longer production time.

Just for you.®

Allergen-Free Compounding

We understand that many prescribers face barriers in prescribing due to their patients' allergies and/or sensitivities to various food and pharmaceutical ingredients. This can impair usability of various manufactured drugs as well as put limitations on compounded drugs.

The good news is that we will work with you and your patients to develop customized medications that suit their dietary and health needs.

We can compound medications free of:

- Gluten
- Dairy
- Corn
- Sugar
- Dyes
- Excipients

Call our pharmacists today to discuss how we can customize medications for your patients.

Ordering prescriptions for your patients is simple.
