SPECIAL SHAPES

Regardless of what's perceived in the mind's eye, Endicott possesses the ability to transform that image into an aesthetically beautiful shape of the highest quality. These shapes, available in colors, textures and sizes to match the face brick, create the benchmark for design flexibility.

POOL COPING

Applications for this unit are limited only by the imagination. In addition to swimming pools, other unique applications include step nosing and decorative accents on windows, fireplace mantels and hearths.

Pool coping units are available in colors to coordinate with Endicott pavers and tile.

ESTIMATING DATA

POOL COPING:

actual size – 2 1/4" x 3 5/8" x 9"
double bullnose – one end
metric size – 57 x 92 x 228
weight per unit – 6#
no. per linear ft. – 3

actual size – 2 1/4" x 3 5/8" x 11 5/8"
double bullnose – one end
metric size – 57 x 92 x 295
weight per unit – 7.5#
no. per linear ft. – 3

POOL COPING DOUBLE BULLNOSE:

actual size – 2 1/4" x 3 5/8" x 9"
metric size – 57 x 92 x 228
weight per unit – 6#
no. per linear ft. – 3

actual size – 2 1/4" x 3 5/8" x 11 5/8"
metric size – 57 x 92 x 295
weight per unit – 7.5#
no. per linear ft. – 3

PAVERS

Nationally recognized for their aesthetic beauty and durability, Endicott's complete line of brick pavers gracefully enhances any landscape setting and coordinates perfectly with Endicott's face brick, tile and pool coping units.

Endicott's relieved edge pavers feature beveled edges that make a unique visual presentation. The pavers are set hand-tight or butt joint. Beveled edges create a spaced joint effect yet are not grouted. Small spacings (1/16"-1/8") between units accommodate sand sweepings to keep the units apart and create interlock. They are manufactured to meet ASTM C902, Class SX, Type I, Application PX or ASTM C1272, Type R, Application PX specifications.

Private Residence – Lincoln, Nebraska

Liberty Plaza – Pittsburgh, Pennsylvania
Medium Ironspot #46 – 1/2" x 3 5/8" x 11 5/8" and Dark Ironspot – 1/2" x 3 5/8" x 11 5/8" accent

THIN BRICK

Endicott thin brick is ideally suited to year-round commercial, residential and remodeling applications.

Genuine kiln-fired thin brick possesses all the durability and unparalleled elegance of Endicott face brick, yet when installed maximizes space and weighs considerably less.

Whether it's new construction or a remodeling project, Endicott thin brick may be applied over any structurally sound substrate. And because no footings or supports are required, the thin brick may extend all the way to grade.

There are a number of prefabricated panel systems available to the industry that can receive the thin brick as factory or job site applied. Reputable installation suppliers have literature that you may obtain for review regarding project applicability.

Endicott thin brick has been tested according to ASTM-C1088 specifications and meets Type TBX requirements.
