

POWER GENERATORS

Generator Product Catalog

About Milbank | EmPOWERing the Future

Milbank Manufacturing Co., a third-generation family-owned business, has been engineering and manufacturing electrical supplies, equipment and solutions for use by utilities, contractors, distributors and OEMs since its founding in 1927.

Today, Milbank's meter mounting equipment is the standard by which all others are measured. Our meter sockets and electrical enclosures can be found on homes, schools, businesses, factories, roadways, RV parks, arenas, and airports across North America.

Consistent with our vision to remain at the forefront of power generation and distribution technology, and to honor our stewardship of the environment, Milbank launched its PowerGen™ division in 2009. The PowerGen™ product line—which features wind, solar, electric vehicle charging stations and generators—incorporates renewable energy sources and distributed power generation while helping to advance smart grid initiatives.

Protection. Power. Peace of Mind.

Our generator products include a comprehensive line of residential, commercial and industrial standby and portable power systems featuring best-in-class engines such as Briggs & Stratton, Honda and GM. To find a distributor near you, please call 877.483.5314 or visit us at milbankpowergen.com

Home Standby Generators

Frequently Asked Questions	34-35

Protect your family.

When the power goes out, don't be left in the dark. With Milbank home standby generators, you'll ensure the protection of your family and your possessions.

Protect your home.

Life, interrupted.

A blizzard. A thunderstorm. A collision with an unsuspecting utility pole. A heat-wave induced brownout. An aging, and now blown, transformer down the street.

A freezer full of steaks and ice cream in the garbage. A refrigerator full of food and drinks down the drain. No computer. No television. No alarm system. No lights, inside or out. It's life, interrupted. It's inconvenient, expensive, uncomfortable, and most importantly, may compromise our family's safety.

Life, uninterrupted.

A home standby generator offers life, uninterrupted. A standby generator offers continuous, uninterrupted power in the event of an outage. The result: continuous comfort, convenience and safety. Eliminate one of life's interruptions. Install a Milbank home standby generator today and ensure an uninterrupted tomorrow.

Questions about how our home standby generators work? Check out the FAQs on pages 34-35.

7-10kW Home Standby Systems

Models

MG07002 – 7kW
MG10001 – 10kW

Automatic System Features

Fully Automatic – Advanced electronics will detect a utility power outage and automatically start the generator whether you are home or away.

Continuous Fuel Supply – A permanent connection to natural gas or propane delivers uninterrupted performance with no messy gasoline storage and refueling.

Contemporary, Space-Saving Design – One of the most compact and functional designs on the market provides for location flexibility and an attractive, subtle yard presence.

Quiet Operation – Engineered air passages, an automotive-style exhaust system and acoustic foam dampeners ensure 50% quieter operation than most portables.

Durable Outdoor Enclosure – Each system features professional rust-proofing and premium automotive paint for maximum durability and all-weather protection.

Computer-Friendly Power – Advanced alternator technology provides safe and stable power for computers and other sensitive electronics.

Strong Warranty – The 7kW units include a two-year warranty; the 10kW units include a three-year warranty.

Turnkey Extras – Automatic systems include a battery charger, hour meter, and installation pad. The engine also comes pre-filled with synthetic oil and is pre-run and tested at the factory, saving you time and money.

Remote System Status Monitor

This 8-fault remote status monitoring system is a standard, preventative accessory that provides customers with peace of mind knowing their generator is always operating correctly. Included with all Milbank generators.

Accessories

Power Management System Enhancement: Model MG0501440

Featuring patented computer-controlled technology, this Power Management System upgrade further expands your generator's range and performance by automatically prioritizing and managing an additional 4 high-demand 240V appliances.

Cold Weather Package: Model MG111102

An oil heater and battery warmer are both thermostatically controlled to heat up when the temperature drops, ensuring smooth starting and engine operation. Items also available separately.

Battery Warmer Only: Model MG240100

Oil Heater Only: Model MG240101 (included on 7kW model)

Maintenance Kit

Model MG070022 (7kW), MG101222 (10kW)

Includes special UL air filter, pre-cleaner, spark plugs, oil filter, and synthetic oil.

12-20kW Home Standby Systems

Models

MG12001 – 12kW
MG15001 – 15kW
MG20002 – 20kW

Automatic System Features

Fully Automatic – Advanced electronics will detect a utility power outage and automatically start the generator whether you are home or away.

Continuous Fuel Supply – A permanent connection to natural gas or propane delivers uninterrupted performance with no messy gasoline storage and refueling.

Vanguard™ V-Twin Engines – An industry leading commercial grade Big Block™ air-cooled engine powered by Briggs & Stratton provides powerful, quiet, durable performance for large, power hungry homes – perfect for years of heavy-duty standby power.

Quiet Operation – Engineered air passages, an automotive-style exhaust system and acoustic foam dampeners ensure quiet operation.

Durable Outdoor Enclosure – Features heat/rust proof polymer vents and louvers, rounded corners and a 3-step automotive rust proofing & wet coat paint process for years of durable outdoor protection – perfect for extreme weather and salt air conditions.

Four-Year Warranty – The best comprehensive parts and labor warranty in the industry.

Turnkey Extras – Automatic systems include battery charger, hour meter, installation pad. The engine comes pre-filled with synthetic oil and is pre-run at the factory, saving time and money.

Remote System Status Monitor: All models

This 8-fault remote status monitoring system is a standard, preventative accessory that provides customers with peace of mind knowing their generator is always operating correctly. Included with all Milbank generators.

Accessories

Power Management System Enhancement: Model MG0501440

Featuring patented computer-controlled technology, this Power Management System upgrade further expands your generator's range and performance by automatically prioritizing and managing an additional 4 high-demand 240V appliances.

Cold Weather Package: Model MG111102

An oil heater and battery warmer are both thermostatically controlled to heat up when the temperature drops, ensuring smooth starting and engine operation. Items also available separately.

Battery Warmer Only: Model MG240100

Oil Heater Only: Model MG240101

Maintenance Kit

Model MG101222 (12kW), MG151822 (15-20kW)

Includes special UL air filter, pre-cleaner, spark plugs, oil filter, and synthetic oil.

See Specifications Chart on page 23 for more information.

30-45kW Home Standby Systems

Automatic System Features

Fully Automatic – Advanced electronics will detect a utility power outage and automatically start the generator whether you are home or away.

GM Vortec Engine – Tested and approved on trucks and SUVs, world class 4 and 8 cylinder GM Vortec engines provide sophisticated yet extremely durable industrial grade power - perfect for the high power demands of most larger homes.

Computer-Friendly Power – A long life, commercial grade 4-pole 1800 RPM alternator provides robust, quiet, ultra smooth electricity, perfect for larger 'smart' homes.

Commercial Four-Year Warranty – The best comprehensive parts and labor warranty in the industry.

Quiet Operation – Engineered air flow, an automotive-style exhaust system, acoustic foam dampeners, and low 1800 RPM engine ensure quiet operation.

Durable All-Climate Enclosure – The durable storm grey steel enclosure is powder coated for excellent adhesion and improved resistance to chipping, abrasion and corrosion - perfect for years of all-season outdoor protection.

Turnkey Extras – Each system includes a battery charger and hour meter. The engine also comes pre-filled with synthetic oil, ethylene glycol long-life coolant and is pre-run at the factory, saving you time and money.

Remote System Status Monitor: All models

This 8-fault remote status monitoring system is a standard, preventative accessory that provides customers with peace of mind knowing their generator is always operating correctly. Included with all Milbank generators.

Models
MG30001 – 30kW
MG45001 – 45kW

Accessories

Power Management System Enhancement: Model MG0501440

Featuring patented computer-controlled technology, this Power Management System enhancement further expands your generator's range and performance by automatically prioritizing and managing four additional high-demand 240V appliances.

Maintenance Kit

Model MG300022 (30kW), MG450022 (45kW)

Includes special UL air filter, pre-cleaner, spark plugs, oil filter, and synthetic oil.

See Specifications Chart on page 23 for more information.

Automatic Transfer Switches

Models

MG0503120 – 50A, 12 circuits
 MG1003162 – 100A, 16 circuits
 MG1003002 – 100A
 MG2003002 – 200A
 MG1003992 – 100A, SE Rated
 MG2003992 – 200A, SE Rated
 MG2003993 – 200A, SE Rated (liquid cooled models only)

Automatic System Features

Fully Automatic – All Milbank transfer switches monitor utility and generator voltages and will automatically connect to the appropriate source of power. 100 and 200 amp switches are capable of “whole house” power transfer in residential/small business applications.

Power Management Technology – During a power outage, most people think they have to go without central air conditioning to weather the storm. Keep your cool with patented computer-controlled transfer switches featuring the AC Power Control Module that manage up to two central air conditioners while safeguarding against power overload. The size of your generator dictates the level of comfort provided by this feature.

12kW – One 4-Ton AC
 15kW – Two 4-Ton ACs
 20kW – Two 5-Ton ACs

Exclusive Design – Each transfer switch is UL approved, custom-made and dedicated exclusively for Milbank, reducing overall cost and giving you exactly what you need for your home or small business.

Computer Friendly – All transfer switches feature Automatic Voltage Regulation to ensure a safe and stable sine wave to sensitive electronics.

Lightweight/Ease of Installation – Efficient component selection has resulted in switch gear optimization for a lightweight product solution to residential/small business installations. Five wires – three 120/240 VAC and two utility supply wires (for battery charger and optional battery warmer and oil heater) also allow for efficient one person installation.

EEPROM (Electronic Program Read-Only Memory) – All transfer switches feature non-volatile memory, so when the power goes out, the transfer switch “remembers” its programming once power is restored. The switch never has to be programmed or reprogrammed once it is installed.

Variable Engine Warm-Up – All of our switches feature both 20-second and 50-second warm-up options: 20 seconds for warm weather starts or a 50-second setting when the generator requires additional start time in colder climates.

Safety Features – All transfer switches are solenoid-operated from utility or generator inputs and contain electrical interlock switches to eliminate the possibility of dangerous back-feed to a line during an outage.

Patented Power Management Technology

All of our 100 amp and 200 amp automatic transfer switches that accompany our residential home standby generators come standard with our patented Power Management technology.

This technology is leading the industry in meeting NEC 702, allowing homeowners whole-house managed power with a smaller, more efficient generator system and lowering overall installation costs.

HOW IT WORKS

Our power management system intelligently monitors the load the generator is providing when utility power is lost and waits until enough power is available to start higher wattage loads.

When higher wattage appliances (most common is central air conditioning systems) want to start up, they send a signal to the automatic transfer switch. By using a set of current transformers, we can monitor the load the generator is producing to the home. If the generator exceeds a predetermined capacity, the transfer switch will prevent these higher wattage loads from starting and check back every five minutes until enough power is available.

Electrical loads can be intelligently managed with Milbank’s automatic transfer switches and power management technology. This will allow the homeowner to maximize the output of a smaller generator, which will reduce total cost of installation, lower fuel consumption, and reduce emissions.

Power Management System Enhancement

Featuring patented computer-controlled technology, this Load Control Center upgrade further expands your generator’s range and performance by automatically prioritizing and managing an additional four high-demand 240V appliances.

Model
 MG0501440

Note: Automatic Transfer Switches are compatible only with home standby generator models.

See Specifications Chart on page 23 for more information.

Maintenance Accessories

Cold Weather Package

An oil heater and battery warmer are both thermostatically controlled to heat up when the temperature drops, ensuring smooth starting and engine operation. Items also available separately.

Model
 Package – MG11102

Giving you the power

Milbank offers a complete line of industrial generators that give you the power you need to get the job done, whether it's at a construction site or at a finished location.

to get the job done.

There's work to be done.

With an industrial generator on duty, it's better than business as usual. Powerful, reliable and safe, our industrial generators eliminate the uncertainty of power outages and their costly impact to operations and the bottom line. Whether a retail storefront, multi-story office complex or a job trailer, Milbank offers industrial generators that give you the power to get the job done.

Industrial Generators

Liquid Propane / Natural Gas

The GEW series is designed and manufactured with top quality components and meets the needs of any typical standby application. These products are UL2200 listed, NPFA-110 capable with unmatched reliability to ensure they are ready when needed.

Models

GEW25G
GEW30G
GEW40G
GEW50G
GEW65G

GEW100G
GEW120G
GEW160G
GEW175G

System Features

- Easy access for maintenance
- Safety guards for all electrical connections and moving parts
- Lockable latches for enclosed models
- Engineered vibration dampening system
- Rugged base frame for versatile application
- Easy access display of all critical genset measures
- Clean power with the Marathon alternator
- Regulator provides 0.5% voltage regulation
- Heavy duty GM Vortec engine
- EPA emissions compliant
- Integral mechanical radiator
- Internal silencer for enclosed models
- Standard aluminum enclosures
- 1-year warranty

Options Available

- Transfer switch
- Coolant heater
- Permanent magnet excitation
- Battery warmer
- NPFA 110 compliance

Configurations Available

- Open set
- Weather enclosure
- Soundproof enclosure
- Parallel capable
- Any single phase or three phase voltage
- 50 Hz by special order

Industrial Generators

GSW Series

The GSW series fulfills power requirements with the excellent reliability and performance.

Models

- GSW15Y (Yanmar)
- GSW25Y (Yanmar)
- GSW35Y (Yanmar)
- GSW50Y (Yanmar)

Models

- GSW60P (Perkins)
- GSW70P (Perkins)
- GSW90P (Perkins)
- GSW120P (Perkins)
- GSW160P (Perkins)
- GSW170P (Perkins)
- GSW200P (Perkins)

System Features

- STAMFORD alternator
- Water-cooled
- Automatic controller
- Internal residential muffler
- Detachable central lifting point
- Completely sealed drip pan
- Complete with engine and battery liquids
- Manual oil drain pump
- Heavy duty galvanized skids (optional)
- Moveable baseframe
- Standard 8-hour tank
- EPA emissions compliant
- Standard soundproof enclosure
- Battery / charger included
- 1-year warranty

Options Available

- 50Hz models
- Automatic transfer switch
- Coolant pre-heat
- UL142 base tanks
- Battery warmer
- DOT Road trailer
- Custom colors
- Fuel transfer pump
- Gensets for parallel

Automatic Control Panel (ACP)

Automatic control panel mounted on the genset, complete with digital control unit AC01 for monitoring, control and protection of the generating set.

Instrumentation (digital) – Generator set voltage (3 phases), mains voltage, generator set frequency, generator set current (3 phases), battery voltage, power (kVA - kW - kVAR), power factor, hour counter, engine RPM, fuel level (%), engine temperature.

Commands and others – Six settings (automatic test, automatic starting, engine locked, mains contactor forced, manual start, genset contactor forced); emergency stop button; remote start capable; acoustic alarm; integrated battery charger.

Protections with alarm – Engine protection (low fuel level, low oil pressure, high engine temperature); genset protection (under/over voltage, overload, under/over frequency, start failure, under/over battery voltage, battery charge failure).

Protections with shutdown – Engine protection (low fuel level, low oil pressure, high engine temperature); genset protection (under/over voltage, overload, under/over battery voltage, battery charge failure); circuit breaker and differential protection (optional).

Output and sockets – Power cables connected to terminals board (external), main lugs.

* Manual starting: the preheating period begins automatically when this position is selected. It is necessary to select this position again to enable the preheating period one more time.

Custom control panel available.

Digital Controller

Standard Fuel Tank

Fully Lockable

See Specifications Chart on page 26-27 for more information.

Industrial Generators

GRW Series

The GRW series is designed for the most demanding power in general applications, ideal for rental operators. It features a modern design, low noise level and versatility for any application.

System Features

- Heavy duty compact construction
- Designed for long running time
- Lockable door with access to emergency stop
- Individual modules for each section
- Quiet operation
- Standard soundproof enclosure
- Easy-to-use control panel
- Switchable voltage
- Ready for manual or auto-start operation
- Road-tow trailer available (optional, sold separately)
- EPA emissions compliant
- Internal silencer for enclosed models
- Standard fuel tank, 24-hour runtime
- Battery / charger included
- 1-year warranty

Manual Control Panel (MCP)

Manual control panel mounted on the genset, with analog instrumentation and protected through door with lockable handle.

Instrumentation (analog) – Voltmeter, ammeter, frequency meter, hours-counter, fuel level indicator, oil pressure indicator, engine temperature indicator.

Commands and others – Start / stop selector switch with key, emergency stop button, potentiometer for adjusting the output voltage, six wire multipin connector for external remote start / stop signal and battery charger feeding.

Protections with alarm – Engine protection: low fuel level, low oil pressure, high engine temperature battery charge failure.

Protections with shutdown – Engine protection unit (MC-01): low fuel level, low oil pressure, high engine temperature, battery charger failure. Circuit breaker protection.

Output – Power cables connected to terminals board (external).

Output receptacles – 2 x 120V 20A 2P+T NEMA (duplex w/ GFCI)
 1 x 120V 30A 2P+T NEMA (twistlock)
 1 x 240/120V 30A 2P+T NEMA (twistlock)
 1 x 240/120V 50A 2P+T NEMA (twistlock)
 1 x 240V 50A 3P+T NEMA (twistlock)
 Main lugs

Models

- GRW15Y (Yanmar)
- GRW25Y (Yanmar)
- GRW35Y (Yanmar)
- GRW50Y (Yanmar)

Models

- GRW60P (Perkins)
- GRW70P (Perkins)
- GRW90P (Perkins)
- GRW120P (Perkins)
- GRW160P (Perkins)
- GRW170P (Perkins)
- GRW200P (Perkins)

Note: Trailer sold separately.

See Specifications Chart on page 28-29 for more information.

Portable Generators

Vx-POWER Series - Powered by *Powermate*

Vx-POWER series generators offer versatile power solutions for home, work or play.

1,200 Rated Watts / 1,400 Surge Watts – Manual Start

- Engine – Powermate OHV
- Voltage – 120V AC; 12 Volts DC
- Compact roll cage design
- Includes 12V battery charging cables
- 1-year warranty
- CSA Certified

Model

PM0101207 – 49-state compliant
PC0101207 – CSA compliant

3,000 Rated Watts / 3,750 Surge Watts – Manual Start

- Engine – Powermate OHV
- Voltage – 120V / 240V AC; 12 Volts DC
- Compact roll cage design
- Mobility kit included with 8" never-flat wheels
- Dual folding handles for easy storage
- Includes hour meter and AVR
- 2-year warranty

Model

PM0103007 – 49-state compliant
PMC103007 – CARB and City of Los Angeles compliant
PC0103007 – CSA compliant

5,000 Rated Watts / 6,250 Surge Watts – Manual Start

- Engine – Powermate OHV
- Voltage – 120V / 240V AC; 12 Volts DC
- Compact roll cage design
- Mobility kit included with 10" never-flat wheels
- Dual folding handles for easy storage
- Includes hour meter and AVR
- 2-year warranty

Model

PM0105007 – 49-state compliant
PMC105007 – CARB and City of Los Angeles compliant
PC0105007 – CSA compliant

6,500 Rated Watts / 8,125 Surge Watts – Electric / Manual Start

- Engine – Powermate OHV
- Voltage – 120V / 240V AC; 12 Volts DC
- Compact roll cage design
- Mobility kit included with 10" never-flat wheels
- Dual folding handles for easy storage
- Includes hour meter and AVR
- Battery included
- 2-year Warranty

Model

PM0106507 – 49-state compliant
PMC106507 – CARB and City of Los Angeles compliant
PC0106507 – CSA compliant

See Specifications Chart on page 30 for more information.

Portable Generators

Standard & Elite Series

As North America's largest supplier of portable generators, Briggs & Stratton offers a premium combination of power, performance and value.

5,500 Watt – Manual Start

- Briggs & Stratton 1650 Series OHV Engine
- 5 gallon fuel tank - 10 hours of run time @ 50% load
- Hour meter
- Never-go-flat wheels
- Rubber outlet covers
- 2-year limited warranty
- CSA Certified

Model
MGP5502 – 5,500 Watts

7,000 Watt – Electric Start

- Briggs & Stratton 2100 Series OHV Engine
- 7 gallon fuel tank - 9 hours of run time @ 50% load
- Hour meter
- Key electric start
- Battery included
- Never-go-flat wheels
- Rubber outlet covers
- 3-year limited warranty
- CSA Certified

Model
MGP7000 – 7,000 Watts

8,000 Watt – Electric Start

- Briggs & Stratton 2100 Series OHV Engine
- 7 gallon fuel tank - 9 hours of run time @ 50% load
- Hour meter
- Key electric start
- Battery included
- Never-go-flat wheels
- Rubber outlet covers
- 3-year limited warranty
- CSA Certified

Model
MGP8002 – 8,000 Watts

See Specifications Chart on page 30 for more information.

Portable Generators

S Class Generators

The new S Class Generators were designed with the contractor and rental operator in mind, with the features needed to meet the needs of the most demanding applications. CARB and CSA units available.

Model
2,600 Rated Watts / 3,100 Surge Watts - Manual Start
PD292MHI003 - 49 State Compliant

Model
3,800 Rated Watts / 4,000 Surge Watts - Manual Start
PD382MHI001 - CARB Compliant
PD382MHI002 - 49 State Compliant

Model
5,300 Rated Watts / 6,000 Surge Watts - Manual Start
PD532MHI001 - CARB Compliant
PD452MHI004 - 49 State Compliant

Model
6,100 Rated Watts / 7,200 Surge Watts - Electric Start
PD612MHB001 - CARB Compliant
PD612MHB002 - 49 State Compliant

Model
11,700 Rated Watts / 14,000 Surge Watts - Electric Start
PD123MHBZ04 - CARB Compliant
*Standard wheel kit

Product Features

- Honda GX series engines
- Voltage – 60 Hz / 120 / 240
- Rugged frame design
- Large fuel tank with gauge
- Fuel valve
- Idle control
- Hour meter
- Voltage selector switch
- Easy-to-read electrical panel
- Optional wheel kit available
- Mecc-Alte Alternator; Harmonic Distortion less than 6%
- Fully EPA, CARB and CSA compliant
- 2-year (3-year on engine) warranty
- Batteries not included

Light Tower Kits

Model Number	PY000A00092	PY000A00094	PY000A00098

Telescopic mast sections	Three		
Max Height	13.8 feet		
Operation Temperature	266° F		
Protection Level	IP 55		

*Stand alone model available

See Specifications Chart on page 31 for more information.

Portable Generators

Powermate Series

Whether you need portable power for construction sites, camping, tailgating or power outages, Powermate offers a complete line of portable generators for a variety of applications. This quality product offers superior performance, reliability and durability.

5,000 Rated Watts / 6,250 Surge Watts

- Engine – Subaru EX30
- Recoil start as a backup
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Long life alternator
- Full tubing frame for added protection
- Wheel kit includes 10" wheels
- Includes battery and charger
- 2-year warranty

Model
PM0435006 – Electric Start

5,700 Rated Watts / 7,125 Surge Watts

- Engine – Yamaha MZ 300
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Long life alternator
- Receptacle debris cover for in-use operation
- Wheel kit – included with 14" wheels
- Includes AVR, one quart of engine oil, 25 foot 30A generator cord, CordKeepers™
- 2-year warranty

Model
PM0675700 – Manual Start

6,800 Rated Watts / 8,500 Surge Watts

- Engine – Yamaha MZ 360
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Long life alternator
- Full tubing frame with added protection
- Wheel kit – included with 10" wheels
- Includes AVR and one quart of engine oil
- 2-year warranty
- Electric start unit includes recoil start as backup and a 12V 18AH battery & 12V battery charger

Model
PM0676800 – Electric Start
PM0676801 – Manual Start

See Specifications Chart on page 31 for more information.

Portable Generators

Powermate Series

Model
PM0497000.04 – Manual Start

7,000 Rated Watts / 8,750 Surge Watts

- Engine – Honda GX390
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Full tubing frame for added protection
- Wheel kit – included with 10" wheels
- Includes AVR & CordKeepers™
- 3-year warranty

Model
PM0418000 – Electric Start

8,000 Rated Watts / 10,000 Surge Watts

- Engine – Kohler PS-44550
- Electric or recoil start
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Full tubing frame for added protection
- Battery included
- Wheel kit – included with 10" wheels
- Includes (2) one quart bottles of engine oil, AVR, 12V 18AH battery & CordKeepers™
- 3-year warranty

Model
PM0601250 – Electric Start

12,500 Rated Watts / 15,625 Surge Watts

- Engine – Subaru EH65
- Fuel type – Gasoline
- AC Voltage – 120V/240V
- AC Frequency – 60 Hz
- Full tubing frame with added protection
- Built-in lifting points on frame
- Battery included
- Idle control
- Wheel kit includes 13" wheels
- Includes (2) one-quart bottles of engine oil, 12V 34AH battery and CordKeepers™
- 3-year warranty

See Specifications Chart on page 31 for more information.

Portable Generators

DeWALT Series

The new line of DeWALT Generators are powered by the DeWALT commercial grade engine. These generators offer professional users increased surge watt capacity along with the same durability and reliability that has proven to be successful in all DeWALT generators since their introduction into the market.

3,000 Max Watts / 2,920 Rated Watts – Commercial Generator

- Engine – DeWALT 196cc (6.5HP) OHV engine
- Maintenance free, brushless DeWALT alternator
- High amp surge capacity
- Super quiet muffler reduces engine noises
- Low oil shut-off
- 8-hour run-time at 50% max output
- 3.3 gallon fuel tank capacity

Model
DG3000 – 49-state compliant
DG3000C – California compliant

4,400 Max Watts / 4,180 Rated Watts – Commercial Generator

- DeWALT 18-volt battery start (battery and charger included)
- Engine – DeWALT 270cc (9HP) OHV engine
- 20% more starting watts than generators in its class
- Proper 120V and 240V outlets for jobsite applications
- Worksite tested frame with panel protections bars
- Super quiet muffler reduces engine noises
- Idle control saves fuel and reduces noise
- Low oil shut-off provides greater pump protection

Model
DG4400B – 49-state compliant
DG4400BC – California compliant

6,300 Max Watts / 5,950 Rated Watts – Commercial Generator

- DeWALT 18-volt battery start (battery and charger included)
- Engine – DeWALT 389cc (13HP) OHV engine
- 20% more starting watts than generators in its class
- Proper 120V and 240V outlets for jobsite applications
- Worksite tested frame with panel protections bars
- Super quiet muffler reduces engine noises
- Idle control saves fuel and reduces noise
- Low oil shut-off provides greater pump protection

Model
DG6300B – 49-state compliant

7,000 Max Watts / 6,500 Rated Watts – Commercial Generator

- DeWALT 18-volt battery start (battery and charger included)
- Engine – DeWALT 270cc (9HP) OHV engine
- 20% more starting watts than generators in its class
- Proper 120V and 240V outlets for jobsite applications
- Worksite tested frame with panel protections bars
- Super quiet muffler reduces engine noises
- Idle control saves fuel and reduces noise
- Low oil shut-off provides greater pump protection

Model
DG7000B – 49-state compliant

See Specifications Chart on page 31 for more information.

Important Warranty Information
DeWALT portable generators come with a 2-year engine warranty and a 2-year product warranty.
These units are also eligible for 2-year free maintenance on spark plugs, fuel filter, air filter and oil. Go to DeWALT.com/2YearGeneratorMaintenance to register your new generator to be eligible for the free maintenance offer.

If you should have any questions or run into maintenance issues with any Milbank home standby generator product, we recommend you first contact the contractor who performed the original installation. First-hand knowledge of your original system installation makes them best equipped to field questions and perform any necessary maintenance. Oftentimes installers will also offer you special maintenance agreements once the original system is installed, making any potential mechanical problems less worrisome.

Milbank OneCERT

Your one-stop emergency response team

The next natural disaster affecting your area is not a matter of **IF**, it's a matter of **WHEN**. And when that time comes, you need immediate world-class service. That's why Milbank Manufacturing offers OneCERT, your One-Stop Emergency Response Team to get you the product you need, when you need it.

During the unprecedented winter storms in early 2011, Milbank was able to react quickly and ship out a truckload of portable generators to an electrical distributor in the Midwest in less than an hour.

During normal business hours 8am-5pm CST - call Milbank at 877-483-5314.

A single call to 800-227-5564 sets the OneCERT team in motion:

- After-hours call support 24 hours per day, 365 days per year
- Single point of contact to coordinate all aspects of the emergency
- Expedited product availability
- Optional solutions on product applications
- Fast, reliable service

When a natural disaster strikes your area, put the country's leading manufacturer of meter sockets and related products on your team. Call Milbank's OneCERT emergency line at 800-227-5564 or visit www.OneCERT.com.

Note: this program as well as emergency portable generator stock (pictured below) is available *only* to our current electrical distributors.

What is the difference between portable generators and automatic home standby generators?

The differences have to do with the steps needed to have emergency power flowing into your house in the event of a power outage. Portable systems are wheeled units that require you to roll the generator outside, start it up, and hook it up to a power inlet box. From there you must go to the transfer switch panel installed near your circuit breakers and switch the power coming into your house from the main line to the generator running outside. After the power from your local utility is restored, you are required to reverse the setup process. You will also need to make sure you are home when the power outage occurs since portables are not automatic.

One of the clear advantages with an automatic home generator system is that the unit turns itself on and off automatically without you ever having to leave the safety of your home. Our automatic home generator systems also exercise themselves once a week. You can even set the time when the unit will perform this diagnostics check. The generator will then be ready to run whenever needed.

Also, most portable generators have a high total harmonic distortion (voltage fluctuation) which is not recommended for sensitive electronics. Our home standby generators run at 5% THD or less, assuring clean power.

How does the home generator system work?

At the point of loss of utility power, the system will wait approximately 6 seconds to start (this is to verify that the power is going to stay out). After it has started it will go through a warm up period of 20 seconds. After this time the transfer switch will change over to generator power. The house will remain under generator power for a minimum of five minutes, even if the utility power comes back on. After utility has come back on, and the generator has powered up the house for at least five minutes, the transfer switch will go back to utility power after 10 seconds. The generator will then run one minute to cool down before turning itself off.

What size standby generator do I need to run the electric items in my house during a power outage?

Most average homes of 1,200 to 2,500 sq. ft. can run critical items in the home by using a 7,000-10,000 watt generator. The most common items that need emergency power during a blackout would be the furnace blower motor, refrigerator, freezer, lights, TV, sump pump and water pumps.

The 12-20kW generators allow you to supply power to both essential items and up to 6 high-wattage appliances including two central air units for the ultimate in comfort and control.

Can I run a computer or other sensitive electronic equipment off the generator during a power outage?

Yes. The power coming from your generator is just as safe as what you normally have coming out of the wall socket. The spikes or surges that accompany power generation (also known as "harmonic distortion") are just a normal aspect of electricity. However, when considering sensitive or expensive electronic equipment running off a wall outlet, you should use a good surge protector to guard against small influxes of power.

Does motor starting require a different wattage?

Yes. Induction motors require larger amounts of amperage for initial start-up than when they are running. Some appliances and tools, such as your refrigerator/freezer, furnace fan, air conditioner, electric chain saw, weed trimmer, etc. will require more watts than normal running wattage for motor starting. This must be considered when sizing a generator to meet your needs.

What does a home generator system typically cost?

When you choose the safety, reliability and automatic operation of a home generator system, there are several items that contribute to the total cost: the cost of the system itself, a transfer switch and installation charges. Optional maintenance contracts can also add to the cost if you choose one. Costs may vary depending on the size of the unit, transfer switch used, location of installation and permits required for installation. Check with your installing contractor on specific charges related to your installation.

Can I run my central air conditioner on the home generator system?

Yes. We have designed a transfer switch that will monitor loads on the generator, under emergency power, allowing you to run your central air units from 3-ton to-5 ton rating with our 12kW and 20kW generator systems. They are available in 100 or 200 amp sizes. We also offer a load control center to aid in running air conditioning systems allowing whole house managed power.

What is a transfer switch?

A transfer switch is a device that is fed by both

utility and generator power. It isolates the two types of power from each other so a back feed does not occur. National Electrical Code requires a device like this if two types of power are going to feed the house.

How do I know what size transfer switch I need?

There are many factors that will determine the size of transfer switch needed (size of utility service, appliances needed to run, size of generator, etc.) The transfer switches available vary from 100 and 200 amps. Check with your installing contractor to determine what size transfer switch is needed. The 100 and 200 amp transfer switches are for whole house power and feed the entire distribution panel.

What is the Load Control Center and how can it benefit me?

With our power management transfer switch, there must be room on the generator for a central air unit to run. The LCC isolates six circuits from your main distribution panel to allow the air conditioner to start when it wants. Basically, the LCC makes room on the generator. These would be circuits that you would not mind being turned off for a short period of time while the A/C runs. You can hook these circuits up in priority, 1 is the highest priority and 6 is the lowest. Discuss with a contractor how you want each item hooked up.

How do I purchase a generator? Who do I contact?

If you are interested in learning more about our products or are looking for information on how to purchase, please call 877-483-5314 or email generators@milbankmfg.com.

Can I install the unit myself or does someone else need to?

It is recommended that you have your home generator system (generator and transfer switch) installed by a licensed contractor. Failure to do so could be dangerous for both family members as well as outside repair workers trying to fix downed power lines. In addition, professional installation is required to maintain the warranty. They would also make sure that all the necessary permits are obtained to verify it will pass code and safety inspection. Most Milbank home generator systems dealers are capable of not only performing the necessary installation, but can also offer maintenance agreements that ensure the generator is being serviced on a regular basis. Check with your local sales representative for more information.

What happens in a typical installation?

A basic installation includes:

- Delivery of the system to dealer; additional charges for drop ship to consumer
- Installation of the 50, 100 or 200 amp transfer switch hardwired into your home or business
- Final start up inspection of system and completion of start-up form
- Cleanup of installation debris after installation is completed
- Consumer is responsible for making arrangements to provide all necessary gas service and connections

What does Automatic Voltage Regulation (AVR) do for me?

The 7kW home standby system features AVR. AVR maintains a more steady voltage. This is especially important for running sensitive electronics such as computers, microwaves and televisions.

What is the warranty?

The warranties will vary depending upon the unit that is purchased. Entry level systems will carry a 2-3 year warranty, while our more popular systems carry a 4-year warranty. To validate your warranty, simply return the postage paid installation checklist.

Do I need to start the generator frequently when it is not being used?

One of the advantages of our home generator systems is that they are designed to run once a week for 20 minutes. All you have to do is program when you want this task to be performed and it will start up automatically. During this time it will not only lubricate the engine, but it will also run a diagnostics check. If there are any problems with this process, an LED display located inside the front access panel or your in-home remote performance monitor will alert you to a problem if one exists.

How long will a unit run before I have to let it cool down or refill it with fuel?

Another advantage of our home generator systems is that they run on liquid propane or natural gas, so they don't need to be refueled as often, if at all. Additionally, rest periods to allow cooling are not necessary. All Milbank home generator systems are air- or liquid-cooled and do not require you to

turn them off after extended run times. However, you will need to turn off the unit before refueling (if running on liquid propane) or when checking the oil levels which should be done on a regular basis during and after extended use (refer to your owner's guide for instructions).

Do I have to worry about "back feed" if the generator is running when the power comes back on?

No. All of our transfer switches are designed to keep generator back feed from occurring. When the contractor installs the transfer switch, it will be connected directly to the utility power. A control board will be able to sense when the utility power has returned to transfer back to utility (it is programmed so the generator powers up the house for a minimum of five minutes). Everything is programmed so that one source of power is broken before another source of power is made.

How often do I have to change the oil?

The engine maintenance manual recommends 50-hour intervals between oil changes and 100-hour intervals for the oil filter. We do require that 5W30 fully synthetic oil be used when replacing the oil. This will enable the engine to stabilize quicker (it has 20 seconds to do this). All home generator systems are shipped fully lubricated and the engines broken in; no break-in of the engine needs to be performed.

Who do I call if I have any questions or maintenance issues?

We recommend that you first contact the person or contractor who performed the original installation. First-hand knowledge of your original system installation makes them best equipped to field questions and perform any needed maintenance. Oftentimes installers will also offer you special maintenance agreements once the original system is installed, making any potential mechanical problems less worrisome. You can also call Milbank at 877-483-5314 or email generators@milbankmfg.com if a problem requires additional help.

Can I vent exhaust out of an enclosed area?

No. Carbon monoxide gases produced by the engine could be deadly. Milbank home generator systems are designed to be run outside only where there is plenty of ventilation. Never run these units inside a home or enclosed area. All Milbank home generator systems are permanently installed outside your home.

Can I run the generator inside my home?

No! A generator has an internal combustion engine and uses gas and oil. The exhaust from running a generator contains lethal carbon monoxide. Therefore, this unit should always be placed in a well-ventilated area and never run or be installed in an enclosed area.

How can I get more information on Milbank Home Generator Systems?

You can request information and support through our web site at www.milbankpowergen.com, by calling 877-483-5314 or by emailing generators@milbankmfg.com.
