EBC BRAKES

Introducing the radical new floating
rotor design technology
SD-System™

**NEW FOR
2007**

What is
SD-System™?

SD stands for SQUARE DRIVE

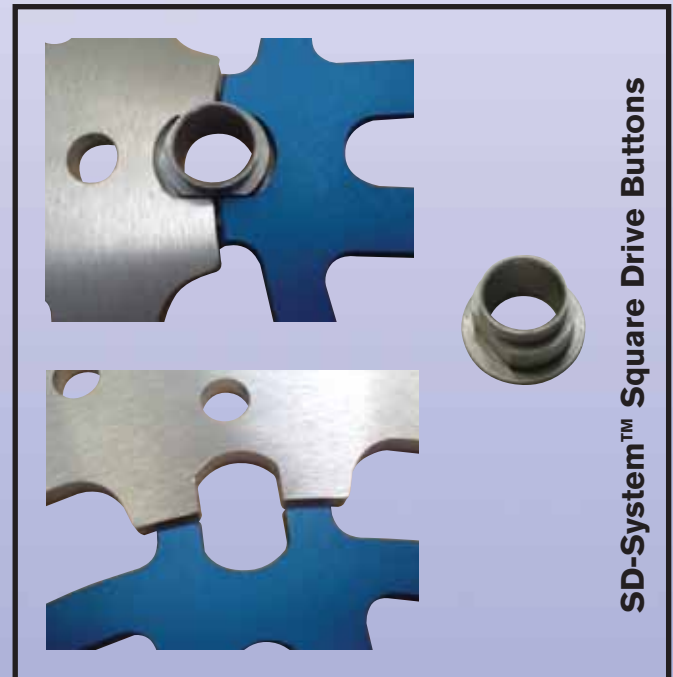

All conventional floating brake rotors use a circular rivet to attach the rotor blade to the inner hub. The SD-System™ uses a square sided rivet with many advantages.

The theory behind SD-System™

Under the heat of braking a rotor blade expands or shrinks in both its diameter and band width causing the inside of the rotor blade to shrink radially inwards towards the hub. With circular buttons, as the rotor shrinks, it will contact the inner button and cause the rotor to tighten and either be distorted sideways causing either brake pulsation or spongy brakes. The SD-System™ of square sided buttons means that the rotor can expand inwards and outwards unrestrained and that perfect rotor functionality is retained at any speed or load. Not only does this extend the lifetime of the rotor and prevent distortion failures, it keeps the rotor blades perfectly true and flat throughout their life cycle and technically the only reason for a rotor to need replacement will be impact damage or over a VERY EXTENDED number of miles possible rotor wear limits being exceeded. This means that a rotor equipped with the EBC Brakes SD-System™ could last 5-10 times as long as a conventional rotor built with circular buttons. A further advantage of the SD-System™ is that the drive forces under braking are transmitted over a LINE CONTACT on the square side of the button compared to the point contact of a circular button. Extended use with a circular button and its point contact will mean that the rotor could shake loose over a period of time in the drive direction. Slackness of the rotor blade relative to the inner hub is a major negative and can cause rotor "throw-out" and lead to severe vibrations at speed. The SD-System™ maintains close tolerances of the rotor in the drive direction over a far longer period thereby extending rotor life.

WHICH PADS WORK BEST ...

For almost 30 years Harley riders have appreciated the softer organic pads (EBC Kevlar® formula pads) which offer fingertip stopping, great brake feel and much less rotor damage. EBC now also offer longer lasting American made sintered metal pads for improved life.

What's new on rotors for 06
After a successful launch of contour rotors in 2005 the new CONTOUR PLUS range.

New EVEN LIGHTER rotor rings now made in STAINLESS STEEL and featuring new scraper slots to accelerate pad bed-in when using EBC Double-H™ pads. Hubs are made from EBC's own tough and ductile special mill rolled billet alloy.

See tech section for descriptions of all the pad and rotor options.

CLUTCH KITS FOR STREET/DIRT/ATV

STREET - 2 choices

1. Standard - CK Series

Almost identical to original equipment clutch plates the CK series are a cork based product impregnated with aluminum particles to increase wear life and heat resistance. Material is highly compressed to avoid swell and clutch drag and is an ideal general purpose replacement material for all grades and sizes of motorcycle. Kit includes a complete 'engine set' of friction plates only.

Note: Do not use fully synthetic oil

2. Race/Sport

SRC Kevlar Series

A Kevlar paper lined plate set complete with heavy duty clutch springs (for bikes fitted with diaphragm type springs we cannot supply a heavy duty spring kit), the SRC kit is ideal for heavy sport bikes, faster riders and production based race use. Advantages of the SRC Kevlar series are longer life, higher heat resistance, although this clutch has a more aggressive/faster take up than the CK cork series.

Note: Do not use fully synthetic oil

DIRT/ATV - 3 choices

1. Full Kit - DRC Series

The US #1 selling off road clutch

Why are these the best???

- Anti-swell, alloy impregnated heavy duty cork based facings provide smooth clutch take up and allow modulation, unlike paper clutches which tend to snatch.
- Complete engine set of friction plates, HD springs and **STEEL SEPARATOR PLATES** prevent premature driven plate wear, oil muddying and loss of stack height.
- EBC DRC kits are built with swaged aluminum carriers which spread the load on the clutch basket and prevent clutch basket "dogging".

Note: do not use fully synthetic oil.

2. Standard - CK Series

Cork based replacement clutch exactly the same as used on the street series CK clutch plates described above. A general all purpose replacement unit.

3. Race - Heavy Duty 'EP' Kevlar Series

The EP kit is lined with Kevlar impregnated facings which incorporates an extra drive and driven plate in the set. Like the DRC the EP kit includes steel driven plates to prevent premature wear and HD springs but has the added advantage of almost unlimited wear life. As with all paper clutches, the EP kit does take up faster on release than the DRC kit. Main advantage of the Kevlar lining is almost total resistance to burning and clutch abuse.

HOW TO ORDER EP KITS

Select kit no. and add suffix EP i.e. DRC5 becomes DRC5EP

CSK CLUTCH SPRING SETS

Always fit new springs which get tired after miles of heat and use.

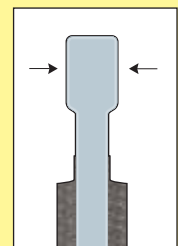

EBC spring kits are 10% stiffer than standard and are sold in engine sets.

As stated in general fitting/safety instructions, advise customers that lever will feel slightly 'heavier' when uprating springs, and to test ride/acquaint themselves with this change in control.

Please note: We can only supply coil springs - diaphragm types are not available other than O/E supply.

What makes EBC the BEST!!!

Unique wide ear soft alloy drive body eliminates basket damage and delivers smooth clutch operation.

EBC CLUTCH KITS - ATV

EBC Clutches are totally Asbestos Free made from a cork based "anti-swell" facing impregnated with aluminum particles to reduce wear & heat fade. Kits are sold in pre-measured engine sets and should always be replaced in engine sets. USE ONLY MANUFACTURERS Drive case oils and avoid lead or other anti-friction additives. SOAK PLATES in drive case oil before installing. EBC Clutch Springs are 10-15% stiffer than stock springs to avoid slip. Diaphragm type springs are not available. Always check lever operating pressure for ease of clutch disengagement before riding or releasing motorcycle for use.

CAUTION – SAFETY WARNINGS FOR CONSUMERS

The following warnings now appear on the underside of our clutch packaging. For stocks in older packaging that do not display these safety warnings, we strongly recommend you photocopy these essential points and advise customers. **Never start a motorcycle whilst in gear with clutch depressed. Never reverse a motorcycle with the engine running, the machine in gear and clutch depressed. Hold front brake lever on when selecting gears from standstill. Never engage gears from a standstill with engine revs above 1500 rpm. Check oil levels regularly. When fitting heavy duty clutch springs acquaint yourself with increased hand pressure required to depress clutch before riding motorcycle. We do not recommend the use of fully synthetic oils.**
