Delivering Value with Predictivity™

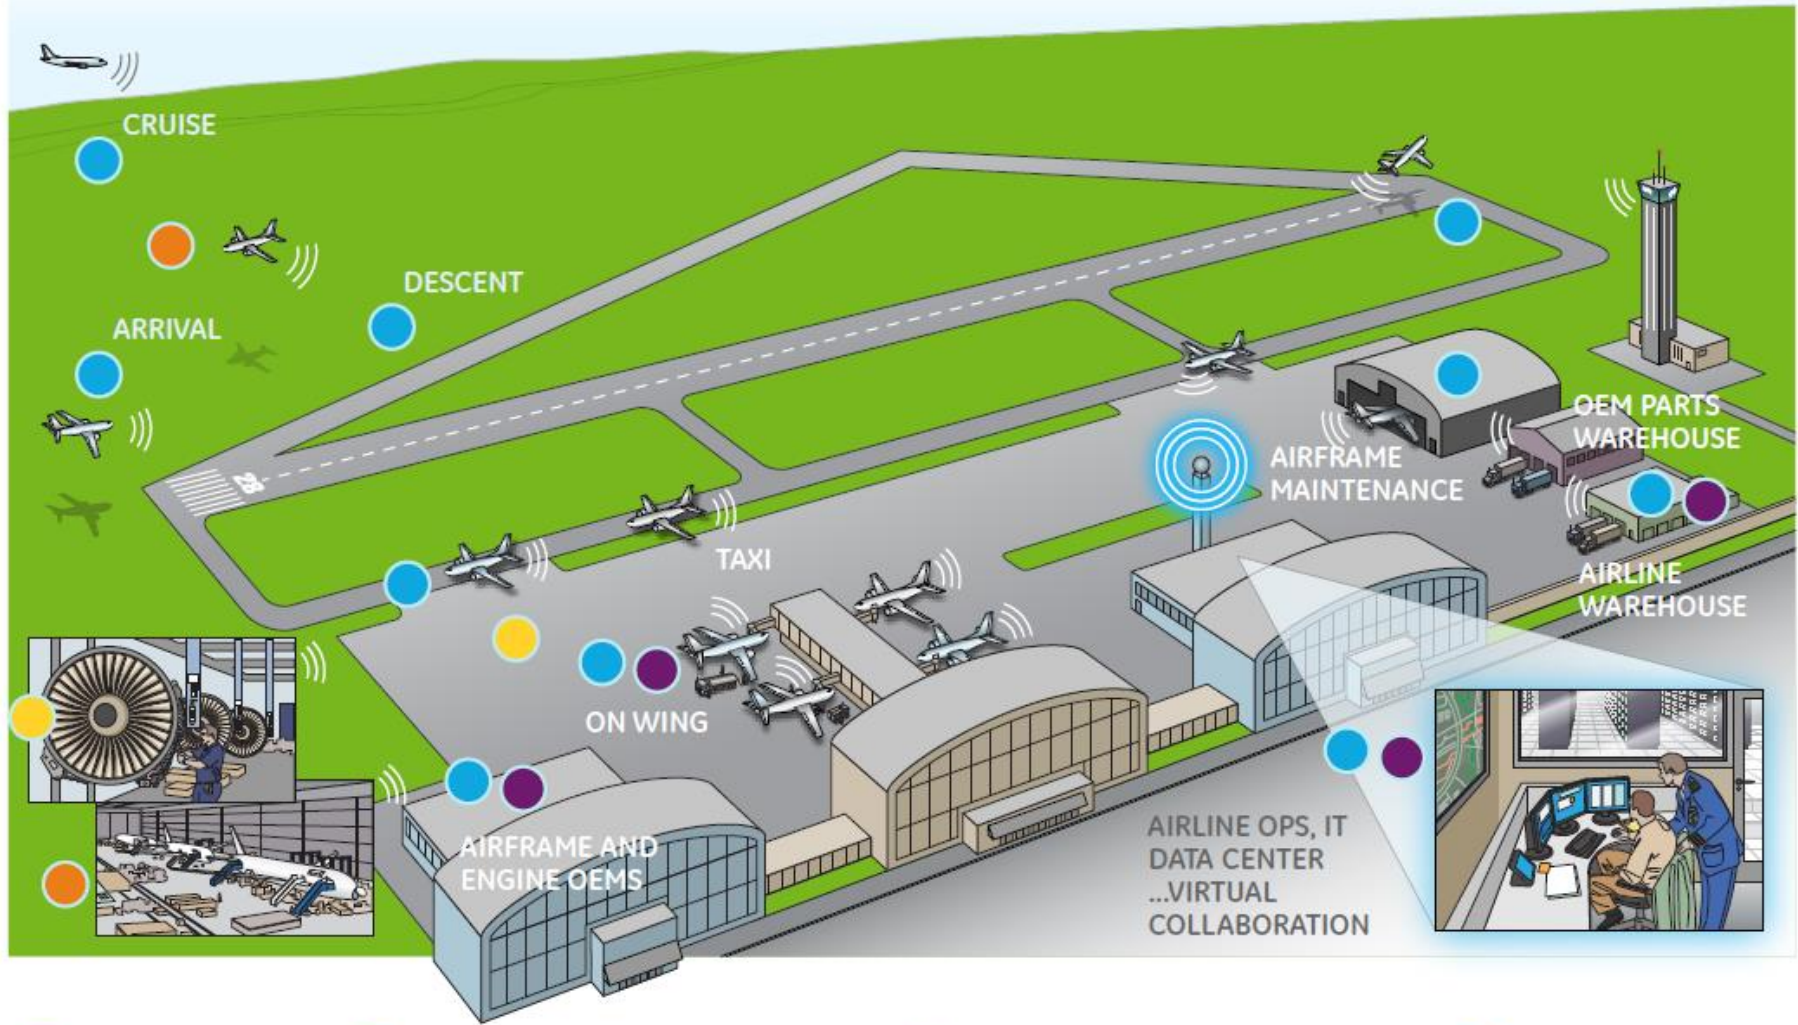

Predictivity™ for Aviation

6.3% fuel savings on short flights
for GOL Airline.

- Proactive Maintenance
- Fuel Efficiency
- Operational Recovery

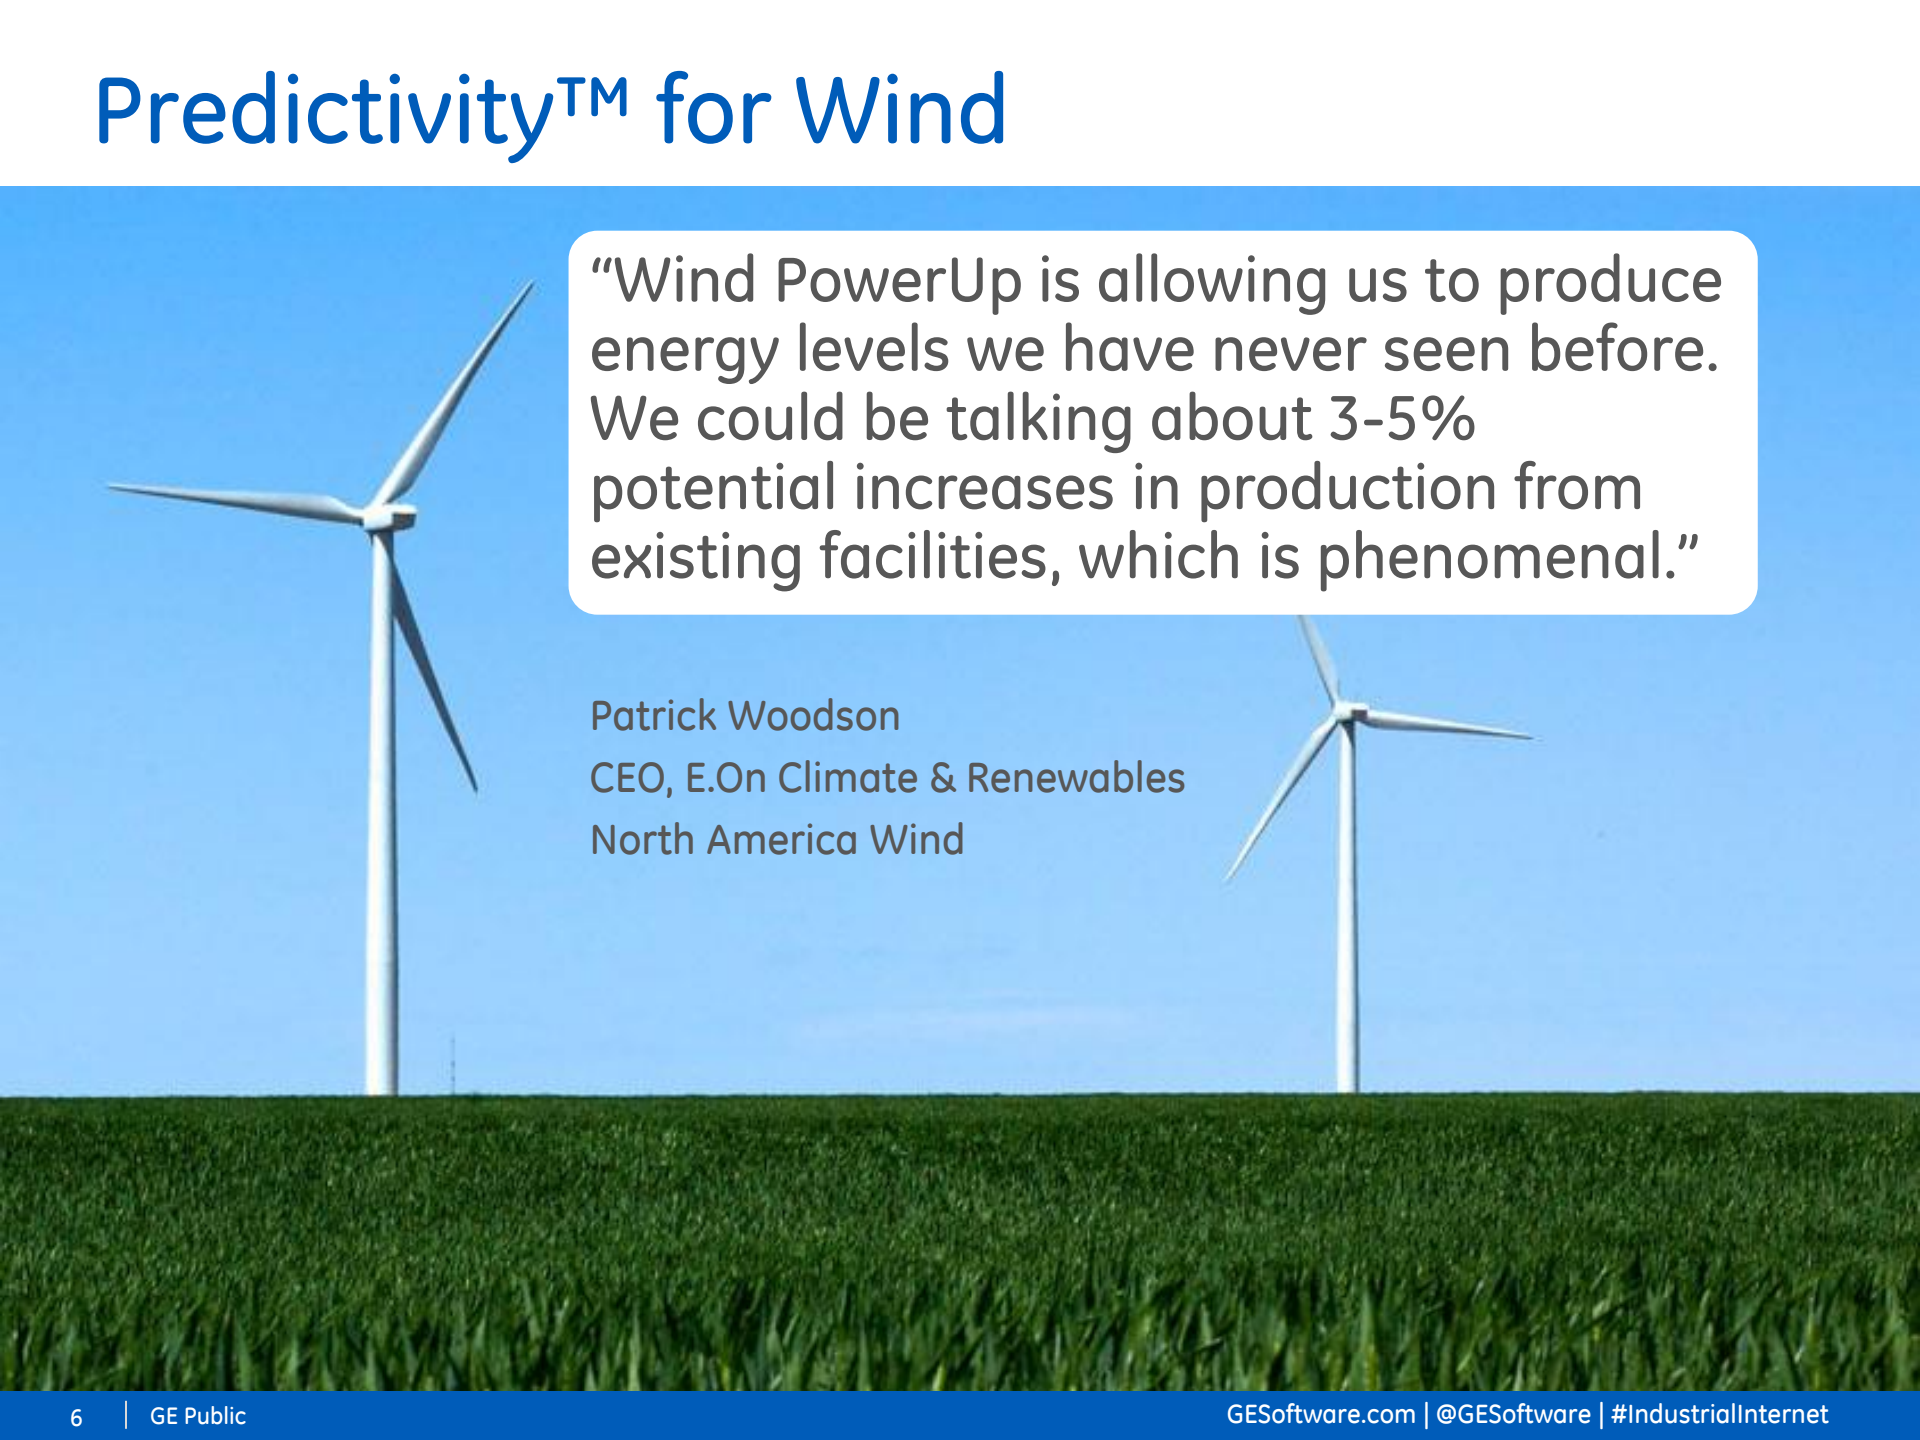

Predictivity™ for Aviation

Service Quality Asset and Facility Optimization Fleet and Network Optimization Asset Performance

Predictivity™ for Wind

“Wind PowerUp is allowing us to produce energy levels we have never seen before. We could be talking about 3-5% potential increases in production from existing facilities, which is phenomenal.”

Patrick Woodson
CEO, E.On Climate & Renewables
North America Wind

Predictivity™ for Aeroderivatives

Industrial Internet sensors, analytics, and software enabled 98% uptime guarantee for Queensland Curtis LNG.

Big Data → \$\$\$

THE WORLD'S TOP 10 MOST INNOVATIVE COMPANIES IN BIG DATA

ACCORDING TO ONE PROJECTION, THE SALES OF BIG-DATA-RELATED PRODUCTS AND SERVICES GREW TO MORE THAN \$18 BILLION IN 2013.

BY FAST COMPANY STAFF

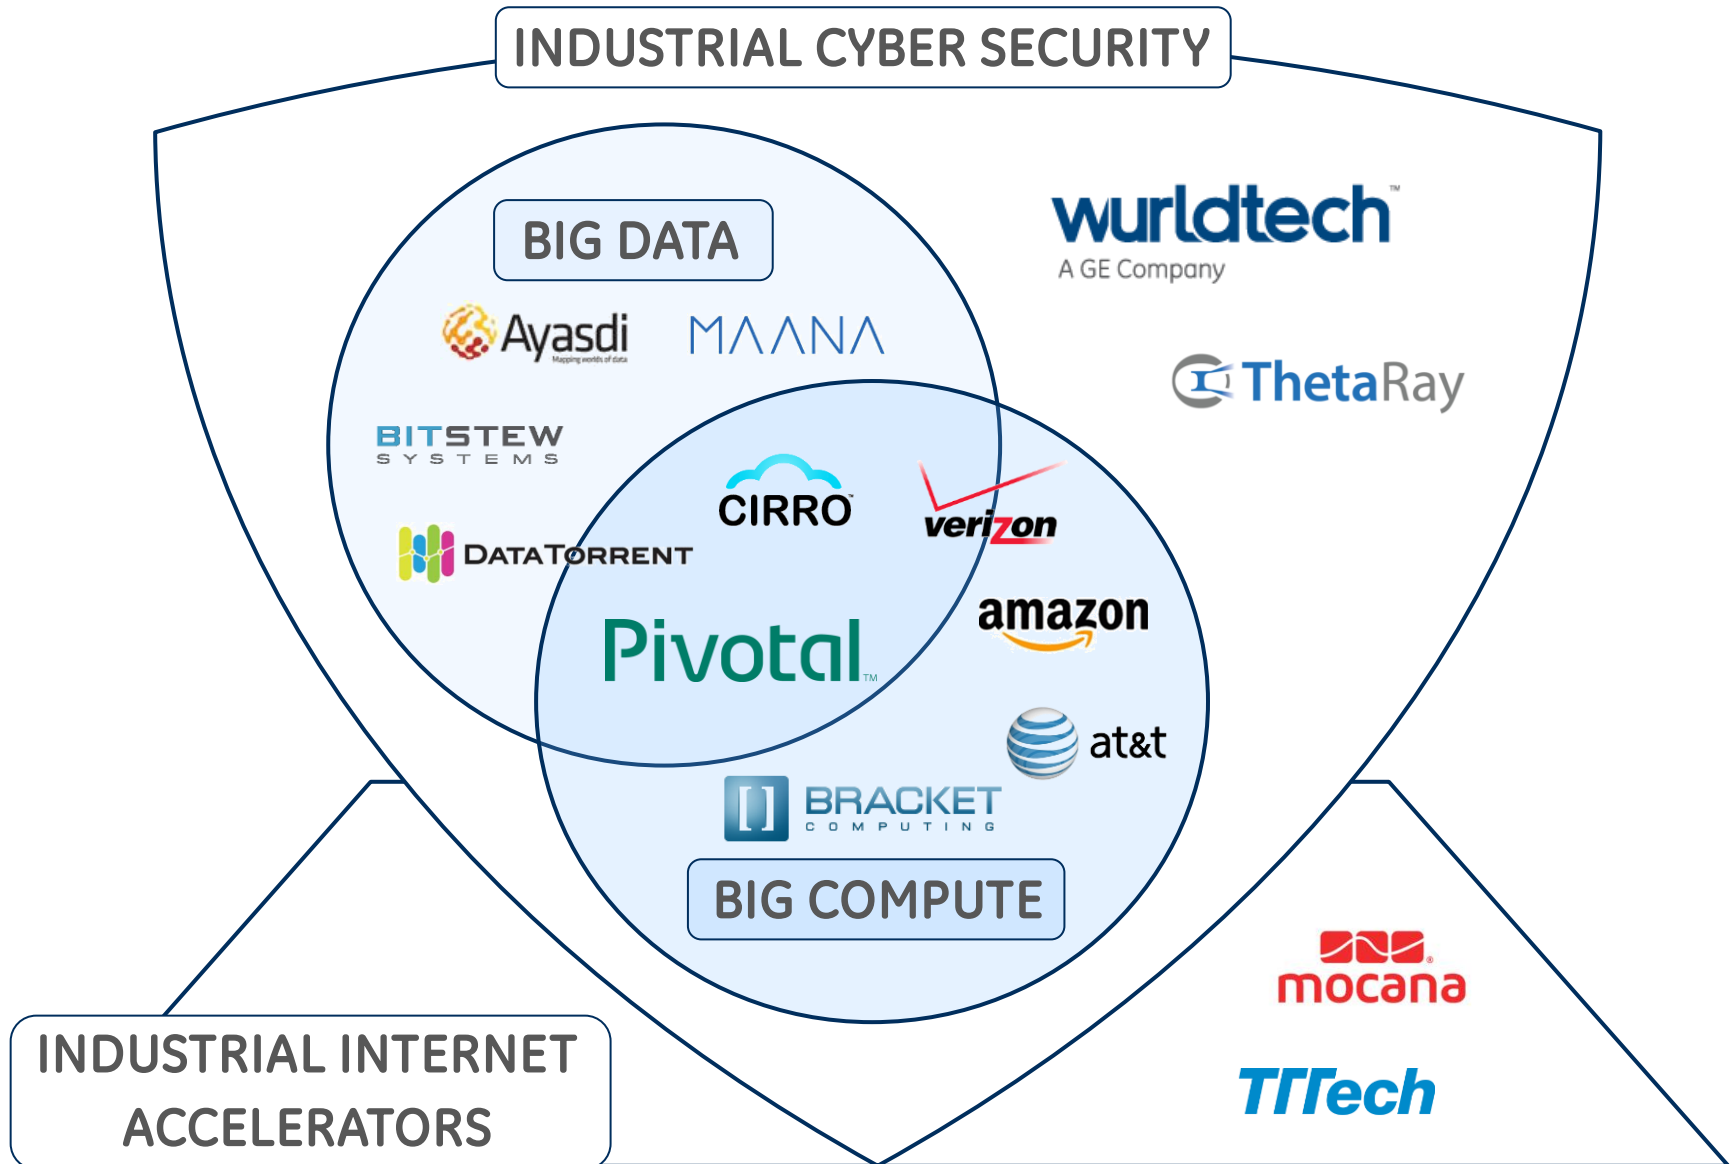

1. GE

For harnessing data from its planes and trains to power a new Industrial Internet, potentially saving billions. General Electric is best known for its machine making, but it's gotten smart and branded itself as a big-data company, too, by pushing its vision for an "Industrial Internet"—the notion that machines should be connected like the web in order to increase efficiency and reduce downtime. In 2012, it launched software to help airlines and railroads move their data to the cloud and partnered with Accenture to form Taleris, a startup that will help airlines predict mechanical malfunctions and reduce flight cancellations. The Abu Dhabi-based Etihad Airways was the first to deploy the tech in November. [Read more >>](#)

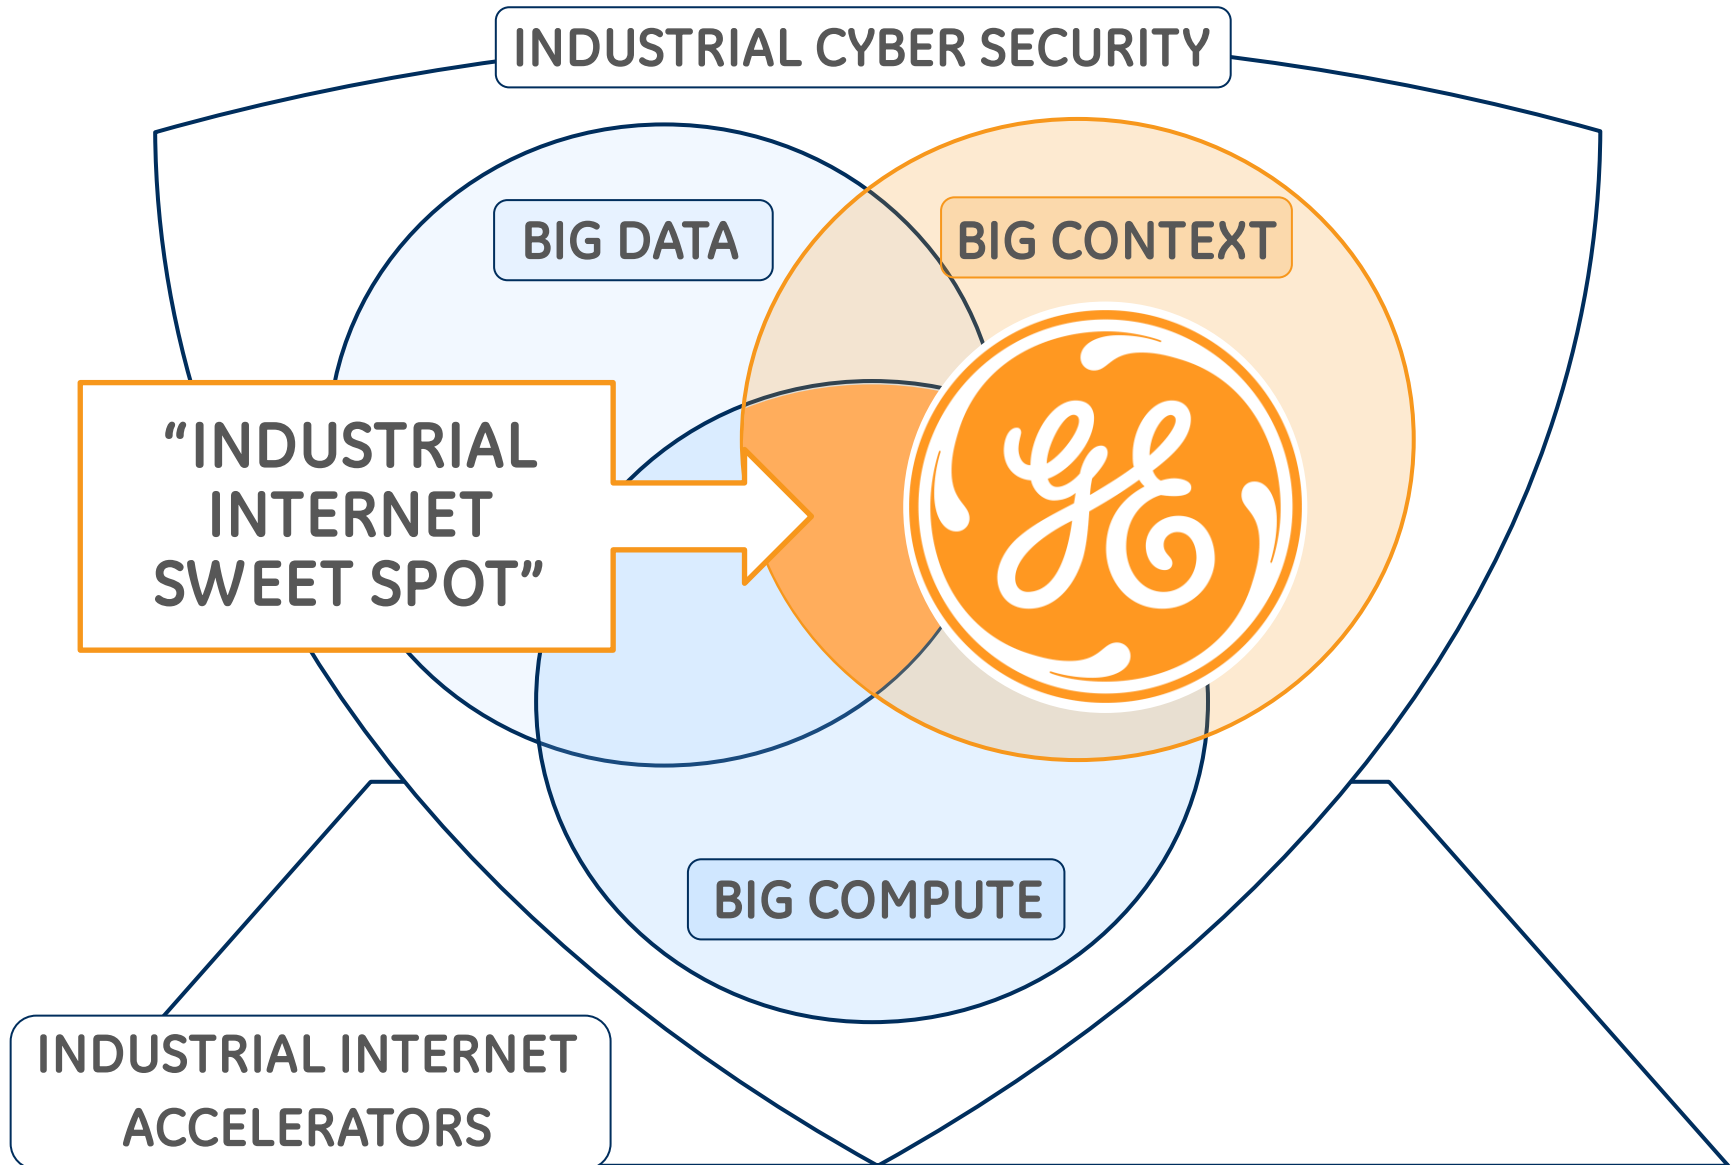

2. KAGGLE

For feeding its DIY data scientists cash-prize challenges (then molding them into a consulting biz). Now more than ever, organizations are turning toward data insights to make big decisions, and with its battalion of 150,000 data scientists, no one is better poised to take advantage of the shift than Kaggle. It farms out complex "data

Appendix: Vendor Comparison

GE		PaaS (IT Vendor)
Industrial Know-How	 <ul style="list-style-type: none"> In-depth understanding of industrial business and engineering processes In-depth experience in APM³; GE manages customer assets of \$1T value 	 <ul style="list-style-type: none"> Does not engineer / deliver / service / support industrial assets and equipment Industrial knowledge dependent on partnerships with industrial companies
Machine Knowledge	 <ul style="list-style-type: none"> Advanced data science, based on physics, heuristics, statistics (GE/non-GE asset) Enables SDM¹: insights to action / policy updates on machines 	 <ul style="list-style-type: none"> Focused on traditional predictive analytics, without native understanding of assets Does not natively support closed-loop scenarios (insight to action) with machines
Industrial Big Data Analytics	 <ul style="list-style-type: none"> Analytics seamlessly distributed across edge (historian), plant, enterprise (HDFS)² Flexible, modern APM framework with industrial predictive analytics 	 <ul style="list-style-type: none"> Still evolving cloud strategy, based on multiple / overlapping products Does not natively delivery analytics deployed on industrial equipment
Modern Cloud Architecture	 <ul style="list-style-type: none"> Modern platform, built ground-up on modern design principles; \$1b+ revenue Deployment flexibility (Cloud, managed services, on-premises data center) 	 <ul style="list-style-type: none"> Portfolio not fully integrated, includes many acquisitions & legacy technology Generic technology, not optimized for industrial use cases
Resilient and Secure	 <ul style="list-style-type: none"> Leading OT security with industrial firewalls and Wurdtech certification Proven cloud management, support stringent security and data sovereignty 	 <ul style="list-style-type: none"> Security strategy not dedicated to industrial / operational technology Professional services-based architectures can create one-off customer challenges
Industrial App Factory	 <ul style="list-style-type: none"> Proven expertise to deliver solutions to customers, with 90 day rapid prototyping Risk / gain sharing models ensure customer return of investment (ROI) 	 <ul style="list-style-type: none"> Solution model heavily reliant on professional services delivery "Build versus Buy" can become very expensive (CAPEX and COPEX)

¹ SDM = software-defined machines (<https://www.gesoftware.com/software-defined-machines>)

² HDFS = Hadoop Distributed File System

³ APM = Asset Performance Management (source: Gartner)
