Differential Pressure Sensors (DPS)

Walker Products Differential Pressure Sensors (DPS) measures the pressure difference between exhaust gas in the inlet and outlet of the Diesel Particulate Filter (DPF). The sensing element of the DPS is piezo resistive where the sensor changes its electrical resistance based upon the mechanical deformation of the internal membrane. Walker Products DPS's are designed to meet or exceed OE specifications. Our sensors have been tested for cyclic operation at high and low pressure in extreme conditions, vibration and shock resistance, humidity and temperature endurance, as well as thermal shock. Each DPS is also tested for leakage and voltage performance. In some cases, failure to replace a defective DPS can result in: unnecessary filter regenerations, power loss, reduction in filter life, increased pollution levels, or an increase in oil consumption. Always replace a defective sensor with a quality Walker Products DPS.

Los sensores de Presión Diferencial (DPS) de la marca Walker Products, miden la diferencia de presión entre la entrada y la salida del Filtro de Partículas Diesel (FAP). El elemento medidor es un componente piezoelectrónico, cuya resistencia varía en función de la deformación mecánica de la membrana interna. Los sensores DPS de Walker Products están diseñados para superar las especificaciones técnicas de la pieza original (OEM). Para ello han sido testados individualmente de manera cíclica en alta y baja presión igual que trabajarían en el vehículo, controlando su respuesta en voltaje y si existe la más mínima perdida de rendimiento. Durante estas pruebas se simulan unas condiciones extremas de funcionamiento donde comprobamos su resistencia a las vibraciones, cambios de temperatura, humedad, resistencia a los impactos y choques térmicos. No reemplazar un DPS defectuoso puede causar serios inconvenientes en su vehículo, como: regeneraciones FAP innecesarias, pérdida de potencia, acortar la vida útil del FAP, incrementar los niveles de contaminación e incluso un mayor consumo de aceite. Reemplace siempre un sensor defectuoso con nuestro sensor DPS Walker Products

Les capteurs de pression différentielles (CPD) de la société Walker Products mesurent la différence de pression entre les gaz d'échappement à l'entrée et à la sortie du filtre à particules diesel (FAP). L'élément de détection du CPD est piezo-résistif à l'endroit le capteur modifie sa résistance électrique en fonction de la déformation mécanique de la membrane interne. Les produits CPD de Walker sont conçus pour répondre aux spécifications OEM et même surpasser leur qualité. Leurs capteurs ont été testés pour un fonctionnement cyclique à haute et basse pression dans des conditions extrêmes, pour une très bonne résistance aux vibrations, aux chocs, à l'humidité et aux températures élevées, ainsi qu'aux chocs thermiques. Chaque CPD est également testé pour les fuites et les performances de tension. Dans certains cas, le fait de ne pas remplacer un CPD défectueux peut entraîner la régénération inutile du filtre, une perte de puissance, la réduction de la durée de vie du filtre, un niveau de pollution accru du véhicule, ou une augmentation de la consommation d'huile. Il est toujours préférable de remplacer un capteur défectueux avec un CPD de qualité signé Walker Products.

Walker Products Differenziali Sensori di Pressione (DPS) misura la differenza di pressione tra gas di scarico in ingresso e l'uscita del filtro antiparticolato (FAP). L'elemento sensibile del DPS è resistivo piezo cui il sensore cambia la sua resistenza elettrica basato sulla deformazione meccanica della membrana interna. Walker Products DPS sono progettati per soddisfare o superare le specifiche OE. I sensori sono stati testati per funzionamento ciclico ad alta e bassa pressione in condizioni estreme, vibrazioni e resistenza agli urti, umidità e resistenza di temperatura, così come shock termici. Ogni DPS è anche testato per perdite e le prestazioni di tensione. In alcuni casi, la mancata sostituzione di un DPS difettoso può causare: rigenerazioni del filtro inutili, perdita di potenza, riduzione della durata del filtro, un aumento dei livelli di inquinamento, o un aumento del consumo di petrolio. Sostituire sempre un sensore difettoso con una qualità Walker Products DPS.

Walker – Differenzialdrucksensoren (DDS) messen den Abgas-Druckunterschied zwischen Ein- und Ausgang des Diesel-Partikelfilters (DPF). Das Fühlerelement des DDS ist piezoresistiv, wobei der Sensor seinen elektrischen Widerstand ändert, basierend auf der mechanischen Deformierung der inneren Membrane. Walker – DDS sind so ausgelegt, dass sie den OE- Spezifikationen entsprechen oder sie sogar übertreffen. Die Sensoren wurden während zyklischer Verfahren unter niedrigem und hohen Druck getestet. Zudem wurde der Widerstand gegen Stoß und Vibrationen sowie die Beständigkeit gegen Flüssigkeiten und extreme Temperaturen getestet. Jeder DDS wurde auch auf Undichtigkeit und elektrische Leistung überprüft. Durch einen defekten DDS kann es zu folgenden Fehlern kommen: Falsche Reinigungszyklen des DPF, Leistungsverlust, verminderte Lebensdauer des Filters, abnormale Abgaswerte oder eine Steigerung des Ölverbrauchs. Ersetzen Sie defekte Sensoren immer durch Qualitätssensoren von Walker Products.
