Assessing Web Application Security

<http://killexams.com/exam-detail/HP0-M25>

E. The Start Macro is used to gain session state at the beginning of the assessment and to maintain session state throughout.

Answer: A, C

Question: 95

What are the functions of the setting Limit maximum web form submission to (3)? Select two.

- A. stops submitting forms after encountering 3 pages
- B. lightens the load on the target host by throttling the WebInspect scan
- C. ensures that any single form will only be requested 3 times during the Crawl phase
- D. saves time by only submitting a limited number of valid values for any individual form
- E. ensures that any single form will only be submitted 3 times during the entire assessment

Answer: C, D

Question: 96

How do you slow down a scan? Select two.

- A. Turn off the submission of hidden forms.
- B. Increase the Timeouts value and the Retries value.
- C. Switch the Crawl and Audit method from Simultaneous to Sequential.
- D. Drop the Requestor counts to 1 for Crawl threads and for Audit threads.
- E. Change from the Standard scan policy to the Passive scan policy and run an Audit-Only Scan.

Answer: C, D

Question: 97

Which options best describes a Crawl and Audit (Sequential) scan?

- A. This scan spiders the website, discovering all links and pages therein.
- B. This scan forces the user to provide all of the site pages by hand via their browser while the audit performs attacks.
- C. This scan discovers links/pages while attacking the same pages, running with multiple threads. A recursion setting allows new items discovered in the attack phase to be spidered further.
- D. This scan fully discovers the site structure first, followed by a phase of attacks of the same pages. A recursion setting allows new items discovered in the attack phase to be spidered further.

Answer: D

Question: 98

Which regular expression best matches the string [w-]+@[([w-]+\.)+[w-]+?

- A. 192.23.39.9
- B. alice@wonderland.com
- C. http://www.somesite.com/
- D. alice.smith@wonderland.com

Answer: B

Question: 99

Management has asked you to quantify the improvements and corrections completed by the development team since your last WebInspect assessment of a particular site. How can you generate this data for them? Select two.

- A. Run an identical scan compared to the first one. Generate a Report by specifying both scan files, and using the Trend report option.
- B. Run an identical scan compared to the first one. Generate a Report by specifying both scan files, and using the Executive report option.
- C. Run an identical scan compared to the first one. Generate a Report by specifying both scan files, and using the Aggregate report option.
- D. Run an identical scan compared to the first one. Generate a Report by specifying both scan files, and using the Developer report option.
- E. Run an identical scan compared to the first one. Generate a Report by specifying both scan files, and using the Comparison report option.

Answer: A, E

Question: 100

What is the purpose and use of Interactive Input designation as used in the Web Form Editor?

- A. This designation prompts a user for an input during the execution of the scan.
- B. This designation encrypts the values entered into a parameter during the scan.
- C. This designation will prevent WebInspect from using these values during the scan.
- D. This designation allows WebInspect to use digital certificates to authenticate to the server.

Answer: A

Question: 101

How can the HTTP response time of the server be determined before you start your scan?

- A. Run the Web Discovery tool.
- B. Run the Server Analyzer tool.
- C. Send a ping request and look at the average response time.
- D. It is displayed in the column of statistics within the Dashboard view.

Answer: B

Question: 102

How does the Redundant Page Detection setting/option affect scan results?

- A. Redundant Page Detection will shorten the assessment time by visiting each page only once.
- B. Redundant Page Detection will shorten the assessment time by visiting only the first four links in every page.
- C. Redundant Page Detection will collate multiple vulnerabilities on the same page into a single vulnerability listing to simplify the Report output.
- D. Redundant Page Detection will shorten the assessment time by identifying common static pages and only auditing a few copies of these structures.

Answer: D

Question: 103

What are two types of Web Macros used by WebInspect?

- A. Start Macros and Login Macros
- B. Start Macros and Logout Macros
- C. Initialize Macros and Login Macros
- D. Initialize Macros and Logout Macros
