# Outline

- Heuristic Evaluation Overview
- The Heuristics
- Team Break
- Exercise

# Evaluation

- About figuring out how to improve design
- Issues with lo-fi tests?

# Evaluation

- About figuring out how to improve design
- Issues with lo-fi tests?

Not realistic

- visuals & performance

Not on actual interface

- can't test alone

Need participants

- can be hard to find repeatedly

# Heuristic Evaluation

- Developed by Jakob Nielsen
- Helps find usability problems in a UI design
- Small set (3-5) of evaluators examine UI
  - independently check for compliance with usability principles (“heuristics”)
  - evaluators only communicate afterwards
    - findings are then aggregated
  - use violations to redesign/fix problems
- Can perform on working UI or on sketches

# Why Multiple Evaluators?

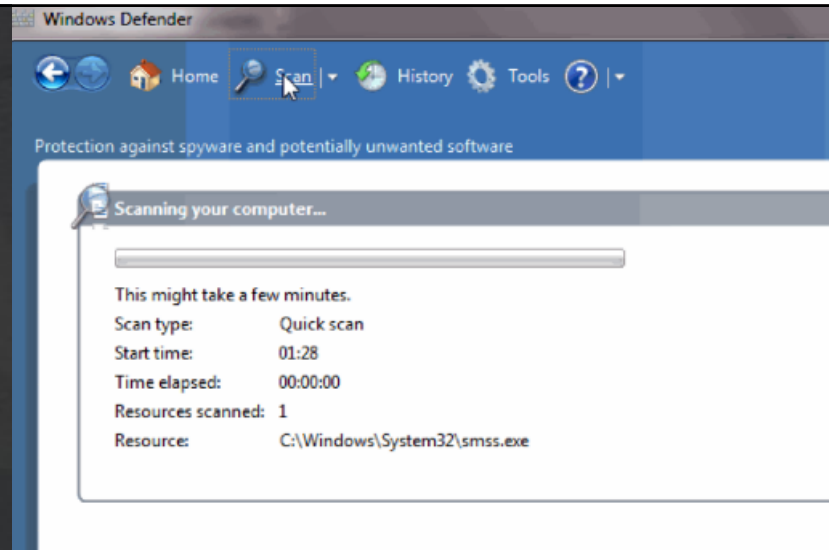

- Every evaluator doesn't find every problem
- Good evaluators find both easy & hard ones

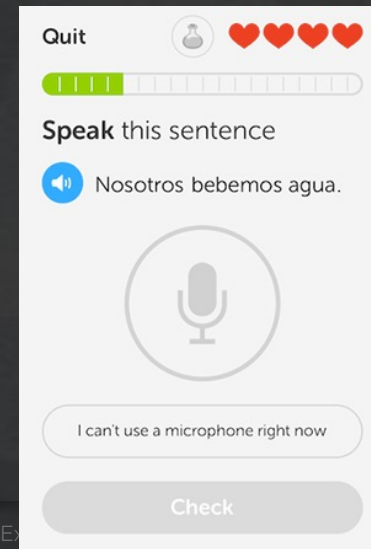

# Heuristics

H1: Visibility of system status

H2: Match between system & real world

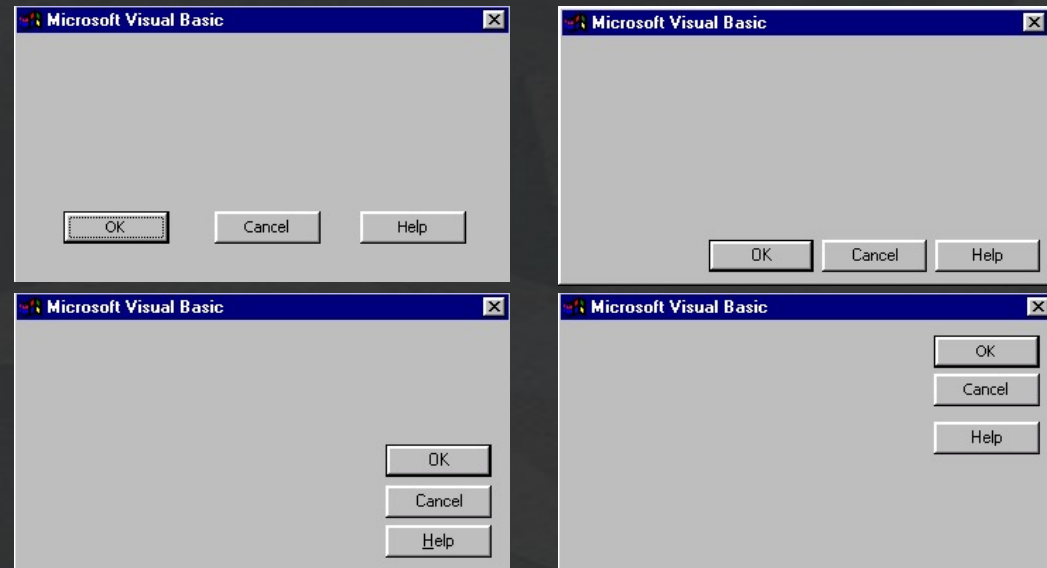

H3: User control & freedom

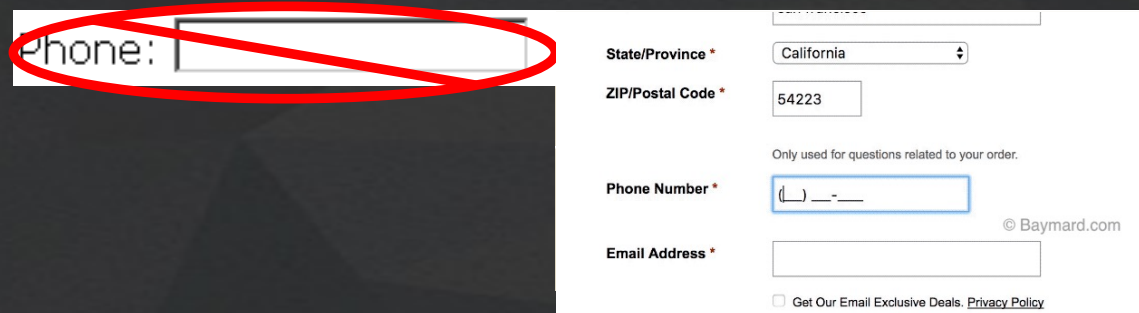

# Heuristics (cont.)

H4: Consistency & standards

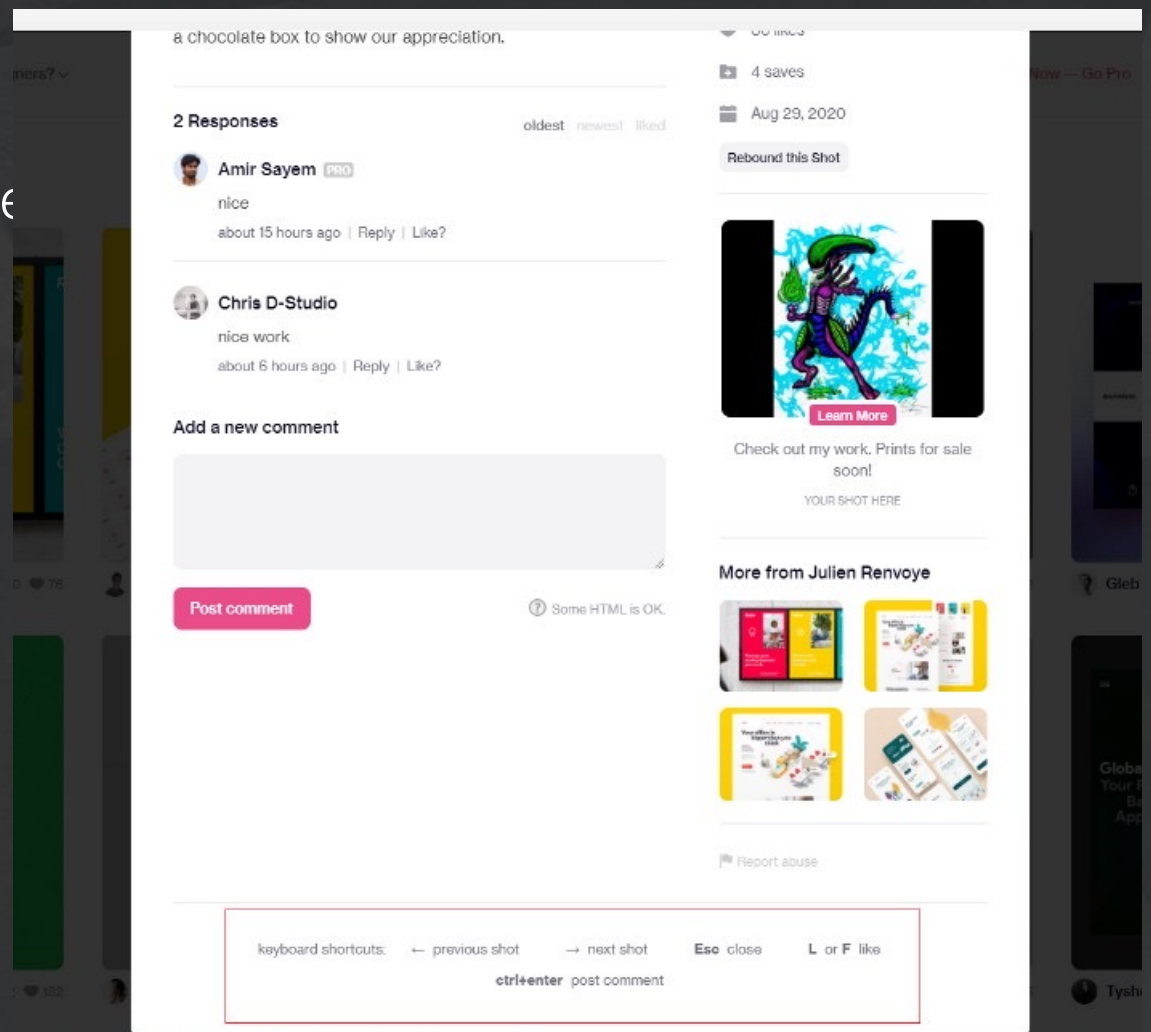

H5: Error prevention

H6: Recognition rather than recall

# Heuristics (cont.)

## H7: Flexibility and efficiency of use

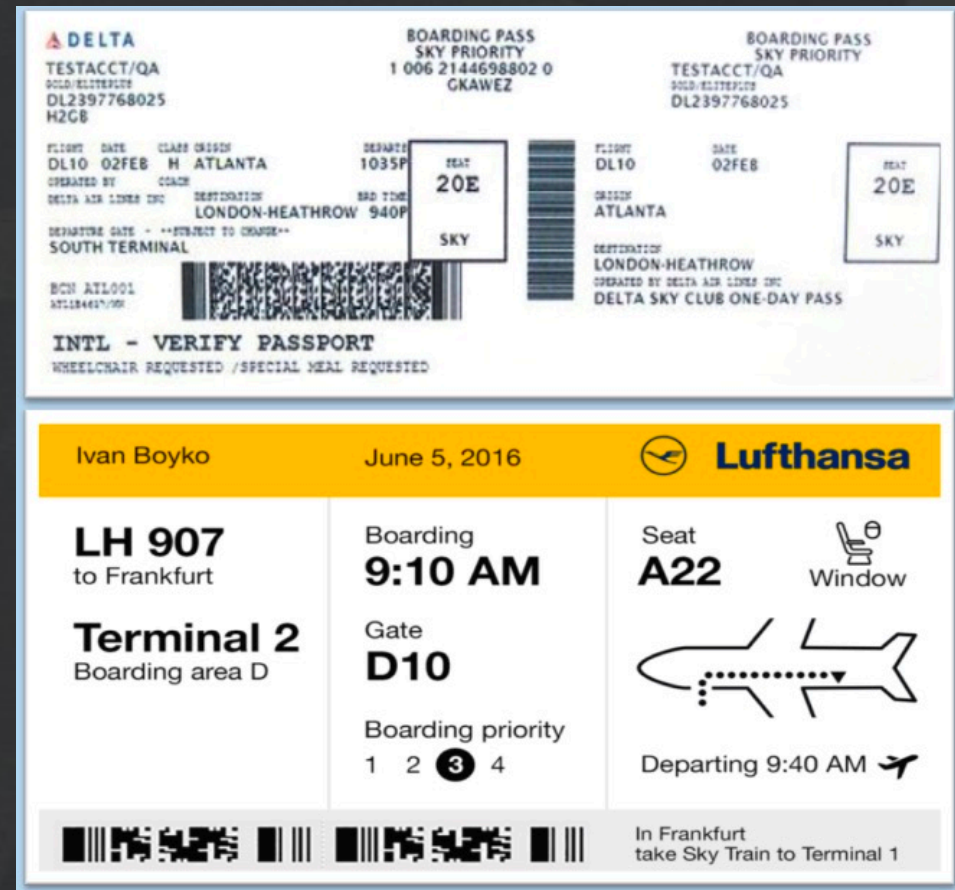

<https://uxplanet.org/heuristics-7-flexibility-and-efficiency-of-use-simplified-by-the-examples-f2d76966e8a5>

# Heuristics (cont.)

H8: Aesthetic & minimalist design

bad

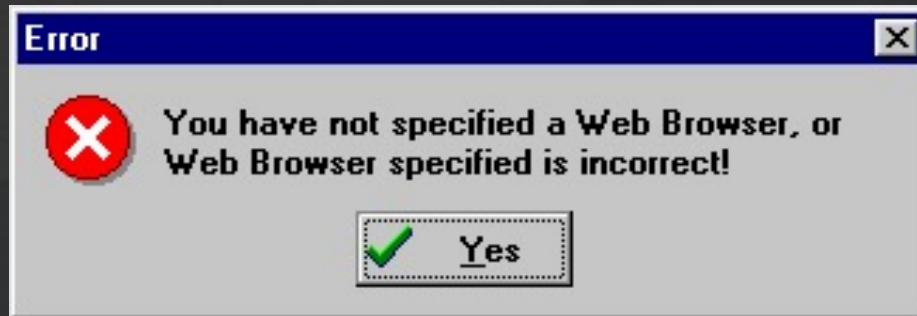

good

<https://icons8.com/articles/redesigning-boarding-pass-again/>

# Heuristics (cont.)

bad

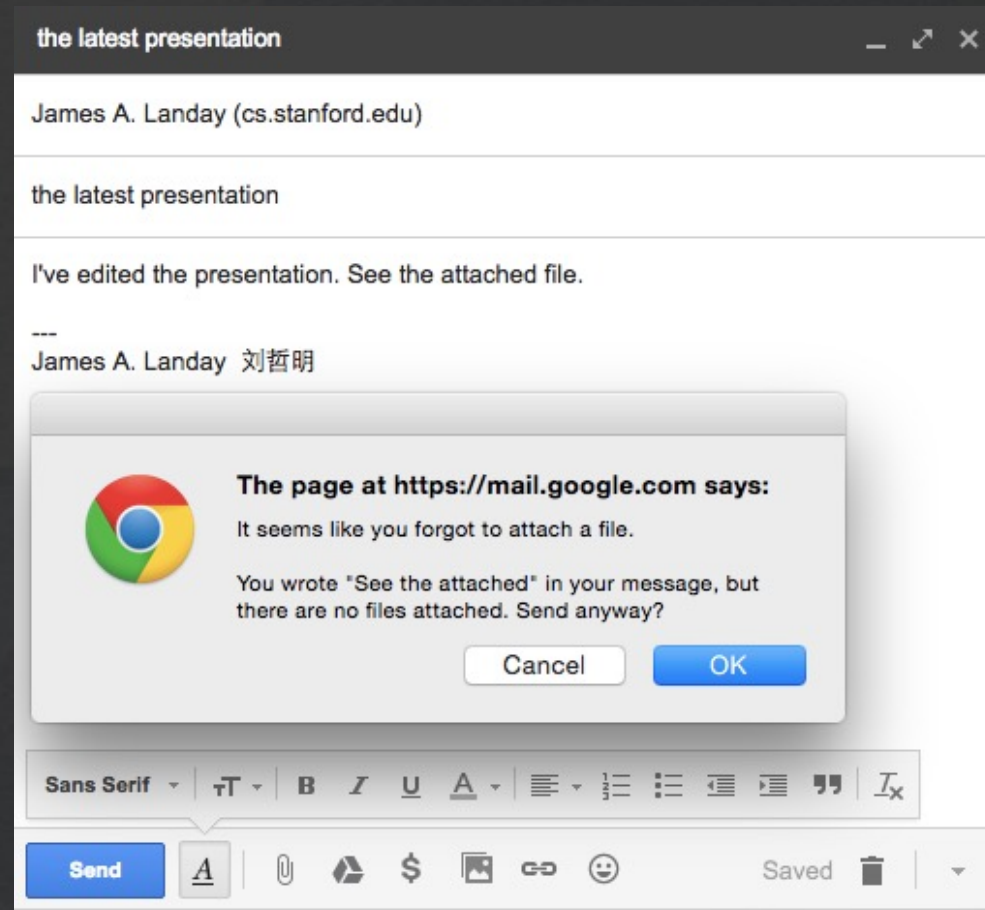

H9: Help users recognize, diagnose, & recover from errors

# Heuristics (cont.)

good

# Good Error Messages

- Clearly indicate what has gone wrong
- Human readable
- Polite
- Describe the problem
- Explain how to fix it
- Highly noticeable

The screenshot shows a car insurance quote page for 'Tyre & Auto Service'. The page is titled 'Your premium estimate' and displays a premium of \$443\* for a 2003 Holden Commodore. A red error message box is highlighted with a green circle containing the number '1'. The error message reads: 'To continue, please... Answer these questions: • Does the car have any non-standard accessories or modifications? Correct the answer to these questions: • When would you want your new policy to start? (Please choose a start date that is within the next 30 days.)'. Below the error message, there is a section for 'Get an exact quote' with a form. The form has a dropdown for 'What type of insurance are you looking for?' set to 'Comprehensive'. A second red error message box is highlighted with a green circle containing the number '2'. This error message reads: 'When would you want your new policy to start?' followed by a date selector showing '28 February 2011'. Below the date selector, it says: 'Please choose a start date that is within the next 30 days. Your policy can start any time in the next 30 days'. The form also has a dropdown for 'Who currently insures your car?' set to 'AAMI'. On the right side of the page, there is a section titled 'Information you have provided' with details about the car, kept overnight, main driver, and cover for drivers under 25.

**Tyre & Auto Service** Need help with your quote? Call us on 1300 590 766 **CAR INSURANCE** from the car experts

### Your premium estimate

**To continue, please...** **1**

Answer these questions:

- [Does the car have any non-standard accessories or modifications?](#)

Correct the answer to these questions:

- [When would you want your new policy to start? \(Please choose a start date that is within the next 30 days.\)](#)

For one year of comprehensive car insurance, your premium will be about **\$443\***  
\* May change depending on your particular circumstances

The amount above is just an estimate and may change depending on your particular circumstances. If you provide a little more information below, we can tell you exactly what your premium will be.

### Get an exact quote

Note that we need answers for all of these questions to be able to provide you with an exact quote.

What [type of insurance](#) are you looking for? Comprehensive

**When would you want your new policy to start?** 28 February 2011 **2**  
Please choose a start date that is within the next 30 days.  
Your policy can start any time in the next 30 days

Who currently insures your car? AAMI

### Information you have provided

**Car** 2003 Holden Commodore S Manual 4D Sedan [Change](#)

**Kept overnight** In postcode 2607 [Change](#)

**Main driver** 32 year old male made no car insurance claims in the last 3 years [Change](#)

**Cover for drivers under 25?** No [Change](#)

# H10 – Help & Documentation

- Better if the system can be used without documentation, but it may be necessary

- How

- easy to search
- focused on task
- list concrete steps

The screenshot shows a form titled "Table Action Properties" with the following fields and values:

Field	Value
Action Type	Redirect (selected), Custom
Action Label	Import Contacts
Action Icon	ui-silk-user-add
URL	

Numbered callouts: 1 points to the "Redirect" option in the Action Type dropdown; 2 points to the "Import Contacts" text in the Action Label field; 3 points to the "ui-silk-user-add" icon in the Action Icon field.

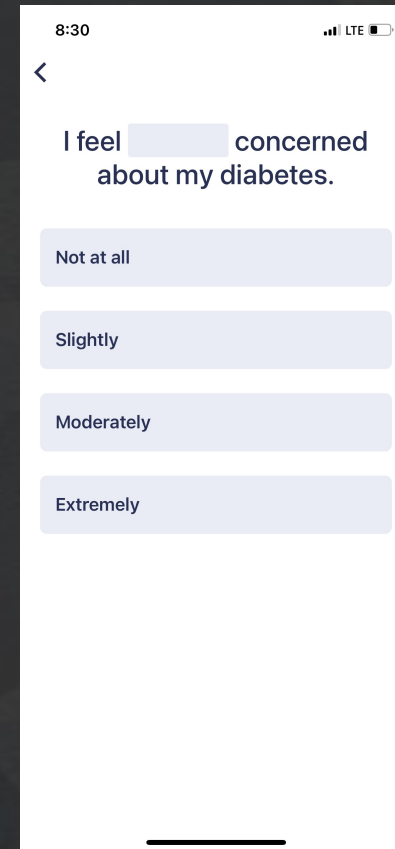

1. Choose **Redirect** as the action type.
2. Name your action something inspirational, like **Import**.
3. Choose a helpful icon.

<http://blog.screensteps.com/10-examples-of-great-end-user-documentation>

# H11\* – Accessible

Users can interact with the system using *alternative input methods*. Content is legible with *distinguishable contrast* & *text size*. Key information is upfront & *not nested* for screen readers. Purely visual or auditory content has *text-based alternatives* for users with low vision & low hearing.

\* New heuristic that CS147 staff has added to Nielsen's 10.

Glucose Buddy

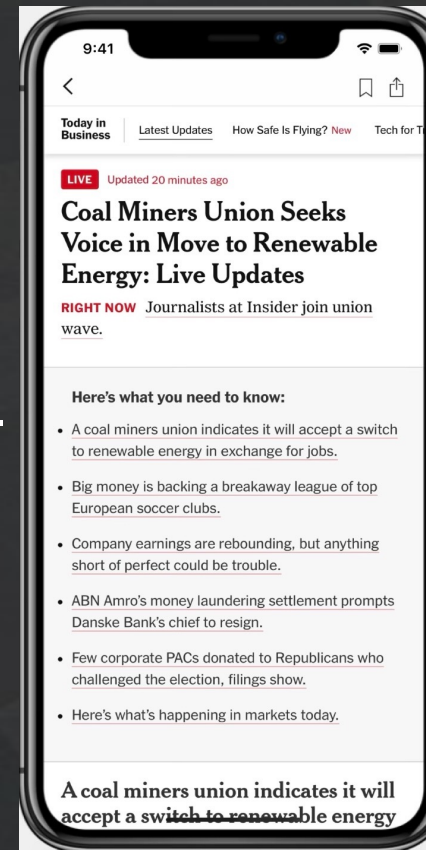

Be My Eyes

# H11\* – Accessible

Users can interact with the system using *alternative input methods*. Content is legible with *distinguishable contrast* & *text size*. Key information is upfront & *not nested* for screen readers. Purely visual or auditory content has *text-based alternatives* for users with low vision & low hearing.

\* New heuristic that CS147 staff has added to Nielson's 10.

NY Times

Spotify (lyrics mode)

# H12\* – Fairness & inclusion

Users shouldn't feel that the design is not made for them. The design should meet all users' needs equally and *prevent the reproduction of pre-existing inequities*. It should *not create additional burdens for disadvantaged populations*.

\* New heuristic that CS147 staff has added to Nielsen's 10.

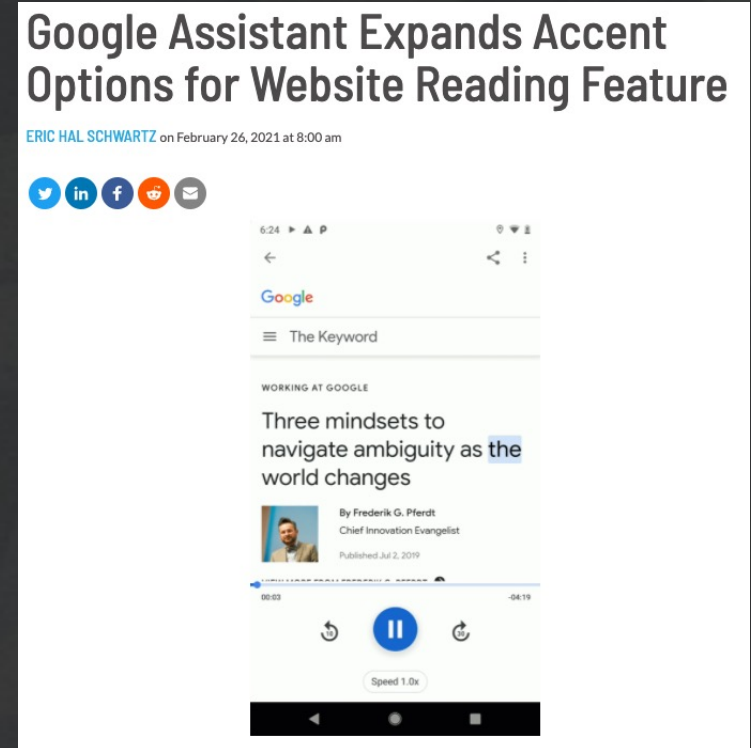

<https://www.theverge.com/2021/11/16/22785163/digital-health-physical-activity-inequity>

Western, M.J., Armstrong, M.E.G., Islam, I. *et al.* The effectiveness of digital interventions for increasing physical activity in individuals of low socioeconomic status: a systematic review and meta-analysis. *Int J Behav Nutr Phys Act* **18**, 148 (2021). <https://doi.org/10.1186/s12966-021-01218-4>

# H13\* – Value alignment

The design should *encode values that users can understand & relate to*. *Conflicting collateral values should not emerge* when the user interacts with the product. Encoded values should match users' values in a broad set of contexts.

Google adds accented reading but leaves out marginalized groups.

\* New heuristic that CS147 staff has added to Nielson's 10.

# Heuristic Violation Examples

1. [H6 Recognition Rather Than Recall]  
Can't copy info from one window to another
  - user needs to memorize the data & retype
  - fix: allow copying
2. [H4 Consistency and Standards]  
Typography uses different fonts in 3 dialog boxes
  - slows users down
  - probably wouldn't be found by user testing
  - fix: pick a single format for entire interface

# Severity Ratings

- 0 - don't agree that this is a usability problem
- 1 - cosmetic problem
- 2 - minor usability problem
- 3 - major usability problem; important to fix
- 4 - usability catastrophe; imperative to fix

# Severity Ratings Example

## 1. [H4 Consistency & Standards] [Severity 3]

The interface used the string “Save” on the first screen for saving the user’s settings, but used the string “Store” on the second screen. Users may be confused by this different terminology for the same function.

Fix: Use “Save” everywhere in the application.

## Carl's Car Audio and Electronics -- Shopping Bag

what fits my car? [logout](#) [continue shopping](#)

Your vehicle: 1989 Tercel

To select a different vehicle, click 'What Fits My Car' above

### PLEASE NOTE

Order Total:			<b>\$2,596.24</b>

[Update Cart](#) [Clear Cart](#)

- To change an item's quantity, enter the correct number in the **Quantity** column, then press **Update Cart**.
- To remove an item, check the box in the **Remove?** column, then press **Update Cart**.
- To order an item that appears in your printed Crutchfield catalog, enter the item number into the Cart and click **Update Cart**.
- International visitors, please [click here](#).

# Problems Found this Year

- H1: Visibility of system status
  - Username for current shopping cart missing [1]
- H2: Match between system & real world
  - "price" and "total" should refer to different things [1]
  - Items referred to by their Item Number [3]
- H3: User control & freedom
  - Not clear where/how user can place order [1]
  - Missing a search bar [1]
- H4: Consistency & standards
  - Red used inconsistently - error, special, title, out of stock [4]
  - Yes/No Checkbox in "Remove?" [5]
  - Menu Bar links on different lines - logout, continue, shopping [1]

# Problems Found this Year

## H5: Error prevention

- Out of Stock items allowed to be added to cart [4]
- "h" in Quantity Field [7]

## • H6: Recognition rather than recall

- Item number not auto-filled, difficult for user to remember [2]

## • H7: Flexibility and efficiency of use

- Update Cart Button required to update cart and ambiguous use [2]
- Quantity Field could be a selection menu [1]

## • H8: Aesthetic & minimalist design

- Color Combinations - red/green, black text on blue background [6]
- Crowded Design - columns and text squished [2]
- # Sign not necessary [1]

# Problems Found this Year

- H9: Help users recognize, diagnose, & recover from errors
  - “Please Note” error message refers to item bolded in red but multiple items bolded in red [2]
  - Last row has quantity 1 but no other info, user unsure how to fix [1]
- H10: Help & Documentation
  - Instructions for use not immediately visible [1]
  - International users not immediately redirected to other page [2]
- H11\*: Accessible
  - Aesthetic choices difficult for visually impaired- blue links, small text, blue on blue color scheme [3]
  - Error message relies on ability to view red color - hard for color-blind [1]
- H12\*: Fairness & inclusion
  - Requires knowledge of your car beyond just model and year [1]

# Problems Found Last Year

1. H4 (consistency): The use of red to indicate errors, out of stock items, and sales/savings [26]
2. H4 (consistency): two of the check boxes have yes/no next to them but none of the others do. Error prevention? [22]
3. H9 (Aesthetic): "#" is not needed [2]
4. H5 [Error Prevention]: "h" in the quantity box. [11]

# Decreasing Returns

problems found

benefits / cost

\* Caveat: graphs for a specific example

# Heuristic Evaluation Summary

- Have evaluators go through the UI twice
- Ask them to see if it complies with heuristics
  - note where it doesn't & say why
- Have evaluators independently rate severity
- Combine the findings from 3 to 5 evaluators
  - come to agreement on problems, fixes & severity
  
- Alternate with user testing

# Speech UI Heuristics

- S1: Give the agent a persona through language, sounds, and other styles.
- S2: Make the system status clear.
- S3: Speak the user's language.
- S4: Start and stop conversations.
- S5: Pay attention to what the user said and respect the user's context.
- S6: Use spoken language characteristics.
- S7: Make conversation a back-and-forth exchange.
- S8: Adapt agent style to who users are, how they speak, and how they are feeling.
- S9: Guide users through a conversation so they are not easily lost.
- S10: Use responses to help users discover what is possible.

SPOTLIGHT: CONVERSATIONAL USER INTERFACES AND INTERACTIONS

## Evaluating Speech-Based Smart Devices Using New Usability Heuristics

**Zhuxiaona Wei**  
deeplearning.ai

**James A. Landay**  
Stanford University

We developed a set of 17 usability heuristics for speech-based smart devices. An expert evaluation of three popular devices shows that these heuristics can be used to uncover existing usability problems as well as help design new interfaces.

A recent empirical study showed that in both English and Mandarin, speaking is almost three times faster than typing a short message.<sup>1</sup> Thanks to recent breakthroughs in speech and language technologies, speech user interfaces (SUIs) have improved rapidly, and voice-enabled devices are now common. Baidu's Deep Speech 2 system, for example, can recognize spoken words with human-level accuracy.<sup>2</sup>

Nevertheless, designing good SUIs remains challenging.<sup>3</sup> The state of an SUI is often opaque to users, leading to more user errors compared to graphical user interfaces (GUIs).<sup>4</sup> Unfortunately, simply transforming GUIs into speech interfaces does not work well.<sup>5</sup> Although researchers have been working on SUI technology for three decades, much useful knowledge is in older papers and not easily accessible to designers. Moreover, the knowledge has not been updated to reflect recent improvements in speech-recognition accuracy. Consequently, those new to SUI design often feel lost.<sup>6</sup>

To help address these issues, we developed a new set of heuristics for designing and evaluating speech-based smart devices. To validate and improve these heuristics, we had a group of usability experts—half of whom specialized in SUIs—use them to empirically evaluate three state-of-the-art devices.

### RELATED WORK

In the early 1990s, Jakob Nielsen developed a set of 10 usability heuristics for evaluating UIs ([www.useit.com/articles/ten-usability-heuristics](http://www.useit.com/articles/ten-usability-heuristics)). Although these heuristics are most often applied to GUIs, he and his colleagues also used them to evaluate a telephone voice-response system.<sup>7</sup> However, the user input and system output options for the system were quite limited.

# Speech UI Heuristics

- S11: Keep feedback and prompts short.
- S12: Confirm input intelligently.
- S13: Use speech-recognition system confidence to drive feedback style.
- S14: Use multimodal feedback when available.
- S15: Avoid cascading correction errors.
- S16: Use normal language in communicating errors.
- S17: Allow users to exit from errors or a mistaken conversation.

The list of heuristics along with detailed descriptions and examples can be found at <http://hci.stanford.edu/publications/2018/speech-he/sui-heuristics.html>

# TEAM BREAK

# EXERCISE

Heuristic evaluation practice

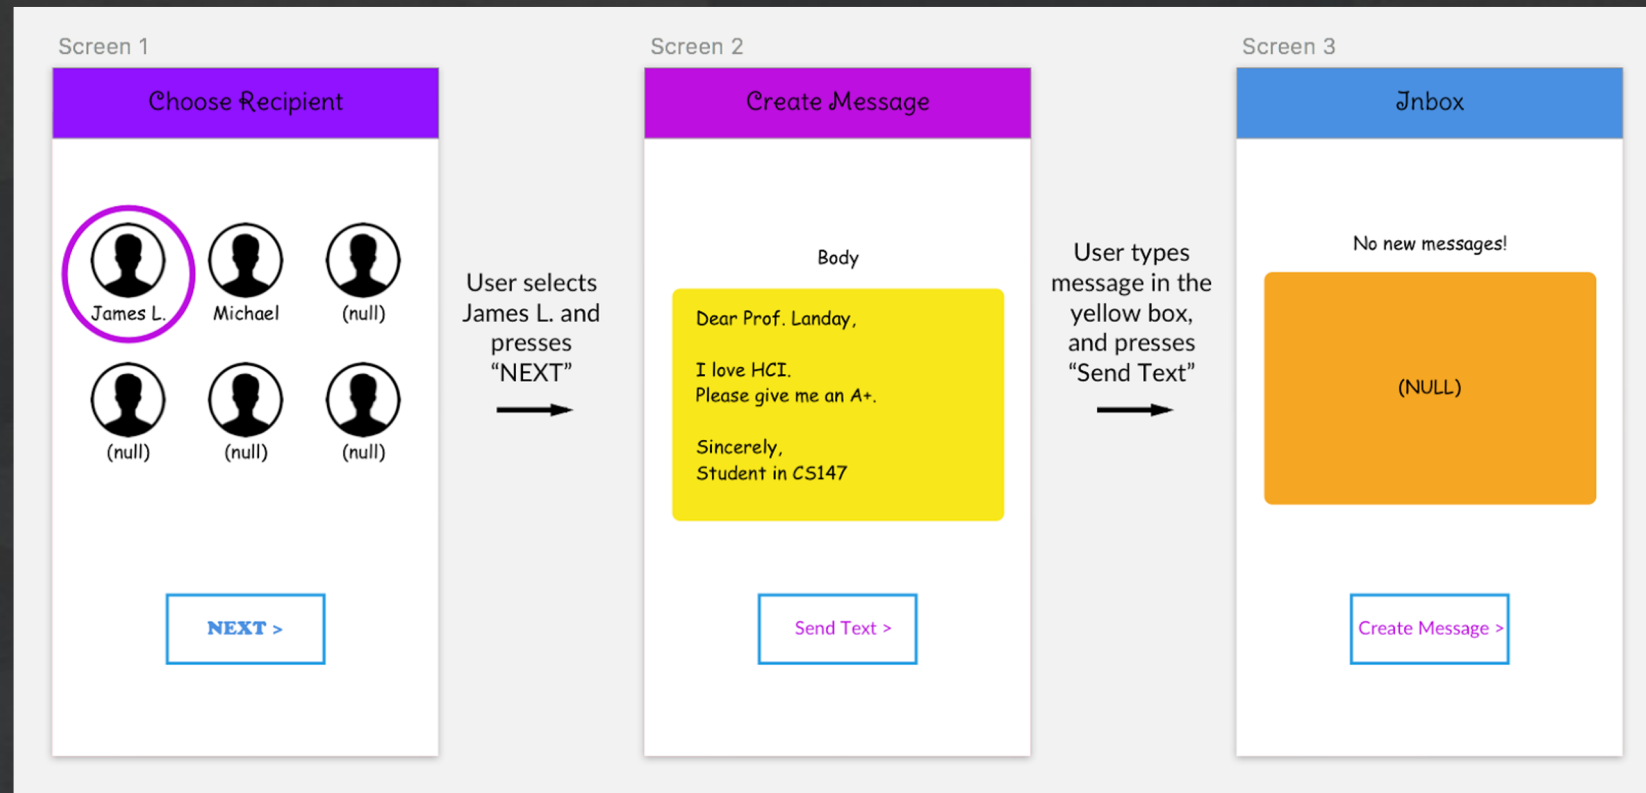

## [8 min]: On your own, find 8+ usability violations

For each one: Which guideline was violated and why? How could it be fixed?

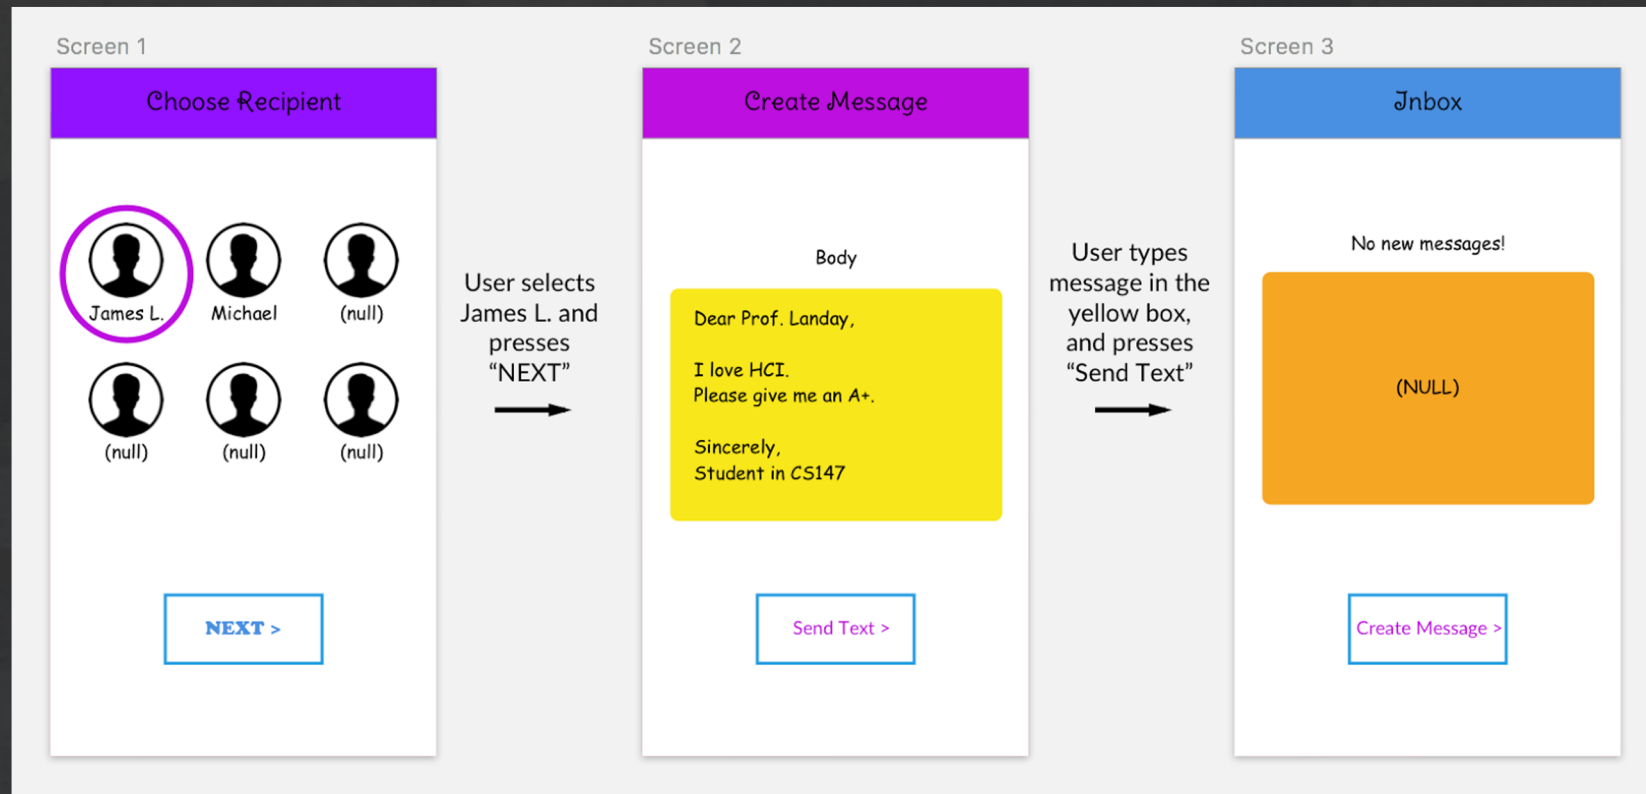

## [8 min]: Share with your breakout room

What violations did you all find? Which ones did only one of you notice?

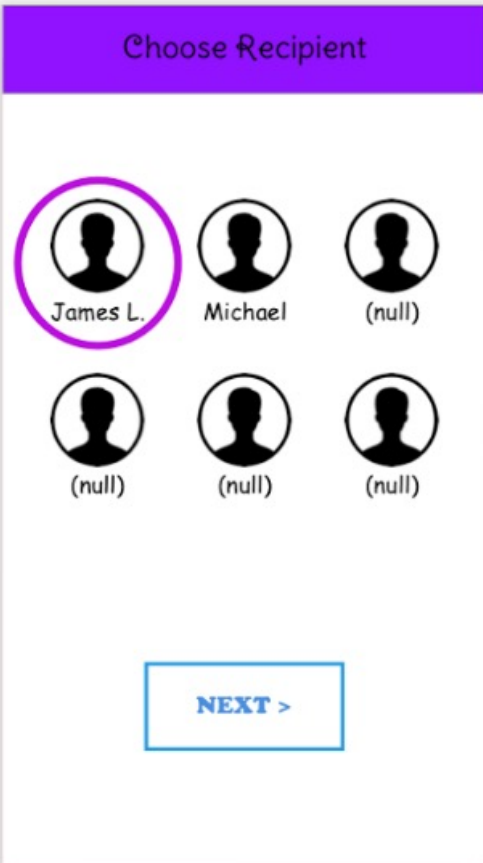

## [10 min]: Share with the class

Raise your hand or post a screenshot with your description on Slack.

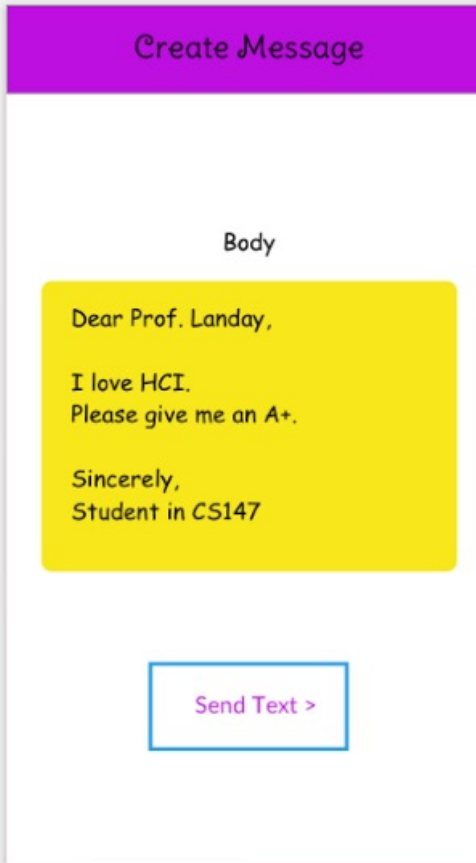

Screen 1

User selects James L. and presses "NEXT"

Screen 2

User types message in the yellow box, and presses "Send Text"

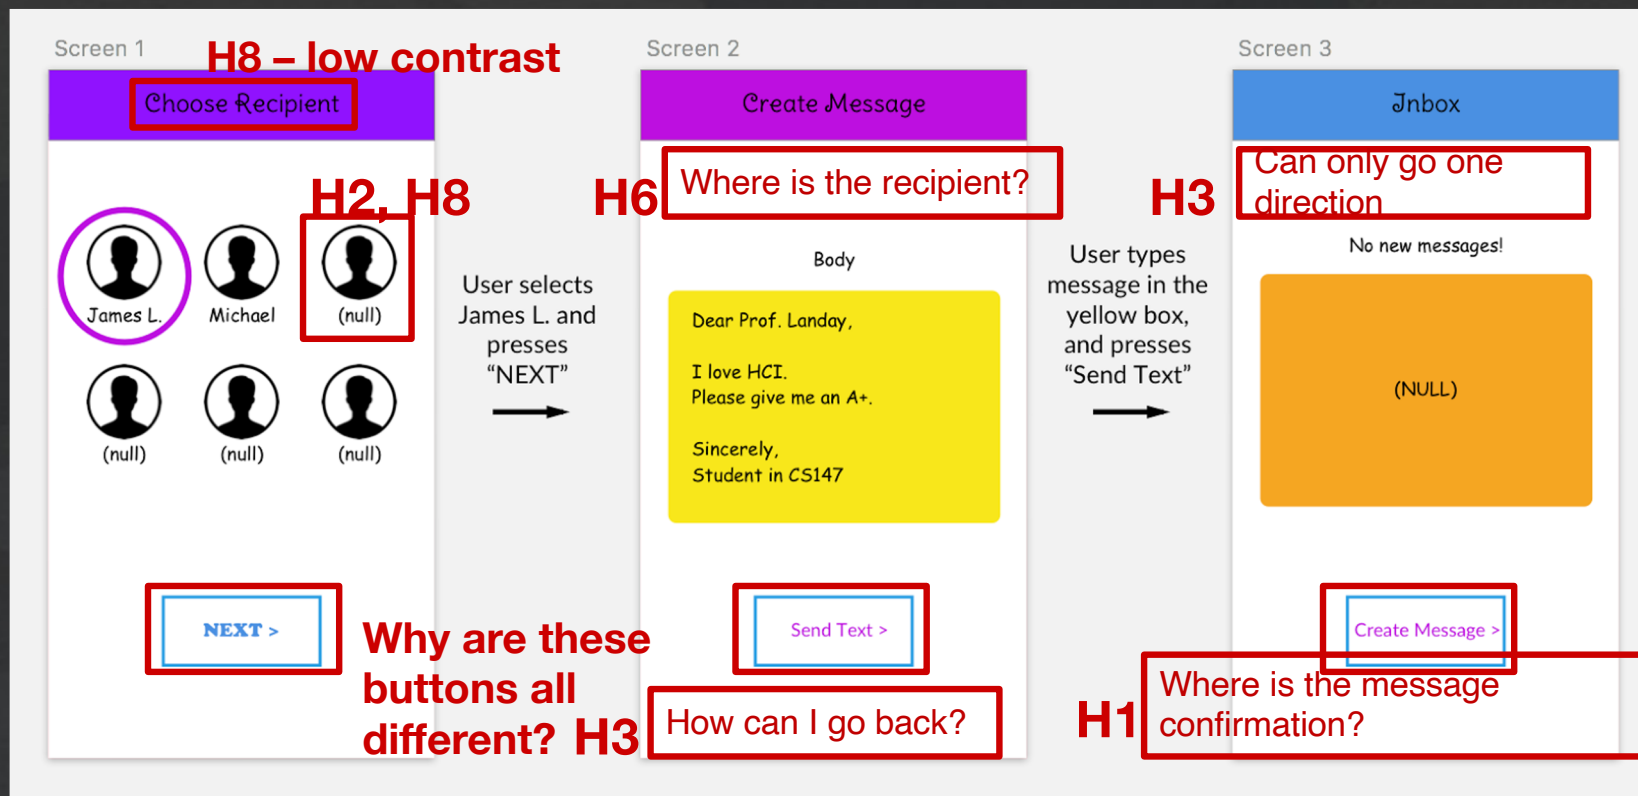

Screen 3

# Find, label, & describe 8-10 Heuristic Violations

# [10 min]: Share with the class

Raise your hand or post a screenshot with your description on Slack.

# Problems Found This Year

*H2: Match between system & real world*

Showing “(null)” for empty content

*H3: User control & freedom*

No “back” button [5]

*H6: Recognition rather than recall*

No way to see who you’re sending to in the second screen

# Problems Found Last Year

1. H1: no feedback on whether the message is sent or not, just navigates to inbox screen
2. [H3: user control and freedom] No way to cancel message solution: add an 'x' or cancel button that allows them to delete the message on screen 2
3. H8. There was unnecessary users listed that were null
4. H4: so many different colors, not consistent
5. H1: No visibility of system status (can't really tell which page I'm on - perhaps some sort of diagram at the bottom could fix this)
6. H6: James L is not displayed on create message screen
7. [H6 Recognition rather than recall] Can't see who you're sending the message to when you're creating the message. Fix: include sub-header that specifies name you just clicked on
8. H4: inconsistent button design
9. H4: consistency with names on the first screen (names have or don't have last initials) --> should just choose one format (potentially just first name if we want to avoid clutter)
10. H8 (aesthetics) - The headers have low contrast (especially the purple/pink) and should use less saturated colors for better contrast.
11. H3/H6: User can't go back from screen 2 to 1 if they mislicked on the wrong person's profile, no recall of who you selected --> recall the recipient name on screen 2
12. H3: User control and freedom - can only send to recipients in the list, no way to add a new recipient
13. H9: "error"/null messages offer no explanation
14. H3: can only send text (no images/files which might be helpful in certain cases)
15. [H5 Error prevention] Could potentially select (null) users to write messages to. Fix: just don't display the icons of null users at all.
16. H7: unnecessary "next" button on the first page. Might instead click on the person to transition to the next screen, and display the person's name on screen 2 (H6) and add back button there (H3)
17. H3: How do you view old messages?
18. H10: no help or documentation included - just buttons indicating the very next step
19. H4 consistency: not sure the differences between 'text' 'messages' 'body'
20. H3 - no ability to edit message text
21. H2: "Body" and "Null" might not make sense to user without technical background, but also why would they even see these words to begin with
22. H4: terminology of "message" vs "text"
