POSITIONING ISON //

ISON is the perfect alternative for motorcycle filters on the market covering over 98% of all motorcycles on the European Market.

ISON filters match and even exceed OEM specifications. With many years of experience in OE automotive and heavy duty machinery, we co-developed a fully new motorcycle filter range. In a comparison test ISON filters scored best in longevity and Filter efficiency, compared to its main competitors.

STEEL TENSION SPRING
Designed with heat treatment process to maintain stability of tension between filter element and canister.

SPIRAL PERFORATING TUBE
High structural strength to prevent the element filter from collapsing and to provide a better flow.

ANTI DRAIN BACK SEAL
To prevent the oil in the filter from draining back to the crankcase.

SQUARE SEAL GASKET
For multifitting & enhanced sealing area. Also to prevent the gasket from slipping out.

BYPASS VALVE
To ensure oil flow in filtration system to continually lubricate the engine at the termination pressure point.

FILTRATION MEDIA
Optimal filtration media specifications to ensure maximum filtration efficiency & lifetime of filter.

IN-BOND SEAM
Double-lock seam between the plate and the canister to increase burst strength ability

ISON FILTERS TESTED AS PREMIUM ON MARKET

The newest, most complete and broadest range of motorcycle filters tested best in comparative benchmark.

N°	TYPE OF TEST	DESCRIPTION
1	IMPULSE	Standard JIS
2	BURST STRENGTH	is the pressure to which the filter can withstand. This must be minimum 17 kg/cm ² . ISON is at 33 kg/cm ² .
3	DRAIN BACK	is the flow of oil that comes back through the holes at the bottom or side of the filter. This depends on the design of the filter and also on the fitting. This should always be BENEATH the maximum standard of 100 ml.
4	PRESSURE DROP	is the difference between the initial and the terminal pressure. This depends on the media or filter material. It should never be out of standard.
5	FILTER EFFICIENCY	Initial Efficiency: during the first 11 hours of the test.

Full Efficiency: MOST IMPORTANT issue: this gives the percentage of dirt that can be absorbed by the filter. If it is too low, too much dirt can go through the filter which could damage the engine.

Lifetime: Another critical point. How long the filter can operate in a test environment with polluted liquid before it is saturated and the bypass valve opens.

DHC: Dust Holding Capacity. Indicates how much dust the filter can contain. The more dust it can contain, the longer the life of the filter will be.

SPIN ON FILTER COMPARISON

between ISON and equal filters from different manufacturers

N°	TYPE OF TEST	CONDITION	FILTER TESTED			
			ISON 204	Brand 1	Brand 2	Brand 3
1	IMPULSE	Temperature 100±2 °C Base pressure 2 kgf/cm ² Peak pressure 9 kgf/cm ² Frequency 90 cpm Standard Min. 50.000 cycles	75.000 Cycles (No leak)	75.000 Cycles (No leak)	75.000 Cycles (No leak)	75.000 Cycles (No leak)
