Dr Mudit Khanna stands out as one of the most innovative writers of the modern era whose strategic ideology changed the way all students aspiring for a position in All India Post Graduate Medical Examination (AIPGMEE) have prepared for their exams over the past decade. He is widely recognized as a pioneer who introduced the concept of precise and crisp explanations with authentic answers in his books that transformed Indian Medical Post Graduate Preparation Scenario way back in early 2000s. There is little doubt that the landmark transition of the AIPGMEE from a paper-based pattern to a computer-based pattern is set to change the strategy for the preparation of the exam once again. Dr Mudit Khanna has been prompt to recognize the significant change and set out to plan a unique and innovative approach to counter the recent changes and challenges that can help aspiring medical undergraduates emerge as 'smart' winners.

Mudit's Mantras

Ques: How do I plan my PG exam preparation in such a limited time?

Dr Mudit Khanna: 300 days for preparation and 20 subjects to cover, leaves you with 15 days to cover each subject. These days include not only the time you spend during your primary study but also the time allocated for your revision (which should be a minimum of two). As it is highly critical to revise important topics, the key is to formulate a working plan that suits your requirements best. You need to know exactly how much time you have in your hand. Identify High Yield Subjects and Low Yield Subjects, as all subjects do not carry equal weightage in the PG exam. Then based on your strengths and weaknesses you need to allocate the right amount of time for each subject. Thus, you will end up gaining more time for subjects and areas that are more significant. Studying smartly, strategizing and adhering to a clear study schedule are imperative for your success. One should not commit one of the common mistakes of spending too much time on one subject while ignoring other important subjects. MyPGMEE will allow you to study smartly and strategize your preparation to achieve your goal of PG exam success.

Mudit's Mantras

Ques: **How do I prepare myself for the changing environment of computer exams?**

Dr Mudit Khanna: In the current scenario of Computer Based testing, the likelihood of repeats from previous year examinations has considerably gone down. Theoretically, routine textbooks would be more useful than 'guide books', as very few questions are being repeated in these exams. However, with the limited time in hand, using textbooks to cover subjects as well as the cover-to-cover reading of subject wise MCQ books is a herculean task. The most effective way would be to use the standard text books in a smart and selective manner. Identify the must and good to know areas within each text book to gain a basic base of the subject and go to a testing platform that throws most relevant questions and keeps your revision going while you are absorbed in the next subject. The advantage of this approach would be thorough understanding of the subject to address the new questions and regular practice with most relevant MCQs. This will also save time from reading lengthy and many a times inaccurate, illogical explanations of the guide book. To summarize, just mugging up the last ten year MCQ questions with their explanations will not be the right way for success in PG exams.

Moreover with AIPGMEE going online now, it is very important to adapt and acclimatize to the Computer Based Testing platform. Students should constantly practice and test themselves on platforms that simulate exam-like conditions to grow their confidence.

MyPGMEE is a dynamic testing platform that provides you the relevant, credible and recent style questions with ability to sort them by topic and book mark the difficult questions for quick revision while doing other subject. Its exam-like interface will help you to familiarize with the online PG exam environment during your preparation, letting you focus better on the questions during the actual exams and avoid struggle with the interface.

Ques: **How can I assess my areas of strength and weaknesses in various subjects and topics?**

Dr Mudit Khanna: To know your areas of strength and weakness, it is important for you to take tests after a short or long interval from the time you have completed the initial subject.

MyPGMEE platform identifies the questions that you answered incorrect during your initial tests as your 'weak areas'. It then gives you several possibilities to strengthen the weak areas such as the option to repeat only the questions you marked wrong; more questions from same/similar topics. You can repeat these questions in either a relaxed 'practice mode' or a timed 'exam mode'. You need to work on your weak areas by building on your basics and taking re-tests. It is important that your strong areas remain strong and weak areas improve.

MyPGMEE's performance reporting will help you in tracking your progress in various subjects and topics. The detailed analysis of the progress of the preparation will update you regarding your areas of strength and development in various subjects.

Ques: **How can I assess my PG preparation as compared to other aspirants?**

Dr Mudit Khanna: In today's competitive environment, where the best of MBBS students are fighting for selected PG seats, it is very important that the student knows where he/she stands in comparison to other aspirants. The best way to assess and compare your preparation with your peers is through Nation-Wide Mock tests. The results of such tests in the form of percentiles and ranks give you a true assessment of your standing. MyPGMEE's nation-wide mock tests will help you in keeping a track of your preparation and allow you to see where you stand in comparison to other aspirants.

What Users Say

MyPGMEE is a great tool. I've taken other online mock tests and this one was by far the most helpful and most practical. The questions were authentic and the interface is similar to any online exam and my performance improved dramatically over the last month. This platform is great for any PG aspirant. I highly recommend it.

- **Dattatreya Sitaram, 3rd Prof. MBBS**

It's a very handy, on the go kind of approach, with a lot of practical thought behind it. The answers are backed up with relevant explanations from well-known texts and thus serve as easy reference. The format also familiarizes the student with the online pattern of examination, thus adding further to what increasingly seems to be a win-win situation!

- **Sagnik Biswas, 3rd Prof. MBBS**

It was very similar to the testing interface seen at NEET PG exam wherein you can mark questions and come back for review. So, it gives good practice of the setup for the D-day. In addition it combines attributes which allow us to bookmark questions for future review. So all in all, best of both the worlds.

- **Simrina Kaur Sabharwal, Intern**

MyPGMEE can become a very useful tool for students preparing for AIPGMEE. It is a nice concept. It's much more conducive for studying than the book as there is a timer and questions are bifurcated according to subjects, regions and difficulty.

- **Jeevika Singh, 3rd Prof. MBBS**

The questions are given in a very systematic form; one can easily choose questions according to their preparation. The answers to those questions have also been explained very nicely and to the point. The page and book references provided are very useful for the students.

- **Deeksha Seth, 3rd Prof. MBBS**
