

## Getting Started With Your New LG G3 Phone

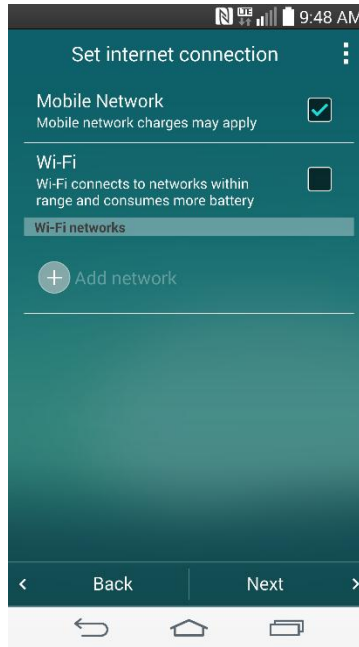

Not sure how to set up your shiny new LG G3? We're here to help! Just follow this setup guide and you'll be able to take advantage of everything your new device has to offer.

Let's start with the basics.

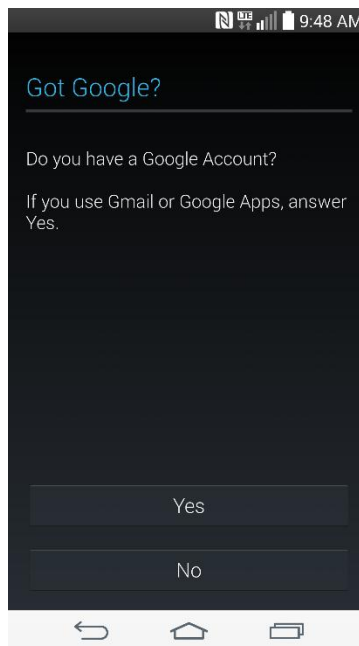

When turning your phone on for the first time you'll be presented with the screen below, where you will choose the default language you'd like to use with your phone.

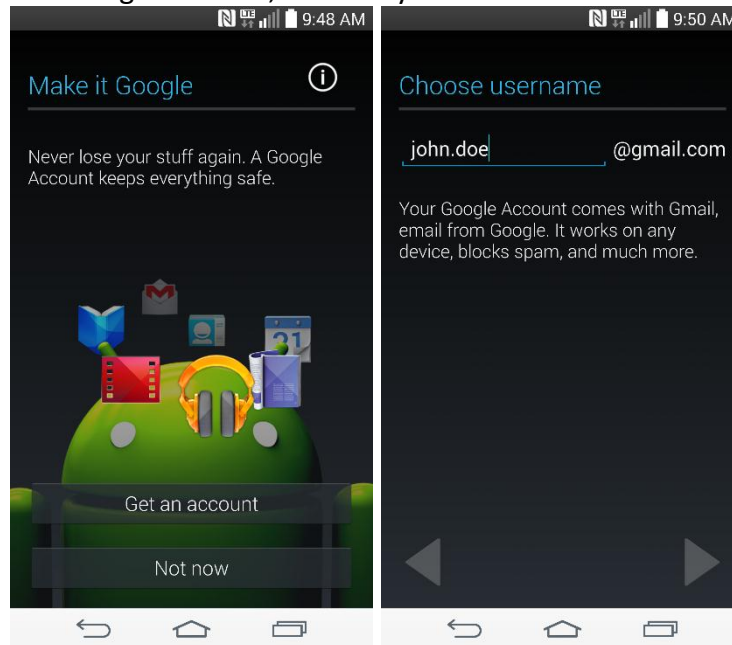

Hit **Next** in the bottom right corner if you're satisfied with the language you have selected. The next step will prompt you to set up your Wi-Fi connection; if you wish to do so at this time, turn it on by toggling the switch in the top right corner, otherwise hit **Next** to continue without configuring your Wi-Fi.

We'll skip the Wi-Fi setup and proceed to the next step, which is confirming whether or not you have an existing Google account. We'll proceed to set up a new account just in case you're new to Android and do not have an existing Gmail account. If you already have a Gmail account feel free to hit **Yes** in this process and enter your credentials to continue.

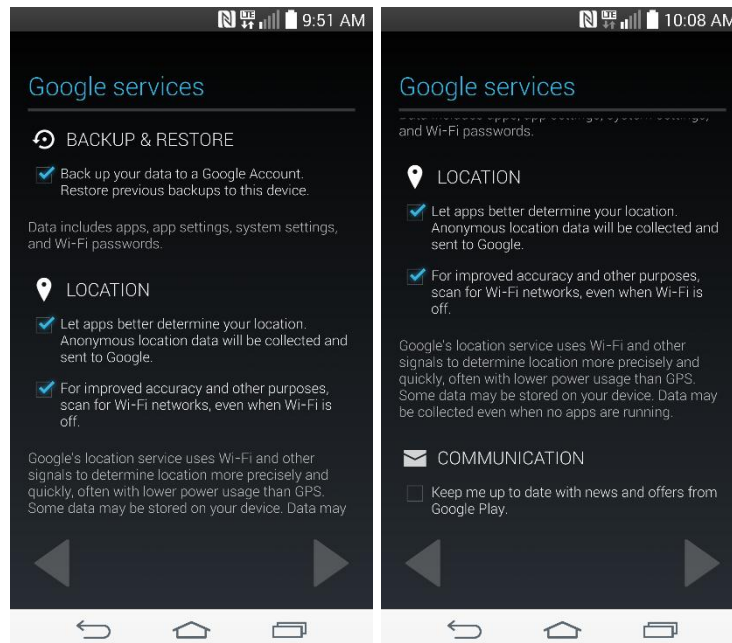

If you've selected **No**, you'll be presented with the screens below. Please click **Get an account** to continue and enter your name in the next screen. The next step prompts you to enter the username for your new Google account, which is your Gmail address as well.

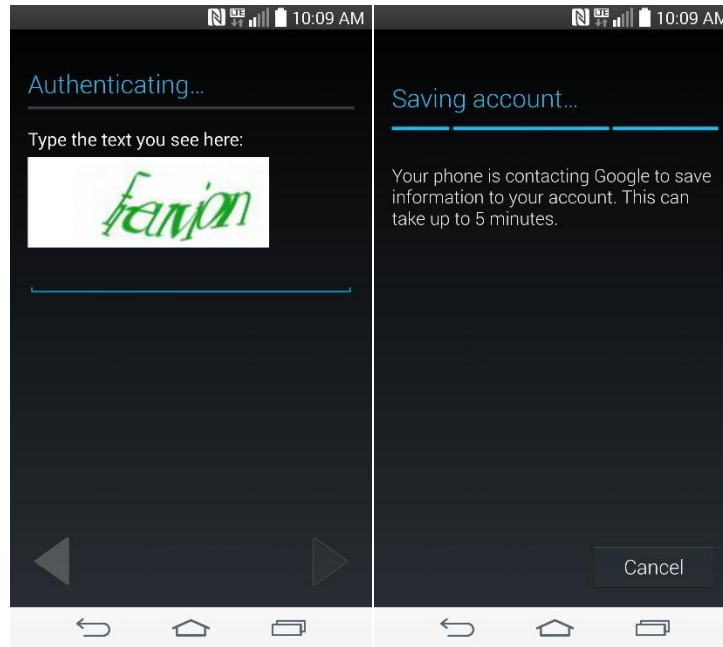

The next step in creating your account is setting up Google password recovery options using SMS or an alternate email address, such as a Yahoo Canada email. Feel free to set this up if needed, but we will skip this option within this guide.

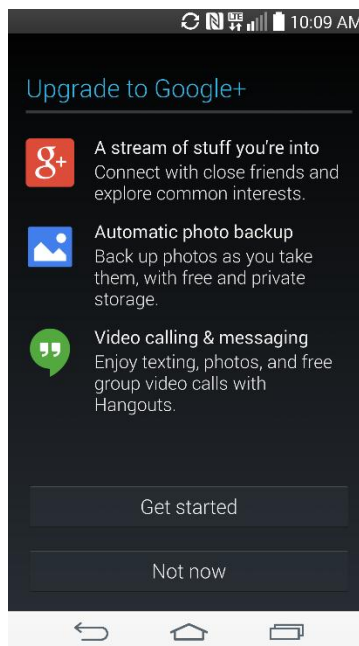

Next you'll be prompted to enable some of Google's cloud based services, such as the Backup & Restore function which copies your app list, app and system settings as well as your Wi-Fi passwords. Additional services include location based data and communications from Google regarding news and offers.

The final step in the account setup process is to accept Google's Terms of Services and enter in the captcha text displayed to complete the account setup.

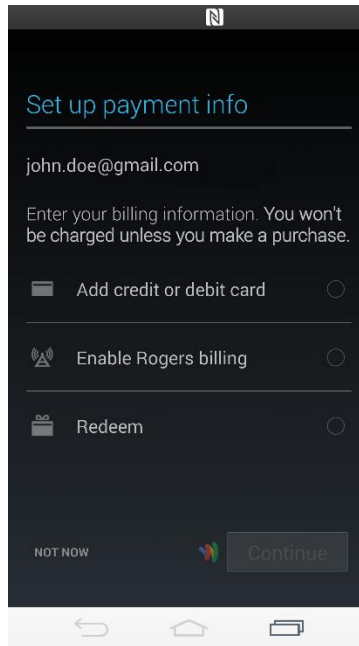

During the setup process you'll be prompted to join Google's social media platform, Google+. We will skip this part of the process as it's not critical at this time. Please select **Not now** to proceed.

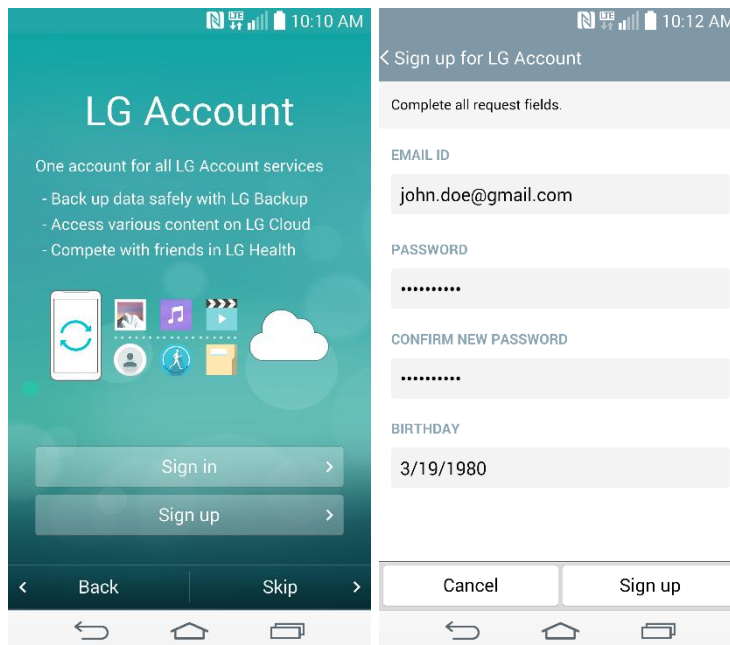

You'll also be given the option to enter your credit card information with Google Wallet if you wish. It is recommended that this information is entered, otherwise you will not be able to purchase any applications, movies, books or other media from the Google Play Store. If you do

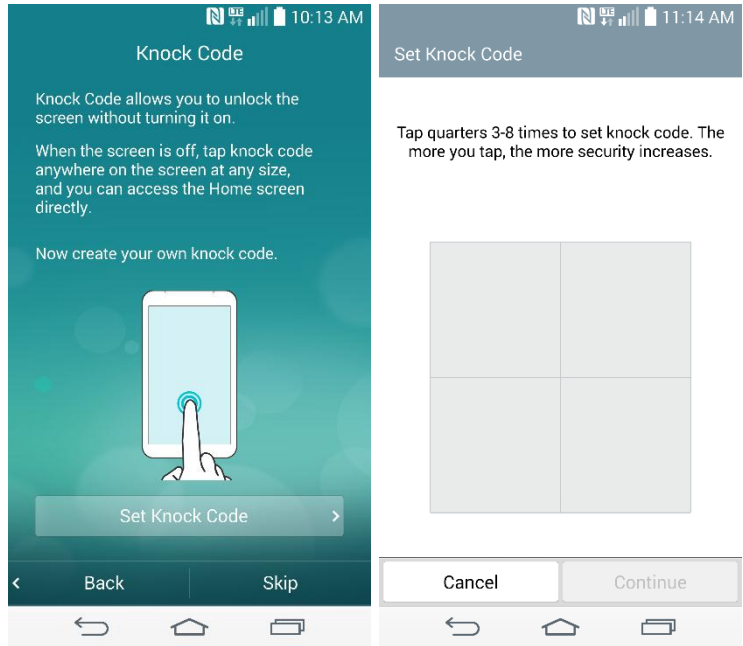

not wish to enter your credit card information, Rogers customers have the ability to pay for content using their Rogers bill, which can be associated with your Google Wallet.

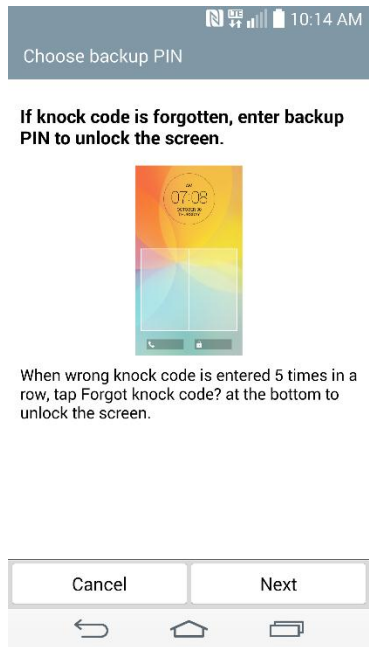

The next step in setting up your LG G3 is creating a LG account which can be used to back-up your phone data, and access various content via LG's cloud services. Agree to the terms and conditions and complete the validation process by clicking the link in your email when you receive it. Fill out your details as seen below and click **Sign up** to complete the process.

The next step in setting up your phone is a unique feature to LG, setting up your Knock Code security feature. This allows you to unlock the phone simply by tapping a pattern without even having to turn the screen on.

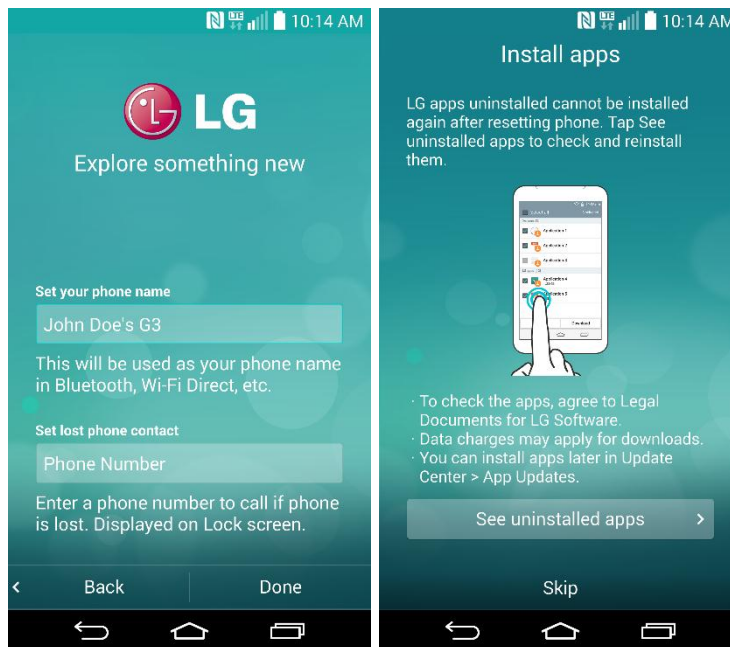

You will also be prompted to set up a PIN should you forget your Knock Code so that you aren't locked out of your phone.

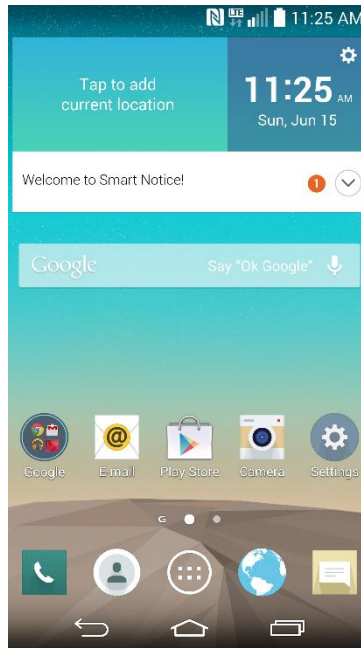

Next, you will be selecting the appearance of the on screen navigation buttons as LG provides you with options to suit your preference.

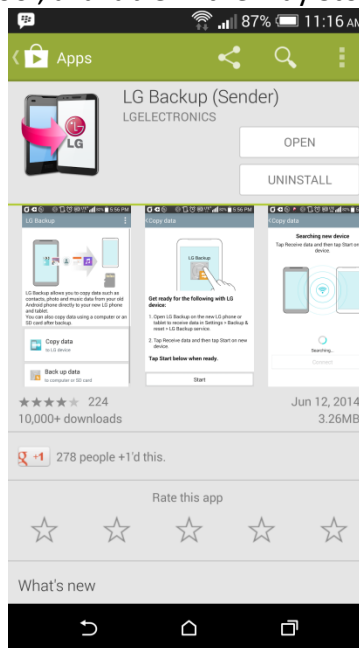

The final steps of the initial setup involves the name of your phone, and the phone number to display on the lock screen should a person locate your lost phone. You will also be prompted to view the default applications installed with your new phone, however we will skip this step as it is not necessary at this time.

Below you'll see the default home screen you're first presented with upon completion of your new G3's setup.

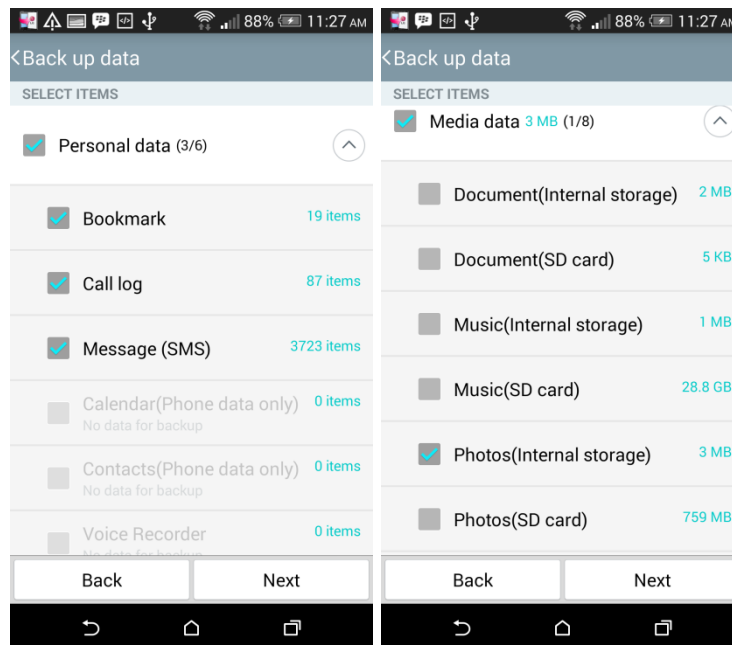

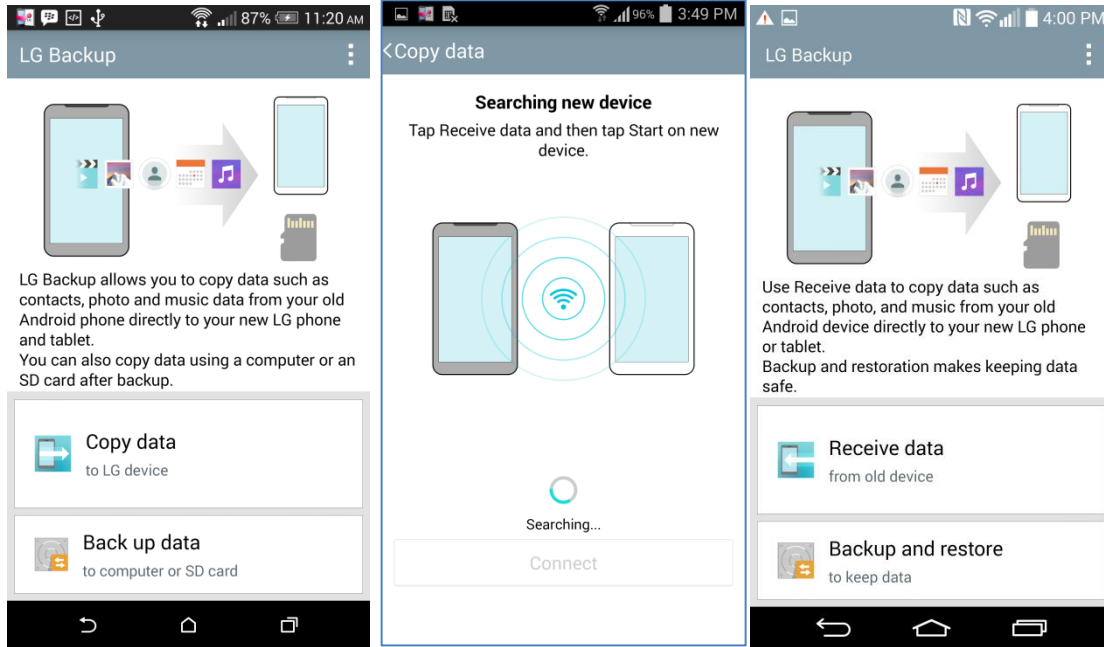

Upgrading from another Android phone? LG provides an app to migrate your data from your Android by using the LG Backup tool, available in the Play Store as seen below.

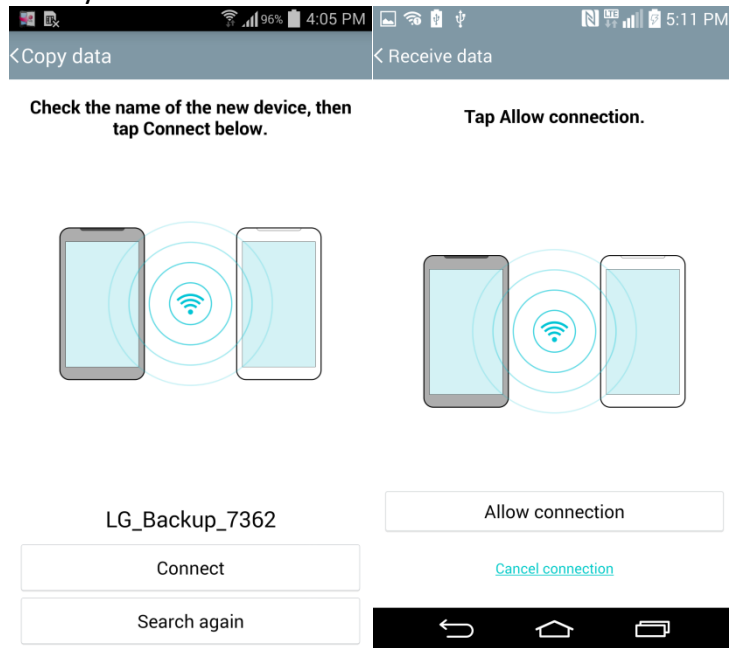

If you're upgrading from another Android, please install the application on your old phone and launch the application. Select **Copy data** from the screen below, then select **Start** and your old phone will begin to search for your LG G3. On your G3, go to the **Settings** menu, **General** and select **Backup & reset**. Within that menu, select **LG Backup service** and then **Receive data** as shown below and finally **Start**.

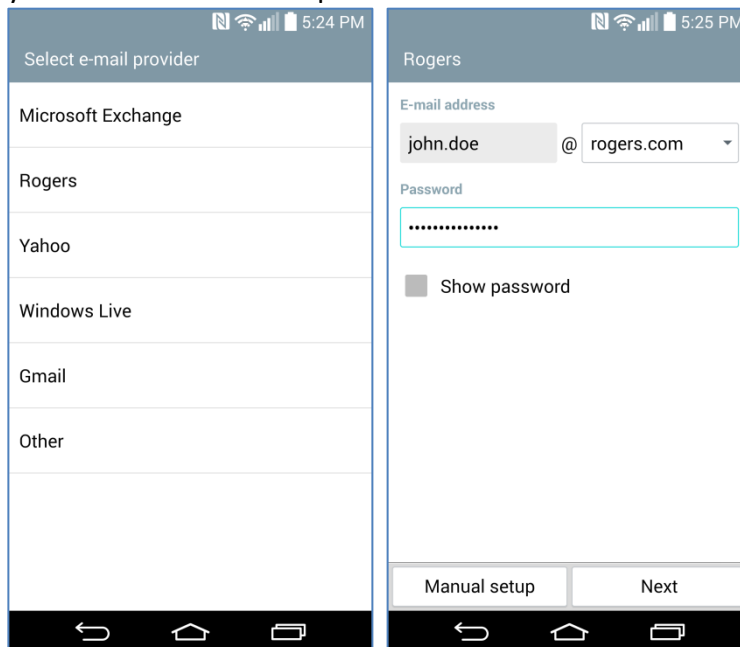

After selecting the content you wish to transfer over to your new G3, click **Copy** to connect the two devices to begin the data transfer.

On both devices, there will be a confirmation of the name of the LG Backup tool session to connect to. Ensure both devices show the same name and select **Connect** on your old phone, and **Allow connection** on your new LG G3.

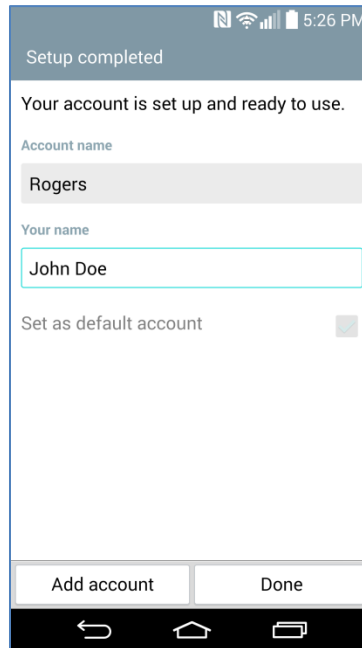

Upon completion, simply click **Done**, at which point your LG G3 will reboot with your data transferred over.

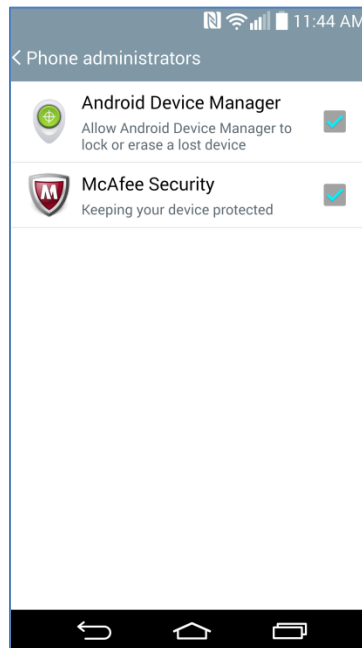

If you use email services such as Yahoo, Hotmail or Rogers, click the email icon on your G3's home page to begin the setup process. You will be presented some of the common email options as listed below. We will select **Rogers** for this example, after which you will be prompted to enter your email address and password.

The final step is to name your email account and set up your name to be displayed on any outgoing emails.

Please be advised, that LG enables the **Android Device Manager** as a Phone Administrator by default. This option allows you to locate, ring, lock or erase your phone. Log in to your Google account at <http://play.google.com/store> and select **Android Device Manager** from the settings gear  on the linked website.

This completes our getting started guide for your new LG G3! We hope you enjoy your phone and thank you for being a Rogers customer.
