#### 700K/750K/850K DOZERS

93–152 kW (125–205 hp)

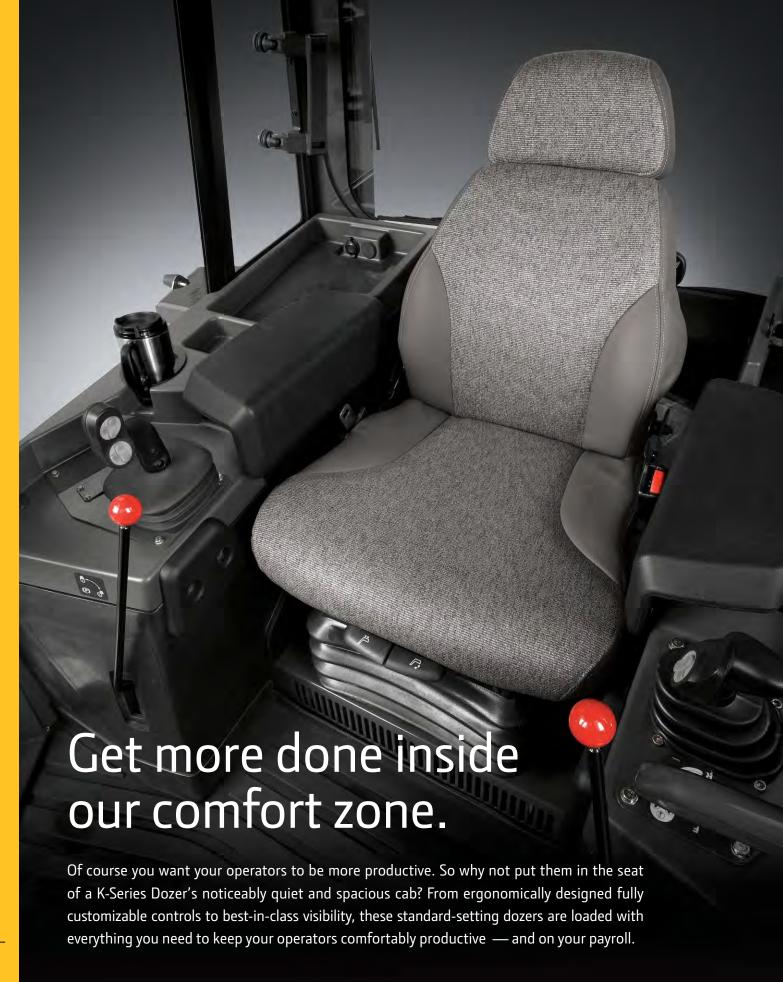

Packed full of production-boosting advantages, our dozers do more without a lot of extra effort. State-of-the-art electronic controls put an operator in complete command of an arsenal of production-boosting hydrostatic advantages, including power turns, counterrotation, and infinitely variable travel speeds. What's more, Total Machine Control (TMC) allows customized decelerator mode and response, forward/reverse ground-speed, steering modulation, and forward/reverse speed ratios. Nothing runs like a Deere.

- 1. Sealed-switch module gives fingertip control of keyless start, and enables exclusive features such as turbocharger cool-down and auto shutdown. Touchpad security system requires a numeric pass code (when enabled) to help prevent unauthorized machine operation.
- 2. Beyond cup holders and cooler storage, there are plenty of places to store stuff. If you're running a grade-control system, the lockable in-dash compartment is ideal for end-of-day storage (or permanent placement) of the monitor.
- Overhead radio and storage console includes a 12-volt electrical outlet for powering a cell phone or an iPod<sup>®</sup>.

Oil-filled cab mounts and extensive insulation effectively isolate operators from vibration and noise. At just 76 dBA, the cab is noticeably quiet.

Standard high-back air-suspension seat and optional deluxe heated and leather-bolstered lower cushion adjust multiple ways for daylong comfort and support. Arm- and footrests also adjust.

Numerous directional vents keep the glass clear and interior comfortable. Pressurized cab helps keep dust out. Air conditioning is standard. For ROPS-only models, an optional under-seat heater helps warm the operator.

Fully modulated hydrostatic drivetrain ensures smooth moves, virtually eliminating jerky or abrupt movements. Ergonomically correct joystick provides intuitive, low-effort control of steering, direction, and ground speed. It's detented so it doesn't require an operator's constant touch or attention, and employs a thumb-actuated travelspeed control switch.

Use the decelerator to slow both ground speed and engine rpm. Or ground speed only to help maintain traction without affecting engine power and hydraulic response. Fully depressing the pedal applies the brakes.

Exclusive Total Machine Control (TMC) monitor lets an operator select decelerator mode and response, forward/reverse ground-speed ranges, steering modulation, FNR shift rate, and forward/reverse speed ratios.

# Nothing runs like a Deere, because nothing is built like it.

Designed and built with state-of-the-art tools and techniques by a quality-conscious workforce at our world-class facility in Dubuque, lowa, the K-Series comes loaded with uptime-boosting features. Enhancements such as our unique V-cool system and EPA IT4/EU Stage IIIB diesel engines — plus traditional John Deere features such as one-piece unitized mainframes, DuraTrax™ undercarriages, wet-sleeve engine liners, and isolated planetary final drives give these dozers the durability you need. When you know how they're built, you'll run these Deere.

- 1. Our EPA IT4/EU Stage IIIB technology is simple, fuel efficient, fully integrated, and fully supported. It employs field-proven cooled exhaust gas recirculation (EGR) for reducing NO<sub>x</sub>, and a diesel particulate filter and diesel oxidation catalyst to reduce particulate matter. Periodic active and passive regeneration automatically cleans the filter without impacting machine productivity.
- Sealed-switch module keeps out moisture and debris, and virtually never wears out.
- **3.** V-cool design isolates coolers from dust and engine heat for increased efficiency and durability. Positioned behind the heavy-duty grille and fan, coolers are also less vulnerable.

Only our K-Series is available with John Deere WorkSight™. This easy-touse comprehensive suite of technology increases uptime and productivity while lowering operating costs. JDLink™ machine monitoring provides real-time machine utilization and health data, plus location information. Fleet Care proactively suggests maintenance to correct problems early before they create costly downtime. Service ADVISOR™ Remote enables your dealer to read diagnostic codes, record performance data, and even update software without a trip to the jobsite. And Topcon and other gradecontrol options make it easy to add your preferred system.

Flush-fit bottom guards and tight-fitting side shields help keep trash out. Hood and side-shield perforations function as a "first filter," further preventing entry of most debris. Anything that gets past the five-mm holes also passes through the cooler cores.

Available extended-life undercarriage delivers up to twice the bushing life, for extra durability in extremely abrasive conditions. If you want to further reduce maintenance and operating costs, choose the SC-2<sup>TM</sup> extended-life option.

Individually replaceable wet-sleeve enginecylinder liners provide uniform engine cooling and long-term durability.

Reversing fan (standard on 750K and 850K) automatically back-blows the cooler cores at preset intervals. When conditions demand more frequent cleaning, simply press a button to actuate the reversing cycle.

Variable-speed on-demand fan automatically speeds up or slows down, operating only as needed to keep things cool. Helps conserve power and fuel, while reducing noise. One-piece welded mainframe resists torsional stress, absorbs shock loads, and delivers maximum strength while allowing easy service access to major components. Heavy-duty double-reduction planetary final drives are mounted independent of the track frames, where they're effectively protected from shock loads.

Engine pre-cleaner with aspiration lines (standard on 750K and 850K) provides higher filter efficiency for longer engine filter service life.

## Precise grades, strong blades.

John Deere dozers enjoy solid reputations as superior grading machines. And for plenty of reasons. Unlike others that utilize the same mainframe with all dozers, our purpose-built design optimizes blade ratio and center of gravity for superior balance. So whether you opt for a power/angle/tilt (PAT) or an outside-mount straight or semi-U blade, you'll profit from uncompromised performance. Durability is also second-to-none. Advantages such as noticeably larger push beams, closed-cell blades, box-section C-frames, and steel-cable-supported Cordura®-covered hydraulic hoses provide long-term stamina and strength.

- PAT blade's heavy-duty ball-and-socket C-frame joint resists material buildup for long-term grading precision. Blade hoses are steel-cable supported and Cordura covered for extra protection.
- 2. With heavy-duty high-profile push beams and a three-position pitch-adjustable semi-U blade, the outside-mount dozer delivers exceptional durability and high-production performance.
- 3. Heavy-duty cross-members provide solid lateral support and are shaped to allow a clear view of the bottom of the blade. What's more, their raised position allows generous clearance at the end of the push.
- **4.** Greaseless shim-adjustable clamshell bearings in front and rear joints of the push beams ensure a tight connection for low-maintenance, "like-new" grading performance.

# Configured, not compromised.

W. Cele

Yours isn't just any business. Why settle for just any crawler? With a choice of five undercarriage configurations, inside-mount PAT or outside-mount straight or semi-U blades, and numerous other options, building a John Deere dozer your way is the way we do business. These highly versatile machines can also be equipped with special-duty and severe-application packages that help them thrive on a wide variety of jobsites. And tackle tasks that other crawlers can't. Ask your dealer for details.

## Designed with an open mind.

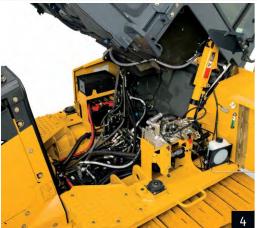

It takes only minutes to uncover the many ways our re-imagined K-Series helps minimize maintenance. Side shields swing open wide to reveal convenient same-side daily service points. An exclusive tilt-out fan box allows simplified access to cooler cores for quick cleanout. Other periodic service tasks such as fluid and filter changes are also refreshingly easy. Even gaining access to drivetrain components takes only minutes. As you can see, when it comes to keeping uptime up and daily operating costs down, we're pretty open-minded.

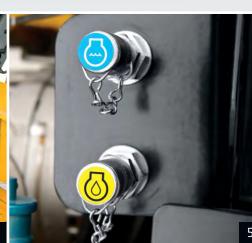

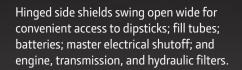

- 1. Available quick fluid-evacuation system helps speed servicing. 500-hour engine oil and 2,000-hour transmission and hydraulic fluid intervals decrease downtime and expense.
- Exhaust filter operation and status are indicated with icons and on-screen displays.
   The diagnostic monitor also provides easyto-understand messages that help speed troubleshooting.
- 3. Innovative V-cool design provides convenient access to both sides of the coolers for easy cleanout. Hydraulically driven fan runs only as needed, reducing fuel consumption and debris flow through the cores.
- Operator station tilts a full 70 degrees in only minutes, for wide-open drivetrain component access.
- **5.** Fluid-sample and diagnostic test ports simplify preventive-maintenance work and troubleshooting for increased uptime.

Heavy-duty recessed belly guards allow easy access to the engine oil pan for fast service.

Advanced diagnostic monitor provides easy-to-understand messages to help speed troubleshooting.

Sealed hydraulic and hydrostatic reservoirs are separate, eliminating any possibility of cross-contamination.

Remote lube banks provide easy access to difficult-to-reach crossbar and C-frame pivots. Convenient color-coded lube chart ensures that nothing gets overlooked.

Vertical filters allow quick, no-spill changes. Engine, hydraulics, and transmission utilize a common oil, further simplifying service.

Diesel particulate filter is easily removed through the top of the engine compartment. Minimum service interval is 5,000 hours and can be done by your John Deere dealer.

Did you hear the one about the service technician who showed up with the right part — without first having seen the machine? It's possible with Service ADVISOR Remote. So are system software updates via JDLink. See your dealer for details about this brave new world of remote diagnostics and repair.

Engine 700K XLT / 700K LGP
Blade Type Power/Angle/Tilt (PAT)

Manufacturer and Model John Deere PowerTech™ PVX 6068 Non-Road Emissions Standard EPA Interim Tier 4/EU Stage IIIB

Displacement 6.8 L (414 cu. in.)

SAE Net Rated Power 93 kW (125 hp) at 1,800 rpm
Net Peak Torque 563 Nm (416 lb.-ft.) at 1,300 rpm
Aspiration Turbocharged with charge air cooler
Air Cleaner Dual-stage dry tube with tangential unloader

Cooling

Type Variable-speed suction fan with optional reversing feature

Engine Coolant Rating —37 deg. C (–34 deg. F) Engine Radiator 10 fins per in.

Powertrain

**Transmission**Automatic, dual-path, hydrostatic drive; load-sensing feature automatically adjusts speed and power to match changing load conditions; each individually controlled track is powered by a variable-displacement piston pump and motor combi-

nation; ground-speed selection buttons on single-lever steering and direction control; independently selectable reverse speed ratios of 100%, 115%, or 130% of forward ground speed; decelerator pedal controls ground speed to stop

Service

Hydrostatic (dynamic) braking stops the machine whenever direction-control lever is moved to neutral or the decelerator is depressed to the detent

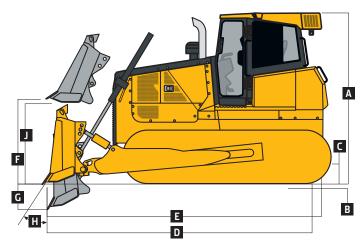

Parking

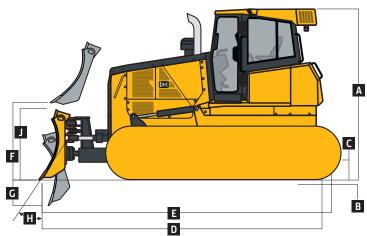

Exclusive safety feature engages wet, multiple-disc brakes whenever the engine stops, the decelerator is depressed to the end of travel, or the park-lock lever is placed in the start or neutral positions and motion is detected; machine cannot be driven with brake applied, reducing wearout or need for adjustment; spring-applied, hydraulic release
