

Implementation science and learning health systems: Pieces of a puzzle

ANNE SALES PHD RN

SALESANN@UMICH.EDU

Overview

- ▶ Brief cartoon versions
 - ▶ Learning health systems
 - ▶ Implementation science
 - ▶ Points of similarity and convergence
 - ▶ Points of divergence
- ▶ Some of my recent (relevant) work
- ▶ Fitting the puzzle together– sort of

IOM defines a learning health system as

- ▶ “... one in which progress in science, informatics, and care culture align to generate new knowledge as an ongoing, natural byproduct of the care experience, and seamlessly refine and deliver best practices for **continuous improvement** in health and health care”

IOM Learning Health System Series 2007 - 2012

4

From Chuck's slides: Schema of a Learning Health System

5

And more from Chuck: the Virtuous Learning Cycle

6

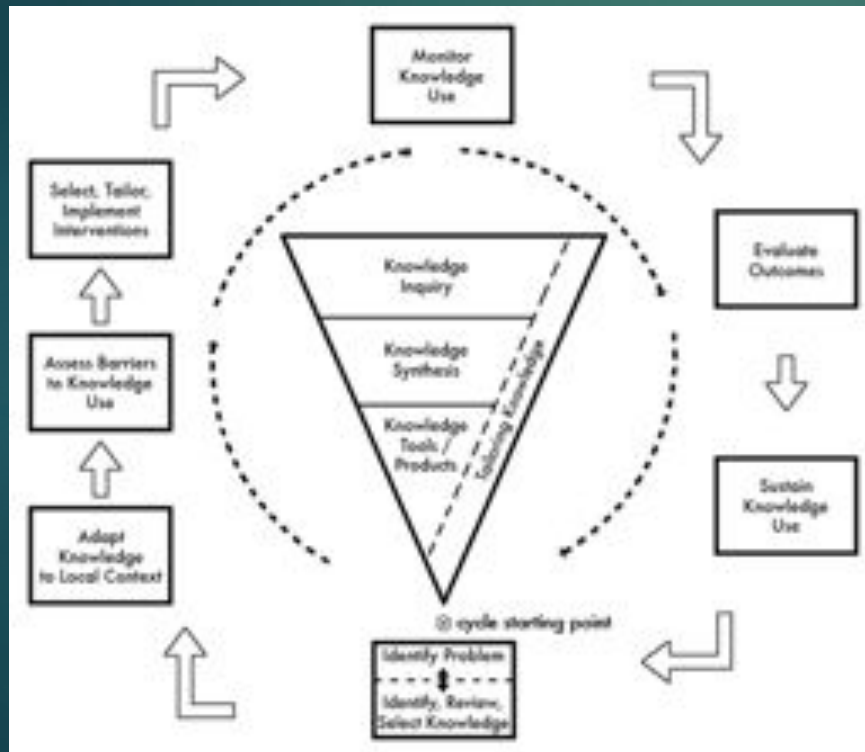

Not unlike the PDSA cycle from continuous improvement

7

And...not unlike the Knowledge to Action cycle

A staple of Knowledge Translation (Canada)

Processes

- ▶ Identify gaps
- ▶ Adapt to local context
- ▶ Assess barriers to knowledge use
- ▶ Select, tailor and implement interventions
- ▶ Monitor knowledge use
- ▶ Evaluate outcomes
- ▶ Sustained knowledge use

Defining implementation science (IS)

- ▶ As defined by the Annual NIH Conference on Implementation and Dissemination, implementation is the use of **strategies to adopt and integrate evidence-based health interventions and change practice patterns within specific settings**. Research on implementation addresses the level to which health interventions can fit within real-world public health and clinical service systems.
- ▶ Implementation science is the study of **methods to promote the integration of research findings and evidence into healthcare policy and practice**. It seeks to understand the behavior of healthcare professionals and other stakeholders as a key variable in the sustainable uptake, adoption, and implementation of evidence-based interventions.
- ▶ <http://www.fic.nih.gov/News/Events/implementation-science/Pages/faqs.aspx>

10

Current state of the science

11

- ▶ Most recent systematic review identified 61 different models or frameworks for dissemination and implementation
 - ▶ Tabak RG, Khoong EC, Chambers DA, Brownson RC. Bridging research and practice: models for dissemination and implementation research. *Am J Prev Med*. 2012 Sep;43(3):337-50. doi: 10.1016/j.amepre.2012.05.024. Review. PubMed PMID: 22898128; PubMed Central PMCID: PMC3592983
- ▶ Previous review (2006) found 41
 - ▶ Several efforts to consolidate frameworks
 - ▶ Damschroder LJ, Aron DC, Keith RE, Kirsh SR, Alexander JA, Lowery JC. Fostering implementation of health services research findings into practice: a consolidated framework for advancing implementation science. *Implement Sci*. 2009 Aug 7;4:50. doi: 10.1186/1748-5908-4-50. PubMed PMID: 19664226; PubMed Central PMCID: PMC2736161

And more

16

The screenshot shows the 'CFIR Constructs' page on the CFIR Guide website. The page features a blue sidebar with navigation links: Home, CFIR Constructs, Design an Evaluation, Design an Implementation Strategy, Tools and Templates, Reported Studies, Additional Resources, Participants, and Contact Us. The main content area is titled 'CFIR Constructs' and includes a brief introduction and a list of 11 constructs. Each construct is listed with a lettered identifier and a short description. The constructs are grouped into two main categories: 'INTERVENTION CHARACTERISTICS' and 'OUTCOMES/SETTING'.

CFIR Constructs

The table below lists all the CFIR constructs by domain along with a short description for each. Clicking on the construct/domain name will take you to our CFIR site which has more detailed information including:

- Detailed description and rationale for inclusion in CFIR
- Qualitative coding guidelines
- Links to quantitative measures when available (these build periodically for updates)
- Opportunity to add to discussions related to any construct

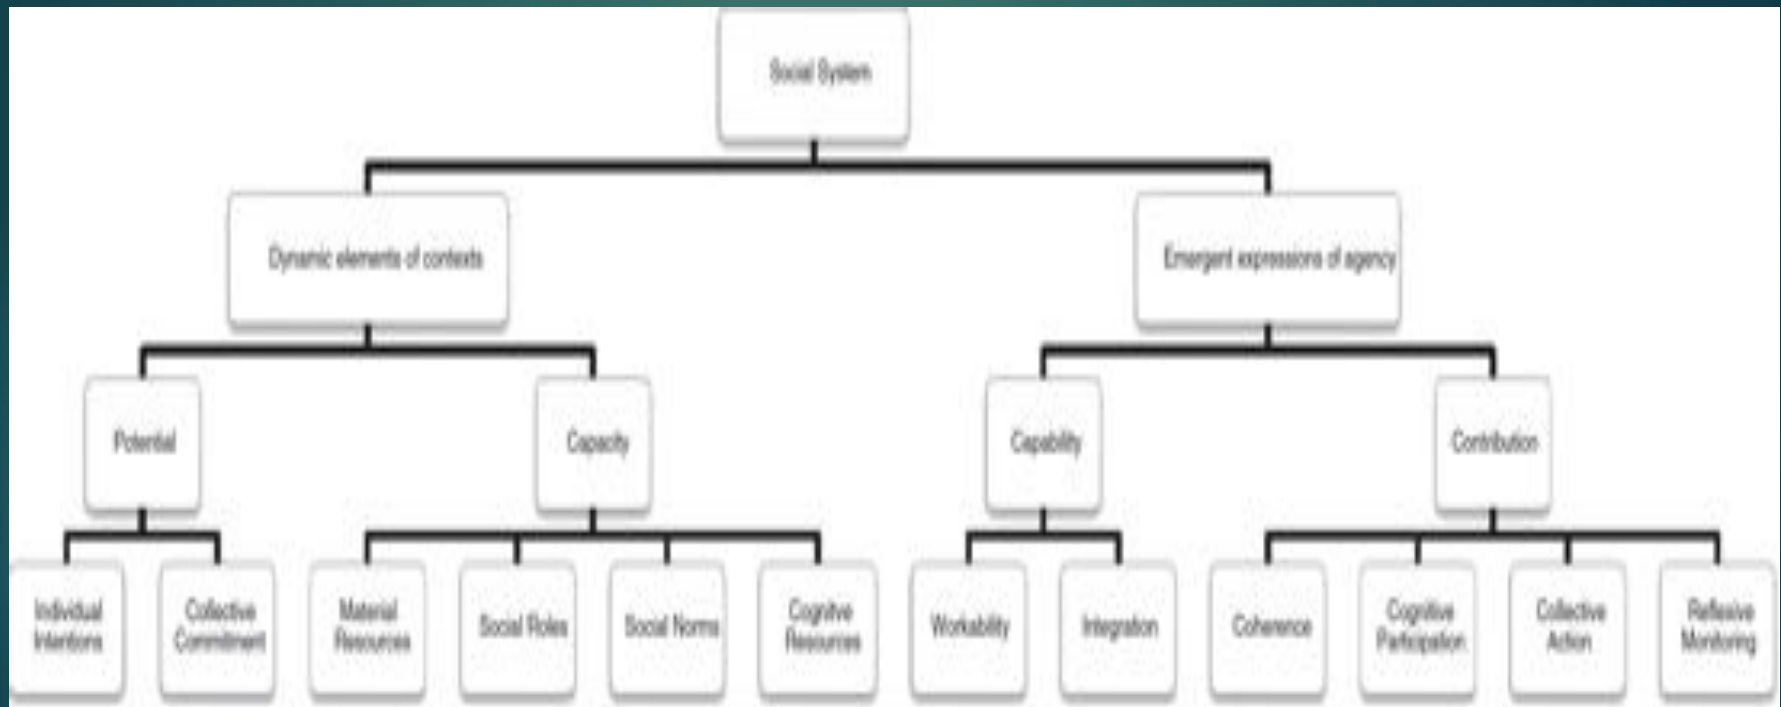

This table is available for downloading in three formats: [Word](#), [PDF](#), [Excel](#)

Construct	Short Description
INTERVENTION CHARACTERISTICS	
A. Intervention Source	Perception of key stakeholders about whether the intervention is externally or internally developed
B. Evidence Strength & Quality	Stakeholders' perceptions of the quality and validity of evidence supporting the belief that the intervention will have desired outcomes
C. Relative Advantage	Stakeholders' perception of the advantage of implementing the intervention versus an alternative solution
D. Adaptability	The degree to which an intervention can be adapted, tailored, refined, or reinvented to meet local needs
E. Feasibility	The ability to test the intervention on a small scale in the organization, and to be able to reverse course (only implementation) if warranted
F. Complexity	Perceived difficulty of implementation, reflected by duration, scope, riskiness, disruptiveness, centrality, and intensity and number of steps required to implement
G. Design Usability & Packaging	Perceived evidence to how the intervention is funded, presented, and assembled
H. Cost	Costs of the intervention and costs associated with implementing the intervention, excluding personnel, supply, and opportunity costs
OUTCOMES/SETTING	
A. Current Needs & Resources	The extent to which patient needs, as well as barriers and facilitators to meet those needs, are accurately known and prioritized by the organization
B. Coordination	The degree to which an organization is interlinked with other internal organizations

Data for improvement and clinical excellence: report of an interrupted time series trial of feedback in long-term care

Anne E Sales^{1,2*}, Corinne Schalm³, Melba Andrea B Baylon⁴ and Kimberly D Fraser⁴

transfer in long-term care facilities: Protocol for a study

Anne E Sales^{*1}, Carole A Estabrooks¹ and Thomas W Valente²

Data for Improvement and Clinical Excellence (DICE)

- ▶ Designed as a 12 month project to deliver feedback reports to all direct care providers in four nursing homes (9 units) in Edmonton, Alberta, Canada
- ▶ Provide feedback reports to all staff
 - ▶ Previous studies only provided reports to professional staff
- ▶ Measure resident outcomes
- ▶ Understand how feedback interventions work in LTC settings
 - ▶ Measuring social networks and their interaction with the intervention
 - ▶ Measuring context using the Alberta Context Tools (not presented)
- ▶ Time series design with control (non-intervention) retrospective comparison
 - ▶ Interrupted time series using segmented regression analysis
 - ▶ Assessment of social networks embedded within study

21

Intervention Period

Monthly feedback reports

22

- ▶ 13 month feedback intervention
 - ▶ Delivered brief feedback report monthly based on resident outcomes/process measures to all direct care staff on 9 long term care units
 - ▶ Measured staff response to feedback reports one week after reports were delivered in most months
- ▶ Used Minimum Data Set-Resident Assessment Instrument (MDS-RAI) version 2.0 data about residents
 - ▶ Pain assessment
 - ▶ Depression screening
 - ▶ Falls and fall risk

Example of feedback graph

23

Figure 1. Residents with moderate to severe pain

Percentage (%)

of new resident assessments per month

Month	▲	●
July	15	96
Aug	11	94
Sept	12	105
Oct	11	115

Post-feedback survey

24

- ▶ Anonymous
 - ▶ Short demographic section
- ▶ Section on perception of feedback report
 - ▶ Read
 - ▶ Understand
 - ▶ Discuss
 - ▶ Find useful
 - ▶ Take action
- ▶ Theory of Planned Behavior section

Falls didn't change

25

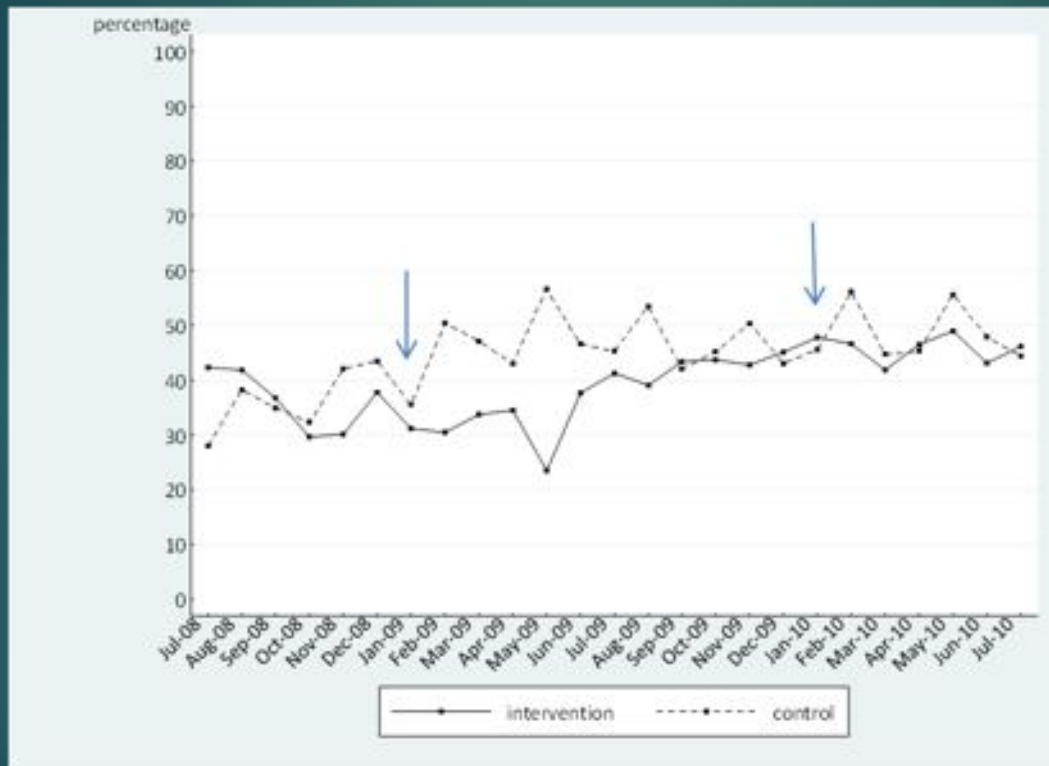

Pain did

26

But depression went the wrong way

27

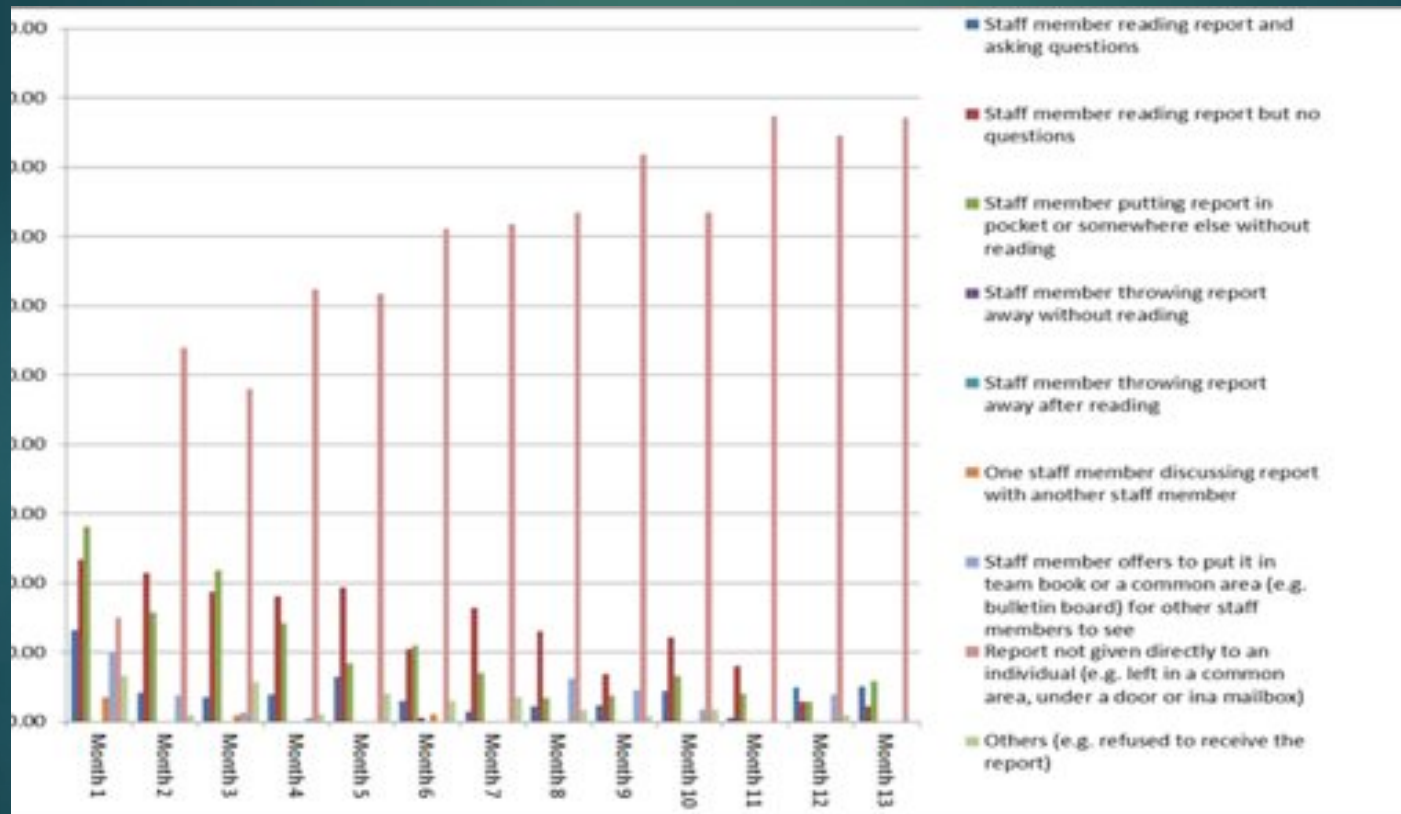

Response rates varied by time and place

28

Observed behavior changed over time

Participants received, read and understood the reports

30

Participants intended to change behavior

31

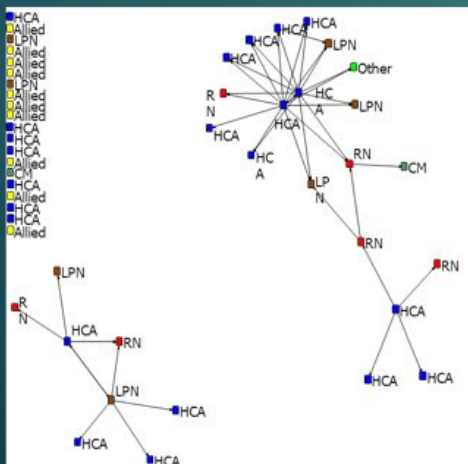

Social network methods

32

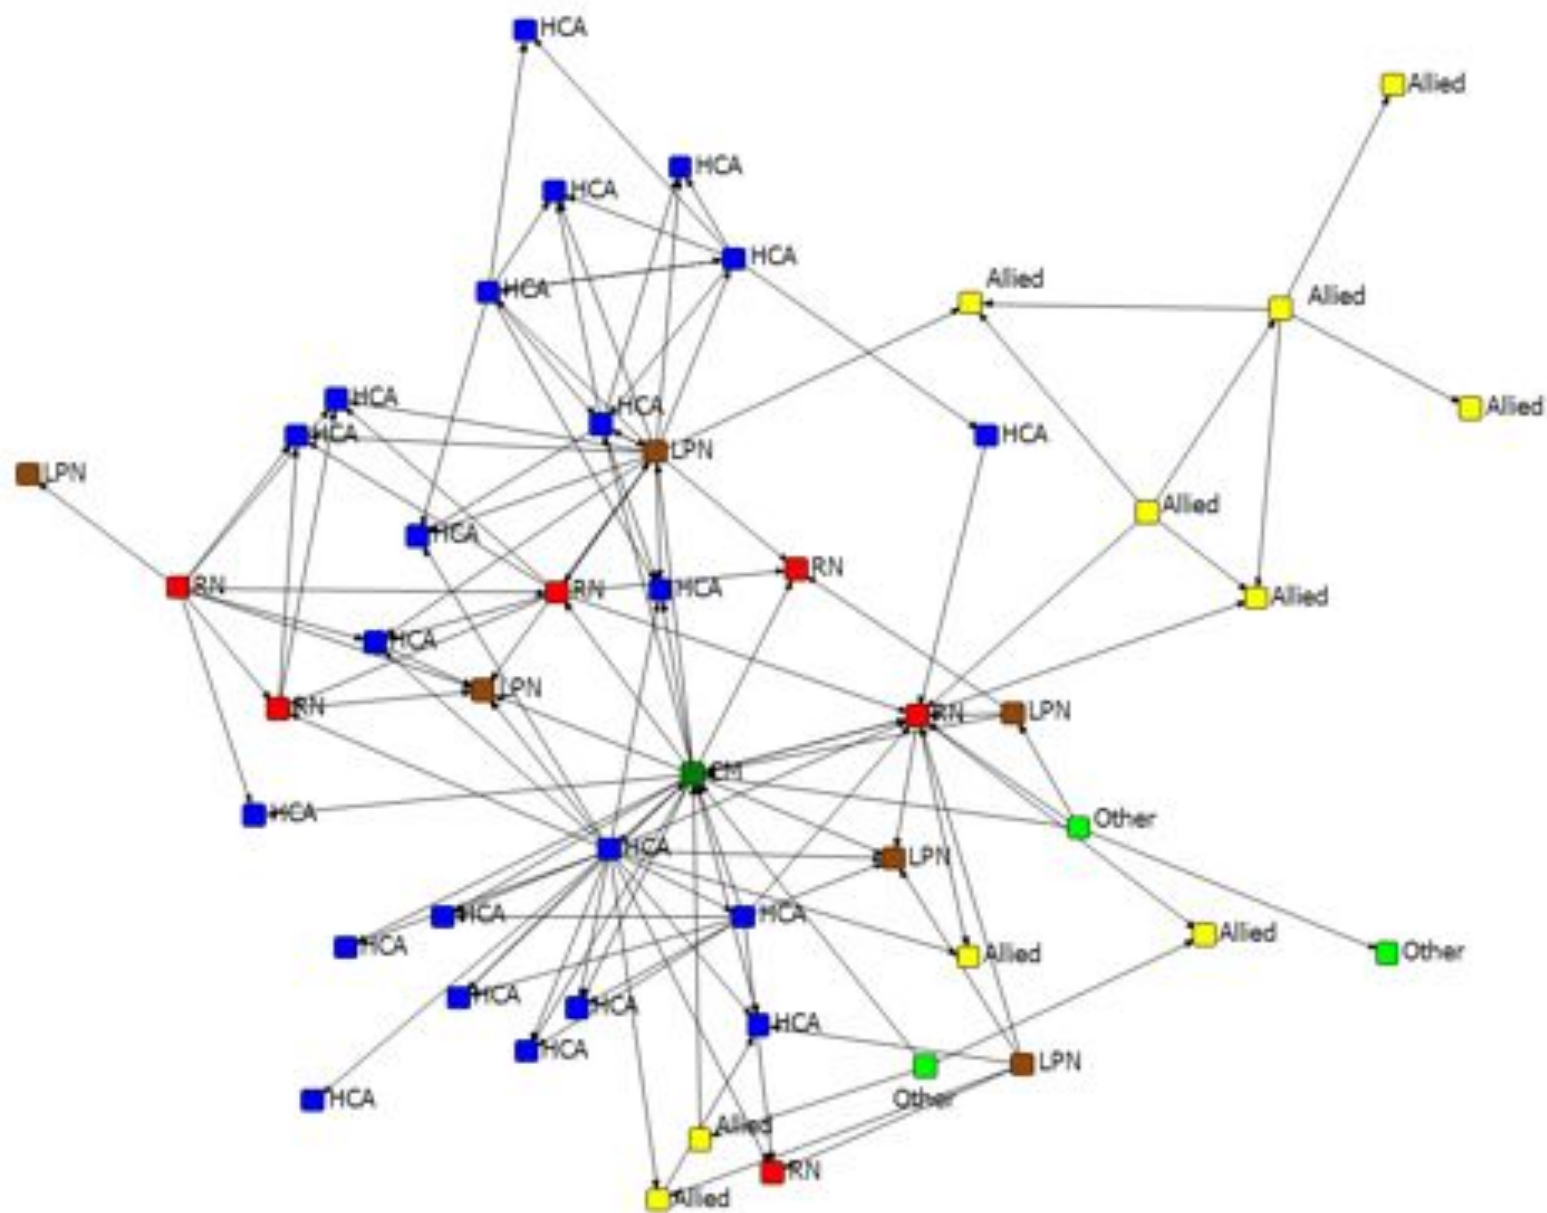

- Paper survey, hand distributed
- Obtained lists of all staff working on the six nursing units as well as staff working on multiple units
 - Unit based staff are mostly nursing staff (registered nurses, licensed practical nurses, health care aides)
 - Multiple unit staff are mostly allied health professionals (occupational therapy, physical therapy, pharmacy, social work)
- Asked questions about five types of networks
 - Relevant to this discussion: “Who did you discuss the feedback report with?”

Networks discussing feedback report varied widely by unit
