UNIVERSITY PRESS

Great Clarendon Street, Oxford OX2 6DP

Oxford University Press is a department of the University of Oxford.
It furthers the University's objective of excellence in research, scholarship
and education by publishing worldwide in
Oxford New York

2000/345

Athens Auckland Bangkok Bogotá Buenos Aires Calcutta
Cape Town Chennai Dar es Salaam Delhi Florence Hong Kong Istanbul
Karachi Kuala Lumpur Madrid Melbourne Mexico City Mumbai
Nairobi Paris São Paulo Singapore Taipei Tokyo Toronto Warsaw
with associated companies in Berlin Ibadan

Oxford is a registered trade mark of Oxford University Press
in the UK and in certain other countries

Published in the United States
by Oxford University Press Inc., New York

Contents

The plates fall at the back of the book.

A note on units xv
List of abbreviations xvii

Chapter 1 **Introduction** 1

- 1.1 Aims of this book 1
 - 1.2 Historical aspects 1
 - 1.3 Remarkable properties of enzymes as catalysts 4
 - 1.4 Cofactors 7
 - 1.5 Nomenclature and classification of enzymes 8
 - 1.6 The contents of this book 13
- References 14

Chapter 2 **The purification of enzymes** 15

- 2.1 Introduction 15
 - 2.2 Why isolate enzymes? 15
 - 2.3 Objectives and strategy in enzyme purification 16
 - 2.4 Choice of source 17
 - 2.5 Methods of homogenization 20
 - 2.6 Methods of separation 21
 - 2.7 How to judge the success of a purification procedure 34
 - 2.8 Examples of purification procedures 36
 - 2.9 Conclusions from the examples of enzyme purification 43
- References 44

Chapter 3 **The structure of enzymes** 47

- 3.1 Introduction 47
- 3.2 The determination of M_r 48
- 3.3 The determination of amino-acid composition and primary structure 54

3.4	The determination of secondary and tertiary structure	75
3.5	The determination of quaternary structure	100
3.6	The unfolding and folding of enzymes	106
3.7	Concluding remarks	110
	References	111
	Appendix 3.1	116
	References for Appendix 3.1	117
Chapter 4	An introduction to enzyme kinetics	118
4.1	Outline of the chapter	118
4.2	How do we obtain kinetic data?	119
4.3	How do we analyse kinetic data?	121
4.4	Pre-steady-state kinetics	144
4.5	Concluding remarks	148
	References	148
	Appendix 4.1	150
	Appendix 4.2	151
	Appendix 4.3	152
	References for Appendices	153
Chapter 5	The mechanism of enzyme action	154
5.1	Introduction	154
5.2	Definition of the mechanism of an enzyme-catalysed reaction	154
5.3	Background to catalysis	155
5.4	Experimental approaches to the determination of enzyme mechanisms	162
5.5	Examples of enzyme mechanisms	177
5.6	Concluding comments on enzyme mechanisms	212
	References	212
Chapter 6	The control of enzyme activity	217
6.1	Introduction	217
6.2	Control of the activities of single enzymes	218
6.3	Control of metabolic pathways	237
6.4	Examples of control of metabolic pathways	249
6.5	Concluding remarks	266
	References	266
	Appendix 6.1	270
Chapter 7	Enzymes in organized systems	273
7.1	Introduction	273
7.2	Organized enzyme systems	273

- 7.3 RNA polymerase from *E. coli* 274
- 7.4 The occurrence and isolation of multienzyme proteins 281
- 7.5 Phylogenetic distribution of multienzyme proteins 282
- 7.6 Properties of multienzyme proteins 283
- 7.7 Pyruvate dehydrogenase multienzyme complex and related systems 285
- 7.8 Glycine decarboxylase multienzyme complex 294
- 7.9 The tryptophan synthase multienzyme complex from *E. coli* 294
- 7.10 Carbamoyl phosphate synthase and the associated enzymes of the pyrimidine and arginine biosynthetic pathways in *E. coli*, fungi, and mammalian cells 300
- 7.11 Multienzyme polypeptides: fatty-acid synthase and the *arom* complex (AROM enzyme) 304
- 7.12 Enzymes involved in DNA synthesis 315
- 7.13 The glycogen particle 315
- 7.14 Conclusions 317
- References 317

Chapter 8 **Enzymes in the cell** 321

- 8.1 Introduction 321
- 8.2 Intracellular compartmentation 322
- 8.3 Compartmentation of metabolic pathways 333
- 8.4 Vectorial organization of enzymes associated with membranes 347
- 8.5 The concentrations of enzymes and substrates *in vivo* 355
- 8.6 Conclusions 366
- References 367

Chapter 9 **Enzyme turnover** 370

- 9.1 Introduction 370
- 9.2 Kinetics of enzyme turnover 371
- 9.3 Methods for measurement of rates of enzyme turnover 373
- 9.4 Results from measurements of rates of enzyme turnover 375
- 9.5 Possible correlations between the rates of turnover and the structure and function of enzymes 376
- 9.6 The mechanisms of protein degradation 377
- 9.7 The significance of enzyme turnover 389
- 9.8 Other processes in which intracellular proteolysis is important 394
- 9.9 Conclusions 396
- References 396
- Appendix 9.1 399

Chapter 10 **Clinical aspects of enzymology** 400

- 10.1 Introduction 400
- 10.2 Determination of enzyme activities for clinical diagnosis 401

- 10.3 Clinical enzymology of liver disease 404
- 10.4 Clinical enzymology of heart disease 406
- 10.5 Other enzyme activities that become elevated in serum in disease 408
- 10.6 The detection and significance of enzyme deficiencies 411
- 10.7 Enzyme inhibitors and drug design 415
- 10.8 The use of enzymes to determine the concentrations of metabolites of clinical importance 416
- 10.9 Enzyme therapy 424
- 10.10 Conclusions 428
- References 428

Chapter 11 **Enzyme technology** 430

- 11.1 Introduction 430
- 11.2 Use of microorganisms in brewing and cheesemaking 430
- 11.3 Use of microorganisms in the production of organic chemicals 433
- 11.4 Use of isolated enzymes in industrial processes 433
- 11.5 Immobilized enzymes 440
- References 449

Appendix: Enzymes referred to in Chapters 1-11 450

Index 471
