more: specified number * past days scale (0 can not be specified) (Example 20 → past 20 days) |
| 10 | scale_sbt_day | Daily Scale Type | Integer value (unsigned) | | | 0: Time / Calendar scale (=current month), 1 or more: specified number * day past scale (Example 20 → past 20 days) |
| 11 | scale_sbt_week | Weekly Scale Type | Integer value (unsigned) | | | 1 or more: specified number * past 7 days scale (0 can not be specified) (Example 2 → past 14 days) |
| 12 | scale_sbt_month | Monthly Scale Type | Integer value (unsigned) | | | 0: Time / Calendar scale (=current year), 1 or more: specified number |

| | | | | | | |
|----|----------------|-------------------|---------------------------------|--|--|---|
| | | | | | | * past month scale (Example 6 → past 6 months) |
| 13 | scale_sbt_year | Yearly Scale Type | Integer value (unsigned) | | | 1 or more: specified number * past year scale (0 can not be specified) (Example 3 → past 3 years) |
| 14 | data_sbt1 | Data type 1 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 15 | data_cat1 | Data element 1 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 16 | data_sbt2 | Data type 2 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 17 | data_cat2 | Data element 2 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 18 | data_sbt3 | Data type 3 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 19 | data_cat3 | Data element 3 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 20 | data_sbt4 | Data type 4 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 21 | data_cat4 | Data element 4 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 22 | data_sbt5 | Data type 5 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 23 | data_cat5 | Data element 5 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |

| | | | | | | |
|----|-------------|-----------------|------------------------------|--|--|--|
| 24 | data_sbt6 | Data type 6 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 25 | data_cat6 | Data element 6 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 26 | data_sbt7 | Data type 7 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 27 | data_cat7 | Data element 7 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 28 | data_sbt8 | Data type 8 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 29 | data_cat8 | Data element 8 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 30 | data_sbt9 | Data type 9 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 31 | data_cat9 | Data element 9 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 32 | data_sbt10 | Data type 10 | Alphanumeric characters only | | | Code to identify the type of stored primary and secondary data (power usage, production volume, etc.) |
| 33 | data_cat10 | Data element 10 | Alphanumeric characters only | | | Category to further identify an element of data stored by data type (for example, to identify the fluctuating, fixed, and proportional-to-production parts out of actual energy use) |
| 34 | alarm_id | Alarm ID | Alphanumeric characters only | | | Target alarm ID when referring to alarm data |
| 35 | alarm_level | Alarm level | Alphanumeric characters only | | | ID uniquely managed for a log, attention, warning, or emergency (managing names by locale) |
| 36 | comment_txt | Comment | Arbitrary data | | | Common master item |

| | | | | | | |
|----|----------------|-------------------------|--|--|--|--------------------------|
| 37 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |
| 38 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 39 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 40 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 41 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |

For details on the screen item master table items, see "Table 2.2.1.2.20. Screen Item Master Table Items" below.

Table 2.2.1.2.20. Screen Item Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-------------|--------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | screen_id | Screen ID | Alphanumeric characters only | | 2 | * Required item Screen. (Screen ID of screen master) |
| 3 | area_id | Component ID | Alphanumeric characters only | | 3 | In the case of object arranged on the screen directly,specify the fixed value 0 In the case of internal object of Component, specify Parent Component ID. |
| 4 | object_seq | Object sequential number | Numerical value (unsigned, without decimal part) | 3 | 4 | * Required item Unique sequential number for each object as many as displayed for the same screen |
| 5 | x_axis | X coordinate | Numerical value (unsigned, without decimal part) | 5 | | X coordinate of an object placed in the area of a screen function (number of pixels counted from the top left) |
| 6 | y_axis | Y coordinate | Numerical value (unsigned, without decimal part) | 5 | | Y coordinate of an object placed in the area of a screen function (number of pixels counted from the top left) |
| 7 | object_id | Object ID | Alphanumeric characters only | | | Object to place on the screen (Object ID of object master) |
| 8 | resource_id | Resource ID | Alphanumeric characters only | | | Contents displayed by Object. (Resource ID of resource master) |

| | | | | | | |
|----|------------------|-------------------------|--|---|--|---|
| 9 | place_id | Place ID | Alphanumeric characters only | | | Data location targeted by data elements such as graphs (Place ID of Place master) |
| 10 | link_mode | Link method | Alphabetical characters only | 1 | | Transition method to the linked screen after clicking, 0: Moves to the screen of Dashboard Screen ID. 1: Screen of the Dashboard Screen ID is displayed on another screen. 2: Specified URL is displayed on another screen. 3: Transit the screen with the screen ID and time type specified in the CSV format [screen ID, time type] in the link URL |
| 11 | link_url | Link URL | Alphanumeric characters and symbols only | | | Link URL or Dashboard Screen ID of the destination of transition after clicking To specify the time type, specify the link method to 3 and specify it in the format of [screen ID, time type]. (Example: Display Screen ID, CJP screen with time type 050 specification -> CJP, 050) |
| 12 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 13 | role_id | Role ID | Alphanumeric characters only | | | ID assigned according to the authority of the user (Role ID of role master) |
| 14 | refresh_interval | Redraw interval | Single-byte numerals | 8 | | Screen redraw interval (in milliseconds) |
| 15 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 16 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 17 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 18 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 19 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the threshold master table items, see "2.2.1.2.21. Threshold Master Table Items" below.

Table 2.2.1.2.21. Threshold Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits (Decimals) | Main Key | Remarks |
|-----|-------------------|----------------------------------|--|-----------------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | place_id | Place ID | Alphanumeric characters only | | 2 | * Required item Location of threshold determination target data (Place ID of Place master) |
| 3 | alarm_id | Alarm ID | Alphanumeric characters only | | 3 | * Required item Alarm ID of the judgment result (Alarm ID of alarm master) |
| 4 | alarm_level | Alarm level | Alphanumeric characters only | | 4 | * Required item Level of judgment result (caution / warning / emergency) (Resource ID of resource master) |
| 5 | time_sbt | Time type | Alphanumeric characters only | 3 | 5 | * Required item 010: Timely(Sequential performance), 020: Minutely, 030: Hourly, 040: By shift, 050: Daily, 060: Weekly, 070: Monthly, 080: By fiscal year |
| 6 | time | Time | Date (year, month, day, hour, minute, second, and millisecond) | 2 | 6 | * Required item Set thresholds (alarm upper limit / lower limit) are enabled only when it corresponds to the time set by on "time" of the master. (If always enabled, 99 is set) For instance, when 9:00 is input, they are enabled when it is 9:00 every day and compared with the past data at the same time (9:00). The type of input numerical value is judged by time type (time_sbt). |
| 7 | upper_alarm_value | Alarm value (upper limit) | Numerical value (unsigned, with decimal part) | 15(3) | | Measured value, calculated value, etc. |
| 8 | upper_cond_kbn | Condition category (upper limit) | Alphanumeric characters and symbols only | 1 | | 0: Less than, 1: Less than or equal to, 2: Greater than, 3: Greater than or equal to, 4: Equal to |
| 9 | lower_alarm_value | Alarm value (lower limit) | Numerical value (unsigned, with decimal part) | 15(3) | | * Required item Measured value, calculated value, etc. |
| 10 | lower_cond_kbn | Condition category (lower limit) | Alphanumeric characters and | 1 | | 0: Less than, 1: Less than or equal to, 2: Greater than, 3: |

| | | | | | | |
|----|----------------|-------------------------|--|--|--|--|
| | | limit) | symbols only | | | Greater than or equal to, 4: Equal to |
| 11 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 12 | resource_id | Resource ID | Alphanumeric characters and symbols only | | | ID uniquely managed with a dictionary (managing names by locale) (R + 7-digit sequential number) |
| 13 | replace_value1 | Replacement value 1 | Arbitrary data | | | Value to insert in an alarm message (generated value, etc.) |
| 14 | replace_value2 | Replacement value 2 | Arbitrary data | | | Value to insert in an alarm message (generated value, etc.) |
| 15 | replace_value3 | Replacement value 3 | Arbitrary data | | | Value to insert in an alarm message (generated value, etc.) |
| 16 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 17 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 18 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 19 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 20 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the user master table items, see “Table 2.2.1.2.22. User Master Table Items” below.

Table 2.2.1.2.22. User Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | user_id | User ID | Alphanumeric characters and symbols only | | 2 | * Required item ID of user using this system |
| 3 | locale_kbn | Locale Category | Alphanumeric characters and symbols only | 5 | | User's language (country) (Locale category of locale master) |
| 4 | init_screen_id | Initial Screen ID | Alphanumeric characters only | | | Screen to be displayed firstly after login (Screen ID of screen master) |
| 5 | init_time_sbt | Initial Time Type | Alphanumeric characters only | 3 | | Initial time type (time type of Screen Data Master) |
| 5 | comment_txt | Comment | Arbitrary data | | | Common master item |

| | | | | | | |
|----|----------------|-------------------------|--|--|--|--------------------------|
| 6 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 7 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 8 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 9 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 10 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the user authority master table items, see "Table 2.2.1.2.23. User Authority Master Table Items" below.

Table 2.2.1.2.23. User Authority Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------------|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | user_id | User ID | Alphanumeric characters and symbols only | | 2 | * Required item ID of user using this system |
| 3 | role_id | Role ID | Alphanumeric characters only | | 3 | * Required item Authority given to users (Role ID of role master) |
| 4 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 5 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 6 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 7 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the aggregation master table items, see "Table 2.2.1.2.24. Totalling Master Table Items" below.

Table 2.2.1.2.24. Totalling Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-------------------|-------------------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | seq | Order | Numerical value (unsigned, without decimal part) | 3 | 2 | * Required item Processing sequence within a batch (from 1) |
| 3 | in_sum_range_kbn | Aggregation Range Category (input) | Alphanumeric characters and symbols only | 7 | | Category specifying the aggregation target range of input for processing (time axis) (010: Timely(Sequential performance), 020: Minutely, 030: Hourly, 040: By shift, 050: Daily, 060: Weekly, 070: Monthly, 080: By fiscal year) |
| 4 | out_sum_range_kbn | Aggregation Range Category (output) | Alphanumeric characters and symbols only | 7 | | Category specifying the aggregation target range of output for processing (time axis) (010: Timely(Sequential performance), 020: Minutely, 030: Hourly, 040: By shift, 050: Daily, 060: Weekly, 070: Monthly, 080: By fiscal year) |
| 5 | retroactive_term | Retroactive period | Numerical value (unsigned, without decimal part) | 5 | | Defines the time for tracing in the past to process the processing target time range. Specify a time value in units of the output time category in the aggregation range category. |
| 6 | in_place_id1 | Place ID (Input 1) | Alphanumeric characters only | | | Location of aggregation subjects. (Place ID of Place master) |
| 7 | in_data_sbt1 | Data Type (Input 1) | Alphanumeric characters only | | | Specifies the data type of the input target of processing. |
| 8 | in_data_cat1 | Data Element (Input 1) | Alphanumeric characters only | | | Specifies the data element of the input target of processing. |
| 9 | in_place_id2 | Place ID (Input 2) | Alphanumeric characters only | | | Location of aggregation subjects. (Place ID of Place master) |
| 10 | in_data_sbt2 | Data Type (Input 2) | Alphanumeric characters only | | | Specifies the data type of the input target of processing. |
| 11 | in_data_cat2 | Data Element (Input 2) | Alphanumeric characters only | | | Specifies the data element of the input target of processing. |
| 12 | sum_kbn | Aggregation Type | Alphanumeric characters and symbols only | 2 | | Category specifying the calculation method for aggregation processing (01: sum, 02: avg, 03: min, 04: max) |

| | | | | | | |
|----|-------------------|-------------------------|--|----|--|---|
| 13 | calc_value | Calculation Value | Numerical value (signed, with decimal part) | 11 | | Correction value (coefficient, etc.) used in the four arithmetic operations |
| 14 | calc_kbn | Calculation Type | Alphanumeric characters and symbols only | 1 | | 0: Use acquisition source location, 1: Use correction value |
| 15 | convert_operator | Operator | Alphanumeric characters and symbols only | 1 | | +, -, *, / |
| 16 | out_place_id | Place ID | Alphanumeric characters only | | | Location of output target. (Place ID of Place master) |
| 17 | out_data_sbt | Data Type (Output) | Alphanumeric characters only | | | Specifies the data type of the output target of processing. |
| 18 | out_data_cat | Data Element (Output) | Alphanumeric characters only | | | Specifies the data element of the output target of processing. |
| 19 | out_data_unit_kbn | Data Unit Type (Output) | Alphanumeric characters only | 3 | | Unit of the data that is the output target of processing |
| 20 | proc_flg | Process Flag | Alphanumeric characters and symbols only | 1 | | Specifies whether to process with the setting of this master line. 0: Do not process, 1: Process |
| 21 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 22 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 23 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 24 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 25 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 26 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the aggregation master table items, see "Table 2.2.1.2.25. Language Master Table Items" below.

Table 2.2.1.2.25. Language Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------------|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | language_kbn | Language Division | Alphanumeric characters and symbols only | | 2 | * Required item Language ID |
| 3 | resource_id | Resource ID | Alphanumeric characters only | | | Name of locale category (Resource ID of Resource Master) |
| 4 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 5 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 6 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 7 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the aggregation master table items, see "Table 2.2.1.2.26. Globe Master Table Items" below.

Table 2.2.1.2.26. Globe Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|-------------|-------------|--|------------------|----------|---|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | screen_id | Screen ID | Alphanumeric characters only | | 2 | * Required item Screen to be set (Screen ID of Screen Master) |
| 3 | key | Item ID | Alphanumeric characters and symbols only | | 3 | * Required item Specify the Item ID which defines display method of the globe (Display location, Height, Widht, Rotational speed etc.) |
| 4 | value | Value | Arbitrary data | | | Specify the value for Item ID |
| 5 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 6 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |

| | | | | | | |
|----|----------------|-------------------------|--|--|--|--------------------------|
| 7 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 8 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 9 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 10 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

For details on the aggregation master table items, see "Table 2.2.1.2.27. Screen Item Extension Master Table Items" below.

Table 2.2.1.2.27. Screen Item Extension Master Table Items

| No. | Item Name | Name | Attribute | Number of Digits | Main Key | Remarks |
|-----|----------------|-------------------------|--|------------------|----------|--|
| 1 | tenant_id | Tenant ID | Alphanumeric characters only | 8 | 1 | * Required item ID to identify each tenant |
| 2 | screen_id | Screen ID | Alphanumeric characters only | | 2 | * Required item Screen to be set (Screen ID of Screen Master) |
| 3 | place_id | Place ID | Alphanumeric characters only | | 3 | * Required item Place of acquisition target data (Place ID of Place Master) |
| 4 | key | Item ID | Alphanumeric characters and symbols only | | 4 | * Required item Specify the Item ID regarding circle and cylinder arranged on the globe |
| 5 | value | Value | Arbitrary data | | | Specify the value for Item ID |
| 6 | comment_txt | Comment | Arbitrary data | | | Common master item |
| 7 | reg_user_id | Register ID | Alphanumeric characters and symbols only | | | Common master table item |
| 8 | reg_datetime | Registering Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 9 | upd_user_id | Updater ID | Alphanumeric characters and symbols only | | | Common master table item |
| 10 | upd_datetime | Update Date & Time | Date (year, month, day, hour, minute, second, and millisecond) | | | Common master table item |
| 11 | reg_factory_id | Registering Factory ID | Alphanumeric characters only | | | Factory to register |

(b) User settings

You can set an Intelligent Dashboard user with a user name registered for a tenant user, by editing the user master and user authority master.

The tenant operator is set as Intelligent Dashboard user when the initial environment is built at the time of a new application. Therefore, they do not need to be set by the system administrator.

To register a user name for a new tenant user, use the COLMINA portal's user settings function. For details, see the *User Guide*.

b.1. Adding a user

Add a user to use Intelligent Dashboard. You can add the user by registering the following master data:

- User master
- User auth master

b.2. Deleting a user

You can delete a user by editing the following master data:

- User master

b.3. Moving a user to another factory

You can move a user to another factory by editing the following master data:

- User master
- User auth master

b.4. Moving a user's authority

You can add a new authority to a registered user or deprive the user of an authority by editing the following master data:

- User auth master

(c) Factory settings

An application has to be submitted for each factory. Once the application is accepted, you can set factory information to use with Intelligent Dashboard by registering or editing the following master data:

- Place master
- Resource master
- Place Date Control Master
- Role master

(d) Authority settings

Two types of authority are managed with Intelligent Dashboard: display authority and administrator authority.

- Display authority: Limits which users can display each screen or internal screen element.
- Administrator authority: Limits which users can execute the master maintenance function.

d.1. Display authority

You can configure display authority to limit which users can display each screen and internal screen element by editing the following master data:

- Role master
- Screen master
- Screen item master
- User auth master

d.2. Administrator authority

Authority is divided into three types: system administrator, factory administrator, and user with no authority.

The system administrator has the following privileges:

- Always displayed system menu (still displayed even when "no system menu" is defined in the screen master)

- Can edit master data that does not belong to any factory
- Even has authority as a factory administrator. The administrator can perform master maintenance on any factory. The factory administrator has the following privilege:
- Can perform master maintenance in the relevant factory

You can configure the system administrator and factory administrator users by editing the following master data:

- Role master
- Screen master
- Screen item master
- User auth master

(e) Locale settings

You can define the combination of a default display language and time zone by editing the locale master. Then, you can set this definition for individual users. The ID for the combination is the value of a locale category, and you can set the ID in the user master. After you add the locale category, on-screen messages do not display until you add a definition for the added locale category.

(f) Screen design settings

You can configure screen design by editing the following master data:

- Screen master
- Screen item master
- Screen data master
- Object master
- Object style master

(g) Data aggregation settings

You can define a batch aggregation processing method to aggregate performance data by editing the aggregation master as data aggregation settings. Through batch processing, you can temporally and locally aggregate data that was sent and saved as sequential performance data.

You can configure data aggregation by editing the following master data:

- Aggregation master

(h) Resource settings

You can define the text to be displayed on the screen by editing the following master data:

- Resource master

(i) Registering master data

After editing master table data, you can upload the data in CSV format. If an error occurs, you can check the error details from the access log screen. Master data has to be registered with the same file name as when the data was downloaded. Otherwise, the data cannot be uploaded.

(j) Outputting sequential performance data.

You can download stored sequential performance data as a CSV file within the data retention period. You can download sequential performance data for each selected target period. The maximum number of downloads is 50,000 and when the number gets bigger than the limitation, shortening the target period is required.

(k) Registering image data

You can register image data by hierarchical type (factory, line, facility map information, etc.) for display on the screen. The limit for the image data file size is 100 MB. If you are registering an image with same file name as existing data, the existing data is overwritten by the new image file.

(l) Note on master maintenance

(1) User names and Place ID, even the ones registered with different factories, must be unique in the system.

2.2.2. Number of Factories

To increase the number of factories used with Intelligent Dashboard, you need to submit a change application via K5 portal. For details, see the *User Guide*.

To visualize factories, the contract must be concluded for each factory name. After the plan's change application, send additional information to the help desk such as factory ID and factory name to visualize (or delete). Also, you cannot change to plan with less number of factories.

2.3. Considerations About Charges

The service user is charged monthly at a fixed rate, according to the selected plan, from the service start date notified by e-mail.

Changes to the plan are applied monthly starting from the change start date of the new plan.

On plan's change, the "application date" is considered to be the date when the help desk receives the additional information necessary to change the plan. Until its change start date, service user will be charged according to the previous plan. For details on the application time, see the *User Guide*.

The contract for this service can be canceled as needed. However, the monthly fee is still charged for the contract cancellation month. Charges are not made on a per diem basis.

Chapter 3 Operation

3.1. Scope of Service Provision

The sending program and network of the service user are outside the scope of service.

For the scope of service provision, see "Figure 3.1. Scope of Service" below.

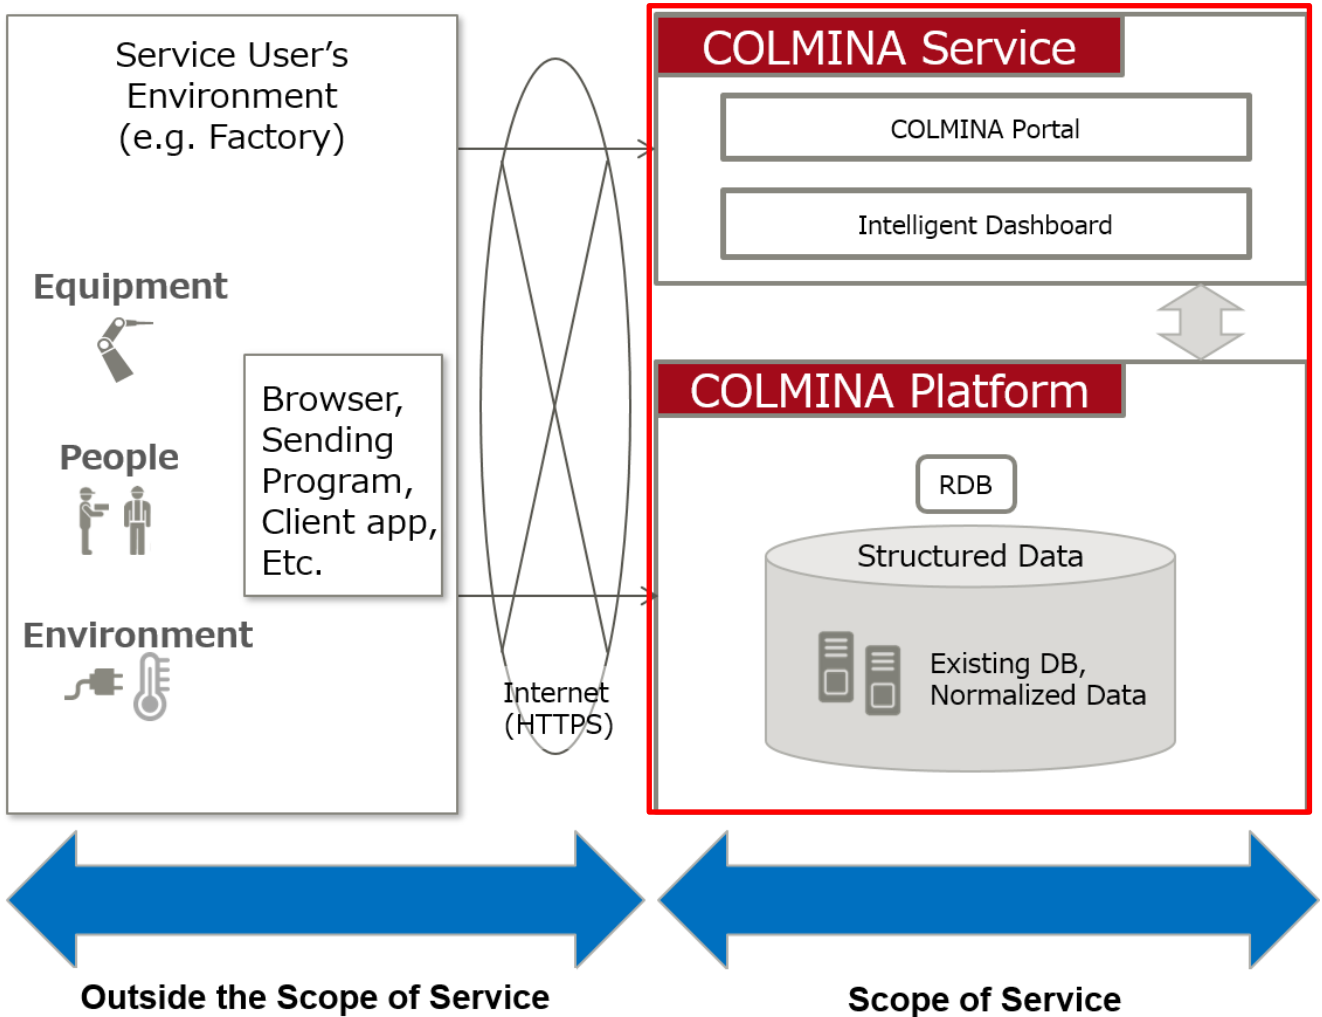

Figure 3.1. Scope of Service

3.2. Time of Service Provision

This service operates 24 hours a day, 7 days a week. However, the service may be suspended during a time slot where planned or emergency maintenance is performed. Such maintenance may take several hours, and the service is not available during the maintenance (data may not accumulate in some cases). The maintenance time cannot be changed for the customer's convenience.

3.3. Service Suspension

3.3.1. Planned Maintenance

This service will be suspended to a service user who is applying for the disk expansion option of the service. The service is suspended during maintenance (in roughly one business days). However, the change work maintenance period may be pushed back or ahead for intensive change work.

3.3.2. Emergency Maintenance

Fujitsu may perform emergency maintenance work due to the occurrence of a failure or other reasons. A report on this work is released immediately before or after the work. In this case, a failure report cannot be submitted.

3.4. Contact Information for Inquiries

Use the help desk as a contact for inquiries. Prepare to provide the following information when contacting the help desk. For details, see the FAQ and the *User Guide*.

Table 3.4. Information for Inquiries

| No. | Item | Information |
|-----|-------------------------------------|--|
| 1 | Contract service name | FUJITSU Cloud Service K5 COLMINA Platform |
| 2 | K5 contract number | Your K5 contract number. |
| 3 | Service application number | Service application number described in the application letter to be received after accepting the new application. |
| 4 | Customer's company name | Name of the customer's company |
| 5 | Name of customer's person in charge | Name of the customer's person in charge |
| 6 | Contact telephone number | Telephone number that can be used to contact the customer |
| 7 | Details of inquiry | (1) Use type (inquiry, change application, or failure notification) (2) Contents * Inquiry (user information or factory information used with Intelligent Dashboard) * Change application (password initialization, batch aggregation start interval, data retention period, or increasing/decreasing the number of factories, category of default locale) * In a failure notification, provide as much detailed information as possible. Examples include the date of occurrence, an incident description, and the work procedure. |

Chapter 4 Limitations

4.1. COLMINA Platform Limitations

4.1.1. Data Reception

- (1) This section shows data reception limitations.

Table 4.1.1.1. Data Reception

| Outline | Description |
|---------------------------------------|-------------------------------|
| Data amount per communication session | 517 KByte / 1,000 records |
| Transmission interval | 1 time / minute |
| Maximum number of columns in CSV file | 15 |
| Maximum record size in CSV file | 529 Bytes (Average: 75 Bytes) |

* If even one of these limitations is exceeded for any element, data may not be received correctly.

- (2) This section shows data format limitations.

Table 4.1.1.2. Data Format

| Outline | Description |
|-------------------------------------|--|
| Character code used in this service | UTF-8 |
| Line feed code used in this service | LF |
| CSV layout used in this service | Data with comma-separated values, each enclosed in double quotation marks (Example: "value","value") |
| Date format used in this service | Notation in the YYYY-MM-DD hh:mm:ss.SSS format (Example: 2017-05-25 20:42:36.123) |

- (3) If the data to be stored has the same key item (time, data type, data element, etc.) as that in already registered data, the new data will overwrite the registered information.
- (4) This service uses the transmission protocol HTTPS and the POST method.
- (5) Access to this service may be denied to a service user whose use is so intensive that it may seriously harm the service or constantly exceeds data reception limitations.
- (6) Regardless of remaining disk volume, sequential performance data can't be stored over 80 million records.
- (7) To increase users limit, submit for a plan change application. If the change application is accepted by Fujitsu, the customer will be notified about the change start date. New plan will be valid on change start date. Note that service user can't change to a plan that will reduce the current users limit.
- (8) To increase disk space, submit for a plan change application. If the change application is accepted by Fujitsu, the customer will be notified about the change start date. Customer won't be able to use the service on the notified date while change work will be done. Note that service user can't change to a plan that will reduce the current disk space.
- (9) To increase the number of factories, submit for a plan change application and then send an e-mail to the help desk about which factory should be added or removed. If correct information arrives to the help desk and the change application is accepted by Fujitsu, the customer will be notified about the change start date. Fujitsu will also notify the change work date. New plan will be valid on change start date. Note that service user can't change to a plan that will reduce the current number of factories.
- (10) Service user shall be solely responsible regarding the utilization of this service to receive and store data. Customer shall agree that Fujitsu will use following information for the purpose of improving the quality of service and the functions provided, and publishing the compiled statistics on performance. However, customer data itself will not be used by Fujitsu without prior consent.

Table 4.1.1.3. Target Data by Information Acquisition Location

| Information Acquisition Location | Target Data |
|-------------------------------------|--|
| Servers and communication apparatus | Communication information (time, access count, and volume of communication) Server performance information (load and status of service use) System log Log of component applications/middleware of this service |

- (11) Any service user who will use personal information or personal data in this service or provide such information or data to Fujitsu has to meet the following requirements. The user is required to make the necessary announcement to the owners of the personal information or personal data, or obtain consent from the owners. The service user is also required to guarantee and announce that providing the information or data to Fujitsu or use of the information or data by Fujitsu does not violate any country's laws and regulations or third-party rights.
- (12) When Fujitsu detects data suspected to be infected with a virus in Fujitsu's company environment, data used in this service by a service user may be deleted without prior notice for the purpose of protecting the environment.
- (13) This service does not recover registered or created data. The service user is responsible for making backups of the necessary data, restoring the backups, and recreating data from the backups.
- (14) The service user needs to prepare data in CSV format for use with this service, and send it to the specified URL of the service. (CSV is the prescribed format for the service.)
- (15) In addition to the service description, the service details instruction manual at the following URL sets forth the license terms and conditions applicable to open source and other software to be separately identified by Fujitsu as part of this service. If the license terms and conditions set forth in said service details instruction manual are contrary to the provisions of the service description, the license terms and conditions set forth in said service details instruction manual shall prevail.
<https://k5-doc.jp-east-1.paas.cloud.global.fujitsu.com/doc/en/colminapf/document/manual/servicedetails.pdf>

4.2. COLMINA Service Limitations

4.2.1. Data Visualization

- (1) For information on client environments, see the following document:
<https://k5-doc.jp-east-1.paas.cloud.global.fujitsu.com/doc/en/colminapf/document/manual/requirements.pdf>
- (2) The service user can add languages for display on the dashboard screens. A total of six languages can be added including Japanese.
- (3) The service user needs to prepare the images to be displayed on the dashboard screens, such as factory images, line images, facility images, alarm images and icons.
- (4) "CRLF" is the line feed code used when a CSV file is uploaded or downloaded in master maintenance. Only CSV files containing definition information for screen design settings can be uploaded.
- (5) The maximum number of records in stored data downloaded as a CSV file in master maintenance is 50 thousand. If the number of downloaded records exceeds the limit value, split the download into multiple downloads, such as by shortening the target period selected for each download. Then, download the data again.
- (6) The maximum number of stored records in sequential performance data is 80 million records.
- (7) The dashboard screen resolution is Full HD (1920 x 1080). Part of the screen might not be displayed with resolutions below this.

4.3. Other Limitations

4.3.1. Encrypted communication method

The COLMINA is performing encrypted communication of https. For encrypted communication, only TLS 1.2 communication is permitted as a protocol. In terms of security enhancement, TLS 1.0 / 1.1 is not allowed.

4.3.2. Language Used

COLMINA Platform portal is offered in Japanese and English.

The service user can add languages to display on the dashboard screens. A total of six languages can be added including Japanese, combining languages and locale categories.

4.3.3. Period of Data to be Aggregated

Sequential performance data can be aggregated until its time past 240 hours in Coordinated Universal Time (UTC).

4.3.4. Use Region

This service is provided in the following region:

- East Japan region 2

4.3.5. Contract Information Confirmation and Fee Confirmation

Contract information confirmation and confirmation of fees after an optional service change, etc. will be reflected on the K5 portal screens at the beginning of the month after the month that charging begins.

Chapter 5 Explanation of Important Matters

5.1. Scope of Support

Please note that Fujitsu cannot provide support regarding problems with communication apparatus and information collection terminals prepared by the customer. Contact your seller for support.

5.2. Suitability of Accumulated Data

The customer is responsible for judging the suitability of and using the accumulated data that this service has collected and accumulated.

Furthermore, recent developments in some countries have seen a move to introduce laws and regulations prohibiting the transfer of data, particularly data that constitutes personal information, outside their own region. The customer is responsible for checking and complying with such laws and regulations. (We do not recommend storing personal information and confidential information with this service.)

5.3. Login Information Management

The customer is responsible for managing the login user names and passwords required when using this service. If login user names and passwords become known to others, it may result in unreasonable charges and data leaks due to unintended access. For this reason, the customer is responsible for managing the login user names and passwords.

5.4. Referencing Customer Data

This service may reference the contents of customer data when executing the data sending API or providing various functions. However, this data is only used to provide the functions or check the contents of inquiries, and is not used for any other purpose.

5.5. Using Accumulated Data

Various information is obtained during the period that this service is in use. Fujitsu shall use this information, without the consent of or compensation to the customer, for the purpose of improving the quality of service and the functions provided, and publishing the compiled statistics on performance. However, customer data itself will not be used by Fujitsu without prior consent.

Table 5.5. Target Data by Information Acquisition Location

| Information Acquisition Location | Target Data |
|-------------------------------------|---|
| Servers and communication apparatus | Communication information (time, access count, and volume of communication) Server performance information (load and status of service use) System log Log of component applications/middleware of this service Frequency of use and contents used of the service and service portal/usage count, types, and parameters of APIs (including internal APIs)/amount of disk use, number of users, number of factories used, etc. |

5.6. Export Control Regulations

When exporting this document or providing it to a third party, check the export control laws and regulations of your country and the United States, and follow the necessary procedures.

5.7. License Conditions and Liability Provisions of Open Software, etc.

5.7.1. Open Software

This service includes the open source software (called "OSS" below) described in this document. This section describes the license conditions of each OSS. After Fujitsu starts providing the service to you, the OSS versions and license conditions may change in line with provided patch programs. For details on these OSS version and license condition changes, see the provided patch programs and documents.

5.7.2. Liability Provisions

Regardless of the provisions of the Fujitsu software license agreement, Fujitsu's responsibility with regard to the OSS used by the customer is limited to Paragraphs 1 and 2 in Article 5 of the Fujitsu software license agreement. Except for the responsibility stipulated in these paragraphs, Fujitsu makes no warranty with regard to the OSS and assumes no responsibility for third-party claims or damages arising from use of the OSS.

5.7.3. OSS License Conditions

This section describes the names, versions, and license conditions of the OSS included in this service.

Apache License

Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
 - (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
 - (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

- 5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
- 6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
- 7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any

risks associated with Your exercise of permissions under this License.

8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

- [Cesium 1.42]

Copyright 2011-2018 CesiumJS Contributors

The following license conditions apply to the above OSS.

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
 - (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
 - (b) You must cause any modified files to carry prominent notices

stating that You changed the files; and

- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

- 5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
- 6. **Trademarks.** This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
- 7. **Disclaimer of Warranty.** Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

NVIDIA GameWorks Graphics Samples

<https://github.com/NVIDIAGameWorks/GraphicsSamples>

> Copyright 2016 NVIDIA Corporation

>

> BY DOWNLOADING THE SOFTWARE AND OTHER AVAILABLE MATERIALS, YOU ("DEVELOPER") AGREE TO BE BOUND BY THE FOLLOWING TERMS AND CONDITIONS

>

> The materials available for download to Developers may include software in both sample source ("Source Code") and object code ("Object Code") versions, documentation ("Documentation"), certain art work ("Art Assets") and other materials (collectively, these materials referred to herein as "Materials"). Except as expressly indicated herein, all terms and conditions of this Agreement apply to all of the Materials.

>

> Except as expressly set forth herein, NVIDIA owns all of the Materials and makes them available to Developer only under the terms and conditions set forth in this Agreement.

>

- > License: Subject to the terms of this Agreement, NVIDIA hereby grants to Developer a royalty-free, non-exclusive license to possess and to use the Materials. The following terms apply to the specified type of Material:
 - >
 - > Source Code: Developer shall have the right to modify and create derivative works with the Source Code. Developer shall own any derivative works ("Derivatives") it creates to the Source Code, provided that Developer uses the Materials in accordance with the terms of this Agreement. Developer may distribute the Derivatives, provided that all NVIDIA copyright notices and trademarks are used properly and the Derivatives include the following statement: "This software contains source code provided by NVIDIA Corporation."
 - >
 - > Object Code: Developer agrees not to disassemble, decompile or reverse engineer the Object Code versions of any of the Materials. Developer acknowledges that certain of the Materials provided in Object Code version may contain third party components that may be subject to restrictions, and expressly agrees not to attempt to modify or distribute such Materials without first receiving consent from NVIDIA.
 - >
 - > Art Assets: Developer shall have the right to modify and create Derivatives of the Art Assets, but may not distribute any of the Art Assets or Derivatives created therefrom without NVIDIA's prior written consent.
 - >
 - > Government End Users: If you are acquiring the Software on behalf of any unit or agency of the United States Government, the following provisions apply. The Government agrees the Software and documentation were developed at private expense and are provided with "RESTRICTED RIGHTS". Use, duplication, or disclosure by the Government is subject to restrictions as set forth in DFARS 227.7202-1(a) and 227.7202-3(a) (1995), DFARS 252.227-7013(c)(1)(ii) (Oct 1988), FAR 12.212(a)(1995), FAR 52.227-19, (June 1987) or FAR 52.227-14(ALT III) (June 1987), as amended from time to time. In the event that this License, or any part thereof, is deemed inconsistent with the minimum rights identified in the Restricted Rights provisions, the minimum rights shall prevail.
 - > No Other License. No rights or licenses are granted by NVIDIA under this License, expressly or by implication, with respect to any proprietary information or patent, copyright, trade secret or other intellectual property right owned or controlled by NVIDIA, except as expressly provided in this License.
 - > Term: This License is effective until terminated. NVIDIA may terminate this Agreement (and with it, all of Developer's right to the Materials) immediately upon written notice (which may include email) to Developer, with or without cause.
 - >
 - > Support: NVIDIA has no obligation to support or to continue providing or updating any of the Materials.
 - >
 - > No Warranty: THE SOFTWARE AND ANY OTHER MATERIALS PROVIDED BY NVIDIA TO DEVELOPER HEREUNDER ARE PROVIDED "AS IS." NVIDIA DISCLAIMS ALL WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT.
 - >
 - > LIMITATION OF LIABILITY: NVIDIA SHALL NOT BE LIABLE TO DEVELOPER, DEVELOPER'S CUSTOMERS, OR ANY OTHER PERSON OR ENTITY CLAIMING THROUGH OR UNDER DEVELOPER FOR ANY LOSS OF PROFITS, INCOME, SAVINGS, OR ANY OTHER CONSEQUENTIAL, INCIDENTAL, SPECIAL, PUNITIVE, DIRECT OR INDIRECT DAMAGES (WHETHER IN AN ACTION IN CONTRACT, TORT OR BASED ON A WARRANTY), EVEN IF NVIDIA HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THESE LIMITATIONS SHALL APPLY NOTWITHSTANDING ANY FAILURE OF THE ESSENTIAL PURPOSE OF ANY LIMITED REMEDY. IN NO EVENT SHALL NVIDIA'S AGGREGATE LIABILITY TO DEVELOPER OR ANY OTHER PERSON OR ENTITY CLAIMING THROUGH OR UNDER DEVELOPER EXCEED THE AMOUNT OF MONEY ACTUALLY PAID BY DEVELOPER TO NVIDIA FOR THE SOFTWARE OR ANY OTHER MATERIALS.

IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

CesiumJS Documentation

=====

The CesiumJS documentation files include the following third-party content.

Source Sans Pro (Font)

Source 𐄂 Sans Pro, Adobe's first open source typeface family, was designed by Paul D. Hunt. It is a sans serif typeface intended to work well in user interfaces.

[SIL Open Font License, 1.1](http://scripts.sil.org/cms/scripts/page.php?site_id=nrsi&id=OFL)
([text](http://scripts.sil.org/cms/scripts/render_download.php?format=file&media_id=OFL_plaintext&filename=OFL.txt))

Example Applications

=====

The CesiumJS example applications include the following third-party libraries and data.

Dojo Toolkit
