

JSN Reta 1 Configuration Manual

Getting Started

Template Installation

After downloading, you should have a template installation file called `jsn_reta_pro_unlimited_Z.Z.Z_install.zip` if you purchased the PRO UNLIMITED Edition, or `jsn_reta_pro_standard_Z.Z.Z_install.zip` if you purchased the PRO STANDARD Edition.

- ZZZ is the template version

This is a standard Joomla! Template installation file, which can be installed in Joomla! Administration as usual. Here are quick instructions to remind you:

- In Joomla! Administration, go to menu Extensions -> Extension Manager
- Once you are on Extension Manager, click Browse button and select template installation file `jsn_reta_pro_unlimited_Z.Z.Z_install.zip` or `jsn_reta_pro_standard_Z.Z.Z_install.zip`. After that, click on button Upload & Install.
- Installation file will be uploaded to your server and installed in Joomla!
- Set the templates as default, go to menu Extensions -> Template Manager

Sample Data Installation

GETTING STARTED

Step 1. Setup sample data

The best way to understand the template is to setup sample data on your website to make it look the same as template demo website. There are 2 options:

- **Install Sample Data**
Install everything directly on this website. All current data will be lost.
- **Download QuickStart package**
Download the package and process it as standard Joomla website package you downloaded from joomla.org

All JoomlaShine templates have unique feature of installing sample data which makes your testing website look the same as on the template demo website. You can choose to install:

- Sample Data – A light package with only JSN Reta data. You install it on your available Joomla website
 - Sample data will be installed for common Joomla components and for supported third-party extensions (K2, Kunena, VirtueMart, OS Property...) which are already available on your website.
 - If you have installed the third-party extensions after installing Sample Data, you must reinstall the Sample Data to have the content for those extensions.
- QuickStart package – It contains both the latest Joomla installation file and JSN Reta.
 - By default, free extensions like K2 and Kunena are already included in the package with their sample data. The QuickStart packages do not contain commercial third-party extensions, you need to install these extensions separately.
 - You install this package normally as the flow to install Joomla. After that, you will get a totally new Joomla website with JSN Reta template and its sample data.

Below is the instruction to install Sample Data package:

1. First, go to Extensions --> Templates --> JSN Reta - Default, at the parameter GET STARTED, click Install sample data button.

Install Sample Data

This installer will make your website look the same as **JSN Boot PRO** live demo website.

Important information

Important information

- Installing sample data will delete all data on this website.
- It is NOT recommended to install sample data on production website.

I agree that installing sample data will delete all content on this website

2. Next, on page JSN Reta Sample Data Installation follow on-screen instruction to start the process

- Download sample data package of the demo website data such as: demo articles, demo menus, demo template settings, etc.
- Install free extensions: JSN ImageShow, JSN PowerAdmin, JSN PageBuilder, JSN Mobilize, JSN EasySlider and JSN Uniform You can install them or not.
- Install sample data: this step will check the template version before installing the sample data

Install Sample Data

There are several stages involved in the process. Please be patient.

- Download sample data package ✓
- For the best experience, it's strongly recommended for you to install following FREE extensions.
 - JSN ImageShow
 - JSN Source Picasa
 - JSN Theme Classic
 - JSN Theme Grid
 - JSN Theme Slider
 - JSN Theme Carousel
 - JSN Theme Flow
 - JSN Theme Strip
 - JSN PowerAdmin
 - JSN UniForm
 - JSN Mobilize

3. Finally, you should click the Finish button to Return to template settings page for further configuration

Install Sample Data

There are several stages involved in the process. Please be patient.

- Download sample data package ✓
- For the best experience, it's strongly recommended for you to install following FREE extensions.
 - JSN ImageShow ✓
 - JSN Source Picasa ✓
 - JSN Theme Classic ✓
 - JSN Theme Grid ✓
 - JSN Theme Slider ✓
 - JSN Theme Carousel ✓
 - JSN Theme Flow ✓
 - JSN Theme Strip ✓
 - JSN PowerAdmin ✓
 - JSN UniForm ✓
 - JSN Mobilize ✓
- Install sample data and download demo assets ✓

Sample data is successfully installed

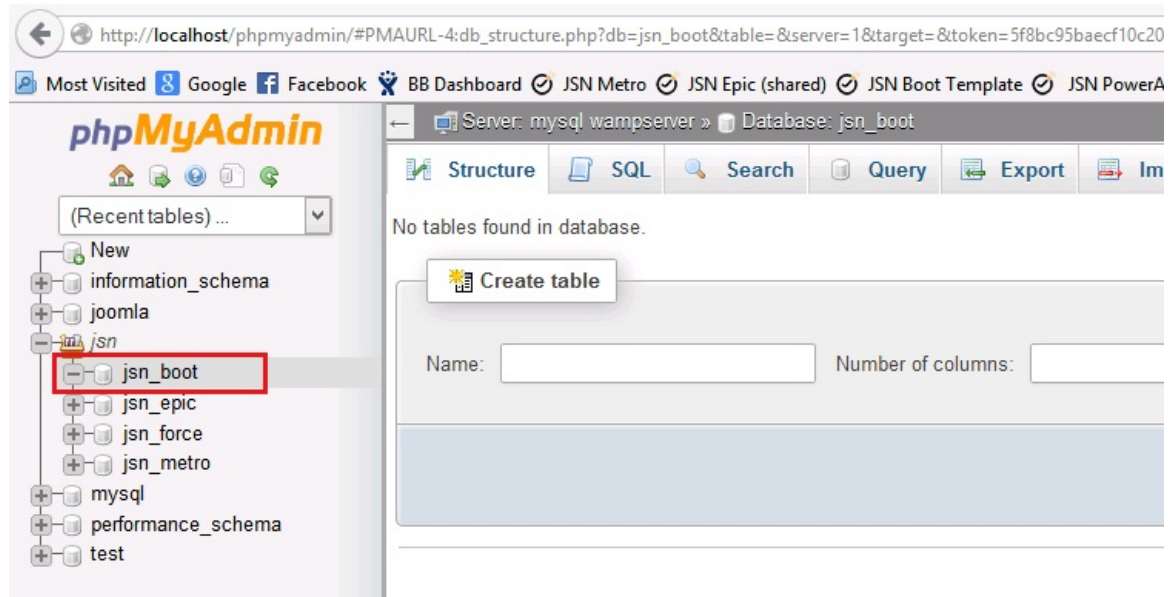

Congratulations, your website now looks the same as JSN Boot PRO live demo website.

Original data restoration

Before the sample data installation process, all original data of your website is automatically backed up into a backup file located in folder /backup inside the joomla_root_folder/templates/jsn_reta_XXX/, where XXX is the template edition on your server. Technically, this is the zip file, which contains a plain text file with SQL instructions that need to be executed on your Joomla! Database.

Below are the instructions on how to do that by using software phpMyAdmin 3.2.1.

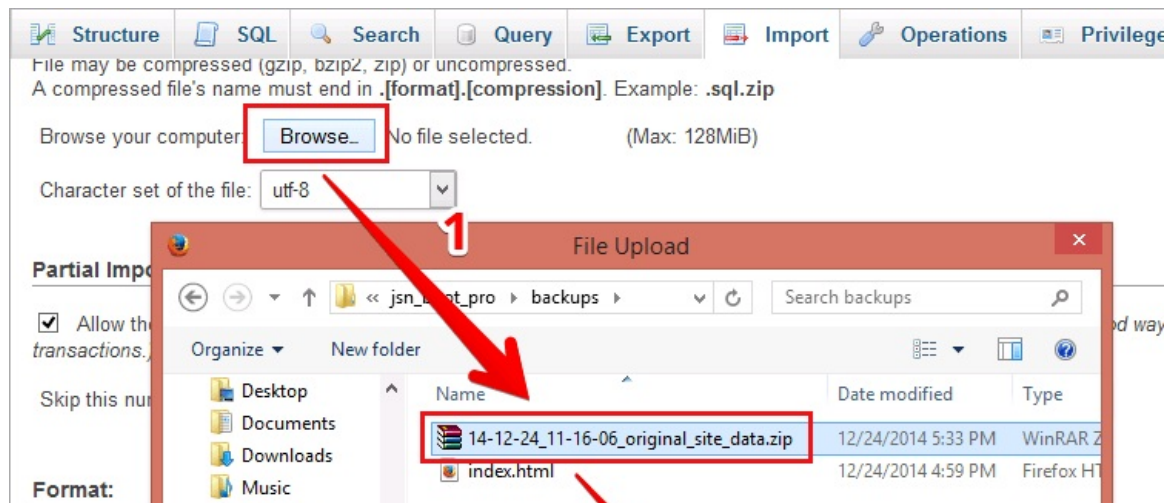

1. First, login to phpMyAdmin and select your Joomla! database on the left column

2. Next, select tab Import on the horizontal menu bar

3. Next, click button Browse..., then select the backup zip file and click button Go at the right corner of the page.

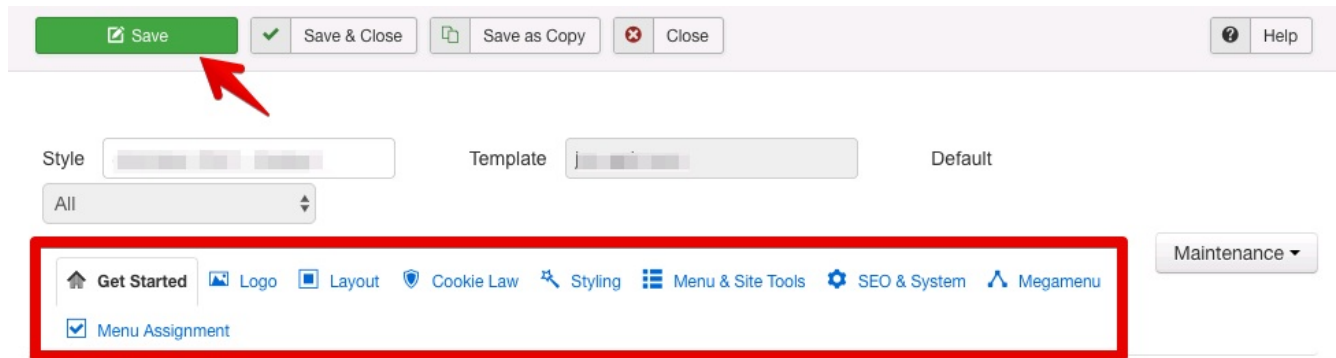

After script execution, you can get back to your website to check how the original data was restored.

Video tutorial

It guides you how to install a JSN template and sample data visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Reta in the video is an example and these instructions can be applied to other JSN templates as well.

Template Parameters

Template parameters logically grouped in panels

All JoomlaShine templates can be effortlessly configured by template parameters. In template setting page, there are 40+ template parameters arranged into logical groups for convenient operation.

To access template setting page, please take the following steps:

- Go to the template manager by menu Extensions -> Template Manager.
- Click on template name JSN_reta_XXX, where XXX is the template edition you have.
- Here in the Template Edit page, you will see the list of template parameters in section Parameters.
- Click button Save to save all changes you've made.

Template Configurations

Template Information & Auto Update notification

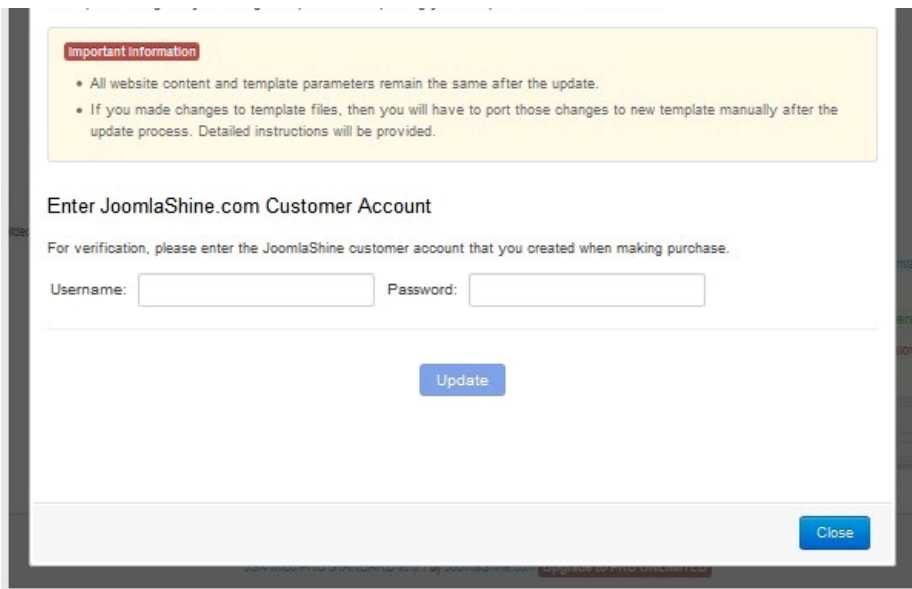

In the first parameter, you can find important information about the latest template version. We really do treat our templates as a piece of software, which needs to be continuously improved. So you should always make sure you are using the latest version.

Also, in this section you can find some other relevant information such as Author and Copyright.

JSN Reta automatically checks the latest version available for template version and framework version to download.

- If you want to update Framework only, click on the button Update to Y.Y.Y (Y.Y.Y is the latest framework version) which is next to the current framework ve After that a new modal window appears on your web browser, you click on the button Update, waiting for the update process, then click Finish.
- If you want to update both framework and template, click on the button Update to X.X.X (X.X.X is the latest template version) which is next to the current template ve You fill in the JoomlaShine customer account and click on the button Update, waiting for the update process, and then click Finish.

Update template to the latest version

After that the window about successful upgrade appears in your web browser.

Please note, if you customized the CSS files of original template, the changes would be lost. The best if you do backup the customized CSS files before the upgrade process.

Favicon configuration

Favicon is a small icon positioned on the left of the address bar of your browser. By default, Joomla! has an icon as shown on the screenshot below.

Default Joomla! favicon

On your website, you might want to use your own icon, like the one we are using on our site joomlashine.com.

JoomlaShine favicon

Here are instructions on how to do that:

Step 1: Create your own favicon file

Technically, favicon is a regular 16px * 16px icon file with exact name favicon.ico. In most cases, favicon is the sized-down version of the company logo saved in the icon format. In some cases, the logo is too specific and favicon needs to be built from scratch.

You can use some professional icon editor software like Axialis IconWorkshop (<http://www.axialis.com/>) and Iconcool Editor (<http://www.iconcool.com/icon-editor.htm>) or to use online favicon generators. (<http://www.google.com/search?q=favicon%2Bgenerator&ie=utf-8&oe=utf-8&aq=t&rls=org.mozilla%3Aen-GB%3Aofficial&client=firefox-a>) The first method gives you better quality, but takes more effort. The second method is easier, but the quality is not the best.

Step 2: Upload favicon file to your server

After you've got the favicon file, it's time to upload it to your server. You need to upload the icon file to template folder overwriting the default file. This is the folder `joomla_root_folder/templates/jsn_reta_XXX/`, where XXX is the template edition.

If you have permission problems while using FTP, then we strongly recommend you use a great Joomla! Extension called eXplorer (<http://extensions.joomla.org/extensions/core-enhancements/file-management/2630>). And you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

any other template will automatically present it as well.

If you don't see your new icon, that doesn't necessarily mean you did anything wrong. Browsers are designed to customize data traffic, so they don't refresh the favicon every time they show a page. Even refreshing the page (F5) won't help. So you need to refresh more thoroughly:

- *Mozilla / Firefox / Safari*: hold down Shift while clicking Reload, or press Ctrl-Shift-R (Cmd-Shift-R on Apple Mac)
- *Internet Explorer*: hold Ctrl while clicking Refresh, or press Ctrl-F5
- *Konqueror*: simply click the Reload button, or press F5
- *Opera*: users may need to completely clear their cache in Tools -> Preferences
- *Chrome*: Shift-F5

If this doesn't work, you will need to delete the temporary internet files and history and then open your page again

Logo

JSN Reta logo is the default sample logo and you should replace it with your own. Technically, logo is an image file called logo.png located in folder `joomla_root_folder/templates/jsn_reta_XXX/images/`, where XXX the template edition you have.

You can manually choose your own logo file via template parameter Logo File. Additionally, you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

Parameters to set logo

When the logo file is ready, you can select and set it as the default logo of your website:

- Logo File - Select the image file you want to use as logo.
- Mobile Logo File – Set specific logo for your website on mobile device Please leave this parameter empty if on mobile, you want to use the re-sized logo which is used on the desktop already.
- Logo Link – Set URL where the logo image should link to. You can set here:
 - Absolute link like <http://www.joomlashine.com> (<http://www.joomlashine.com/>)
 - Relative link starting from Joomla! root folder like `index.php`

Leave this parameter empty if you do NOT want your logo to be clickable at all.

- Logo Slogan – Set the slogan text to be inserted to the logo image attribute alt. Text in alt attribute is visible to screen readers (good for accessibility) and search engines (good for SEO).
- Enable Colored Logo – Define if you want to use special colored logo for each template color. Colored logo file is located under folder `images/colors/{color_name}/` inside the template folder.

Set up rich-media logo via module in position "logo"

JSN Reta provides a module position called logo, where you can put any Custom HTML module with rich-media logo. Another advantage is that you can create multiple modules with different logos and display them in various pages using the menu-module assignment feature in Joomla!

Attention! If template detects that there are some module presented in position logo, then it will disable default logo with all logo parameters: Enable Colored Logo, Logo File, Logo Link and Logo Slogan.

Video tutorial

It guides you how to configure logo visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

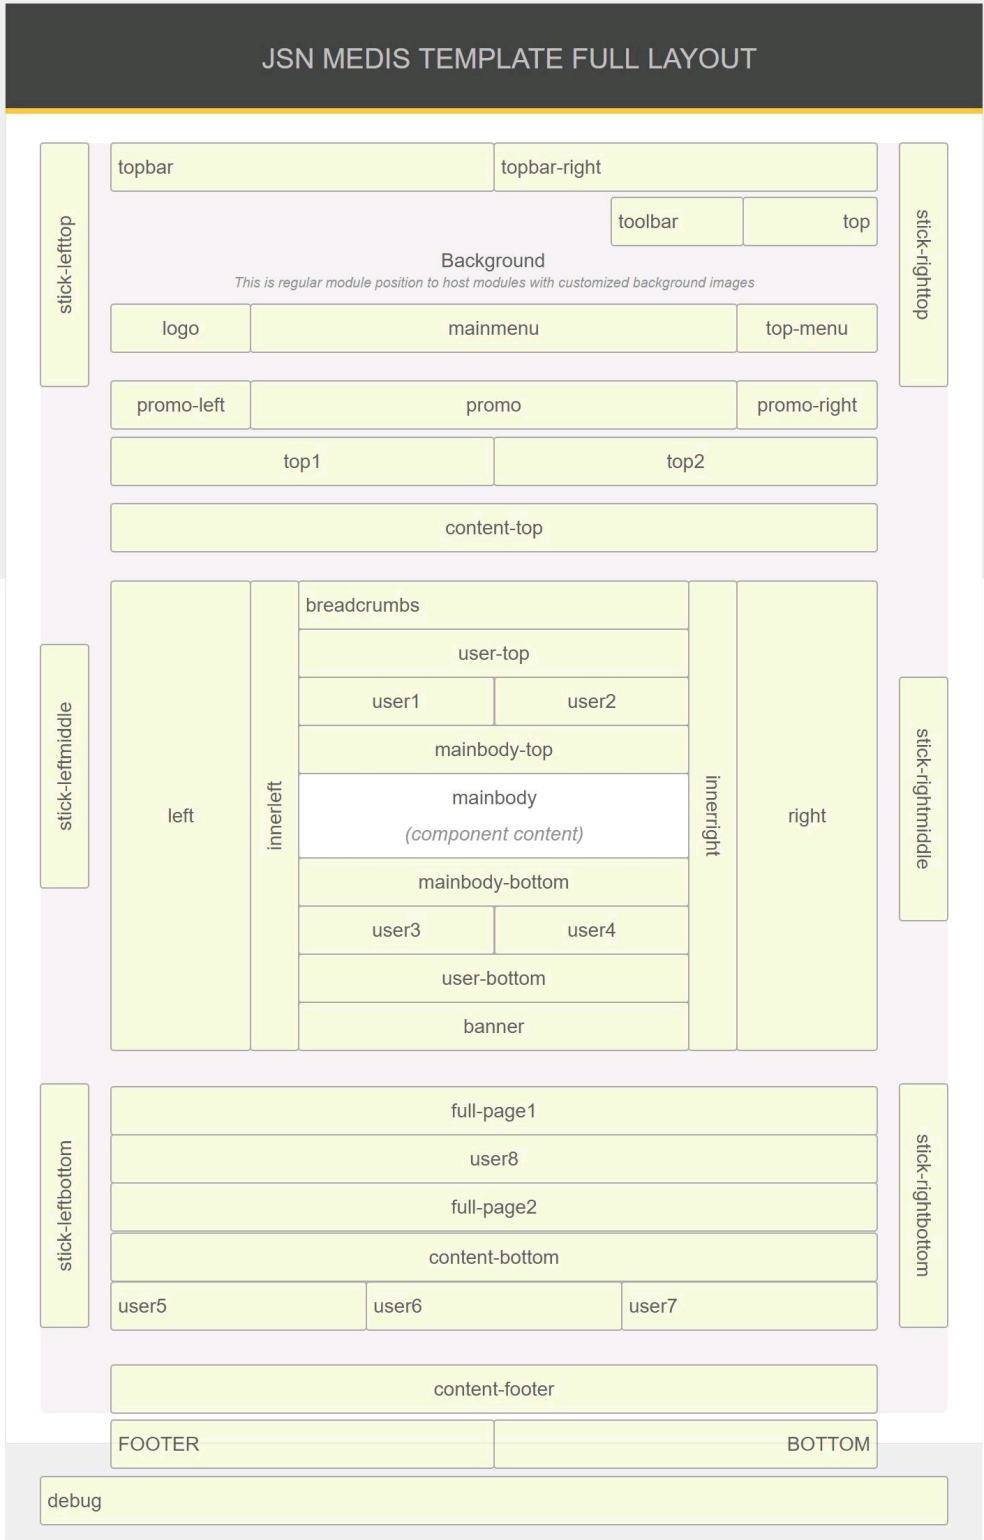

JSN Reta in the video is an example and these instructions can be applied to JSN templates as well.

Layout

Module positions

JSN Reta provides 38+ module positions allowing you to have multiple layout configurations. All module positions are collapsible which means if you don't use all the positions they will be left as blank for neighboring modules.

means if you don't use all the positions they will be left as blank for neighboring modules.

Layout dimensions

JSN Reta allows you to change the width size of several critical layout elements. All settings can be done via template parameters in the section LAYOUT SETTINGS.

Template Width

Template width can be configured in two different ways.

Configuration by template parameter (lowest priority)

Template Width Type

Fixed Width

Template width can be set by template parameter Template Width Type. There are three options for you to choose:

- Fixed – Template width is fixed in pixels defined in parameter Fixed Width (px).
- Float - Template width is fixed in percentage defined in parameter

Float Width (%).

- Responsive - Template width fits into different resolution:
- Mobile Device: Template width fits into mobile devices – tablets and smartphones
- Wide Desktop: Template width fits into desktop with width display 1200 px and higher

This is the default setting and has the lowest priority.

Configuration by "Page Class" (higher priority)

Browser Page Title

Show Page Heading No

Page Heading

Page Class

Template width can be set by Page Class of a menu item with syntax

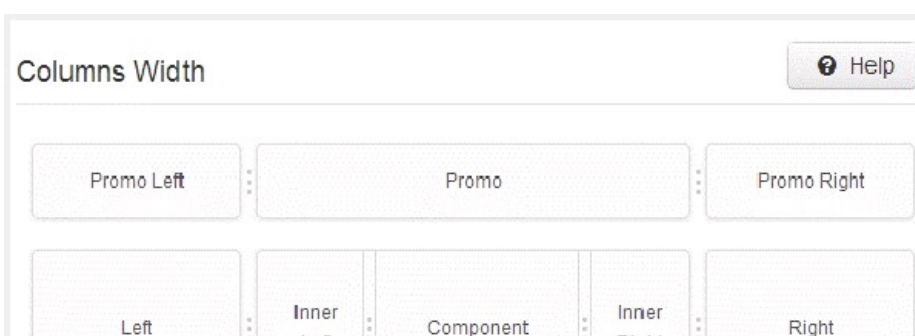

Custom-width-xxx, where xxx is the width value you choose.

There are the following possible values: fixed, float and responsive. For example: custom-width-fixed

This setting will override the default settings by template parameter *Template Width*.

Columns Width and Position

Thanks to the Bootstrap grid system, the layout is divided into 12 equal columns. Each module should take the width equal the columns number. You can drag and drop modules to adjust their widths and positions.

Visual column widths and positions

12 Bootstrap grids

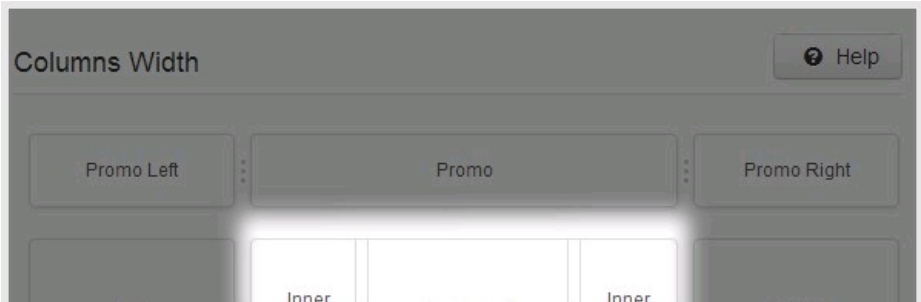

Columns width adjustment

Columns position change

Please be aware that, you can adjust all the column widths and change almost all column positions. However, you are not allowed to change the positions of separate elements in the center block of "Inner Left", "Component" and "Inner Right".

The center block "Inner Left", "Component" and "Inner Right"

Stick Positions

The template layout includes 6 stick positions: stick-lefttop, stick-leftmiddle, stick-leftbottom, stick-righttop, stick-rightmiddle and stick-rightbottom. You can assign any modules or create custom HTML module into mentioned positions for better website presentation. The module "sticks" into your layout, so when you scroll mouse up and down, the assigned module is moved in appropriate direction.

Let's see how we can create a custom HTML module then place it in the stick-lefttop position.

- In Joomla Administration you go to Extensions -> Module Manager
- Click on a button New then choose Custom HTML
- Fill the settings:
 - Title: My stick module
 - Show Title: No
 - Published: Published
 - Position: stick-lefttop
 - Customer Output: Type HTML code into this field

Above, we created a new module then assigned to the position stick-left-top. You can assign a module to the rest 5 stick positions.

Video tutorial

It guides you how to configure layout visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

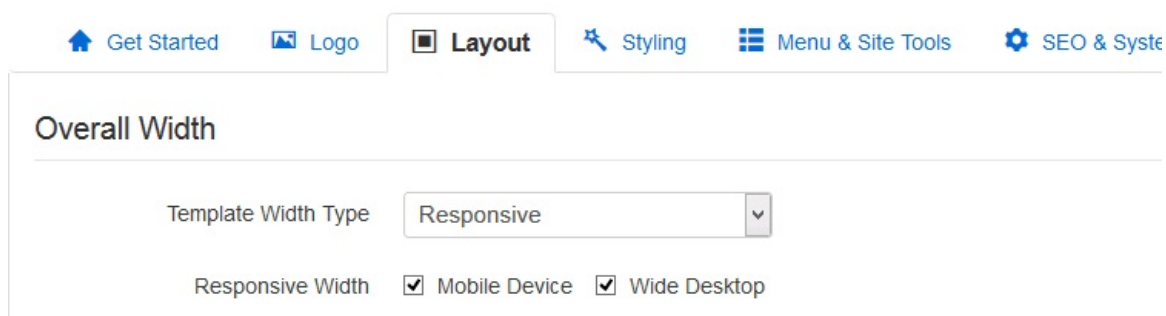

JSN Reta in the video is an example and these instructions can be applied to JSN templates as well.

Mobile settings

All JoomlaShine templates are equipped with responsive design feature making your website look beautiful in mobile (both smartphones and tablets).

Enable Mobile Support

To enable responsive design with mobile please set the parameter Template width type as Responsive and choose Mobile Device in parameter Responsive Width.

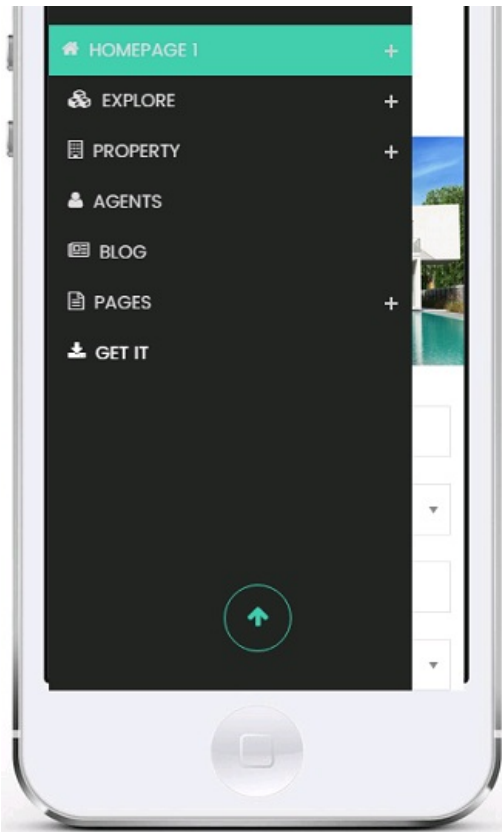

Mobile settings

After that all modules will be automatically rearranged to fit different screen resolutions.

- If the client device is a smartphone like iPhone or Android-based phone, all content will be arranged in one column.
- If the client device is a tablet like iPad, Kindle Fire, e all content will be arranged in two or three columns.

Also, main menu will be transformed into compact dropdown menu.

Opened mobile menu

1-column module

As default, all modules will be displayed on both desktop and mobile. To display a module on only desktop or on only mobile, add Module Class Suffix parameter as following:

- Display a module on only desktop: display-desktop

Menu Assignment Module Module Permissions Options **Advanced**

Alternative Layout Default

Module Class Suffix display-desktop

Caching Use Global

- Display a module on only mobile: display-mobile

Enable Mobile Menu Sticky

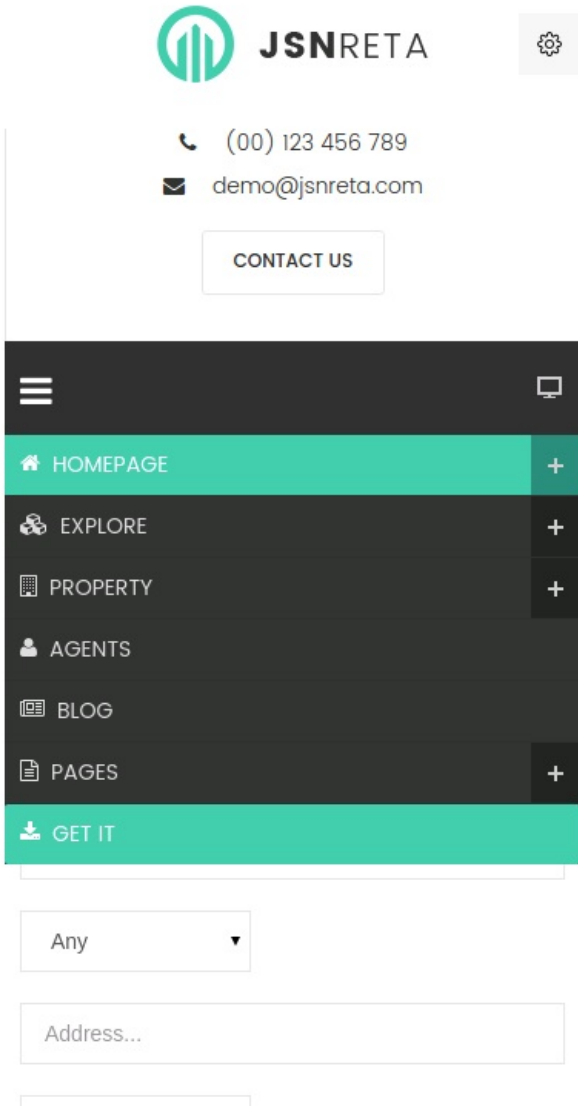

Mobile Menu Sticky, the menu will appear anytime. This will help you control all menus easily.

To enable this feature, in the section Menu & Site Tools -> parameter Enable Sticky Menu -> choose the option Mobile.

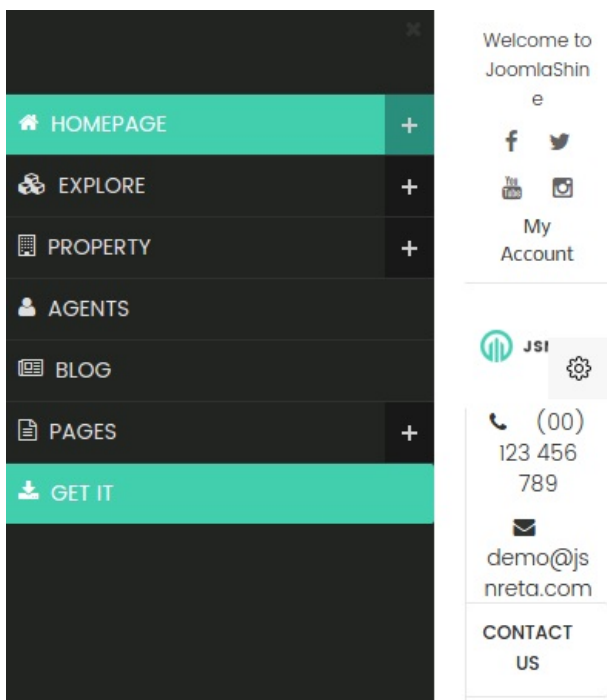

Mobile Menu Effect

With Mobile Menu Effect, you can control how the mobile menu appears when being toggled. This feature has recently been added to make JSN template more flexible and mobile friendly. There are 5 choices for you to choose:

Default

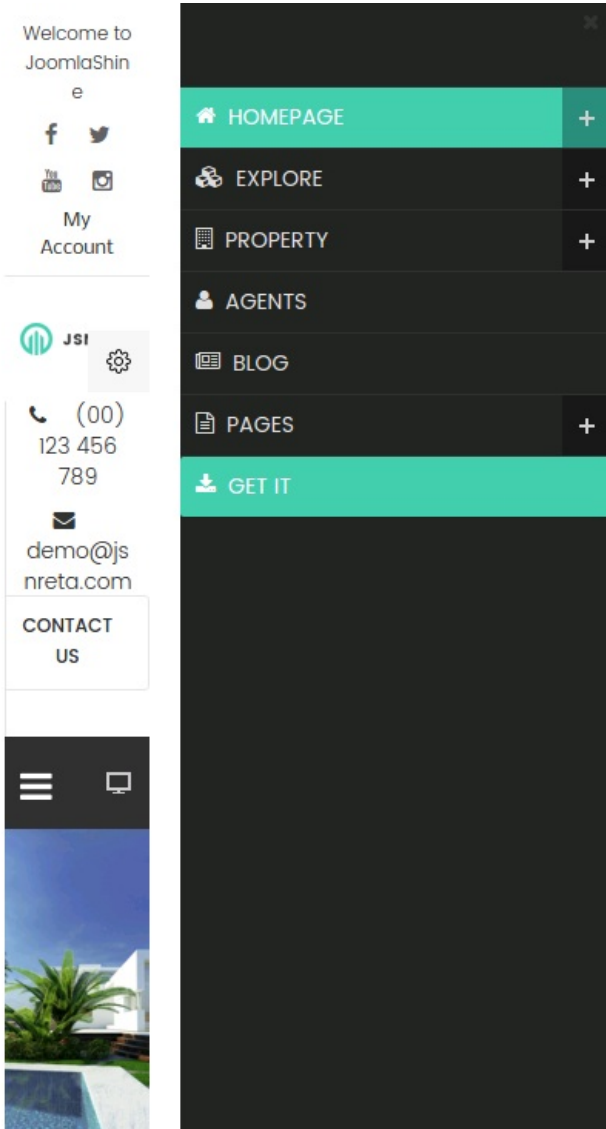

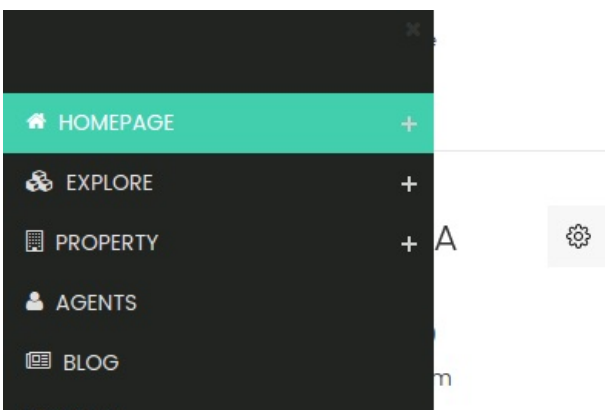

Key wr

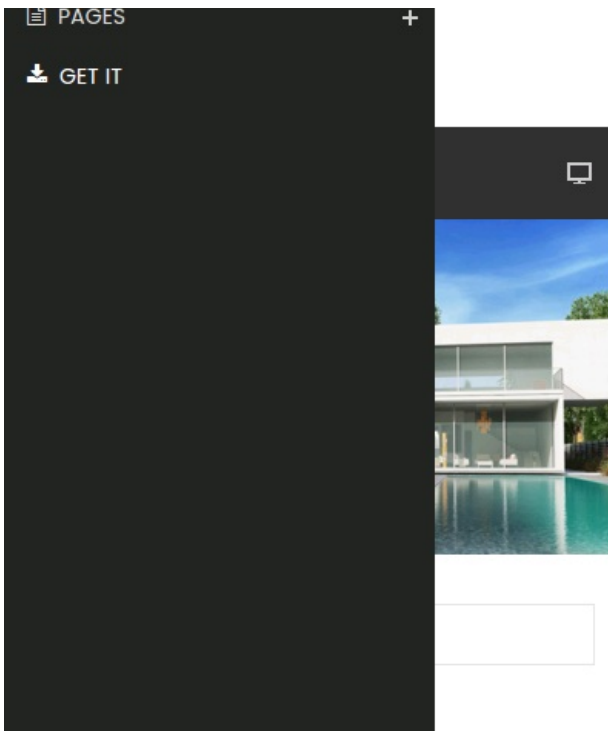

Any

Push Left

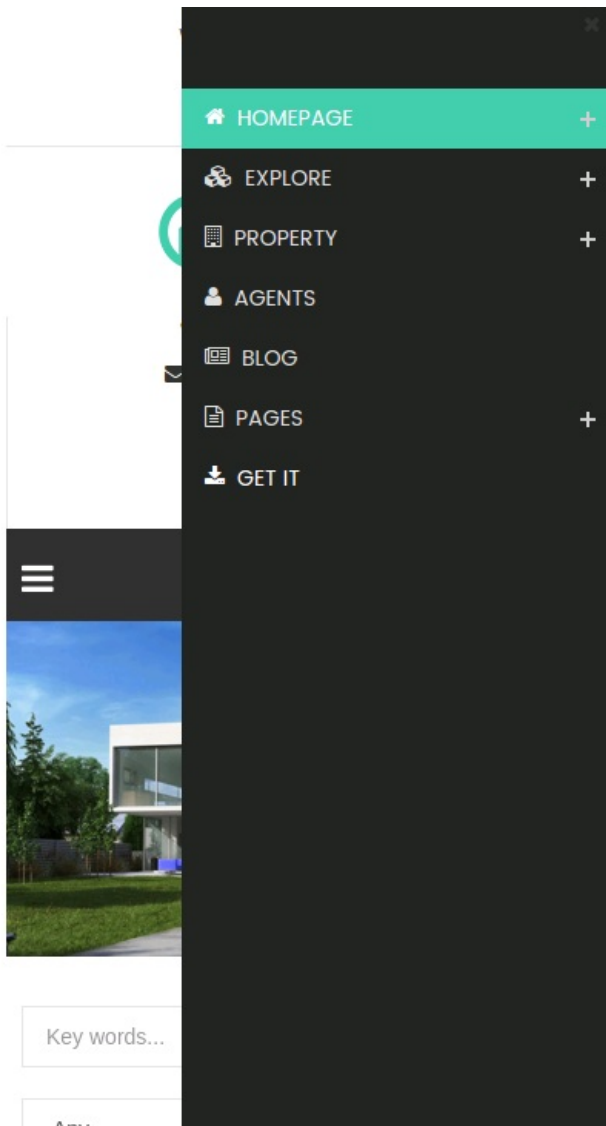

Push Right

Slide left

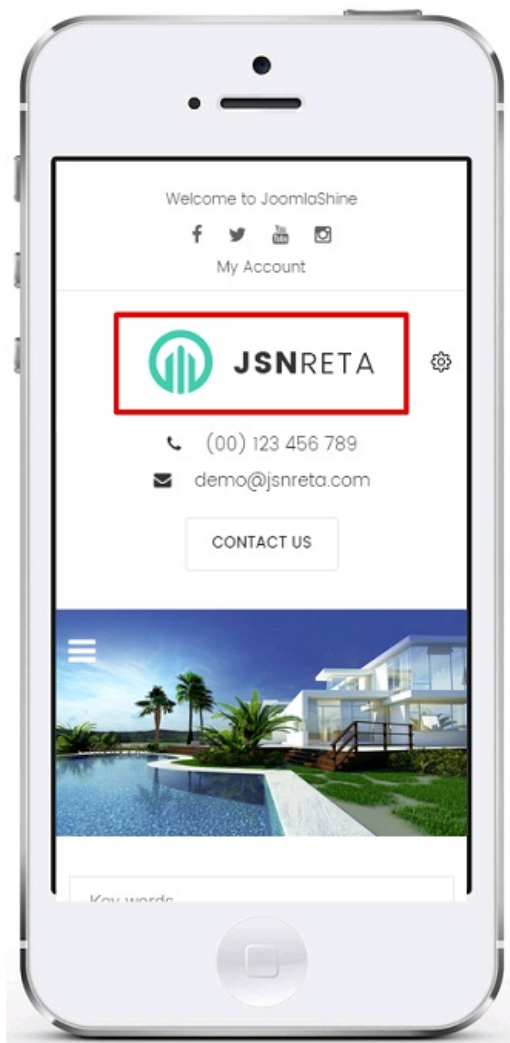

Slide Right

- Default: This is the default mobile menu style which will show the menu in full-width under the toolbar
- Push Left/Right: The mobile menu will slide in from the left/right while website content will be pushed to the same direction.
- Slide Left/Right: The mobile menu will slide in from the left/right and overlap website content.

Mobile Logo File

Normally, the default logo will be automatically resized and displayed nicely in mobile layout. But if you want to have specifically designed logo, then you can select it in the section Logo -> parameter Mobile Logo File.

Mobile Logo File

Cookie Law

Another feature of JSN templates is the Cookie Law, which shows a bar notifying website visitors about the cookies policy in your website.

You have the option to enable this function in the tab Cookie Law via template settings as well as configure its layout and content:

Cookie Law settings

- Enable Cookie Consent - Choose whether to use Cookie Law.
- Banner Placement – Select position of initial consent slide-down notification.
- Style – There are 2 styles of Cookie Law to choose from: Light and Dark.
- Message – The notification message to be shown to users.
- Accept button text – The label of the accept button.
- Readmore button text – The text shown on the link to the cookie policy (requires Your Cookie Policy Link to be set).
- Your Cookie Policy Link – The url of the Cookie Policy. If left blank, the link will be hidden.

Video tutorial

It guides you how to configure menus visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Reta in the video is an example and these instructions can be applied to all JSN templates as well.

Colors Variation

Template Color

JSN Reta is a Joomla! template that is designed to be used for a wide range of websites. It is a modern, clean, and professional template that is easy to use and customize. It features a variety of color schemes and layouts that can be changed online without the need for programming knowledge. The template is also fully responsive, meaning it will look great on any device, from desktop computers to smartphones. If you are looking for a Joomla! template that is both functional and visually appealing, JSN Reta is a great choice. You can find more information about the template and its features on the Joomla! website.

JSN Reta provides six major color variations for you to choose from. Each color variation covers not only the main background, but also fills drop-down menu, links, table's header and some others.

All available colors are described below.

-  Blue
-  Red
-  Green
-  Pink
-  Orange
-  Cyan

Template color can be configured in three different ways. Configuration by template parameter (lowest priority)

Template color can be set by template parameter `Template Color` in Styling section. This is the default setting and has the lowest priority.

Configuration by "Page Class" (higher priority)

Template color can be set by Page Class of a menu item with syntax `custom-color-xxx`, where `xxx` is the color you want to have. There are the following possible values: blue, red, green, orange, grey and violet.

For example: `custom-color-red`

This setting will override the default settings by template parameter `Template Color`.

Configuration by Site tools panel (top priority)

Template color can be selected by Color Selector from Site tools.

This setting is considered as the visitor's preference and has top priority. It will overwrite both `Page Class` and default settings of parameter `Template Color`.

Video tutorial

It guides you how to configure colors visually. Here are video tutorials. (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>)

JSN Teki in the video is an example and these instructions can be applied to JSN templates as well

Module Styles

MODULE STYLES

JSN Reta provides six box designs for module background styling, which can be combined with Unilcons for module title styling.

Module styles are configured by module's parameter Module Class Suffix. All available values are described below and need to be applied without double quotes.

Module Box Designs

Box designs to be applied to modules.

"solid-1"

"solid-2"

"richbox-1"

"richbox-2"

Box designs to be applied to modules. 

"lightbox-1"

"lightbox-2"

Module Icon Designs 

You can attach any of the Unilcons to the module's title. To set up icons, you need to add the string fa fa-xxx to the module class suffix, where xxx is the icon name.

Menu Styles

JSN Reta provides five menu styles to present your website navigation. The default Joomla! built-in menu module (mod_mainmenu) is utilized, so you don't need to install any external menu modules.

Top Menu

Top Menu allows you to arrange menu items in horizontal lines and assign icons to them. All icons are configured directly in the menu item settings page which is very convenient.

To set up Top Menu please select the menu module you want to use and set up parameters as follows:

- Title: Top Menu *(or any other you like)*
- Show title: Hide
- Position: topbar
- Access: public
- Language: All
- Select Menu: Top Menu *(you might want to use another sources here)*
- Start Level: 1
- End Level: 2
- Show sub-menu items: No
- Menu Class Suffix: menu-topmenu menu-iconmenu *(Please only use "menu-iconmenu" if you want to display icons)*

Attention! There is a common misconception about Menu Class Suffix and Module Class Suffix. They are absolutely different parameters, so please pay attention to their settings.

Top Menu icons

You can attach any of the Unilcons to top menu items to make them more appealing. Unilcons is the set of 20 predefined icons that can be used for multiple purposes. For more information about the available icons and their names, please read section Unilcons of this document.

To set up icons, you need to go to menu item settings and take the following steps:

Add symbol combination fa fa-xxx to menu item's parameter Link CSS Style, where xxx is the icon name.

Main Menu

Main Menu is a powerful menu built with clean accessible XHTML code structure and effective drop-down submenu panels.

To set up Main Menu please select the menu you want to use and set up parameters as follows:

Title *

Module [Menu Assignment](#) [Advanced](#) [Permissions](#)

Menu

Site

This module displays a menu on the Frontend.

Select Menu: Main Menu

Tree Menu

Tree Menu represents menu items in a clear tree-like hierarchy which is very appropriate for indexing menu. By default all sub-menu items are collapsed until you select the parent menu item.

To set up Tree Menu please select the menu module you want to use and set up parameters as following:

The screenshot shows the configuration form for a Tree Menu. The title is 'Tree Menu'. The 'Menu' section is active. The 'Select Menu' dropdown is set to 'Main Menu'. The 'Base Item' is 'Select a Menu Item'. The 'Start Level' is '1'. The 'End Level' is 'All', which is highlighted with a red box. The 'Show Sub-menu Items' is set to 'No'. The 'Position' is 'right'. The 'Status' is 'Published'. The 'Access' is 'Public'.

- Title: Tree Menu (or any other you like)
- Position: right
- Access: Public
- Language: All
- Select Menu: Main Menu (you might want to use another menu source here)
- Start Level: 1
- End Level: All
- Show sub-menu items: No
- Menu Class Suffix: menu-treemenu menu-iconmenu menu-richmenu (Please only use "menu- iconmenu" if you want to display icons and use "menu-richmenu" if you want to display rich text)

The screenshot shows the 'Permissions' tab of the configuration form. The 'Menu Class Suffix' field is highlighted with a red box and contains the value 'menu-treemenu'. Other fields include 'Menu Tag ID', 'Target Position', 'Layout' (set to 'Default'), and 'Module Class Suffix'.

Tree Menu Icons and Rich Text

You can set up menu items to utilize both icons and rich text just as you can with Main Menu.

Div Menu

Div Menu is a simple yet nice menu bar with items separated by barely visible dashes. This menu is very suitable for footer navigation presentation.

To set up Div Menu please select the menu module you want to use and set up parameters as following:

The screenshot shows the Joomla! administrator interface for configuring a menu module. The title is "Div Menu". The "Menu Assignment" tab is selected. In the "Menu" section, "Main Menu" is chosen from the "Select Menu" dropdown. The "End Level" is set to 1, and this field is highlighted with a red box. The "Show Sub-menu Items" is set to "No". The "Position" is set to "footer". The "Status" is "Published".

- Title: Div Menu (or any other you like)
- Show title: Hide
- Position: footer
- Access: Public
- Language: All
- Menu Name: othermenu (you might want to use another menu source here)
- Start Level: 1
- End Level: 1
- Show sub-menu items: No
- Menu Class Suffix: menu-divmenu

This is an identical screenshot of the Joomla! Menu module configuration interface as shown above.

Attention! There is a common misconception about Menu Class Suffix and Module Class Suffix. They are absolutely different parameters, so please pay attention to their settings.

Video tutorial

It guides you how to configure menus visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Reta in the video is an example and these instructions can be applied to all JSN templates as well.

Mega Menu

JSN Reta allows you to create a mega menu for usability enhancement. All settings can be done via template parameters in the section MEGAMENU.

Enable Mega Menu

To enable mega menu please choose Yes in parameter Enable Megamenu.

Also, Mega menu needs to be enabled in each menu items. You can select the menu item you want to present mega menu and set the Configuration as On.

When you enable megamenu, you can configure the basic setting for it:

- Show menu item description
- Show menu item icon

Create Mega Menu

JSN Reta provides a visual way to create a mega menu with clicks and drag-n-drop function, without touching a code line. Here are quick instructions:

- Select menu you want to apply Mega Menu like Main Menu
- Select menu item to build mega menu like Explore
- Build the skeleton of Mega Menu based on your need.
 - Click icon to add column
 - Click Add row to make a new row
- Add suitable elements to make the content of mega menu. You can select from 3 element types:
 - Joomla module
 - Submenu
 - Positions
- Configure the container width and add CSS Class suffix if you want to style the menu.

For example:

Mega Menu in "Explore" - Backend

Mega Menu in "Explore" - Frontend

Attention! Megamenu is now only available in desktop view. The classic menu will be displayed when viewing on mobile devices.

Video tutorial

It guides you how to configure menus visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Dona in the video is an example and these instructions can be applied to all JSN templates as well.

Typography

JSN Reta was created with a strong focus on typography and we believe it contains the most comprehensive content presentation capability. Headings, text, links, tables, images, everything was designed with high level of refinement. Let's take a look.

Content columns

It's a pretty common situation when you need to arrange your content in multiple columns. JSN Reta offers you very a convenient and accessible method to create multiple column content. This is a real step forward removing table tags from your content and leaving them only for showing tabular data.

You can arrange your content in as many columns as you like. JSN Reta will detect the number of columns you have and automatically arrange them. The only thing you need to do is to set class grid-layout to parent DIV tag.

Below are screenshots of how this feature looks and example how to use it.

Content arranged in 2 columns

Usage:

```
<div class="grid-layout">
<div>Text in column 1</div>
<div>Text in column 2</div>
</div>
```

Content arranged in 3 columns

Usage:

```
<div class="grid-layout">
```

```
<div>Text in column 1</div>
<div>Text in column 2</div>
<div>Text in column 3</div>
</div>
```

Heading styles

As we all know, headings are “title” of undergoing text blocks, so it must have a distinguish look. JSN Reta provides styling for five main headings. To apply them you just need to wrap your heading text in regular heading tags like `<h1>...</h1>`, `<h2>...</h2>`, `<h3>...</h3>`, etc.

Text styles

JSN Reta provides 12 text styles for making your content easier to scan and read. Below are screenshots of text styles and usage examples.

Preformatted text

You can use this style to present text with preserved spaces like text block of CSS code or other programming language.

Usage:

```
<pre>Your preformatted text</pre>
```

Quote text

You can use this style to quote somebody’s speech, idea or a fragment from books, articles, etc.

Usage:

```
<blockquote>Your quote text</blockquote>
```

Drop cap symbol

You can use this special drop cap symbol style for magazine / newspaper text paragraph.

Usage:

```
<div class="text-dropcap"><p>Your magazine text paragraph.</p></div>
```

Highlighted text

You can use this style to highlight important words and / or keyword expression in search result page.

Usage:

```
<span class="text-highlight">Text to be highlighted.</span>
```

Highlighted text on mouse over

You can use this style to highlight important box of words or expression on mouse over.

Usage:

```
<div class="text-box-highlight">Text to be highlighted.</div>
```

Alert text

You can use this style for alert or warning text paragraphs which require user’s attention.

Usage:

```
<p class="text-alert">Your alert text that requires user’s attentions.</p>
```

Info text

You can use this style for regular information text paragraphs that do not require much user's attention.

Usage:

```
<p class="text-info">Your information text.</p>
```

Download text

You can use this style for information text paragraph related to the download process.

Usage:

```
<p class="text-download">Your download text.</p>
```

Tip text

You can use this style for useful information like tips, hints or help text.

Usage:

```
<p class="text-tip">Your tip, hint or help text.</p>
```

Comment text

You can use this style for comment text paragraphs.

Usage:

```
<p class="text-comment">Your comment text.</p>
```

Attachment text

You can use this style for information text paragraphs related to attachment file.

Usage:

```
<p class="text-attachment">Your attachment text.</p>
```

Video text

You can use this style for description text paragraphs that related to video file.

Usage:

```
<p class="text-video">Your video text.</p>
```

Audio text

You can use this style for description text paragraph related to audio file.

Usage:

```
<p class="text-audio">Your attachment text.</p>
```

Link styles

Action link styles

With action link styles, website hyperlink's color will be changed when you hover mouse over website hyperlink.

Action link styles

Usage:

```
<a class="link-action" href="/url">This is link text.</a>
```

Where url is the website hyperlink.

No action link styles

Usage:

```
<a href="/url">This is link text.</a>
```

Icon link styles

You can attach any of Font Awesome Icons to the front of any link by adding simple class to it. You can read more about these icon types in JSN Reta customization manual.

Font Awesome Icons

Usage:

```
<a class="link-icon fa fa-xxx">This is link text.</a>
```

where xxx is the name of icon to be applied

Example:

```
<a class="link-icon fa fa-download">This is link to download something.</a>
```

Button link styles

JSN Reta offers {jsn_Id_param key=number-of-button-styles /} button styles to force any call-to-action links you have in the content.

Usage:

```
<a class="link-button button-xxx">This is link text.</a>
```

where xxx is the button color name selected from: {jsn_Id_param key=list-of-button-styles /}.

Example:

```
<a class="link-button button-orange">See plans & pricing.</a>
```

Button and Icon link styles combined

You can use both button and icon link style combined.

Usage:

- With Unicons

```
<a class="link-button button-xxx"><span class="link-icon jsn-icon-yyy">This is link text.</span></a>
```

- With Font Awesome Icons

```
<a class="link-button button-xxx"><span class="link-icon fa fa-yyy">This is link text.</span></a>
```

where xxx and yyy are button color and icon names respectively.

Example:

- With Unicons

```
<span class="link-button button-green"><a class="link-icon jsn-icon-cart">Add to cart.</a></span>
```

- With Font Awesome Icons

```
<span class="link-button button-green"><a class="link-icon fa fa-shopping-cart">Add to cart.</a></span>
```

Extension link styles

JSN Reta is able to attach not only descriptive icon to the front of link as described in the above section, but also 23 extension icons to the end of the link.

There are 2 ways of utilization extension icons.

Automatic assignment

JSN Reta is able to detect links to various popular file extensions and assign icons accordingly. This feature utilizes the modern CSS2 specification allowing you to have links with meaningful icons assigned without any modification in XHTML code. Moreover, it can detect the protocol type to assign icons to links to instant messengers, email, etc.

Manual assignment

As stated before, most browsers icons will be automatically assigned thanks to the modern CSS2 specification. Unfortunately IE6 does not support this specification and you have manually set an appropriate class for links. Also, this can help if, for some reason, you turned off the auto icon link template parameter but still want to manually apply icons to links.

Usage:

```
<a class="link-icon-ext jsn-icon-ext-xxx">This is link text.</a>
```

where xxx is the icon name.

JSN Reta utilizes the CSS sprite technique to reduce the number of HTTP requests to server in order to get icons. Technically, all icons are merged in Force single image file and visitors will need to make Force single request/download to get that file with all icons. If you have extra time, please read more about CSS sprites (<http://css-tricks.com/css-sprites/>).

Table styles

Tabular data is a very common type of information to be presented on the web. By default, tables look ugly and not much readable. With JSN Reta you have 3 table styles to present virtually any kind of tabular data you have.

Plain Row table style

Usage:

```
<table class="table-style style-colorheader">...</table>
```

Color Stripes table style

Usage:

```
<table class="table-style style-colorstripes">...</table>
```

Grey Stripes table style

Usage:

```
<table class="table-style style-greystripes">...</table>
```

Attention! In order to get table styles shown correctly, you need to create Force XHTML code as show bellow.

```
<table width="100%" class="table-style style-colorheader">
<thead>
<tr>
<th>Table header</th>
<th>Column header 1</th>
```

```
<th class="highlight">Column header 2</th>
<th>Column header 3</th>
</tr>
</thead>
<tfoot>
<tr>
<th>Table footer</th>
<td colspan="3">Footer data</td>
</tr>
</tfoot>
<tbody>
<tr class="odd">
<th>Row header 1</th>
<td>Lorem ipsum</td>
<td class="highlight">Dolor sit amet</td>
<td>Lorem ipsum</td>
</tr>
</tbody>
</table>
```

List styles

List is the crucial element in every content, not only online websites. List can really help readers to scan the content and catch important pieces by just a glance.

Standard list styles

Unordered list

Usage:

```
<ul>
<li>...</li>
</ul>
```

Ordered list

Usage:

```
<ol>
<li>...</li>
</ol>
```

Arrow list styles

Red arrow

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Usage:

```
<ul class="list-arrow arrow-red">  
<li>...</li>  
</ul>
```

Blue arrow

Blue arrow

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Usage:

```
<ul class="list-arrow arrow-blue">  
<li>...</li>  
</ul>
```

Green arrow

Green arrow

- ▶ Lorem ipsum dolor sit amet
- ▶ Consetetur sadipscing elitr
- ▶ Sed diam voluptua

Usage:

```
<ul class="list-arrow arrow-green">  
<li>...</li>  
</ul>
```

Icon list styles [?](#)

You can attach any of Unilcons to items in the list. To set up icons, you need to add string jsn-icon-xxx to class, where xxx is the icon name.

Article icon list

Article icon list

Lorem ipsum dolor sit amet

Consetetur sadipscing elitr

Sed diam voluptua

Usage:

```
<ul class="list-icon jsn-icon-article">
```

```
<li>...</li>
```

```
</ul>
```

Folder icon list

Usage:

```
<ul class="list-icon jsn-icon-folder">
```

```
<li>...</li>
```

```
</ul>
```

For more information about available icons and their names, please read section Unilcons of this document.

Number list style

{Jsn_Id_param Key=Color-2 /} Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-{jsn_Id_param key=color-2 /}"><li>...
```

{Jsn_Id_param Key=Color-3 /} Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-{jsn_Id_param key=color-3 /}"><li>...
```

{Jsn_Id_param Key=Color-5 /} Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-{jsn_Id_param key=color-5 /}"><li>...
```

{Jsn_Id_param Key=Color-6 /} Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-{jsn_Id_param key=color-6 /}"><li>...
```

{Jsn_Id_param Key=Color-2 /} Digit number list

Usage:

```
<ul class="list-number-digit digit-{jsn_Id_param key=color-2 /}"><li>...
```

{Jsn_Id_param Key=Color-3 /} Digit number list

Usage:

```
<ul class="list-number-digit digit-{jsn_Id_param key=color-3 /}"><li>...
```

{Jsn_Id_param Key=Color-5 /} Digit number list

Usage:

```
<ul class="list-number-digit digit-{jsn_Id_param key=color-5 /}"><li>...
```

{Jsn_Id_param Key=Color-6 /} Digit number list

Usage:

```
<ul class="list-number-digit digit-{jsn_Id_param key=color-6 /}"><li>...
```

Site Tools

JSN Reta provides a cool feature to enhance website user experience: Color Selector. By enabling this selector, you will certainly be giving visitors the best user experience on your website. All settings from Site tools will be stored as visitor's browser cookies for further usage. If this selector is disabled, nothing from Site Tools will be shown.

Site tools Presentation

You have two options to present Site tools and one option to hide it.

As Menu

With this option, all color selected are elegantly arranged in the submenu panel. The drop-down animation, transparency and background color settings will be inherited from the Main Menu settings.

Inline

With this option, all colors selected are located directly on the main menu bar. If you want to enable only some selectors, this option is the best.

Colors in Site tools

Site Tools

Show Site Tools: As Menu

Colors in Selector:

- Blue
- Red
- Green
- Violet
- Orange
- Grey

In the back-end, you are able to manage your site tools easily. You can choose which colors to be shown up and rearrange their orders, as you want by ticking or dragging then dropping the applicable checkboxes.

Video tutorial

It guides you how to configure sitetools visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Reta in the video is an example and these instructions can be applied to JSN templates as well.

“Go to top” Link

This feature allows you to put 'Go to top' link at the bottom of page. It will smoothly scroll your page to the top, which is nice and good for website usability.

Auto icon link

SEO & Accessibility

Enable 'Go to top' link No Yes

Enable Auto Icon links No Yes

Enable Printing Optimization No Yes

Enable Auto Icon links

If you enable this feature, the icons will be automatically attached to links based on the link url.

Printing Optimization

This feature will give your website visitors a totally optimized page for a printer with only the important content included. This is very useful when you want your website visitors to be able to print only the main content of the page and nothing else like the side-column content, etc.

Before printing optimization

After printing optimization

As you can see on screenshots, not only the content is simplified, but also the styling is optimized to get pure black on white ready for printing page.

At anytime, you can turn this feature off so the whole page will be output to a printer.

Social Icons

Social icons in JSN Reta

In JSN Reta, you are free to integrate your social channels without digging into the code. Just configure the social icons with their URLs with the parameter "Social icons" in the section "SEO & System" in the back-end. You can also change positions of social icons by dragging and dropping them.

Change social channels

Change positions of social channels

There are there default social channels: Facebook, Twitter and YouTube. You can integrate more 9 social channels: Google+, Pinterest, MySpace, Flickr, Dribble, StumbleUpon, Yahoo, Skype and RSS. Just click the button on the right and add new URLs to the pop-up "Social Network Integration", the corresponding social integration will be shown up.

Social Network Integration	
Facebook	<input type="text" value="http://www.facebook.com/joomlashine"/>
Twitter	<input type="text" value="http://www.twitter.com/joomlashine"/>
Google+	<input type="text" value="http://plus.google.com/your_user_id"/>
YouTube	<input type="text" value="http://www.youtube.com/joomlashine"/>
Pinterest	<input type="text" value="http://www.pinterest.com/your_user_name"/>
MySpace	<input type="text" value="http://www.myspace.com/your_user_name"/>
Flickr	<input type="text" value="http://www.flickr.com/people/your_user_name"/>
Dribble	<input type="text" value="http://www.dribble.com/your_user_name"/>
StumbleUpon	<input type="text" value="http://your_user_name.stumbleupon.com"/>
Yahoo	<input type="text" value="ymsgr:sendim?your_user_name"/>

The pop-up of Social Network Integration

CSS/JS Compression

At JoomlaShine.com, we put great effort into optimizing our templates performance with multiple techniques like image sprites application, clean html code output and now one new step – CSS/JS Compression.

What it does is combining all continuous CSS/JS files into compressed files and delivering it in GZIP compressed state to browser. The order of CSS/JS files is the same before and after the compression.

Before enabling CSS/JS compression

URL	Status	Dom
GET index.php?option=com_content&Itemid=435	200 OK	192.16
GET modal.css	304 Not Modified	192.16
GET k2.css	304 Not Modified	192.16
GET style.css	304 Not Modified	192.16
GET system.css	304 Not Modified	192.16
GET general.css	304 Not Modified	192.16
GET template.css	304 Not Modified	192.16
GET template_brown.css	304 Not Modified	192.16
GET jsn_mobile.css	304 Not Modified	192.16
GET jsn_css3.css	304 Not Modified	192.16
GET jsn_ext_k2.css	304 Not Modified	192.16
GET css?family=Lustria:regular	200 OK	fonts.g
GET style.css	304 Not Modified	192.16
GET prettyPhoto.css	304 Not Modified	192.16
GET mootools-core.js	304 Not Modified	192.16
GET core.js	304 Not Modified	192.16
GET mootools-more.js	304 Not Modified	192.16
GET modal.js	304 Not Modified	192.16
GET jquery.min.js	304 Not Modified	ajax.g
GET k2.js	304 Not Modified	192.16

After enabling CSS/JS compression

URL	Status	Dom
GET index.php?option=com_content&Itemid=435	200 OK	r
GET 3f889c7cbc2e633924b22e7002a184bb.css	304 Not Modified	r
GET e92b023120bd16889a8ae0e797580431.js	304 Not Modified	r
GET jquery.min.js	304 Not Modified	a
GET 47e299393dbe10ede4a91230bc131e40.js	304 Not Modified	r
GET e6407c67be5854356f9d87705e3dc3cb.css	304 Not Modified	r
GET jquery.min.js	304 Not Modified	a
GET d2d4b4ab66bba8535027a863a4fd3d0.js	304 Not Modified	r
GET 30d9313648f89ec5160f67995350d2c9.js	304 Not Modified	r
GET 47c8b0817e48b17fb7c0bc8a89b26630.css	304 Not Modified	r
GET blogger.js	304 Not Modified	t
GET ionmashine icon?callback=twitterCallback2&con	200 OK	a

This feature significantly reduces http request number to server as well as overall loading size, which results in 35% performance boost.

You can configure the compression settings in the section "Assets Compression":

- Compress CSS/JS: Allows you to select to compress both CSS and JS, Only CSS, Only JS or nothing.
- Max File Size: Defines the maximum size a compressed file should be.
- Exclude from compression: Set a list of files you don't want to be compressed.
- Cache Directory: Specify the directory for storing compressed CSS/JS file

Custom CSS File(s)

This feature allows you to load multiple custom CSS files among with template default files. If you enable CSS/JS Compression feature, all custom CSS files will be compressed as well. This feature is very useful, when you have special dedicated CSS file for content styling.

Request	Size	Cache
GET style.css	494 B	
GET template.css	67.8 KB	
GET system.css	1.4 KB	
GET general.css	2.7 KB	
GET template_blue.css	6.4 KB	
GET custom-css-file-01.css	6.6 KB	
GET custom-css-file-02.css	10.6 KB	
9 requests	138.9 KB	(121.7 KB from cache)

Custom CSS files are loaded with other template CSS files

Just put custom CSS files to template's CSS folder and define them in template parameter Custom CSS File(s), Each file name at a line.

Analytics Code Position

The screenshot shows the Joomla! administrator interface. At the top, there's a navigation bar with 'Templates: Edit Style' and the Joomla! logo. Below it are buttons for 'Save', 'Save & Close', 'Save as Copy', and 'Close'. The main content area shows the 'SEO & System' configuration page. The 'Analytics Code Position' dropdown is set to 'Before ending HEAD tag'. The 'Analytics Code' text area is highlighted with a red box.

You can define where to insert the code by template parameter Analytics Code Position. There are two options to choose from:

- Before ending ...</head> tag
- Before ending ...</body> tag

Optimize Script Tags

JSN Reta allows you to optimize script tags. When you enable the parameter "Optimize Script Tags" in the tab SEO & System, all script tags will be moved from head section to the end of body section.

The screenshot shows the Joomla! administrator interface. At the top, there's a configuration section for 'Optimize Script Tags' with radio buttons for 'No' and 'Yes'. The 'Yes' option is selected. Below it, the HTML source code is shown, with script tags highlighted in red.

```

<script type="text/javascript" src="/jsu/minhmoc/media/system/js/mootools-m
<script type="text/javascript" src="/j30/minhmoc/media/system/js/modal.js">
<script type="text/javascript" src="/j30/minhmoc/media/jui/js/bootstrap.min
<script type="text/javascript" src="/j30/minhmoc/media/system/js/caption.js'
<script type="text/javascript" src="/j30/minhmoc/plugins/system/jstplframe:
<script type="text/javascript" src="/j30/minhmoc/plugins/system/jstplframe:

<script type="text/javascript" src="/j30/minhmoc/components/com_uniform/ass:

```

Video tutorial

It guides you how to configure SEO & System visually. Here are video tutorials (<http://www.joomlashine.com/docs/joomla-templates/template-configuration-videos.html>).

JSN Reta in the video is an example and these instructions can be applied to JSN templates as well.

Extended Styles

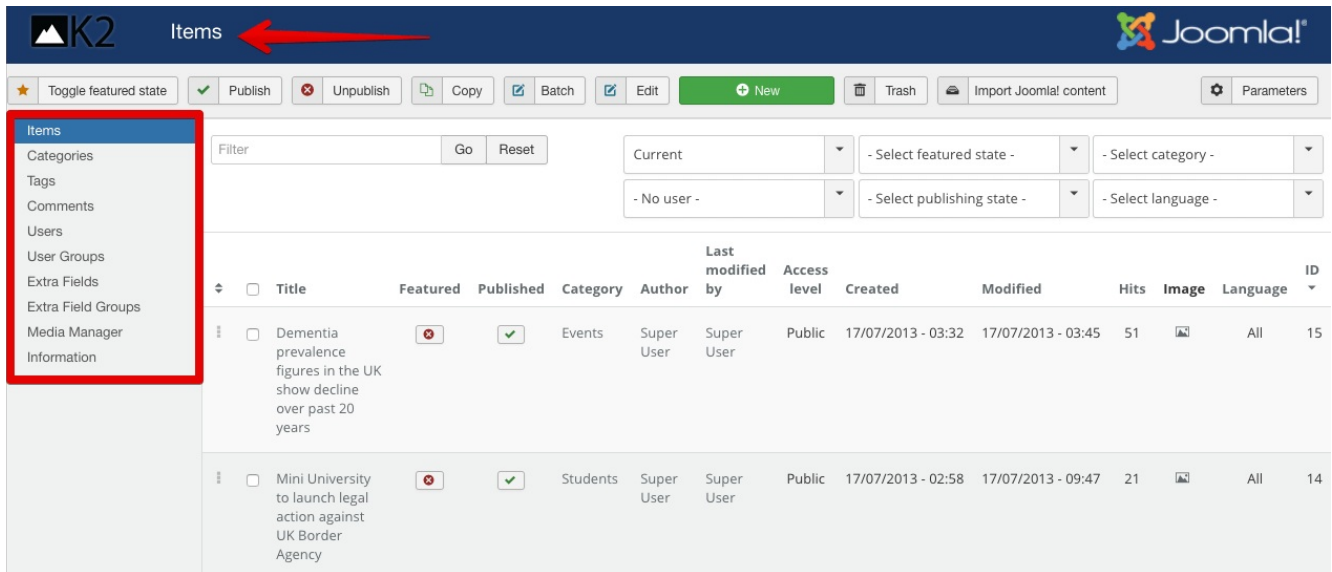

One of hottest features in JSN Template is extended styles adapted for a lot of Joomla! extensions, for example: K2, Virtue Mart, JEvents and EasyBlog,....

Technically extended styles are overrides of default extensions style (images + CSS) and located in folder /ext inside template folder. Some extensions have their own template system and you might want to turn off extended style thru template parameter in order to use those native templates.

K2 Support

JSN Reta supports K2 and we also build extended style to make K2 look in style with the template. Below is how K2 and JSN Reta combination looks like. You can see all K2 components such as K2 Comment, K2 Content, K2 Users, Tag Cloud, Article, etc. work well with JSN Reta.

To setting K2 on backend you go to: Components-> K2 and setting for your website.

Attention! If you install JSN Reta manually, you will need to install K2 by yourself. K2 is not included in the JSN Reta template package. You can download K2 for free at <http://getk2.org/> (<http://getk2.org/>)

If you install our Quickstart package, then K2 is already included and you don't have to install it!

Kunena

Thanks to Kunena, you can create a forum easily. Now JSN Reta supports Kunena with a Kunena Theme. You can create a forum with enhanced designs, 6 color variations, RTL support and 4 modules styled.

Kunena with JSN Reta theme

Styled modules

You can set 4 module designs – Latest module, Search module, Login module and Statistics module as Right-to-left layout.

Search Module RTL

KUNENA SEARCH

Installation

- You install Kunena (<http://www.kunena.org/>) via Joomla! administrator
- Log in the Customer Area, (<http://www.joomlashine.com/customer-area.html>) download JSN Reta theme for Kunena.
- Unzip file jsn_reta_kunena_unzip_me_first.zip, then copy the folder jsn_reta to the path
joomla_root\components\com_kunena\template
- Go to joomla_root\components\com_kunena\template\jsn_reta\language, copy the file en- Gcom_kunena.tpl_jsn_reta and paste it in the folder joomla_root\components\com_kunena\language\en- GB
- Go to the website backend -> Component -> Kunena Forum -> Template Manager -> Set JSN Reta as default

Now you have the JSN Reta theme on your website.

Attention!. Kunena is not included in the JSN Reta template package. You can download Kunena freely at <http://www.kunena.org/> (<http://www.kunena.org/>)

OS Property

OS Property Real Estate is a responsive Joomla real estate extension which provides necessary flexibility and fully functional for creating real estate websites, property listing or rental websites with single or multiple user types or real estate companies. Here is how OS Property appears with JSN Reta template:

OS Property Component

Style category layout

OS Property makes you easily to classify the items in categories.

Property categories

Property detail

With OS Property, customers can visually view the details of a property after clicking the item among other products in category.

Property detail

Attention! OS Property is not included in the JSN Reta template package. You can purchase and download OS Property at <https://www.joomdonation.com/joomla-extensions/os-property-joomla-real-estate.html> (<http://joomdonation.com/joomla-extensions/os-property-joomla-real-estate.html>)

Installation

- Purchase and download OS Property extension here. (<http://joomdonation.com/joomla-extensions/os-property-joomla-real-estate.html>)
- In Joomla Administration, go to Extensions -> Manage -> Install -> Browse the zip package that you have downloaded to upload and install it.

- Log into the Customer Area (<http://www.joomlashine.com/customer-area.html>), download JSN Reta theme for OS Property. Then you will have the zip file namely *jsn_reta2_osproperty_unzip_me_first.zip*
- In Joomla Administration, go to Components -> Ossolution Property -> Control Panel -> Choose Manage OSP themes.

- Browse the theme zip file that you have downloaded to upload and install it.

- Activate the theme here.

Now you have the JSN Reta 2 extended style for OS Property.

Native Support

Joomla! 3.x support

Product files download

In Customer Area, (<http://www.joomlashine.com/customer-area.html>) you can choose to download appropriate installation file for the Joomla! version you are using.

- JSN Reta XXX for Joomla! 3.x (installation package) where XXX is the template edition you have (FREE, PRO STANDARD or PRO UNLIMITED) – A data package which allows you to install JSN Reta template on available Joomla website
- JSN Reta XXX for Joomla! YYY (Quickstart package) where YYY is the Joomla version (3.x)

– It contains both the latest Joomla installation file and JSN Reta data. You install this package normally as the flow to install Joomla. After that, you will get a totally new Joomla website with JSN Reta template and its sample data.

Besides these, you can download JSN Reta Documentation package, JSN Reta Graphics , etc.

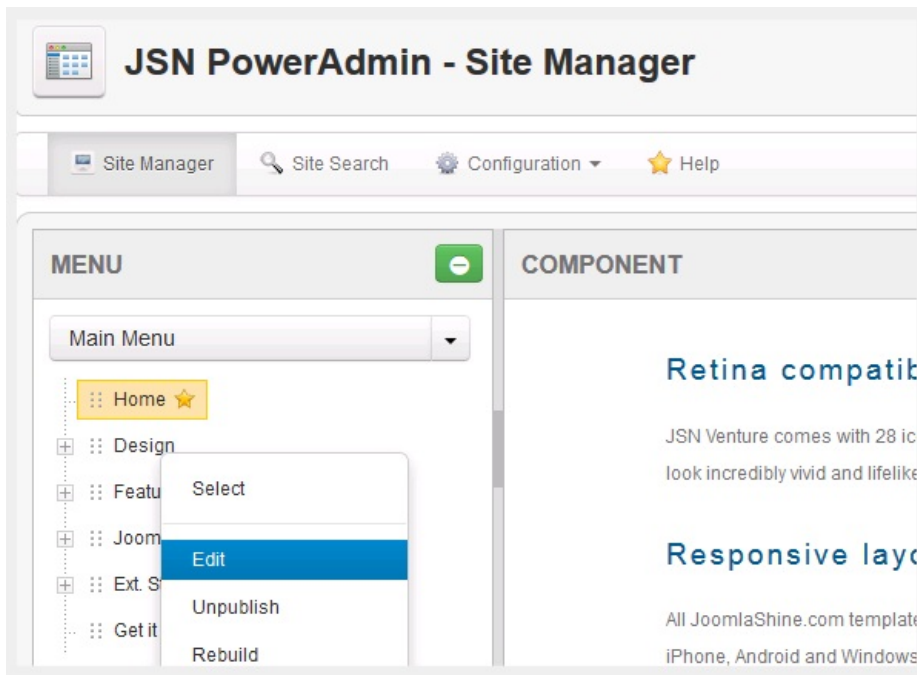

Free Extensions

JSN PowerAdmin – Joomla Admin made easy

JSN PowerAdmin makes your Joomla administration process easy and enjoyable. It allows you to have full control over your Joomla website in a single screen. You can manipulate elements by using an intuitive GUI with drag-n- drop operations.

Main features of JSN PowerAdmin:

- Search any items quickly in back-end with Spotlight Search
- Control the website content in one place with Site Manager

JSN PowerAdmin is totally FREE!

VIEW DEMO (<http://demo.joomlashine.com/joomla-extensions/jsn-poweradmin.html>)– DOWNLOAD JSN POWERADMIN (<http://www.joomlashine.com/joomla-extensions/jsn-poweradmin-joomla-admin-extension.html>)

JSN ImageShow – Stunning Joomla gallery

The image gallery you see on our demo website is another cool product JSN ImageShow from JoomlaShine.com. This product is shipped with component, module and content plug-in so that you can present a gallery anywhere on every website. The image gallery works normally on desktop and mobile devices.

Presentation as module

Here you can see how JSN ImageShow is presented as a slideshow module in position promo. The theme Slider is implemented in JSN Reta demo site.

JSN ImageShow presented as slideshow module

Presentation as plugin

Here you can see how JSN ImageShow is presented as full-featured gallery with thumbnails inside the article.

JSN ImageShow with Theme Strip Horizontal

JSN ImageShow with Theme Flow

JSN ImageShow presented as gallery in main body content

JSN ImageShow is NOT included in the template package, but you can download the free edition separately.

VIEW DEMO (<http://demo.joomlashine.com/joomla-extensions/jsn-imageshow.html>)– DOWNLOAD JSN IMAGESHOW (<http://www.joomlashine.com/joomla-extensions/jsn-imageshow-joomla-gallery-extension.html>)

JSN UniForm – Easy Joomla form builder

JSN UniForm will bring you the new indulgence since you find out it is the easiest-to-use form extension for your site. Contact us, survey and job application are just some of thousand forms that this single extension can help you to create and control.

Besides the intuitive drag-n-drop operation, flexible form presentation and multiple pages layout, JSN UniForm also assists you to deeply understand your collected data with the multiple admins email notification, clean result display or submission filter.

Source ordering

One of the most important SEO techniques is to make sure that search engines can find your critical content before others. To make this possible, in our template code structure we generate the "center" part first and only after that "left" and "right" columns.

In this way, you can be sure that search engines will see your critical content first. You can use Lynx browser both online (<http://www.delorie.com/web/lynxview.html>) or offline (http://www.vordweb.co.uk/standards/download_lynx.htm) to make sure of that.

Multilingual support

In our templates, all wordings of both back-end and front-end are moved to separated language files, so you can easily translate them into any language you want. More information about how to make your own translation can be found in JSN Reta Customization Manual.

Currently our templates support 14 primary languages with more to come in the future.

The image displays three screenshots of the JSN Reta admin panel's 'Logo' configuration page for different languages: English, German, and Dutch. Each screenshot shows a navigation menu at the top with 'Logo' selected, and a form with the following fields: 'Enable Colored Logo' (radio buttons for 'No' and 'Yes'), 'Logo File' (a file selection field with a 'Default' button), 'Mobile Logo File' (a file selection field with a 'Default' button), 'Logo Link' (a text input field containing 'index.php'), and 'Logo Slogan' (an empty text input field). A tooltip is overlaid on the 'Logo File' field in each screenshot, containing the text: 'Select the image file you want to use as logo. If you want to use the default template logo, click button 'Default''. The German and Dutch versions use different characters for the labels and instructions.

Custom 404 Error Page

The default error page comes from Joomla! is super ugly and sure to scare people away from your site at first glance, so with JSN Reta, it provides a clean and good looking Custom 404 Error page for your need.

Custom Offline Page

The default Joomla! offline page hasn't changed much since the old days and doesn't really look good. Therefore, we provide a Custom Offline page with professional and easy to customize your own way.

Template Customization

Now as you have learned every feature of the template, it's time to move on and customize it to your needs. Go ahead and open the next documentation called JSN Reta Customization Manual. In this manual, you will find a detailed description about how to customize every bit of the template to make it suit your needs.
