

Wall mount options for most popular brands of touchpanels and keypads

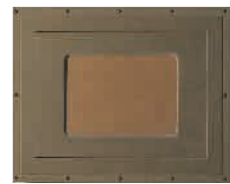

Introduction

Wall Smart manufacture a large range of flush mount keypad, wall switch and touch/smartpanel accessories for most brands of products to enable installation:

- at pre-construction (plaster and concrete walls)
- in stone and fine panel walls
- during post-construction (retrofit drywall)
-

Mounting and design instructions in PDF format are available for all models. Some models have YouTube video installation instructions also available.

Please see our website for more information or contact us directly.

New Construction

Made for stud walls. Some additional framing is usually necessary to prevent future movement and for a truly beautiful finish. After the unit is securely screwed into place it may be mudded in by a plasterer for the best finish.

Invisible Mount

Also for New Construction and all the same applies, with the additional benefit of no obvious mounting system. The panel appears to be pressed into the plasterboard.

Manual Mount

As per New Construction, with a door for removal of the touch panel. Intended mainly for Apple iPads.

Hidden Lock Mounts

Same as Manual Mounts, but lockable by magnetic key or RFID key. Intended for universities and other public places where iPads are to be used and secured away.

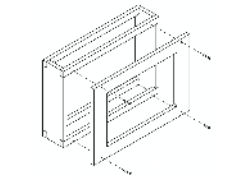

Solid Surface

Special versions for routed panels, such as in kitchen cupboard walls and masonry such as granite, marble, etc. A spacer section allows for accurate positioning. Skilled craftsmen must ensure a clean finish before commencing.

Retrofit

By far the most popular. Cut a square hole in the plasterboard and mount the Wall-Smart unit in the same way a wall speaker is mounted with toggles. A choice of fascia finishes is also available. Some units available with POE for power.

Concrete Box

For construction with a lot of concrete. A cavity for the panel must be created. This type of construction is popular in Perth and in high end residential premises. Please see the end of our price list.

WO.GRILLS or W.GRILLS

Some Wall-Smart products have the option of having speaker perforations and a microphone hole when using on board audio functions. Careful selection must be made when ordering.

Apple

iPad invisible mount. Flush mounted into wall.

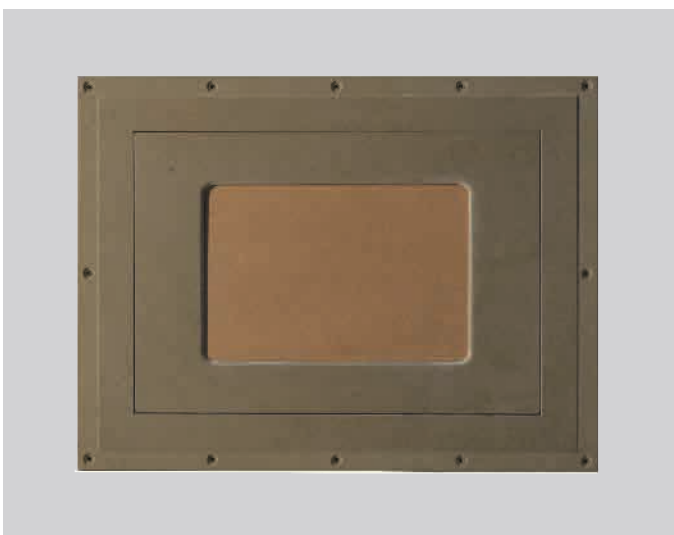

Perfect finish. Held in by magnets, easily removed.

Manual Mount - door version. Upgradable.

Also available in lockable version for commercial/

Pre-construction board, ready for mounting.

Solid mount for joinery or stone installation.

WS with Vantage - New Construction

IMPORTANT

Products are delivered unpainted except the retrofit models. These are available in white, black and paintable.

Many other brands and models are not shown in this list as the international offer is very large and many of the brands are not represented in Australia. If you have a specific brand and model you would like to use, please call or email us with your inquiry.

Products include only the in-wall mounting adapter, and do not include any **control devices, keypads, power supplies or cables**. (Except the invisible models for iPad which include POE to USB).

As brands change models frequently, some models may be discontinued without notice. Please check for availability of current models and new models that may become available before a new price list is created.

Wall Boxes for Concrete

SKU	Description
10-01-010	Concrete Box 182x140
