## Pen Pal

This problem gives you the chance to:

- use a formula

Darla's European pen pal has sent her a recipe for a cake.
The recipe says to bake the cake at $170^{\circ}$ Celsius but Darla's oven is in degrees Fahrenheit.

Darla finds a formula in her science book for changing degrees Celsius to degrees Fahrenheit:

$$
F=9 / 5 C+32
$$

1. At what temperature, in degrees Fahrenheit, should Darla bake her cake? $\qquad$ Show your calculations.
2. Her recipe says that she should bake her cake at $350^{\circ} \mathrm{F}$. What is this in degrees Celsius?

Show your calculations.
3. Darla wants to send a recipe to her pen pal.

She decides to convert the temperature from degrees Fahrenheit to degrees Celsius.
Darla rearranges the formula so that she can easily convert ${ }^{\circ} \mathrm{F}$ to ${ }^{\circ} \mathrm{C}$.
Write the formula so that it begins with

$$
\mathrm{C}=\ldots
$$

## Picking Apples

This problem gives you the chance to:

- work out costs from given rules

Anna goes to pick apples.
She sees two orchards next to each other; David's orchard and Pam's orchard.
The signs below are at the entrance to the orchards.

| DAVID'S APPLE ORCHARD |  |
| :---: | :---: |
| Pick your own apples! | PAM'S ORCHARD |
| DELICIOUS APPLES |  |
| First 10 pounds \$2 per pound | $\$ 10$ entry fee |
| Each additional pound \$1 per pound | First 10 pounds $\$ 1.50$ per pound |
|  | Each additional pound $\$ 0.75$ |

Anna wants to pick 40 pounds of apples.

1. a. How much does this cost at David's orchard? $\qquad$
Show your calculations.
b. How much does it cost at Pam's orchard? $\qquad$
Show your calculations

Grade 8 - 2005

Chris has $\$ 30$ to spend.
2. a. How many pounds of apples will he get if he goes to David's orchard? $\qquad$
Explain how you figured it out.
$\qquad$
$\qquad$
$\qquad$
b. If Chris goes to Pam's orchard, how many pounds of apples will he get? $\qquad$ Explain how you figured it out.
$\qquad$
$\qquad$
$\qquad$
3. How many pounds of apples must Chris pick before Pam's orchard is cheaper than David's? Show your work.

| Picking Apples | Rubric |  |

## Fractions of a Square

This problem gives you the chance to:

- calculate areas and fractional regions of a square

The large square shown below is cut into pieces along the lines shown in the diagram.

(diagram not drawn to scale)

The large square is 4 cm long and 4 cm wide.
Square A is 2 cm long and 2 cm wide.
Square B is 1 cm long and 1 cm wide.
What fraction of the large square are the other pieces?
Show your work.

Piece A

| easier to understand |  |

## Sports

This problem gives you the chance to:

- work with percentages
- use circle graphs

In a survey in Lake City, girls in the $8^{\text {th }}$ grade were asked their favorite sport.
The results are shown in this table.

| SPORT | GIRLS | PERCENTAGE |
| :---: | :---: | :---: |
| Soccer | 78 |  |
| Basketball | 117 |  |
| Tennis | 65 |  |

1. Find the percentage of girls who preferred each of the sports. Write your answers in the table.

Show your calculations.
2. Use the percentages in the table to complete this circle graph. Do not forget to label each sector.

Grade 8 - 2005

In Lake City, boys in the $8^{\text {th }}$ grade were also surveyed.
The results of this survey are shown in the circle graph below.
3. Seventy boys liked basketball best.

How many boys were there in the $8^{\text {th }}$ grade survey?
Show your calculations.

The $8^{\text {th }}$ grade baseball teams from Lake City and Appleton plan to play a game.
Luis has seen a survey of Appleton's $8^{\text {th }}$ grade boys' favorite sports. The survey shows that $45 \%$ of them like baseball best.

Luis says that this will not be fair because more boys in Appleton like baseball best, so there will be more boys to choose from for the team.

Kyle says he thinks Luis is wrong.
4. Explain why Luis might be wrong in thinking that more boys prefer baseball in Appleton than in Lake City.
$\qquad$
$\qquad$
$\qquad$

| The core elements of performance required by this task are: <br> - work with percentages <br> - use circle graphs <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives three correct percentages: 30, 45, $\mathbf{2 5}$ <br> Partial credit <br> 1 value correct and total 100\% <br> or 2 values correct <br> Shows a correct method for at least one calculation such as: $78 / 260 \times 100$ | 2 <br> (1) <br> (1) | 3 |
| 2. Draws and labels one sector correctly. <br> Draws and labels the other two sectors correctly. | 1 ft <br> 1ft | 2 |
| 3. Gives a correct answer: 180 <br> Shows correct work such as: $72 / 40 \times 100$ | 1 <br> 1 | 2 |
| 4. Gives a correct explanation such as: We only know about the percentages, not the actual numbers. or There might be fewer $8^{\text {th }}$ grade boys in Appleton than in Lake City. | 1 | 1 |
| Total Points |  | 8 |

Grade 8-2005

## T-shirt Sale

| Student Task | Calculate the total costs and savings when purchasing T-shirts on sale. |
| :---: | :---: |
| Core Idea <br> 1 <br> Number and Operation | Understand number systems, the meanings of operations, and ways of representing numbers, relationships, and number systems. <br> - Work flexibly with fractions, decimals, and percents to solve problems <br> - Understand the meaning and effects of operations with fractions and decimals <br> - Select appropriate methods and tools for computing with fractions and decimals from among mental computations, estimation, calculators, and paper and pencil depending on the situation, and apply selected methods. |

Grade 8 - 2005

## T-shirt Sale

This problem gives you the chance to:

- calculate total costs
- calculate percentage savings

## T-shirt Sale <br> Any 3 T-shirts for \$14.50

1. Tom bought these three T-shirts at the sale price of $\$ 14.50$.

How much money did he save compared to the original total price of the T-shirts?
Show your calculations.
\$ $\qquad$
2. What percentage of the original total price did Tom save? $\qquad$ \%

Show your work.
3. Harry also paid $\$ 14.50$ for three T-shirts at the sale. The sale price saved Harry $30 \%$ of the original price of the three T-shirts.
What is the original total price of his three T-shirts?
\$ $\qquad$
Show your calculations.

| T-shirt Sale | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - calculate total costs <br> - calculate percentage savings <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives correct answer: $\mathbf{\$ 2 . 4 7}$ <br> Shows correct work such as: $3.99+6.99+5.99=16.97$ <br> $16.97-14.50$ | 1 | 2 |
| 2. Gives correct answer: $\mathbf{1 4 . 5 6 \%}$ (accept $14 \%$-15\%) <br> Shows correct work such as: 2.47/16.97 |  | 2 |
| 3. Gives correct answer: $\mathbf{\$ 2 0 . 7 1}$ <br> Shows correct work such as: $14.50 \div 0.7$ | $1$ | 2 |
| Total Points |  | 6 |

Grade 8-2005

| Core Idea | Task | Score |
| :--- | :--- | :--- |
| Geometry and <br> Measurement | Aaron's Designs |  |
| This task asks students to draw reflections and rotations of a given figure on a grid. <br> Students describe transformations needed to make a given pattern. Successful students <br> could draw and describe reflections, flips, and slides. Students working at a high <br> level could draw rotations and quantify the transformations. <br> Algebra and Functions $\quad$ Squares and Circles |  |  |
| This task asks students to work with perimeter and circumference of squares and <br> circles. Students use and interpret line graphs and their equations. Successful students <br> could reason about perimeter of squares and plot points on a graph. They could <br> identify the equation for perimeters and explain why the graph was a straight line. <br> Students working at a high level could compare and contrast the graphs of two <br> functions. |  |  |
| Data Analysis$\quad$ Temperatures |  |  |
| This task asks students to understand and interpres statistical graphs and diagrams <br> showing real data. Students compare and contrast data sets. Successful students <br> compare and contrast line graphs and match the line graphs to box and whisker <br> diagrams by noting key features of the data. Students working at a high level <br> understood the upper and lower quartiles on a box and whisker diagram. |  |  |
| Number and Operation | 25\% Sale |  |
| This task asks students to work with percentage increase and decrease in the context <br> of a sale and develop mathematical arguments on the effects of decreasing a price by <br> 25\% four times. Successful students could calculate the cost of a $25 \% ~ r e d u c t i o n ~ a n d ~$ |  |  |
| reason why reducing something by 25\% four times does not result in zero cost. |  |  |$|$| Students working a a high level could calculate the percent reduction given the |
| :--- |
| amount of reduction and original cost. |

## Aaron's Designs

This problem gives you the chance to:

- draw reflections and rotations of a given figure on a grid
- describe transformations needed to make a given pattern

Aaron is drawing some designs for greetings cards.
He divides a grid into 4 quadrants and starts by drawing a shape in one quadrant.
He then reflects, rotates or translates the shape into the other three quadrants.

1. Finish Aaron's first design by reflecting the gray shape over the vertical line.

Then reflect both of the shapes over the horizontal line.

This will make a design in all four quadrants.

2. To finish drawing Aaron's second design, rotate the gray shape $1 / 4$ of a turn in a clockwise direction about the origin. Then draw the second shape.

Rotate the second shape $1 / 4$ of a turn in a clockwise direction about the origin. Then draw the third shape.

Rotate the third shape $1 / 4$ of a turn in a clockwise direction about the origin. Then draw the fourth shape.

This will make a design in all four quadrants.

(c) Noyce Foundation 2006. To reproduce this document, permission must be granted by the Noyce Foundation: info@ noycefdn.org.
3. This is Aaron's third design.

He started with one gray shape in the top left hand quadrant of the grid and transformed it to make the design.

Describe the transformations that Aaron may have used to draw this design.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Squares and Circles

This problem gives you the chance to:

- work with perimeter and circumference of squares and circles
- use and interpret line graphs and their equations

The points on this graph show the perimeters of squares of different sizes.
For example, a square with sides 2 inches long has a perimeter of 8 inches.

1. What is the perimeter of a square with sides 5 inches long?
$\qquad$

Mark a point for this square on the graph.
2. How long are the sides of a square with perimeter 12 inches?
$\qquad$

Mark a point for this square on the graph.

Eighth Grade - 2006
(c) Noyce Foundation 2006. To reproduce this document, permission must be granted by the Noyce Foundation: info@ noycefdn.org.
3. Draw a line through the points on the graph.
(a) Explain why the line passes through the point $(0,0)$.
$\qquad$
$\qquad$
(b) Explain why the line is straight.
$\qquad$
$\qquad$
4. Draw a circle around the correct equation of the straight line on the graph.

$$
x+y=4 \quad y=x+4 \quad y=4 x \quad y=\frac{x}{4}
$$

This table shows the circumferences of circles with different diameters.
The circumferences have been rounded to one decimal place.

| Diameter of circle in inches | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Circumference in inches | 3.1 | 6.3 | 9.4 | 12.6 | 15.7 | 18.8 |

5. For each circle, mark an $(X)$ on the graph to show its diameter and circumference.

Join the $\mathrm{X}_{\mathrm{s}}$ with a straight line.
6. Write down one thing that is the same and one thing that is different about the line for the squares and the line for the circles.

Same:

## Different:

$\qquad$

## 25\% Sale

This problem gives you the chance to:

- work with percentage increase and decrease

In a sale, all the prices are reduced by $25 \%$.

1. Julie sees a jacket that cost $\$ 32$ before the sale. How much does it cost in the sale?
\$ $\qquad$
Show your calculations.

In the second week of the sale, the prices are reduced by $25 \%$ of the previous week's price. In the third week of the sale, the prices are again reduced by $25 \%$ of the previous week's price. In the fourth week of the sale, the prices are again reduced by $25 \%$ of the previous week's price.
2. Julie thinks this will mean that the prices will be reduced to $\$ 0$ after the four reductions because $4 \times 25 \%=100 \%$.

Explain why Julie is wrong.
$\qquad$
$\qquad$
$\qquad$

## Going to Town

This problem gives you the chance to:

- interpret and complete a distance/time graph for a described situation

Craig and James walk from home to town during the school holidays.
The distance/time graph below shows their journey into town.
They set off from home at 10:30 a.m.

1. At what speed did they walk for the first part of their journey?
$\qquad$ miles per hour
Show how you figured it out.
2. What do you think they do after they have travelled $1 \frac{1}{2}$ miles?
$\qquad$
$\qquad$
$\qquad$

Eighth Grade - 2006
(c) Noyce Foundation 2006. To reproduce this document, permission must be granted by the Noyce Foundation - info $($ nnevrefdn ora
3. After an hour the graph is steeper. What does this tell you about Craig and James's walking speed?
$\qquad$
$\qquad$
$\qquad$

Craig and James stay in town for an hour and then catch a bus home.
The bus averages 12 miles per hour.
4. At what time did they get home?

Show how you figured it out.
5. Continue the graph on the previous page to show the rest of this information.

| Core Idea | Task |
| :--- | :--- | :--- |
| Geometry | Triangle |
| This task asks students to read and interpret clues about geometric attributes of a <br> triangle to find the side lengths. Students needed to understand geometric terms, such <br> as, perimeter, equilateral triangle, and isosceles triangle. Students also needed to <br> understand number properties, such as prime number, single digit, and ratio. <br> Successful students could find a solution that met all of the clues and that would make <br> a closed triangle. <br> Measurement Rugs |  |
| This task asks students to work with perimeter and circumference of squares, <br> triangles, and circles. Students were given the formula for circumference to help <br> them with the calculations. Students needed to make conversions from feet and inches <br> to feet or inches. Students also needed to find the perimeter of a semi-circle and <br> explain why it is not the same as half the circumference. Successful students could <br> use Pythagorean theorem to find the side length of an isosceles triangle and use that <br> length to find the perimeter. <br> Algebra <br> This task asks students to explore the order of number operations by creating <br> examples to fit a set of conditions and test those conditions by calculating the answers <br> to their examples. Successful students could calculate accurately with negative <br> numbers and understand division with decimal answers. Students were then given a <br> set of algebraic representations for the relationships that they had investigated and <br> asked to decide which were true. <br> Functions <br> This task asks students to work with a pattern of growing shelves, made up of boards <br> and bricks. Students needed to use spatial thinking to find the number of boards and <br> bricks needed, determine the height, and find the cost of the bookcase. Successful <br> students realized that the height would include the bricks and the thickness of the <br> boards. Students were also asked to look at a graph of the four functions in the <br> pattern (cost, number of bricks, height, and width) and match the points on the graph <br> with descriptions and their equations. Successful students could match the verbal <br> description to the equation. <br> Number <br> This task asks students to work with speed, time, and distance in the context of an <br> Indy car race and a rocket launch. Students needed to be able to convert units of <br> measure and work with rates. Successful students could work with a rate in either <br> kilometer per second or meters per second to find the distance traveled given an <br> amount of time or to find the time given the distance. |  |

[^0]
## Triangle

This problem gives you the chance to:

- use clues to solve a problem

Use the six clues below to find the lengths of the sides of this triangle.

| CLUE 1 | CLUE 4 |
| :--- | :--- |
| The perimeter of the triangle is 35 centimeters. | The length of one side is a prime number. |
| CLUE 2 | CLUE 5 |
| The triangle is not equilateral. | The triangle is not isosceles. |
| CLUE 3 | CLUE 6 |
| The length of one side is a single-digit number. | The ratio of the shortest side to the middle side is $1: 2$. |

Shortest side $=$ $\qquad$ cm. $\quad$ Middle side $=$ $\qquad$ cm. $\quad$ Longest side $=$
$\qquad$ cm.

Show how you figured it out.

| Task 1: Triangle | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - use clues to solve a problem <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives correct answers: $\mathbf{6}, \mathbf{1 2}, \mathbf{1 7}$ <br> Partial credit <br> Gives answers that satisfy all six clues but are not closed figures such as: $1,2,32 ; 2,4,29 ; 3,6,26 ; 4,8,23 ; 5,10,20$ <br> Gives answers that satisfy five clues and are closed figures such as: <br> $8,16,11$ <br> Gives answers that satisfy five clues but are not closed figures such as: $11,22,2 ; 6,12,23 ; 1,11,23$ <br> Gives answers that satisfy four clues and are closed figures such as: $7,14,14 ; 9,18,8$ <br> Mentions and uses at least three of the given clues <br> Partial credit <br> Shows evidence of using at least two of the given clues. | 6 <br> (4) or <br> (4) <br> (3) <br> or <br> (3) <br> 2 <br> (1) | 8 |
| Total Points |  | 8 |

## Rugs

This problem gives you the chance to:

- find perimeters of shapes
- use Pythagoras' Rule

Hank works at a factory that makes rugs.
The edge of each rug is bound with braid. Hank's job is to cut the correct length of braid for each rug.

1. The factory makes a rectangular rug that is 4 feet long and 2 feet 6 inches wide.

How much braid will Hank need to cut to go all the way around this rug?

$\qquad$ feet
Show your work.
2. The factory makes a triangular rug. It is an isosceles triangle 4 feet wide with a perpendicular height of 1 foot 6 inches.

How much braid will Hank need to cut to go all the way around this rug?
$\qquad$ feet
Show your work.
3. The factory also makes a circular rug that has a diameter of 5 feet.

How much braid will Hank need to go all the way around this circular rug? Give your answer in whole feet.

The circumference of a circle $=2 \pi r$ The area of a circle $=\pi r^{2}$ $\qquad$ feet

Show your work.

4. There are plans to make a semi-circular rug which also has a diameter of 5 feet. Hank thinks that this rug will need half as much braid as the circular rug.

Explain why Hank is not correct.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

How much braid will this rug need? $\qquad$ feet

| Task 2: Rugs | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - find perimeters of shapes <br> - use Pythagoras' Rule <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives a correct answer: $\mathbf{1 3}$ feet and shows correct work such as: $2 \mathrm{x}(4+2.5)$ | 1 | 1 |
| 2. Gives a correct answer: $\mathbf{9}$ feet <br> Shows correct work such as: <br> Attempts to use the Pythagorean Rule. $\begin{aligned} & x^{2}=2^{2}+1.5^{2}=6.25 \\ & x=2.5 \\ & 2.5+2.5+4 \quad \text { Addition of sides } \end{aligned}$ | 1 <br> 1 <br> 1 ft | 3 |
| 3. Gives a correct answer: $\mathbf{1 6}$ feet or $5 \pi$ feet <br> Shows correct work such as: $5 \mathrm{x}$ | 1 $1$ | 2 |
| 4. Gives a correct explanation such as: <br> The curved part would be half the length of the circumference of the circle but you would need to add on 5 feet for the straight edge. <br> Gives correct answer: 13 feet | $1$ | 2 |
| Total Points |  | 8 |

## Number Calculations

This problem gives you the chance to:

- explore the order of number operations

1. When adding two numbers, it makes no difference to the answer if the order of the numbers is changed. Write an example that shows this.
$\qquad$
$\qquad$
2. When subtracting two numbers, it does make a difference to the answer if the order of the numbers is changed. Write an example that shows this.
$\qquad$
$\qquad$

Describe what happens to the answer of a subtraction calculation when the order of the two numbers is changed.
$\qquad$
$\qquad$
3. When multiplying two numbers, does the order of the numbers matter?

Use examples to explain your answer.
$\qquad$
$\qquad$
4. When dividing two numbers, does the order of the numbers matter?

Use examples to explain your answer.
$\qquad$
$\qquad$
5. Complete the table below to show whether each statement about the numbers $a$ and $b$ is correct $(\checkmark)$ or incorrect $(X)$.

| Statement | ব or $X$ |
| :---: | :---: |
| $a+b=b+a$ |  |
| $a-b=b-a$ |  |
| $a-b=-(b-a)$ |  |
| $a \times b=b \times a$ |  |
| $a \div b=b \div a$ |  |

| Task 3: Number Calculations | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - explore the order of number operations <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | sectio n points |
| 1. Gives correct example such as: $2+3=5$ and $3+2=5$ | 1 | 1 |
| 2. Gives correct example such as: $3-2=1$ and $2-3=-1$ <br> Makes statement such as: The answers are opposite | $1$ | 2 |
| 3. Gives correct examples to show that the order does not matter | 1 | 1 |
| 4. Gives correct examples to show that the order does matter | 1 | 1 |
| 5. See table. <br> Five answers correct 3 points <br> Partial credit <br> Four answers correct 2 points <br> Three answers correct 1 point | 3 <br> (2) <br> (1) | 3 |
| Total Points |  | 8 |

## Shelves

This problem gives you the chance to:

- solve problems in a spatial context
- identify and distinguish the four point graphs related to this situation

Pete is making a bookcase for his books and other stuff.
He already has plenty of bricks and can get planks of wood for $\$ 2.50$ each.
Each plank of wood measures 1 inch by 9 inches by 48 inches. Each brick measures 3 inches by 4.5 inches by 9 inches.

For each shelf, Pete will put three bricks at each end then put a plank of wood on top. The diagram shows three shelves.

1. Pete wants five shelves in his bookcase.
a. How many planks of wood does he need?
b. How many bricks does he need?
c. How high will the shelves be?
d. How much will the bookcase cost? $\qquad$

The diagram below shows graphs with the following descriptions:
Description One: The cost of the bookcase against the number of shelves.
Description Two: The number of bricks against the number of shelves.
Description Three: The height of the bookcase against the number of shelves.
Description Four: The width of the bookcase against the number of shelves.
The equations of the graphs are

$$
y=48, \quad y=10 x, \quad y=6 x, \quad y=2.5 x
$$

2. Complete this table to match each graph with its description and its equation.

| Graph letter | Description number | Equation |
| :---: | :---: | :---: |
| A |  |  |
| B |  |  |
| C |  |  |
| D |  |  |

| Task 4: Shelve |  |  | Rubric |  |
| :---: | :---: | :---: | :---: | :---: |
| The core elements of performance required by this task are: solve problems in a spatial context identify and distinguish the four point graphs related to this situation <br> Based on these, credit for specific aspects of performance should be assigned as follows |  |  | points | section points |
| 1. Gives correct answer: $\mathbf{5}$ <br> Gives correct answer: $\mathbf{3 0}$ <br> Gives correct answer: $\mathbf{5 0}$ inches <br> Gives correct answer: \$12.50 |  |  | 1 <br> 1ft <br> 1ft <br> 1ft | 4 |
| 2. Four points for <br> Partial credit <br> 7 or 6 correct 3 <br> 5 or 4 correct 2 <br> 3 or 2 correct | t correct answers. | Equation <br> $y=10 x$ <br> $y=6 x$ <br> $x=48$ <br> $x=2.5 x$ | 4 <br> (3) <br> (2) <br> (1) | 4 |
|  |  | Total Points |  | 8 |

## Take Off

This problem gives you the chance to:

- work with speed, time, and distance

1. A space rocket needs to move at 11.2 kilometers per second to escape from the earth's gravitational pull. This is called escape velocity.

An Indy car races at up to 370 kilometers per hour.

How many times faster would an Indy car have to move to reach escape velocity?
Give your answer correct to the nearest whole number.
Show your work
2. Sound travels at about 340 meters per second.

Light travels at almost $300,000,000$ meters per second.
If you watched a space rocket take off from a distance of 3.5 kilometers how much later would it be before you heard it take off?
Give your answer correct to the nearest second. $\qquad$ seconds

Explain how you figured it out and show your calculations.
$\qquad$
$\qquad$
$\qquad$

| Task 5: Take Off | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - work with speed, time and distance <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives a correct answer: $\mathbf{1 0 9}$ (accept 112) <br> Shows correct work such as: $\begin{array}{lc} 11.2 \times 60 \times 60= & \text { or } 370 \div 60 \div 60=0.1027 \\ 40320 / 370 & 11.2 \div 0.1027= \end{array}$ | $\begin{gathered} 1 \\ 1 \mathrm{ft} \end{gathered}$ | 3 |
| 2. Gives a correct answer: $\mathbf{1 0}$ seconds <br> Partial credit <br> Gives answer 10.29 <br> Gives a correct explanation such as: <br> You would see the take off straight away. <br> 3.5 kilometres $=3500$ metres <br> $3500 / 340$ | 2 <br> (1) <br> 1 <br> 1 1 | 5 |
| Total Points |  | 8 |

| Core Idea | Task | Score |
| :--- | :--- | :---: |
| Number Operations | At the Jewelry Store |  |
| This task asks students to work with percents to calculate discounts, tax, and then find <br> total cost. Successful students could calculate the original price given the sale price <br> and percent of the discount. |  |  |
| Number Properties | Multiples of 10 |  |
| This task asks students to work with multiples of 10 and explain their thinking. <br> Successful students were able to make generalized arguments about items like why <br> multiplying any two multiples of 10 would be multiples of 100. |  |  |
| Geometry and <br> Measurement | Patterns in Prague |  |
| This task asks students to calculate the area and perimeter of a complex figure. <br> Students needed to interpret the scale in the diagram when finding the dimensions. <br> Successful students were able to use Pythagorean theorem to find the side dimensions <br> for part of the shape. |  |  |
| Functions and Rates | Cog Railway |  |
| This task asks students to calculate and compare average speeds and work with a time <br> distance graph. Successful students could use the distance formula to help them solve <br> parts of the problem. |  |  |
| Probability | Flora, Freddy, and the Future |  |
| This task asks students to use terms likely and unlikely to describe probabilities for <br> events and also give numerical probability for simple and compound events. <br> Successful students could reason about the issue of "non-replacement" in the context <br> of a sequence of events and use multiplication to find the total probability. |  |  |

## At the Jewelry Store

This problem gives you the chance to:

- work with percents of discount and tax

Marcy and Dave are at the jewelry shop.
Marcy buys a necklace costing $\$ 45$ and a pair of earrings costing $\$ 30$.
An 8\% sales tax needs to be added to the price she has to pay.

1. Calculate what Marcy has to pay. Show your work.
\$ $\qquad$

Dave chooses a watch.
It is on sale and has $30 \%$ off the original price of $\$ 135$.
An $8 \%$ sales tax will be added onto the price after the sales reduction has been calculated.

2. Calculate what Dave has to pay. Show your work.
\$ $\qquad$

Marcy and Dave look at a ring.
It is on sale and the sale price is $\$ 188$ after a $20 \%$ reduction.
3. How much was the ring before the sale reduction?

Explain how you figured it out.

\$ $\qquad$

## Multiples of 10

This problem gives you the chance to:

- work with multiples of 10 and explain your reasoning

This task is about multiples of $10(10,20,30, \ldots)$.

1. Adam says, "If you add together two multiples of 10 you get a multiple of 20 ."
a. Give an example to show that this can be true. $\qquad$
b. Give an example to show that this is not always true. $\qquad$
2. Eli says, "If you multiply two multiples of 10 you get a multiple of 100 ."
a. Give an example to show that this can be true. $\qquad$
b. Explain why this is always true. $\qquad$
$\qquad$
$\qquad$
$\qquad$
3. Dona says, "If you multiply two multiples of 5 you get a multiple of 10 ."
a. Give an example to show that this can be true.
b. Give an example to show that this is not always true. $\qquad$
c. What do you have to do to make sure the answer will be a multiple of 10 ?
4. Hannah says, "If you multiply a multiple of 2 by a multiple of 5 you get a multiple of 10 ."

Use examples and explanation to show whether this statement is always true, sometimes true or never true.

## Patterns in Prague

This problem gives you the chance to:

- calculate the area of a complex shape
- calculate the perimeter of a shape using Pythagoras' Rule

Prague is an ancient city in the Czeck Republic.
In Prague some of the sidewalks are made from small square blocks, $\mathbf{5 c m}$ by $\mathbf{5 c m}$.
The blocks are in different shades to make patterns.
This is one of the patterns they make.
In this pattern some triangular blocks are made by cutting a square in half diagonally.

1. Find the area of this pattern.

Show how you figured it out.
$\qquad$ $\mathrm{cm}^{2}$
2. Calculate the perimeter of the pattern.

Show how you figured it out.
$\qquad$ cm

## The Cog Railway

This problem gives you the chance to:

- calculate and compare average speeds
- work with a time/distance graph

In 1869 a cog railway was built to take people to the top of Mount Washington, NH.
The track is 3 miles long and it takes between 1 hour and 1 hour 10 minutes for the train to climb to the top.

1. What is the average speed of the train:

a. when the journey takes 1 hour?
$\qquad$ miles per hour
b. when the journey takes 1 hour 10 minutes?

Show your work.
$\qquad$ miles per hour

The train descends in about 40 minutes.
2. What is the average speed at which the train descends?

Show your calculations.
$\qquad$ miles per hour

Until 1920 workers went down the track on a wooden plank called a 'slide board'. A typical ride down took 10 minutes.
3. How many times faster is this than on the train?

Grade 8-2008

This is an approximate distance/time graph of the journey up Mount Washington.
4. What does the horizontal line at the 'passing point' tell you?
$\qquad$
$\qquad$
$\qquad$
5. For how long does the train stop at the summit?
$\qquad$ minutes
6. On the distance/time graph draw a line to show the return journey that takes the train 40 minutes to descend from the summit to the base station without a stop.

| The Cog Railway | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - calculating and comparing average speeds <br> - understanding a time/distance graph <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1.a. Gives correct answer: $\mathbf{3}$ miles per hour <br> b. Gives correct answer: $\mathbf{2 . 5 7}$ miles per hour or $2^{4} / 7$ Shows correct work such as: $3 / 1 \frac{1}{1 / 6}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | 3 |
| 2. Gives correct answer: 4.5 miles per hour Shows correct work such as: $3 /\left({ }^{40} / 60\right)$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 2 |
| 3. Gives correct answer: 4 times | 1 | 1 |
| 4. Gives correct answer: The train going up stops at the passing point. | 1 | 1 |
| 5. Gives correct answer: 20 minutes | 1 | 1 |
| 6. Draws a correct line from (3:20 pm, summit) to ( 4 pm , base station) | 1 | 1 |
| Total Points |  | 9 |

## Flora, Freddy and the Future

This problem gives you the chance to:

- use terms likely and unlikely for events
- use numbers from 0 to 1 as measures of likelihood

Flora and Freddy often think about what is likely to happen in the future. Here are some of their thoughts.
Choose the word you think fits their thoughts best on the likelihood line and draw a ring around it,

1. a. When Flora flips a coin it will land head up.

| $L$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| impossible | unlikely | equally likely | likely | certain |

b. Freddy will be a millionaire by the time he is fourteen.

| $\llcorner$ |  |  |  |
| :---: | :---: | :---: | :---: |
| impossible | unlikely | equally likely | likely |

c. In the year 2010 more people than today will own a computer.

| $\llcorner$ |  |  |  |
| :---: | :---: | :---: | :---: |
| impossible | unlikely | equally likely | likely |

Grade 8-2008
Copyright © 2008 by Mathematics Assessment Resource Service All rights reserved.
2. There are 12 socks in Flora's drawer, 9 are red, 2 are blue and 1 is green.

She takes out one sock without looking at the color.
a. What is the numerical probability of Flora picking out a blue sock.

Explain how you figured it out.
b. What is the numerical probability of Flora picking out a red sock first time?
c. Flora picks out a red sock. Freddie then picks out a second sock. Flora does not replace the first sock before Freddie picks the second sock.

What is the numerical probability that Flora and Freddie both pick out red socks?
Show how you figured it out.

## Flora, Freddy and the Future.

The core elements of performance required by this task are:

- use terms likely and unlikely for events
- use numbers from 0 to 1 as measures of likelihood

Based on these, credit for specific aspects of performance should be assigned as follows

1. Gives correct answer: equally likely.

Gives correct answer: unlikely
Gives correct answer: likely
Partial credit
2 correct
2.a. Gives correct answer: 2/12 or equivalent
b. Gives correct answer: 9/12 or equivalent
c. Gives correct answer: $\mathbf{7 2} / \mathbf{1 3 2}=6 / 11$ or equivalent

Shows work such as:
$\mathrm{P}($ red first $)=9 / 12$
$\mathrm{P}($ red second $)=8 / 11$
Multiplies $9 / 12 \times 8 / 11$

| Core Idea | Task |
| :--- | :--- |
| Data | Averages |
| This task asks students to work with weighted averages and percents. Successful <br> students could find and correct an error in calculating the average test scores. |  |

Algebra and Functions Square Patterns
This task asks students to work with extending geometric patterns and calculating percentages. Successful students could count the number of black and white tiles in a pattern and calculate the percentage of the pattern containing black tiles.

## Probability $\quad$ Marble Game

This task asks students to calculate compound probability for pulling marbles from two bags, to compare experimental and theoretical probabilities, and find the probability for a simple spinner. Successful students were able to find probabilities in different situations, but often struggled with making comparisons between probabilities or applying probabilities to context.

| Algebra and <br> Mathematical Reasoning | Vincent's Graph |
| :--- | :--- |
| This task asks students to read and interpret graphs in a context. Students needed to <br> interpret the slope of graphs in terms of the action of the context. Successful students <br> could interpret a graph about measures and time and make some correct work in <br> drawing their own graph to match a given story. |  |
| Geometry and <br> Measurement | Photos |
| This task asks students to work with equivalent ratios and show understanding of <br> spatial relationships by finding sizes of photos on a page. Successful students could <br> identify equivalent rations, find the size of photos for a given number per page, and <br> find the number of pages needed for making a given number of copies. |  |

## Averages

This problem gives you the chance to:

- identify an error about means
- calculate means and solve a problem involving means

1. In a test, the 10 students in Group 1 get a mean score of $43 \%$.

The 15 students in Group 2 get a mean score of $57 \%$.
Hank says, "The mean score for all 25 students is $50 \%$."
a. What mistake has Hank made?
$\qquad$
$\qquad$
b. What is the correct mean score for all 25 students?

Show how you figured it out.
2. In a different test, the mean score of 50 students is $54 \%$.

The students are split into two groups, Group A and Group B.
The mean score for Group A is $60 \%$ and the mean score for Group B is $50 \%$.
How many students are in Group A and how many are in Group B?
Group A $\qquad$
Group B $\qquad$
Show how you figured it out.

| Averages | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - identify an error about means <br> - calculate means and solve a problem involving means <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1.a. Gives correct explanation such as: <br> Hank has found the mean of $43 \%$ and $57 \%$. <br> He has not taken into account the sizes of the groups. <br> b. Gives correct answers: 51.4 $\text { Mean }=\frac{10 \times 43+15 \times 57}{25}=\frac{1285}{25}$ | $\begin{aligned} & 2 \\ & 2 \\ & 1 \end{aligned}$ | 5 |
| 2. Gives correct answers: $\mathbf{2 0}$ and $\mathbf{3 0}$ <br> Shows work such as: <br> If number in group A is X and number in Group B is Y , $\begin{aligned} & X+Y=50 \\ & 60 X+50 Y=50 \times 54 \end{aligned}$ <br> Solution of the above to give 20 in group A and 30 in group B or <br> Guess and check | $2$ $\begin{gathered} 2 \\ \text { or } \\ 2 \end{gathered}$ | 4 |
| Total Points |  | 9 |

## Square Patterns

This problem gives you the chance to:

- work out percentages

In Prague some sidewalks are made from small square tiles.
The blocks are made from black and white tiles.
This is one of the patterns.

1. How many black and white tiles are there in this pattern?
black $\qquad$
white $\qquad$
2. What percent of the tiles is black?

Give your answer to one decimal place.
Show how you figured it out.
$\qquad$

On the sidewalks the patterns are separated by areas of white tiles.
3. On one sidewalk there are 10 patterns separated by areas of 13 by 13 white tiles, with a 13 by 13 area of white tiles at each end.

What percent of the tiles on the sidewalk is black? Explain how you figured it out.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Marble Game

This problem gives you the chance to:

- use probability in an everyday situation

Linda has designed a marble game.

1. Bag A contains 3 marbles one red, one blue and one green.

Bag B contains 2 marbles one red and one blue.

To play this game, a player draws one marble from each bag without looking.
If the two marbles match (are the same color), the player wins a prize.
What is the theoretical probability of winning a prize at a single try? Show your work.
2. Here are the results for the first 30 games.

How do the results in this table and the theoretical probability you found compare?

$\qquad$
$\qquad$

Grade 8
Marble Game

Resource Service. All rights reserved.
3. Linda has designed a second game.

The spinner has nine equal sections.
To play the game, a player spins the spinner.
If the spinner lands on a Gold section, the player wins a prize.

Does the player have a better chance of winning with the bag game or the spinner game?

Explain your reasoning.
$\qquad$
$\qquad$
$\qquad$

| Marble Game | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - listed here <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives correct answer: $\frac{2}{6}=\frac{1}{3}$ <br> Lists all possibilities: $\mathrm{RR}, \mathrm{RB}, \mathrm{BR}, \mathrm{BB}, \mathrm{GR}, \mathrm{GB}$ $p(R R$ or $B B)=2 / 6$ or $1 / 3$ <br> or <br> Shows work such as: Probability $R \cap R=\frac{1}{3} \times \frac{1}{2}$ <br> Probability $B \cap B=\frac{1}{3} \times \frac{1}{2}$ <br> Probability both same color $=\frac{1}{6}+\frac{1}{6}$ | 1 <br> 1 <br> 1 <br> or <br> 1 <br> 1 | 3 |
| 2. These results are quite close; <br> but the number of trials is not large enough to give an accurate estimate. or <br> Explains that from these results the experimental probability $=\frac{9}{30}=\frac{3}{10}=0.3$ <br> The theoretical probability $=0.33$ recurring | 1 <br> 1 | 2 |
| 3. Gives correct answer: the spinner game <br> Shows work such as: the probability of winning on the spinner game is $4 / 9=0.44$ recurring | 1 <br> 1 | 2 |
| Total Points |  | 7 |

## Vincent's Graphs

This problem gives you the chance to:

- interpret graphs
- draw a graph

Vincent is eating a packet of raisins.
This graph shows the changes in the mass of raisins in the packet as time passes.

1.a. What is Vincent doing when there is a vertical line on the graph?
b. Why are the vertical lines of different lengths?
c. Did Vincent eat all the raisins? $\qquad$ Explain how you know.
$\qquad$
2. Ellie is drinking with a straw from a box of fruit juice.

The graph shows the volume of juice in the box as time passes.

Time in minutes
a. What is happening when the line on the graph is horizontal?
b. Why do the lines going downwards on this graph go at an angle?
3. Ralph is eating cherries from a bag.

After eating a cherry he puts the stone back into the bag before taking out the next cherry.

On the grid draw a graph to show the changes in the mass of the bag of cherries as time passes.

| Vincent's Graphs | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - interpreting graphs <br> - drawing graphs <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. a. Gives correct answer such as: he is taking raisins out of the packet. <br> b. Gives correct answer such as: he takes different numbers of raisins from the packet. <br> c. Gives correct answer: No <br> and a correct explanation such as: the line does not reach the x axis. | 1 <br> 1 <br> 1 | 3 |
| 2. a. Gives correct answer such as: Ellie is not drinking. <br> b. Shows correct work such as: the volume decreases steadily as the juice is sucked out. | 1 <br> 1 | 2 |
| 3. Draws a correct graph: First a short horizontal line <br> Followed by a short line downwards. <br> A short horizontal line followed by a short line upwards. <br> The line upwards should be shorter than the first line downwards. | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | 3 |
| Total Points |  | 8 |

[^1]
## Photos

This problem gives you the chance to:

- show understanding of spatial relationships

The 'aspect ratio' of a picture is the ratio of its width to its height.

1. Which of the following are correct expressions for the aspect ratio for this 8 inch by 12 inch baby photo?

Draw rings around all of the correct ratios.

| $8: 12$ | $12: 8$ | $4: 6$ | $2: 3$ |
| :--- | :--- | :--- | :--- |
| $3: 2$ | $1: 1.5$ | $16: 24$ | $24: 36$ |

b. Jane wants 75 copies of this size of the photo for Christmas cards.
How many 8 inch by 12 inch pages does she need?

Show your work.
2. When the length and width of the photo are halved, four photos fit onto the 8 inch by 12 inch page. The aspect ratio is still the same.
a. What are the new measurements of the photo?
$\qquad$
$\qquad$

St
3. For use on key chains, the photo is reduced to a width of 1 inch, keeping the aspect ratio the same.
a. What is the height of the photo? $\qquad$
b. How many of the photos will fit onto one 8 inch by 12 inch page?
4. Explain how to calculate the number of photos that will fit on one page if you know the width of the photo.
$\qquad$
$\qquad$
$\qquad$
$\qquad$

| Photos | Rubric |  |
| :---: | :---: | :---: |
| The core elements of performance required by this task are: <br> - show understanding of spatial relationships <br> Based on these, credit for specific aspects of performance should be assigned as follows | points | section points |
| 1. Gives correct answers: 8:12 $\mathbf{4 : 6} \quad \mathbf{2 : 3} \quad \mathbf{1 : 1 . 5} \quad \mathbf{1 6 : 2 4} \quad$ 24:36 with no extras <br> Partial credit <br> 4 or 5 correct with no extras or 6 correct and 1 extra <br> 3 or 2 correct with no extras or $4 / 5$ correct and 1 extra | 3 <br> (2) <br> (1) | 3 |
| 2.a. Gives correct answer: $\mathbf{4}$ inches by $\mathbf{6}$ inches <br> b. Gives correct answer: 19 | $1$ | 2 |
| 3.a. Gives correct answer: $\mathbf{1 . 5}$ inches <br> b. Gives correct answer: 64 | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 2 |
| 4. Gives correct explanation such as: Find how many times the width goes into 8 inches and square that number. <br> Or <br> Find how many times the width goes into 8 inches and multiply by how many times the height of the photo goes into 12 . | 2 <br> or <br> 2 | 2 |
| Total Points |  | 9 |
