

# GENETICAL RESEARCH

## EDITORIAL BOARD

C. H. WADDINGTON (*Chairman*)  
CHARLOTTE AUERBACH    D. LEWIS  
H. GRÜNEBERG    G. PONTECORVO  
W. HAYES    A. ROBERTSON

## EXECUTIVE EDITOR

E. C. R. REEVE

## ASSISTANT EXECUTIVE EDITOR

J. O. BISHOP

**Volume 7. 1966**

**CAMBRIDGE  
AT THE UNIVERSITY PRESS**

**1966**

*Printed in Great Britain by Spottiswoode, Ballantyne & Co. Ltd.  
London and Colchester  
and published by the Cambridge University Press  
Bentley House, 200 Euston Road, London, N.W.1  
American Branch: 32 East 57th Street, New York, N.Y. 10022  
Agents in Canada: The Macmillan Company of Canada Limited*

# CONTENTS

No. 1 (February 1966)

SUGINO, Y. Mutants of <i>Escherichia coli</i> sensitive to methylene blue and acridines	page 1
LYON, M. F. and MORRIS, T. Mutation rates at a new set of specific loci in the mouse	12
STADLER, D. R. Glutamic dehydrogenase in revertants of <i>am</i> mutants in <i>neurospora</i>	18
CINADER, B., DUBISKI, S. and WARDLAW, A. C. Genetics of MuBl and of a complement defect in inbred strains of mice	32
BOHREN, B. B., HILL, W. G. and ROBERTSON, A. Some observations on asymmetrical correlated responses to selection	44
GRÜNEBERG, H. The case for somatic crossing-over in the mouse	58
MORTON, J. R. The multiple electrophoretic bands of mouse haemoglobins	76
SEARLE, A. G. Curtailed, a new dominant T-allele in the house mouse	86
SPICKETT, S. G. and THODAY, J. M. Regular responses to selection. 3. Interaction between located polygenes	96
BRAY, D. F. Variability and restrictions against inbreeding and unequal family size in control populations of <i>Tribolium</i>	122
LYON, M. F. Order of loci on the X-chromosome of the mouse	130
MEYNELL, E. and DATTA, N. The relation of resistance transfer factors to the F-factor (sex-factor) of <i>Escherichia coli</i> K12	134
MEYNELL, E. and DATTA, N. The nature and incidence of conjugation factors in <i>Escherichia coli</i>	141

## No. 2 (April 1966)

PREVOSTI, A. Chromosomal polymorphism in western Mediterranean populations of <i>Drosophila subobscura</i>	page 149
BLOOM, J. L. and FALCONER, D. S. 'Grizzled', a mutant in linkage group X of the mouse	159
MCNELLY-INGLE, C. A., LAMB, B. C. and FROST, L. C. The effect of temperature on recombination frequency in <i>Neurospora crassa</i>	169
CLUTTERBUCK, A. J. and ROPER, J. A. A direct determination of nuclear distribution in heterokaryons of <i>Aspergillus nidulans</i>	185
MORGAN, D. H. Suppression of 'purple' in <i>Coprinus lagopus</i> —an anomalous genetic situation	195
BALL, C. and ROPER, J. A. Studies on the inhibition and mutation of <i>Aspergillus nidulans</i> by acridines	207
GLOVER, S. W. and COLSON, C. Stable and unstable alterations of the host-induced modification properties of <i>Escherichia coli</i> B, K and C	223
COWAN, J. W. and LEWIS, D. Somatic recombination in the dikaryon of <i>Coprinus lagopus</i>	235
DOWRICK, G. J. Breeding systems in tetraploid <i>Rubus</i> species	245
ANDERSON, W. W. Genetic divergence in M. Vetukhiv's experimental populations of <i>Drosophila pseudoobscura</i>	255
FISHER, K. W. Mechanically caused damage to Hfr cells of <i>Escherichia coli</i> K12	267
SCHELL, J. and GLOVER, S. W. The effect of various physiological conditions on host-controlled restriction in <i>Escherichia coli</i> K(P1)	273
SCHELL, J. and GLOVER, S. W. On the localization of a factor responsible for host-controlled restriction in <i>Escherichia coli</i> K(P1)	277
REEVE, E. C. R. Characteristics of some single-step mutants to chloramphenicol resistance in <i>Escherichia coli</i> K12 and their interactions with R-factor genes	281

## No. 3 (June 1966)

DUKE, E. J. Further studies on the inheritance of lymph proteins in <i>Drosophila melanogaster</i>	page 287
YOUNG, S. S. Y. and LEWONTIN, R. C. Differences in bristle-making abilities in scute and wild-type <i>Drosophila melanogaster</i>	295
WADDINGTON, C. H. and ROBERTSON, E. Selection for developmental canalization	303
LATTER, B. D. H. The interaction between effective population size and linkage intensity under artificial selection	313
LAMB, B. C. Polarized segregation in Ascomycetes and the differential bursting of asci	325
WARR, J. R., McVITTIE, A., RANDALL, SIR JOHN and HOPKINS, J. M. Genetic control of flagellar structure in <i>Chlamydomonas reinhardtii</i>	335
ESPARDELLIER-JOSET, F. and FOURNIER, R. Induction of invertant males in <i>E. Coli</i> K12	353
DEOL, M. S. The probable mode of gene action in the circling mutants of the mouse	363
LEE, R. M. Genetic control of the hydrolysis of aromatic esters by sheep plasma A-esterase	373
CHURCH, R. B. and ROBERTSON, F. W. Biochemical analysis of genetic differences in the growth of <i>Drosophila</i>	383
<i>Index of subjects and authors</i>	409

**PLATES** should only be included where absolutely essential. They should be supplied as unmounted glossy prints; any lettering to be inserted on them is best indicated on a separate sketch. Please do not damage prints by writing heavily on their backs or by using paper clips.

**DIAGRAMS** should be about twice the size of the finished block, and the thickness of lines and size of points determined accordingly. They must be drawn in Indian ink on white Bristol Board or tracing linen; graph paper ruled in pale blue (but not other colours) is also acceptable. Lettering should be lightly inserted in soft pencil only, so that the printer can put in the finished lettering.

Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back. Plates and diagrams should be numbered separately and their position indicated on the typescript. It will hasten refereeing if a photograph of each diagram can be supplied with the carbon copy of the paper.

**TABLES** should each be typed on a separate sheet of paper and their approximate positions in the text indicated on the typescript. Each table should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion.

**FOOTNOTES** should be avoided where possible. They can often be incorporated into the text, in parentheses.

**SYMBOLS.** Italic letters should generally be adopted for both gene symbols and quantities in mathematical formulae. Bold letters add to printing costs, and should only be used where they are necessary to avoid confusion.

**SPELLING** should follow the *Concise Oxford Dictionary*.

**REFERENCES** should follow the normal usage in the journal. In the list of references at the end of the paper, titles of periodicals should be abbreviated according to the *World List of Scientific Periodicals* (fourth edition).

**PROOFS.** Two sets of single-sided page proofs, together with the typescript, of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Correction should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

**OFFPRINTS.** Fifty offprints of each paper, including short papers, are provided free of charge. Additional offprints may be ordered on the form sent out with proofs, provided this is returned within seven days of receipt.
