

JSN Festival Configuration Manual

Getting Started

The Sun Framework is automatically installed when you install JSN Template Gen.2 templates.

In case manual installation is needed, please download the plug-in from our Customer Area and install it as a normal Joomla extension: Navigate to Extensions → Manage → Upload Packages → Select the Choose File button. Locate the downloaded ZIP and click Upload & Install to begin the installation process.

System Requirements

System	Requirements
Joomla	Joomla 3.6+
Server	Database: <ul style="list-style-type: none">• MySQL 5.1 +• SQL Server 10.50.1600.1 +• PostgreSQL 8.3.18 +
	Web Server: <ul style="list-style-type: none">• Apache 2.0 +• Microsoft IIS 7 +• Nginx 1.0

Browser	<ul style="list-style-type: none"> • Firefox 4 + • Google Chrome 10 + • Opera 10 + • Safari 5 + • Microsoft Edge

License

JSN Sun Framework is FREE, and released under the GPLv2.0 license: (<http://www.gnu.org/licenses/gpl-2.0.html>) *Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.*

Images, flash files and cascading style sheets (css) files are released under a JoomlaShine.com Proprietary License. All content and images shown on demos or sample data are for presentation purposes ONLY and ARE NOT INCLUDED with any templates or extensions.

User & Product Verification

After installed JSN templates, you must go through the User & Product Verification section on the page layout.

User Verification

When you click on the Get Started, the User Verification modal will be show. Here, you need to input JoomlaShine account for verification. After that, click on the Verify.

User verification ✕

Please input your JoomlaShine account credential to verify the product before utilization. This is one time requirement. Thank you.

Don't have JoomlaShine account? [Create one for free.](#)

➔

Product Verification

After you completed User verification section, you can see Product Verification modal show on the display, you need to check you information of the product you bought. Click on the Let's get started to install sample data.

Third Party Extensions

As there are different extension providers in Joomla world, it is a real challenge for most of the template developers to ensure that their template styles are fully compatible with extensions of other providers.

JoomlaShine team always try their best to ensure that all the templates created with JSN Sun Framework are compatible with the most popular Joomla extensions.

Depending on the specific features of each template, we will have extended style support for other 3rd extensions.

- Sample data will be installed for common Joomla components and for supported third-party extensions. Some extensions are not included in the JSN installation template package, so you need to download manually in the website of 3rd. Therefore, if you need the sample data for the 3rd party extensions that come with your template, make sure that you have installed them all before running sample data installation.
- In some cases, the 3rd extensions that you have installed are not matched with the ones that come with sample data, the installation process will not be completed. Please check the log at the end of the installation step to see the Version Requirement, then go to the extensions' websites and download them. After that, run the sample data installation again.

JTicketing

With JTicketing, you can create a new event and manage them easily right on the front-end. You can see immediately the change as well as it will save you a lot of time going back and forth in the administration.

Besides that, you can keep track of all activities in your site with one monitor display in the back-end, from sale report, coupon, to upcoming event.

To setting JTicketing on the admin site, go to: Components → JTicketing and setting for your website.

Installation

To build your website by JSN SunFramework, you need to install JSN Template Gen-2 which built on JSN SunFramework.

There are two ways to install JSN Template: install sample data via template package installation and install by quickstart package.

This section will help you with steps to install JSN template - Template Installation and Quickstart Installation.

Template Package Installation

1. Download the template installation package

Log in JoomlaShine Customer Area (<https://www.joomlashine.com/customer-area.html>) to download the template package that you have purchased. Make sure that you have downloaded the file marked with "Installation Package."

Downloads

Download your purchased products

Orders Downloads Licenses Profile Logout

#	FILE	VERSION	DATE	SIZE	ACTION
JSN 2					
<input type="checkbox"/>	JSN 2 for Joomla! 3.x (installation package)	1.0.0	17 Nov, 2017	773 KB	
<input checked="" type="checkbox"/>	JSN DEVELOPER for Joomla! 3.x (Quickstart package)	1.0.0	03 Feb, 2018	45.11 MB	

Depending on your order, you should have a template installation file either called jsn-festival_2_Z.Z.Z_install.zip (Z.Z.Z is the template version).

2. Install the template package

This is a standard Joomla! Template installation file, which can be installed in Joomla! Administration as usual. Here are quick instructions to remind you:

In Joomla! Administration, go to menu Extensions -> Extension Manager -> Install click Or browse for the file, select template installation file or drag and drop template installation file.

POWERADMIN Site Users Menus Content Components **1** Extensions Help

Extensions: Install Joomla!

Install Update Manage Discover Database Warnings Install Languages Update Sites

Install from Web Upload Package File Install from Folder Install from URL

2 Install Manage Update

Upload & Install Joomla Extension

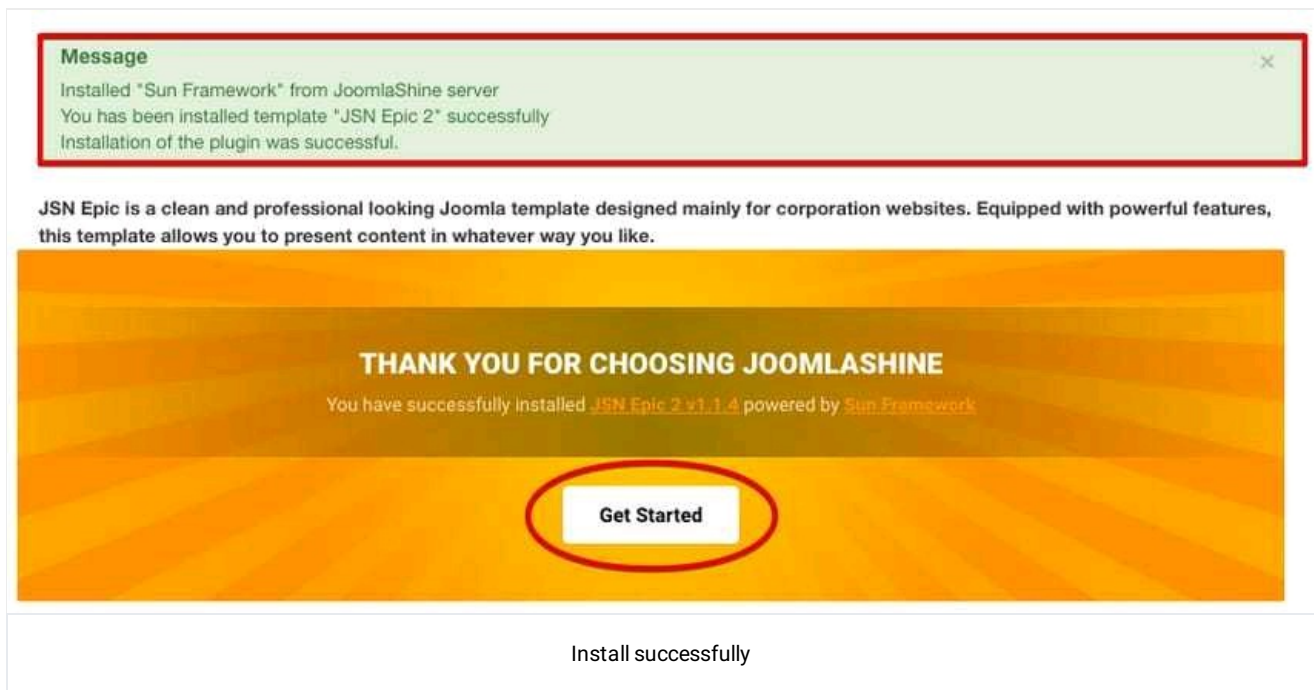

Drag and drop file here to upload.

3 Or browse for file

Maximum upload size: 32M

Install the template package

Installation file will be uploaded to your server and installed in your Joomla. Once the process is completed, you will see the following notification.

Now, the template is installed, but your layout and style need to be re-configured. You can build your own layout and set your style from here. However, it will be more convenient if you choose to install our Sample Data.

Please see our instructions below for further details about sample data installation.

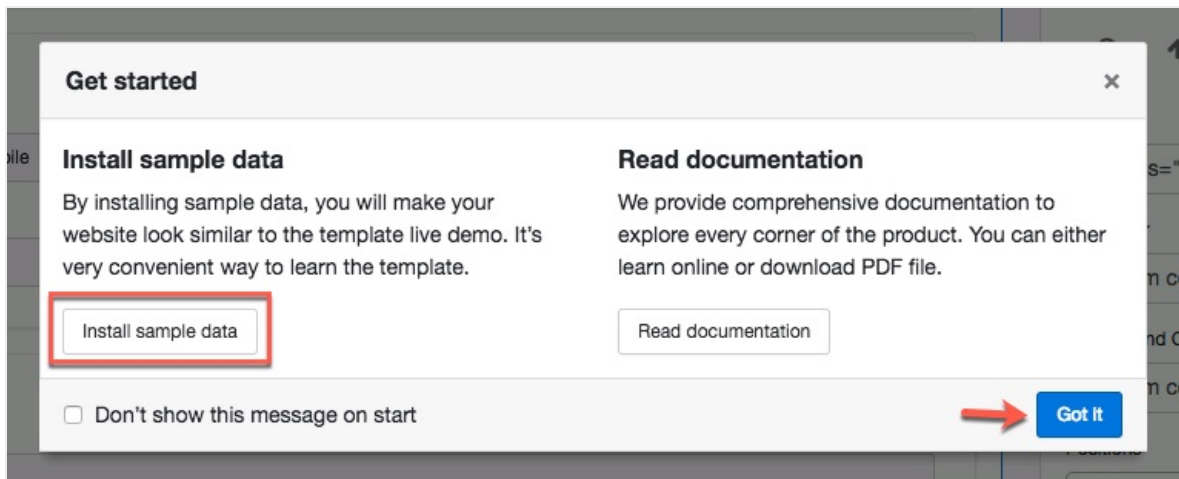

Sample Data Installation

NOTE:

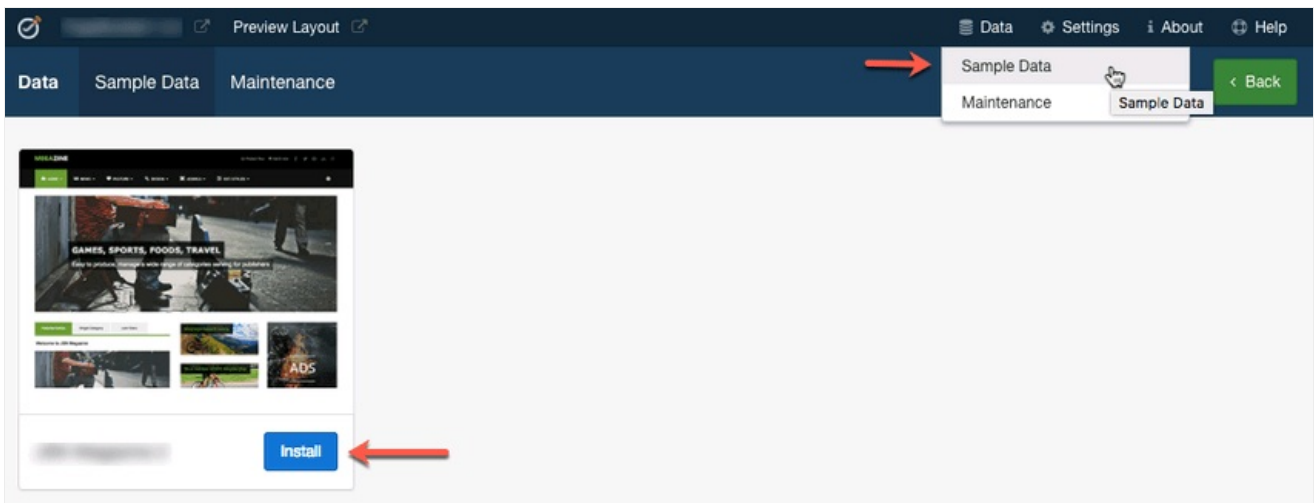

- Sample data will be installed for common Joomla components and for supported third-party extensions. Some extensions are not included in the template package, so you need to download manually in the website of the third-party extensions. Therefore, if you need the sample data for the third-party extensions that come with your template, make sure that you have installed them all before running sample data installation.
- In some cases, the third-party extensions that you have installed are not matched with the ones that come with sample data, the installation process will not be completed. Please check the log at the end of the installation step to see the Version Requirement, then go to the extensions' websites and download them. After that, run the sample data installation again.
- Third - party extensions this template support: JTicketing (<https://www.joomlashine.com/documentation/jsn-templates/jsn-festival/jsn-festival-configuration-manual.html#third-party-extensions>)

All JoomlaShine templates have the unique feature of installing sample data which makes your website look the same as on the template demo website.

You can start the sample data installation process by clicking on Get Started button, which appears at the end of your template installation and user verify step, or from the Data Menu Item on the top of JSN Template Gen-2 template style settings page.

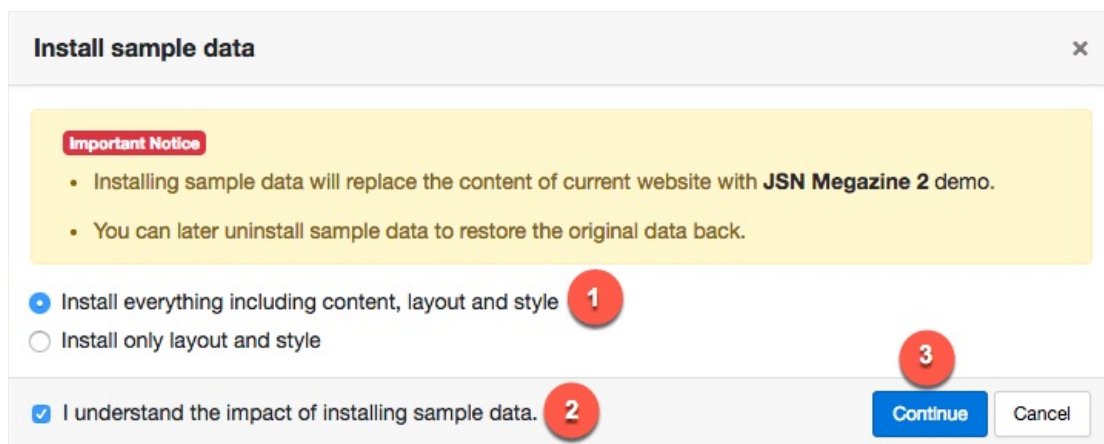

Click Install sample data button on the sample data you want to install.

Option 1: Install everything including content, layout and style

Your current contents will be erased. This option is suitable when you build a new website, and current contents are of no importance to you.

1. On page JSN Template Gen-2 Sample Data Installation follow on-screen instruction to start the process.

- Download sample data package of the demo website data such as: demo articles, demo menus, demo template settings, etc.
- Install free versions of JSN extensions: JSN ImageShow, JSN PowerAdmin, JSN PageBuilder 3 and JSN UniForm.
- Install sample data: this step will check the template version before installing the sample data.

Install sample data

There are several stages involved in the process, please be patient.

- Download sample data package.
- For the best experience, it's strongly recommended for you to install following FREE Edition extensions.
 - JSN PageBuilder3 New Installation +
 - JSN UniForm New Installation +
 - JSN ImageShow New Installation +
 - JSN Source Picasa New Installation
 - JSN Theme Classic New Installation
 - JSN Theme Slider New Installation
 - JSN Theme Masonry New Installation
 - JSN PowerAdmin New Installation +

Continue Cancel

2. Click the "Start editing" button to Return to template settings page for further configuration.

Install sample data

Sample data has been successfully installed, except for following extensions:

- EasyBlog Blogging Platform (5.1.8)
This is commercial extension, which need to be purchased and installed manually. [Learn more.](#)
- Kunena Forum (5.0.9)
This extension need to be downloaded and installed manually. [Download now.](#)

Start editing

In this window, the information of third-party extensions them are supported style in the template which need to be purchased and installed manually. Click on [Learn more](#) or [Download now](#) to get more information.

Option 2: Install only layout and style

Your current contents will be untouched. This option is suitable when you want to migrate your existing site to JoomlaShine templates.

Install sample data ✕

Important Notice

- Installing sample data will replace the content of current website with **JSN Magazine 2** demo.
- You can later uninstall sample data to restore the original data back.

Install everything including content, layout and style

Install only layout and style 1

I understand the impact of installing sample data. 2

3 Continue Cancel

Original data restoration

Before the sample data installation process, all original data of your website is automatically backed up into a backup file

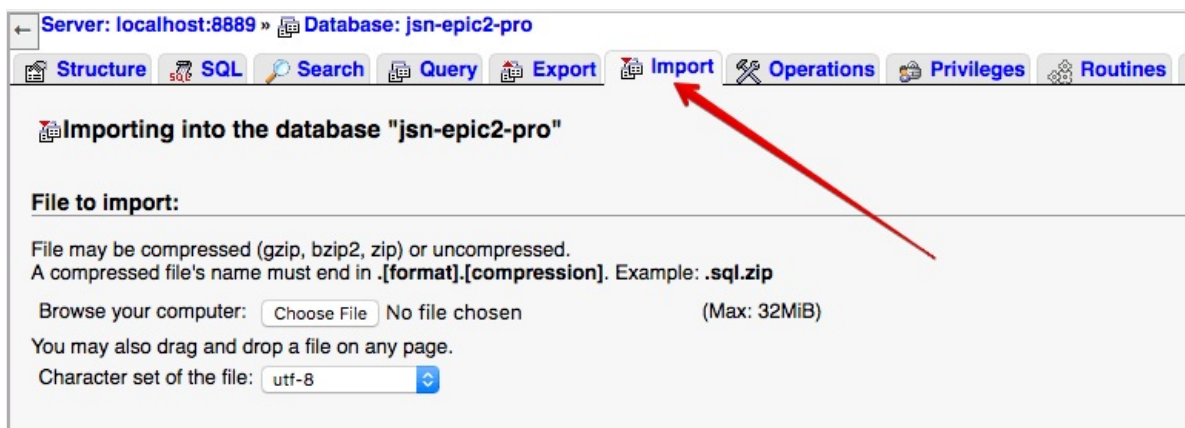

located in /backup inside the joomla_root_folder/templates/JSN Template Gen-2_XXX/, where XXX is the template edition on your server. Technically, this is the zip file, which contains a plain text file with SQL instructions that need to be executed on your Joomla! Database.

Below are the instructions on how to do that by using software phpMyAdmin 3.2.1.

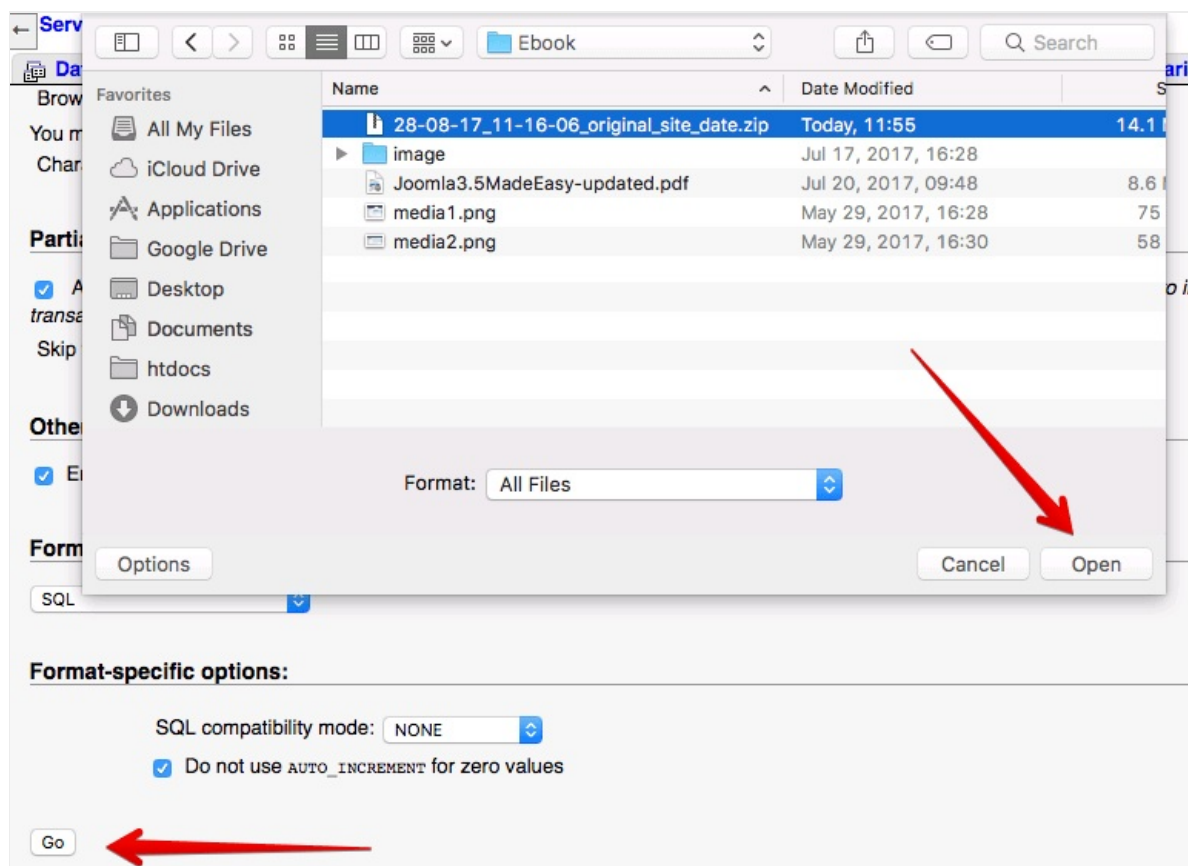

1. First, login to phpMyAdmin and select your Joomla! database on the left column

2. Next, select tab Import on the horizontal menu bar

3. Next, click button Browse..., then select the backup zip file and click button Go at the right corner of the page.

After script execution, you can get back to your website to check how the original data was restored.

Quickstart Installation

Quickstart package is a fully functional Joomla! package containing the CMS itself, the database, the selected template and all extensions used in the template.

Once you install the quickstart successfully, you will have a complete website that looks exactly same as our demo, with all the configurations and data that we used on the demo site in one place.

NOTE:

- You can NOT install a Quickstart package in Joomla administration. Instead, you will need to upload it to the host, extract all the files - then click on the URL and follow the instruction there to set up your package.
- Commercial extensions are not included in a quickstart package, even if you have purchased them. After installing a quickstart package, install these extensions and run sample data installation to get the full demo look for these extensions.
- In some cases, you will need to update your Joomla version after installing the quickstart package.

Preparation

- A template quickstart package downloaded from Customer Area (<https://www.joomlashine.com/customer-area.html>).
- A hosting Cpanel account or an FTP connection.
- A MySQL database with a user that has full privileges over this database.

Step 1: Download the Quickstart package from Customer Area

Note that the Quickstart package often has a big file size than the normal installation package. So it will be helpful if you have a good internet connection.

Option 2: Using FTP to upload extracted files from the Quickstart package to your public_html web folder

Step 3: Open your web browser, type or paste your URL in the address bar to start the quickstart installation process. Fill in all the fields below as required. Once you have completed all the fields, click NEXT to proceed to the next step.

Step 4: Enter your database configuration information

On this page, please enter the correct database info that you created for this Joomla.

Once you have filled in all the info, click NEXT to continue.

The screenshot shows the Joomla! installation wizard's Database Configuration step. At the top, the Joomla! logo is displayed. Below it, a banner states "Joomla! is free software released under the GNU General Public License." The navigation bar shows three steps: 1 Configuration, 2 Database (highlighted), and 3 Overview. The main heading is "Database Configuration" with "Previous" and "Next" buttons. The form includes the following fields and instructions:

- Database Type ***: A dropdown menu set to "MySQLi" with the instruction "This is probably 'MySQLi'."
- Host Name ***: A text input field containing "localhost" with the instruction "This is usually 'localhost' or a name provided by your host."
- Username ***: A text input field with a yellow background and a masked character, with the instruction "Either a username you created or a username provided by your host."
- Password ***: A text input field with a yellow background and masked characters, with the instruction "For site security using a password for the database account is mandatory."
- Database Name ***: A text input field containing "jsn-epic2-pro" with the instruction "Some hosts allow only a certain DB name per site. Use table prefix in this case for distinct Joomla! sites."
- Table Prefix ***: A text input field containing "ga2sr_" with the instruction "Create a table prefix or use the randomly generated one. Ideally four or five characters long, it may only contain alphanumeric characters and MUST end in an underscore. Make sure that the prefix chosen is not already used by other tables."
- Old Database Process ***: Two buttons, "Backup" (red) and "Remove" (grey), with the instruction "Backup or Remove any existing tables from former Joomla! installations with the same Table Prefix."

At the bottom right, there are "Previous" and "Next" buttons, with the "Next" button highlighted in blue and enclosed in a red rectangular box.

If all the information is correct, the quickstart package will be installed.

Step 5: Finalize the installation process

The congratulation message will appear when the package is fully installed. On this screen, you will be prompted to remove Joomla installation.

Click on Remove Installation folder to perform this action.

After that, you can either log on your backend to start working on the site by clicking on "Administrator" button, or check how the website looks by clicking on "Site" button.

Joomla! is free software released under the GNU General Public License.

Congratulations! Joomla! is now installed.

Joomla! in your own language and/or automatic basic native multilingual site creation

Before removing the installation folder you can install extra languages. If you want to add extra languages to your Joomla! application select the following button.

→ Extra steps: Install languages

Note: you will need internet access for Joomla! to download and install the new languages. Some server configurations won't allow Joomla! to install the languages. If this is your case, don't worry, you will be able to install them later using the Joomla! Administrator.

PLEASE REMEMBER TO COMPLETELY REMOVE THE INSTALLATION FOLDER.

You will not be able to proceed beyond this point until the installation folder has been removed. This is a security feature of Joomla!

Layout

This section covers the basics of layout configuration in JSN Template Gen-2 and other templates powered by Sun Framework.

For most non-coder users, controlling layout in Joomla is often a real struggle. In most cases, users will need to accept the layout as designed and coded by the template provider. However, this is no longer an issue with the new Layout Builder in JSN Sun Framework. With a self-explanatory user interface, this the Layout Manager provides endless possibilities to create and customize your Joomla template layout without a single line of code.

Here are some great features in JSN Sun Framework's Layout Builder:

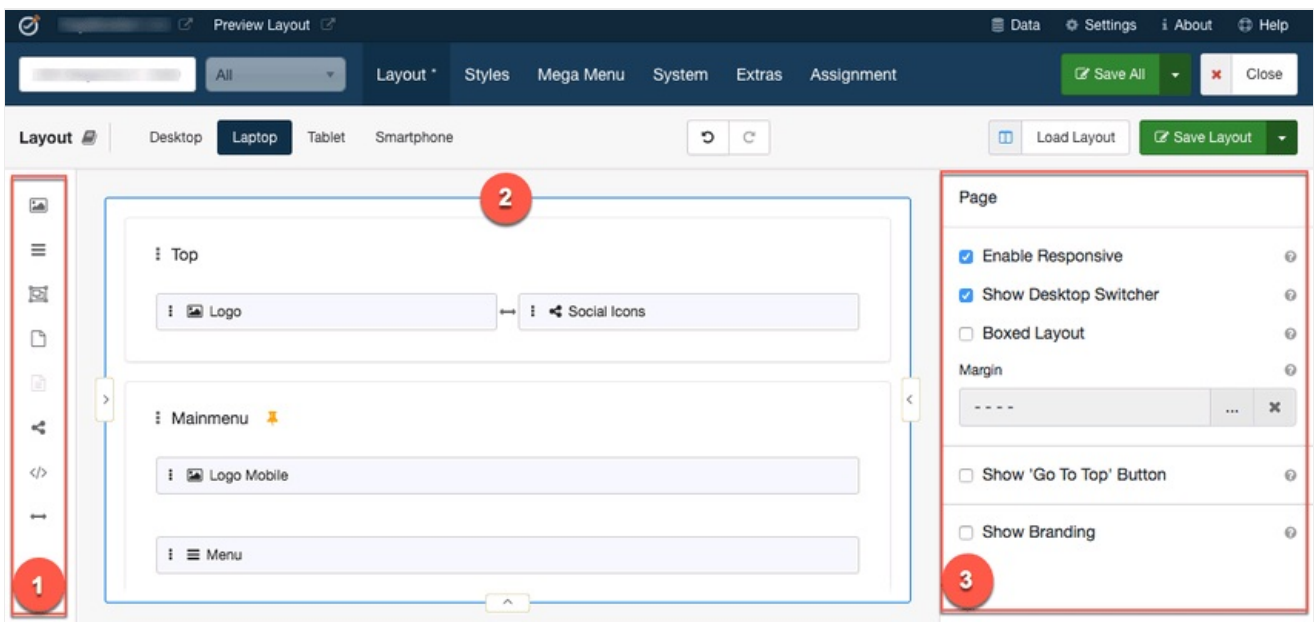

- Easy-to-build drag & drop process: Creating a template layout from scratch just by dragging & dropping items into your layout, with incredible speed and performance.
- Painless customization: Thanks to the intuitive user interface, you can easily customizing the existing layout.
- Flexible module position creation: Never have to wonder which files and codes are needed to add a new module position in your layout, as you can do this directly in the framework's intuitive user interface.
- Unlimited Undo & Redo: No worries if you have made a mistake while building or customizing a template layout, as you can always use Undo feature to take a step back and recover what you had previously.
- Powerful backup & restore: Your layout can be backup and restore with just one click.
- Highly responsive: Fully responsive with Bootstrap 3 support. The layout builder also offers editing mode in tablet and mobile devices.
- Easy to learn: There is no learning curve. What you see in the layout builder is what you get on the front-end view.

To start with layout configuration, go to Extension → Template → JSN_template_default. The first tab you see will be the Layout tab, where you can have the ultimate control of the template layout.

Layout Control

Overview

Sun Layout Builder is a very flexible and powerful tool which gives you the ability to build and customize the existing template with the intuitive drag-and-drop interface.

The Layout Builder consists of three main areas:

1. Layout Items: list of items which you can drag & drop into the layout.
2. Layout: including the main layout and four off-canvas regions. There are areas where your template's layout items are positioned and built.
3. Setting Panel: all the settings related to layout items which are being configured.

Undo & Redo

Sun Layout Builder allows you to undo and redo the actions that you made. Simply hit Undo to switch back or Redo to go forth. This tool will surely save you a huge amount of time and efforts. Worry-free if you accidentally make a mistake.

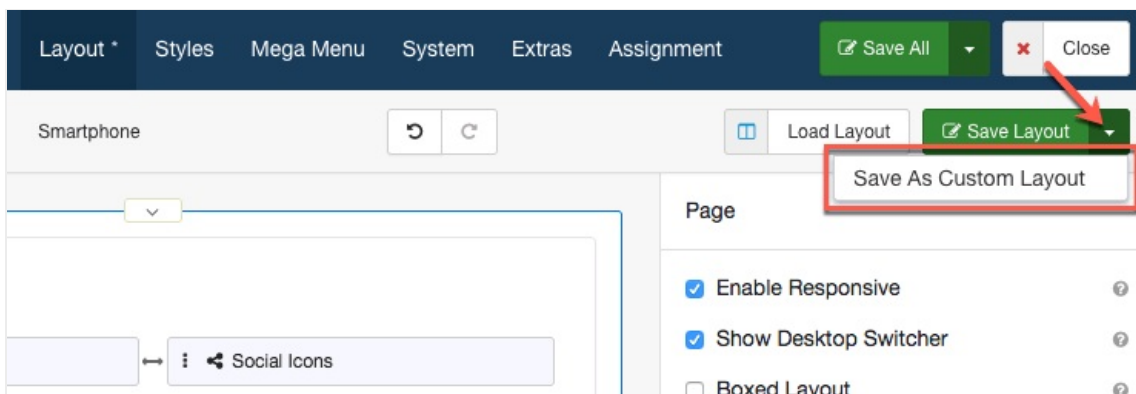

Save Layout

Sun Framework offers Ajax save button for each settings tab. Changes will be saved quickly without having to reload the setting pages.

Save as Custom Layout

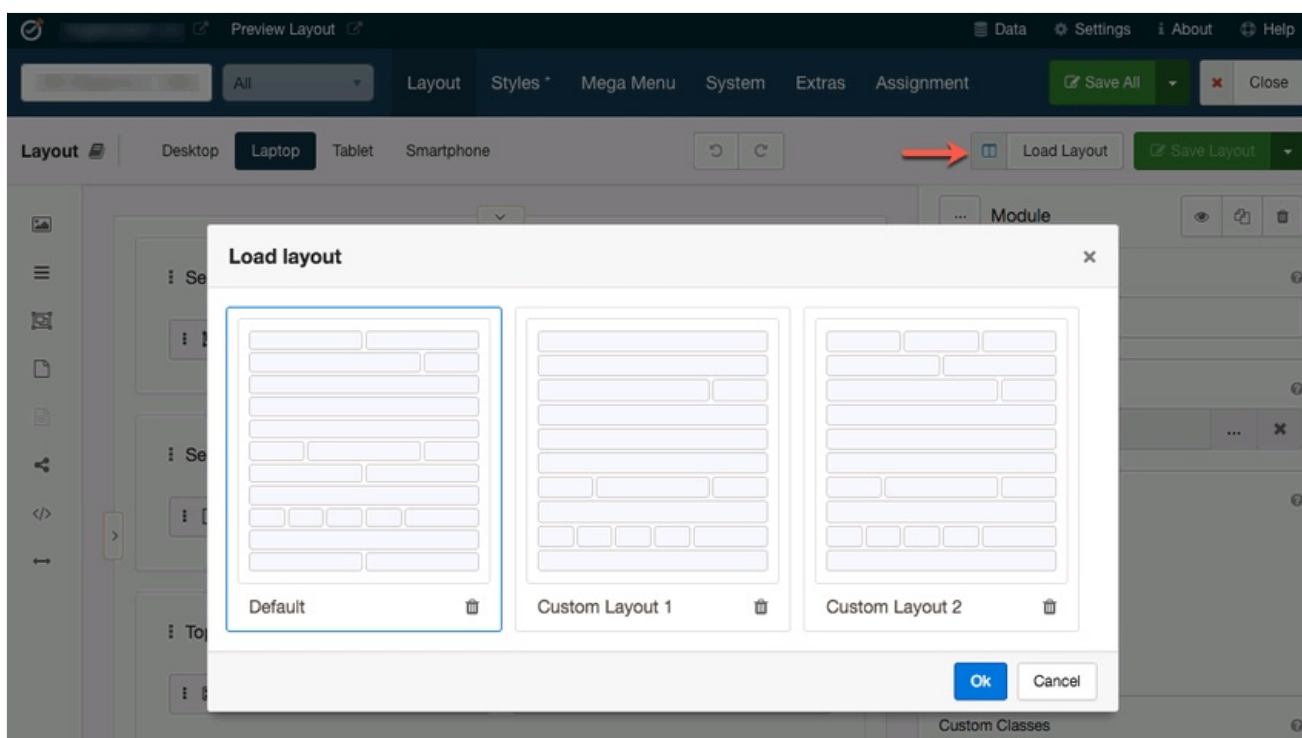

This option gives you the ability to save the current layout and use it later on.

To save the current layout as a custom one, just click on Save As Custom Layout button. After that, type the name of the layout.

Load Custom Layout

This button enables you to load custom layout that you saved.

Building a Layout

Concepts

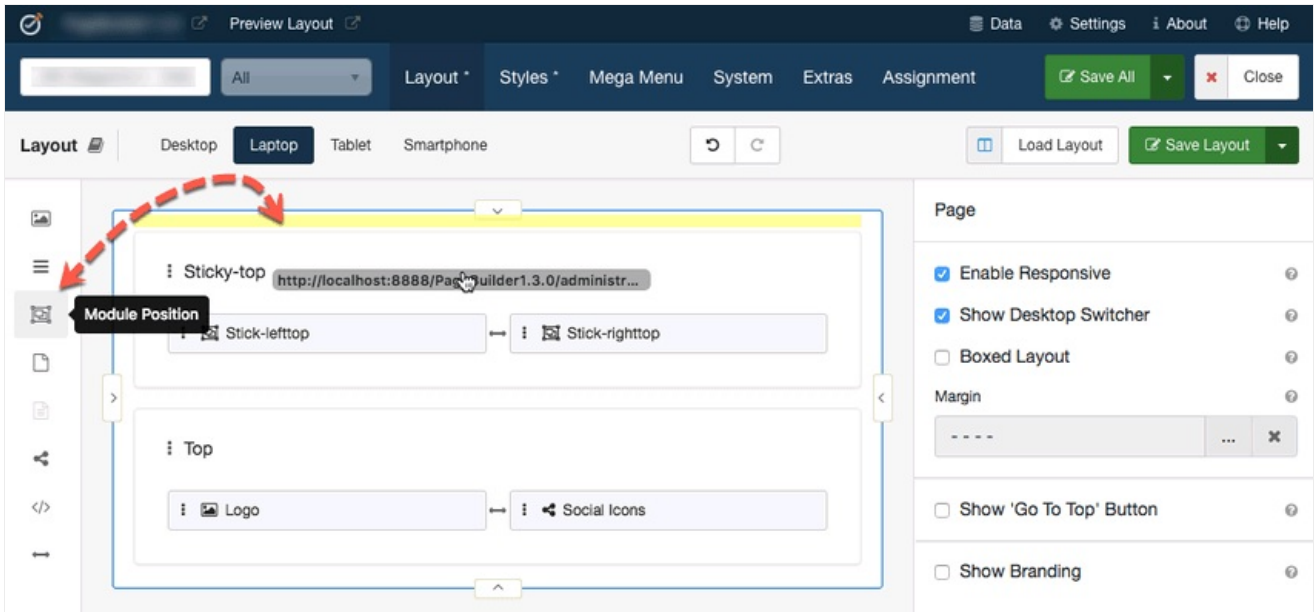

Sun Framework's layout concepts:

1. Page: Overall settings for the layout.
2. Section: Section is a division of a page. A section is automatically created when you add a row to an empty area in the layout. It contains one or more rows in which you can add layout items.
3. Row: Row is the component contained in the section. Same as section, a row is automatically created when you add a

layout item on the left of the page. A row contains one or more columns corresponds one or more layout items.

4. Column: Column is the component contained in the row. Each column corresponds to only one layout item.
5. Layout items: These are smallest pieces in the layout. Each item is made up of one column.

Drag & Drop

You can start building your own layout by drag & drop items on the left panel into the layout area. After that, you can adjust their settings via the right panel.

- If you drag a new item into a blank area of the layout, it will automatically create a row, a column and section wrapped around this item.
- If you drag a new item below an existing row, a new row which contains this new item will be created. These two rows will be in the same section.
- If you drag a new item below an existing item/row in a column, these two items will be wrapped in the same column.
- You can drag an existing item in the layout to any position simply by clicking on the drag icon in the item and bringing it to anywhere you want.

Note: This feature is only available in PRO templates powered by JSN Sun Framework.

Adjusting Column Width

To change a column width, simply move your mouse cursor on the dividing line between two columns and drag it left or right, depending on how you want it to go.

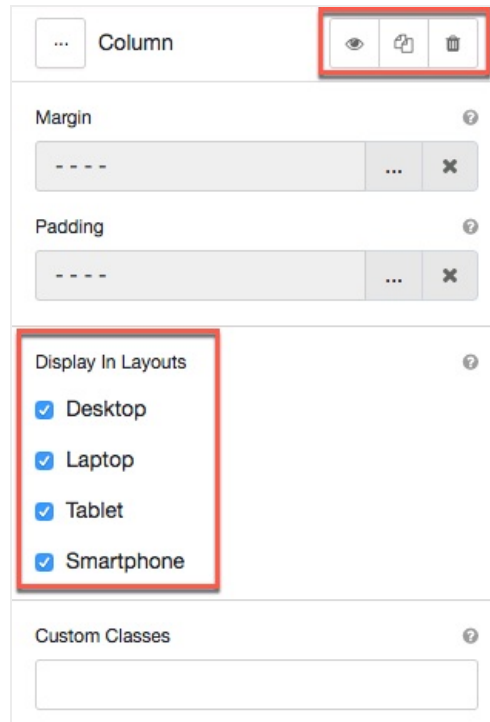

Sun Framework utilizes Bootstrap 3, which means there will be 12 columns in the layout.

Layout Settings

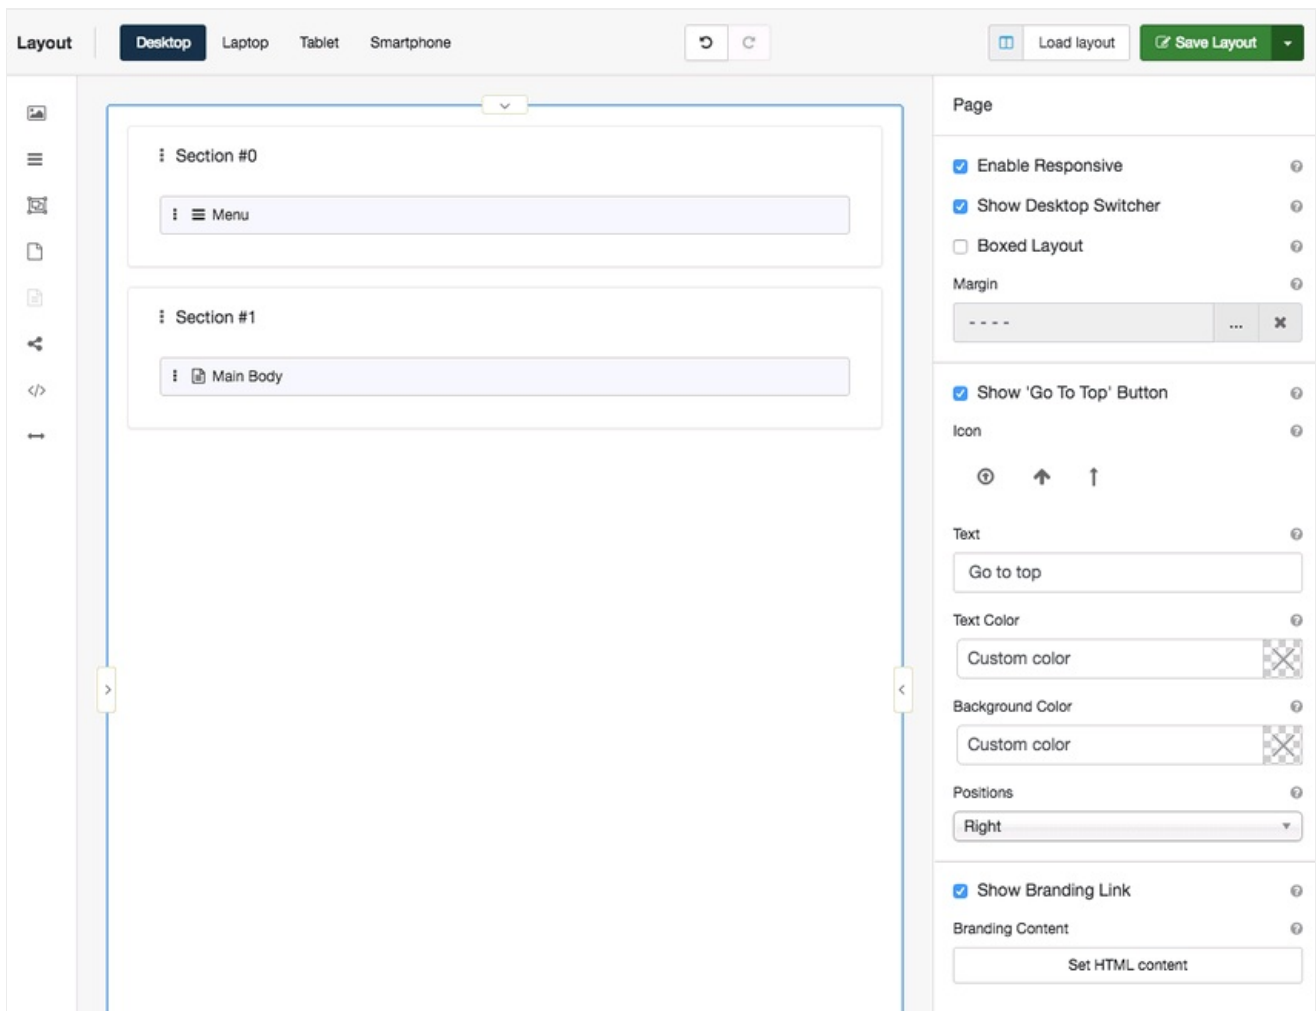

Common Settings

Most of the items in Sun's layout share the following settings

- Hide
- Clone
- Delete
- Custom classes: for custom styling
- Responsive display: hide or display item in different viewports (applied for columns/items)

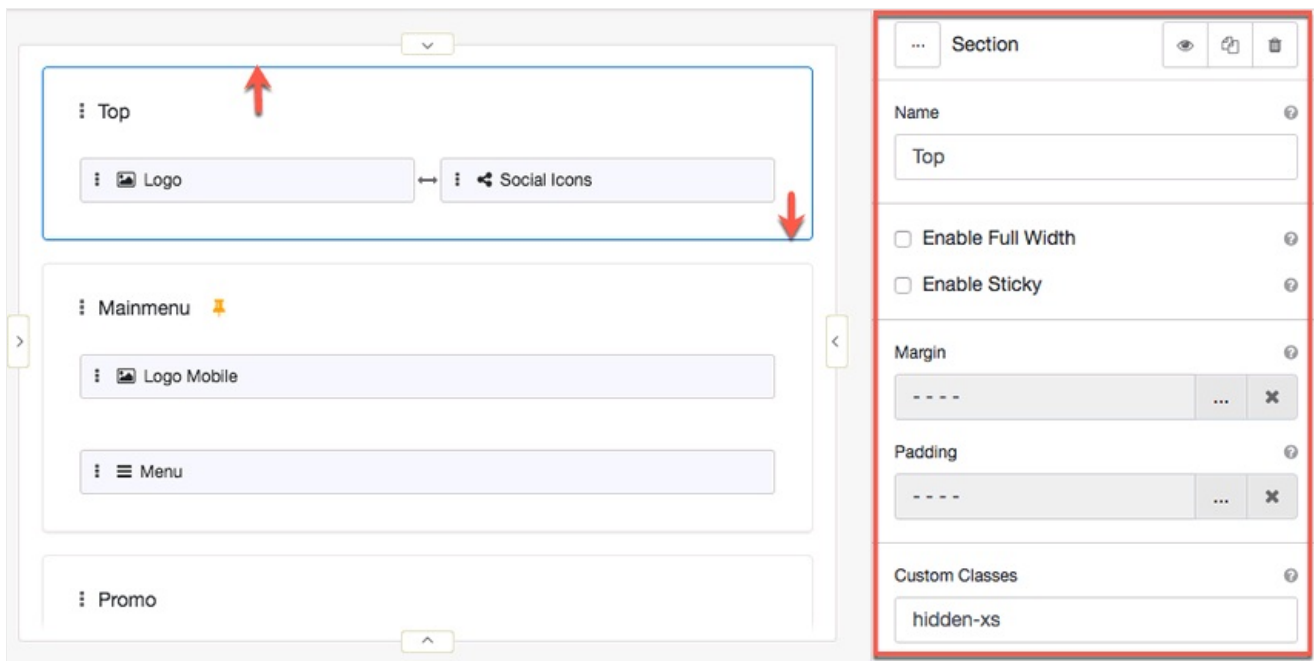

Page Settings

This panel is the first thing you see when opening the Layout tab. It contains general settings for the template page setting.

Settings	Description
Enable responsive	Turn on or off responsive layout mode. This feature is on by default.
Show desktop switcher	Display an icon that allows you to switch from mobile view to desktop view.
Boxed layout	Change from full-width layout to boxed layout. Upon selecting this option, you can set the width for your layout.
Margin	Set margin values for the page.
Show "Go to Top" button	Display go-to-top button near the bottom of the website. Upon selecting this option, you can select proper icons for this button.
Show Branding Link	Display "Template by JoomlaShine" in center of the bottom on the website. You can set HTML content for branding by click on Set HTML button. Note: This feature is only available in PRO templates powered by JSN Sun Framework.

Section Settings

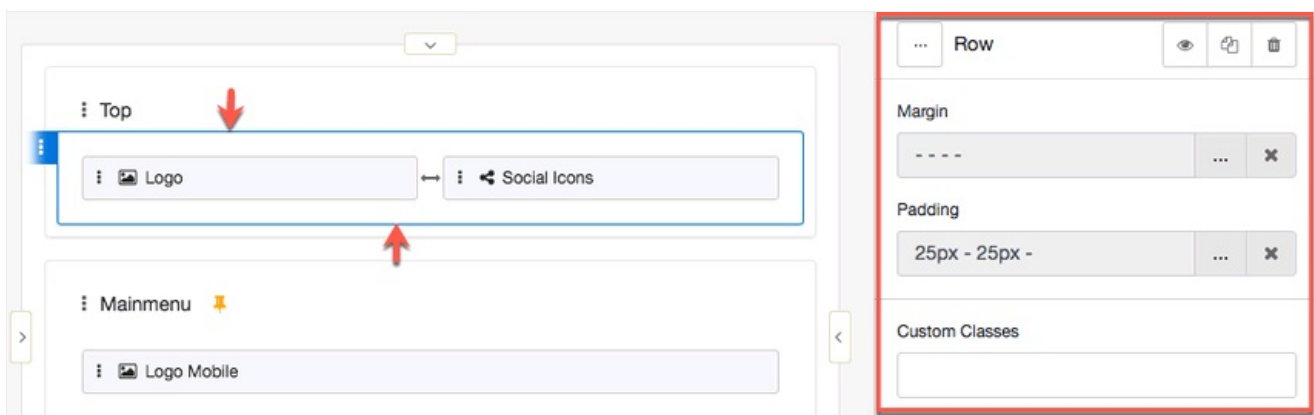

A section is automatically created when you drag a Layout Item into a blank area in the layout.

Section settings will appear when you select any section in the layout. See the available settings for a section in the screenshot below:

Settings	Description
Enable full width	Set full-width layout for a section.
Enable sticky	Set sticky mode for a section. This feature is often used for header section.
Margin	Set margin values for a section.
Padding	Set padding values for a section.

Row Settings

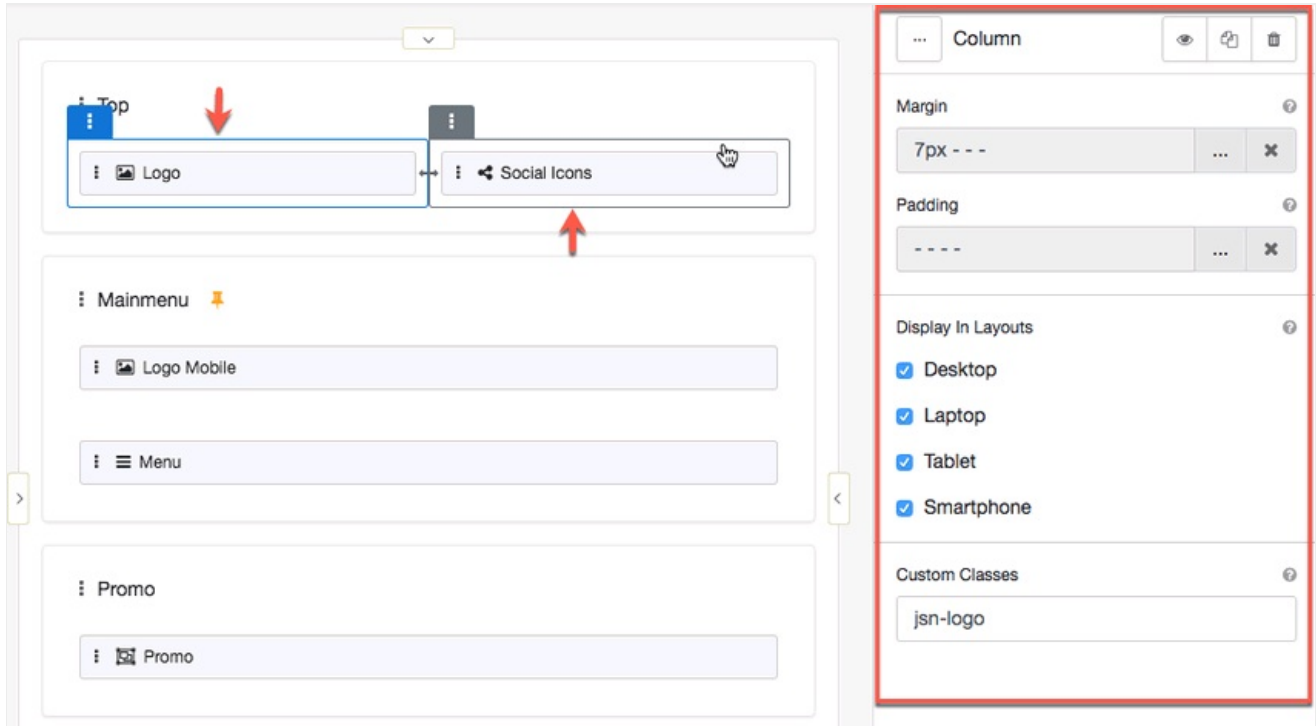

Row settings will appear when you select any row in the layout. See the available settings for a row in the screenshot below:

--	--

Settings	Description
Margin	Set margin values for a section
Padding	Set padding values for a section
Custom classes	Specific CSS classes for custom styling

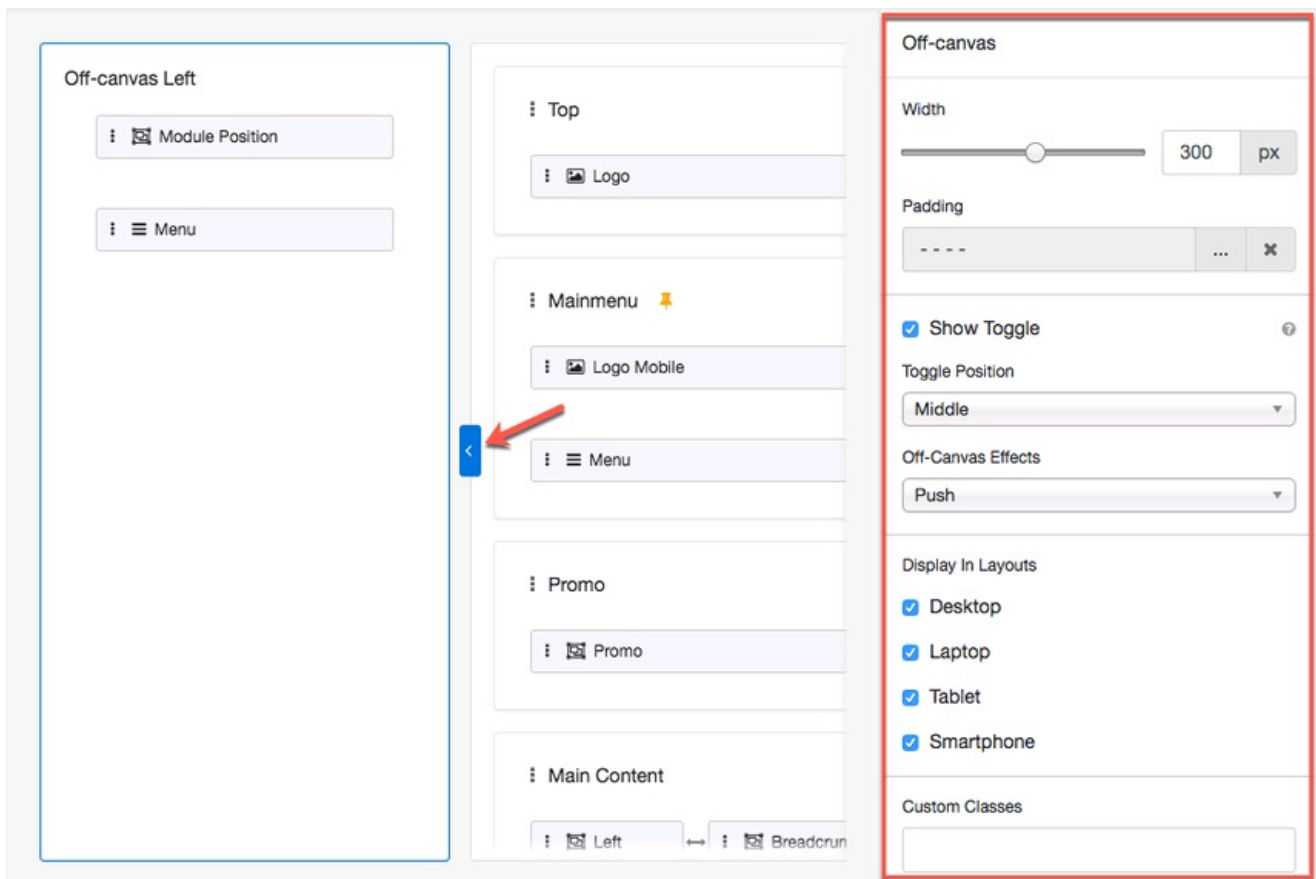

Column Settings

Column settings will appear when you select any column in the layout. See the available settings for a column in the screenshot below.

Settings	Description
Margin	Set margin values for a section
Padding	Set padding values for a section
CSS classes	Specific CSS classes for custom styling
Display in layouts	Set visibility of columns in each viewport: mobile, tablet, laptop, desktop

Off-canvas Section

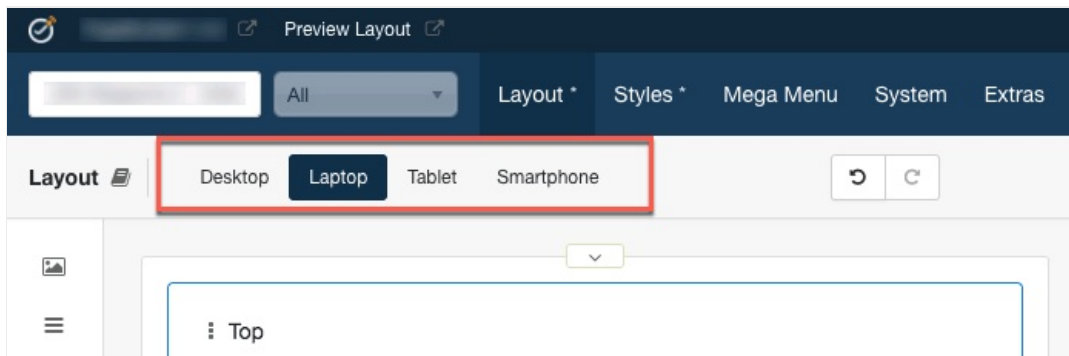

This section give you the ability to place menus, modules and positions in a special Off-canvas sidebar, used for both desktop and mobile view.

The Sun framework offers four Off-canvas sections, which are located on the top, right, bottom and left side of the layout.

To set up a Off-canvas section, you only need to click on one of the toggle buttons, which are available on each side of the layout builder, depending on where you want the Off-canvas section to display on the front end.

Settings	Description
Width	The width of the Off-canvas section (Applied for left and right off-canvas only).
Height	The height of the Off-canvas section (Applied for top, bottom off-canvas only).
Padding	Set the padding value, including top, right, bottom and left padding
Toggle position	Set the position of the toggle button.
Custom classes	Add custom CSS classes for the Off-canvas section.

Responsive Layout

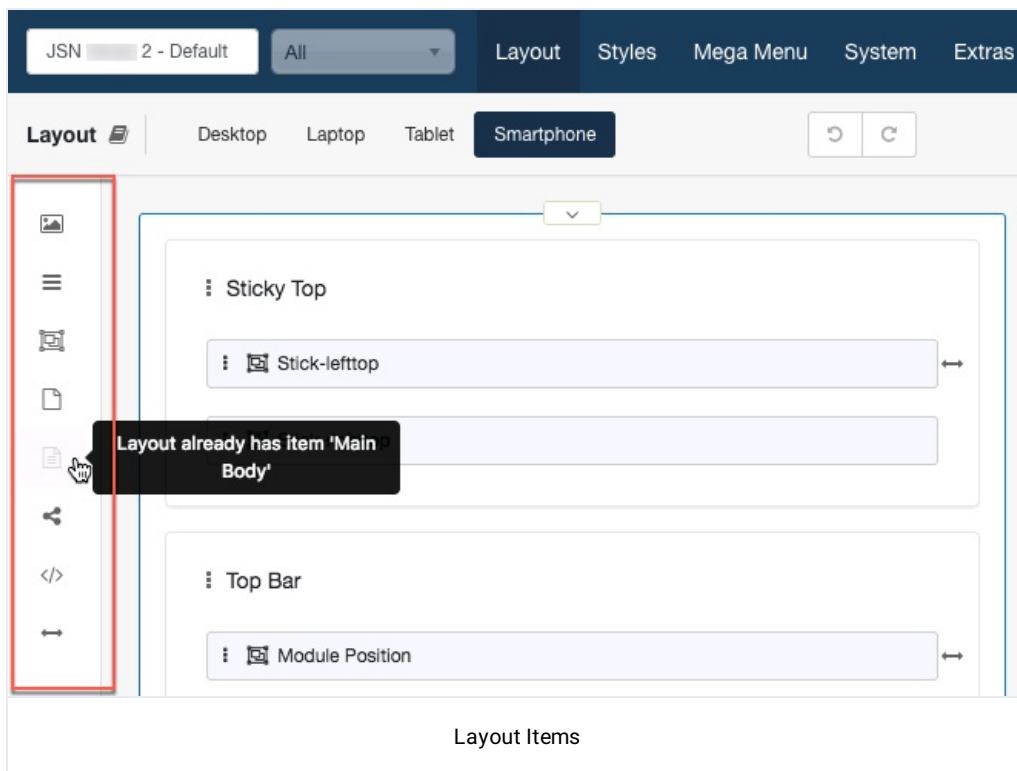

The responsive mode is enabled by default. If you don't want to use Responsive Layout, go back to Page Settings and deselect Enable Responsive.

You can adjust the width of each item in tablet and mobile, as well as their visibility in each viewport, by going to each viewport and change its settings.

The responsive viewport of Sun Framework layout is similar to that of Bootstrap 3. For further information, please see it.

Note: This feature is only available in PRO templates powered by JSN Sun Framework.

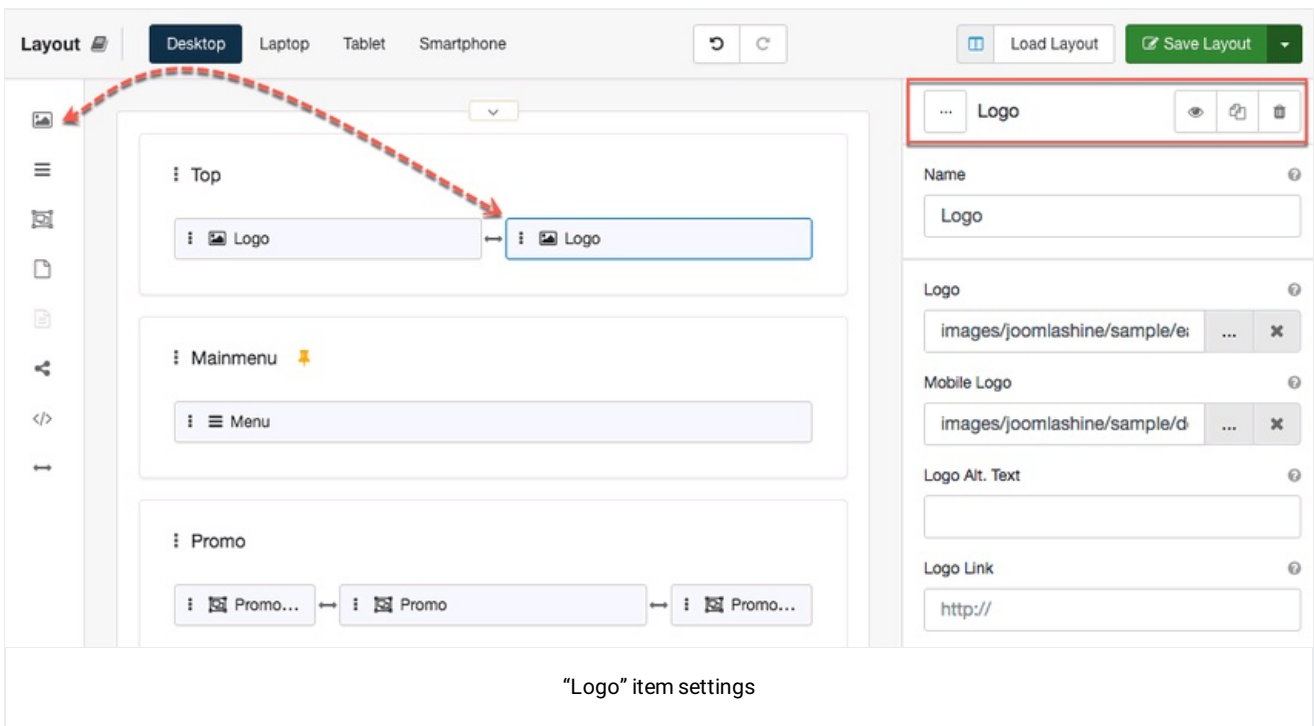

Items Settings

When you open template setting layout, go to list of layout items on the left of this page. There are eight layout items show on the main layout: Logo, Menu, Module Position, Module, Main Body, Social Icons, Custom HTML, Flexible Space.

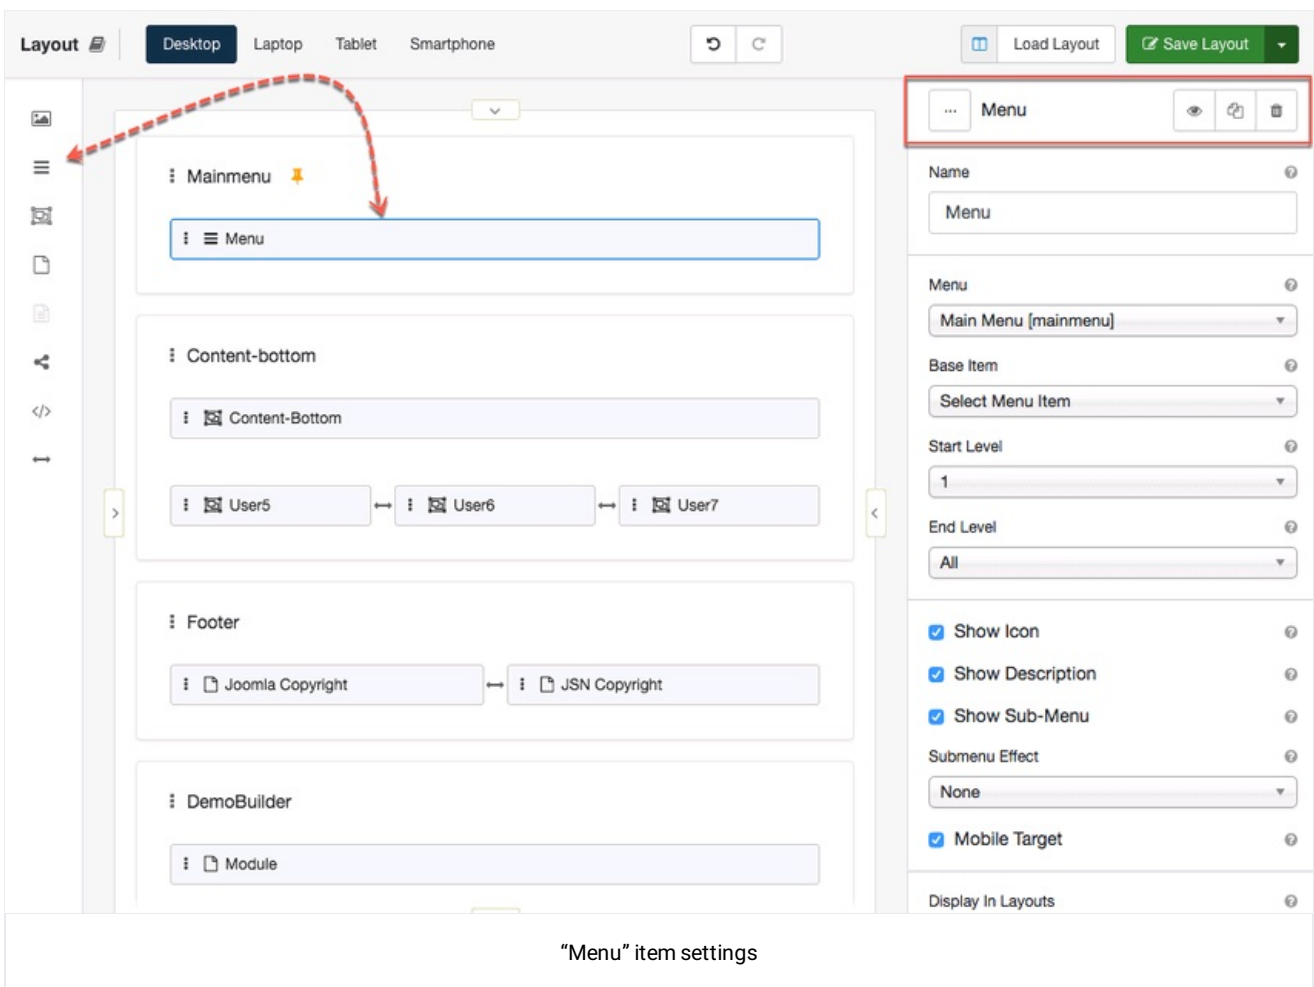

Now, let's go to each item:

Logo Item

After drag logo item to the layout, click on on logo item, go to Logo Setting Panel on the right of the page to select a logo image for desktop and mobile logo via Media Selector and add your own Logo Alt. Text, Logo Link.

Menu Item

This item allows you to show on visitor area the menu created from Joomla Menu Manager before.

Settings	Description
----------	-------------

Name	Change the name of “Menu” item.
Menu	Select the menu you want to assign to the “Menu” item.
Base Item	Select a menu item to always be used as the base for the menu display.
Start Level	Level to start rendering the menu at.
End Level	Level to stop rendering the menu at.
Show	To show icon, menu description and sub-menu created on menu manager before. You can select one of three option: Show Icon, Show Description, Show Sub-menu.
Submenu Effect	You can choose one of three options: None, Fading, Slide for submenu.
Mobile Target	Display your menu as off-canvas menu in mobile view.

Module Position Item

“Module Position” item settings

With one module position, you can assign one or more modules to this item. First of all, you need to drag a module position item to the layout and review some option:

Setting	Description
Name	Change the name of “Module Positions” item.

Module Position	Select one of the available module positions. By default is "banner", you should create other position before select.
View Module	Click on this button you can see the modules is assigned for this position before.
Create New Position	Create a new position.

Module Item

"Module" item settings

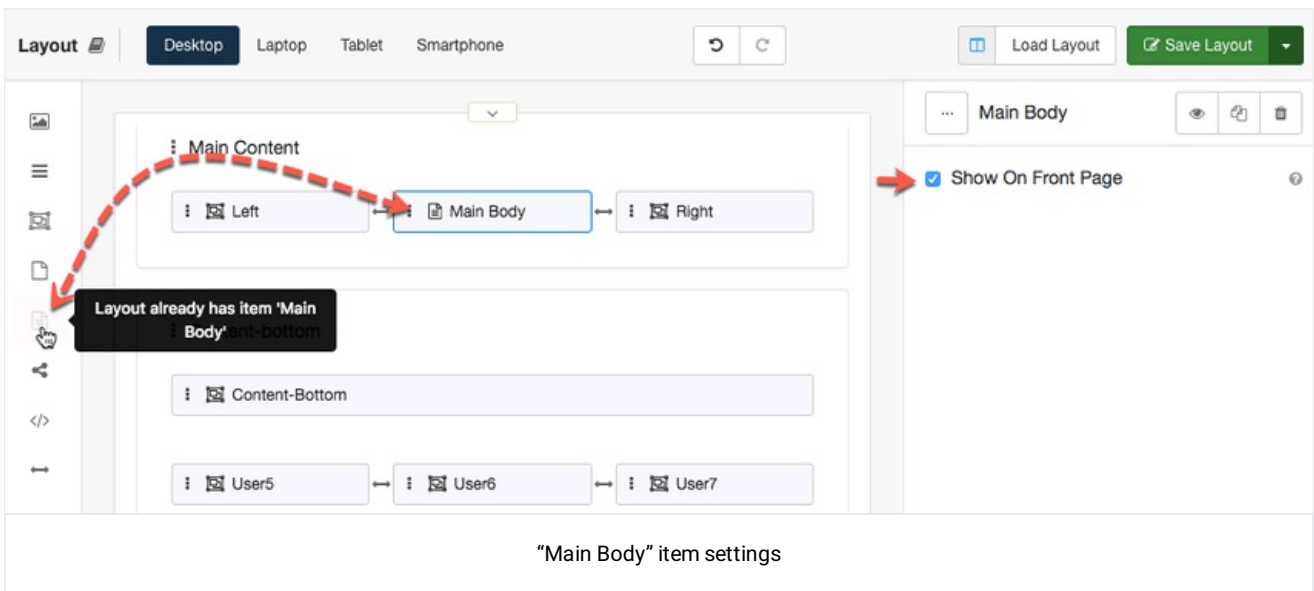

Similar to the function of the "Module Position" item, you can assign module created before for this item, but you just assign only one module for a module item by selecting module from Module selector. After clicking on the "select" icon you can find your module faster by smart search tool.

Status	Title	Position	Access	Language	ID	Action
✓	Main Menu	position-7	Public	All	1	
✓	Login Form	position-7	Public	All	16	
✓	Breadcrumbs	position-2	Public	All	17	

Module Selector

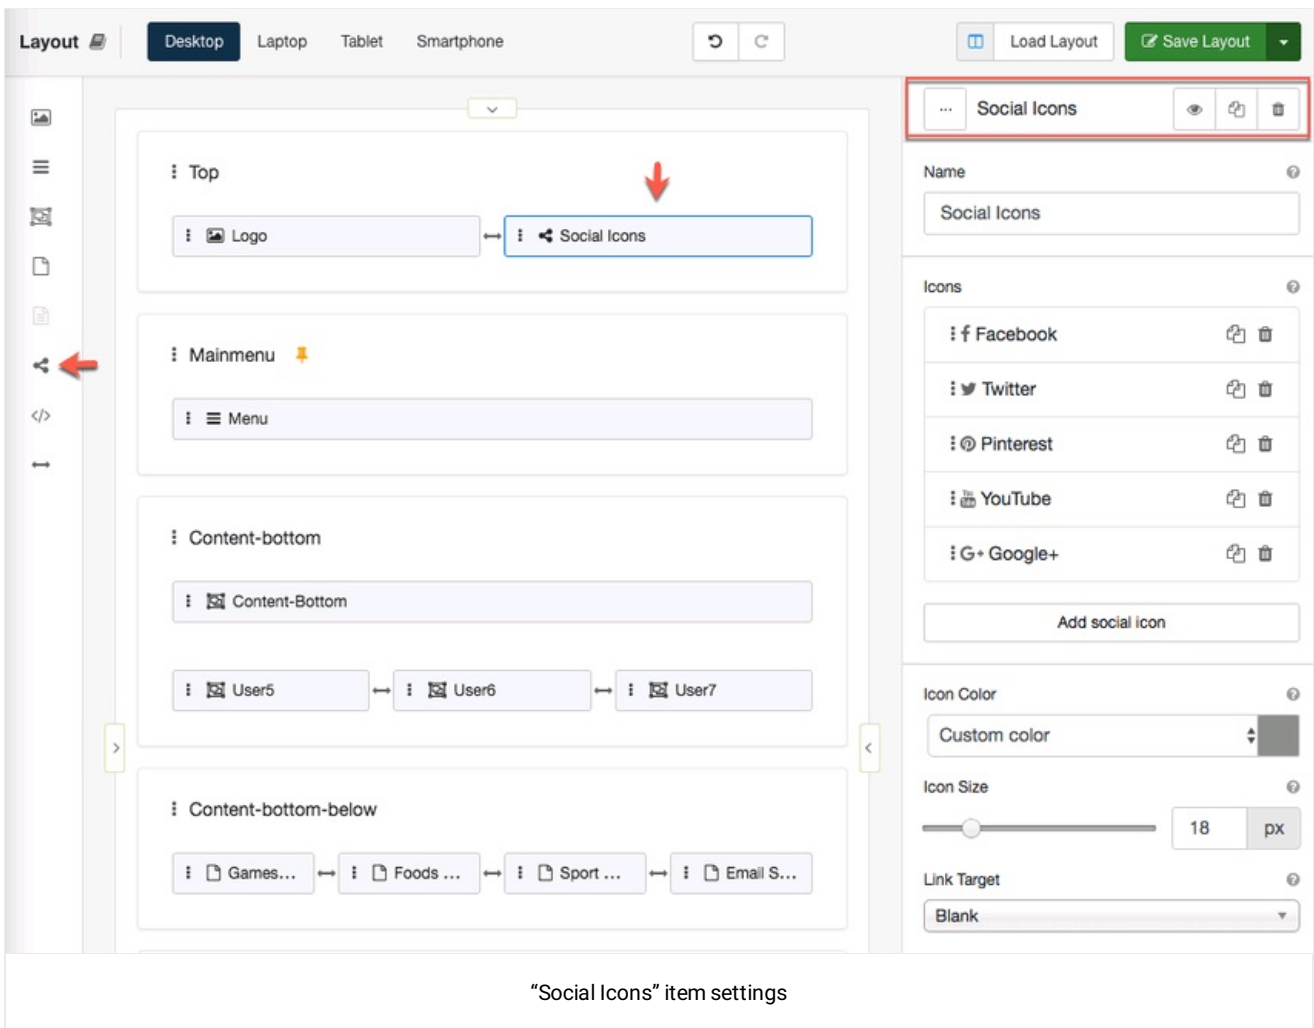

Main Body Item

This item allows to show article/feature articles. You just drag only one item for one page. If your page has this item before you select item to drag to the page, you will see a notification Layout already has item "Main Body".

Show On Front Page: Turn on or turn off the mode to show or hide the main body on the frontend. This option only effect on the menu of the homepage.

Social Icons Item

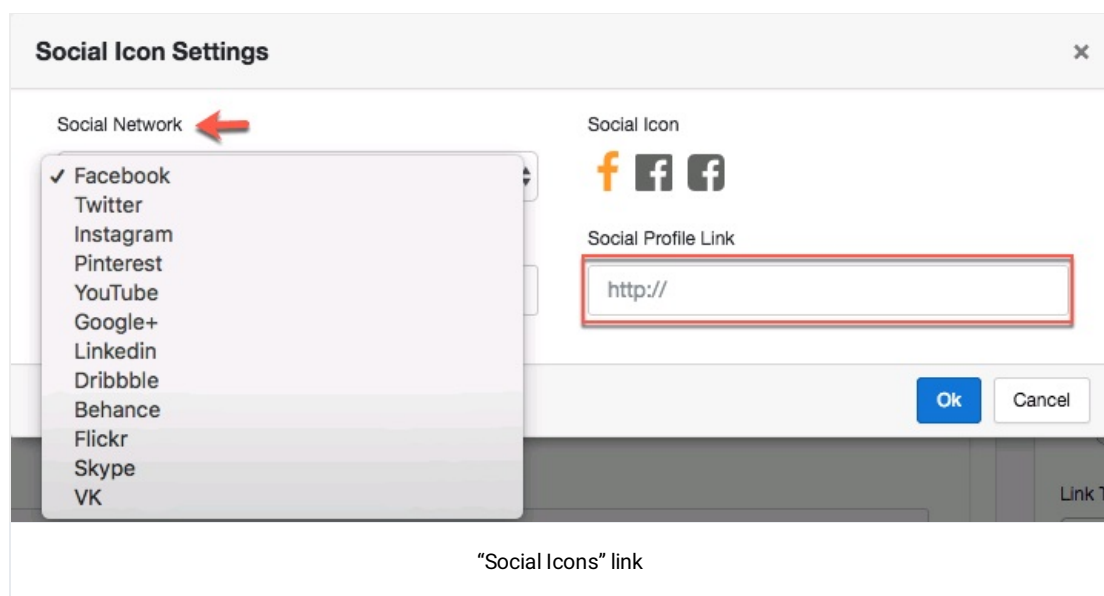

If you want to put your site some social icons, simply drag "Social Icons" item to the page and make some quick settings:

Setting	Description

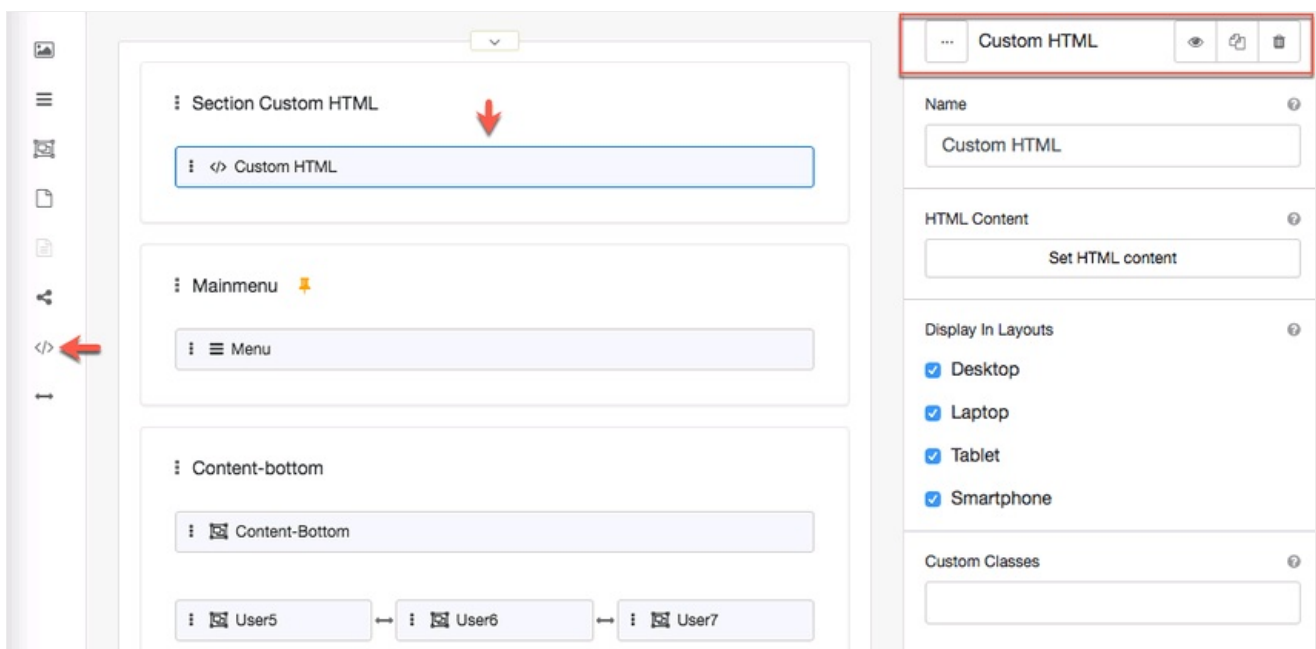

Name	Change the name of the "Social Icons" item.
Icons	Select the social icons you want to presentation by click on Add social icon.
Icon Color	Select the color for the icons.
Icon Size	Select the size for the icons.
Link Target	Select how the links of the social icons will be opened.

To add more social icons, click on Add Social Icon button → select a Social Network. Here you can the social link, click on the icon image → Social Profile Link to update the social link.

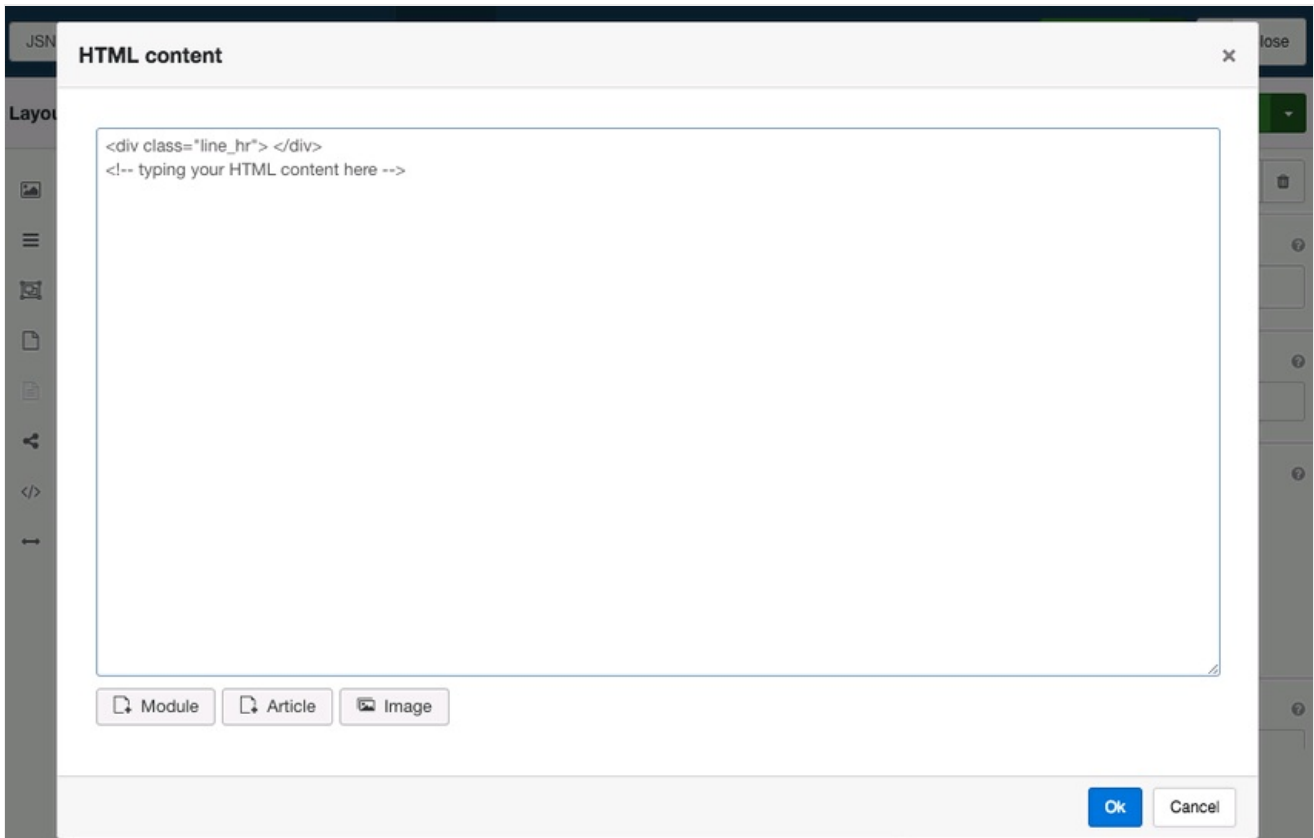

Social Icons supported are: Facebook, Twitter, Pinterest, Youtube, Google+, Instagram, LinkedIn, Dribbble, Behance, Flickr, Skype, VK.

Custom HTML

"Custom HTML" item settings

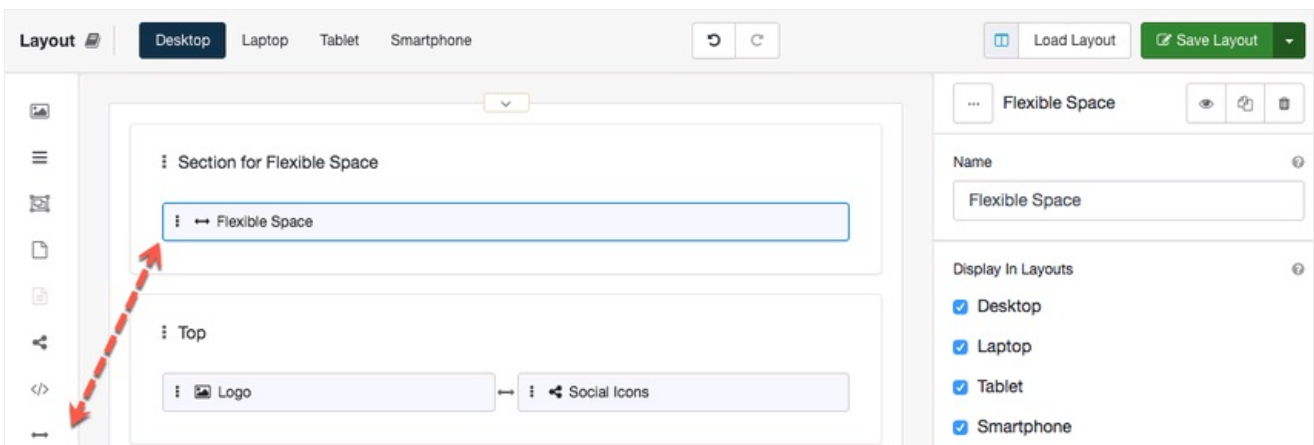

This item allows you to put your HTML content, you just need to drag this item to the page and click on Set HTML content button then type your HTML content there.

Custom HTML window

Flexible Space

Flexible Space allows you to add an empty space between items in the layout. This item doesn't have any special function but merely a styling tool. Just drag the item to the page.

"Flexible Space" item settings

Styles

Overview

The built-in Styles Manager in JSN Sun Framework provides various options for configuring main stylistic aspects, from typography, background to text and link color, in almost all the elements of your website.

Flexible Styles Management Through A Logical Style Hierarchy

The Styles Manager includes four comprehensive levels of styles:

- General styles: Creating a master style for all layout elements. This section can be understood as the parental style for your website.
- Section styles: Controlling style of a section in your layout. Section can be seen as a group of rows which are parts of a content block, for example: "Header" section, "Footer" section, etc. You can either create a custom style for each of them, i.e. using a different background & text color. Otherwise, their the style attributes will be inherited from that in General styles level.
- Module styles: Controlling styles for modules on your site.
- Menu styles: Defining styles for your menu.

Smart Color Management With Main And Sub Color

While allowing a great level of flexibility for configuration, JSN Sun Framework also provides a feature for you to manage your main and sub color. It helps you to ensure the consistency in the use of colors across all the sections and elements of your site.

Powerful Typography

All of the templates powered by JSN Sun Framework come with the same wide variety of fonts to choose from. In any layout element with typography settings, you will see three categories of fonts.

- Standard fonts: Common/system desktop fonts which are "web safe" and widely available.
- Google fonts: A large collection of 800+ beautiful and free web fonts hosted and served up by Google. We have also built a user-friendly Google font selector, which gives you the option to find and filter Google fonts quickly by categories (serif, slab, sans-serif, handwritten and monospaced styles) or subsets.
- Custom fonts: This option enables you to upload your web fonts, which are usually commercial fonts related to your business/brand.

You can select font types in the Heading and Content setting panel, as the image below:

The screenshot displays the JSN Sun Framework Styles Manager interface. The top navigation bar includes 'JSN', '2 - Defa', 'All', 'Layout', 'Styles *', 'Mega Menu', 'System', 'Extras', 'Assignment', 'Save All', and 'Close'. The 'Styles *' tab is active, showing a sub-menu with 'General', 'Section', 'Module', and 'Menu'. The 'General' sub-menu is selected, and the 'Heading' section is expanded. The 'Color' section shows 'Main Color' and 'Sub Color' with green color swatches. The 'Font Type' section is highlighted with a red box, showing a dropdown menu with 'Google', 'Standard', 'Google', and 'Custom' options. The 'Font Variant' is set to '700'. The 'Text Transform' is set to 'None'. The 'Text Shadow' is set to 'None'. The 'Base Size' is set to '10.5 px'. The main content area shows a list of heading styles: 'Heading 1' (28 px), 'Heading 2' (23 px), 'Heading 3' (18 px), 'Heading 4' (14 px), 'Heading 5' (10.5 px), and 'Heading 6' (9 px). Below the heading list is a text block with placeholder text: 'Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nulla aliquam imperdiet vestibulum. Sed nunc lectus, pretium ac libero vitae, porta tempus lectus. Phasellus faucibus dolor sit amet volutpat aliquam. Maecenas dictum tortor orci, et scelerisque arcu condimentum in. Quisque tristique fringilla aliquet. Quisque malesuada quam finibus nunc lobortis dictum. Quisque dapibus risus neque, vel fringilla nisl feugiat fermentum. Fusce ac purus non turpis dignissim efficitur. Cras et nibh elementum, tincidunt diam nec, hendrerit risus.' Below the text block are three buttons: 'Default Button', 'Primary Button', and 'Link'.

Font type configuration

NOTE: This feature is only available in PRO templates powered by JSN Sun Framework.

General

General Page Style

This area gives you the ability to edit overall styles for both page outer and page inner.

Page Outer

If boxed layout is disabled, only settings for page outer style will be displayed:

The screenshot displays the JSN Sun Framework style editor. The top navigation bar includes 'Preview Layout', 'Data', 'Settings', 'About', and 'Help'. The main menu has 'Layout', 'Styles', 'Mega Menu', 'System', 'Extras', and 'Assignment'. The 'Styles' tab is active, and the 'General' sub-tab is selected. The main content area shows a preview of page styles including Main Color, Sub Color, and various heading sizes (Heading 1 to 6) with their corresponding font sizes. A 'Page Outer' settings panel is visible on the right, showing options for Background Color and Background Image. The 'General' tab is highlighted with a red box, and the 'Page Outer' settings panel is also highlighted with a red box.

Heading	Font Size
Heading 1	28 px
Heading 2	23 px
Heading 3	18 px
Heading 4	14 px
Heading 5	10.5 px
Heading 6	9 px

General Link Style

To set up the style for links, click on the link in the preview panel on the left side and change its settings on the right panel.

The screenshot displays the 'Styles' panel with the 'General' tab selected. The left side shows a preview of various UI elements: 'Main Color' and 'Sub Color' swatches (both green), a list of headings (Heading 1 to 6) with their respective font sizes (32 px to 11 px), a paragraph of Lorem Ipsum text, and three buttons: 'Default Button' (grey), 'Primary Button' (green), and 'Link' (blue with a red arrow pointing to it). The right side shows the configuration panel for 'General > Link', which is highlighted with a red border. It includes 'Normal Color' (Main Color) and 'Hover Color' (Sub Color) dropdown menus. At the top right, there are 'Load Style' and 'Save style' buttons.

Section

Go to the Styles → Section, you will see the same section names and many styling options for each of them. For example, the style for section "Top" in layout tab will also be under section "Top" in Styles tab. This makes it easy for you to locate where the customization can take place.

Section Container Style

You can change the style of each section's container simply by clicking on the area around the border of the section that you want to have custom style, and change its settings on the right panel.

The screenshot shows the 'Styles' panel with the 'Section' tab selected. The main preview area displays a section titled 'Top' containing a list of headings (Heading 1 to Heading 6) and a paragraph of Lorem Ipsum text. The headings are styled with different font sizes: Heading 1 (28 px), Heading 2 (23 px), Heading 3 (18 px), Heading 4 (14 px), Heading 5 (10.5 px), and Heading 6 (9 px). The right panel shows the 'Section 'Top' > Container' settings, including Background Color (Custom color), Background Image, and Border. A red dashed arrow points from the 'Section' tab to the 'Section 'Top' > Container' settings panel.

Section container style

Section Heading Style

By default, Section Headings Style will be inherited from General style. If you want to have different styles for section Heading, click on Use Custom Settings to activate custom style settings.

The screenshot shows the 'Styles' panel with the 'Section' tab selected. The main preview area displays a section titled 'Top' containing a list of headings (Heading 1 to Heading 6) and a paragraph of Lorem Ipsum text. The headings are styled with different font sizes: Heading 1 (32 px), Heading 2 (26 px), Heading 3 (21 px), Heading 4 (15 px), Heading 5 (12 px), and Heading 6 (11 px). The right panel shows the 'Section 'Top' > Heading' settings, including 'Use Custom Setting' (checked), Color (Custom color), Font Weight (Bold), Text Transform (None), Text Shadow, Base Size (12 px), Line Height (1.5 em), and Letter Spacing (0 px). A red arrow points from the 'Use Custom Setting' checkbox to the 'Section 'Top' > Heading' settings panel.

Module

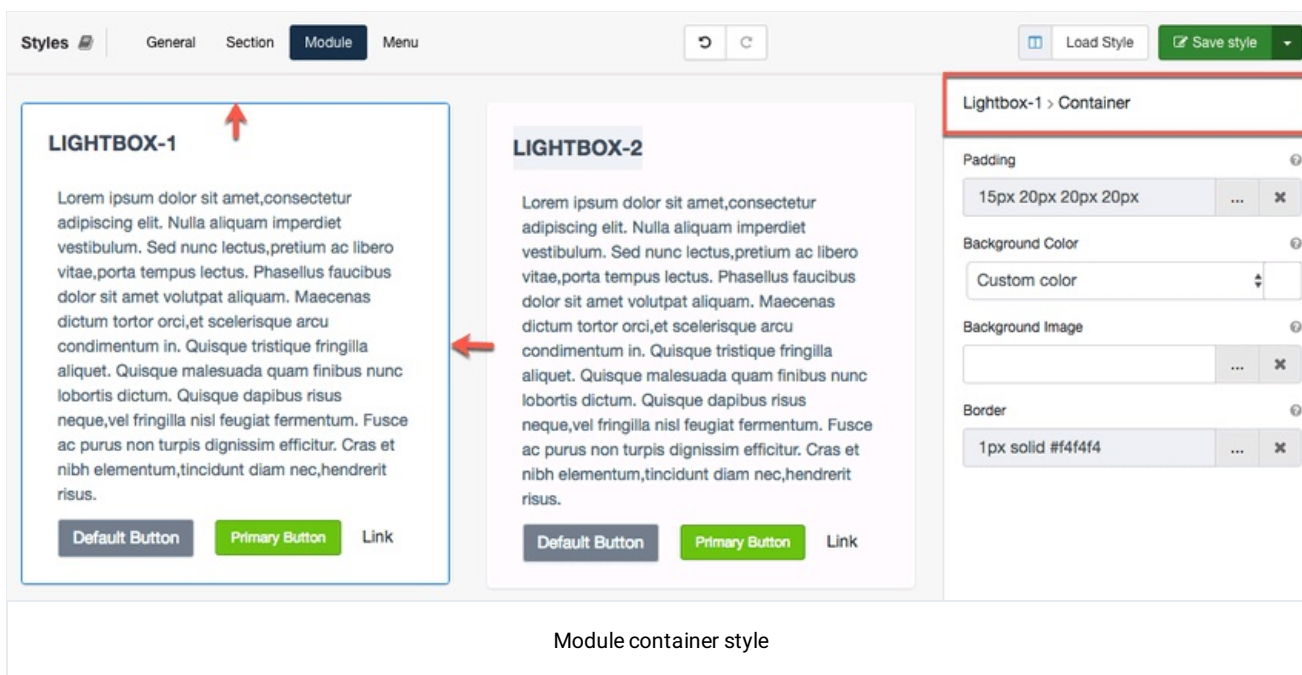

First, go to tab Styles → Module. From here you will see some module styles provided by the template.

The Sun Framework comes with 04 to 06 highly flexible module styles, and you can customize each of them in the same way with Section.

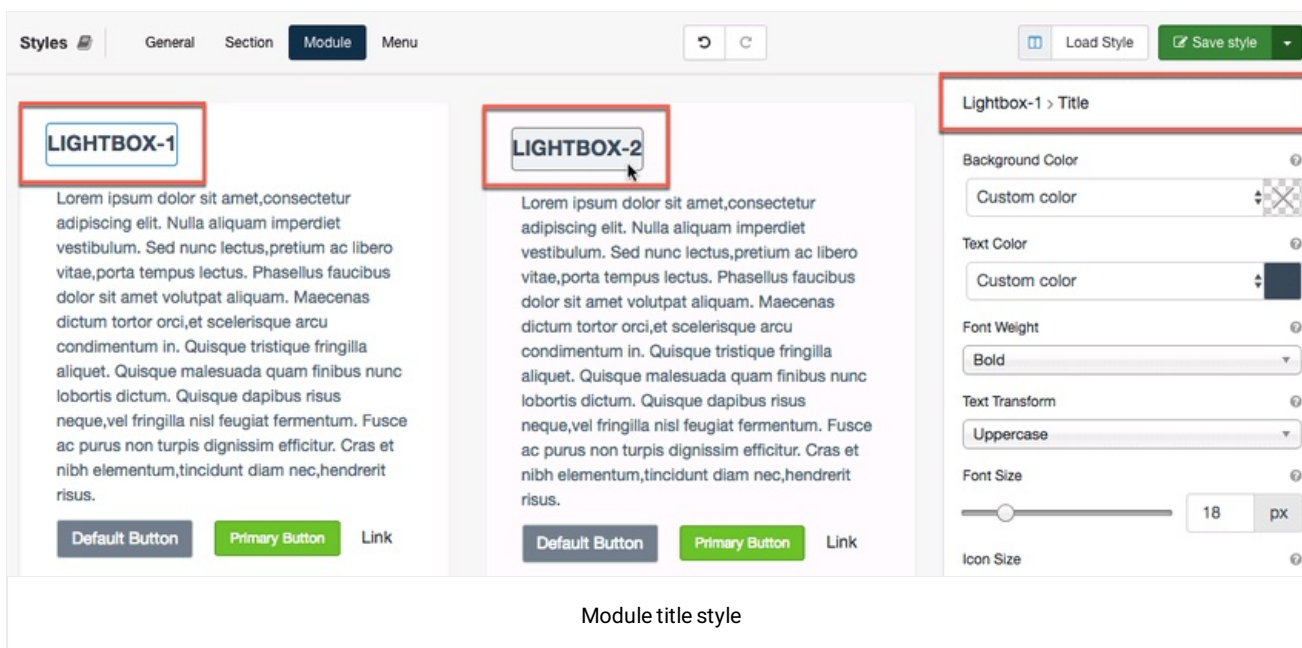

Module Container Style

Similar to Module Container Style, you can change the style of each module container simply by clicking on the module that you want to have custom style, and change its settings on the right panel.

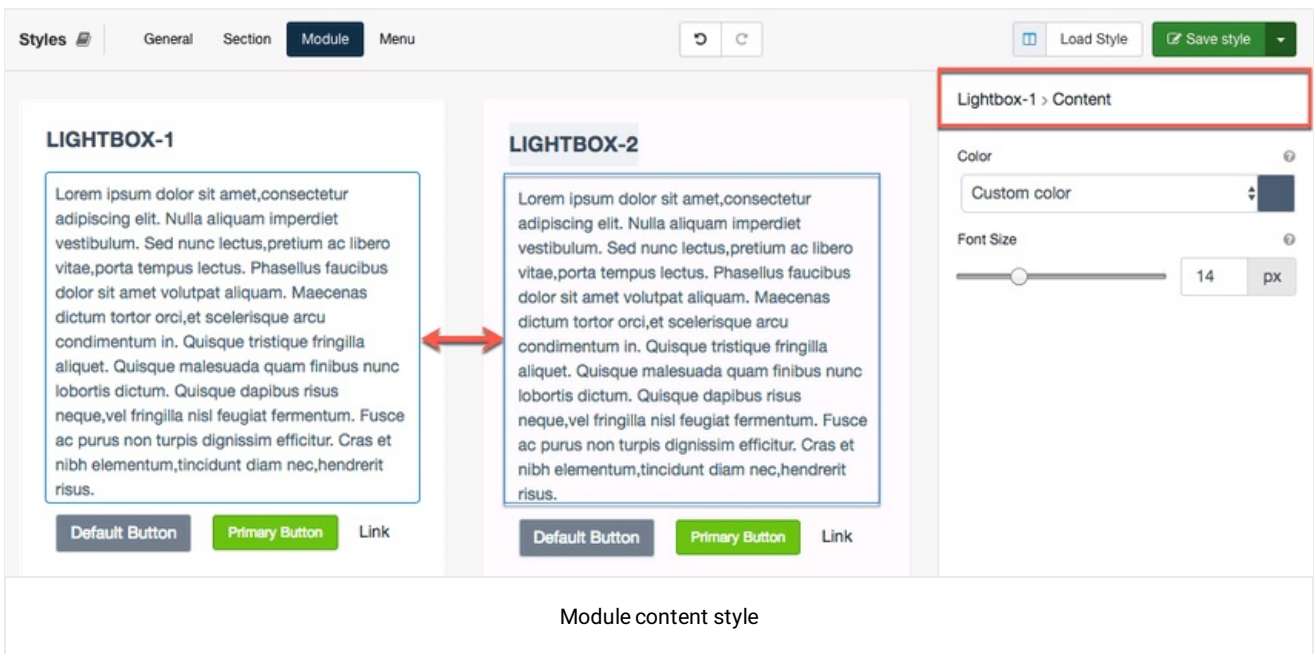

Module Title Style

To change the style of a module's title, click on the title of the module style that you want to customize in order to see its available settings.

Module Content Style

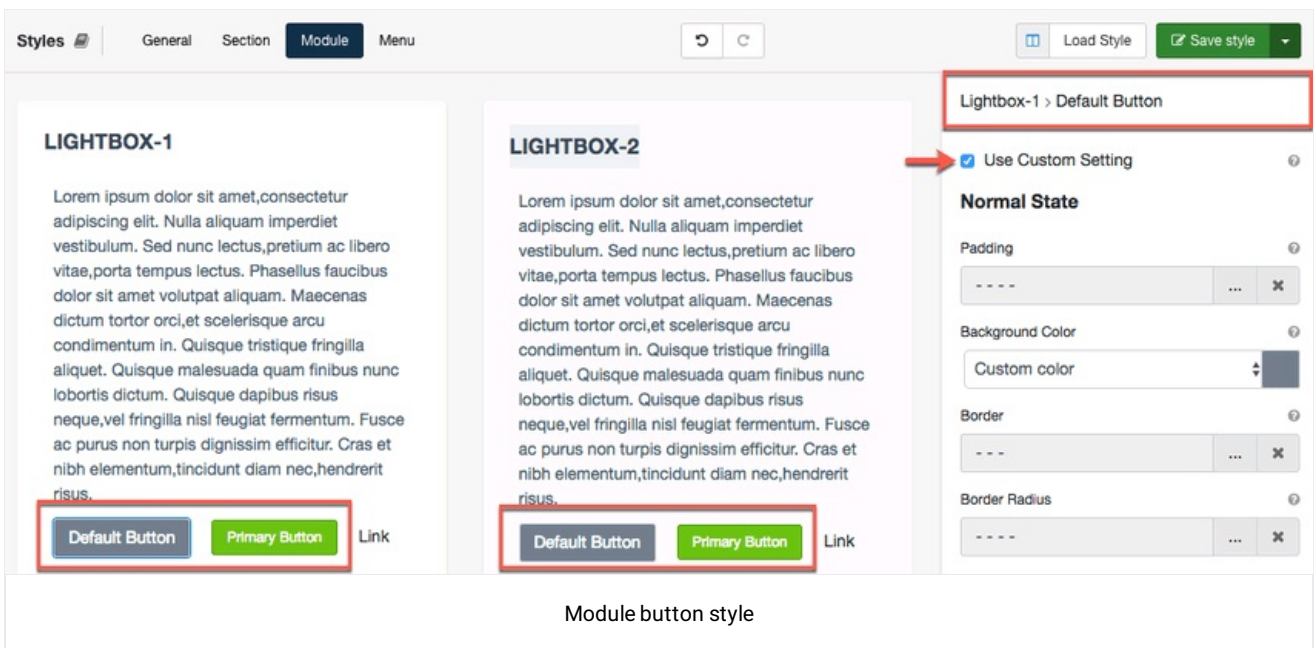

To change the style of a module's content, click on the content area of the module style that you want to customize in order to see its available settings.

Module Button Style

By default, the button style of the module is inherited from the General settings.

To enable custom style for module settings, select “Use custom setting” to open custom style options and make changes as you want.

Module Link Style

To change the style of a module’s hyperlink, click on link in the module style that you want to customize in order to see its settings.

The screenshot displays the Joomla! Styles editor interface. At the top, there are tabs for 'General', 'Section', 'Module', and 'Menu', with 'Module' selected. To the right, there are buttons for 'Load Style' and 'Save style'. The main area is divided into two columns, 'LIGHTBOX-1' and 'LIGHTBOX-2', each containing placeholder text and three buttons: 'Default Button', 'Primary Button', and 'Link'. Red arrows point to the 'Link' buttons in both lightboxes. On the right side, a configuration panel for 'Lightbox-1 > Link' is visible, showing 'Normal Color' and 'Hover Color' settings, both set to 'Custom color' with a color picker icon.

Module link style

To apply a style to a module:

- Open a module in Joomla Module Manager.
- Go to Advanced tab:
 1. Select a style from the list in the dropdown.
 2. Add Awesome Font code in Header Class to have icons for your module heading.

Mega Menu

Overview

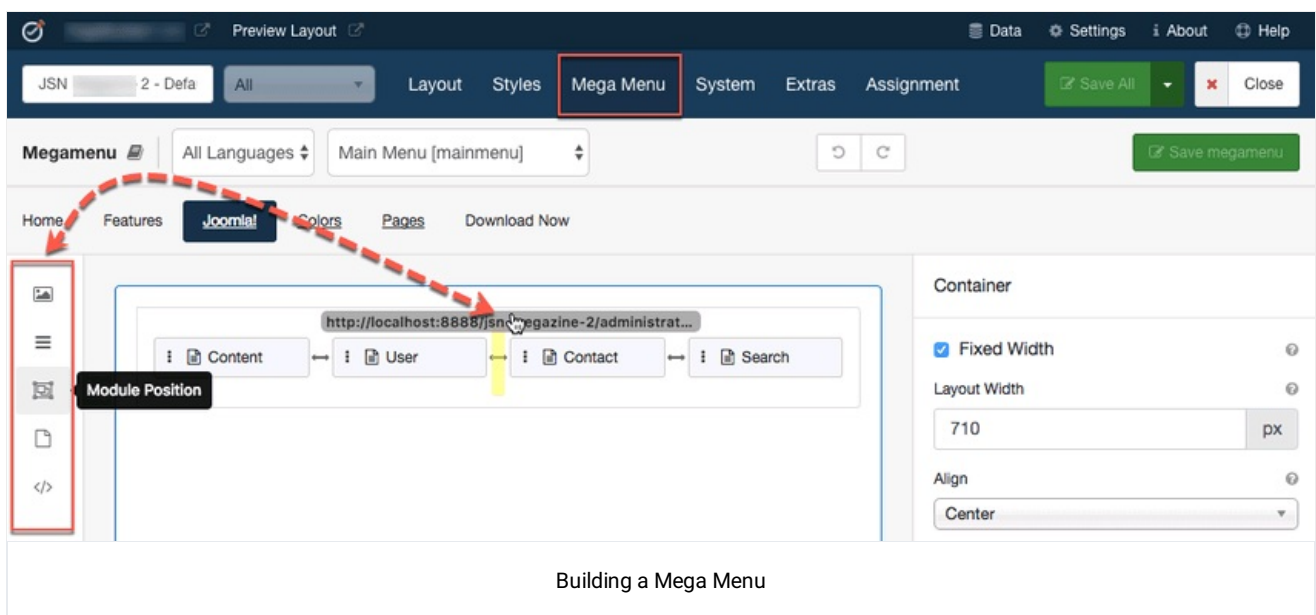

There is an increasing need for mega menu, as it improves the navigability and aesthetics of modern websites. Understanding that mega menu is a must-have item, JSN Sun Framework has integrated an innovative Mega Menu Builder in its core since its birth. This tool gives you the ability to build a complex Mega Menu in the most user-friendly and versatile manner.

The following are some key features of the Megamenu Builder in JSN Sun Framework:

- Easy to use: Megamenu can be built with simple drag & drop, similar to the way you handle the Layout Manager in JSN Sun Framework.
- Painless customization: Basically, what you see is what you get. Everything in the Megamenu Builder can be edit with some simple clicks.
- Multi-column layout support: Since it's based on Bootstrap 3, you can create up to 12 columns in the Megamenu Builder.
- Unlimited content type support: The ability to display all kinds of content types in menu item including text, images, videos, module, etc.
- Mobile friendly: Megamenu created with JSN Sun Framework is responsive, and thus displayed nicely on any mobile devices.

NOTE: This feature is only available in PRO templates powered by JSN Sun Framework.

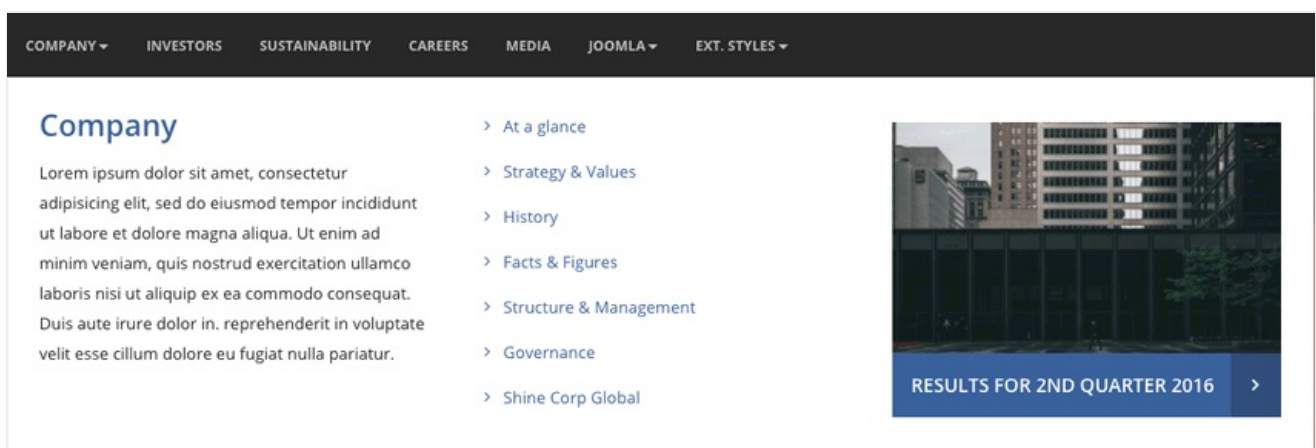

Building a Mega Menu

Megamenu in templates powered by Sun Framework can be built with the following steps:

- Click Mega Menu on top bar of the template framework.
- Select the menu & language of the menu that you want to config.
- Drag menu item into the main menu panel. Settings for each of these items will be available on the right panel.
- Config menu container, row and column in the same way you do with the Layout.

Let's start with a mega menu like the image below:

Step 1: Create menu content

First of all, you need login to your Joomla administrator area and install JSN Template. Go to Menus → Manage → Add new menu, here you can create a new menu and menu items to appear in the menu.

For example with the image on the top, we need to create a menu is SubMenu, and then create some menu items in the SubMenu.

Status	Title	Menu
<input checked="" type="checkbox"/>	At a glance URL	SubMenu
<input checked="" type="checkbox"/>	Strategy & Values URL	SubMenu
<input checked="" type="checkbox"/>	History URL	SubMenu
<input checked="" type="checkbox"/>	Facts & Figures URL	SubMenu
<input checked="" type="checkbox"/>	Structure & Management URL	SubMenu
<input checked="" type="checkbox"/>	Governance URL	SubMenu
<input checked="" type="checkbox"/>	Shine Corp Global URL	SubMenu

Next, go to module manager to create a menu module. In this section, we create a module has some information:

- Module Title: Mega Menu
- Select Menu: SubMenu
- Start Level: 1
- End Level: All
- Show Sub-menu Items: No
- Show Title: No

Title * Mega Menu

Module Menu Assignment Advanced Permissions

Menu

Site

This module displays a menu on the Frontend.

Select Menu: SubMenu

Base Item: Current [Select] [Create]

Start Level: 1

End Level: All

Show Sub-menu Items: Yes No

Show Title: Show Hide

Position: Select position

Status: Published

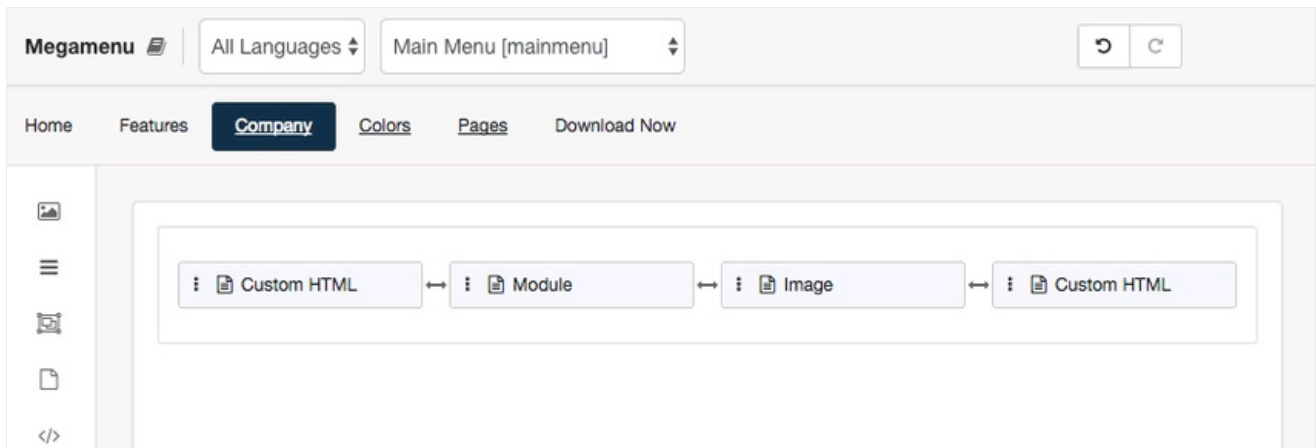

Start Publishing: [Calendar]

Finish Publishing: [Calendar]

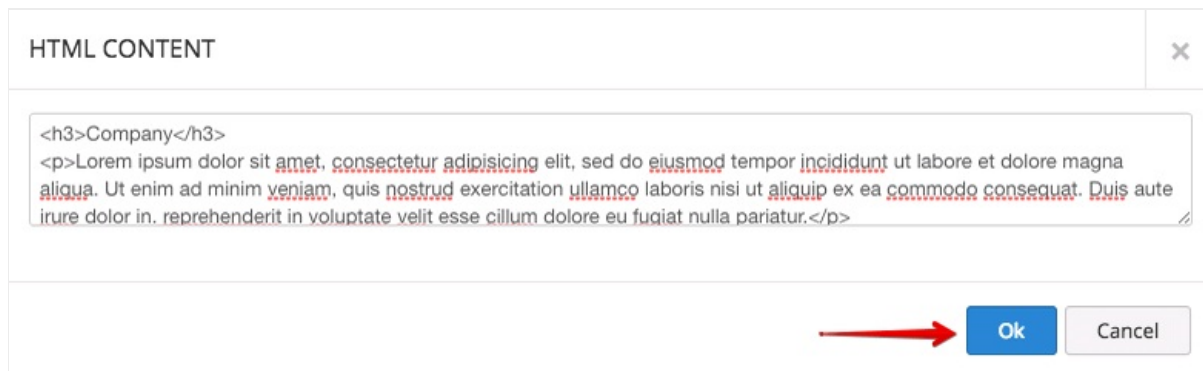

Step 2: Setup Mega Menu

Now, you can design for your megamenu more beautiful. Go to Extensions → Templates → JSN Template Gen-2 → Mega Menu. Here, you need to select a menu to design.

After select a menu, click on a menu item to design mega menu there. With example on the top, you need to drag and drop two custom html items, a module and image item. And then you can change the position of the items.

Custom HTML item: after selected custom HTML item, click on the Set HTML Content button and add your HTML content there.

Module item: you need to select the module menu type was created before.

Modules (Site) Joomla!

 Custom Classes:

System

Despite its geeky and unattractive name, this System Configuration offers some down-to-earth but amazing features that most web owners need:

- Adding website favicon icon: Instead of using FTP client to upload your favicon icon to the template folder, you can go to this section and upload your icon from here.
- Adding custom CSS and JS: If it is important for you to have your own custom CSS and JS, you can upload them to your template folder and specify their locations here.
- Improving website's speed: Accelerating your site's loading speed with built-in CSS and JS compression tool.

Adding external tracking codes: The framework allows you to flexibly add external codes of third-party platforms before and after head and body tag. You can utilize this feature to add tracking codes required by Google Analytics, Google Tag Manager, or those of other tracking services.

Assets Compression

With Sun Framework, we put great effort into optimizing our template performance with multiple techniques like image sprites application, clean html code output and now one new step – CSS/JS Compression.

It helps combine all continuous CSS/JS files into compressed files and deliver it in GZIP compressed state to browser. The order of CSS/JS files is the same before and after the compression. This feature significantly reduces http request number to server as well as overall loading size, which results in significant performance boost.

Note: This feature is only available in PRO templates powered by JSN Sun Framework.

You can configure the compression settings in the tab Advanced → section Assets Compression:

- Compress CSS/JS: Allows you to select to compress both CSS and JS, Only CSS, Only JS or nothing.
- Max File Size: Defines the maximum size a compressed file should be.
- Exclude from compression: Set a list of files you don't want to be compare.
- Cache Directory: Specify the directory for storing compressed CSS/JS file.

Assets Optimization

Assets Compression	?	Max File Size	?
<input checked="" type="checkbox"/> CSS <input checked="" type="checkbox"/> Javascript		<input type="text" value="100"/> KB	
Cache Directory		<input type="text" value="cache"/> Verify	?
Directory is valid and ready.			
Exclude From Compression			?
<input type="text"/>			
<input type="checkbox"/> Minify HTML	?	<input type="checkbox"/> Move JS To Bottom	?

Custom Code

You can define where to insert the Analytics Code code by template parameter Custom Code.

Custom Code

After <Head> ?

Before </Head> ?

After <Body> ?

Before </Body> ?

Custom Files

For all customization purposes, Sun framework allows you to load multiple CSS/JS files you customized without altering the template core files.

Just put custom CSS/JS files to template's CSS/JS folder and define them in template parameter Custom CSS File(s) and Custom JS File(s); each file name at a line.

Custom Files

Custom CSS File(S) ?

Custom JS File(S) ?

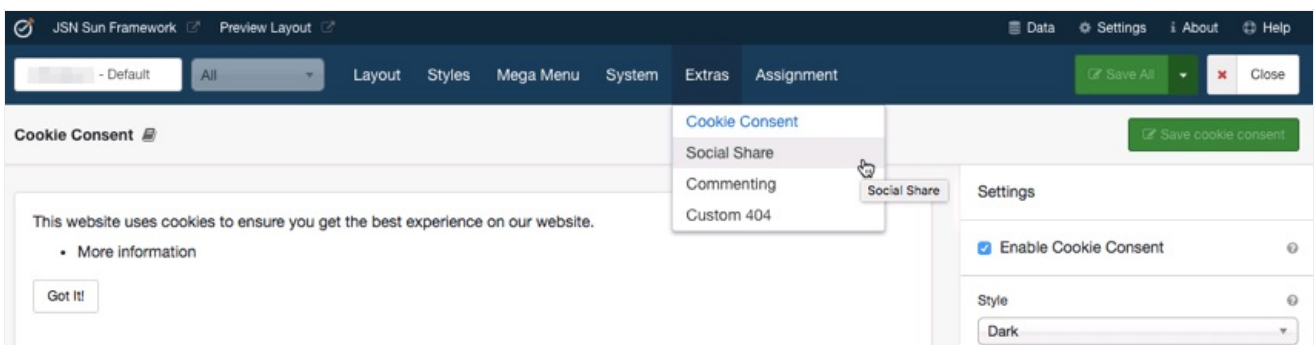

NOTE: If you enable CSS/JS Compression feature, all custom CSS files will be compressed as well.

Extras

In this section, you can settings for:

- Cookie Consent
- Social Share
- Commenting
- Custom 404

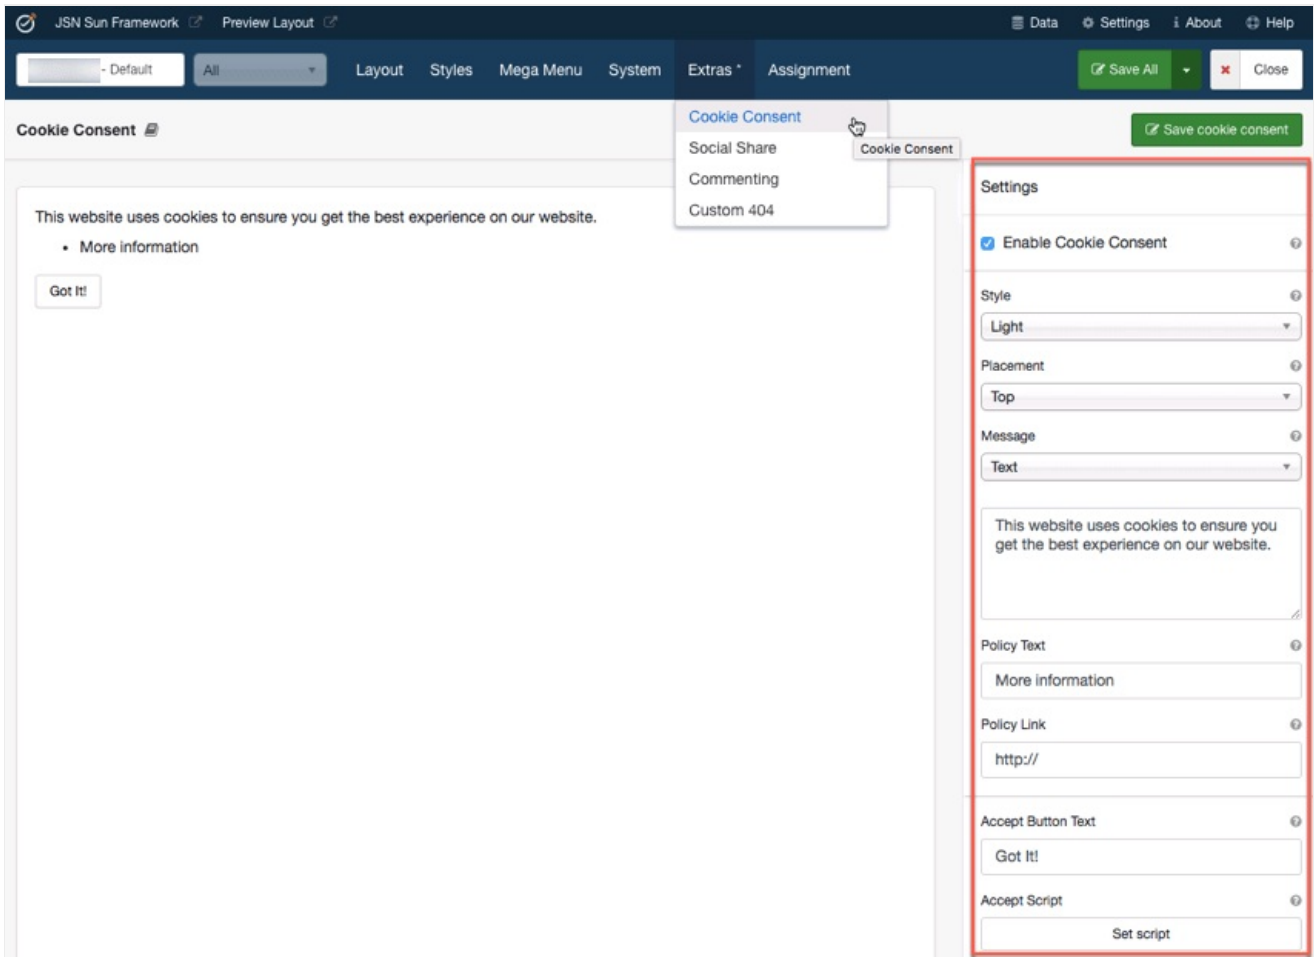

This section is only available in PRO templates powered by JSN Sun Framework.

Cookie Consent

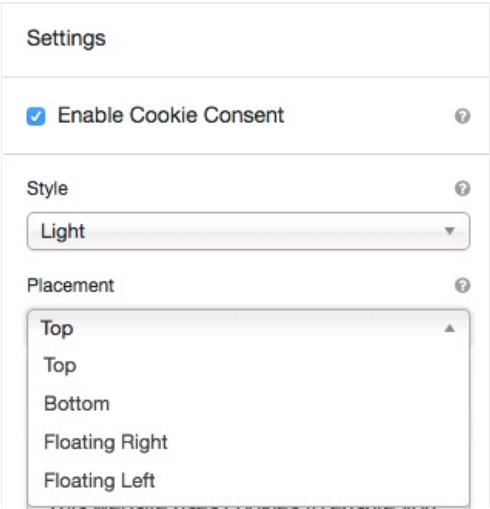

A Cookie Consent is a quick way to ask your visitors about their cookie permissions, making sure that your website is compliant with EU Cookie Consent Policy. When GDPR is finally enforced from 25 May 2018, plenty of websites have made a new change: to add a cookie consent on the front-end as a message to ask for users' agreements.

To enable Cookies Consent, go to Extras → Cookie Consent → Select Enable Cookie Consent to config its layout styles and contents.

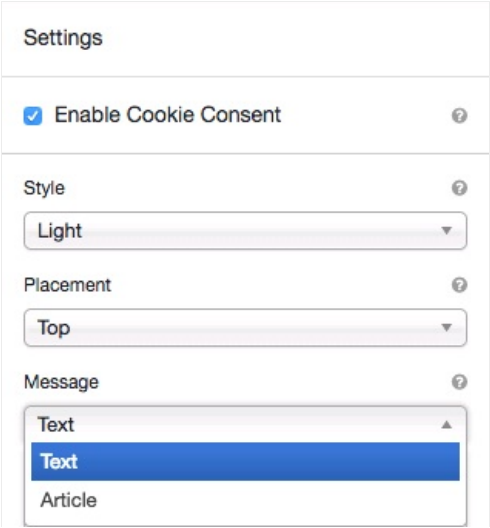

Settings	Description
Enable Cookie Consent	Choose whether to use Cookie Consent.
Style	<p>There are 2 styles of Cookie Consent to choose from: Light and Dark</p> 
	Select position of initial consent slide-down notification

Placement

Cookie Consent content: You can use either a simple text message for Cookie Consent, or use an article to display the message.

Message

Policy Text

The text link to the cookie policy for example is More Information or Read More (requires Your Cookie Policy Link to be set)

Policy link

The url of the Cookie Policy that links to the Cookie Policy.

Accept Button Text

The label of the accept button

Define script that will be inserted to the page output if "accept" cookies found. All the scripts here will be activated if users agree to share their data, or they hit the Got It button.

Accept Script

Accept script

After <Head>

Before </Head>

After <Body>

Before </Body>

Social Share

This feature allow you show some social channel, the reader can share the articles to socials.

Enable Social Share

To setting Social Share for articles, go to Extras → Social Share. By default, the display shows a white page, you need to click on Enable Social Share.

Commenting Facebook type presentation

Google+

This type, just select commenting type.

IntenseDebate

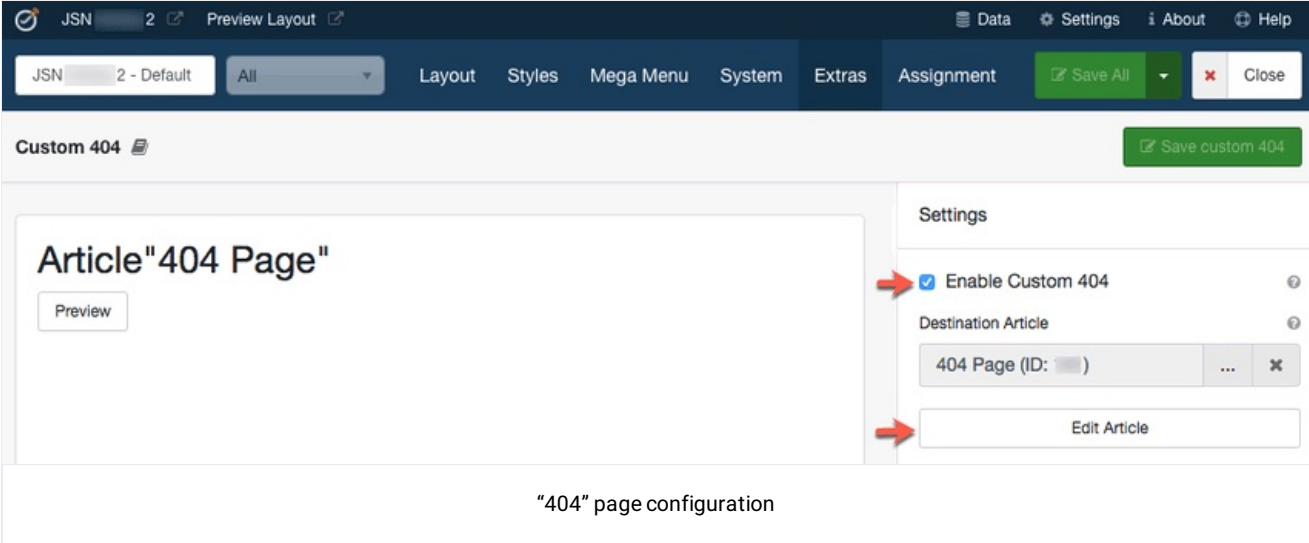

Before you select this type, you need to create a IntenseDebate Site Account and input it into the IntenseDebate Site Account box on the page layout. Save Commenting to finish.

You can go to IntenseDebate website (<https://intensedebate.com/>) to create a IntenseDebate account for your site.

Custom 404

To custom for this page, go to template setting page → Extras tab → Custom 404 → click on Enable Custom 404.

After saving custom 404, you can see Destination Article is an article name, click on Edit Article to adjust content for this page.

Assignment

After assigning the menu item for your template, in the Assignment tab, all of the menus and menu items you created before will be show.

Assignment

Footer Menu	Main Menu	Must-see Stuff	Top Menu
<input type="checkbox"/> JoomlaShine	<input type="checkbox"/> Home	<input type="checkbox"/> Layout	<input type="checkbox"/> More Details

Pages was assigned

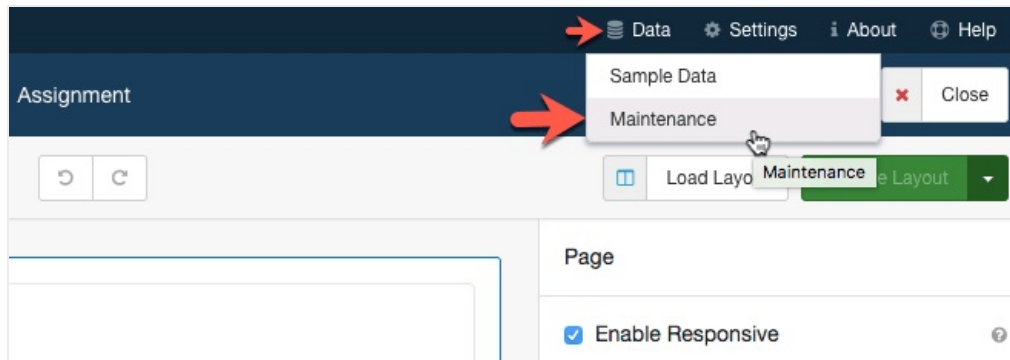

Finally, go to the frontend to check the pages.

Template Style Settings Import/Export

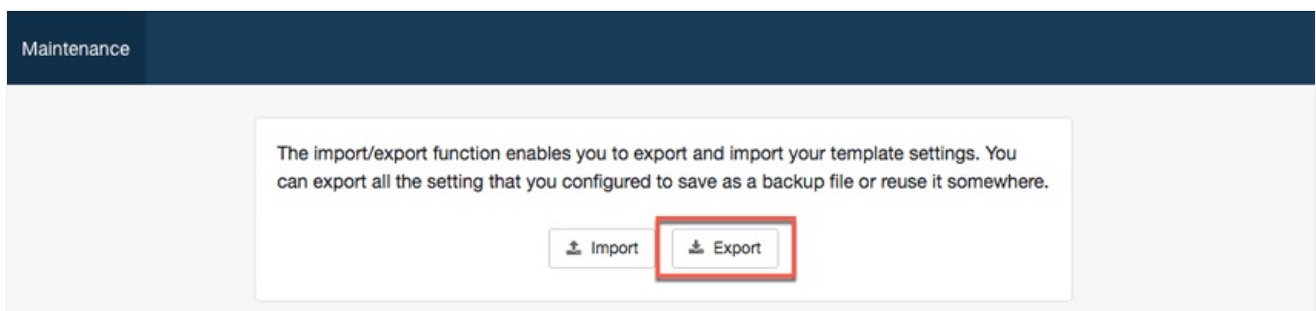

The Import/Export function enables you to export and import your template style settings. You can export all the settings that you configured to save as a backup file or reuse it somewhere.

Export

On the template page setting click on the Data → Maintenance.

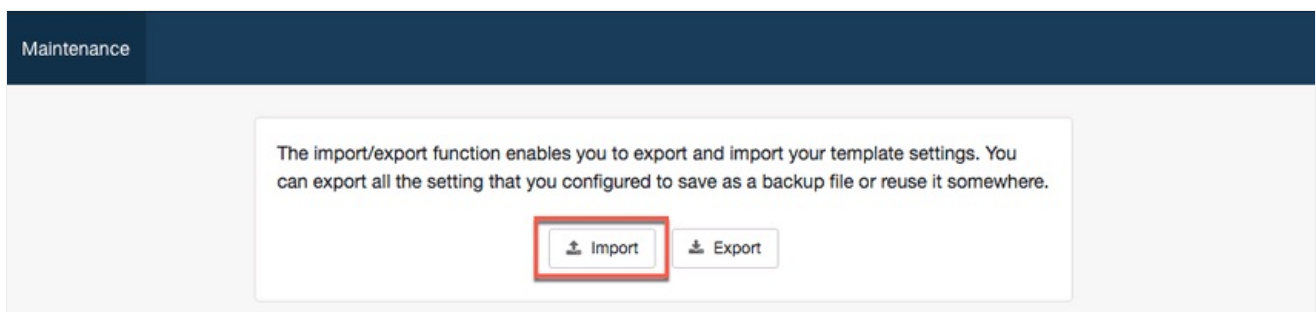

Then you need to click on the Export button to export your template settings.

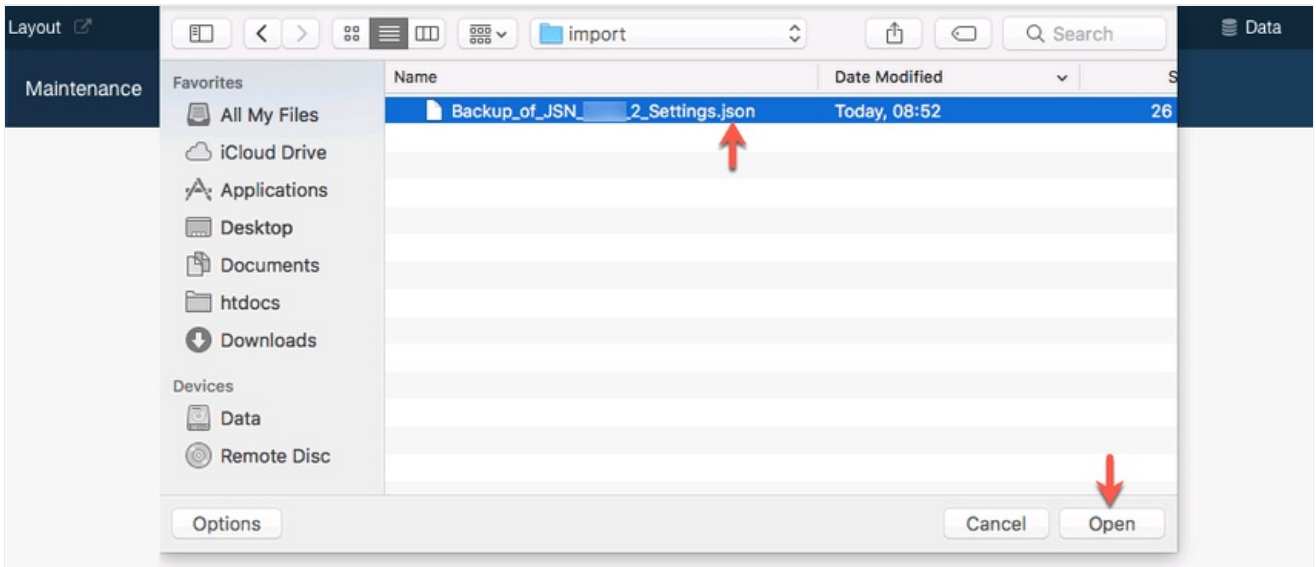

After that, a backup file will be automatically downloaded. Now you can import your template configuration to other sites using JSN Sun Framework.

Import

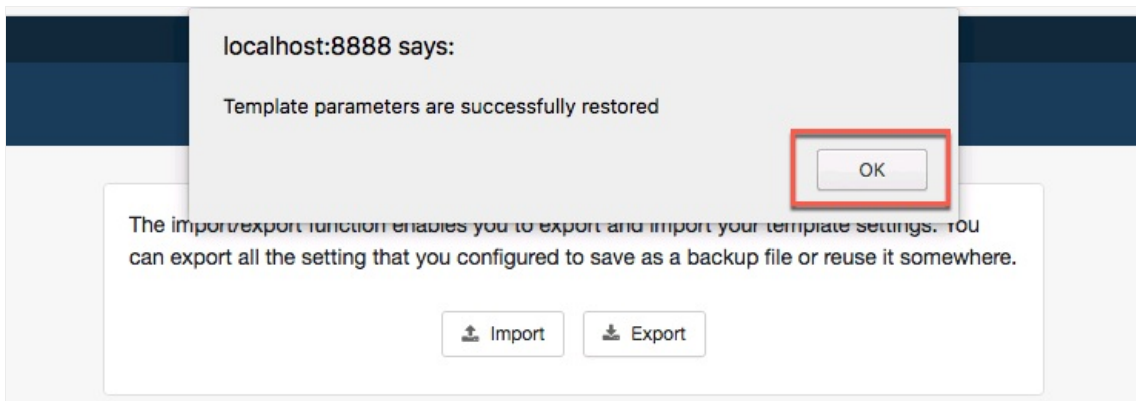

After you have a backup file from the export process, follow the first step in the Export section, and then click on the Import button to import a backup file.

Now, you need to select a backup file which was exported before. Go to your folder which you saved the backup file, select a file and click on the Open button and wait for restoring.

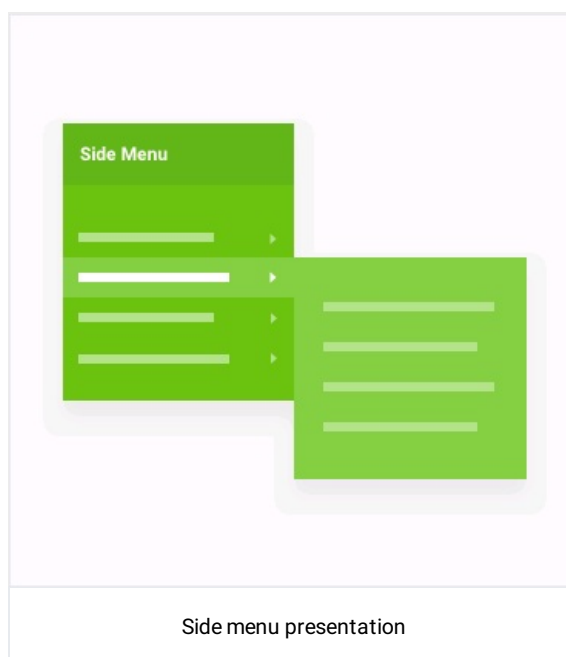

When the import process completes, the display will show a successful message as below.

Menu Variations

Side menu

Side Menu is a unique vertical menu with slide-out panels. This menu is extremely efficient when you have complex navigation with a lot of menu items.

To set up Side Menu, select the menu module you want to use to Module tab → Select Menu parameter, and then go to Advanced tab → Menu Class Suffix parameter → type menu-sidemenu class as the image below:

Modules: Menu

Save Save & Close Save & New Save as Copy Close

You can add descriptive text to menu items to make them much clearer.

To set up descriptive text, you need to go to Sun framework Options tab settings and add descriptive text to Link Description. Next, go to Template Layout Settings area --> click on Menu --> Show Description.

Typography

With strong support from Bootstrap 3, JSN Template Gen-2 was created with a strong focus on typography and we believe it contains the most comprehensive content presentation capability. Headings, Images, Paragraph, List, Button & Links, Alert, Tables styles. Here we introduce some featured content elements. However, you can create more elements with Bootstrap 3 (<https://getbootstrap.com/docs/3.3/>).

Let's take a look some featured elements of JSN Template Gen-2.

Heading

Heading

Heading 1 (H1)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading 2 (H2)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading 3 (H3)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading 4 (H4)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading 5 (H5)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading 6 (H6)

Lorem ipsum dolor sit amet consectetur eleifend elit vel tellus laoreet. At ut pellentesque risus quis sem eros et consequat enim lorem. Aenean lorem consequat consequat eu.

Heading Styles presentation

To apply them you just need to wrap your heading text in regular heading tags like: `<h1>...</h1>`, `<h2>...</h2>`, `<h3>...</h3>`, etc.

Additional Content Types

This feature allows you to add new content types to an article without HTML code. Sun Framework provides 06 new content types: Standard, Audio, Gallery, Link, Quote, and Video.

The screenshot shows the Joomla! 'Articles: Edit' interface. At the top, there are several buttons: 'Save', 'Save & Close', 'Save & New', 'Save as Copy', 'Close', 'Help', and 'Switch Editor'. Below these is the 'Title' field containing 'User Component' and an 'Alias' field containing 'user-component'. A red arrow points from the 'Title' field down to the 'Sun Framework Options' tab. The 'Content Type' dropdown menu is open, showing a list of options: 'Standard', 'Standard', 'Audio', 'Gallery', 'Link', 'Quote', and 'Video'. The 'Standard' option is selected and highlighted in blue. The 'Featured Image' field is visible below the dropdown. At the bottom of the interface, the text 'Content Types' is displayed.

Standard Type

Standard type works in the same way with the image tag.

To use Standard Type content, go to an article → Sun Framework options → Select Standard → click on the Featured Image box to select an image for articles.

The screenshot shows the Joomla! 'Articles: Edit' interface. At the top, there's a dark blue header with the Joomla! logo and the text 'Articles: Edit'. Below the header is a toolbar with buttons for 'Save', 'Save & Close', 'Save & New', 'Save as Copy', 'Close', 'Help', and 'Switch Editor'. The main content area has a title field containing 'User Component' and an alias field containing 'user-component'. Below these are tabs for 'Content', 'Images and Links', 'Options', 'Sun Framework Options', 'Publishing', 'Configure Edit Screen', and 'Permissions'. The 'Sun Framework Options' tab is active. Under this tab, there's a 'Content Type' dropdown menu set to 'Standard' (marked with a red circle '1') and a 'Featured Image' field containing 'images/50_w308_h361.jpg' (marked with a red circle '2'). Below the featured image field is a section titled 'Standar Types'.

If you want to change your image, click on the browse icon to select a new one. Click on the remove icon, if you want to remove the Featured Image.

Audio Type

In Sun Framework option → Select Audio type → add your Audio Embed Code.

The screenshot shows the Joomla! 'Articles: Edit' interface. At the top, there's a dark blue header with the Joomla! logo and the text 'Articles: Edit'. Below the header is a toolbar with buttons for 'Save', 'Save & Close', 'Save & New', 'Save as Copy', 'Close', 'Help', and 'Switch Editor'. The main content area has a title field containing 'User Component' and an alias field containing 'user-component'. Below these are tabs for 'Content', 'Images and Links', 'Options', 'Sun Framework Options', 'Publishing', 'Configure Edit Screen', and 'Permissions'. The 'Sun Framework Options' tab is active. Under this tab, there's a 'Content Type' dropdown menu set to 'Audio' (marked with a red circle '1') and an 'Audio Embed Code' field containing a SoundCloud embed code (marked with a red circle '2'). Below the audio embed code field is a section titled 'Audio Types'.

- To get Audio Embed Code on the Soundcloud, you need go to Soundcloud to click on the Share button → Embed → Copy code in the text box.

In Sun Framework option → Select Audio type → add your Audio Embed Code.

Link Type

The screenshot shows the Joomla! 'Articles: Edit' interface. At the top, there's a title 'Articles: Edit' and the Joomla! logo. Below that is a toolbar with buttons: Save, Save & Close, Save & New, Save as Copy, Close, Help, and Switch Editor. The main form has a title field 'User Component' and an alias field 'user-component'. There are several tabs: Content, Images and Links, Options, Sun Framework Options, Publishing, Configure Edit Screen, and Permissions. The 'Content Type' dropdown is set to 'Link' (marked with a red circle '1'). The 'Link Title' field contains 'JoomlaShine Templates & Extensions' (marked with a red circle '2'). The 'Link URL' field contains 'https://www.joomlashine.com/' (marked with a red circle '3'). Below the form, the text 'Link Type' is displayed.

Here you need to select Link in the Content Type option and fill in the Link Title and Link URL.

Quote

After selecting Quote type, enter Quote Text and Quote Author in the text box.

The screenshot shows the Joomla! 'Articles: Edit' interface. At the top, there's a title 'Articles: Edit' and the Joomla! logo. Below that is a toolbar with buttons: Save, Save & Close, Save & New, Save as Copy, Close, Help, and Switch Editor. The main form has a title field 'User Component' and an alias field 'user-component'. There are several tabs: Content, Images and Links, Options, Sun Framework Options, Publishing, Configure Edit Screen, and Permissions. The 'Content Type' dropdown is set to 'Quote' (marked with a red circle '1'). The 'Quote Text' field contains a paragraph of text: 'Dear JoomlaShine team I am using your JSN ImageShow and I really appreciate it. First I tried free versions, and then I realized how nice it is and wanted to use full potential of the product. With good experience with you from the past I bought pro unlimited version right' (marked with a red circle '2'). The 'Quote Author' field contains 'VLADIMIR' (marked with a red circle '3'). Below the form, the text 'Quote Type' is displayed.

Video

Just paste your Video URL to the text box.

Product Update

JSN Template Update Notification

- Open a JSN template → If the template is outdated, you will see a notification on the top bar like Update available for JSN XXX version → Click on the Update button on the top right.

- Upon clicking the Update button, you will see some important information and the link to check the changelog.

User Account

This is a feature of JSN Sun Framework, it allows the customer refresh license and switch account.

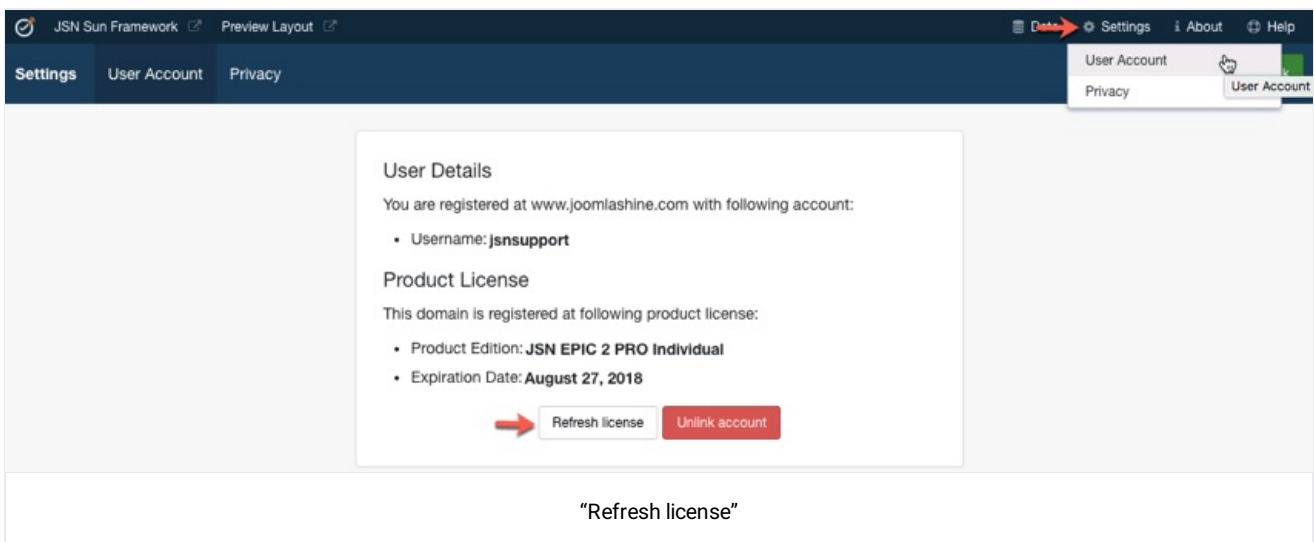

Refresh License

When should the client refresh the license?

If the customer is using only one account for the free license of a template package, they upgrade the template from free to trial or PRO license with the same account.

How to refresh license?

In the layout page setting, click on Settings item on the top menu → click on User Account.

Here you just need to click on Refresh license button and wait a few seconds to license is refreshed.

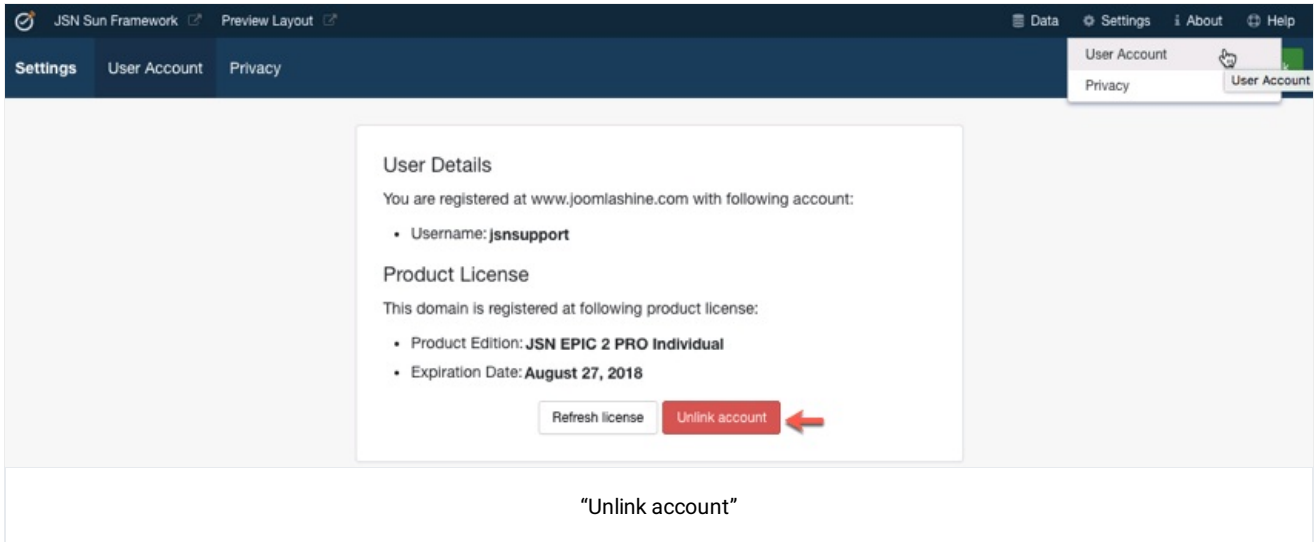

Unlink Account

When should the user unlink account?

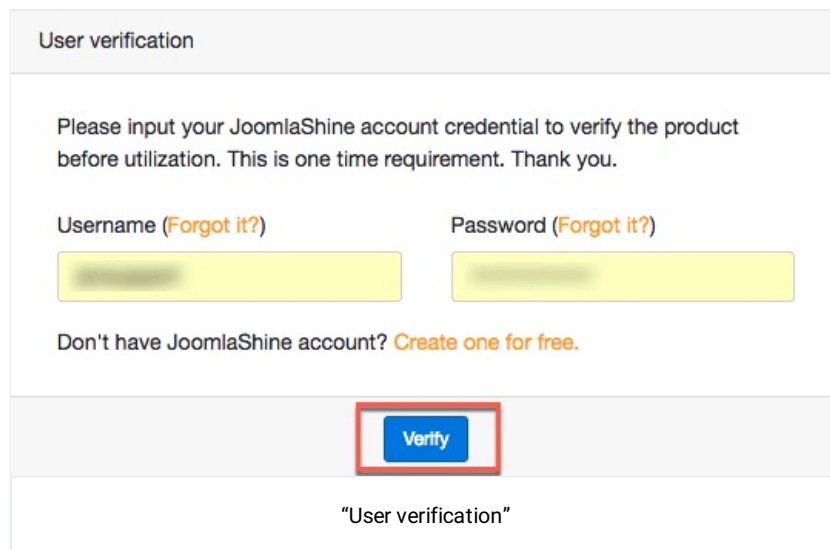

When the customers are using a JoomlaShine account on the template and want to change to another JoomlaShine account with other license or the same license.

How to unlink account?

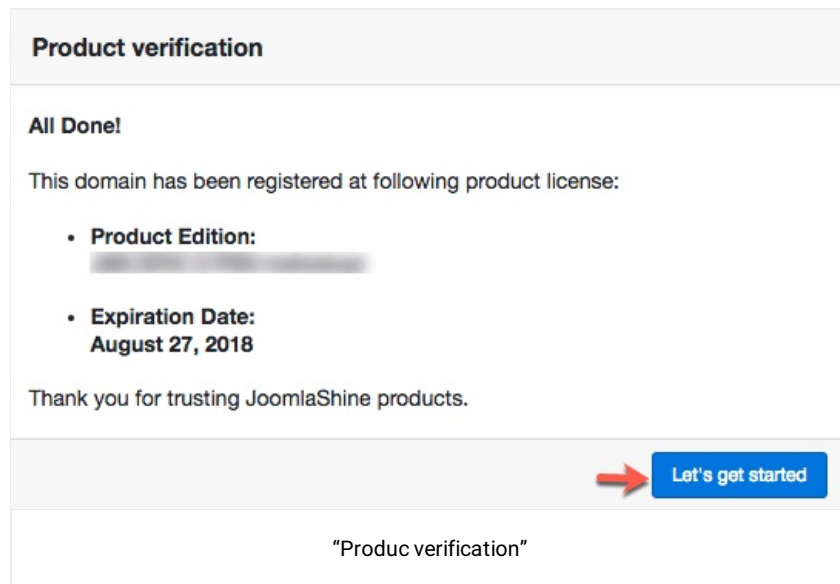

In the layout page setting, click on Settings item on the top menu → click on User Account.

Click on Unlink account button to input your new account.

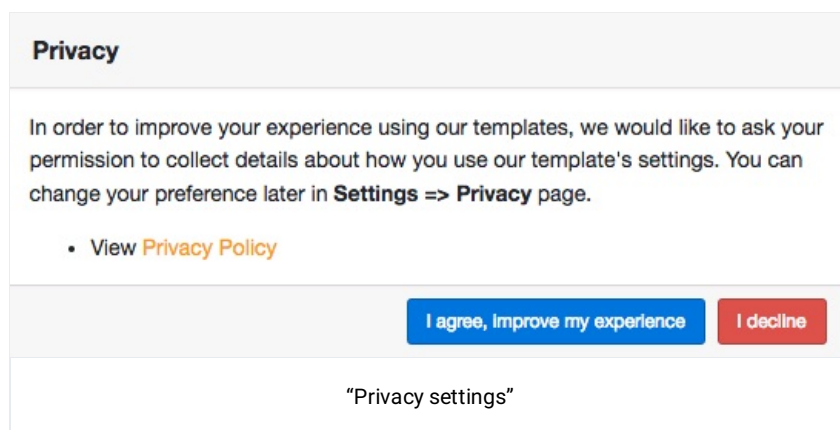

Input another JoomlaShine account to the parameter, click on Verify button to check the product verification.

- Click on Let's get started button to go to the next step.

Privacy Settings

Once you're done to check product verification step, you can see Privacy pop-up.

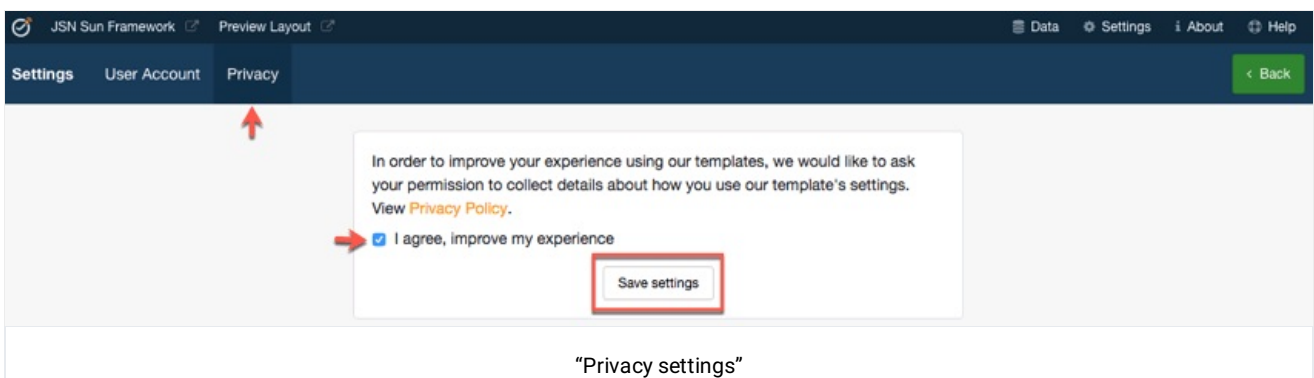

When you install something new on Joomla! website, you may wonder whether it affects the whole data or not. That's why JoomlaShine team finds it necessary to clarify this concern on the new update of JSN Sun Framework. You are enabled to decide to share your experience with us when using any JSN template on the Privacy feature. This option is meant to respect your privacy and make you understand how we collect, use, and share data from you.

- Click on I agree, improve my experience button or I decline button to finish.

You can open this feature by following other steps:

- Go to the Settings tab in the top right corner -> Choose Privacy.
- Tick or untick the I agree, improve my experience option, and hit the Save Settings button to make an agreement.

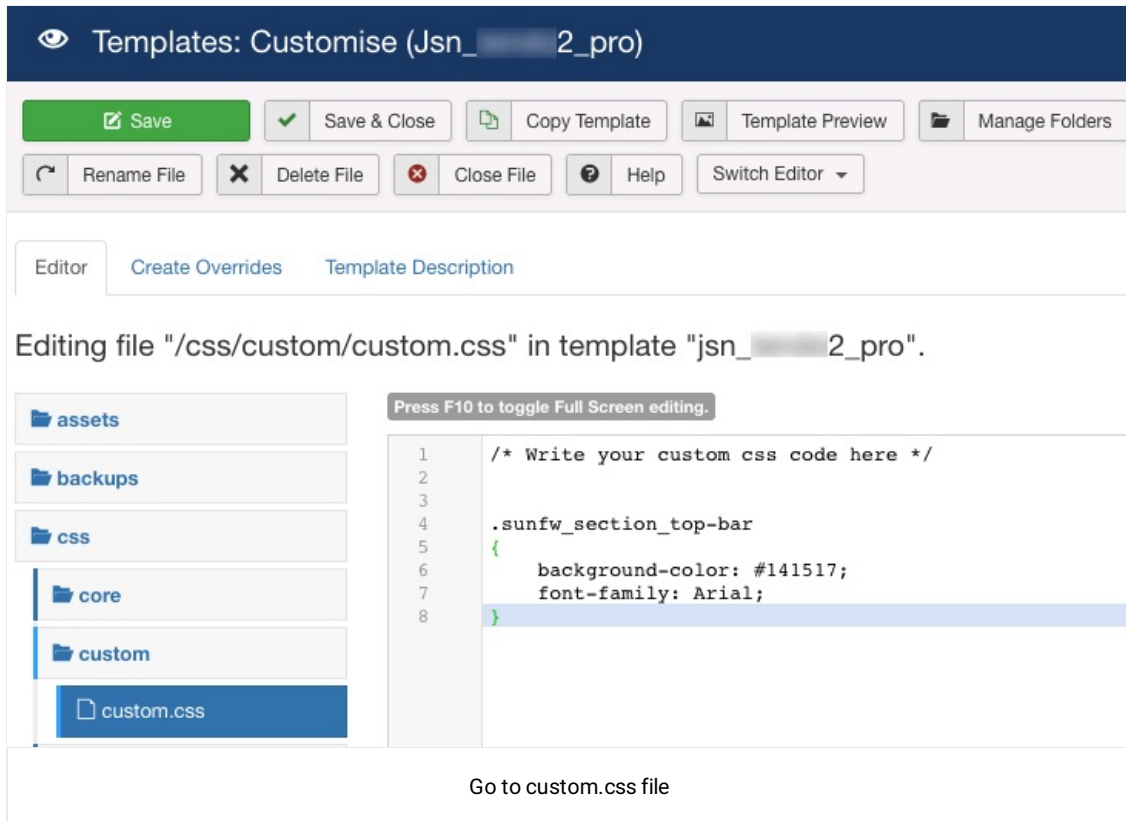

Tips & Tricks

Custom CSS in Sun Framework

Most of the pages on JSN templates are designed with beautiful styles, and JSN Sun Framework provides a wide variety of styling options. However, you may have some unique styles that the standard settings of JSN Sun Framework cannot offer. In this case, you will need to use custom CSS. You can easily add custom CSS in JSN Sun Framework as below:

Step 1: Open the file custom CSS file in the template folder

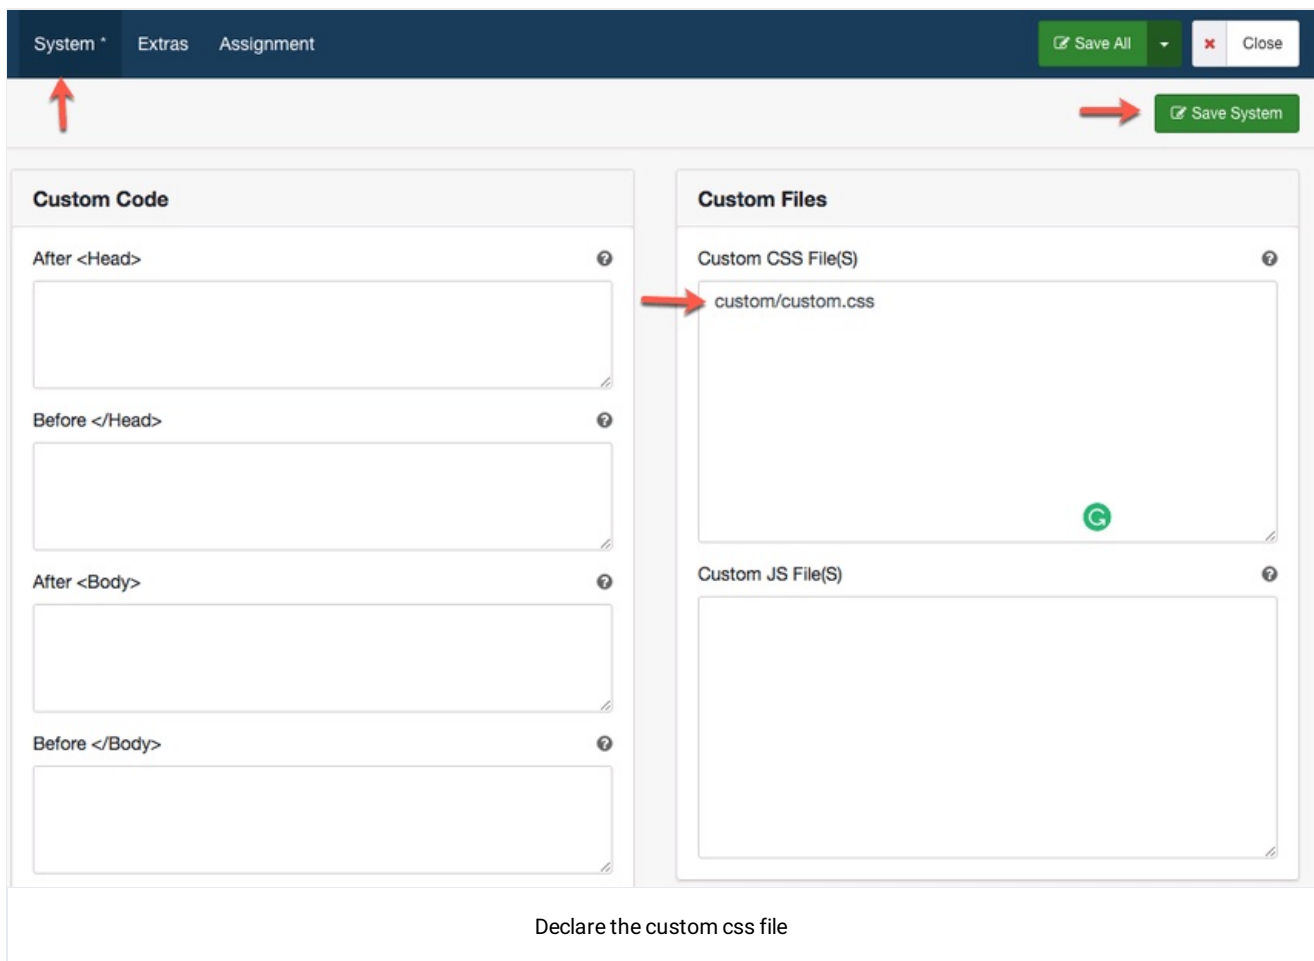

Login to your administrator area → Extensions → Templates → Templates → JSN Template Gen-2 → css → custom.

Now, let's add your CSS code there.

Step 2: Declare your custom CSS file

The final step is declare custom.css file. Go to: Extensions → Templates → JSN Template Gen-2 - Default → System. In the text box Custom CSS File(s) you must type the path of custom.css file.

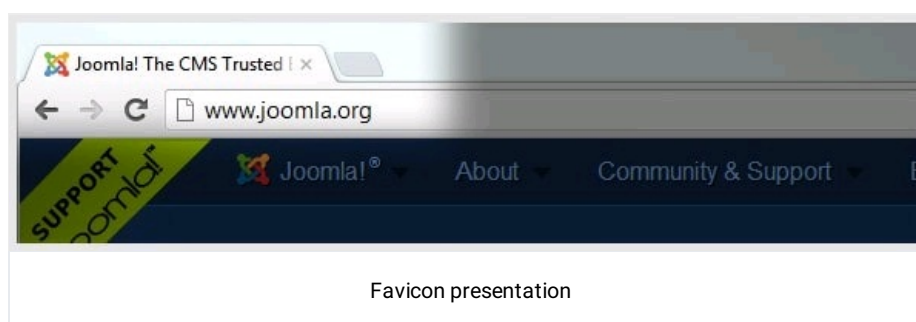

Your own CSS file?

You can create your custom CSS file and name it the way you prefer.

Via FTP to access to root_folder/templates/template_short_name/css/custom, here you can create your css file. After that, go to System tab in JSN Sun Framework to declare your custom CSS file as described above.

Favicon

Favicon is a small icon positioned on the left of the address bar of your browser. By default, Joomla! has an icon as shown on the screenshot below.

Here are instructions on how to do that:

Step 1: Create Favicon File

Favicon is a regular 16px * 16px icon file with exact name favicon.ico. In most cases, favicon is the sized-down version of the company logo saved in the icon format. In some cases, the logo is too specific and favicon needs to be built from scratch.

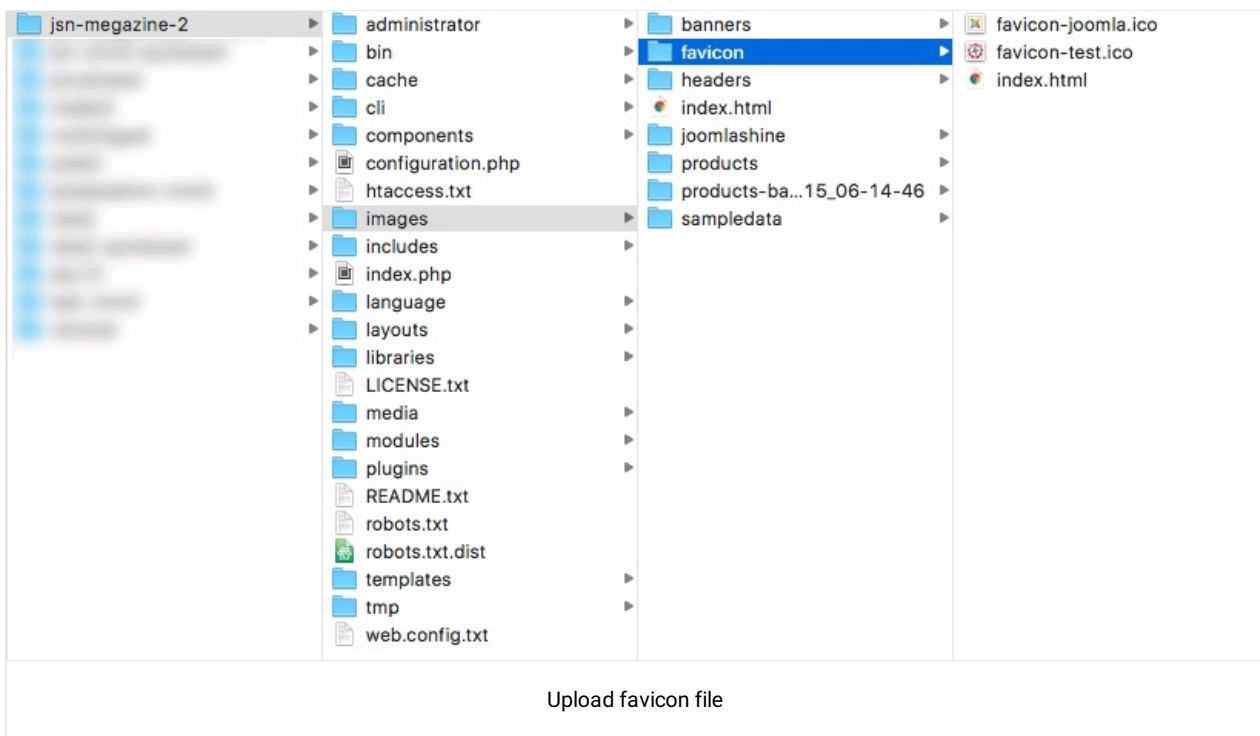

You can use some professional icon editor software like Axialis IconWorkshop (<http://www.axialis.com/>) and Iconcool Editor

(<http://www.iconcool.com/icon-editor.htm>) or to use online favicon generators. (<http://www.google.com/search?q=favicon%2Bgenerator&ie=utf-8&oe=utf-8&aq=t&rls=org.mozilla%3Aen-GB%3Aofficial&client=firefox-a>) The first method gives you better quality, but takes more effort. The second method is easier, but the quality is not the best.

Step 2: Upload Favicon File

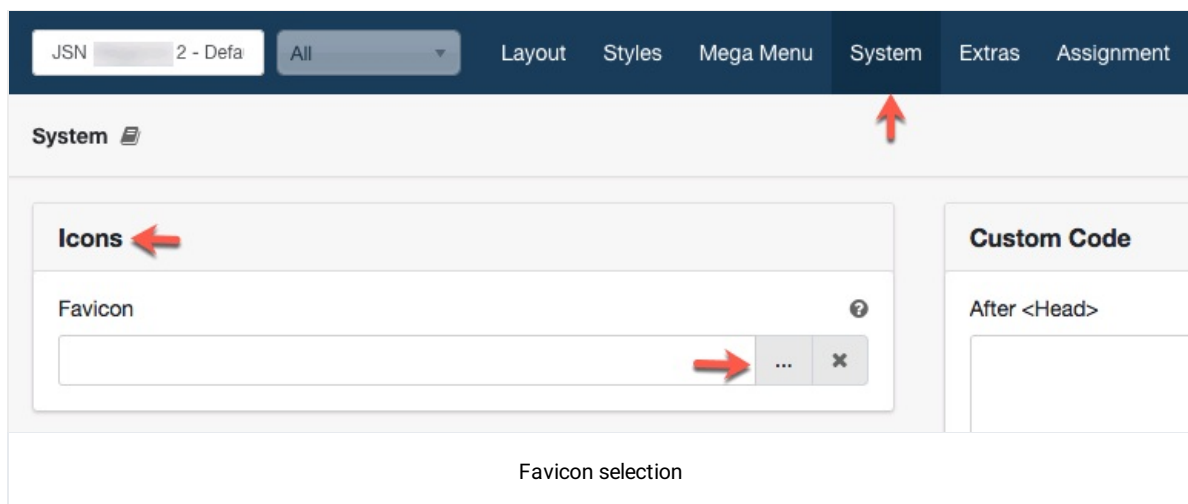

After you have got the favicon file, it is time to upload it to your server. You will need to upload the icon file to the template folder via FTP.

Let's go to `joomla_root_folder/images` to create a new folder and upload the favicon file there.

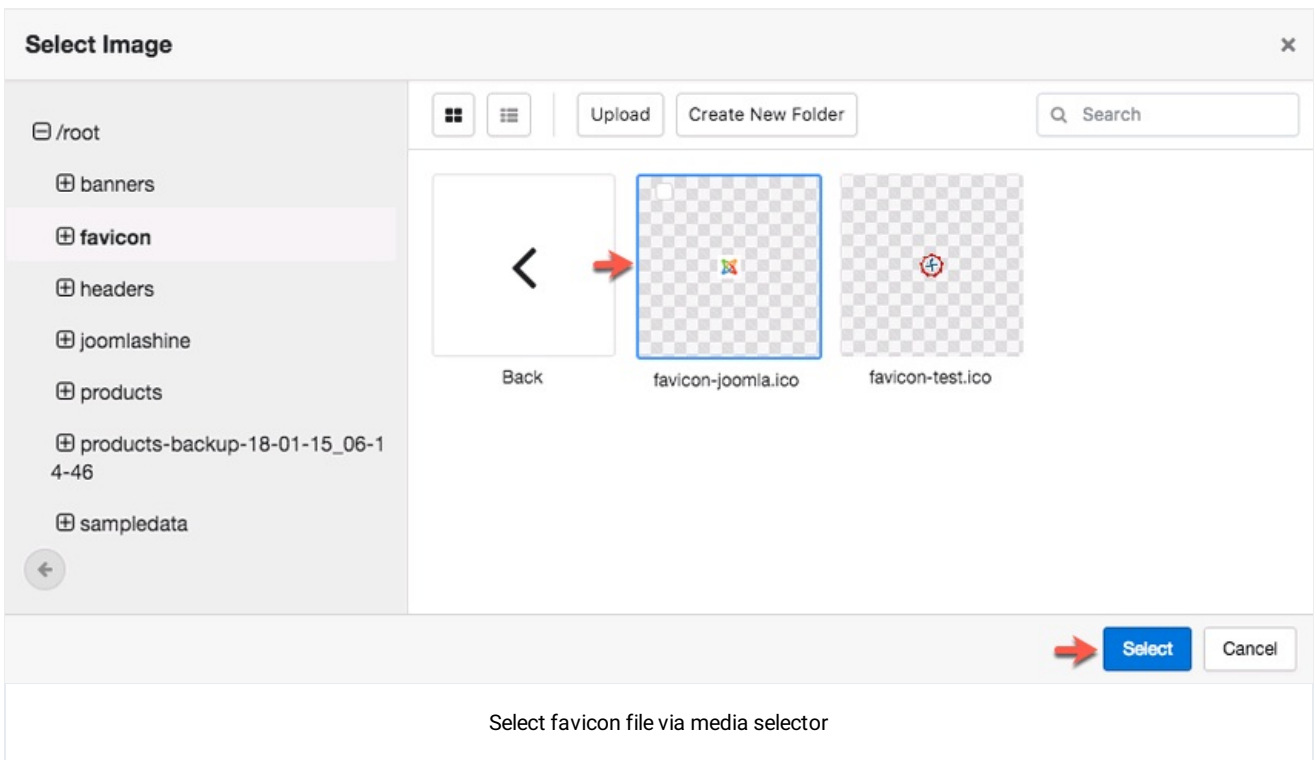

Step 3: Change the favicon in the template settings

Go to Extensions → Templates → Styles → Template_Full_Name - Default → System tab → Icons → choose browse file in the Favicon parameter, here you need to select favicon.ico updated before, and then click on Save System to finish.

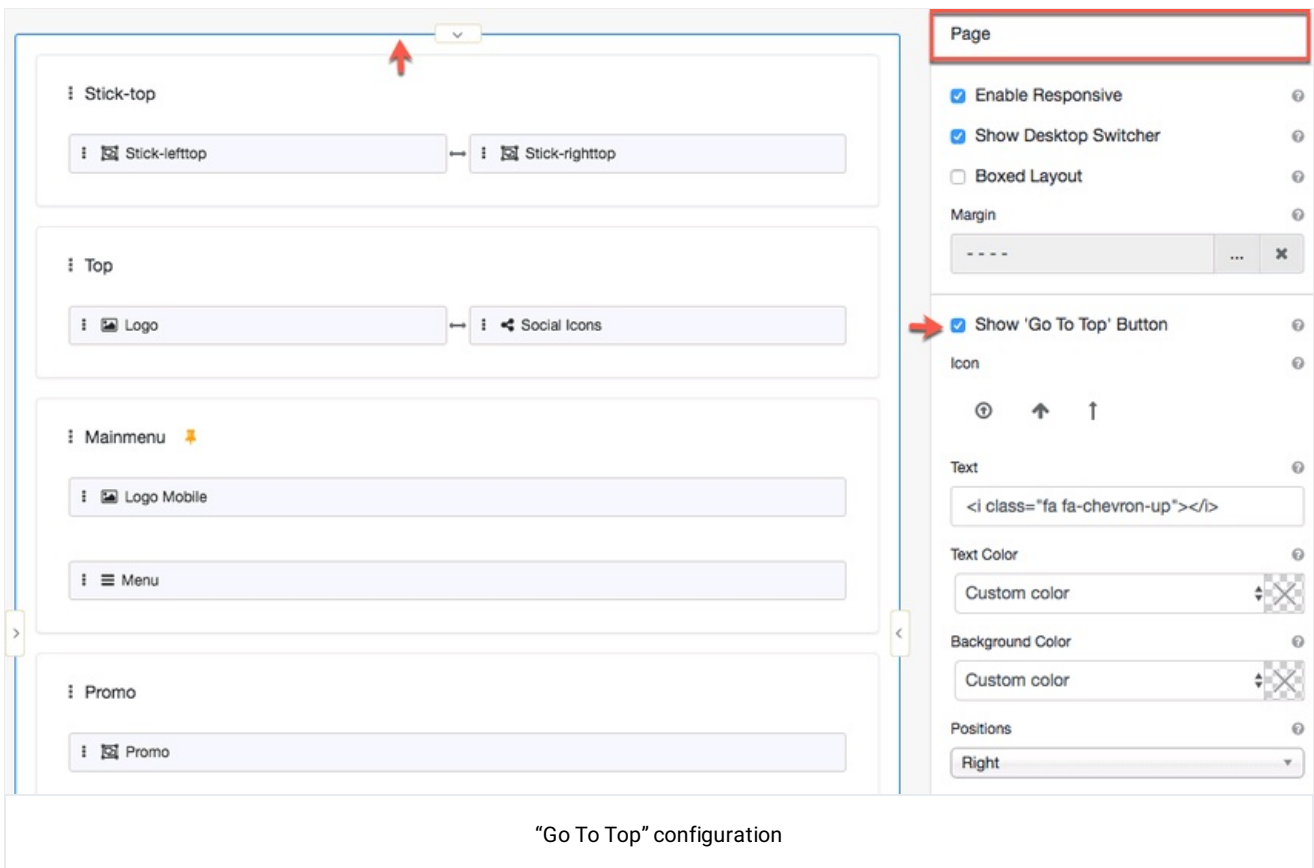

Media selector is opened. Now, select your uploaded favicon file to change.

Go To Top

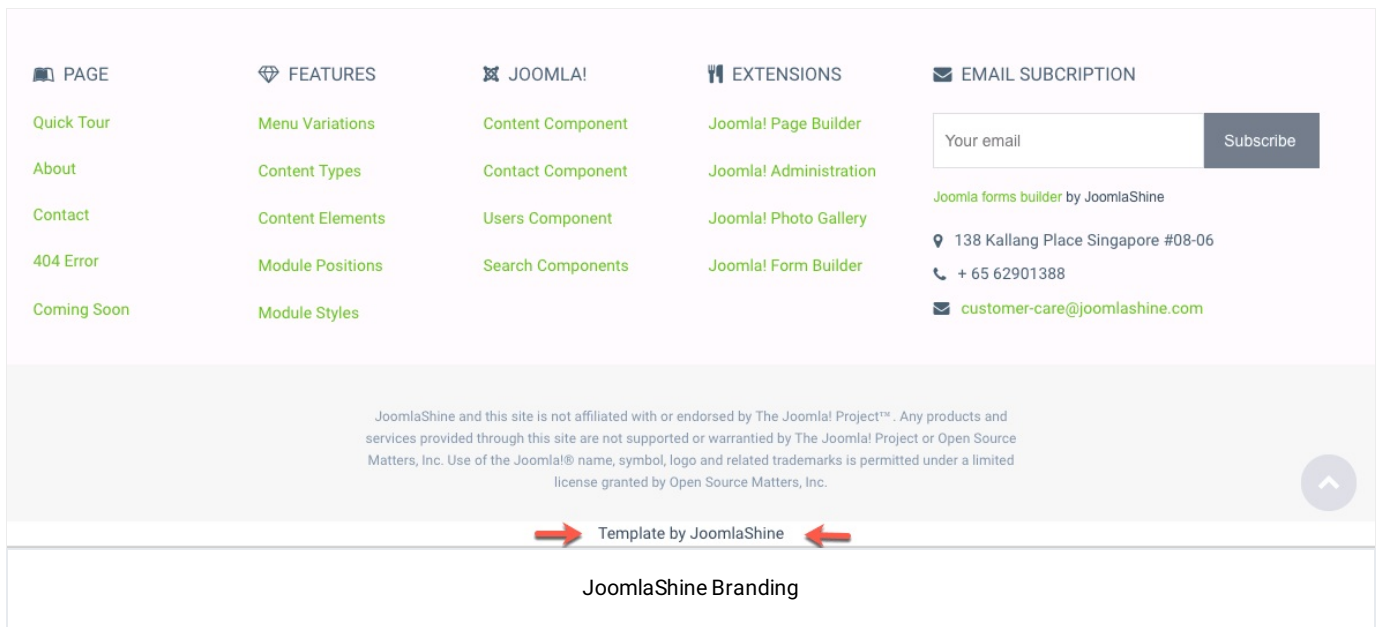

To turn on/off the Go To Top button, click on the layout of the entire page → Show “Go To Top” button.

Template Branding

When you install sample data, the content "Template by JoomlaShine" will be show on the bottom of your website.

NOTE: This feature is only available in PRO templates powered by JSN Sun Framework.

To disable or change the content:

- Go to Extensions → Templates → Styles → JSN Template Gen-2 - Default → Layout tab select all page, the Show Branding Link option will show on the setting panel.
- Untick the Show Branding option to disable branding link.

If you enable to show branding, you can change the content shown on the frontend by clicking on Set HTML content.
