## ULTRARAPID FREQUENCY

The world-exclusive design of the Apilus® Platinum Pure™ uses an ultrarapid 27 MHz radio frequency to permanently and rapidly eliminate all hair types of any color. The Apilus® Platinum Pure™ works twice as fast as any other epilator by optimizing energy concentration in the hair follicle. The cells responsible for hair growth are more rapidly coagulated, resulting in incomparable effectiveness and comfort.

## UNRIVALLED COMFORT

Your clients will not hesitate to ask for more treatments because the Apilus® Platinum Pure™ offers unprecedented comfort in permanent hair removal. Using state-of-the-art technology, the 27 MHz radio frequency is so swift and concentrated that treatments are much more comfortable as compared to conventional thermolysis and electrolysis. The age of ultra comfortable electrolysis is finally here!

NOTE: The Apilus is a needle type epilator and must be used only for hair removal treatments by certified electrologists.

## EASY TO USE

The Apilus® Platinum Pure™ is adaptable to all situations. It includes 550 programs covering each body area and every type of hair. In just seconds, the programs guide electrologists through the configuration of treatment parameters for each of the selected modes. The Apilus® Platinum Pure™ also offers an automatic function to convert these programs for use with insulated electrolysis probes. Regardless of the body area and hair type you treat, or the probe you use, the Apilus® Platinum Pure™ programs will provide you with optimal performance at all times.

## DISTINCTIVE POST-EPILATORY CARE

The Apilus® Platinum Pure™ is equipped with a universal connection for use with all VitaPhase™ devices. Optionally, VitaPhase™ IM, LT, SM and IR devices will allow you to offer supplemental ionomassage, light therapy and stimulomassage treatments. Used after hair removal treatments, the VitaPhase™ devices reduce redness, encourage cellular renewal and provide an antibacterial effect while soothing the skin. Moreover, combined with the vibromassage function, these devices promote an even greater penetration of the active ingredients, thereby enhancing treatment effectiveness.

## EASY UPDATE BY INTERNET

The Apilus® Platinum Pure™ can be easily updated by Internet. This very convenient option eliminates any loss of revenue resulting from the necessity of sending your equipment away to be updated. You simply download new programs and your system is updated and ready to use!

## PERMANENT RESULTS MORE RAPIDLY

The effectiveness of the Apilus® Platinum Pure™ device has been confirmed by scientific studies performed in cooperation with Dr. Charles Doillon, research scientist and professor at the Université Laval Hospital Center in Québec City, Canada.

Due to the ultrarapid 27 MHz radio frequency applied precisely inside the hair follicle, the Apilus® Platinum Pure™ can permanently eliminate all hair cells more rapidly. Moreover, the Apilus® Platinum Pure™ can effectively treat any hair or skin color, an achievement that laser or intense pulse light (IPL) devices can't reproduce.

## EXCEPTIONALLY EFFICIENT HAIR REMOVAL TECHNIQUES

The world-exclusive Apilus® Platinum Pure™ offers new hair removal techniques using the 27 MHz radio frequency, all designed to deliver outstanding results: PicoFlash™, MultiPlex™, PicoBlend™, OmniBlend™, and MultiBlend™.

### PICOFLASH™

With its exceptional speed, the PicoFlash™ technique produces a very localized coagulation at the base of the hair follicle avoiding heat dispersion in the surrounding tissues. Thus, it directly targets cells of any type of hair growth, and provides a level of comfort that will amaze your clients.

### MULTIPLEX™

The MultiPlex™ technique is the ideal solution for terminal and slightly distorted hairs. With its combination of low intensity radio frequency and ultra-rapid PicoFlash™ pulse, it helps you to reach the base of the follicle regardless of its shape.

### SYNCHRO (OPTIONAL)

(Patent Technology)

The Synchro™ radio frequency is very effective for tough and deeply-rooted hairs. Its simultaneous application of a hundred or so 27 MHz picopulses of less than .002 second each, eliminate all germ cells located between the bulb and the bulge of the follicle. This unique technology offers impressive results!

### BLEND MODES

Blend modes, namely PicoBlend™, OmniBlend™ and MultiBlend™, are strongly recommended for deeply rooted, stubborn or distorted hairs in the anagen phase. While PicoBlend™ combines a galvanic current with a precise number of 27 MHz pulses, OmniBlend™ and MultiBlend™ combine the galvanic current with a continuous 27 MHz current. The MultiBlend™ technique also adds a split-second 27 MHz PicoFlash™ pulse at the end of the Blend sequence. This intensifies the destructive effect of lye inside the hair follicle, from the bulge to the bulb.

## PLATINUM<sup>TM</sup> 27 MHz PURE

Ultrarapid 27 MHz radio frequency
5 highly effective hair removal techniques: PicoFlash <sup>TM</sup> , MultiPlex <sup>TM</sup> , PicoBlend <sup>TM</sup> , OmniBlend <sup>TM</sup> , MultiBlend <sup>TM</sup>
Patented Synchro 27 MHz thermolysis technique available in option.
Hair removal programs classified by modality, body area, hair type and electrolysis probe type (insulated or non insulated)
Ability to record 50 user-defined hair removal programs
User-friendly graphic screen with icons
Displays Units of Lye "U.L." and HF energy Level "E.L."
Means of operation without footswitch with automatic detection
Computer link
2 probe-holder connectors
Blend test
"Processor sentinel" protection circuit
Current stability monitor
International power supply with automatic voltage detection
Meets international medical standards
"Cataphoresis" mode for post-epilatory care and "Anaphoresis" for deep-cleansing skin treatments
Connection for VitaPhase <sup>TM</sup> devices (optional)
Skin moisture sensor
