Contents

PART ONE

The Forces Between Atoms and Molecules: Principles and Concepts

Chapter 1	Historical Perspective	3
1.1	The four forces of nature	3
1.2	Greek and medieval notions of intermolecular forces	3
1.3	Early scientific period: contrasts with gravitational forces	5
1.4	First successful phenomenological theories	8
1.5	Modern view of the origin of intermolecular forces	11
1.6	Recent trends	11
	Problems and discussion topics	
Chapter 2	Some Thermodynamic Aspects of Intermolecular	16
	Forces	
2.1	Interaction energies of molecules in free space and in a medium	16
2.2	The Boltzmann distribution	20
2.3	The distribution of molecules and particles in systems at equilibrium	21
2.4	The van der Waals equation of state	23
2.5	The criterion of the thermal energy kT for gauging the strength of an interaction	24
2.6	Classification of forces	27
	Problems and discussion topics	
Chapter 3	Strong Intermolecular Forces: Covalent and Coulomb Interactions	31
3.1	Covalent or chemical bonding forces	31
3.2	Physical and chemical bonds	32
	V	

	vi	Contents	
	3.3	Coulomb forces or charge–charge interactions	
1. Alexandre de la companya de la compan	3.4	lonic crystals	
	3.5	Reference states	
	3.6 3.7	Range of Coulomb forces	
	3.8	The Born energy of an ion Solubility of ions in different solvents	
	3.9	Specific ion-solvent effects	
	3.10	Continuum approach	
	3.11	Molecular approach: computer simulations	
		Problems and discussion topics	
one was a second a s	Chapter 4	Interactions Involving Polar Molecules	4
	4.1	What are polar molecules?	
10000	4.2	Dipole self-energy	
	4.3 4.4	lon-dipole interactions	1
	4.4	lons in polar solvents Strong ion–dipole interactions: hydrated ions	:
	4.6	Solvation forces, structural forces, hydration forces	1
1000000	4.7	Dipole-dipole interactions	
	4.8	Rotating dipoles and angle-averaged potentials	é
	4.9	Entropic effects	e
		Problems and discussion topics	
	Chapter 5	Interactions Involving the Polarization of Molecules	6
	5.1	The polarizability of atoms and molecules	6
second and	5.2	The polarizability of polar molecules	7
	5.3	Interactions between ions and uncharged molecules	7
	5.4	lon-solvent molecule interactions and the Born energy	2
	5.5 5.6	Dipole-induced dipole interactions	2
	5.0	Unification of polarization interactions Solvent effects and 'excess polarizabilities'	2
	5.7	Problems and discussion topics	7
	Chapter 6	van der Waals Forces	8
	6.1	Origin of the van der Waals dispersion force between neutral molecules: the London equation	8
	6.2	Strength of dispersion forces: van der Waals solids and liquids	8
	6.3	van der Waals equation of state	ç
		Gas-liquid and liquid-solid phase transitions	9
	6.4		
		van der Waals forces between polar molecules	g

PART TWO

The Forces Between Particles and Surfaces

Chapter 9	Some Unifying Concepts in Intermolecular and Interparticle Forces	139
9.1	Factors favouring the association of like molecules or particles in a medium	139
9.2	Two like surfaces coming together in a medium: surface and interfacial energy	144
9.3	Factors favouring the association of unlike molecules, particles or surfaces in a third medium	145
9.4	Particle-surface interactions	147

viii	Contents	
9.5	Adsorbed surface films: wetting and non-wetting <i>Problems and discussion topics</i>	149
Chapter 10	Contrasts Between Intermolecular, Interparticle and Intersurface Forces	152
10.1 10.2 10.3	Short-range and long-range effects of a force Interaction potentials between macroscopic bodies Effective interaction area of two spheres: the Langbein approximation	152 155 159
10.4	Interactions of large bodies compared to those between molecules	159
10.5	Interaction energies and interaction forces: the Derjaguin approximation	161
10.6	Experimental measurements of intermolecular and surface forces	165
10.7	Direct measurements of surface and intermolecular forces Problems and discussion topics	168
Chapter 11	van der Waals Forces Between Surfaces	176
11.1	The force laws for bodies of different geometries: the Hamaker constant	176
11.2	Strength of van der Waals forces between bodies in vacuum or air	178
11.3 11.4	The Lifshitz theory of van der Waals forces Hamaker constants calculated on the basis of the Lifshitz theory	179 183
11.5	Applications of the Lifshitz theory to interactions in a medium	188
11.6	Repulsive van der Waals forces: disjoining pressure and wetting films	192
11.7	Retardation effects	196
11.8	Screened van der Waals forces in electrolyte solutions	199
11.9	Combining relations	200
11.10	Surface and adhesion energies	201
11.11	Surface energies of metals	204
11.12	Forces between surfaces with adsorbed layers	206
11.13	Experiments on van der Waals forces Problems and discussion topics	207
Chapter 12	Electrostatic Forces Between Surfaces in Liquids	213
12.1	The charging of surfaces in liquids: the electric 'double layer'	213

Here's
