Coolspear1 has not created completely new careers, but it did it. It is better to read the descriptions to have a complete explanation of all the things that will make the careers more realistic and seamlessly during gameplay (how to increase the probability of emergencies in the doctor's career, Or
add more collaborators to both careers). I love the! He took the mechanism A «Work at home 'included in the City Living expansion package and applied to different careers in the base game, including Astronaut, Tech Guru, painter, culinary, entertainer, business, athlete and writer, in So that your sims can choose whether to go to work every day or
stay at home and complete their tasks. Of course, it is necessary to live in the city, but it is an excellent addition to the game, as a legal career, a
career of training, architect, military and even a self-employment career. These are some excellent options for players who love to play with a more realistic game, rather than having sims that have the kind of extravagant work that comes into the game (I mean, let's go, not everyone grow up to become astronauts or rock stars!) Zerbo (the creator above the Mod Go To School) has also made new features for this mod ('Relaxer'e Beach
Junkie'), and there are also new CAS clothes that will look great on your Sims at the beach-go. I really love this mod! Mod The Sims 4 Columns does not keep it in my game all the time, but I like to put it in when my Sims want to take a tropical vacation and relax on the beach! English! Sims 4 modders have been creating personalized traits and aspirations or, but here are TONS out there are some of my favorite personalized traits and aspirations, which I think is worth mentioning. For some reason, Get To Work included no aspiration to go

This mod adds four new aspirations to the game, which go with the careers of Get to Work, Detective, Doctor and Scientist, and a Frankenstein aspiration bonus. All these aspirations come from new interactions and buffs, and really add some new elements and fun to Go

I think this is a great thing for young Sims, and it's just a really fun, realistic detail for the game, including Romance, Knowledge, Family and Growing Suction! These are great new

This is a truly special stretch, and I particularly like the thought that has entered it. Finally, while it does not add any new mods or aspirations to the game, adds the ability to randomize traits and aspirations when creating Sims. This is
great for someone who has difficulty choosing aspirations or traits to give their sims, or for those of us (like me) who simply use the same times plus and more times, basically recreate the same sims with every new game. This does not add to the real game, but it's definitely a must-have if you are a generation-type player, or anyone plays the game for
more than a few days. Here is the fact: Sims 4 has a huge glitch in it, where you remove (delete) sims from your quarter basket. This happens after a week in the game, or when your population reaches over 200. The game does this to keep things running smoothly, which looks great in theory, but the problem comes with those who choose to crouge ¢

you can keep an eye on the population by downloading this). This is a MUST-HAVE for any player, a Opinion! I'm so excited! I was a greedy Sims 2 player at the time!! My game has been filled filled personalized content that I loved!! I never entered Sims 3 because © I'm sorry. {My daughter plays it... it sounds really interesting! I will lose my

The fourth iteration of the one Strategy game ', Hearts of Iron succeeds at keeping the classic Paradox Grand-Strategy-Strategy scale, but focusing it in a
waregamous context having players browse the political and then military landscape of the world between 1936 Å ¢ â € Å "1948. An integral part of the game, as you can imagine, consists in fighting in the wars bursting during this era. While the story is directed a little more than it is in other Paradox games, there is actually flexibility here than
previous iterations. So while always fighting, in a very general sense, the Second to "War of the World" The nature and course of that war can be radically different every time. And then more ground while Hoi IV dedicated mechanics and systems to fight both in the air and at sea, in the heart of him (iron?) This is a game about War! To fight Earth
wars, it is necessary to create divisions using the wonderfully flexible and slightly impenetrable Division Designer. What does all this mean? What do all those statistics do? What defines the effectiveness of a division against. That's where we come in. First of all, you're gonna want to watch. TJ has done a great job deciphering what all the statistics
mean, even though he's dropping F-bombs like his Battle of Britain. With a basic understanding of what it all does, you're ready to start looking at how to make the craft divisions. There are some basic things to remember: The general consensus is that the Combat width of a division should be maintained at or below the 20's (see section below).
Research &tTrinits will influence some of the fundamental principles set out here, as well as more advanced models of things. Always keep in mind the productive capacity of your country. If you are a smaller and poorer country you will have to reduce considerably. Changing division models costs XP, which can be difficult
to get into the game first depending on who you are. Try to plan how you want to set up your divisions, as you will not be able to afford too much evidence and mistakes. A good way to get XP in peace is to form divisions, and send volunteers to other wars (which depend on ideology and world tension). Training divisions cost equipment, but combat
bonus units get when they reach level 3 is invaluable, so you get two advantages. A division is composed of Regiments, which in turn are composed of Battalion. The regiments are columns, so the more battalions a regiment is the more troops that have to pedal though, but generally you want to be as deep as you are wide, especially to the size 20

that each side can field up to 80 division widths (not counted for any modifiers). In addition, an extra width 40 is applied for addition, will attack with 4 divisions on the main thrust, and then two on the side The .best
division pattern of division Hoi4it is worth noting that in this scenario 3 V 1, only you get the extra width - the enemy must attack with the 80 coming from their province. Simply put, 4 x 20 = 80, but 4 x 21 is 84
This means that an entire division is sent to book accordingly, actually just sticking with 3x21, which is 63. If your enemy has blocked up to 20 combat width, and Assuming they have designed well, you are at a 17 point disadvantage and will probably lose. Linesupport Battalions are a vital part of a division's trick. You will notice some types, such as
towed artillery and anti-tank guns, can also be inserted as "line" battalion is "support" or "line" is:. Support slots do not change the speed of a split, which is set to the slower unit. This means you can put the artillery back up with a motorized infantry division and it
will still be as fast as the motorized units, for example. Support regiments can be dropped out of the air along with the paratroopers, which allows you to give a much needed backbone to these divisions. Support regiments require less and labor. But in the case of, for example, artillery or even less have an effect on the statistics of the division
compared to a complete regiment of the same type. With that in mind, it's just worth putting the "Line" versions of things like And AT on foot infantry much more firepower. To stay within the 20th Combat Width limit you will have to sacrifice an Infantry
Regiment, but the exchange in terms of HP and Organization is worth it. For armor divisions/combined weapons, you typically want to give them support battalions until you unlock the self-propelled frame versions of Artillery & AT, so you won't be hit by speed sanctions. Combined ArmsWhile you can create divisions that work for a specific purpose,
you generally want to mix things up.. Depending on the role your division will assume, it will dictate the trick. As we said above, the infantry provides a lot of HP, Organization and Defense, while the armor provides a lot of punch. Still TJ makes some great videos that speak in depth in general crafting theory for Infantry and Armour divisions: there is
one more, but it usually covers the elements of the other videos, and until you get to mechanization I personally would advise you not to have all the infantry divisions motorized because they cost 200 more labor. 1 per battalion, more have heavy ground penalties. All you get in return is really the extra speed, but there are better combinations you can
use. It is a more rounded unit, but Light Armour has its drawbacks - they cost so much 'Medium' tanks but they are not as good, one school of thought is to wait until you reach Medium before adding tanks to the divisions. Be sure to check out this video also on, including a dedicated anti-tank division. TJ also covers a ground-based AA model, but
we're getting mixed reports that division-based AA really has an effect right now. It is also worth bearing in mind that and Mountainers are considered considered considerably superior to the regular infantry due to the STAT distribution (lower HP, but better organization), so an option is Ã" Move your entire infantry to a specialized unit where possible. You will
not repeat too much of what you talk about TJ, but there are some important. You'll be going through an organization is important. You'll be going through an organization. The technical
support and reconstruction battalions are automatic. If you have motorized or Amour, maintenance is also a must, with the hospital camp that is good for infantry divisions. If you are fighting outside of continental Europe, logistics can also be a life saver. The reporting medium is a secret weapon "use it more. You will want separate divisions for
attack and defense, even if it is possible to design all theorems as well. Generally infantry is better in defense than they are not in attack, but mechanized battalions change this dynamic some-thing. The standard infantry division models are 4/3/3, the same for infantry. Working towards the width of the 20th fight, you add and add and subtract other
types of battalion from there. E.G., 3/3/4 / infantry tank (motorised or mechanized). WikiFinal Thoughts of Hoi4 There are exceptions to all things above "land, which you are fighting, the productive capacity of your nation, research. These all dictate or will otherwise change what your "optimal" regiment builds will be. You won't need much to fight China, but you'd like a f.ton for Russia. Halo Wars
has generally received positive reviews. Reviewers praised the pre-rendered movies, the attention to detail in replicating the Halo universe, and the intuitive control scheme. Complaints against the game included the lack of an option to play as the Covenant faction in campaign mode as well as the lack of strategic options during the game. Critics from

console, In which the players command the armies from one of the battlefields. The game focuses on military combat, but contains simplified building elements. It was designed bearing in mind that, for example, the A button is used to select units. A single touch of the button selects one, while a double key selects all units of the same type. The
navigation to the current battles and cycles through the bases, while the right regulates the angle of the camera. A radial is used for basic construction. Halo Wars has a history, military campaign that can be played alone or during service. A no-plan option, called "Screen Mode", allows players to compete against human or computer-controlled
opponents. The game features two factions that players can control: the human (UNSC) such as Captain Cutter, Sergeant Forge or Professor Anders, and the alien as Prophet of Rimpiret, Arbiter or Brute Chieftain. Each faction has different units, strengths and special abilities. There are three Leader selectable for each party; the chosen leader
allows the use of specific units and enhancements during the game. While the leaders of the Pact appear on the battlefield as a unit, human leaders do not. Combat in Halo Wars is by a system. In general, land vehicles are effective in combating infantry, infantry against aircraft and aircraft against vehicles. Most of it. Units have a special ability: for
example, human marines throw grenades, while the Warthog vehicle can hit enemies. Fire and its special abilities, like a powerful called M.A.C. (Magnetic Acceleration Cannon). Covenant units are generally weaker than their UNSC counterparts, but can use powerful and economic defense generators to add protection to their bases. Players
establish their armies by building and expanding bases; These are used to train the units and to allocate resources to search for updates and technologies. There are a limited number of possible base positions on any scenario or map, making base fortification and defense a priority. A player is defeated if all his bases are destroyed, unless a new base
is quickly established. A player's army must also be destroyed in order to be defeated. Units are trained, upgraded buildings and special abilities activated using resources known as "supplies". Players can find supplies on the battlefield, or generate them by building supply structures at the bases. More of these buildings produce more supplies. Some
structures and updates become available only after the player reaches a certain "technological level". The UNSC can achieve multiple technological level four; The Covenant builds a single temple that allows for three technological upgrades. The Covenant has a less
technological level, and each upgrade is more expensive. Destruction of a temple causes the loss of all technology until the temple is rebuilt. Each base has a limited amount of space, so players must balance their resource buildings with other structures, such as those used to create military units. The number of units a player can distribute is limited
but some updates facilitate this limit. Plot Seting Halo Wars takes place Of the Halo series, during the 26th century. In 2525, a collective of attorney breeds known as the humanity attached, declaring humans a faced to them, theirs. The game takes place at 2531, about 20 years before the events of. Development Computer game developer designed as a real-time strategy game where players would tactically control units and vehicles in a three-dimensional environment. Microsoft bought Bungie in 2000, and the game became one and the same for the console. Bungie produced two
best-selling sequels in 2004 and 2007, before separating from Microsoft and becoming an independent company once again. Although Bungie is free to produce new intellectual property, Halo's rights remain with Microsoft. We spent a whole year just trying to reconstruct how the commands would work on an RTS game. Without revealing the title, Goodman described the game as shorter and
visceral than their previous projects. Halo Wars was not originally a Halo series title. Ensemble discovered that managing the resources, units and
buildings of Age of Mythology was too difficult with the console controller. "The answer to making a PC-style strategy game for a console is hidden in the query'; It's something we believe has kept
strategy games from success on the console: you can actually bring a PC-style strategy game to the basic game mechanic is connected to the mouse and keyboard input devices. It is not just a question of changing the control system to be Friendly - You need to adapt the mechanic of the strategy below to make sense with the
new input device. "With the aim of doing the first game of great strategy on the console", mechanical ensemble of simplified gameplay;
The single game resource is produced on each basic site, which allows players to scroll quickly through their bases instead of multiple microgomaniac resources in many locations. The developers were satisfied with the controls, presented is not
happy with this development. The Founder of Ensemble, Tony Goodman, said in an interview of 2012 that Bungie saw the move as "The Whoring Out of Nost Franchise ultheough Ensemble had to recreate all the resources of bungie from scratch, Bungie had produced a great quantity of Reference material for the reference material for Halo cinematic

Observe the artistic continuity between Halo Wars and the previous games of the The series, ensemble has created a series of guidelines for their artists to follow; Eg, They had to keep their curved,

"The first-person shooter fans have very strong expectations for the look, feel and play of Halo games, to save humanity, mega-battles across the galaxy, visceral combat, highly tuned and a raging tension, "Peace said. These themes were considered fundamental to the Halo experience, so Ensemble tried to

replicate them for Halo Wars. At the beginning of the game tests, developers saw Halo fans playing the game; Their feedback has led to the development of special skills, which, according to Devine, has improved Halo's feeling. Initially the Ensemble thought to make Flood a playable race, but the idea did not go beyond the conceptual stage
According to Devine, this is largely due to the fact that the flood should have been similar to US, in order to maintain the balance with the UN Security Council and the Pact. This did not correspond to Flood's role as "the most frightening thing in the galaxy." Because of its important role in previous games, Spartan units made a considerable effort
The head designer said that the design team "began by accepting and embracing the fact that the Spartans must be the coolest unit in the game. If they are not, they will not be able to meet the expectations of Halo fans. The team gave that the
players would stick to the individual Spartans in the campaign and give each one an individual name; the squash units remained nameless. The design of the Spartan characters wanted to emphasize their relative and the setting of the game, which takes place decades before the events of the main trilogy. Ensemble expanded Halo's universe during the development of the game, in order to create enough units to give players strategic options. Among the new units was Gorgon, a bipede that used weapons called Needlers to destroy light aircraft. Ensemble thought to use the original, less advanced Spartan Mark I armor suits, in line with Halo tradition, but once added these units were indistinguishable from the
Spartan Covenant in appearance. Instead, they created a blur, a mechanized unit called the Cyclops, a nod to the Mythology Age of Ties. Time prevented many elements from appearing in the final game. One of these features that was missing was a system of fatalities from which the Spartans or Covenant leaders could inflict enormous damage on
