Preface

nternational Classification of Diseases (ICD) is a global standard for reporting medical diagnoses, procedures and causes of death developed by the World Health Organization. This standard allows to exchange terminologies on medical diagnoses, procedures and causes of deaths across all languages in the world and simplifies statistical analysis. The current version of the classification is ICD-10. We, at the Management Information System (MIS) of the DGHS, were facing enormous problem in processing disease and cause-specific data due to absence of practice of ICD-10 in our health facilities. We were in urgent need for introducing use of ICD-10 in medical practice of Bangladesh, be it public or private setting. However, the immediate limitation was absence of a suitable Guide Book on ICD-10 customized for local context. Thanks to our professional colleagues, both in home and abroad, who assisted us to develop the Guide Book for printing and distribution across hospitals and health facilities of Bangladesh, both in printed as well as in web-based formats.

I deeply believe that our medical practitioners will understand the needs for using ICD-10, and will fully comply with the guidelines and recommendations given in the Guide Book. I urge upon the concerned health managers, medical teachers, consultants and institute heads to play their specific roles proactively and in innovative ways so that we achieve the goal of fully compliant ICD-10 use in a short period of time. Their vigilance and supportive supervision will remain as the most important keys to the success.

I am indebted to Acting WHO Representative of Bangladesh Country Office Dr Arun Bhadra Thapa to accept our request very cordially and respond positively for taking all necessary steps towards printing this Guide Book.

Finally, I express my thanks to all concerned, who directly or indirectly, remained with us to publish this Guide Book on ICD-10.

Message

am glad to see that MIS-Health of DGHS is going to publish the Guide Book on ICD-10 for use by the medical practitioners of Bangladesh both in health facilities as well as in private practice. International Classification of Diseases (ICD) is a global standard, which needs to implement for statistical processing of diagnoses of morbidities and mortalities in easy to understand format so that health planning and programs can be made based on the country situation. ICD-10 is also important for comparison of morbidity and mortality data between countries. The health service of Bangladesh lacked a suitable guide book on ICD-10, which made difficulties in introducing practice of using standard medical diagnostic terminologies in the country. I hope that this guide book will remove these difficulties and our medical practitioners will feel comfortable for using ICD-10. I emphasize on their full compliance with the guidelines and recommendations given in the Guide Book.

I have learnt that WHO-Bangladesh Country Office provided assistance to publish this Guide Book. Let me extend my appreciation to WHO in this opportunity. Finally, I thank Director, MIS-Health and his team for taking this laudable initiative of publishing this Guide Book on ICD-10.

Dr Arun Bhadra Thapa Acting WHO Representative to Bangladesh

Message

t is my pleasure to know that Bangladesh is publishing the International Classification of Diseases (ICD-10), developed by the World Health Organization (WHO), which is used world-wide for morbidity and mortality statistics, reimbursement systems and automated decision support in medicine.

As we know, ICD is a global standard diagnostic classification for all general epidemiological, many health management purposes and clinical use. The main purpose of ICD is to harmonize medical recording practices worldwide and medical practitioners of Bangladesh should learn and use ICD while caring for their patients. ICD-10 was adopted by the World Health Assembly in May 1990 and all government and private health and medical institutions in the country should essentially use this ICD in preparing their records and reports and the same should be ensured by all concerned authorities through well designed guidelines, directives and continued monitoring. All medical and health institutions, including hospitals in the country should equip themselves with WHO publication on ICD-10 as a reference and authorities should formulate a plan for regular orientation on the use of it. I believe, Implementation of ICD-10 will have a positive impact on the entire value chain of healthcare, including insurance, service delivery, scheduling, patient registration, patient care, customer service, revenue and reimbursement management, network management and risk management.

With regard to achieving the objective of ICD-10, it is important for the concerned health managers, medical teachers, consultants and institute heads to play their roles proactively. I hope that this valuable publication will guide them to perform their roles and responsibilities fruitfully.

I would like to extend my sincere appreciation to all those in Directorate General of Health Services who have significantly contributed to the development and publication of this valuable guide.

Aleapa

Dr Arun Bhadra Thapa Acting WHO Representative to Bangladesh

Introduction

What do we understand by ICD

ICD stands for International Classification of Diseases. This classification system has been developed by the World Health Organization (WHO). ICD is used world-wide for morbidity and mortality statistics, reimbursement systems and automated decision support in medicine. The design of ICD promotes international comparability in the collection, processing, classification and presentation of these statistics. The ICD contains only diagnosis codes. The WHO revises the ICD code-set periodically, and it is currently in its 10th edition. ICD-10 represents a fundamental overhaul of the previous ICD-9 coding system. The volume of ICD-10 codes as compared to ICD-9 codes is significant because in ICD-10, the code size has been expanded, code values and interpretations have been redefined and specificity has been further improved.

Global ICD-10 adoption

The current version of ICD is ICD-10, which was adopted by the World Health Assembly in May 1990. It is learnt that as of writing this guide book 138 countries have implemented the ICD-10 code set for mortality, and 99 of them have also implemented ICD-10 for morbidity. Individual country, on permission from WHO, may make modification to ICD-10 to meet individual country-specific needs. For example, Canada and Australia each has a national version of the ICD-10 code set. Likewise, WHO granted permission to the United States to develop a national clinical modification of ICD-10. The effort involved the United States National Center for Health Statistics (NCHS) and the Centers for Medicare and Medicaid Services (CMS). The NCHS created ICD10-CM, which contains diagnosis codes. The ICD10-Procedure Coding System (PCS) was developed for CMS, which contains the procedure codes for use in reimbursement of in-patient hospital services. The ICD10-CM code set is five times larger than the code sets being used in other countries.

Advantages of implementing ICD-10

- Measuring the quality, safety (or medical errors) and efficacy of care
- Making clinical decisions based on output from multiple systems
- Conducting research, epidemiological studies and clinical trials
- Comparability between health facilities, regions and countries
- Setting health policy
- Designing healthcare delivery systems
- Monitoring resource utilization
- Improving clinical, financial and administrative performance
- Identifying fraudulent or abusive practices
- Managing care and disease processes
- Tracking public health and risks
- Providing data to consumers regarding costs and outcomes of treatment options

Implementation of ICD-10 will impact the entire value chain of healthcare, including insurance, service delivery, scheduling, patient registration, patient care, customer service, revenue and reimbursement management, network management and risk management.

How to use ICD

ICD is an international standard. To harmonize our medical practice, we should learn and use ICD while caring our patients. Although ICD is a classification system and not a coding system, it uses codes to represent different diagnoses, procedures or life events. There are some easy to use software(s) that help to find ICD codes. However, those who will not use computer software, here are some tips for them to understand ICD. Essentially, all medical practitioners need to understand the ICD.

The WHO has published three important volumes on ICD. The volume I provides a tabular list of ICD. The volume II is the instruction manual on how to use the ICD. The Volume III is the alphabetical list of ICD. In ICD-10, there are more than 14,400 different codes. It allows tracking of many new diagnoses. Using optional sub-classifications, the codes can be expanded to over 16,000 codes.

The ICD is sub-divided into chapters, blocks, 3-digit codes and 4-digit codes. Further subclassification like 5-digit codes and 6-digit codes also exist. But, we will limit our discussion up to 4-digit codes. Below is a listing of Chapters, Block groups and Chapter titles.

Chapter	Block	Title
I	A00-B99	Certain infectious and parasitic diseases
II	C00-D48	Neoplasms

Chapters I to XVII list different diagnoses. Chapter XVIII lists symptoms, signs and abnormal laboratory findings that are not mentioned elsewhere. Chapter XIX lists injury, poisoning and certain other consequences of external causes. Chapter XX lists external causes of morbidity and mortality. Chapter XXI lists factors influencing health status and contact with health services. Chapter XXII keeps provision for inclusion of new codes which are unavailable in the existing ICD.

Following list shows different blocks under Chapter I. List of all blocks will be provided in appendix. Please note that each block has a title.

B90-B94	Sequelae of infectious and parasitic diseases
B95-B97	Bacterial, viral and other infectious agents
B99	Other infectious diseases

How each ICD block is constituted

Please see the first block above. It begins at code A00 and ends at code A09. It titles "Intestinal Infectious Diseases". The block is an alphanumeric character block, where the first character is a CAPITAL LETTER and the next two characters are numeric. Either A00 or A09 constitutes a 3-digit ICD code. All the 3-digit ICD codes for block A00-A09 are mentioned below:

A00	Cholera
A01	Typhoid and paratyphoid fevers
A02	Other salmonella infections
A03	Shigellosis
A04	Other bacterial intestinal infections
A05	Other bacterial foodborne intoxications, not elsewhere classified
A06	Amoebiasis
A07	Other protozoal intestinal diseases
A08	Viral and other specified intestinal infections
A09	Diarrhoea and gastroenteritis of presumed infectious origin

3-digit vs. 4-digit ICD codes

We have seen above, example of 3-digit ICD codes. Let us consider A00. It is the 3-digit ICD code for Cholera. It does not tell specifically, which type of cholera it is, classical or el tor, or un-specified. A 4-digit ICD code answers this question. The table below shows how 3-digit ICD codes are broadened into 4-digit ICD codes to enhance the specificity.

3-digit code	4-digit code	Name
A00		Cholera
	A00.0	Cholera due to Vibrio cholerae 01, biovar cholerae
	A00.0	Classical cholera
	400.1	Cholera due to Vibrio cholerae 01, biovar eltor
	A00.1	Cholera eltor
	A00.9	Cholera, unspecified
A01	Typhoid and paratyphoid fevers	
	A01.0	Typhoid fever
		Infection due to Salmonella typhi
	A01.1	Paratyphoid fever A
	A01.2	Paratyphoid fever B
	A01.3	Paratyphoid fever C
	A01.4	Paratyphoid fever, unspecified
		Infection due to Salmonella paratyphi NOS (not otherwise specified)

4 | Guidebook on ICD-10

It is easy to understand the difference between 3-digit and 4-digit ICD codes. The 3-digit code begins with a Capital Letter followed by two numeric characters (example: A00 Cholera). The 4-digit code, on the other hand, adds with the 3-digit code a dot (.) plus another numeric character (example: A00.0 Cholera classical; A00.1 Cholera el tor). In 4-digit code, the (.) mark is not considered as a digit.

Why to write the ICD-10 code

- It has been planned that ICD-10 codes will be introduced in the Bangladeshi hospitals, both public and private.
- Initially ICD-10 codes will need to be reported for indoor patients.
- The MIS-Health will ask respective hospitals for patient by patient reporting on indoor patients.
- Use of ICD-10 codes will be integral part of this system.

Who to write the ICD-10 code

- The doctor in-charge of the patient will have the primary responsibility to write the ICD-10 code. Otherwise, the doctor who is writing the discharge, transfer, referral or death certificate of the patient will have to write or complete the ICD-10 code.
- The doctor writing the ICD-10 code should write his/her name legibly so that s/he can be traced for clarification or completing the incomplete write up.
- The overall responsibility of writing ICD-10 codes in all patient case-sheets will be the responsibility of the unit head.
- The completed case-sheet on discharge, transfer, referral or death of patient will go to the medical record room for entry into national database. In time, this will be done through hospital ward where the patient will receive treatment. In case of incomplete or no ICD-10 code, the case-sheet will be returned to the corresponding doctor for completing the job.

How to write ICD-10 code

It is advised that each hospital ward will make a seal with the following information from the hospital's own local fund. Simple hand writing will also be allowed. However, all hand writings must be clear and legible.

ICD-10 Coding		
Chapter No.		
Block No.		
3-digit Code		
(Name)		
4-digit Code		
(Name)		
Name of the doctor		

Let us see, how it will look after completing:

	ICD-10 Coding
Chapter No.	I
Block No	A00-A09
3-digit Code _	A01
(Name)	Typhoid and paratyphoid fever
4-digit Code	A01.1
(Name)	Paratyphoid fever A
Name of the doctor Dr. Shamima Rahman	

There may be question, why so many information to provide? Can we not simply go for writing 3-digit code or 4-digit code directly? There are two reasons for requesting the information. First, two keep provision for cross-checking so that mistakes are identified and corrected. Second, to guide the doctor to follow the steps in sequence to easily find the correct ICD code. To explain further, begin from Chapter Name and identify which chapter the patient's diagnosis represents. Identify the blocks and go to respective block. Then go to the 3-digit code. Finally, explore the 4-digit code, if you could further specify your diagnosis or intervention.

If we examine the ICD codes, we will understand that to write 4-digit code, one will need to do specific diagnosis further down from 3-digit code. In primary care setting, even determining 3-digit code may appear difficult due to lack of adequate diagnostic facilities. However, we should remember that the international obligation is to write at least 3-digit code. In this given context, introduction of ICD-10 coding system will pressurize our policy makers to improve the standards of health care facilities of Bangladesh.

To compromise with the shortcomings of interim period, based on the information available, the respective ICD-10 information boxes may be filled up. For example, only Chapter No. and Block No.; up to 3-digit code along with code name; all the information boxes including 4-digit code along with code name. Doctors should be inquisitive to explore information as finest as possible to be comfortable to write the 4-digit code. This will improve their clinical abilities.

How to simplify works – making your own quick reference

- This hand book accommodates only ICD 3-digit and 4-digit code. The codes are mentioned in order of block, 3-digit code and 4-digit codes (please see appendix).
- All the 4-digit codes are also available in the web site of DGHS (www.dghs.gov. bd>document>ICD10) and WHO web site (http://apps.who.int/classifications/apps/ icd/icd10online/). In the DGHS web site (www.dghs.gov.bd), we also provided ICD-10 software. We advise you to download the software and install it in your own computer to find a ready-made offline solution for ICD-10 4-digits codes. You may find, on the Internet, software for mobile phone, to get ICD-10 codes accessible in mobile phones.
- But, the quicker solution may be your own quick reference. Please imagine, you work in a highly selective environment. In your ward or unit, the type of patients usually belongs to a narrow boundary. If you begin with specific chapter(s), then with specific blocks,

then specific 3-digit and 4-digit codes, you will be able to make a list with most common diagnoses, interventions and codes, you need to deal with.

 Make such a list with few copies. Hang on the wall of your ward and/or unit for all of your colleagues to see easily. Make laminated copies for your work desk also. Now, you will see that practicing ICD-10 codes is not at all difficult.

Writing Medical Certification of Death

In 1967, the Twentieth World Health Assembly defined the cause of death to be entered in the Medical Certification of Death as "all those diseases, morbid conditions or injuries which either resulted in or contributed to death and the circumstances of the accident or violence which produced any such injury". An International Form of Medical Certification of Death (please see below) has been developed and is in practice in most countries of the world. Unfortunately, this issue was not brought into due attention earlier in our country.

Causes of death		Approximate Interval between onset and death
I. Disease or condition directly leading to death*	a) (Due to or as a consequence of)	
Antecedent causes	b) Due to or as a consequence of	
Morbid conditions, if any, giving rise to the above cause, stating the	c) Due to or as a consequence of	
underlying condition last	d) Due to or as a consequence of	
II. Other significant conditions contributing to death, but not related to diseases or conditions causing it		
*This does not mean the mode of dying, e.g., heart failure, respiratory failure. It means the disease, injury or complication that caused death		

International Form of Medical Certification of Death

With the improvement and growing demand of health information system, it is now a necessity that Bangladeshi hospitals will conform to the international standards of death certification and meet international obligation of death reporting for statistical purposes. Therefore, it has been decided that an Internationally Standard Medical Certification of Death Form will have to be enclosed with the deceased's case-sheet in case of any death event. The doctor writing the death certificate will have to complete the standard medical certification form.

Above is an example of the standard form.

How to complete the Standard Medical Certification Form

The Standard Medical Certification Form has three important sections: Part I for statement on causes of death having direct relation; Part II for statement of conditions that may contribute to death but not directly related to factors causing death; and another section to write the interval between specific event and death. The Part I has two sub-sections: Disease or condition directly leading to death; and Antecedent causes (i.e., morbid conditions, if any, giving rise to the above cause, stating the underlying condition last).

If we begin with the immediate cause of death, that may be a condition, like pulmonary embolism or coma. In box(a), we may write this condition with the interval of time between this condition and death in the right column (please see below).

Why the condition in box(a) has occurred? Look for the cause and mention in box(b) with interval in right column.

What led to the condition in box(b)? Look for the cause and mention in box(c) with interval in right column.

Go to the last box(d) in part I and mention the underlying cause with interval in right column.

Please remember that you may not be required to fill all the boxes. This will depend on the chain of events that would follow from the exact underlying cause gradually to immediate cause. Therefore, the number may vary. The cause mentioned in the last line of Part I will be the cause of death and you will translate it into ICD-10, in the exact way as shown in the ICD-10 coding prescribed proforma.

There may be associated disease(s) or conditions that may aggravate conditions leading to death; but not directly related to death. You can mention this/these disease(s) in Part II.

	Causes of death	Approximate Interval between onset and death
I. Disease or condition directly leading to death*	a) Pulmonary embolism (Due to or as a consequence of)	Minutes
Antecedent causes	b) Pathological fracture Due to or as a consequence of	2 days
Morbid conditions, if any, giving rise to the above cause, stating	c) Secondary carcinoma of femur Due to or as a consequence of	6 months
the underlying condition last	d) Carcinoma of breast Due to or as a consequence of	5 years
II. Other significant conditions contributing to death, but not related to diseases or conditions causing it	Diabetes mellitus – Non-insulin dependent	10 years
*This does not mean the mode of dying, e.g., heart failure, respiratory failure. It means the disease, injury or complication that caused death		

International Form of Medical Certification of Death

Recommendations

Essential use of ICD-10

- 1. All government and private health and medical institutions in the country should essentially use ICD-10 in their records and reports and the same should be ensured by all concerned authorities through well designed guidelines, directives and continued monitoring.
- All medical and health institutions, including hospitals of any size, in the country should equip themselves with WHO publication on ICD-10 (3 volumes; available on the Internet) as a reference and ICD-10 codes relevant to each medical specialty be prominently made available in concerned wards in the hospitals. No medical record should remain without ICD-10 code for the diagnosed disease.

Capacity Building for ICD-10 Use

- Authorities should formulate a plan for regular orientation on the use of ICD-10 and every medical and health institution should make efforts to keep their medical/nursing/ paramedical staff duly oriented on ICD-10 through well drawn and regularly conducted orientation programs in their institutions.
- 4. The third and fourth year medical and dental students should be given due orientation of writing ICD-10 codes during their learning of case history writing.

Plan for implementation of ICD 10, its monitoring and evaluation

- MIS-Health may develop online / offline software package for ICD-10 coding of disease nomenclatures and provide it to various medical/health institutions. Computerized user manual/self-learning module for ICD-10 may be prepared and circulated through website of DGHS.
- 6. Directives need to be issued from heads of the medical/health institutions to all concerned Medical/Nursing/Paramedical personnel of all departments in the medical/health institutions for ensuring completion of medical records, and for clearly writing diagnosis using standard medical terminology, while avoiding the abbreviations.
- 7. Data on morbidity/mortality based on Medical Records should be regularly compiled, analyzed and should form the part of various documents/reports of the medical/health institutions including annual reports.
- 8. There should be regular visits / interactions to facilitate the speedy implementation of ICD-10.

Strengthening Medical Record Unit/Department and Computerized Medical Record System

9. The medical record system in each medical/health institution should be computerized with appropriately designed software for both outpatient and inpatient records, while using meticulously designed formats, local area network as well as internet facility in all the departments/wards of the medical/health institution.

- 10. The medical record department in each medical/health institution should be given highest priority and be headed by a senior level expert/officer of the same rank as in other existing technical departments in the same institution.
- 11. All the technical functionaries in the medical record department should be trained through the prescribed training programs and such training personnel should not be diverted to other departments. The contribution of medical record department functionaries in any of the research papers should be duly acknowledged.
