

SHOREMASTER®

full line product catalog
customer focused | market driven | great people

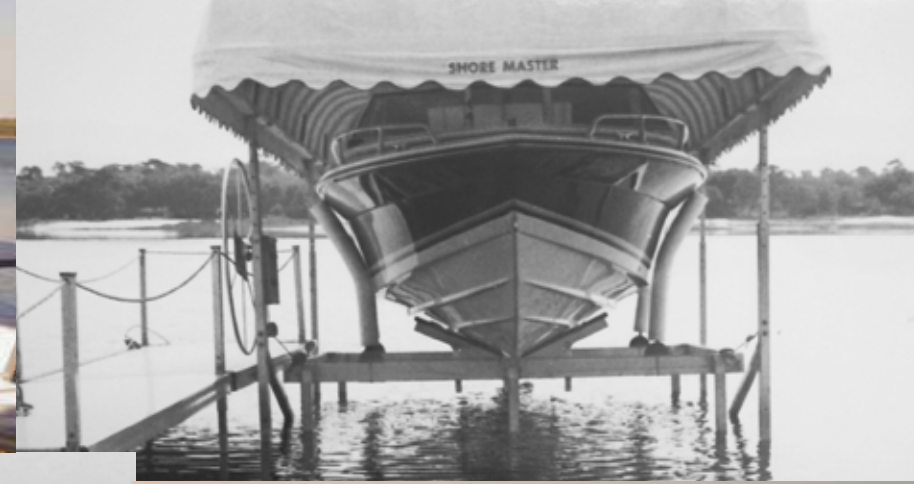

EVERY GREAT COMPANY HAS A STORY TO TELL, THIS IS OURS.

Here at ShoreMaster we are more than just manufacturing. We are customer service, innovation, and experience...we are welders, mechanics, developers, designers, problem solvers, and more working to provide each and every customer and user with the very best waterfront experience available. With over 40 years of experience and knowledge, ShoreMaster is primed for continued growth well into the future. We have been since the beginning, and we will continue to be today and tomorrow.

When Dennis Tuel, Sr. started in Carlos, MN in 1972 he wanted to build a boat lift that would better serve the lakeshore owners in the area. Even then ShoreMaster's passion was our customers. It was with that passion that we started crafting aluminum boat lifts in a market dominated by steel lifts. It is with that same passion that we continue to provide one of the deepest and most diverse product line-ups in the market.

In 1985, ShoreMaster operations moved to Fergus Falls, MN and that is still where we call home. With over 100 employees from around Central Minnesota, ShoreMaster continues to be a family orientated, close-knit company with a passion not only for our people but for our community.

in other words ShoreMaster is
customer focused | market driven | great people

It all started for ShoreMaster back in July of 1972 when the first prototype of our aluminum boat lift was mounted on a pickup truck. Dennis Tuel, Sr. (pictured above with wife Marsha) sold 300 lifts by October of 1972 for the 1973 selling season and business as well as boat lifts have never been the same since.

OUR MISSION:

**SHOREMASTER IS A CUSTOMER FOCUSED
MARKET DRIVEN COMPANY THAT
MANUFACTURES QUALITY PRODUCTS
SAFELY & EFFICIENTLY WITH GREAT PEOPLE.**

OUR PEOPLE

WHY CHOOSE SHOREMASTER?

ShoreMaster is so much more than just a dock and boat lift manufacturing company, we are a team of great people working to do great things for our customers and our community. We are welders, mechanics, developers, designers, problem solvers and more working to provide each and every customer with the very best waterfront experience available. From the small lakes of the Midwest to the deep waters of the South, our lineup of waterfront equipment is built to withstand the waves, wind and continual use you'll put it through. For over 40 years, ShoreMaster has covered the

waterfront with world-class equipment designed to help people enjoy their waterfront experience to the fullest. ShoreMaster is one of the most experienced premier waterfront equipment brands on the market providing reliability, durability and longevity to our customers. We are passionate about our products, our dealers, our users and we strive to provide the highest quality, most innovative products we can to help improve the waterfront experience of anyone who uses ShoreMaster.

CUSTOMER FOCUSED:

ShoreMaster's complete line-up of residential docks and lifts are sold through an extensive network of knowledgeable, friendly dealers throughout the United States and Canada. Our dealers are just as passionate about your waterfront experience as we are. They strive to make sure you are equipped with the right product for your shoreline, your lifestyle and your needs.

MARKET DRIVEN:

ShoreMaster provides docks, boat lifts and accessories for any and all waterfront environments. From the small lakes of the Midwest, to the deep waters of the South, our lineup of waterfront products is built to withstand the waves, wind and continual use you'll put it through. Plus, our lean philosophy means that from concept to design and from production to assembly we are continually adapting our practices and offering to provide only the very best product on the market.

GREAT PEOPLE:

At the end of the day a company is only as strong as the people within it; which means that ShoreMaster is about as good as they come. Our people are passionate about our products, our dealers, and our users. We strive to provide the highest quality, most innovative products we can to help improve the waterfront experience of anyone who uses ShoreMaster. From operations to sales, shipping to finance and every department in between our team shows up each and every day with that goal in mind.

SHOREMASTER DOCKS

Style. Versatility. Convenience. Our premiere docks stand in a class all their own.

THERE'S AN ICON FOR IT

INFINITY RS4

Thousands of waterfront property owners just like you, have chosen ShoreMaster's RS4 sectional dock because of its lightweight yet solid, all-aluminum, welded construction and Quick Connect System. ShoreMaster's Quick Connect (QC) System allows you to add, remove or rearrange your RS4 dock and dock

accessories. Imagine easily re-configuring your RS4 dock or dock accessories in preparation for a long holiday weekend of entertaining. Then when the weekend is over, you simply move everything back just the way you like it for everyday dock use. With our Quick Connect System you have the ability to be

like our pros. With ShoreMaster's Infinity RS4 dock, you can do everything yourself which translates into savings in time and money, giving you more time to spend doing the things you love with the people most important to you.

SPECIFICATIONS & GENERAL INFORMATION:

The Infinity RS4 is precision crafted from 4 inch tubular extruded side rail, tubular aluminum center support stringers and cross members then perfectly welded to ensure consistent quality throughout the entire dock frame. The design of the RS4 allows for ShoreMaster's decking to be effortlessly recessed into the dock frame for a more attractive, safe, and secure fit. Our Infinity leg pockets, 5-sided dock legs, along with the premium foot pads, create adjustable and stable support of the dock frame for those who are looking for a combination of a strong and lightweight dock system. The RS4 is perfectly suited for firm, sandy, to slightly soft lake bottoms and shallow to moderate water depths. Installation, removal and reconfiguration requires no tools after the initial set up which means less work for you and more time to enjoy the water.

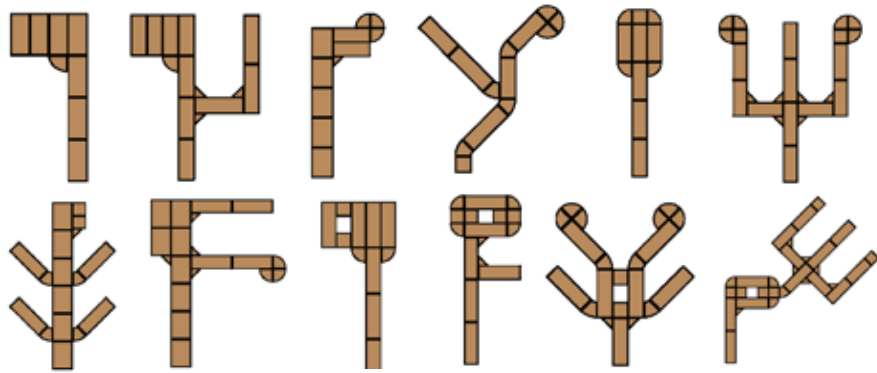

DOCK SIZES AVAILABLE:

INFINITY RS7

ShoreMaster's Infinity RS7 dock owners are confident - confident in the RS7's structural integrity. From its smooth clean lines to its solid, tubular construction, one look and you'll know that you have one of the best in the industry. With just a few steps on the RS7 you can feel the strength of its design, there's little

to no rocking or bounce as you sometimes feel when you're on other dock systems. ShoreMaster's Quick Connect (QC) System works on our RS7 dock system as well, making your choice even easier by allowing you to add or move accessories on your dock without the use of tools. This saves you time and the hassle

of trips to the garage in search of tools when all you want to do is quickly reposition your lakeview dock bench for a better view of the evening sunset after watching the kids swim during the day. Confidence in our construction, in our quick connect system, which means confidence in your investment.

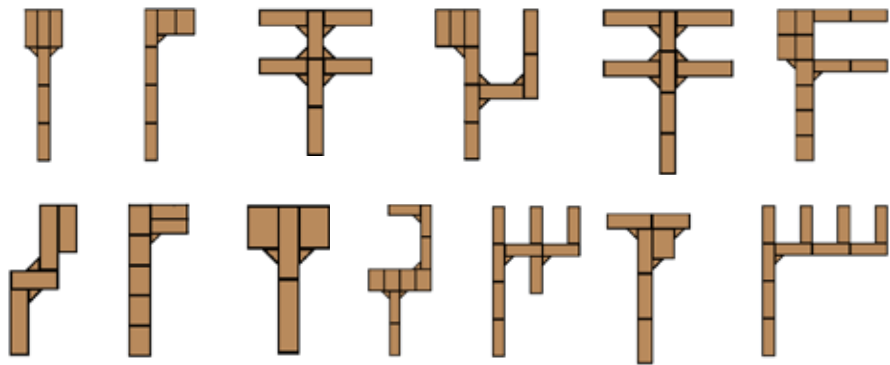

SPECIFICATIONS & GENERAL INFORMATION:

The strength of ShoreMaster's Infinity RS7 dock is handcrafted, 6.75 inch tubular extruded aluminum construction and welded tubular aluminum center support stringers and cross members. The design of the RS7 allows ShoreMaster decking to be recessed into the dock frame for a more attractive, safe, and secure fit. You'll find confidence in the ability to use your RS7 as either a wheel-in style or a standing style dock system. When configured as a wheel-in dock, the adjustable screw legs and polyethylene tires ensure a stable, level and easy to adjust dock system. When configured as a standing style dock system, our RS7 utilizes Infinity leg pockets, 5-sided dock legs and premium foot pads to create adjustable and stable support of the RS7 dock frame. The RS7 dock's modular design allows you to add and reconfigure your dock easily and doesn't require tools after the initial set up. The RS7 is well suited for firm, sandy, or slightly soft lake bottoms and moderate water depth.

INFINITY TS9

There's a reason that the truss style and classic look of ShoreMaster's Infinity TS9 dock has been around for so long - it's strength and durability. The TS9 will save you time and money by reducing the need for maintenance or repair. It's exceptionally lightweight, so installation and removal is quick and simple which

means less work for you. ShoreMaster's TS9 dock is a proven truss design that you can be confident will be a great value for as long as you own it. ShoreMaster's skilled welders handcraft each and every Infinity TS9 dock section one at a time to carry on a tradition of strength and quality in every weld and every

frame. That tradition of strength and quality is then passed on to you and thousands of other waterfront property owners across the United States and Canada that have trusted in their TS9 dock systems to deliver strength and quality.

SPECIFICATIONS & GENERAL INFORMATION:

A large 9 inch truss style aluminum side rail is the foundation for the Infinity TS9 dock. Welded tubular aluminum center support stringers and cross members add to the overall rigidity of the frame. The TS9 utilizes ShoreMaster's Quick Connect (QC) System allowing you to effortlessly add or move accessories on your Infinity TS9 dock without the use of tools or the need to drill into the frame. The design of the TS9 allows ShoreMaster decking to be recessed into the dock frame for a more attractive, safe and secure fit. And it's truss design allows large waves to pass through the frame rather than exert their force upon it, this keeps your dock secure during periods of excessive wave activity brought on by heavy boat traffic, wind, or storms. The TS9 dock can be configured as either a wheel-in style or a standing style dock system and is well suited to firm to slightly soft lake bottoms and moderate water depth.

FLOATING FTS9

ShoreMaster's floating FTS9 truss dock is one of the most versatile dock systems on the market. Because it's a floating dock you'll never need to worry about adjusting your FTS9 to accommodate fluctuations in water depth. The FTS9 dock employs ShoreMaster's proven truss design, which is incredibly strong and

stable, so you will spend less time and money on maintenance. The FTS9 is extremely well suited for use in waterfront locations where a wheel-in or standing style dock system simply cannot go due to deep or fluctuating waters, or an extremely soft or muddy lake bottom. It should be noted that the FTS9

floating dock will also work exceptionally well in any location where a wheel-in or standing dock will. It's a smart choice because you get all the versatility of a traditional dock system along with the benefits of a floating dock.

SPECIFICATIONS & GENERAL INFORMATION:

The floating FTS9 dock utilizes ShoreMaster's time-tested 9 inch truss style aluminum side rail. Each frame is handcrafted one at a time with tubular aluminum center support stringers. FTS9 utilizes ShoreMaster's Quick Connect (QC) System allowing you to effortlessly add or move accessories on your FTS9 dock without the use of tools or the need to drill into the frame. The design of the FTS9 frame allows ShoreMaster decking to be recessed into the dock frame for a more attractive, safe, and secure fit. Flotation for the FTS9 is delivered by ShoreMaster's polystyrene foam filled, polyethylene resin encased floats, and perfectly secured to the FTS9 frame using aluminum float connectors with stainless steel and brass hardware.

KITDOCK™

ShoreMaster's KitDock is a market proven galvanized steel framed floating dock. You're just as likely to find KitDocks as a single or double slip configuration in a typical residential waterfront setting as you are to find KitDock configured as a multi-slip, full service marina at resorts, campgrounds, and restaurants.

Originally designed to withstand the brutal marine environment of Lake of the Ozarks, the KitDock is the best choice for waterfront property owners and businesses looking to add value to their home or income to their business. The KitDock is extremely strong and stable, making it the ideal choice for a

waterfront property owner who has to negotiate with excessive wave action and fluctuating water levels. KitDock is available in a multitude of popular sizes in typical single and double slip configurations. The components of the KitDock are easily configurable to create the perfect layout for your waterfront.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster's KitDock floating dock system is a hand-forged 12 inch bar joist steel truss design, which is then hot-dip zinc galvanized to resist even the toughest marine environments. The galvanized steel frame is mated to ShoreMaster's RhinoFloat® flotation, a tough, foam filled, and polyethylene encased float with a nominal wall thickness of .15". Thirteen different steel panel roofing color options are available, and today, many KitDock marina applications are now utilizing a combination of our aluminum canopy frame, and canopy vinyl, or WeatherMax canopy covers to offer individual slip rentals or owners an upgrade to an uncovered slip. This reduces the initial marina investment while still allowing for incremental revenue in the future.

ROOFING COLOR OPTIONS:

Top Row Left to Right: Ash Grey, Brick Red, Burgundy, Burnished Slate, Charcoal
 Middle Row Left to Right: Cocoa Brown, Forest Green, Hawaiian Blue, Light Stone, Mocha Tan
 Bottom Row Left to Right: Ocean Blue, Patina Green, Polar White, White

Printed color samples are not intended for color matching purposes. Please see your local authorized ShoreMaster dealer for actual color samples.

MOST POPULAR OPTIONS:

Our 10' x 24' single and double slips are the most popular size
 Some accessories and options that many people like are our gangways, sun patios, storage buildings, swim ladder, along with our RhinoHoist® floating boat lifts

SLIP SIZES AVAILABLE*:

10' x 20'	11' x 28'
10' x 24'	12' x 24'
10' x 28'	12' x 28'
11' x 20'	12' x 32'
11' x 24'	

*All KitDock sizes listed above are available in single or double slips.

MARINA QUALITY:

KitDocks are built using marina grade parts and accessories.

OPTIONS:

- Roofing, Sheeting and Trim
- Decking (treated wood or concrete)
- Sun patio
- Roof Columns and Purlins
- 2" x 6" Rubrail with Fasteners
- 4' Corner Braces (2)
- 10" Steel Cleats (4)
- Wide-Side Options, with or without decking

ACCESSORIES:

- Dock Box
- Gangway
- Storage Shed
- Pivoting Ladder

POLYDOCK™

Imagine using your dock system all year long without ever having to take time out of your weekend to adjust it for changing water depths. The PolyDock system allows you to enjoy your dock and use your waterfront without the additional work of maintenance and seasonal adjustments. PolyDock is extremely stable because its modular design is essentially the dock flotation and the

dock frame combined into one attractive structure. This means that each dock section provides the flotation for the entire dock system. The modular design allows you to configure your dock any way you like while allowing you to easily change the configuration as your needs change. This saves you time and money because only minimal assembly required to create your perfect

floating dock system. PolyDock will look good in any waterfront application, from residential properties to resorts and campgrounds, because its brick patterned surface is attractive and slip resistant. PolyDock is perfect for deep or fluctuating water, or where you have an extremely soft or muddy lake bottom.

SPECIFICATIONS & GENERAL INFORMATION:

PolyDock is a modular, rotationally molded, polyethylene floating dock system designed to look great in your waterfront application, and provide you with exceptional value for years. The recessed areas on the bottom of each PolyDock section help to provide stability between the dock and the surface of the water. This means less movement as you walk the length and width of your dock system. PolyDock is designed to feel firm underfoot along the length and width of its slip-resistant brick patterned surface, so you and your entire family can enjoy a day spent on your PolyDock.

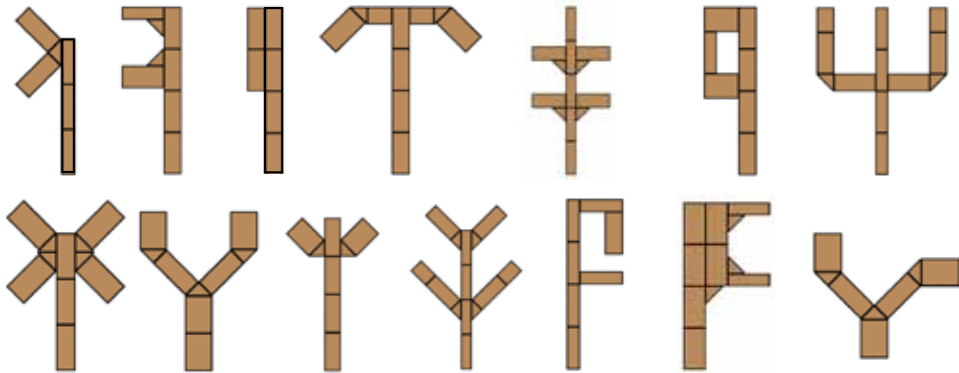

DOCK SIZES AVAILABLE:

WHY IS DECKING SO IMPORTANT?

The type, style, and color of decking that you choose helps to create the overall look and feel of your dock system, and will play a major role in the amount of maintenance required to keep your dock looking great and functioning properly in the future. A dock doesn't truly become useful until you add the perfect decking. You should consider your decking options and accessories even before you consider the layout of your dock. Here are just a few reasons to carefully consider your decking options today so you can be sure that you will thoroughly enjoy your dock system for years to come...

- Help create the overall look and feel of your dock system & waterfront landscape
- Play an important role in the amount of cleaning, and maintenance required to keep your dock functioning properly and looking great
- Allow you to comfortably and safely use your dock the way you intended
- Create a visual tie-in with other elements of your home or property such as the color of your siding, or match well with the material used to construct your homes deck.

CEDAR:

When ShoreMaster sources cedar decking from its suppliers, we search for boards that contain more heartwood, which makes your cedar decking less susceptible to insects and decay. This way you can be confident that your decking will remain safe, while looking great on your shoreline. Nothing feels better on your bare feet than the soft, natural beauty of red cedar decking.

IPE:

When it comes to wood decking for your dock, nothing beats IPE. IPE hardwood will add a sense of stability to your dock and feel incredibly firm underfoot because of its natural hardness and density. It looks great and provides a gentle, natural wood feel on your bare feet. Because IPE is naturally dense, it is a heavy option when it comes to decking, but the added benefit of its weight is that it's resistant to being blown out of the dock by wind or waves.

PLAIN ALUMINUM:

Plain aluminum decking is a worry free, low maintenance, and paint free way to deck your dock for serious work and enjoyment. Our plain aluminum decking is generally chosen by owners that value function over form, and it is typically placed on docks that are used to access the water for work as opposed to recreation. Our aluminum panels are treated to provide you with a surface that is as comfortable, as it is beautiful.

TAN ALUMINUM:

ShoreMaster's tan painted aluminum decking gives you a worry free, low maintenance decking that makes lake living so much easier. It's manufactured from aluminum, it will never rot, twist, or warp, and you'll never have to worry about applying stain or finish to keep it looking great. Powder-coated in natural tan, you get an attractive, slip-resistant surface to compliment your waterfront property. ShoreMaster's tan aluminum decking stays cool to the touch so you can truly enjoy every summer day on your dock.

WHITE ALUMINUM:

ShoreMaster's white painted aluminum decking will add years of worry free, low maintenance enjoyment to your lake experience. Because it's manufactured from aluminum, it will never rot, twist, or warp, and you'll never have to worry about applying stain or finish to keep it looking great. Powder-coated in brilliant white, you get a clean, modern looking, slip-resistant surface that stays cool to the touch even on warm days and a surface that is beautiful and comfortable.

WOOD GRAIN ALUMINUM:

You want a natural wood decking but you simply do not have the time or the desire to keep up with annual power washing and staining every couple of years. What to do? Consider wood grain aluminum decking. It is manufactured from aluminum, so it will never rot, twist, or warp, and you'll never have to worry about applying stain or finish to keep it looking great. Powder-coated in a natural, highly realistic wood grain pattern, you get all of the benefits of aluminum and none of the work of wood. It's the best of both worlds.

VERTEX:

You've decided that you want a low maintenance decking that isn't wood or aluminum, but you just sure you want the traditional "through flow" decking. Consider ShoreMaster's exclusive Vertex decking instead. Vertex is a very low maintenance, lightweight decking that is surprisingly safe, and non-slip, plus it feels incredible on your bare feet.

TITAN:

Titan decking is a great choice for your dock system. Its design allows water, dirt, debris and sunlight to pass through the surface of your dock. This means your decking dries faster, stays cleaner, and even has a positive effect on your waterfront environment because of its ability to allow sunlight to pass through the surface of the dock. Titan incorporates a safe, slip-resistant texture that is easy on the feet and looks good on your dock. ShoreMaster's Titan option is also aluminum reinforced for stability on even the harshest of waves.

POLYDOCK:

The decking surface of our PolyDock is an attractive, textured brick pattern that looks great and is incredibly firm underfoot. PolyDock is a one-piece, rotationally molded floating dock with an attractive brick patterned surface. The surface of the dock is connected internally to the structure at key supporting locations during the molding process making the PolyDock surface one of the firmest in the industry. Take a walk on our PolyDock and experience the difference that a firm walking surface can make on your confidence when walking on a modular floating dock system.

CONCRETE:

ShoreMaster's Rock Face concrete decking incorporates "textured rock" aesthetics and a slip-resistant surface to create a strong, durable decking option for KitDock Floating Dock Systems. Our concrete decking adds mass to your KitDock Floating Dock System which makes it super stable and gives you the feeling of walking on a concrete sidewalk. Thousands of KitDock owners across the United States and Canada have regarded our concrete decking as the best decking choice they've made, next to the purchase of their KitDock. Concrete Decking is only available for ShoreMaster's KitDock Floating Dock System.

MORE ABOUT VERTEX:

Many people don't know that our Vertex decking with the flagstone brick pattern is a ShoreMaster exclusive.

It was designed by Mike Salvevold back in 2005. Mike also designed the detailed tan herringbone brick pattern that you see in our PolyDock. Mike is still part of the ShoreMaster team today.

Be sure to check out our website for more on our team and all ShoreMaster has to offer.

QUICK CONNECT (QC) SYSTEM

Imagine adding, removing, or reconfiguring your dock accessories at a moment's notice, and without the need for tools. Quickly accommodate a change in your dock use without worrying about drilling permanent holes. You don't need to use your imagination any longer, our Quick Connect (QC) System allows you to

do this and so much more on nearly any ShoreMaster system, including our Infinity dock systems (RS4, RS7, TS9), the floating FTS9, and PolyDock. Our QC brackets attach safely and securely to your ShoreMaster QC dock accessories. From there, you can connect your dock accessories anywhere along your dock frame by

positioning the QC bracket into the slot in the dock's top rail, and hand tightening the T-handle bolts on the dock's bottom rail. Just like that, and you're done. No tools, less time, and the perfect dock setup in just minutes.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster's Quick Connect (QC) brackets are super strong and designed to handle even the most fickle types of dock accessory swappers. Their all aluminum construction means they will not rust or corrode, and the stainless steel T handle bolts allow them to be safely and securely tightened using only your hands. This saves you the trouble of having to dig through your tool box to find the right size wrench when you need to install, remove or reconfigure your QC dock accessories.

QUICK CONNECT (QC) ACCESSORIES

QC CLEAT:

QC dock cleats allow you to position the cleat anywhere meaning you can tie up a visiting boat at any point along the dock. And the best part is that there is no additional drilling required.

QC FLAG POLE HOLDER:

A QC flag pole holder lets you show your pride. It accepts flag poles up to 2.5" in diameter and is attached to your dock system using the QC bracket.

QC INFINITY LEG POCKET:

Provide stability to your dock system in fluctuating and rough waters. Our dock leg pockets add steadiness by bracing your leg posts in any water depth.

OTHER QC DOCK ACCESSORIES TO CHECK OUT:

QC ACCESSORY CONNECTOR
QC FISHING ROD HOLDER

QC HINGES
QC KAYAK/ CANOE RACK

QC PIPE BRACKETS
QC TOW HITCH

QC LADDER:

Getting in and out of the water has never been easier than with the QC Ladder, available in 3-, 4- and 5-step models. QC ladders have a vertical pivoting action with a locking pin so that you flip the ladder up when you're not using it, ideal for swimmers.

QC DOCK STEPS

ShoreMaster makes it easier for you, your family members and friends to move from the water back to the surface of your dock with the purchase of a QC Dock step. Available in a 4- or 6-step option.

QC DOCK BUMPER:

QC dock bumpers are a perfect way to protect your and your visitors' boating investment. Our vertical dock bumpers will protect your watercraft above and below the water. The vertical dock bumper can also be rotated to fit horizontally on your dock and features our quick connect system.

DOCK LEG CAP:

ShoreMaster dock caps come in two different styles. The gray caps are for when your dock legs are flush with your dock to prevent injuries and the reflex blue cap is commonly used when you see dock legs that extend above your dock.

DOCK BENCH:

ShoreMaster's lakeview dock benches are offered in a beautiful tan color and are available in either on-deck or off-deck styles. You can also purchase arm rests which feature cup holders at the end of each arm.

QC CANOE/ KAYAK RACK:

Its perfect for canoes, kayaks and even paddle boards! This QC rack provides off the ground storage that won't consume additional walking space of your dock.

DOCK BOX:

Our corner dock box features heavy duty roto-molded plastic construction with stainless hardware and is the perfect storage option for life jackets, bumpers, mooring ropes and your other lakefront necessities.

DOCK BUMPER:

Vertical and corner dock bumpers are a perfect way to protect your boating investment. Our vertical dock bumpers will protect your boat above and below the water; it can also be rotated to fit horizontally on your dock.

POLY TIRE:

Our 24" poly tires have side ventilation chambers which fill with water to help anchor your dock and drain when removing your dock from the water. These rugged poly tires have rigid sidewalls that won't go flat.

RAMPS & GANGWAYS

A ramp or gangway from ShoreMaster can ease the transition between your shore and dock. If you need to take a step over an ridge to reach your dock, or if the space between your dock and your shoreline contains obstacles such as rip rap, vegetation or is a specially protected riparian area, your waterfront

enjoyment will benefit from a ramp or gangway. ShoreMaster manufactures several styles of ramps and gangways in both aluminum and galvanized steel that will match up perfectly to your Infinity dock system, KitDock, PolyDock, or Shoreline Dock. Most styles of ShoreMaster ramps and gangways are

designed to allow the decking to be recessed into the ramp or gangway frame for a safe and secure fit. You also have your choice of ShoreMaster's wide array of decking options to ensure your ramp or gangway looks just as great as your ShoreMaster dock system.

SPECIFICATIONS & GENERAL INFORMATION:

When it comes to choosing a ramp or a gangway that's right for your needs, you'll want to consider the transition area that you are trying to span and the slope that you and your guests will be comfortable traversing to access your dock. Generally ramps are the most common type of transitional elements used on residential dock systems. Our ramps feature high quality, all aluminum construction and are typically 4 or 6 feet wide and 4 feet to 8 feet long. Recessed decking is built into the design and you have your choice of any decking available from ShoreMaster. Gangways are typically found in larger dock systems like marinas or campgrounds, or in locations where the span of the transition needs to be greater than 8 feet. Gangways feature handrails to accommodate steeper slopes and longer spans. ShoreMaster gangways vary in width from 4 feet to 6 feet, and are typically 8 feet long, or longer.

8 X 8 SWIM RAFT:

Aluminum frame construction with four foam filled flotation units. Available with cedar, plain aluminum, tan painted, or white painted decking. Includes four corner bumpers, two anchoring attachments, and a 3-step pivoting ladder. All stainless steel and brass hardware.

QC HANDRAIL:

If you have a steep shoreline or want that additional benefit of added security and safety, our QC Handrail that quickly connects to any of our Infinity Series dock systems. Our handrails are lighter so that they can easily be moved but tough and strong.

STORAGE SHED:

Deigned to be used with ShoreMaster floating KitDocks our storage shed is a safe and secure storage option for your waterfront necessities. The off the deck design mean you still have an entirely unobstructed dock platform.

SCREW LEGS:

For those who have changing water levels, we have a solution for you. Our screw legs allow for easy height adjustment of the ShoreMaster Infinity dock series, all from the convenience of your dock. Works with both our foot pads and poly tires.

ESCAPE SWIM RAFT:

With ShoreMaster's Escape Swim you and your family can have fun spending hours in your own back yard. Our swim raft has a textured design on the surface of the raft and features grooves on the end so that you can connect multiple rafts together if you want.

WINCH LEVELING KIT:

Now you can raise and lower your dock without ever entering the water. The winch leveling kit allows you to adjust your dock to present water conditions. Available for any standing dock style without easy adjustable legs.

DOCK FURNITURE

There is no better way to enjoy the day's first cup of coffee than watching the sunrise before everyone else is awake. You'll savor moments like this even more when you are sitting comfortably, enjoying the view from your ShoreMaster dock furniture. Docks

have become an extension of our homes and yards and dock furniture from ShoreMaster helps make that extension easy to create when using our Quick Connect (QC) System. ShoreMaster's dock furniture is compatible with our QC system for quick and easy

installation, plus you'll be able to reconfigure, add, or remove your dock furniture at a moment's notice with no tools, thanks to the simplicity of the QC System.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster dock furniture quickly and easily attaches to your ShoreMaster Infinity Dock system with our simple QC System. Each swiveling dock chair features an easy to clean, high-gloss frame, painted in brilliant white with an attractive and durable woven mesh fabric in natural tan. The dock table features a smooth, easy to clean tempered glass surface and a glossy, brilliant white frame. You can quickly protect yourself from the midday sun by opening the umbrella. The umbrella features a durable and breathable fabric material in north woods green, and an attractive chrome accented spinner for opening and closing the umbrella.

SHOREMASTER LIFTS

Strength. Stability. Durability. Our lifts are built to stand the test of time.

THERE'S AN ICON FOR IT

www.shoremaster.com

VERTICAL LIFT

When determining what type of boat lift will work best for your lake bottom, your style of boat and your water depth, you won't find an easier or smarter choice than a vertical boat lift from ShoreMaster. Our vertical boat lifts even take the guess work out of choosing which side of the dock to place your new lift.

ShoreMaster vertical boat lifts feature a simple, yet brilliant Double V-Side (DVS) design so you can access your boat just as easily from the left or from the right. ShoreMaster's vertical boat lifts can accommodate any style of boat or pontoon hull, so it's an easy investment to make that will pay you dividends years

later when your boat or pontoon looks just as great as the day you bought it. A ShoreMaster vertical boat lift is also the most versatile in terms of the type of lake bottom and water depth that it can be used in. You simply can't go wrong with a vertical boat lift from ShoreMaster.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster's team of professional welders infuse quality and workmanship into every ounce of aluminum and along every inch of weld to deliver you an extremely sturdy boat lift that you can be confident will always protect your boat and its valuable passengers. The time-tested and in-water proven combination of stainless steel cables, as well as brass sheaves, mean you won't need to spend your hard-earned recreation time replacing cables or worn pulleys. You'll have a hard time finding a vertical boat lift that has more beautifully laid welds, in more critical locations than you'll find on a ShoreMaster. To give you even more peace of mind, ShoreMaster uses only the best stainless steel and brass hardware where fasteners are a part of the design.

HYDRAULIC LIFT

Your time is important and simple tasks should take care of themselves. When you make a purchase you want the best and something that will last. Consider the hydraulic boat lift from ShoreMaster to protect your boat or pontoon. With just the push of a button you can get your boat in and out of the water quickly so you can move on to whatever else interests you.

ShoreMaster hydraulic boat lifts are ultra-quiet so you won't disturb the peace and serenity of the perfect morning or quiet evening. A hydraulic boat lift from ShoreMaster represents the best that the industry has to offer in terms of ease of use and operational speed. Hydraulic boat lifts are a known and proven technology so when you want the best

boat lift technology, a ShoreMaster hydraulic boat lift is a smart choice. Hydraulic boat lifts can be installed just about anywhere a cantilever or vertical boat lift can be installed and are well suited for firm to slightly soft lake bottoms and moderately shallow to deeper water.

SPECIFICATIONS & GENERAL INFORMATION:

Our professional welders hand craft each and every hydraulic boat lift one at a time to ensure consistent, solid welds that provide the underlying strength and durability of its all aluminum frame. Bushings are precision fit at all critical pivot points, stainless steel and brass hardware are used throughout to ensure long lasting connections where hardware is required. We provide easy-to-use, dependable, powerful hydraulic pumps, rams and hoses to provide worry-free service every time you operate your hydraulic boat lift. Your choice of either 12 volt or 110 volt operation means you can have the best the industry has to offer regardless of whether or not you have electrical power at your dock.

CANTILEVER LIFT

Ruggedness is forged from simplicity, at least in the case of ShoreMaster's cantilever boat lifts it is. Many of ShoreMaster's cantilever boat lifts that were manufactured in the 1970's and 1980's are still in service today. Considering the amount of abuse, stress, and environmental conditions that these lifts

have endured in nearly half a century of dependable use, there's a reason why our design hasn't changed much over the years. One stainless steel cable, three brass pulleys and relentless attention to weld quality are what ShoreMaster gives to you in every cantilever boat lift that we produce for you. Our cantilever boat

lifts offer unparalleled protection for your boat or pontoon because they are so simple, rugged and effective. ShoreMaster cantilever boat lifts are your simple choice for lake bottoms that are firm to muddy and shallow to moderately deep water depth.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster cantilever boat lifts have changed very little since their original manufacturing design decades ago. A stainless steel cable ensures a long service life and less worry of cable breakage so your lift is always ready to do its job. The strength and durability of our brass pulleys provides smooth and effortless lifting action. High quality, professional welds throughout the aluminum frame keep your cantilever lift solid and square at critical connection points. Where required, ShoreMaster uses only stainless steel and brass hardware to reduce or eliminate the potential for loose or corroded nuts and bolts. The important pivot points between the lift frame and the lift rack are protected with bushings to provide the strength and longevity that our cantilever boat lifts are well known for.

PONTOON LIFT

Protect your investment and time on the water with a vertical lift specially designed for today's pontoons. Built with a longer frame and available with our pontoon rails, racks and guides this pontoon lift allows for easy centering as well as added on stability and protection. Featuring standard Double V-Sides,

your pontoon is accessible from either side of the dock, allowing for more versatility with your shoreline equipment. Even with the longer base frame our pontoon lift will fit our standard ShoreMaster canopy legs and frames providing superior protection from damaging rain and sun rays. Plus, as with our standard

vertical boat lifts the pontoon lift offers versatility in terms of the type of lake bottom and water depth that it can be used in. If you have a pontoon craft in your lineup you cannot go wrong with the ShoreMaster Pontoon Lift.

SPECIFICATIONS & GENERAL INFORMATION:

Our engineers took special consideration when designing the ShoreMaster pontoon lift to ensure stability and durability for your larger watercrafts. An all-aluminum welded frame along with stainless cables and brass sheaves provides a stable base that you can be confident will always protect your pontoon. Our full-length pontoon racks are adjustable to fit your specific boat and help to evenly distribute the weight of the boat across the lift. Available in two weight capacities - 4,000 lbs and 7,000 lbs - our pontoon lifts take the work out of raising and lowering your boat with our time-tested winches.

RHINOHOIST® FRONT MOUNT LIFT

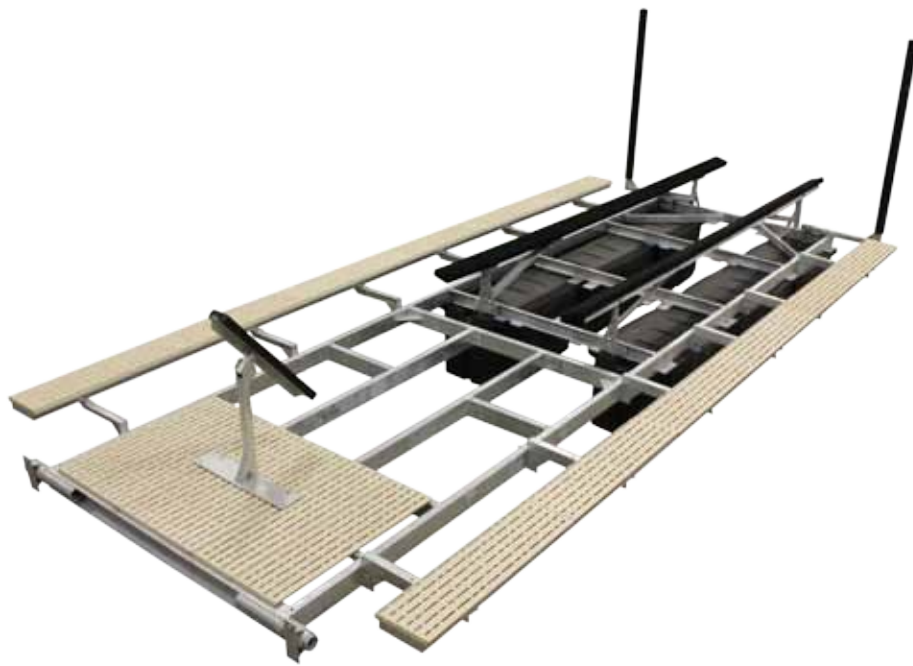

Imagine being able to easily access your boat's hull while it's still positioned on your lift. How much time would you save by not having to trailer your boat from the access point just to clean it? Stop imagining and start doing. ShoreMaster's RhinoHoist Front Mount floating boat lift includes a front positioned walkway,

available port and starboard side walkways featuring Titan decking for a safe and slip-resistant surface that allows you easy access to your boats hull for cleaning, maintenance or just to admire the gel coat up close and personal. The RhinoHoist Front Mount is easy to use so you'll feel like a pro at the dock every time you

put your boat in the water. A RhinoHoist Front Mount is also a perfect option when you do not have a U-shaped dock slip, or if you have a double wide boat slip. RhinoHoist floating boat lifts are perfectly suited to rougher water conditions, and deep or fluctuating water.

SPECIFICATIONS & GENERAL INFORMATION:

The steel frame of the RhinoHoist Front Mount boat lift is expertly welded, then hot-dip zinc galvanized to prevent corrosion and oxidation. Heavy duty dock brackets are supplied with each RhinoHoist Front Mount to ensure a strong and lasting connection at the dock pivot point. The RhinoHoist Front Mount uses marine-grade fasteners where fasteners are necessary to give you confidence that your boat will be protected on the lift in any environmental condition. The included RhinoHoist Front Mount front walkway and the optional side walkways utilize galvanized steel brackets to support the Titan decking panels for a safe, firm and sure-footed feel while walking the length of the lift. Flotation is provided by ShoreMaster's own rotationally molded polyethylene air tanks that are extremely dependable to ensure your boat remains protected whenever you store it on the lift. RhinoHoist floating boat lifts utilize the premier First Mate control units, available with or without a remote.

RHINOHOIST® L-ARM LIFT

The RhinoHoist L-Arm was originally designed to withstand the brutal marine environment in Lake of the Ozarks and are now found everywhere throughout the United States and Canada. RhinoHoist floating boat lifts have a solid reputation for their strength and durability. It's no wonder that countless residential property owners, marinas, restaurants, resorts and

casinos have been adding ShoreMaster's RhinoHoist L-Arm lifts to their boat slips to protect their own, or their customers' boats. RhinoHoist L-Arm floating lifts are safe, dependable and extremely easy to use so they are perfect for the individual homeowner, and a great choice for updating or expanding marina services at your location. A simple push of a button

allows the RhinoHoist L-Arm to operate quickly and quietly to easily get your boat in and out of the water like a true professional. RhinoHoist floating boat lifts are perfectly suited for rougher water conditions, and deep or fluctuating water.

SPECIFICATIONS & GENERAL INFORMATION:

The steel frame of each RhinoHoist L-Arm floating boat lift is handcrafted and expertly welded, then hot-dip galvanized for strength and corrosion resistance. Flotation is provided by ShoreMaster's own rotationally molded polyethylene air tanks that are extremely dependable to ensure your boat remains afloat and protected whenever you store it on the lift. RhinoHoist L-Arm features marine-grade fasteners for improved corrosion resistance to give you peace of mind that your lift will always be able to protect your boat. Heavy duty brackets and 2.5" galvanized steel L-Arms provide additional strength and stability to an already strong and stable lift frame. RhinoHoist floating boat lifts utilize the premier First Mate control units, available with or without a remote.

SHOREPORT™

Save yourself time with Shoreline Industries' personal watercraft port. ShorePort's design is time tested, and proven to make launching and loading your PWC super quick and super easy. Three adjustable rollers conform to just about any PWC hull style, while allowing you to set them up perfectly for the

way you like to load and launch your craft. Because the ShorePort is so dependable and easy to use, it is a favorite for both individual personal watercraft owners, resorts, and marinas that provide PWC rental. An attractive textured surface means you can access your PWC from either the port or starboard side

and an 8" cleat allows you to secure your craft for extended storage. You'll get a lot more use out of your personal watercraft with a ShorePort floating PWC lift, whether you own just one, two or rent out an entire fleet of them.

SPECIFICATIONS & GENERAL INFORMATION:

ShorePort's one-piece rotationally molded design provides a water tight, dependable platform for quick and easy PWC storage. Weighing in at just 260 pounds, the ShorePort is easy to get into position and simple to maneuver around when reconfiguring your dock system. ShorePort can accommodate PWC's up to 1,150 pounds and with the addition of our supplemental flotation, the weight capacity of a ShorePort can quickly and easily be increased up to 1,350 pounds. Because ShorePort is a floating PWC lift, there is no need to adjust the ShorePort for fluctuations in water depth, so you'll have more time to ride your PWC.

*With supplemental flotation.

TRADITIONAL CANOPY

A boat lift helps to protect your boat or pontoon from damage to its hull by getting it up, and out of the way of floating debris, marine organisms, and wind-driven waves. A traditional canopy frame with either a vinyl or WeatherMax cover protects your boat from the damaging effects of the sun's ultraviolet rays, and

water logging caused by rain. It's an easy comparison to make when you compare a boat that has been left out in the elements and one protected by a canopy. You can see just how damaging the effects of sun and rain can be to a boat or pontoon's interior vinyl, carpet, glass, and its exterior paint or gelcoat.

Imagine watching as a storm rolls in over the lake, and knowing inside that your boat or pontoon will remain safe and dry because it is tucked snugly up into your ShoreMaster canopy frame.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster canopy frames are hand-welded by our aluminum artisans for superior strength to provide you with long-term boat protection and to give you confidence that your canopy will withstand years of worry free service. The design of ShoreMaster's aluminum canopy frame is ultra-deep with rounded ends to protect both the interior and the exterior of your boat or pontoon from ultraviolet degradation and wind-driven rain. Four fully welded sections complete the structure of the frame and are fastened using stainless steel and brass hardware. This makes our canopy frame among the strongest and most durable that you'll find anywhere.

HIP ROOF CANOPY STYLE

ShoreMaster's hip roof canopy provides an alternative option to our traditional, "barn-style" canopy frame to suit a variety of weather conditions. With a steep pitch and drum tight cover fit this canopy continues to provide protection against the elements - especially

sun fading and rain shedding without distributing the aesthetics of your shoreline. Available with either a vinyl or WeatherMax® cover in a variety of colors the hip roof canopy offers a lower profile than most traditional canopies providing you an uninhibited

view of your waterfront. Plus, as with all ShoreMaster canopies, the hip roof frame and cover are easy to install and remove allowing you to spend more time on the water. Upgrade your lift today with a canopy from ShoreMaster.

SPECIFICATIONS & GENERAL INFORMATION:

All ShoreMaster canopy frames, including our hip-roof style, are hand-welded in our facility and tested for superior strength and longevity so you can rest assured that your boat is receiving premium protection. The design of ShoreMaster's hip-roof canopy provides a sleek tucked-under cover for a low profile design that protects against ultraviolet degradation and wind-driven rain. Four fully welded sections complete the structure of the frame and are fastened using stainless steel and brass hardware. This welded frame provides easy assembly and installation.

WEATHERMAX®

ShoreMaster canopy frames are incredibly strong and designed so you can tuck your boat or pontoon deep within its protective structure. WeatherMax fabric canopy covers are the premier option to provide a protective barrier between your boat and the elements. WeatherMax is super lightweight and

pliable so it requires less effort to install and remove from your canopy frame. This saves you time and hassle when it's time to clean your cover or install or remove it for the season. WeatherMax canopy covers allow fresh air circulation underneath the canopy, this helps reduce the potential for mold and mildew build

up on your boat or within the canopy cover itself. This is an important feature to look for when selecting a canopy cover for your ShoreMaster canopy frame, as the absence of venting could create more work and maintenance than you initially bargained for.

SPECIFICATIONS & GENERAL INFORMATION:

WeatherMax canopy covers will retain their fit and finish on the canopy frame so your canopy system will resist sagging caused by rain, age, and exposure to the elements. The WeatherMax finish gives you a fabric canopy cover that is breathable so it resists mold and mildew, and allows the cover to be cleaned easily. WeatherMax outperforms acrylic and solution dyed materials in color retention and abrasion resistance. WeatherMax is lightweight, just 8 oz. per yard, and 1/3 less the weight of standard vinyl material, yet it is incredibly durable and long lasting. Seams are precision welded for a watertight, perfect fit every time.

Top Row Left to Right: Burgundy, Pacific Blue, Taupe, Forest Green, Black, Light Charcoal, Sapphire Tweed, Forest Tweed

Printed color samples are not intended for color matching purposes. Please see your local authorized ShoreMaster dealer for actual color samples.

SHELTER-RITE VINYL

While it's true that the canopy frame provides the foundational structure of any boat lift canopy system, the canopy cover provides the protective barrier between your boat and the environment. Vinyl cover is a smart and affordable choice to protect your investment. We challenge our suppliers to provide only the finest, high-grade vinyl available. The ShoreMaster

canopy vinyl is one of the most durable on the market. At 18 oz. and provides exceptional durability, and truly effective ultra violet protection. All seams are heat welded to precise standards to provide a watertight, perfect fit on your canopy frame. ShoreMaster canopy vinyls allow the maximum amount of air circulation underneath the canopy, which helps reduce the

potential for mold or mildew to build up on your boat or within the canopy cover itself. This is an important feature to look for when selecting a canopy cover for your ShoreMaster canopy frame, as the absence of venting could create more work and maintenance than you initially bargained for.

SPECIFICATIONS & GENERAL INFORMATION:

Heavy duty marine grade 18 oz. Shelter-Rite® vinyl is hand selected for its excellent tear, puncture and abrasion resistance. Shelter-Rite® vinyl also includes a high performance vinyl formulation to increase its pliability, and reduce mold, mildew and UV damage. The vinyl cover is hand-crafted with heat welded seams for a watertight snug fit over the deep canopy frame. The flat matte, smooth finish makes clean up very easy and reduces the amount of time it takes to wash and dry your cover.

Vinyl Left to Right: Burgundy, Forest, Tan, White, Blue, Gray

Printed color samples are not intended for color matching purposes. Please see your local authorized ShoreMaster dealer for actual color samples.

WHAT ACCESSORIES DO I CHOOSE?

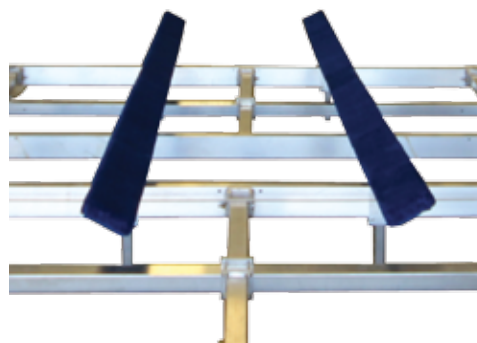

Boat lift accessories add to your peace of mind in two ways. First, they provide useful and functional protection of your boat or pontoon. Second, they add to the simplicity of storing your boat on the boat lift. For instance, you should pay special attention to the bunk, cradle, or guide setup that is used on your boat trailer, and replicate this with ShoreMaster boat lift accessories as closely as possible on your boat lift. This way you are guaranteed that your boat will be properly supported for storage on your boat lift. So, while some boat lift accessories are a necessary requirement to properly store your watercraft, some lift accessories are design to provide you with an easier alternative to actually operating the lift. A powered boat

lift motor eases the effort required to raise or lower your watercraft on the lift. Other lift accessories such as ShoreMaster's full length guides are a nice addition to the overall boating experience as they can make entering or exiting the boat lift much easier, especially for boaters who have less experience operating in tight spaces or wavy conditions. It's important to consider all of the variables that you'll encounter when storing your boat on a boat lift to ensure that your boat will be properly protected, and that any family member who may use your boat or boat lift will find the experience safe, easy and enjoyable as you do.

BOW GUIDE:

ShoreMaster's bow guide is manufactured with an all aluminum frame with a polystyrene foam, vinyl covered bumper to help keep your boat from overrunning your lift.

LIFT BUNKS:

Protect your boat with ShoreMaster's lift bunks. These bunks are a quick and inexpensive way to protect your investment from rubbing against metal parts of your dock or lift.

CRADLES:

ShoreMaster has different types of cradles to accommodate your boating and lift needs. With our adjustable, non-adjustable and tri-toon options we manufacture cradles to support and protect your investment and keep you on the water all summer long.

MOTOR STOP:

ShoreMaster's motor stop is manufactured from aluminum with a vinyl bumper; this motor stop is adjustable to fit hoists that have a straight rack across the bottom. Use our motor stop to help you guide your boat and stop it from passing through the lift.

HYDRAULIC BOX HOLDER:

This hydraulic box holder is a convenient way to get your hydraulic box up and off the dock. It won't take up precious dock space and is more safe as well as secure than having your hydraulic box sitting on the dock where it can accidentally get knocked in the water.

PONTOON CRADLE:

You can choose from either carpet or wood (sold separately) options which support pontoons or tri-toons. This accessory is aluminum and comes with stainless steel hardware.

www.shoremaster.com

www.shoremaster.com

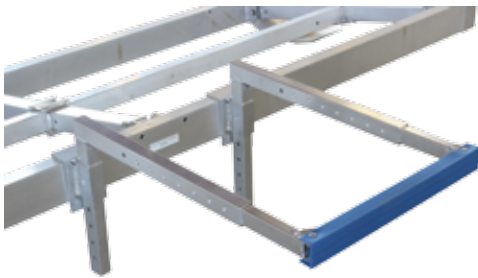

PONTOON GUIDE:

ShoreMaster's pontoon guide goes up on the inside of the pontoons to assist in guiding your boat (please note that the wood for the guides is sold separately). The pontoon guides features four aluminum posts, a perfect accessory for boat parking assistance.

PONTOON RAIL KITS:

ShoreMaster's pontoon rail kits are a set of four and go right up the middle of your pontoon to guide it from the inside of the lift. Our pontoon rail kit lifts your pontoon underneath the deck using a combination of bunks and guides (wood for this kit is sold separately).

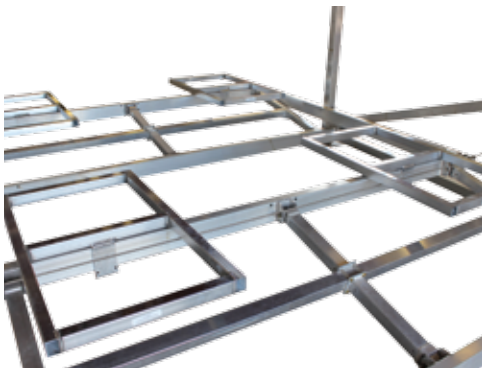

PONTOON MOTOR STOP:

Designed exclusively for pontoons! ShoreMaster's pontoon motor stop will help prevent you from damaging your motor; it's intended to assist you in guiding your pontoon and to stop your pontoon from passing through the lift.

SCREW LEGS:

ShoreMaster's screw legs are easy to adjust and have 30" of travel, important for leveling your lift, making these legs ideal for our vertical and cantilever lifts. Our lift screw legs are an optional add-on accessory for your lift and are manufactured out of aluminum.

PONTOON RACKS:

Our pontoon lift racks feature a set of four that mount to the lift rack and adjust horizontally. These pontoon racks work great for vertical, cantilever as well as hydraulic lifts. They are manufactured out of marine grade aluminum and come with stainless steel hardware.

WHEEL CADDY:

Let us help you with the installation and removal of your lift. The wheel caddy from ShoreMaster attaches to the lift side when the rack is raised, forcing the wheel under the lift. The great part about our wheel caddy is that it can remain on the lift all year round.

FULL-LENGTH ALUMINUM/CARPETED BUNKS

LIFTMATE AND SIDEWINDER BOAT LIFT MOTORS

Boat lift motors from Shoreline Industries are the finishing touch on any boat lift. Shoreline Industries manufactures all of our lift motors to be convenient, powerful, efficient and trouble-free. By installing a

motor on your lift, you'll be able to enjoy your boat time and again, without the hassle of hand-cranking your lift wheel around and around. Lift motors provide superior convenience so you can enjoy your time on

the water. Boat lift motors from Shoreline Industries are simple to install and even simpler to operate.

SPECIFICATIONS & GENERAL INFORMATION:

The Sidewinder direct drive allows you to remove your lift wheel and attach the motor directly to your lift's existing winch so you'll never need to crank a wheel to raise or lower your boat! The Sidewinder fits most major brands of lifts and works on capacities up to 7,000 lbs. The Sidewinder motor is available in 110 volt and 12 volt models with an optional remote control unit available.

Shoreline's LiftMate universal wheel drive boat lift motor takes the work out of raising and lowering your boat on the boat lift. The Lift Mate Boat Lift Motor is available in 110 volt and 12 volt models and both come complete with mounting hardware to fit all boat lifts up to 5,000 lbs. A toggle switch unit is standard, but an optional remote control is available for push-button raising and lowering of your boat lift.

RECREATION

Remember how much fun it was to slide down into the water as a child at the lake or waterpark? With the waterslide from ShoreMaster now you can share those fun memories with your young loved ones.

Built to last and requiring very little maintenance our recreational slides come in two configurations and colors to choose from. You and your family can have endless hours of enjoyment. Glide right off your

dock and into the water with our on-deck slide (don't forget to purchase an adapter kit for the PolyDock) or place your slide in the sand with our free-standing option.

SPECIFICATIONS & GENERAL INFORMATION:

ShoreMaster's recreational on-deck and free-standing slides are over 8' tall and 10' long fully assembled. You can choose from either tan or bright yellow and because we know how important safety is we have added two aluminum safety rails and slip resistant aluminum steps.

SHOREMASTER FLOTATION AND RHINOFLOAT®

ShoreMaster manufactures two very similar, yet very distinct styles of dock flotation. Either style of dock flotation can be found supporting residential dock systems, marinas, resorts, restaurants, campgrounds and casinos all across the United States & Canada.

Our team of professional rotational molders blend the art and the science of perfectly molding strong and durable flotation products like ShoreMaster dock floats. For peace of mind, we inspect each and every float because we understand the significance that

just one float can have on the your dock's stability and integrity. We foam fill each float to ensure that the overall buoyant properties of the float are not compromised in the event of damage to an installed dock float.

SPECIFICATIONS & GENERAL INFORMATION:

Both ShoreMaster flotation and RhinoFloats are rotationally molded using black polyethylene that is infused with UV inhibitors to create the outer shell of the float. We then fill each float with expanded polystyrene to create a two-step flotation system. The outer shell provides water displacement and buoyancy, while the foam filling prevents loss of buoyancy in the in the event of puncture or damage to the outer shell.

ShoreMaster floats feature longer mounting slots to make installation on new or existing dock systems quick and easy. They also provide more tolerance to variables in attachment locations on the dock frame. ShoreMaster flotation has a nominal wall thickness of .15" throughout its design.

RhinoFloat dock flotation uses "J" bolt compatible slots for quick and simple installation, and are molded at each corner to allow a fastener to be positioned at its thickest location. RhinoFloats have a nominal wall thickness of .15" throughout and .20 at the corners. ShoreMaster Floats feature longer mounting slots to make installation on new or existing dock systems quick and easy. They also provide more tolerance to variables in attachment locations on the dock frame.
