# 1 Introduction

## 1.1 Notes on this document

### About this document

The information in this document requires the following in-depth knowledge:

- Functionality and communications of Syncro devices and KNX third-party devices.
- KNX technology and handling the engineering tool software ETS.
- Engineering and commissioning KNX networks using Syncro devices.

### Target audience

This document is intended for persons planning/engineering and commissioning KNX networks using Syncro devices.

### Edition 15

Compared to edition 14 ((2015-04-24), edition 15 contains additional S-mode data points for the following devices: RMH760B V3.0, RMK770 V3.0, OZW772, RDG160KN, RDG405KN.

### Syncro and KNX

Syncro uses KNX TP (Twisted Pair) as transmission medium. The Syncro devices intercommunicate in LTE mode. The Syncro LTE mode data points are connected via zone addresses (see document P3127).

### S-mode data points

The KNX S-mode data points in the Syncro devices represent a subset of the Syncro LTE mode data points. The KNX S-mode data points are required to exchange process values between Syncro devices and e.g. KNX third-party devices, i.e. if the third-party devices can communicate in S-mode only.

The term "data point" is intrinsic to KNX (see KNX standard, Volume 3: System Specifications, Part: 7: Interworking, Chapter 2: Data Point Types).

The title of this document, "KNX S-mode data points" is derived from the following:

- Transmission medium TP → KNX (KNX bus, Twisted Pair).
- Communication mode → S-mode.
- Communication objects → Data points.

### Engineering tool software ETS

You can order the **Engineering Tool Software (ETS Professional)** from the KNX Association at <http://www.knx.org/>.

### Product data, import files

The product data for the devices are contained in **import-File \*.vd5**. Import file \*.vd5 requires tool version **ETS3.0f** or **ETS4**.

The product data for just **ETS4** are contained in **Import-File \*.knxprod**.

Both import files can be downloaded from Siemens Building Technologies.

### Note on EIB

The **European Installation Bus (EIB)** employs TP as transmission medium (same as KNX) and communicates via EIB communication objects, or group objects, in S-mode.

In EIB, the term "data point" (common term in building automation and control) is largely unknown. The following convention applies to this document: One S-mode data point corresponds to one communication object or group object.

## 1.1.1 Terms and abbreviations

<b>Data point type</b>	The data point type (DPT) determines how compatible the devices are. The format and number of bits, bit coding, value range and, where required, the unit (°C, %, m <sup>3</sup> /h, etc.) are specified in each data point type.																		
<b>S-mode</b>	S-mode stands for system mode. This mode primarily is characterized by the assignment of (logical) group addresses to S-mode data points to communicate process values.																		
<b>S-mode data points</b> <b>Short: S-mode DP</b>	<p>Synco 700 devices provide selected data points in S-mode for control and measuring tasks in HVAC plants and individual rooms, for lighting and security plants, and for integration in higher building automation and control systems.</p> <p>S-mode data points and EIB communication objects can exchange process values, if both data point type and group address match.</p>																		
<b>Abbreviations</b>	<table border="1"> <thead> <tr> <th>Abbreviation</th><th>Meaning</th></tr> </thead> <tbody> <tr> <td><b>DP</b></td><td>Data point (or EIB communication object)</td></tr> <tr> <td><b>DPT</b></td><td>Data point type</td></tr> <tr> <td><b>E-mode</b></td><td>Easy mode (LTE is one of several Easy modes)</td></tr> <tr> <td><b>EIB</b></td><td>European Installation Bus (also called Instabus)</td></tr> <tr> <td><b>ETS</b></td><td>Engineering Tool Software</td></tr> <tr> <td><b>LTE mode</b></td><td>Logical Tag Extended Mode (Easy mode used in Synco)</td></tr> <tr> <td><b>KNX</b></td><td>Konnex</td></tr> <tr> <td><b>S-mode</b></td><td>System mode (communication mode in KNX networks)</td></tr> </tbody> </table>	Abbreviation	Meaning	<b>DP</b>	Data point (or EIB communication object)	<b>DPT</b>	Data point type	<b>E-mode</b>	Easy mode (LTE is one of several Easy modes)	<b>EIB</b>	European Installation Bus (also called Instabus)	<b>ETS</b>	Engineering Tool Software	<b>LTE mode</b>	Logical Tag Extended Mode (Easy mode used in Synco)	<b>KNX</b>	Konnex	<b>S-mode</b>	System mode (communication mode in KNX networks)
Abbreviation	Meaning																		
<b>DP</b>	Data point (or EIB communication object)																		
<b>DPT</b>	Data point type																		
<b>E-mode</b>	Easy mode (LTE is one of several Easy modes)

<b>KNX</b>	Konnex																		
<b>S-mode</b>	System mode (communication mode in KNX networks)																		

## 1.1.2 Synco devices with S-mode data points

Type / ASN	Designation	Section
RMU7x0, RMU7x0B	Universal controllers	2
RMH760, RMH760B	Heating controllers	3
RMK770	Boiler sequence controllers	4
RMB795, RMB795B	Central control units	5
RMS705, RMS705B	switching and monitoring devices	6
RMZ792, RMZ792B	Bus operator units	7
OZW771	Central communication unit	8
OZW775	Central communication unit	9
OZW772	Web server	10
QAW740	Room unit	11
RDF301, RDF301.50, RDF301.50H, RDF600KN, RDF800KN, RDF800KN/NF <sup>1)</sup>	Room thermostats	12
RDD810KN/NF <sup>1)</sup>	Room thermostat	13
RDU341	Room thermostat	14
RDG100KN, RDG160KN, RDG165KN	Room thermostats	15
RDG400KN	Room thermostat	16
QAX910	Central apartment unit (Synco living)	17
QAX903, QAX913	Central apartment units (Synco living)	18

1) The devices RDF800KN/NF and RDD810KN/NF are not available in all regions.

Room controllers RXB/RXL	<p>This document does <u>not</u> describe S-mode data points of RXB.../RXL... room controllers.</p> <ul style="list-style-type: none"> <li>• for RXB... see data sheets N3873, N3874, N3875</li> <li>• for RXL... see N3876, N3877, N3878</li> </ul>
-----------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

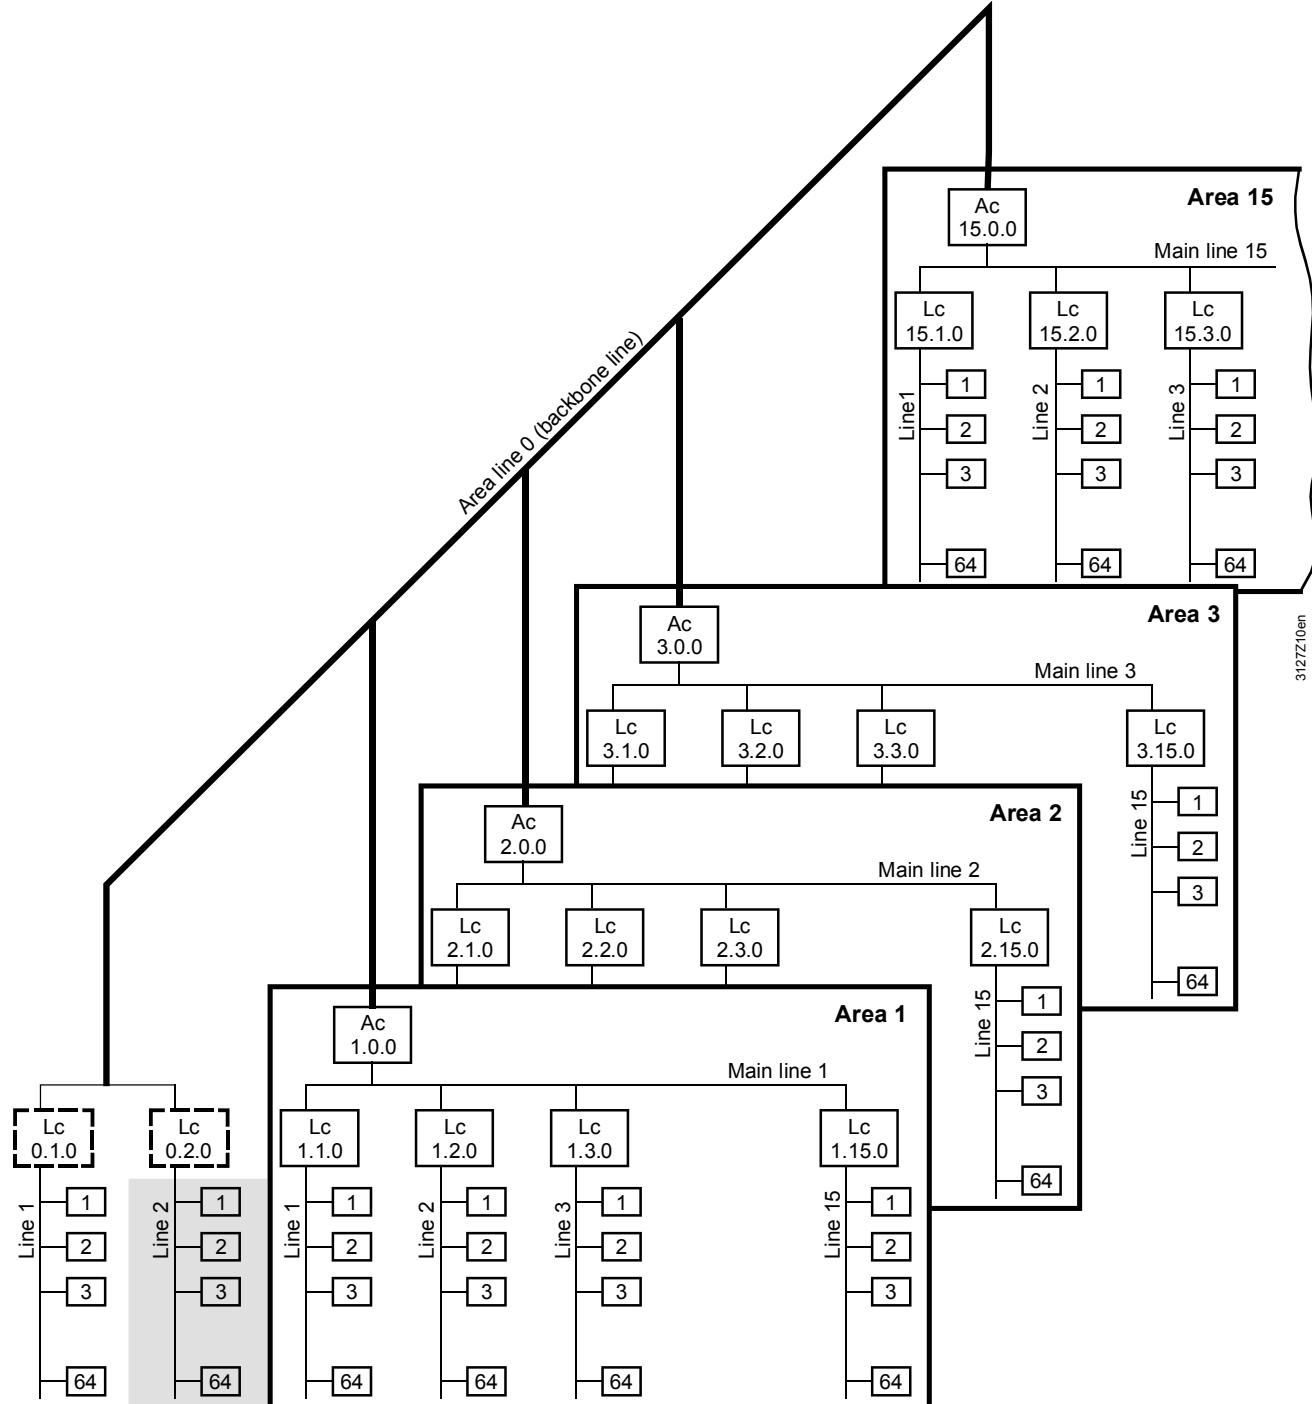

## 1.2 KNX network

### 1.2.1 Complete KNX network

#### KNX network, three tiers

A complete KNX network comprises three tiers. It comprises:

- Area line 0 → Area 0 (backbone)
- Main lines 1...15 → Areas 1...15
- Lines 1.1...15.15

Note

In the above illustration, the device arrangement on the three-tier KNX network, with factory-set area/line address 0.2 on the Syncro devices, corresponds to the highlighted area.

## 1.2.2 Network address

Network address syntax

In a complete KNX network, the network address consists of area, line and device address. The address reflects the unambiguous position of a device on the network and is unique.

**A.L.D** Area.Line.Device (with dot as separator ".")

Area	0	Area line 0
Area	1...15	Main lines 1...15
Line	1...15	
Devices	1...254	

Factory-set network address

The factory-set network address for Synco devices is 0.2.255 (exception: Central communication unit OZW775 with 0.2.150).

Area address "0" and line address "2" applies if no area or line couplers are used. Device address 255 must be changed to any value between 1 and 254 to allow the unit to spontaneously send process data via KNX.

Individual address

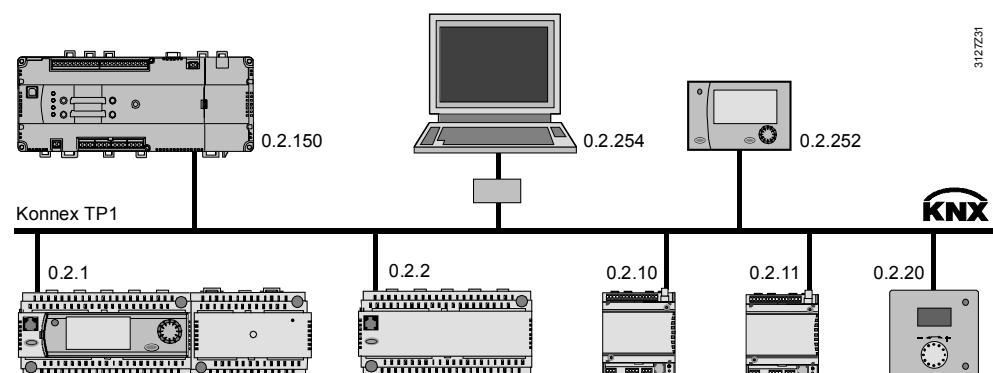

The individual address comprises the positions of the area, line and device address and corresponds to the above network address.

Subnetwork, subnetwork address

In KNX, a subnetwork is a line. Thus, the subnetwork address comprises address parts "Area" and "Line".

## 1.2.3 Device address

The device address helps identify a device in a particular area and line (Area 0, Line 2 in the illustration below).

Device addressing

You only need to set the device address in a Synco device. Area and line address 0.2 are preset or are assumed automatically by the area and line coupler (for addressing, see document P3127).

## 1.3 Group addresses, data point inputs/outputs

The group address is used for S-mode communication. It is function-related address, structured in three levels as per EIB guidelines. You can freely select assignments, but you should not change them within a project.

### Group address syntax

**H/M/S** Main group/medium group/subgroup (with slash as separator " / ")

Main group 0...15 e.g. plant

Medium group 0...7 e.g. function

Subgroup 0...255 e.g. element

### Examples for group addresses

The assignments "Plant/function/element" e.g. provide for group addresses:

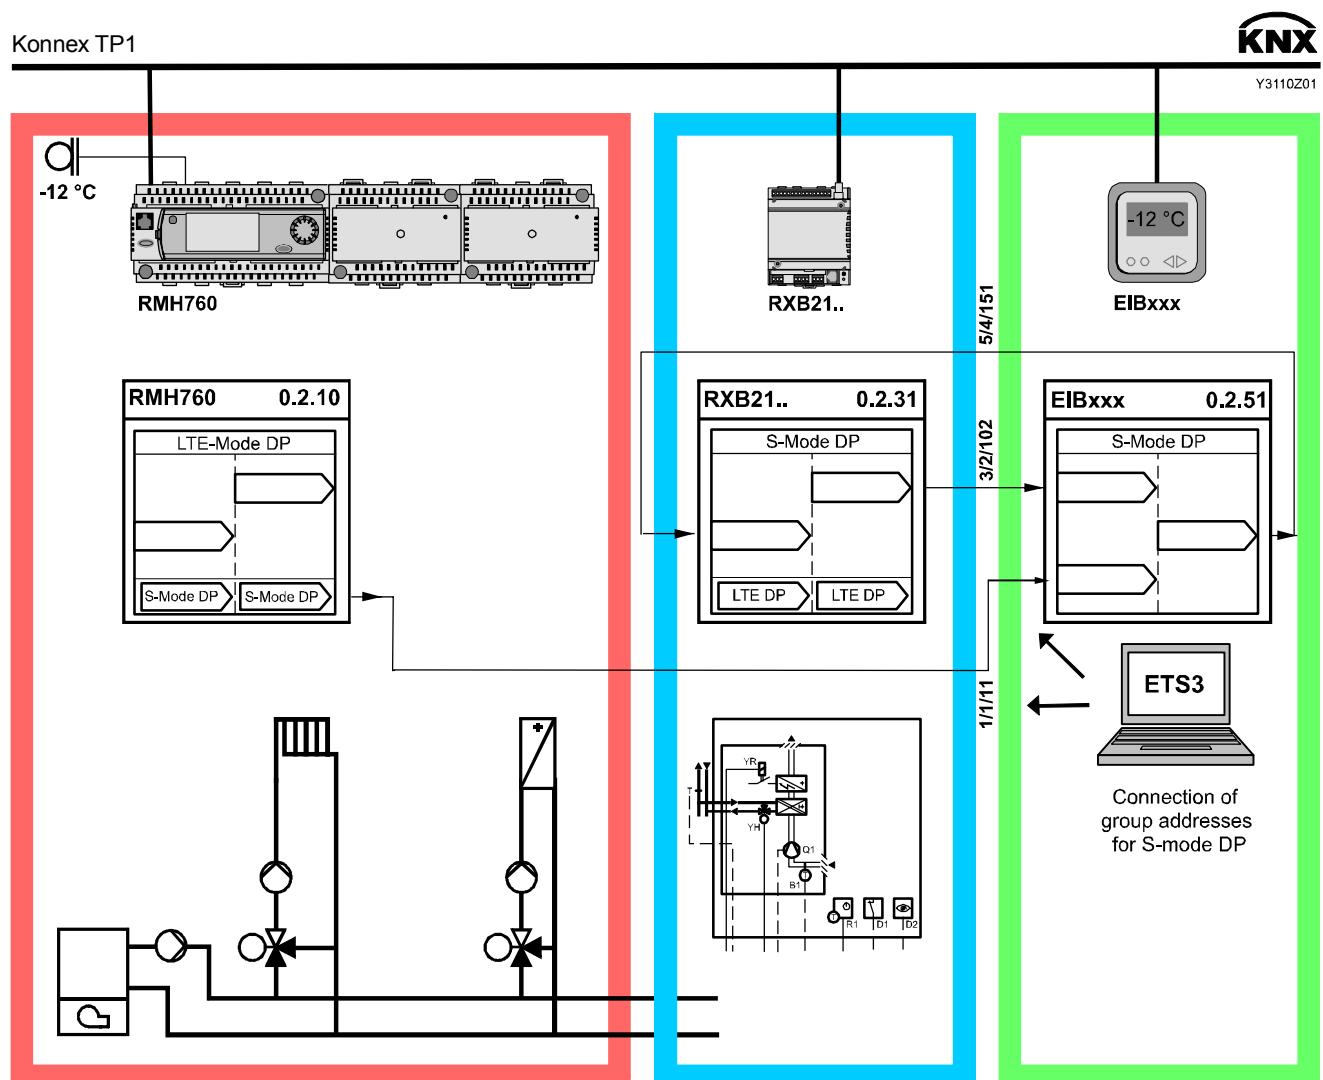

1/1/11 Heating/Signaling/Boiler

3/2/102 Room/Measuring/Temperature 2

5/4/151 Electro/Switching/Lighting 1

### Group addresses

Group addresses allow you to connect EIB communication objects to S-mode data points. You can assign the addresses only via the ETS tool.

### 1.3.1 Group addresses for system time, fault information

#### Fixed group addresses

The KNX standard defines fixed group addresses for some system functions (Functions of Common Interest, FOCI).

In Synco (see screenshot below), this applies to the following data points:

- System time              group address 30/3/254
- Fault information        group address 30/3/250

#### Notes

All Synco devices featuring system time come with a preset group address and connected to the respective group object.

When you load new group addresses in Synco bus devices, the above group address 30/3/254 must exist and be connected in ETS. Only then can you begin download.

If group address 30/3/254 and the system time connection is not generated, time synchronization between the Synco bus devices will cease to function following initial download.

If you use another group address for system time, you must enter and load that group in all devices featuring system time (master and all slaves).

You cannot create the group address 30/3/254 (main group 30) in ETS via the standard settings. However, you can activate Windows registry entries to create main groups >15. Contact your supplier of ETS on the type of entry required.

### 1.3.2 Data point inputs / outputs

In Synco devices, S-mode data points are configured as input, output, input/output (or), or input and output respectively (see screenshot).

Number	Name	Object Function	Desc...
30	System time	Input / Output	
31	Date	Input / Output	
32	Time of day	Input / Output	
33	Fault information	Output	
34	Confirm faults	Input	
35	Reset faults	Input	
36	Fault state (normal/faulty)	Output	
37	Fault transmission (enable/disable)	Input	
38	Timer button	Input (Trigger)	
39	Comfort button	Input (Trigger)	
40	Room optg mode: Preselection	Input and Output	
41	Room optg mode: State	Output	
42	Room temperature: Setpoint relative	Input	
43	[Controller 1] Economy heating setpoint	Input and Output	
44	[Controller 1] Precomfort heating setpoint	Input and Output	
45	[Controller 1] Comfort heating setpoint	Input and Output	
46	[Controller 1] Comfort cooling setpoint	Input and Output	
47	[Controller 1] Precomfort cooling setpoint	Input and Output	
48	[Controller 1] Economy cooling setpoint	Input and Output	
49	[Controller 1] Current cooling setpoint supply air	Output	
50	[Controller 1] Current heating setpoint supply air	Output	

**S-mode DP object function**

The object function of the S-mode DP as input, output, input/output, or input and output is displayed in the "Object Function" column.

Below is an example for each object function (see the above screenshot for the DP number).

**Input, I**

S-mode DP "Room temperature: Setpoint relative" (DP number 18).

→ Input      The Synco device receives "Setpoint relative", i.e. the correction of the room temperature in S-mode from a third-party device.

**Output, O**

S-mode DP "Room optg mode: State" (DP number 15).

Output →      The Synco device sends the stat of the current operating mode in S-mode to one or multiple third-party devices.

**Input / Output,  
I / O**

S-mode DP "Time of day" (DP number 2).

The S-mode DP is connected to an input or an output. The following applies:

→ Input      The Synco device is the clock time **slave** and receives the time of day in S-mode from a third-party clock time master.

or

Output →      The Synco device is the clock time **master** and sends the time of day in S-mode to one or multiple clock time slaves.

**Note**

The basic setting "Rem set clock slave = Yes" in a Synco device does not apply to the S-mode DP inputs / outputs.

**Input and Output,  
I and O**

S-mode DP "[Controller 1] Comfort heating setpoint" (DP number 22).

The S-mode DP is connected to an input and an output. The following applies:

→ Input      The Synco device receives the setpoint (e.g. external setpoint setting).  
and

Output →      The Synco device sends the setpoint (e.g. to other third-party devices).

**Other examples**

Parameterization with send or receive

You can configure some S-mode DPs as output or input (e.g. S-mode DP "Outside temperature") as per the parameterization for send and receive.

Send      Output →      Outside sensor is connected to the Synco device terminals and the Synco device sends the outside temperature in S-mode via KNX.  
or

Receive      → Input      The Synco device receives via KNX the outside temperature in S-mode from a third-party sensor.

**Note**

There are two cases to parameterize send or receive:

- S-mode DPs that change DP number x (Send, Output) to DP number y (Receive, Input) as per the parameterization.
- S-mode DPs that retain DP number x and only change to Input or Output in column "Object Function".

## 1.4 Data point description information

### 1.4.1 Communication flags

#### Meaning of communication flags

Meaning and action of the communication flags C, R, W, T, and U is explained in the following table. The order for C, R, W, T, and U corresponds to the default setting in the ETS tool.

Flags	Bit	Meaning
C = Communication	0	Data point value is not communicated.
	1	Data point is connected to the bus and the data point value is communicated. C = 1, default for inputs and outputs.
R = Read	0	Data point value cannot be read.
	1	With a read command, the device send its data point value.
W = Write	0	Data point value cannot be written.
	1	The device receives and overwrites its data point value. W = 1, default for inputs.
T = Transmission	0	Data point value is not transmitted.
	1	For COV, Event or Heartbeat, the device sends its data point value. T = 1, default for outputs.
U = Update	0	Data point value is not updated.
	1	The data point value is updated if flag W = 1 (and / or R = 1). U = 1, default for inputs.

#### Flags for inputs, receive values

The communication flags must be set as follows (default) for data point inputs (receive values):

Flags <sup>(1)</sup>					Data point type KNX		Value range <sup>(2)</sup>	Receive value <sup>(3)</sup>
C	R	W	T	U	ID	DPT_Name		
1	0	1	0	1	9.001	_Value_Temp	-273.00...+670760.00 Floating point	From KNX devices without/with timeout monitoring.

#### Flags for outputs, send values

The communication flags must be set as follows (default) for data point outputs (send values):

Flags <sup>(1)</sup>					Data point type KNX		Value range <sup>(2)</sup>	Send value <sup>(4)</sup>
C	R	W	T	U	ID	DPT_Name		
1	0	0	1	0	9.001	_Value_Temp	-273.00...+670760.00 Floating point	COV, Event, Heartbeat

- (1) Flags for data communication with setting values 0 or 1.
- (2) Data point value range.
- (3) Synco devices receive the values from third-party devices without/with timeout monitoring of the received values.
- (4) Synco devices send date and time values cyclically every 10 minutes.  
Synco devices send analog process values after COV (change of value) and after heartbeat (e.g. every 15 min).  
Synco devices send digital process values after an event, e.g. contact state change and after heartbeat (e.g. every 30 min).

## 1.4.2 Data point formats

The data point formats in this document are:

Format	Meaning	Comment
B	Boolean / bitset	
F	Floating point value	
N	eNumeration	
U	Unsigned value	Value without preceding sign

Example

F<sub>16</sub> means "Floating point 16 bit" coded, e.g. for value range: -670760.00...+670760.00.

## 1.4.3 Referenced KNX manuals

This document's information on KNX S-mode data points is based on the following manuals (English only):

- KNX, Volume 3: System Specifications, Part 7, Chapter 2: Data Point Types
- Supplement 11: HVAC Data Point Types on  
KNX, Volume 3: System Specifications, Part 7, Chapter 2: Data Point Types

**Complex  
S-mode data points**

This document does not fully describe the complex S-mode data points. For these data points, we refer to the following manuals and information.

DPT\_DateTime ,  
ID 19.001

<sup>1)</sup> Referenced manual:

KNX, Volume 3: System Specifications, Supplement 14: DateTime

KNX data point type	Value range		
DPT_DateTime 19.001	1900...2155	= Year	0...23 = Hours
	1...12	= Month	0...59 = Minutes
	1...31	= Day of month	0...59 = Seconds
	1...7	= Day of week Monday - Sunday	Status bits (see table below)

Status bits

Synco devices evaluate the status bits 1, 4, 5, 6 and 7.

Status bit	Bit abbr.	Bit status = 0	Bit status = 1
1	F	Normal (no fault)	Fault
2	WD	Workday no (holiday)	Workday
3	NWD	Field "Workday" valid	Field "Workday" invalid
4	NY	Field "Year" valid	Field "Year" invalid
5	ND	Fields "Month" and "Day of month" valid	Fields "Month" and "Day of month" invalid
6	NDoW	Field "Day of week" valid	Field "Day of week" invalid
7	NT	Fields "Hours", "Minutes" and "Seconds" valid	Fields "Hours", "Minutes" and "Seconds" invalid
8	SUTI	Time of day = Universal time+X	Time of day = Universal time+X+1
9	CLQ	Clock without external time synchronization	Clock with external time synchronization

KNX data point type	Value range			
DPT_AlarmInfo ID 219.001	[0]...255	= Log number	[0..4]...255	= Error class
	[0..2]...255	= Alarm priority	[0..15]...63	= Alarm attributes
	[0..14]...255	= Application area	[0..7]	= Fault state

- Log number: Always 0 for Synco devices.
- Alarm priority: 0 = High,  
1 = Medium  
2 = Low
- Application area: 0 = No error  
1 = System and functions (general errors)  
2...9 reserved  
10 = HVAC function blocks  
11 = DHW  
12 = HVAC electrical heating  
13 = Room controllers (terminal units)  
14 = Ventilation and air handling
- Error classes: 0 = No error  
1 = Device error (RAM, EEPROM, Watchdog, ... )  
2 = Communication error  
3 = Configuration error  
4 = HW error
- Fault state: **Simple fault** (no acknowledgement):  
0 = No fault  
5 = Fault  
**Standard fault** (to be acknowledged):  
0 = No fault  
2 = No fault, but unacknowledged  
5 = Fault acknowledged  
7 = Fault unacknowledged  
**Extended fault** (to be acknowledged and reset):  
0 = No fault  
4 = No fault, but not reset  
5 = Fault acknowledged, but not reset  
6 = No fault, but unacknowledged and not reset  
7 = Fault unacknowledged and not reset

<sup>3)</sup> Referenced manual:

KNX, Volume 7: Application Descriptions, Part:10: General Functional Blocks,  
Chapter 4: Common Functional Blocks.

Note the differing functionality of the inputs "Timer button" and "Comfort button" for data point DPT\_Trigger.

• **Timer button:**

The trigger signal from the timer button extends Comfort mode by the time set in the Synco 700 controller (default setting = 60 minutes).

Note: With Synco 700 controllers, you can set an extended time of 0...720 minutes (in 15-minute increments) via the RMZ790 and RM791 operator units. Menu e.g. for RMH:

Main menu > Settings > Heating circuit 1 > Space heating > Timer function.

• **Comfort button:**

The first trigger signal of the Comfort button changes over the operating mode from:

- Economy → Comfort
- Precomfort → Comfort
- Comfort → Precomfort

Notes: The second trigger signal from the Comfort button results in a changeover to the previous operating mode, e.g. from Comfort → Economy.

In Protection mode (building protection), the first and second trigger signals from the Comfort button do not change over the operating mode.

<sup>4)</sup> The value range for 00...99 = year means:

00 – 89 = 2000 – 2089, 90 – 99 = 1990 – 1999

## 1.5 Parameterization in ETS

### Principal workflow

Below is a description of the principal workflow for parameterization in the ETS tool (screenshots ETS3). In this case, the RMU730B universal controller represents the Syncro device to be parameterized. Thus, the screenshots refer to this controller.

### Note

Procedures in ETS4 are the same as in ETS3, only the user interface is different.

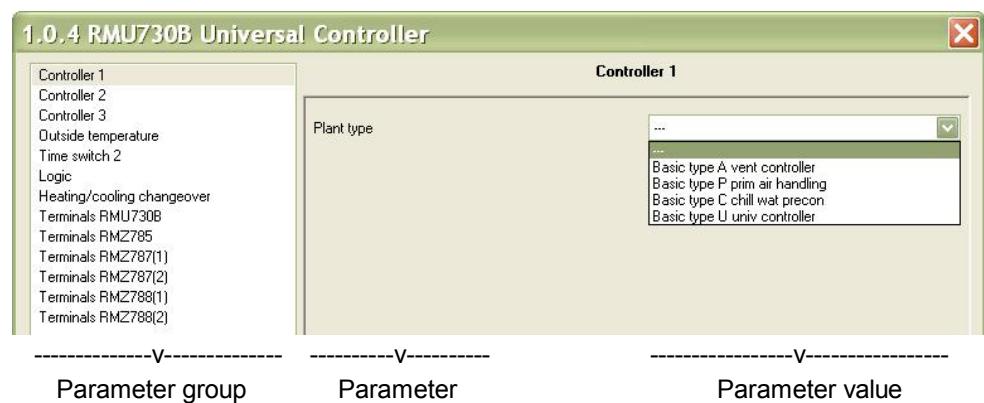

### Steps

1. Determine the configuration in the Syncro device and then the parameter group(s) and parameters, or the required S-mode data points (short: S-mode DP).
2. Start parameterization in ETS (see 1.5.2).
3. Assign the required parameter value to each parameter (= parameterize) and configure the S-mode DP(s) in ETS.
4. Connect the S-mode DP via group addresses to the communication objects.

The DP in the Syncro device and the S-mode are coupled only if the DP is configured in both places. For this reason, start at Step 1.

### Terminology

In ETS, we speak of parameterization (= **Edit Parameters...** ), parameter groups, parameters, and parameter values.

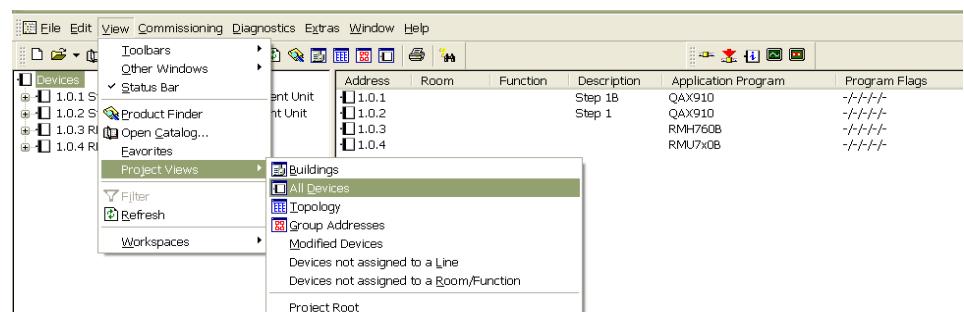

### Parameter → S-mode DP

Assigning a parameter value to the parameter configures the S-mode DP. Both parameter and S-mode DP have the same name.

### View "All Devices"

The view "All Devices" is set in ETS prior to parameterization.

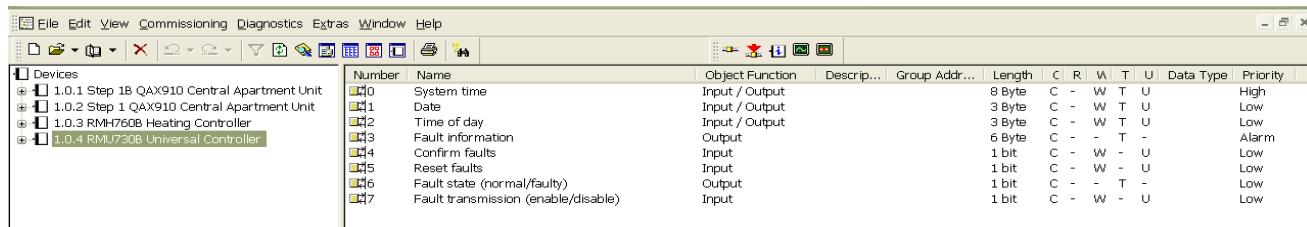

**View > Project Views... > All Devices**

## 1.5.1 Notes for parameterization

### Standard S-mode DP

Click to select the Synco device you want to parameterize. The right pane automatically displays the standard S-mode DP for the selected Synco device.

Number	Name	Object Function	Descrip...	Group Addr...	Length	C	R	V	T	U	Data Type	Priority
10	System time	Input / Output			8 Byte	C	-	W	T	U	High	
11	Date	Input / Output			3 Byte	C	-	W	T	U	Low	
12	Time of day	Input / Output			3 Byte	C	-	W	T	U	Low	
13	Fault information	Output			6 Byte	C	-	-	T	-	Alarm	
14	Confirm faults	Input			1 bit	C	-	W	-	U	Low	
15	Reset faults	Input			1 bit	C	-	W	-	U	Low	
16	Fault state (normal/faulty)	Output			1 bit	C	-	-	T	-	Low	
17	Fault transmission (enable/disable)	Input			1 bit	C	-	W	-	U	Low	

### 5) Standard S-mode DP

S-mode DPs marked as "Always" in the S-mode DP tables for the devices are standard S-mode DPs that are always configured using tool ETS when the corresponding device is selected.

For the Synco 700 devices RM\_7xx, the standard S-mode DPs have numbers 0...7. To some extent, standard S-mode DP in range 0...7 are lacking for the other devices.

Examples:

For room thermostats RDF301.. and RDU341, the standard S-mode DPs 2 and 7 are missing and for the Synco 900 Central Apartment Unit QAX910, the standard S-mode DPs 4 and 5 are missing.

### Value transmission

#### 6) Out of Service

If the application sets an S-mode DP to "Out of service", the S-mode DP does not send a value (not even "----" for "OSV").

- Value transmission is interrupted and either the value last transmitted or an error message appears on an external display unit, depending on the display unit's timeout response.

If the application then sets the S-mode DP to "In operation", the S-mode DP resumes sending the current value.

### DP not parameterized

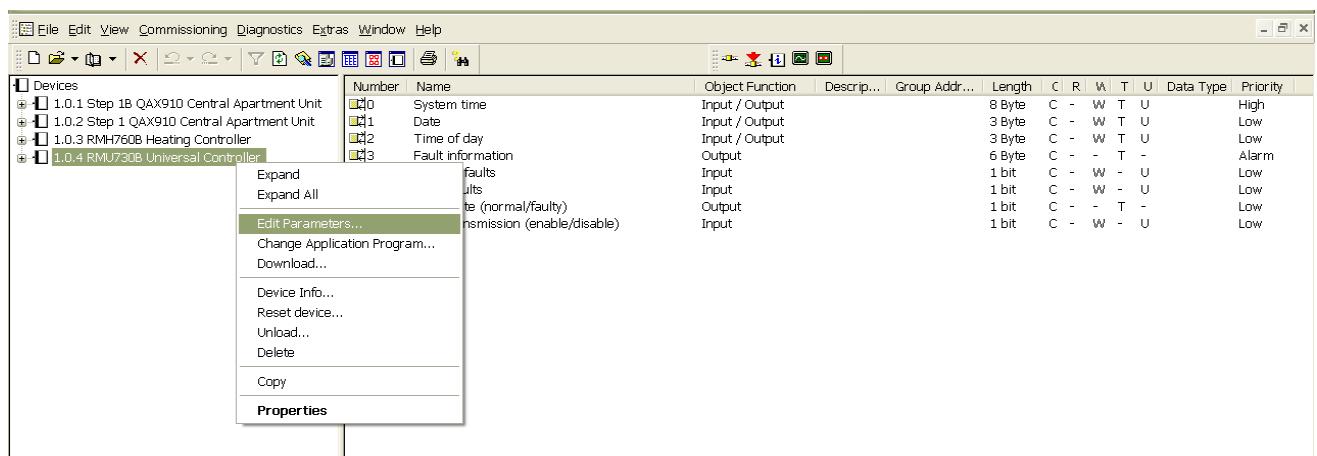

#### 7) S-mode DP sends 0

If S-mode DPs are parameterized in ETS and connected via group addresses not configured in the Synco device, the S-mode DPs send an invalid value (normally value 0 (zero), possibly with a +/- deviation).

## 1.5.2 Workflow for parameterization

### Start parameterization

Right-click the selected Synco device to open the context menu with menu item **Edit Parameters...**.

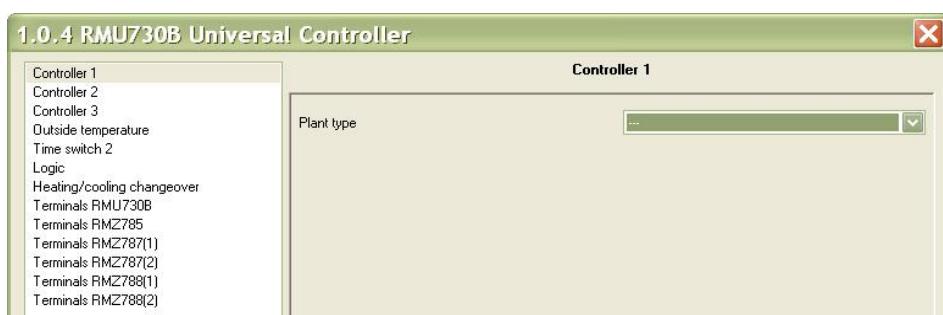

### Note

You can also start parameterization by selecting the **Edit** menu and then **Edit Parameters...**.

### Edit Parameters

Select **Edit Parameters...** to open the dialog box for the selected Synco device.

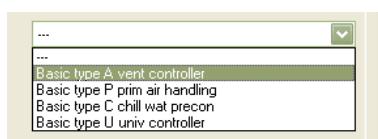

The following dialog box is displayed for the RMU730B universal controller:

### Assign parameter value

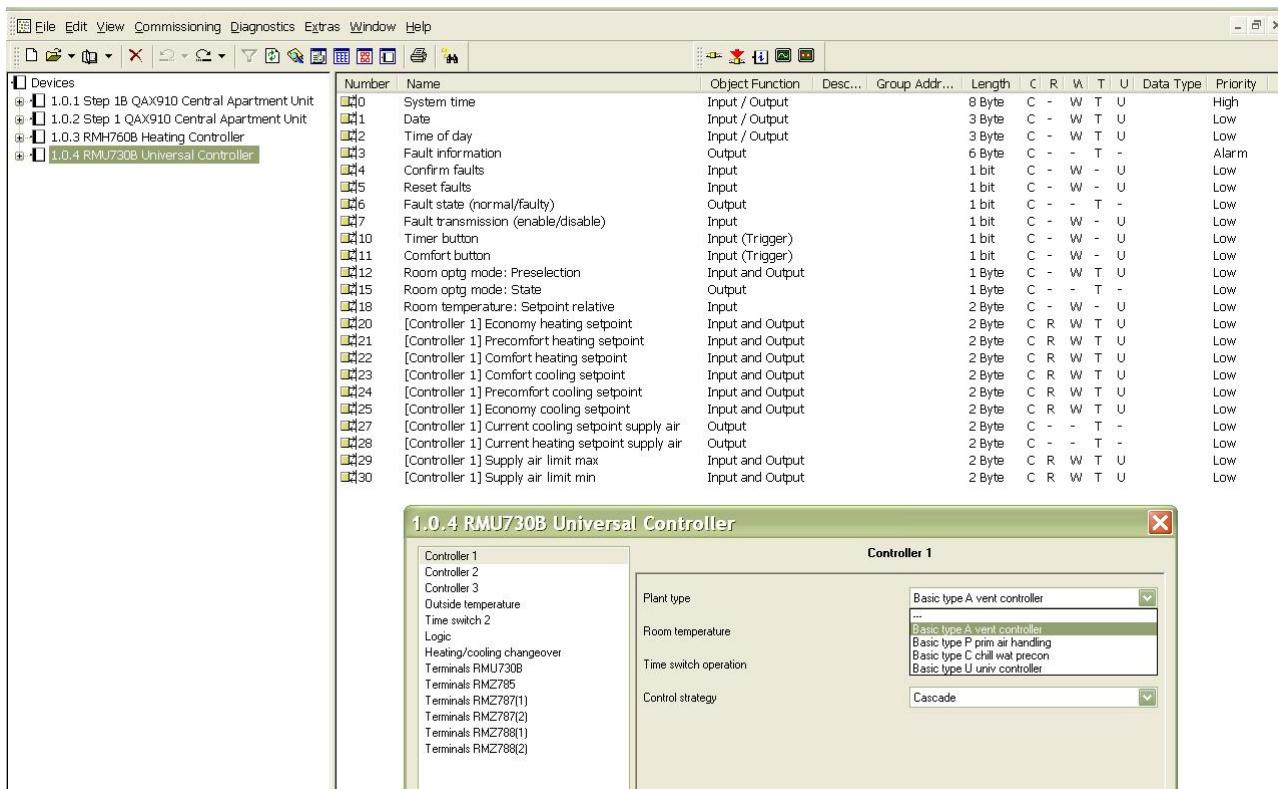

Assigning a parameter value to a parameter configures one S-mode DP or several in ETS.

Select the drop-down list box to display the corresponding parameters (see screenshot for parameter "Plant type").

## Parameter "Plant type"

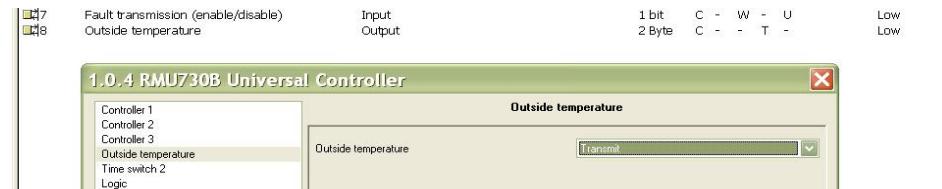

The value assignment "Basic type A vent controller" to parameter "Plant type" configures S-mode DP 10, 11, 12, 15, ..., 30 as well as parameters "Room temperature", "Time switch operation" and "Control strategy".

## Outside temperature

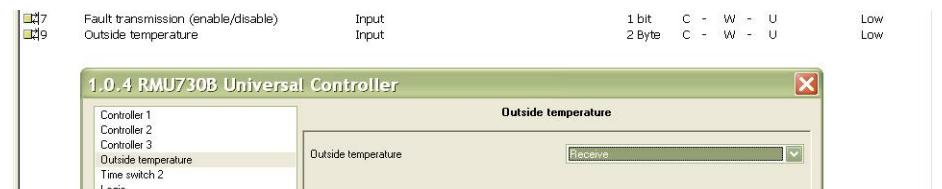

Transmit, S-mode DP 8

Select **Outside temperature** and parameter value **Transmit** to configure S-mode DP 8 **Outside temperature as Output**.

Receive, S-mode DP 9

Select **Outside temperature** and parameter value **Receive** to configure S-mode DP 9 **Outside temperature as Input**.

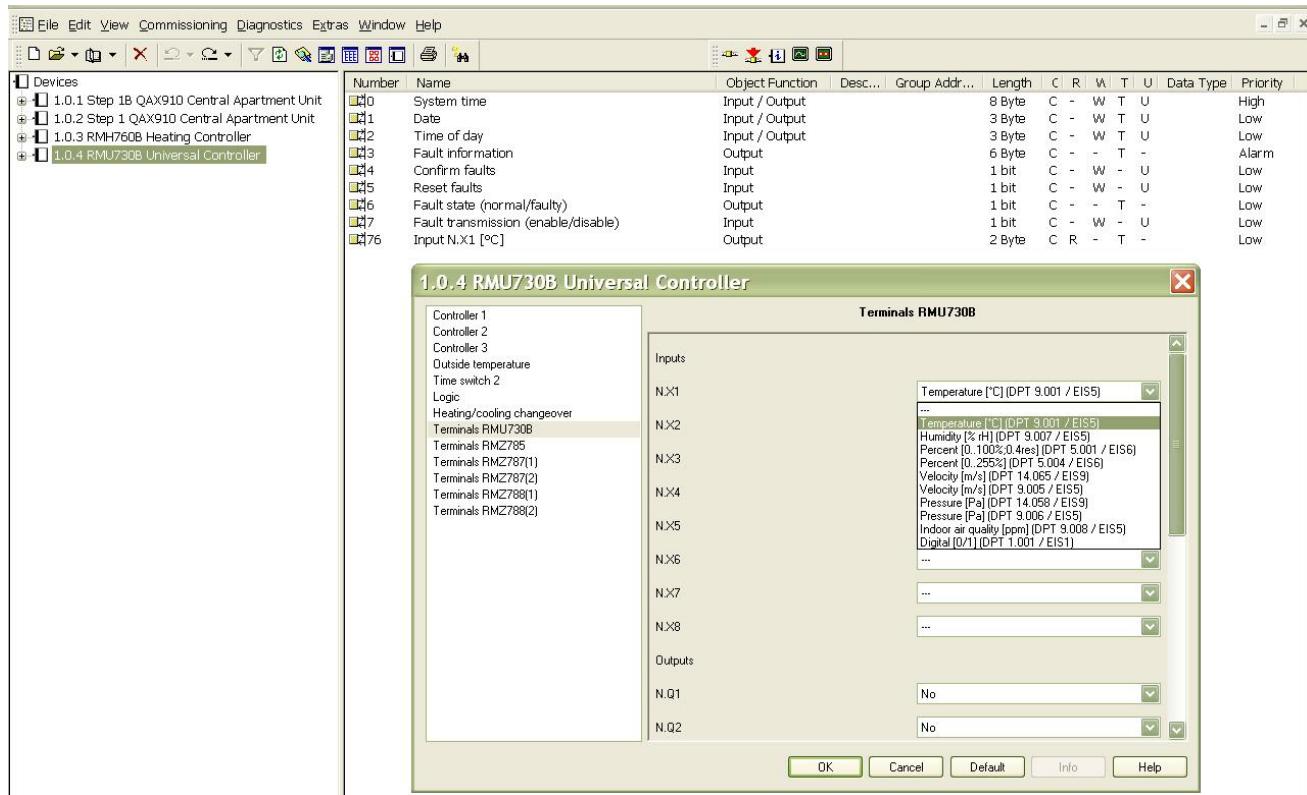

### 1.5.3 Parameterize terminals, inputs and outputs

#### Terminals

#### Inputs and outputs

Click **Terminals RMU730B** to display the **Inputs and Outputs** for the Syncro device (for RMU730B universal controller below).

Click the drop-down list box [v] for either inputs or outputs to display all parameter values (see screenshot below for input N.X1).

#### Parameterize inputs N.X\_

When you use parameter value **Temperature [°C](DPT 9.001 / EIS5)** to parameterize **Terminals RMU730B > Input N.X1**, S-mode DP 76 is configured with function "Output" (see screenshot below).

Input value N.X1 becomes an output value as S-mode DP that can be used e.g. for value transmission to an display unit.

#### Notes

When you use parameter value **Humidity [% rh](DPT 9.007 / EIS5)** or another parameter value to parameterize **Terminals RMU730B > Input N.X1**, S-mode DP 76 is configured also.

Thus, the S-mode DP number is retained regardless of parameter value Temperature, Humidity, Percent, etc.

The S-mode DP can only send the value from N.X1 (or N.X2...N.X8), if a sensor is connected to terminal N.X1.

## 2 RMU7x0, RMU7x0B Universal controllers

### 2.1 Overview

#### Brief description

The Syncro 700 universal controllers RMU710, RMU720, and RMU730 (short: RMU7x0) are designed for application in ventilation, air conditioning and chilled water plants.

The Syncro 700 universal controllers series B, thus RMU710B, RMU720B, RMU730B (short: RMU7x0B) and RMU710B Step 3, RMU720B Step 3, RMU730B Step 3 (short: RMU7x0B Step 3) are designed additionally for application in primary plants together with individual room control. Controllers RMU7x0B Step 3 allow for universal data exchange via their own terminals (universal inputs as reception objects in reception zones and as transmission objects in transmission zones).

The controller types RMU7x0, RMU7x0B and RMU7x0B Step 3 are identical with regard to design and dimensions.

#### Documentation

Documentation RMU7x0

Data sheet      Universal controllers RMU7...      N3144

Basic documentation      Universal controllers RMU710, RMU720, RMU730      P3140

Documentation RMU7x0B,  
RMU7x0B Step 3

Data sheet      Universal controllers RMU7..B      N3150

Basic documentation      Universal controllers RMU710B, RMU720B, RMU730B      P3150

#### Number of S-mode DPs

	RMU7x0	RMU7x0B	RMU7x0B Step 3
Inputs / Outputs	3	3	3...4 <sup>*)</sup>
Inputs and outputs	0	29	10...17 <sup>*)</sup>
Inputs	18	10	6...10 <sup>*)</sup>
Outputs	7	17 (+73 Terminals)	13...26 <sup>*)</sup>
Terminals as reception objects	--	--	32
Terminals as transmission obj.	--	--	64

<sup>\*)</sup> The number of inputs and outputs depends on the set basic type (A, C, U or P).

#### 2.1.1 RMU7x0 Universal controllers

##### Basic types A, C, U

The RMU7x0 universal controllers comprise basic types A, C, U. They serve as the basis to configure own, new applications. Selecting a basic type determines the application and use of the controller.

<b>DP in basic type column</b>	The tables in Section 2.2, column <b>DP in basic type</b> , show basic types A, C, U with the data point communicating in S-mode. For more information on the basic types, refer to the documentation on basics P3140.
Parameterization RMU7x0	An S-mode DP must be configured in ETS <u>and</u> the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

## 2.1.2 RMU7x0B, RMU7x0 Step 3 Universal controllers

<b>Basic types A, C, U, P</b>	The RMU7x0B and RMU7x0B Step 3 universal controllers comprise basic types A, C, U <b>and</b> P. They serve as the basis to configure own, new applications. Selecting a basic type determines the application and use of the controller.
-------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Basic type	Typical applications
A	Ventilation / air conditioning plants, e.g. air handling plant control
C	Demand-dependent control of a chilled water treatment
U	Universal applications, e.g. control to flow setpoint
P	Demand-dependent control of an air handling plant with individual room control

<b>DP in basic type column</b>	The tables in Section 2.3 show the basic types A, C, U, P with the data point communicating in S-mode in column <b>DP in basic type</b> .
Parameterization RMU7x0B RMU7x0B Step 3	The tables in Section 2.4 show the basic types and parameter settings with the data point communicating in S-mode in column <b>DP active</b> . For more information on the basic types, refer to the documentation on basics P3150.

Parameterization RMU7x0B RMU7x0B Step 3	An S-mode DP must be configured in ETS <u>and</u> the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.
--------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Universal reception and transmission zones</b>	<b>Only RMU7x0 Step 3</b> Controllers RMU7x0B Step 3 allows for universal data exchange via own terminals (universal inputs, relay and analog outputs) as well as via terminals of extension modules RMZ78x. Data is exchanged via KNX.  The universal inputs can be used as reception objects in <b>reception zones</b> and as transmission objects in <b>transmission zones</b> . The relays and analog outputs can only be used as transmission objects.  Reception zones      Universal inputs      Terminals N.X_ and A__.X_ Transmission zones    Universal inputs      Terminals N.X_ and A__.X_ Relay outputs        N.Q_ and A__.Q_ Analog outputs.     N.Y_ and A__.Y_
---------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Note</b>	See Sections 2.4.5 to 2.4.10:  Rec. object              Reception object (terminal value connected as input). Trans. object              Transmission object (terminal value connected as output).
-------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## 2.2 RMU7x0, S-mode data points

### RMU7x0: Inputs / Outputs

Name in ETS	DP in basic type	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Value range		RMU receives or sends:

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMU7x0B: Inputs and outputs

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Synco controller RMU7x0B receives the values of the S-mode DPs.
- Output: For operation from the Synco controller RMU7x0B, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP in basic type	Flags					Data point type KNX			Value range	RMU7x0B rec., sends
		C	R	W	T	U	ID	DPT_Name	Format	Unit

See screenshot (right) for [Controller 2].

## RMU7x0B: Inputs

Name in ETS	DP in basic type	Flags					Data point type KNX			Value range		RMU7x0B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 24 h.
Outside temperature	A, C, U, P	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Timer button	A	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Comfort prolongation <sup>3)</sup>	Event from KNX contact.
Comfort button	A	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Optg mode changeover <sup>3)</sup>	Event from KNX contact.
Room optg mode: Time switch (Parameterization: Slave)	A	1	0	1	0	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX operation (device/progr). Timeout monit 31 min.
Room temperature	A	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Room temperature: Setpoint relative	A	1	0	1	0	1	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point	COV from KNX setp adj.
Heating/cooling changeover	A, C, U, P	1	0	1	1	0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

<sup>3)</sup> See Section 1.4.3, page 14.

## RMU7x0B: Outputs

Name in ETS	DP in basic type	Flags					Data point type KNX			Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name					
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---		[0]...255 = Log no. [RMU = 0] [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart-beat 30 min.	
Outside temperature <sup>7)</sup>	A, C, U, P	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Room optg mode: Time switch (Parameterization: Master)	A	1	0	0	1	0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event, heart-beat 15 min.	
Room optg mode: State	A, U	1	0	0	1	0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event, heart-beat 15 min.	
Room temperature <sup>7)</sup>	A	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
[Controller 1] Current cooling setpoint supply air <sup>6)</sup>	A, P	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
[Controller 1] Current heating setpoint supply air <sup>6)</sup>	A, P	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
[Controller 1] Current supply air temp setpoint <sup>6)</sup>	P	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMU7x0B: Outputs (continued)

Name in ETS	DP in basic type	Flags C R W T U					Data point type KNX			Value range		RMU7x0B sends:
		ID	DPT_Name	Format	Unit							
[Controller 1] Current setpoint <sup>6)</sup>	A, C	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point				COV, heart-beat 15 min.
[Controller 1] Current setpoint [°C] <sup>6)</sup>	U	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point				COV, heart-beat 15 min.
[Controller 2...3] Current setpoint [°C] <sup>6)</sup>	A, C, U, P	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point				COV, heart-beat 15 min.
[Time switch 2] State	A, C, U, P	1 0 0 1 0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off					Event, heart-beat 15 min.
[Logic 1...2] State	A, C, U, P	1 0 0 1 0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off					Event, heart-beat 15 min.
Heating/cooling changeover	A, C, U, P	1 0 0 1 0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling					Event, heart-beat 15 min.

For the S-mode DPs (see table above).

- [Controller 1] Current setpoint [°C], basic type U.
- [Controller 2] Current setpoint [°C], basic types A, C, U, P.
- [Controller 3] Current setpoint [°C], basic types A, C, U, P.

"Current setpoint" is displayed as per the unit selected during S-mode DP configuration (e.g. "[Controller 2] Comfort setpoint high").

Thus, "Current setpoint" is not always sent as a temperature value [°C], but can also be sent as humidity value [% rH], for example.

The screenshot (right) shows possible units for "Current setpoint".

□47	[Controller 2] Economy setpoint high [°C]	Input and Output	2 Byte	C R W T U
□48	[Controller 2] Precomfort setpoint high [°C]	Input and Output	2 Byte	C R W T U
□49	[Controller 2] Comfort setpoint high [°C]	Input and Output	2 Byte	C R W T U
□50	[Controller 2] Comfort setpoint low [°C]	Input and Output	2 Byte	C R W T U
□51	[Controller 2] Precomfort setpoint low [°C]	Input and Output	2 Byte	C R W T U
□52	[Controller 2] Economy setpoint low [°C]	Input and Output	2 Byte	C R W T U

The screenshot shows a software interface for configuring a RMU730B controller. On the left, a tree view lists various controller components: Controller 1, Controller 2, Controller 3, Outside temperature, Time switch 2, Logic, Heating/cooling changeover, Terminal RMU730B, Terminal RMZ785, Terminals RMZ787(1), Terminals RMZ787(2), Terminals RMZ788(1), and Terminals RMZ788(2). On the right, under 'Controller 2', there is a dropdown menu titled '[Controller 2] Main controlled variable unit'. The currently selected option is 'Temperature [°C] (DPT 9.001 / EIS5)'. Below this dropdown, a list of other possible units is shown: Humidity [% rH] (DPT 9.007 / EIS5), Percent [0..100% / 0..4res] (DPT 5.001 / EIS6), Percent [0..255%] (DPT 5.004 / EIS6), Velocity [m/s] (DPT 14.065 / EIS9), Velocity [m/s] (DPT 9.005 / EIS5), Pressure [Pa] (DPT 14.058 / EIS9), Pressure [Pa] (DPT 9.006 / EIS5), and Indoor air quality [ppm] (DPT 9.008 / EIS5).

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

## RMU7x0B: Terminals, Universal controllers RMU7x0B

- Input terminals N.X1...N.X6 (RMU710B) and N.X1...N.X8 (RMU720B, RMU730B) with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	RMU7x0B	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input N.X_ [% rH]	RMU7x0B	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.

Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [ppm]	RMZ78x	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0/1]	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Input A5.X1...A5.X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)
Input A8(1).X1...A8(1).X4	RMZ788(1)
Input A8(2).X1...A8(2).X4	RMZ788(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMU7x0B: Terminals, Extension modules RMZ78x on Universal controller RMU7x0B (continued)

- Output terminals A\_\_.Q\_, parameterized for digital output value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX		Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name				
Output A__.Q_	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Output A7(1).Q1...A7(1).Q5                    RMZ787(1) without Q4  
 Output A7(2).Q1...A7(2).Q5                    RMZ787(2) without Q4  
 Output A8(1).Q1, A8(1).Q5                    RMZ788(1)  
 Output A8(2).Q1, A8(2).Q5                    RMZ788(2)

- Output terminals A\_\_.Y\_, parameterized for analog output value [0...100].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX		Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name				
Output A__.Y_	RMZ78x	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

Output A8(1).Y1, A8(1).Y2                    RMZ788(1)  
 Output A8(2).Y1, A8(2).Y2                    RMZ788(2)

Note: Max. 4 Extension modules RMZ78x (same or different types) are allowed per Universal controller RMU7x0B.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 2.4 RMU7x0B Step 3, S-mode data points

### 2.4.1 Basic type A, Ventilation controller

#### RMU7x0B Step 3: Inputs / Outputs, Basic type A

Name in ETS	DP active	Flags C    R    W    T    U					Data point type KNX ID      DPT_Name			Format	Unit	Value range		RMU receives or sends:
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime		8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)														
Date (input)	Always	1	0	1	1	1	11.001	_Date		3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)														
Time of day (input)	Always	1	0	1	1	1	10.001	_TimeOfDay		3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)														

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

### RMU7x0B Step 3: Inputs and outputs, Basic type A

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Sync controller RMU7x0B Step 3 receives the values of the S-mode DPs.
- Output: For operation from the Sync controller RMU7x0B Step 3, the S-mode DP values are sent via KNX (synchronization of external unit).

The configuration of some S-mode data points is determined based on one of the following four control strategies for plant type "Basic type A, Ventilation controller":

- With supply air limitation [S'air limit]
- Cascade [Cascade]
- Constant (supply air) [Constant]
- Cascade/const (alternating) [A'nating]

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMU7x0B rec., sends
		C	R	W	T	U	DPT_Name	Format	Unit		
Room optg mode: Preselection	Plant type = B.type A	1	1	1	1	1	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve
[Controller 1] Economy heating setpoint	Plant type = B.type A	1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point

### RMU7x0B Step 3: Inputs and outputs, Basic type A (continued)

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX			Value range		RMU7x0B rec., sends
		ID	DPT_Name	Format	Unit							
[Controller 2...3] Economy setpoint high [°C]	A and [Ctr. 2...3] Main ctrd variab. unit = Temp.	1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.
[Controller 2...3] Precomfort setpoint high [°C]		1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.
[Controller 2...3] Comfort setpoint high [°C]		1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.
[Controller 2...3] Comfort setpoint low [°C]		1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.
[Controller 2...3] Precomfort setpoint low [°C]		1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.
[Controller 2...3] Economy setpoint low [°C]		1	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	Floating point					COV from KNX setp adj.

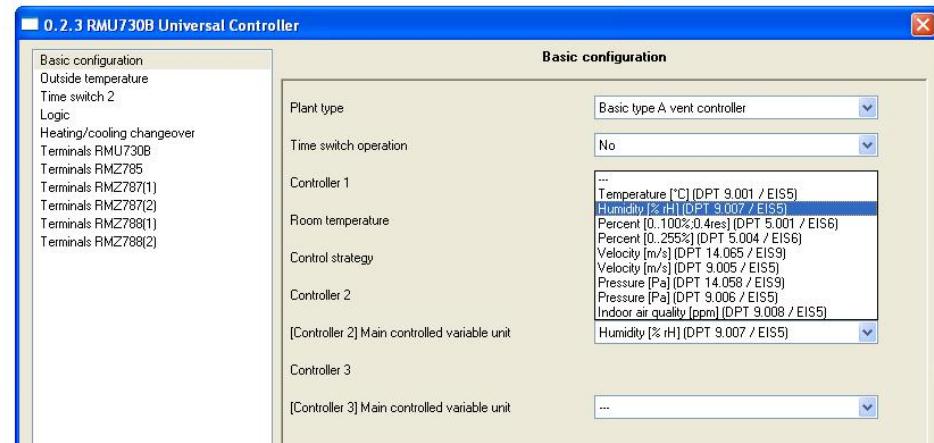

[Controller 2...3] Economy setpoint high [°C] is displayed as per the unit selected during S-mode data point configuration.

[Controller 2...3] Economy setpoint high can be received and sent e.g. also as humidity value [% rH].

The screenshot shows the possible units for:

- [Controller 2...3] Economy setpoint high
- [Controller 2...3] Precomfort setpoint high
- [Controller 2...3] Comfort setpoint high
- [Controller 2...3] Comfort setpoint low
- [Controller 2...3] Precomfort setpoint low
- [Controller 2...3] Economy setpoint low

52	[Controller 2] Economy setpoint high [% rH]	Input and Output	2 Byte	C R W T U
53	[Controller 2] Precomfort setpoint high [% rH]	Input and Output	2 Byte	C R W T U
54	[Controller 2] Comfort setpoint high [% rH]	Input and Output	2 Byte	C R W T U
55	[Controller 2] Comfort setpoint low [% rH]	Input and Output	2 Byte	C R W T U
56	[Controller 2] Precomfort setpoint low [% rH]	Input and Output	2 Byte	C R W T U
57	[Controller 2] Economy setpoint low [% rH]	Input and Output	2 Byte	C R W T U

### RMU7x0B Step 3: Inputs, Basic type A

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMU7xB receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 Bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / bestätigen
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 Bit B <sub>1</sub>	---	0 = No action 1 = Reset / zurücksetzen
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable / sperren 1 = Enable / freigeben (default)
Outside temperature	Outs.temp. = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Timer button	Plant type = B.type A	1	0	1	0	1	1.017	_Trigger	1 Bit B <sub>1</sub>	---	0 = No action 1 = Comfort prolongation <sup>3)</sup>
Comfort button		1	0	1	0	1	1.017	_Trigger	1 Bit B <sub>1</sub>	---	0 = No action 1 = Optg mode changeover <sup>3)</sup>
Room optg mode: Time switch	A and Time swi. operation = Slave	1	0	1	0	1	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve
Room temperature	A and Rm temp. = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Room temperature: Setpoint relative	Plant type = B.type A	1	0	1	0	1	9.002	_Value_Tempd	2 Bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point
Heating/cooling changeover	H/C ch'over = Receive	1	0	1	0	1	1.100	_Heat/Cool	1 Bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)

<sup>3)</sup> See Section 1.4.3, page 14.

### RMU7x0B Step 3: Outputs, Basic type A

Name in ETS	DP active	Flags					Data point type KNX		Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name				
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 Bytes strukt.	---	[0]...255 = Log no. [RMU = 0] [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 Bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart-beat 30 min.
Outside temperature <sup>7)</sup>	Outs.temp. = Transmit	1	0	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, heart-beat 30 min.
Room optg mode: Time switch	A and Time swi. operation = Master	1	0	0	1	0	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	COV, heart-beat 15 min.
Room optg mode: State	Plant type = B.type A	1	0	0	1	0	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event, heart-beat 15 min.
Room temperature <sup>7)</sup>	A and Rm temp. = Transmit	1	0	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, heart-beat 15 min.
[Controller 1] Current room temp setpoint <sup>6)</sup>	A and [Cascade] [A'natting]	1	0	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

### RMU7x0B Step 3: Outputs, Basic type A (continued)

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMU7x0B sends:
[Controller 1] Current setpoint <sup>6)</sup>	A and [S'air limit] [Constant] [A'nating]	1	0	0	1	0	9.001	_Value_Temp		2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
[Controller 2...3] Current setpoint [°C] <sup>6)</sup>	A and [Ctr. 2...3] Main ctrd variab. unit = Temp.	1	0	0	1	0	9.001	_Value_Temp		2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
[Time switch 2] State	[Time swi. 2] State = Yes	1	0	0	1	0	1.001	_Switch		1 Bit B <sub>1</sub>	---	0 = Off 1 = On	COV, heart-beat 15 min.
[Logic 1...4] State	[Logic X] State = Yes	1	0	0	1	0	1.001	_Switch		1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.
Heating/cooling changeover	H/C ch'over = Transmit	1	0	0	1	0	1.100	_Heat/Cool		1 Bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

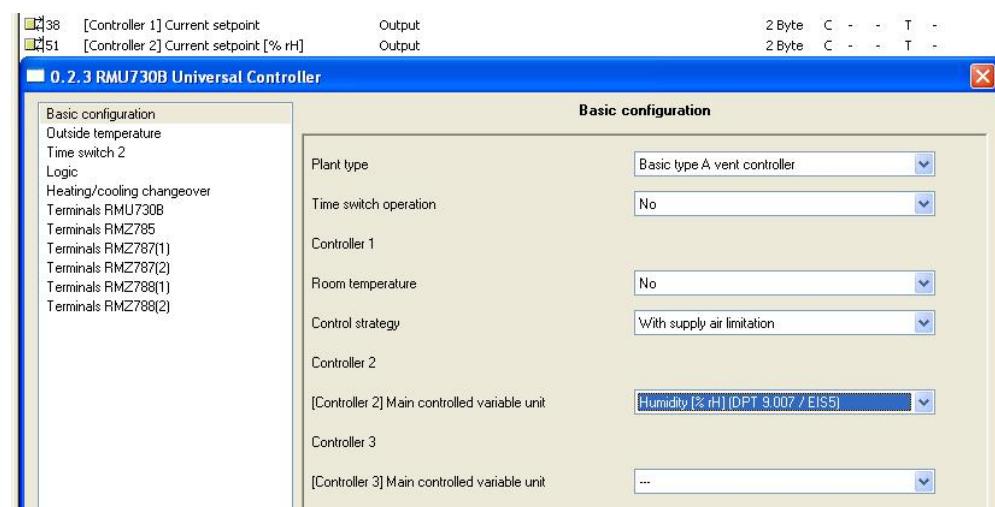

- [Controller 1] Current setpoint (always [°C])
- [Controller 2...3] Current setpoint [°C] is displayed as per the unit selected during S-mode data point configuration.

[Controller 2...3] Current setpoint can be sent e.g. also as humidity value [% rH].

The screenshot shows:

[Controller 1] Current setpoint (always [°C]) and as an example

[Controller 2] Current setpoint [% rH]

## 2.4.2 Basic type P, Primary air handling

### RMU7x0B Step 3: Inputs / Outputs, Basic type P

Name in ETS	DP active	Flags					Data point type KNX				Value range		RMU receives or sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit			
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)													
Date (input)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)

## 2.4.4 Basic type U, Universal controller

### RMU7x0B Step 3: Inputs / Outputs, Basic type U

Name in ETS	DP active	Flags					Data point type KNX				Value range		RMU receives or sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit			
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)													
Date (input)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)													
Time of day (input)	Always	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)													

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

### RMU7x0B Step 3: Inputs and outputs, Basic type U

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Synco controller RMU7x0B Step 3 receives the values of the S-mode DPs.
- Output: For operation from the Synco controller RMU7x0B Step 3, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP active	Flags					Data point type KNX				Value range	RMU7x0B rec., sends	
		C	R	W	T	U	Data	point	Type	DPT_Name	Format	Unit	
Room optg mode: Preselection	Plant type = B.type U	1	1	1	1	1	20.102	_HVACMode		1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX preselect operation (device/progr)
[Controller 2...3] Precomfort setpoint high [°C]	U and [Ctr. 2...3] Main ctrd variab. unit = Temp.	1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	COV from KNX setp adj.	
[Controller 2...3] Comfort setpoint high [°C]		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	COV from KNX setp adj.	
[Controller 2...3] Comfort setpoint low [°C]		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	COV from KNX setp adj.	
[Controller 2...3] Precomfort setpoint low [°C]		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00	COV from KNX setp adj.	

### RMU7x0B Step 3: Inputs, Basic type U

Name in ETS	DP active	Flags					Data point type KNX			Value range		RMU7xB receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 Bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 Bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. "Disable" time-out monit 24 h.
Outside temperature	Outs.temp = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Room optg mode: Time switch	U and Time swi. operation = Slave	1	0	1	0	1	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX operation (device/progr). Timeout monit 31 min.
Heating/cooling changeover	H/C ch'over = Receive	1	0	1	0	1	1.100	_Heat/Cool	1 Bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

### RMU7x0B Step 3: Outputs, Basic type U

Name in ETS	DP active	Flags					Data point type KNX			Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name					
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 Bytes strukt.	---		[0]...255 = Log no. [RMU = 0] [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 Bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart- beat 30 min.	
Outside temperature <sup>7)</sup>	Outs.temp. = Transmit	1	0	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, heart- beat 30 min.	
Room optg mode: Time switch	U and Time swi. operation = Master	1	0	0	1	0	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	COV, heart- beat 15 min.	
Room optg mode: State	Plant type = B.type U	1	0	0	1	0	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event, heart- beat 15 min.	
[Controller 1...3] Current setpoint [°C] <sup>6)</sup>	U and [Ctr. 2...3] Main ctrd variab. unit = Temp.	1	0	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart- beat 15 min.	

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

### RMU7x0B Step 3: Outputs, Basic type U (continued)

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMU7x0B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
[Time switch 2] State	[Time swi. 2] State = Yes	1	0	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	COV, heart-beat 15 min.
[Logic 1...4] State	[Logic X] State = Yes	1	0	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.
Heating/cooling changeover	H/C ch'over = Transmit	1	0	0	1	0	1.100	_Heat/Cool	1 Bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

## 2.4.5 Terminal inputs RMU7x0B Step 3 as reception objects

### RMU7x0B Step 3: Terminal inputs as reception objects, all Basic types

- Universal input N.X1...N.X8, parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags					Data point type KNX			Value range	RMU7x0B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Input N.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Input N.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]
Input N.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %
Input N.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]
Input N.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]
Input N.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On

Notes:

- Receipt of an S-mode DP via input N.X\_ values, that is outside the range limits ("Value high" and "Value low"), is limited by them, e.g. air velocity >20 [m/s] are limited to 20 [m/s] (when "Value high" = 20 [m/s]).
- The following priority applies to communication of data (e.g. sensor values) in S-mode and LTE mode (both modes possible at the same): Value in S-mode before value in LTE mode before terminal input value.

## 2.4.6 Terminal inputs RMU7x0B Step 3 as transmission objects

### RMU7x0B Step 3: Terminal inputs as transmission objects, all Basic types

- Universal inputs N.X1...N.X8 can be parameterized for analog value [°C], [% rH], etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX				Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input N.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0...100%]	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input N.X_ [0...255%]	Trans. object	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input N.X_ [m/s]	Trans. object	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [m/s]	Trans. object	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [Pa]	Trans. object	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [Pa]	Trans. object	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [ppm]	Trans. object	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0/1]	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 2.4.7 Terminal outputs RMU7x0B Step 3 as transmission objects

### RMU7x0B Step 3: Terminal outputs as transmission objects, all Basic types

- The relay outputs N.Q1...N.Q7, parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMU7x0B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output N.Q_	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Analog outputs N.Y1...N.Y4, parameterized for analog output value [0...100]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMU7x0B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output N.Y_	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 2.4.8 Terminal inputs as reception objects, Extension modules RMZ78x

### RMU7x0B Step 3: Terminal inputs as reception objects, Extension modules RMZ78x

- Universal inputs A\_\_.X1...A\_\_.X8, parameterized for analog values [°C], [% rH] etc., or digital value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMU7x0B receives:
Input A__.X_ [°C]	Rec. object	1   0   1   0   1					9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point		Event, no timeout monitoring
Input A__.X_ [% rH]	Rec. object	1   0   1   0   1					9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]		Event, no timeout monitoring
Input A__.X_ [0...100%]	Rec. object	1   0   1   0   1					5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %		Event, no timeout monitoring
Input A__.X_ [0...255%]	Rec. object	1   0   1   0   1					5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %		Event, no timeout monitoring.
Input A__.X_ [m/s]	Rec. object	1   0   1   0   1					14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]		Event, no timeout monitoring
Input A__.X_ [m/s]	Rec. object	1   0   1   0   1					9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]		Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1   0   1   0   1					14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]		Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1   0   1   0   1					9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]		Event, no timeout monitoring
Input A__.X_ [ppm]	Rec. object	1   0   1   0   1					9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]		Event, no timeout monitoring
Input A__.X_ [0/1]	Rec. object	1   0   1   0   1					1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On		Event, no timeout monitoring

- Extension modules RMZ78x with universal inputs as reception objects

Input A5.X1...A5.X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)
Input A8(1).X1...A8(1).X4	RMZ788(1)
Input A8(2).X1...A8(2).X4	RMZ788(2)

## 2.4.9 Terminal inputs as transmission objects, Extension modules RMZ78x

### RMU7x0B Step 3: Terminal inputs as transmission objects, Extension modules RMZ78x

- Universal inputs A\_\_.X1...A\_\_.X8, can be parameterized for analog value [°C], [% rH] etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input A__.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0...100%]	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input A__.X_ [0...255%]	Trans. object	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [ppm]	Trans. object	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0/1]	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Extension modules RMZ78x with universal inputs as transmission objects

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0

Input A5.X1...A5.X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)
Input A8(1).X1...A8(1).X4	RMZ788(1)
Input A8(2).X1...A8(2).X4	RMZ788(2)

## 2.4.10 Terminal outputs as transmission objects, Extension modules RMZ78x

### RMU7x0B Step 3: Terminal outputs as transmission objects, Extension modules RMZ78x

- Relay outputs A\_\_.Q\_\_, parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name					
Output A__.Q__	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On		Event, heart-beat 15 min.

- Extension modules RMZ78x with relay outputs as transmission objects

Output A7(1).Q1...A7(1).Q5	RMZ787(1) without Q4
Output A7(2).Q1...A7(2).Q5	RMZ787(2) without Q4
Output A8(1).Q1, A8(1).Q5	RMZ788(1)
Output A8(2).Q1, A8(2).Q5	RMZ788(2)

- Analog outputs A\_\_.Y\_\_, parameterized for analog output value [0...100]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMU7x0B sends:
		C	R	W	T	U	ID	DPT_Name					
Output A__.Y__	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %		COV, heart-beat 15 min.

- Extension modules RMZ78x with analog outputs as transmission objects

Output A8(1).Y1, A8(1).Y2	RMZ788(1)
Output A8(2).Y1, A8(2).Y2	RMZ788(2)

Note: Max. 4 Extension modules RMZ78x (same or different types) are allowed per Universal controller RMU7x0B Step 3.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

# 3 RMH760, RMH760B Heating controllers

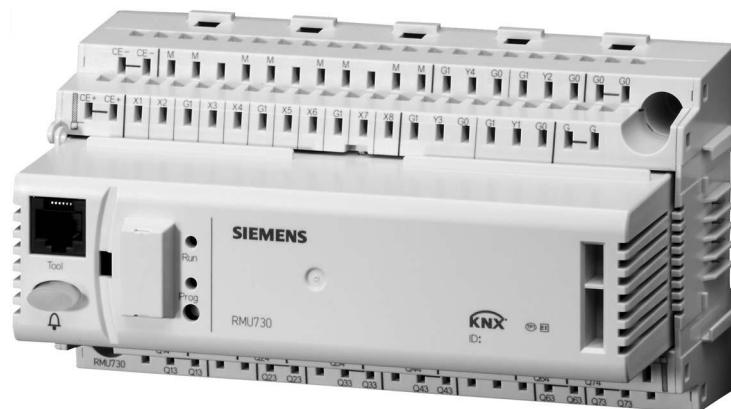

## 3.1 Overview

### Brief description

The Syncro 700 heating controller RMH760 is used either as heating circuit or primary controller.

The Syncro 700 heating controller series B, i.e. RMH760B, in addition can be deployed in remote heating plants.

The controller types RMU760 and RMU760B are identical with regard to design and dimensions.

### Documentation

Heating controller  
RMH760

Data sheet Modular heating controller RMH760 **N3131**  
Basic documentation Modular heating controller RMH760 **P3131**

Heating controller  
RMH760B

Data sheet Modular heating controller RMH760B **N3133**  
Basic documentation Modular heating controller RMH760B **P3133**

### Number of S-mode DPs

	<b>RMH760</b>	<b>RMH760B</b>
Inputs / Outputs	3	3
Inputs and Outputs	0	17
Inputs	30	26
Outputs	17	121

### 3.1.1 RMH760 Heating controller

#### DP in basic type column

The tables in Section 3.2, column **DP in basic type**, show the basic types with the data point communicating in S-mode. For more information on the basic types, refer to the documentation on basics P3131.

#### Basic types

The RMH760 heating controller is delivered with 28 basic types. The basic types correspond to combinations of plants and partial plants (see next page).

Basic types n-x	<b>0-x</b>	Heat consumers
	<b>1-x</b>	Primary control for internal and external heat consumers
	<b>2-x</b>	Primary control for external heat consumers
	<b>3-x</b>	Boiler temperature control
	<b>4-x</b>	Boiler temperature control with maintained boiler return temperature
Basic types x-n	<b>x-1</b>	DHW heating
	<b>x-2</b>	Control of 1 heating circuit
	<b>x-3</b>	Control of 1 heating circuit plus DHW heating
	<b>x-4</b>	Control of 2 heating circuits
	<b>x-5</b>	Control of 2 heating circuits plus DHW heating

### 3.1.2 RMH760B Heating controller

#### DP in FB column

The tables in Section 3.3, column **DP in FB**, show the function blocks with the data point communicating in S-mode. For more information on the function blocks, refer to the documentation on basics P3133.

Indication:	Meaning:
Always	Standard S-mode DP
All	S-mode in all function blocks
MR	Main controller
PC	Primary controller
B	Boiler
HC 1...3	Heating circuit 1...3
DHW	DHW heating

#### Plant types

The RMH760B heating controller is delivered with 41 plant types. The plant types are based on function blocks (FB). You can retroactively change or extend the supplementary configuration for each plant type.

#### Plant type designation

A plant type comprises H and a two-digit number e.g. H3-1.

- The first digit specifies the type of heat generation or distribution.
- The second digit specifies the type and number of internal consumers.

1st digit for plant type: Heat generation / distribution		Function block FB	2nd digit for plant type: Consumer		Function block FB
0	None	--	0	None.	--
1	Primary controller to remote heating	Main controller	1	DHW heating	DHW
2	Primary controller only for external consumers	Primary controller	2	Control of 1 heating circuit	Heating circuit 1
3	Heat generator	Boiler	3	Control of 1 heating circuit plus DHW heating	DHW and heat. circ. 1
4	Heat generator with return temperature control	Boiler	4	Control of 2 heating circuits	Heating circuit 2
5	Consumer to remote heating with storage tank charge and mixing valve control as preset DHW type	--	5	Control of 2 heating circuits plus DHW heating	DHW and heating circuit 2
6	Consumer to remote heating with direct DHW heating as preset DHW type	--	6	Control of 3 heating circuits	Heating circuit 3
			7	Control of 3 heating circuits plus DHW heating	DHW and heating circuit 3

Example,  
plant type H3-1

Plant type H3-1 contains function blocks "Boiler" and "domestic hot water heating" (short DHW).

Plant type	Description	Plant diagram
H3-1	N1: Boiler temperature control.  A3: DHW circuit with mixing valve controlled primary storage tank and charging pump (DHW 2).	

Basic type H

Basic type H is not preconfigured, i.e. no inputs or outputs are preconfigured. Choose this type when the real plant greatly differs from existing plant types (H with letters), and when manual, supplementary configuration requires greater effort than fully configuring plain basic type h.

#### Parameterization RMH760, RMH760B

Example: Parameter  
"Heating circuit 1"

An S-mode DP must be configured in ETS and the Syncro device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

The value assignment "Yes" to parameter "Heating circuit 1" configures S-mode DPs 16, 17, 18, 19, ... as well as parameters "Room temperature" and "Time switch operation".

The screenshot shows the ETS interface with the following details:

- Device Tree:** Shows nodes 1.0.1 to 1.0.4, including 1.0.3 RMH760B Heating Controller.
- Configuration Dialog:** For the 1.0.3 RMH760B Heating Controller.
  - Applications:** Lists Outside/Meteo Sensors, Terminals RMH760B, Terminals RMZ782(1), Terminals RMZ782(2), Terminals RMZ783, Terminals RMZ787, Terminals RMZ789(1), and Terminals RMZ789(2).
  - Heating circuit 1:** Set to Yes for Room temperature and Time switch operation.
  - Heating circuit 2:** Set to No.
  - Heating circuit 3:** Set to No.

## 3.2 RMH760, S-mode data points

### RMH760: Inputs / Outputs

Name in ETS	DP in basic type	Flags					Data point type KNX			Format	Unit	Value range	RMH receives or sends:
		B	R	W	T	U	ID	DPT_Name					
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct. ## RMH760B: Inputs and outputs

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Sync controller RMH760B receives the values of the S-mode DPs.
- Output: For operation from the Sync controller RMH760B, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP in FB	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMH760B rec., sends

Input A9(2).X1...A9(2).X6	RMZ789(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMH760B: Terminals, Extension modules RMZ78x on Heating controller RMH760B (continued)

- Output terminals A\_\_.Q\_, parameterized for digital output value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMH760B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Q_	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Output A2(1).Q1...A2(1).Q3	RMZ782(1)
Output A2(2).Q1...A2(2).Q3	RMZ782(2)
Output A3.Q1...A3.Q5	RMZ783
Output A7.Q1...A7.Q5 (without Q4)	RMZ787
Output A9(1).Q1...A9(1).Q4	RMZ789(1)
Output A9(2).Q1...A9(2).Q4	RMZ789(2)

- Output terminals A\_\_.Y\_, parameterized for analog output value [0...100].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMH760B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Y_	RMZ78x	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

Output A2(1).Y1	RMZ782(1)
Output A2(2).Y1	RMZ782(2)
Output A3.Y1	RMZ783
Output A9(1).Y1, A9(1).Y2	RMZ789(1)
Output A9(2).Y1, A9(2).Y2	RMZ789(2)

Note: Max. 4 Extension modules RMZ78x (same or different types) are allowed per Heating controller RMH760B.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 3.4 RMH760B V3.0, S-mode data points

### RMH760B V3.0: Inputs / Outputs

Name in ETS	DP in FB	Flags					Data point type KNX			Format	Unit	Value range	RMH receives or sends:
		C	R	W	T	U	ID	DPT_Name					
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)													
Date (input)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)													
Time of day (input)	Always	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)													

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMH760B V3.0: Inputs and outputs

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Synco controller RMH760B receives the values of the S-mode DPs.
- Output: For operation from the Synco controller RMH760B, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP in FB	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMH760B V3.0 rec., sends

[Boiler] Flue gas temperature limit value	B	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heartbeat 15 min.
[Logic 1...4] State	[Logic X] State =Yes	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, Heartbeat 15 Min.
[Comparator 1...2] State	[Logic X] State =Yes	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, Heartbeat 15 Min.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

**Terminal inputs as reception objects**

- Input terminals N.X1...N.X6 with S-mode function "Input", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP	Flags					Data point type KNX				Value range	RMH760B V3.0 receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input N.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input N.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input N.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring.
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring.
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring.
Input N.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring.
Input N.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring.

Notes:

- Receipt of an S-mode DP via input N.X\_ values, that is outside the range limits ("Value high" and "Value low"), is limited by them, e.g. air velocity >20 [m/s] are limited to 20 [m/s] (when "Value high" = 20 [m/s]).
- The following priority applies to communication of data (e.g. sensor values) in S-mode and LTE mode (both modes possible at the same): Value in S-mode before value in LTE mode before terminal input value.

## Terminal inputs as transmission objects

- Input terminals N.X1...N.X6 with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMH760B V3.0 sends:	
		C	R	W	T	U	ID	DPT_Name	Format			
Input N.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heartbeat 15 min.
Input N.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heartbeat 15 min.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMH760B V3.0: Terminals, Extension modules RMZ78x on Heating controller RMH760B

### Terminal inputs as reception objects, Extension modules RMZ78x

- Input terminals A\_\_.X\_ with S-mode function "Input", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMH760B V3.0 receives:
Input A__.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	[0...670760]	Event, no timeout monitoring
Input A__.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	[0...100]	Event, no timeout monitoring
Input A__.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	[0...255]	Event, no timeout monitoring.
Input A__.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	0 = Off 1 = On	Event, no timeout monitoring

Input A2(1).X1...A2(1).X3                    RMZ782(1)

Input A2(2).X1...A2(2).X3                    RMZ782(2)

Input A3.X1...A3.X4                            RMZ783

Input A7.X1...A7.X4                            RMZ787

Input A9(1).X1...A9(1).X6                    RMZ789(1)

Input A9(2).X1...A9(2).X6                    RMZ789(2)

## Terminal inputs as transmission objects, Extension modules RMZ78x

- Input terminals A\_\_.X\_ with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX				Value range	RMH760B V3.0 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heartbeat 15 min.
Input A__.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heartbeat 15 min.
Input A__.X_ [0...100%]	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heartbeat 15 min.
Input A__.X_ [0...255%]	Trans. object	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heartbeat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heartbeat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heartbeat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heartbeat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heartbeat 15 min.
Input A__.X_ [ppm]	Trans. object	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heartbeat 15 min.
Input A__.X_ [0/1]	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heartbeat 15 min.

Input A2(1).X1...A2(1).X3	RMZ782(1)
Input A2(2).X1...A2(2).X3	RMZ782(2)
Input A3.X1...A3.X4	RMZ783
Input A7.X1...A7.X4	RMZ787
Input A9(1).X1...A9(1).X6	RMZ789(1)
Input A9(2).X1...A9(2).X6	RMZ789(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

**RMH760B V3.0: Terminals, Extension modules RMZ78x on Heating controller RMH760B (continued)**

- Output terminals A\_\_.Q\_, parameterized for digital output value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMH760B V3.0 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Q_	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Output A2(1).Q1...A2(1).Q3      RMZ782(1)  
 Output A2(2).Q1...A2(2).Q3      RMZ782(2)  
 Output A3.Q1...A3.Q5      RMZ783  
 Output A7.Q1...A7.Q5 (without Q4)      RMZ787  
 Output A9(1).Q1...A9(1).Q4      RMZ789(1)  
 Output A9(2).Q1...A9(2).Q4      RMZ789(2)

- Output terminals A\_\_.Y\_, parameterized for analog output value [0...100].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMH760B V3.0 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Y_	RMZ78x	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heartbeat 15 min.

Output A2(1).Y1      RMZ782(1)  
 Output A2(2).Y1      RMZ782(2)  
 Output A3.Y1      RMZ783  
 Output A9(1).Y1, A9(1).Y2      RMZ789(1)  
 Output A9(2).Y1, A9(2).Y2      RMZ789(2)

Note: Max. 4 Extension modules RMZ78x (same or different types) are allowed per Heating controller RMH760B.

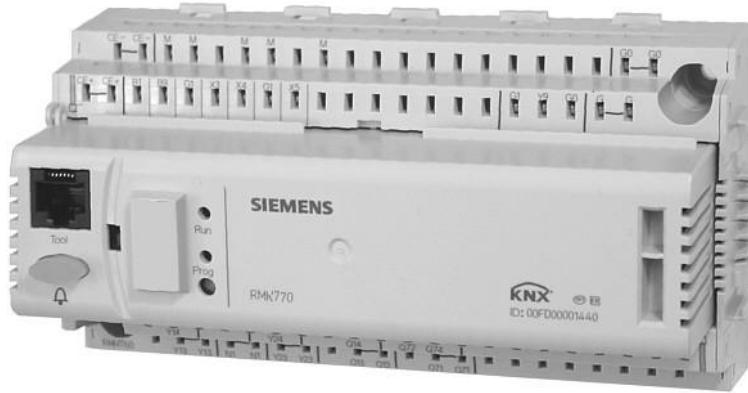

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 4 RMK770 Boiler sequence controllers

### 4.1 Overview

#### Brief description

The Sync 700 Boiler sequence controllers RMK770 and RMK770 V2.0 are responsible for controlling multi-boiler plants (up to 6 boilers), to control the boiler temperature as well as an additional heating and/or primary control loop. When used together with RMZ78x universal modules, additional control functions are possible.

#### Documentation

Data sheet	Boiler sequence controller RMK770	<b>N3132</b>
Basic documentation	Boiler sequence controller RMK770	<b>P3132</b>

#### Number of S-mode DPs

	<b>RMK770</b>	<b>RMK770 V2.0</b>
Inputs / Outputs	3	7
Inputs	15	10
Outputs	38	205

#### Column "DP active"

	<b>Indication:</b>	<b>Meaning:</b>
Always		Standard S-mode DP
HC		Heating circuit
HC or T'swi		Heating circuit <u>or</u> time switch
Boiler 1...6		Boiler 1...6
Boiler seq. manager		Boiler sequence manager
MF sensor		Main flow sensor

#### Note

"Always" points to a standard S-mode DP that is always configured in ETS when the Sync 700 device is selected.

#### Parameterization

##### RMK770, RMK770 V2.0

An S-mode DP must be configured in ETS and the Sync 700 device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

#### Note

For RMK770, of a total of 56 S-mode DPs, a maximum of 50 can be connected via group addresses.

For RMK770 V2.0, all 222 S-mode DPs can be connected via group addresses.

## 4.2 RMK770, S-mode data points

### RMK770: Inputs / Outputs

Name in ETS	DP active	Flags					Data point type KNX			Format	Unit	Value range	RMK rec. or sends:
		C	R	W	T	U	ID	DPT_Name					
System time (input)	Always <sup>5)</sup>	r	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY	1900...2155	= Year	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)										MM	1...12	= Month	
Date (input)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD	1...31	= Day of month	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)										MM	1...12	= Month	
Time of day (input)	Always	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	YY	00...99	= Year <sup>4)</sup>	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)										d	1...7	= Monday - Sunday	
										hh	0...23	= Hours	
										mm	0...59	= Minutes	
										ss	0...59	= Seconds	
										---		Status bits <sup>1)</sup>	

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMK770: Inputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMK770 receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” timeout monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Room temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Timer button	HC	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Comfort prolongation <sup>3)</sup>	Event from KNX contact.
Comfort button	HC	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Operating mode ch'over <sup>3)</sup>	Event from KNX contact
Room temperature: Setpoint relative	HC	1	0	1	0	1	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point	COV from KNX setp adj.
Room optg mode: Preselection	HC	1	0	1	0	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX preselect operation (device/progr)

<sup>3)</sup> See Section 1.4.3, page 14.

**RMK770: Inputs** (continued)

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMK770 receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Room optg mode: Time switch operation Slave	HC or T'swi	1	0	1	0	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX operation (device/progr). Timeout monit 31 min.
Room temp: Protection heating setpoint	HC	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.
Room temp: Economy heating setpoint	HC	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.
Room temp: Precomfort heating setpoint	HC	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.
Room temp: Comfort heating setpoint	HC	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.
Main flow temperature: Setpoint relative	MF sensor	1	0	1	0	1	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point	COV from KNX setp adj.

## RMK770: Outputs

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX			Value range		RMK770 sends:
		ID	DPT_Name	Format	Unit							
Fault information	Always	1 0 0 1 0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [RMK = 0] [0..2]...255 = Alarm priority [0..11]...255 = Application area [0..4]...255 = Error class [0..15]...63 = Alarm attributes [0..7] = Fault state				Heartbeat 30 min.	
Fault state (normal/faulty)	Always	1 0 0 1 0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty				Event, heart-beat 30 min.	
Outside temperature	Send	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point				COV, heart-beat 15 min.	
Room temperature	Send	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point				COV, heart-beat 15 min.	
Room optg mode: Time switch operation Master	HC or T'swi	1 0 0 1 0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve				Event, heart-beat 15 min.

<sup>1)</sup> See Section 1.4.3, page 13. <sup>4)</sup> See Section 1.4.3, page 14. <sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMK770 V3.0: Inputs

Name in ETS	DP active	Flags					Data point type KNX			Value range		RMK770 V3.0 receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Boiler seq. manager: Main flow temperature setpoint relative	Boiler seq. manager	1	0	1	0	1	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point	COV from KNX setp adj.
Heating circuit: Timer button	Heating circuit	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Comfort prolongation <sup>3)</sup>	Event from KNX contact.
Heating circuit: Comfort button	Heating circuit	1	0	1	0	1	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Operating mode ch'over <sup>3)</sup>	Event from KNX contact
Heating circuit room temp.: Setpoint relative	Heating circuit	1	0	1	0	1	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point	COV from KNX setp adj.
Heating circuit: Room temperature →	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Heating circuit room operating mode: Time switch operation →	Slave	1	0	1	0	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX operation (device/progr). Timeout monit 31 min.

<sup>3)</sup> See Section 1.4.3, page 14.

## RMK770 V3.0: Outputs

Name in ETS	DP active	Flags					Data point type KNX			Format	Unit	Value range	RMK770 V3.0 sends:
		C	R	W	T	U	ID	DPT_Name					
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---		[0]...255 = Log no. [RMK = 0] [0..2]...255 = Alarm priority [0..11]...255 = Application area [0..4]...255 = Error class [0..15]...63 = Alarm attributes [0..7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart-beat 30 min.	
Outside temperature	Transmit (Send)	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler seq manager: Main flow temperature actual value	Boiler seq. manager	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler seq manager: Flow temperature current setpoint	Boiler seq. manager	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler seq manager: Return temperature minimum	Boiler seq. manager	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler seq manager: Mixing valve pos maintained return temp	Boiler seq. manager	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 3 min.	
Boiler seq manager: Fault state (normal/faulty)	Boiler seq. manager	1	1	0	1	0	1.002	_Bool	1 bit B <sub>1</sub>	---	0 = No error (default) 1 = Boiler sequence error	Event, heart-beat 15 min.	
Boiler 1...6: Actual value boiler temperature	Boiler 1...6	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler 1...6: Boiler temperature setpoint	Boiler 1...6	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler 1...6: Signal modulating burner	Boiler 1...6	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 3 min.	
Boiler 1...6: Burner stage 1	Boiler 1...6	1	1	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Stage 1 disabled 1 = Stage 1 enabled	Event, heart-beat 3 min.	
Boiler 1...6: Burner stage 2	Boiler 1...6	1	1	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Stage 2 disabled 1 = Stage 2 enabled	Event, heart-beat 3 min.	
Boiler 1...6: Flue gas temperature maximum	Boiler 1...6	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Boiler 1...6: Flue gas temperature limit value	Boiler 1...6	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	

<sup>2)</sup> See Section 1.4.3, page 14.

## RMK770 V3.0: Outputs (continued)

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMK770 V3.0 sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Boiler 1...6: Return temperature minimum	Boiler 1...6	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Boiler 1...6: Mixing valve pos maintained return temp	Boiler 1...6	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 3 min.
Boiler 1...6: Fault state (normal/faulty)	Boiler 1...6	1	1	0	1	0	1.002	_Bool	1 bit B <sub>1</sub>	---	0 = No error (default) 1 = Boiler error	Heartbeat 3 min.
Primary controller: Flow temperature current setpoint	Primary controller	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Primary controller: Return temperature maximum	Primary controller	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Primary controller: Mixing valve position	Primary controller	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

Heating circuit: Return temperature maximum	Heating circuit	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Heating circuit: Mixing valve position	Heating circuit	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Heating circuit room temp.: Current setpoint	Heating circuit	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Heating circuit room operating mode: State	Heating circuit	1	0	0	1	0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	COV, heart-beat 15 min.
Heating circuit: Room temperature →	Transmit	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Heating circuit room operating mode: Time switch operation →	Master	1	0	0	1	0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event, heart-beat 15 min.

- Selection of boilers 1...6 is free (e.g. boiler 2, boiler 3, and boiler 5).

**RMK770 V3.0: Outputs** (continued)

Name in ETS	DP active	Flags					Data point type KNX				Value range	RMK770 V3.0 sends:
[Logic 1...4] State	[Logic X] State =Yes	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, Heart-beat 15 Min.
[Comparator 1...2] State	[Logic X] State =Yes	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, Heart-beat 15 Min.

**Terminal inputs as reception objects**

- Input terminals N.X1...N.X8 with S-mode function "Input", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP	Flags					Data point type KNX				Value range	RMK770 V3.0 receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input N.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input N.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input N.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring.
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring.
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring.
Input N.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring.
Input N.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring.

## Notes:

- Receipt of an S-mode DP via input N.X\_ values, that is outside the range limits ("Value high" and "Value low"), is limited by them, e.g. air velocity >20 [m/s] are limited to 20 [m/s] (when "Value high" = 20 [m/s]).
- The following priority applies to communication of data (e.g. sensor values) in S-mode and LTE mode (both modes possible at the same): Value in S-mode before value in LTE mode before terminal input value.

## Terminal inputs as transmission objects

- Input terminals N.X1...N.X8 with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX				Value range	RMK770 V3.0 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input N.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.

# 5 RMB795, RMB795B Central control units

## 5.1 Overview

### Brief description

The Sync 700 central control units RMB795 and RMB795B allows you to centrally control room groups with RXB/RXL room controllers and RDG/RDF/RDU room thermostats as well as provides menu-assisted operation of room groups.

### Documentation

Central control unit RMB795	Data sheet Basic documentation	Central control unit RMB795 Central control unit RMB795	<b>N3121</b> <b>P3121</b>
Central control unit RMB795B	Data sheet Basic documentation	Central control unit RMB795 Central control unit RMB795	<b>N3122</b> <b>P3122</b>

### Number of S-mode DPs

	<b>RMB795</b>	<b>RMB795B V2.00, V2.01</b>	<b>RMB795B ≥ V2.02</b>
Inputs / Outputs	3	3	3
Inputs and outputs	70	70	70
Inputs	4	27	29
Outputs	79	90	90

### Column "DP active"

	<b>Indication:</b>	<b>Meaning:</b>
Always		Standard S-mode DP
All appl.		S-mode DP in all applications
Room grp. 1...10		Room group 1...10 = Yes
Logic 1...10		Logic 1...10 = Send (only RMB795B)
Receive		S-mode "Receive object" (connected as input)
Transmit/Send		S-mode "Send object" (connected as output)

### Note

"Always" points to a standard S-mode DP that is always configured in ETS when the Sync device is selected.

<b>Parameterization</b> <b>RMB795, RMB795B</b>	An S-mode DP must be configured in ETS <u>and</u> the Synco device to ensure that the S-mode DP transmits (sends) valid values. See Section 1.5 on workflows.												
Note	<p>For RMB795, of a total of 156 S-mode DPs, a maximum of 50 can be connected via group addresses.</p> <p>For RMB795B, all S-mode DPs can be connected via group addresses (maximal 250 group addresses).</p>												
<b>Universal reception and transmission zones</b>	<p>Device RMB795B allows for universal data exchange via own terminals (universal inputs, relay and analog outputs) as well as via terminals of extension modules RMZ78x. Data is exchanged via KNX.</p> <p>The universal inputs can be used as reception objects in <b>reception zones</b> and as transmission (send) objects in <b>transmission zones</b>. The relays and analog outputs can only be used as transmission (send) objects.</p> <table> <tr> <td>Reception zones</td> <td>Universal inputs</td> <td>Terminals N.X_ and A__.X_</td> </tr> <tr> <td>Transmission zones</td> <td>Universal inputs</td> <td>Terminals N.X_ and A__.X_</td> </tr> <tr> <td></td> <td>Relay outputs</td> <td>N.Q_ and A__.Q_</td> </tr> <tr> <td></td> <td>Analog outputs.</td> <td>N.Y_ and A__.Y_</td> </tr> </table>	Reception zones	Universal inputs	Terminals N.X_ and A__.X_	Transmission zones	Universal inputs	Terminals N.X_ and A__.X_		Relay outputs	N.Q_ and A__.Q_		Analog outputs.	N.Y_ and A__.Y_
Reception zones	Universal inputs	Terminals N.X_ and A__.X_											
Transmission zones	Universal inputs	Terminals N.X_ and A__.X_											
	Relay outputs	N.Q_ and A__.Q_											
	Analog outputs.	N.Y_ and A__.Y_											
Note	See Sections 5.3.1 to 5.3.6, pages 110 to 115:												

## 5.2 RMB795, S-mode data points

### RMB795: Inputs / Outputs

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range		RMB receives or sends:
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct. Time of day (output)													

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMB795: Inputs and outputs

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Synco unit RMB795 receives the values of the S-mode DPs.
- Output: For operation from the Synco unit RMB795, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX			Value range		RMB795 rec., sends:
		ID	DPT_Name	Format	Unit							
[Room group 1...10] Preselection	Room grp. 1...10	1 0 1 1 1	20.102 _HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve						Event from KNX preselect operation (device/progr.).
[Room group 1...10] Economy cooling setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Room group 1...10] Precomfort cooling setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Room group 1...10] Comfort cooling setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Room group 1...10] Economy heating setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Room group 1...10] Precomfort heating setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Room group 1...10] Comfort heating setpoint	Room grp. 1...10	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.

- You can freely select room groups 1...10 (e.g. room group 2, room group 3, and room group 9).

## RMB795: Inputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMB795 receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” timeout monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.

## RMB795: Outputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMB795 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [RMB = 0] [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty
Outside temperature.	Transmit	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
[Room group 1...10] Emergency mode	Room grp. 1...10	1	0	0	1	0	20.106	_HVACEmergMode	1 byte N <sub>8</sub>	Enum.	0 = Normal 1 = Smoke extr with supply air 2 = Smoke extr with extract air 3 = Smoke extr with supp/extr air 4 = Emergency off 5 = Emergency fire alarm 6...255 Reserve
[Room group 1...10] State	Room grp. 1...10	1	0	0	1	0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve
[Room group 1...10] Highest room temperature	Room grp. 1...10	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
[Room group 1...10] Lowest room temperature	Room grp. 1...10	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Heating/cooling changeover	All appl.	1	0	0	1	0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)

<sup>2)</sup> See Section 1.4.3, page 14.

- You can freely select room groups 1...10 (e.g. room group 2, room group 3, and room group 9).

## RMB795: Terminals, Central control unit RMB795

- Input terminals N.X1...N.X6 with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMB795 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	RMB795	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input N.X_ [% rH]	RMB795	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0...100%]	RMB795	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input N.X_ [0...255%]	RMB795	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input N.X_ [m/s]	RMB795	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [m/s]	RMB795	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [Pa]	RMB795	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [Pa]	RMB795	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [ppm]	RMB795	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0/1]	RMB795	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Output terminals N.Q1...N.Q5, parameterized for digital output value [0/1].

Output N.Q_	RMB795	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.
-------------	--------	---	---	---	---	---	-------	---------	----------------------	-----	-------------------	---------------------------

- Output terminals N.Y1, N.Y2, parameterized for analog output value [0...100].

Output N.Y_	RMB795	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
-------------	--------	---	---	---	---	---	-------	----------	----------------------	---	-------------------------------	-------------------------

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMB795: Terminals, Extension modules RMZ78x on Central control unit RMB795

- Input terminals A\_\_.X\_ with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMB795 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	RMZ78x	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input A__.X_ [% rH]	RMZ78x	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0...100%]	RMZ78x	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input A__.X_ [0...255%]	RMZ78x	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input A__.X_ [m/s]	RMZ78x	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [m/s]	RMZ78x	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [ppm]	RMZ78x	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0/1]	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Input A5.X1...A5.X8 RMZ785

Input A7(1).X1...A7(1).X4 RMZ787(1)

Input A7(2).X1...A7(2).X4 RMZ787(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

**RMB795: Terminals, Extension modules RMZ78x on Central control unit RMB795 (continued)**

- Output terminals A\_\_.Q\_, parameterized for digital output value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMB795 sends:
		C	R	W	T	U	ID	DPT_Name					
Output A__.Q_	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit	---	B <sub>1</sub>	0 = Off 1 = On	Event, heart-beat 15 min.

Output A7(1).Q1...A7(1).Q5                    RMZ787(1) without Q4  
 Output A7(2).Q1...A7(2).Q5                    RMZ787(2) without Q4

Note: Max. 3 Extension modules RMZ78x (same or different types) are allowed per Central control unit RMB795.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 5.3 RMB795B, S-mode data points

RMB795B: Inputs (Receive) / Outputs (Send)

Name in ETS	DP active	Flags					Data point type KNX			Format	Unit	Value range	RMB receives or sends:

Date (Receive)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (Send)													
Time of day (Receive)	Always	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (Send)													

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMB795B: Inputs (Receive) and Outputs (Send)

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Sync unit RMB795B receives the values of the S-mode DPs.
- Output: For operation from the Sync unit RMB795B, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMB795 rec., sends:
[Room group 1...10] Room optg mode: Preselection	Room grp. 1...10 = Yes	1	1	1	1	1	20.102	_HVACMode		1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Event from KNX preselect operation (device/progr.).
[Room group 1...10] Economy cooling setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	
[Room group 1...10] Precomfort cooling setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	
[Room group 1...10] Comfort cooling setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	
[Room group 1...10] Economy heating setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	
[Room group 1...10] Precomfort heating setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	
[Room group 1...10] Comfort heating setpoint	Room grp. 1...10	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX setp adj.	

- You can freely select room groups 1...10 (e.g. room group 2, room group 3, and room group 9).

## RMB795B: Inputs (Receive)

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMB795 receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Heating/cooling changeover	Receive	1	0	1	0	1	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event from KNX contact. No timeout monitoring.
Heat request <sup>8)</sup>	Receive	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV from KNX controller time-out monitoring 31 min
Refrigeration request <sup>8)</sup>	Receive	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV from KNX controller time-out monitoring 31 min

<sup>8)</sup> New functionality available from RMB795B Version V2.02

## RMB795B: Outputs (Send)

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX			Value range		RMB795 sends:
		ID	DPT_Name	Format	Unit							
Fault information	Always	1 0 0 1 0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [RMB = 0] [0..2]...255 = Alarm priority [0..14]...255 = Application area [0..4]...255 = Error class [0..15]...63 = Alarm attributes [0..7] = Fault state				Heartbeat 30 min.	
Fault state (normal/faulty)	Always	1 0 0 1 0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty				Event, heart-beat 30 min.	
Outside temperature.	Send	1 0 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point				COV, heart-beat 15 min.	
[Room group 1...10] Emergency mode	Room grp. 1...10	1 1 0 1 0	20.106	_HVACEmergMode	1 byte N <sub>8</sub>	Enum.	0 = Normal 1 = Smoke extr with supply air 2 = Smoke extr with extract air 3 = Smoke extr with supp/extr air 4 = Emergency off 5 = Emergency fire alarm 6...255 Reserve				Event, heart-beat 15 min.	
[Room group 1...10] Room optg mode: State	Room grp. 1...10	1 1 0 1 0	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Not used 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve				Event, heart-beat 15 min.	
[Room group 1...10] Highest room temperature	Room grp. 1...10	1 1 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point				COV, heart-beat 15 min.	
[Room group 1...10] Lowest room temperature	Room grp. 1...10	1 1 0 1 0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point				COV, heart-beat 15 min.	
Heating/cooling changeover	Send	1 1 0 1 0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)				Event, heart-beat 15 min.	
[Logic 1...10] State	Send	1 1 0 1 0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On				Event, heart-beat 15 min.	

<sup>2)</sup> See Section 1.4.3, page 14.

- You can freely select room groups 1...10 (e.g. room group 2, room group 3, and room group 9).

### 5.3.1 Terminal inputs as reception objects, RMB795B

#### RMB795B: Terminal inputs as reception objects

- Universal input N.X1...N.X6, parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags					Data point type KNX				Value range	RMB795B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input N.X_ [% rH]	Receive	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input N.X_ [0...100%]	Receive	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input N.X_ [0...255%]	Receive	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring
Input N.X_ [m/s]	Receive	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [m/s]	Receive	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input N.X_ [Pa]	Receive	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [Pa]	Receive	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring
Input N.X_ [ppm]	Receive	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring
Input N.X_ [0/1]	Receive	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring

Notes:

- Receipt of an S-mode DP via input N.X\_ values, that is outside the range limits ("Value high" and "Value low"), is limited by them, e.g. air velocity >20 [m/s] are limited to 20 [m/s] (when "Value high" = 20 [m/s]).
- The following priority applies to communication of data (e.g. sensor values) in S-mode and LTE mode (both modes possible at the same): Value in S-mode before value in LTE mode before terminal input value.

### 5.3.2 Terminal inputs as transmission (send) objects, RMB795B

#### RMB795B: Terminal inputs as transmission (send) objects

- Universal inputs N.X1...N.X6 can be parameterized for analog value [°C], [% rH], etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMB795B sends:
		C	R	W	T	U	ID	DPT_Name					
Input N.X_ [°C]	Send	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Input N.X_ [% rH]	Send	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [0...100%]	Send	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.	
Input N.X_ [0...255%]	Send	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.	
Input N.X_ [m/s]	Send	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.	
Input N.X_ [m/s]	Send	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [Pa]	Send	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.	
Input N.X_ [Pa]	Send	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [ppm]	Send	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [0/1]	Send	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.	

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

### 5.3.3 Terminal outputs as transmission (send) objects, RMB795B

#### RMB795B: Terminal outputs as transmission (send) objects,

- The relay outputs N.Q1...N.Q5 (without Q4), parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMB795B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output N.Q_	Send	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Analog outputs N.Y1...N.Y2, parameterized for analog output value [0...100]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMB795B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output N.Y_	Send	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

### 5.3.4 Terminal inputs as reception objects, Extension modules RMZ78x

#### RMB795B: Terminal inputs as reception objects, Extension modules RMZ78x

- Universal inputs A\_\_.X1...A\_\_.X8, parameterized for analog values [°C], [% rH] etc., or digital value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags					Data point type KNX				Value range	RMB795B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input A__.X_ [% rH]	Receive	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0...100%]	Receive	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input A__.X_ [0...255%]	Receive	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring
Input A__.X_ [m/s]	Receive	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring.
Input A__.X_ [m/s]	Receive	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input A__.X_ [Pa]	Receive	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input A__.X_ [Pa]	Receive	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring
Input A__.X_ [ppm]	Receive	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0/1]	Receive	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring

- Extension modules RMZ78x with universal inputs as reception objects

Input A5(1).X1...A5(1).X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)

### 5.3.5 Terminal inputs as transm. (send) objects, Extension modules RMZ78x

#### RMB795B: Terminal inputs as transmission (send) objects, Extension modules RMZ78x

- Universal inputs A\_\_.X1...A\_\_.X8, can be parameterized for analog value [°C], [% rH] etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX		Value range		RMB795B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Input A__.X_ [°C]	Send	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Input A__.X_ [% rH]	Send	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]
Input A__.X_ [0...100%]	Send	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %
Input A__.X_ [0...255%]	Send	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %
Input A__.X_ [m/s]	Send	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]
Input A__.X_ [m/s]	Send	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]
Input A__.X_ [Pa]	Send	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]
Input A__.X_ [Pa]	Send	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]
Input A__.X_ [ppm]	Send	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]
Input A__.X_ [0/1]	Send	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On

- Extension modules RMZ78x with universal inputs as transmission (send) objects

Input A5(1).X1...A5(1).X8                   RMZ785

Input A7(1).X1...A7(1).X4                   RMZ787(1)

Input A7(2).X1...A7(2).X4                   RMZ787(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

### 5.3.6 Terminal outputs as transm. (send) objects, Extension modules RMZ78x

#### RMB795B: Terminal outputs as transmission (send) objects, Extension modules RMZ78x

- Relay outputs A\_\_.Q\_, parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMB795B sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Q_	Send	1	1	0	1	0	1.001	_Switch	1 bit B1	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Extension modules RMZ787 with relay outputs as transmission (send) objects

Output A7(1).Q1...A7(1).Q5      RMZ787(1) without Q4  
 Output A7(2).Q1...A7(2).Q5      RMZ787(2) without Q4

Note: Max. 3 Extension modules RMZ78x are allowed per Central control unit RMB795B (1 x RMZ787 and/or max. 2 x RMZ787).

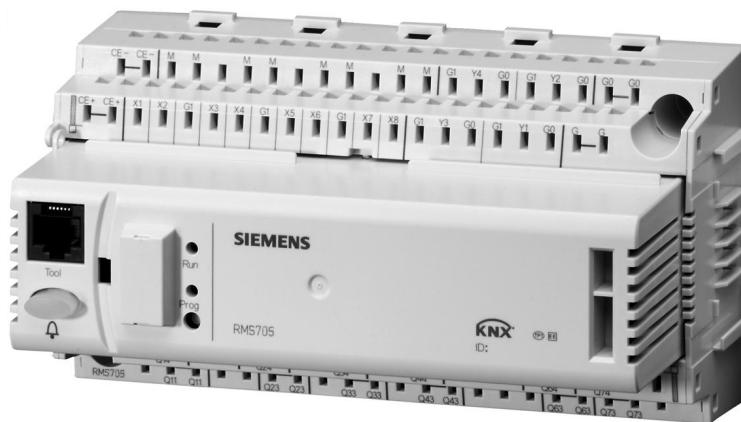

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

# 6 RMS705, RMS705B switching and monitoring devices

## 6.1 Overview

### Brief description

The Sync 700 switching and monitoring device RMS705 and RMS705B contains a multitude of function blocks to acquire counter values and operating hours, to log trends, and to log and record events (event logger). Furthermore, lead/lag control of aggregates with runtime equalization and, via freely configurable logic blocks, switching functions can be implemented.

### Documentation

Documentation RMS705	Data sheet	Switching and monitoring device RMS705	N3123
	Basic documentation	Switching and monitoring device RMS705	P3123
Documentation RMS705B	Data sheet	Switching and monitoring device RMS705B	N3124
	Basic documentation	Switching and monitoring device RMS705B	P3124

### Number of S-mode DPs

	RMS705	RMS705B
Inputs / Outputs	3	3
Inputs and outputs	22	12
Inputs	4	37
Outputs	70	91

### Column "DP active"

#### RMS705

Indication:	Meaning:
Always	Standard S-mode DP
All appl.	S-mode DP in all applications
Controller 1...3	Controller setpoints (sequence controller) 1...3
Logic 1...10	Operation selector Logic 1...10
T'swi 1...6	Operation selector time switch 1...6
Receive	Receive outside temperature (linked as input)
Transmit	Transmit outside temperature (linked as output)

#### Note

"Always" points to a standard S-mode DP that is always configured in ETS when the Sync device is selected.

<b>Column "DP active"</b>	<b>Indication:</b>	<b>Meaning:</b>												
<b>RMS705B</b>	Always	Standard S-mode DP												
	Controller 1...3	Controller setpoints (sequence controller) 1...3												
	Logic 1...10	Operation selector Logic 1...10												
	T'swi 1...6	Operation selector time switch 1...6												
	Receive	Receive outside temperature (linked as input)												
	Transmit	Transmit outside temperature (linked as output)												
	H/C chov. Receive	Receive heating/cooling changeover signal (linked as input)												
	H/C chov. Transmit	Transmit heating/cooling changeover signal (linked as output)												
	Calcul. 1, Calcul. 2	Calculator 1, Calculator 2 (calculated using formula)												
	Enthalpy	Dew point temperature / Wet bulb temperature												
	Sig-Inv	Signal doubler-inverter												
	Rec.object	Reception object (terminal value connected as input).												
	Trans. object	Transmission object (terminal value connected as output).												
<b>Note</b>	"Always" points to a standard S-mode DP that is <u>always</u> configured in ETS when the Synco device is selected.													
<b>Parameterization</b> <b>RMS705, RMS705B</b>	An S-mode DP must be configured in ETS <u>and</u> the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.													
<b>Note</b>	For RMS705, of a total of 99 S-mode DPs, a maximum of 50 can be connected via group addresses. For RMS705B, all 143 S-mode DPs can be connected via group addresses.													
<b>Universal reception and transmission zones</b>	Device RMS705B allows for universal data exchange via own terminals (universal inputs, relay and analog outputs) as well as via terminals of extension modules RMZ78x. Data is exchanged via KNX. The universal inputs can be used as reception objects in <b>reception zones</b> and as transmission objects in <b>transmission zones</b> . The relays and analog outputs can only be used as transmission objects.  <table> <tr> <td>Reception zones</td> <td>Universal inputs</td> <td>Terminals N.X_ and A__.X_</td> </tr> <tr> <td>Transmission zones</td> <td>Universal inputs</td> <td>Terminals N.X_ and A__.X_</td> </tr> <tr> <td></td> <td>Relay outputs</td> <td>N.Q_ and A__.Q_</td> </tr> <tr> <td></td> <td>Analog outputs.</td> <td>N.Y_ and A__.Y_</td> </tr> </table>		Reception zones	Universal inputs	Terminals N.X_ and A__.X_	Transmission zones	Universal inputs	Terminals N.X_ and A__.X_		Relay outputs	N.Q_ and A__.Q_		Analog outputs. ## 6.2 RMS705, S-mode data points

### RMS705: Inputs / Outputs

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Value range		RMS receives or sends:	
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)													
Date (input)	Always	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)													
Time of day (input)	Always	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)													

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## RMS705: Inputs and outputs

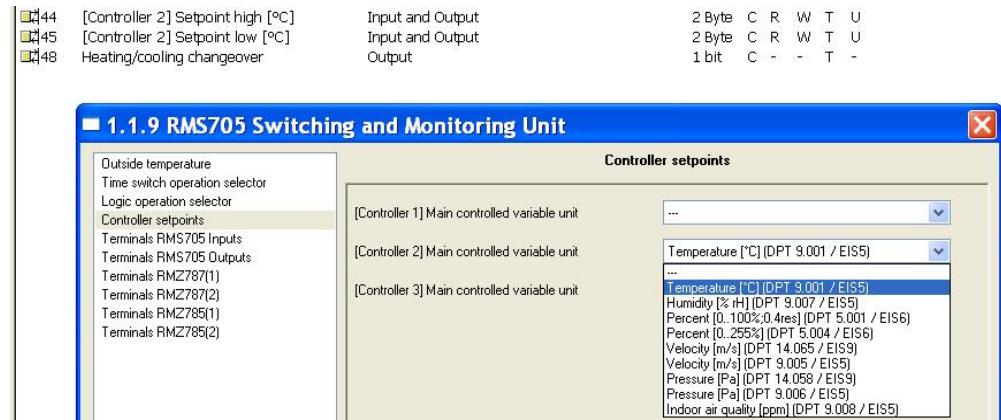

S-mode DPs operated as input and output.

- Input: For operation using external device via KNX, Synco unit RMS705 receives the values of the S-mode DPs.
- Output: For operation from the Synco unit RMS705, the S-mode DP values are sent via KNX (synchronization of external unit).

Name in ETS	DP active	Flags C R W T U					Data point type KNX			Value range		RMS705 rec., sends
		ID	DPT_Name	Format	Unit							
[Operation selector time switch 1...6] Preselection	Ti Swi 1...6	1 0 1 1 1	20.102 _HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve						Event from KNX preselect operation (device/progr).
[Operation selector Logic 1...10] Preselection	Logic 1...10	1 0 1 1 1	(20.102) (_HVACMode)	1 byte N <sub>8</sub>	Enum.	0 = --- OSV (Auto) 1 = Auto (Comfort) 2 = Off (Precomf, Standby) 3 = On (Economy) 4 = Reserve (Protection, BldgProtect) 5...255 Reserve						Event from KNX preselect operation (device/progr).
[Controller 1...3] Setpoint high [°C]	Controller 1...3	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.
[Controller 1...3] Setpoint low [°C]	Controller 1...3	1 1 1 1 1	9.001 _Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point						COV from KNX setp adj.

For [Controller 1...3], you can configure the setpoint for the various units or physical variables via the parameter "[Controller 1...3] Main controlled variable unit".

See screenshot to the right for [Controller 2].

## RMS705: Inputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMS705 receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” timeout monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.

## RMS705: Outputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMS705 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [RMS = 0] [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty
Outside temperature	Transmit	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
[Time switch 1...6] State	T'swi 1...6	1	0	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)
[Logic 1...10] State	Logic 1...10	1	0	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)
Heating/cooling changeover	All appl.	1	0	0	1	0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)

<sup>2)</sup> See Section 1.4.3, page 14.

- You can freely select time switches 1...6 and logic 1...10.

## RMS705: Terminals, Switching and monitoring device RMS705

- Input terminals N.X1...N.X8 with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMS705 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	RMS705	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input N.X_ [% rH]	RMS705	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0...100%]	RMS705	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input N.X_ [0...255%]	RMS705	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input N.X_ [m/s]	RMS705	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [m/s]	RMS705	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [Pa]	RMS705	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input N.X_ [Pa]	RMS705	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [ppm]	RMS705	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input N.X_ [0/1]	RMS705	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Output terminals N.Q1...N.Q7 (without Q5), parameterized for digital output value [0/1].

Output N.Q_	RMS705	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.
-------------	--------	---	---	---	---	---	-------	---------	----------------------	-----	-------------------	---------------------------

- Output terminals N.Y1...N.Y4, parameterized for analog output value [0...100].

Output N.Y_	RMS705	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
-------------	--------	---	---	---	---	---	-------	----------	----------------------	---	-------------------------------	-------------------------

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMS705: Terminals, Extension modules RMZ78x on Switching and monitoring device RMS705

- Input terminals A\_\_.X\_ with S-mode function "Output", parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMS705 sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	RMZ78x	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input A__.X_ [% rH]	RMZ78x	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0...100%]	RMZ78x	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input A__.X_ [0...255%]	RMZ78x	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input A__.X_ [m/s]	RMZ78x	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [m/s]	RMZ78x	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	RMZ78x	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [ppm]	RMZ78x	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0/1]	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Input A5(1).X1...A5(1).X8      RMZ785(1)  
 Input A5(2).X1...A5(2).X8      RMZ785(2)  
 Input A7(1).X1...A8(1).X4      RMZ787(1)  
 Input A7(2).X1...A8(2).X4      RMZ787(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMS705: Terminals, Extension modules RMZ78x on Switching and monitoring device RMS705 (continued)

- Output terminals A\_\_.Q\_, parameterized for digital output value [0/1].

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range	RMS705 sends:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Output A__.Q_	RMZ78x	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

Output A7(1).Q1...A7(1).Q5                    RMZ787(1) without Q4  
 Output A7(2).Q1...A7(2).Q5                    RMZ787(2) without Q4

Note: Max. 3 Extension modules RMZ78x (same or different types) are allowed per **Switching and monitoring device RMS705**.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## 6.3 RMS705B, S-mode data points

### RMS705B: Inputs / Outputs

Name in ETS	DP active	Flags					Data point type KNX			Format	Unit	Value range	RMS705B rec. or sends:
		C	R	W	T	U	ID	DPT_Name					
System time (input)	Always <sup>5)</sup>	1	0	1	1	1	19.001	_DateTime	8 bytes struct. See screenshot (right) for [Controller 2].

## RMS705B: Inputs

Name in ETS	DP active	Flags					Data point type KNX			Value range	RMS705B receives:	
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	Always	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Reset faults	Always	1	0	1	0	1	1.015	_Reset	1 bit B <sub>1</sub>	---	0 = No action 1 = Reset	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 24 h.
Outside temperature	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Heating/cooling changeover	H/C chov. Receive	1	0	0	1	0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

## RMS705B: Outputs

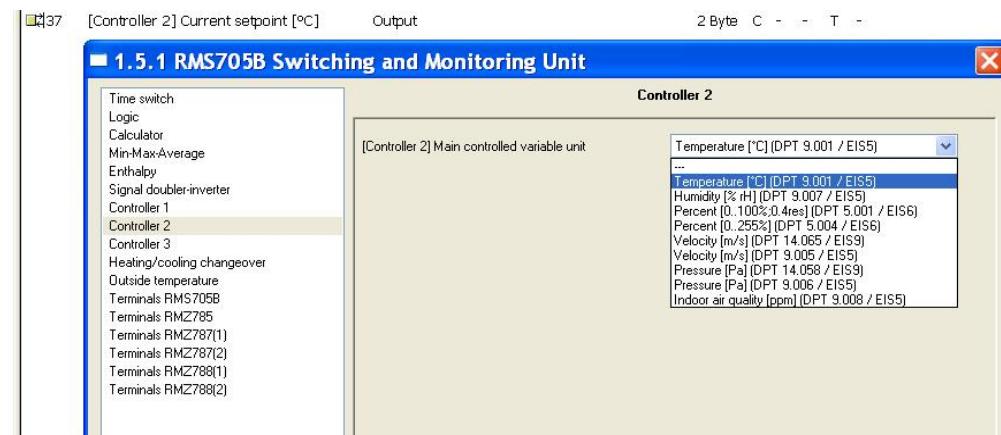

Name in ETS	DP active	Flags C   R   W   T   U					Data point type KNX			Value range		RMS705B sends:
		ID	DPT_Name	Format	Unit							
Fault information	Always	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [RMS = 0] [0..2]...255 = Alarm priority [0..14]...255 = Application area [0..4]...255 = Error class [0..15]...63 = Alarm attributes [0..7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	Always	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart-beat 30 min.
Outside temperature	Transmit	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
[Time switch 1...6] State	T'swi 1...6	1	0	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event, heart-beat 15 min.
[Logic 1...10] State	Logic 1...10	1	0	0	1	0	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event, heart-beat 15 min.
[Controller 1...3] Current setpoint [°C] <sup>6)</sup>	Controller 1...3	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Heating/cooling changeover	H/C chov. Transmit	1	0	0	1	0	1.100	_Heat/Cool	1 bit B <sub>1</sub>	---	0 = Cooling 1 = Heating (default)	Event, heart-beat 15 min.

For the S-mode DPs (see table above).

- [Controller 1...3] Current setpoint [°C]

"Current setpoint" is displayed in the unit selected during S-mode DP configuration. Thus, "Current setpoint" can also be sent as temperature value [°C] or as humidity value [% rH], for example.

The screenshot (right) shows possible units for "Current setpoint".

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>6)</sup> See Section 1.5.1, page 16, Out of service.

## RMS705B: Outputs (continued)

Name in ETS	DP active	Flags					Data point type KNX			Value range		RMS705B sends:

[Min-Max-Average 2] B [0...255%]		1	0	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.

Min-Max-Average: Calculates the minimum or maximum or average value from 5 input values or (if inputs are splitted) from 2 and 3 input values.

- ① [Min-Max-Average 1] Inputs splitted = No → [Min-Max-Average 1] = Temperature [°C] or Humidity [% rH], Percent [0...100%], Percent [0...255%], Indoor air quality [ppm]
- ② [Min-Max-Average 2] Inputs splitted = No → [Min-Max-Average 2] = Indoor air quality [ppm]
- Note on ① and ②    Inputs splitted = No → 1A and 1B or 2A and 2B always have the same unit, e.g. ① [°C], ② [ppm] or [% rH] [0...100%] [0...255%]
- ③ [Min-Max-Average 1] Inputs splitted = Yes → [Min-Max-Average 1] A = Humidity [% rH] or Temperature [°C], Percent [0...100%], Percent [0...255%], Indoor air quality [ppm]  
[Min-Max-Average 1] Inputs splitted = Yes → [Min-Max-Average 1] B = Percent [0...100%]
- ④ [Min-Max-Average 2] Inputs splitted = Yes → [Min-Max-Average 2] A = Temperature [°C]  
[Min-Max-Average 2] Inputs splitted = Yes → [Min-Max-Average 2] B = Percent [0...255%]
- Note on ③ and ④    Inputs splitted = Yes → 1A, 1B, 2A, 2B can have different units: [°C] [% rH] [0...100%] [0...255%] [ppm]

**RMS705B: Outputs** (continued)

Name in ETS	DP active	Flags					Data point type KNX				Value range	RMS705B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
[Enthalpy] Dew point temperature	Enthalpy	1	0	0	1	0	9.001	_Value_DewPnt	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
[Enthalpy] Wet bulb temperature		1	0	0	1	0	9.001	_Value_WetBlb	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
[Signal doubler-inverter] A	Sig-Inv	1	0	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
[Signal doubler-inverter] B		1	0	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

### 6.3.1 Terminal inputs and outputs as reception or transmission objects

**RMS705B: Terminal inputs as reception objects**, Switching and monitoring device RMS705B

- Universal input N.X1...N.X8, parameterizable for analog input value [°C], [% rH] etc. or for digital input value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags					Data point type KNX				Value range	RMS705B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input N.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input N.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input N.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input N.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input N.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring
Input N.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring
Input N.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring

Notes:

- Receipt of an S-mode DP via input N.X\_ values, that is outside the range limits ("Value high" and "Value low"), is limited by them, e.g. air velocity >20 [m/s] are limited to 20 [m/s] (when "Value high" = 20 [m/s]).
- The following priority applies to communication of data (e.g. sensor values) in S-mode and LTE mode (both modes possible at the same): Value in S-mode before value in LTE mode before terminal input value.

## RMS705B: Terminal inputs as transmission objects, switching and monitoring device RMS705B

- Universal inputs N.X1...N.X8 can be parameterized for analog value [°C], [% rH], etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Format	Unit	Value range	RMS705B sends:
Input N.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.	
Input N.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [0...100%]	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.	
Input N.X_ [0...255%]	Trans. object	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.	
Input N.X_ [m/s]	Trans. object	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.	
Input N.X_ [m/s]	Trans. object	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [Pa]	Trans. object	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.	
Input N.X_ [Pa]	Trans. object	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [ppm]	Trans. object	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.	
Input N.X_ [0/1]	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.	

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMS705B: Terminal outputs as transmission objects, switching and monitoring device RMS705B

- The relay outputs N.Q1...N.Q7 (without Q5), parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Output N.Q_	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.
-------------	---------------	---	---	---	---	---	-------	---------	-------------------------	-----	-------------------	---------------------------

- Analog outputs N.Y1...N.Y4, parameterized for analog output value [0...100]. The value can be sent in S-mode via KNX.

Output N.Y_	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
-------------	---------------	---	---	---	---	---	-------	----------	-------------------------	---	-------------------------------	-------------------------

## RMS705B: Terminal inputs as reception objects, Extension modules RMZ78x on the Switching and monitoring device RMS705B

- Universal inputs A\_\_.X1...A\_\_.X8, parameterized for analog values [°C], [% rH] etc., or digital value [0/1]. The value can be received in S-mode via KNX.

Name in ETS	DP	Flags					Data point type KNX				Value range	RMS705B receives:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	Rec. object	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no timeout monitoring
Input A__.X_ [% rH]	Rec. object	1	0	1	0	1	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0...100%]	Rec. object	1	0	1	0	1	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	Event, no timeout monitoring
Input A__.X_ [0...255%]	Rec. object	1	0	1	0	1	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	Event, no timeout monitoring
Input A__.X_ [m/s]	Rec. object	1	0	1	0	1	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input A__.X_ [m/s]	Rec. object	1	0	1	0	1	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1	0	1	0	1	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	Event, no timeout monitoring
Input A__.X_ [Pa]	Rec. object	1	0	1	0	1	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Event, no timeout monitoring
Input A__.X_ [ppm]	Rec. object	1	0	1	0	1	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	Event, no timeout monitoring
Input A__.X_ [0/1]	Rec. object	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no timeout monitoring

- Extension modules RMZ78x with universal inputs as reception objects

Input A5(1).X1...A5(1).X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)
Input A8(1).X1...A8(1).X4	RMZ788(1)
Input A8(2).X1...A8(2).X4	RMZ788(2)

## RMS705B: Terminal inputs as transmission objects, Extension modules RMZ78x on the Switching and monitoring device RMS705B

- Universal inputs A\_\_.X1...A\_\_.X8, can be parameterized for analog value [°C], [% rH] etc., or for digital value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Value range		RMS705B sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Input A__.X_ [°C]	Trans. object	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV, heart-beat 15 min.
Input A__.X_ [% rH]	Trans. object	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0...100%]	Trans. object	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.
Input A__.X_ [0...255%]	Trans. object	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %	COV, heart-beat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [m/s]	Trans. object	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]	COV, heart-beat 15 min.
Input A__.X_ [Pa]	Trans. object	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [ppm]	Trans. object	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]	COV, heart-beat 15 min.
Input A__.X_ [0/1]	Trans. object	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event, heart-beat 15 min.

- Extension modules RMZ78x with universal inputs as transmission objects

Input A5(1).X1...A5(1).X8	RMZ785
Input A7(1).X1...A7(1).X4	RMZ787(1)
Input A7(2).X1...A7(2).X4	RMZ787(2)
Input A8(1).X1...A8(1).X4	RMZ788(1)
Input A8(2).X1...A8(2).X4	RMZ788(2)

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

## RMS705B: Terminal outputs as transmission objects, Extension modules RMZ78x on the Switching and monitoring device RMS705B

- Relay outputs A\_\_.Q\_, parameterized for digital output value [0/1]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMS705B sends:
		C	R	W	T	U	ID	DPT_Name					
Output A__.Q_	Trans. object	1	1	0	1	0	1.001	_Switch		1 bit B <sub>1</sub>	- - -	0 = Off 1 = On	Event, heart-beat 15 min.

- Extension modules RMZ78x with relay outputs as transmission objects

Output A7(1).Q1...A7(1).Q5 RMZ787(1) without Q4  
 Output A7(2).Q1...A7(2).Q5 RMZ787(2) without Q4  
 Output A8(1).Q1, A8(1).Q5 RMZ788(1)  
 Output A8(2).Q1, A8(2).Q5 RMZ788(2)

- Analog outputs A\_\_.Y\_, parameterized for analog output value [0...100]. The value can be sent in S-mode via KNX.

Name in ETS	DP <sup>7)</sup>	Flags					Data point type KNX			Format	Unit	Value range	RMS705B sends:
		C	R	W	T	U	ID	DPT_Name					
Output A__.Y_	Trans. object	1	1	0	1	0	5.001	_Scaling		8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %	COV, heart-beat 15 min.

- Extension modules RMZ78x with analog outputs as transmission objects

Output A8(1).Y1, A8(1).Y2 RMZ788(1)  
 Output A8(2).Y1, A8(2).Y2 RMZ788(2)

Note: Max. 4 Extension modules RMZ78x (same or different types) are allowed per Switching and monitoring device RMS705B.

<sup>7)</sup> See Section 1.5.1, page 16, S-mode DP sends 0.

# 7 RMZ792, RMZ792B Bus operator units

## 7.1 Overview

### Brief description

Synco 700 bus operator units RMZ792 and RMZ792B are used to operate Synco 700 control units via KNX. They can be installed e.g. in control panels or used for mobile application.

### Note

The bus operator units does not allow to configure and commission the devices on the KNX network. To do this, use the RMZ790, RMZ791 operator units locally or together with the OCI700.1 service tool via KNX.

### Documentation

Data sheet	Bus operator unit RMZ792 Series B	<b>N3113</b>
Basic documentation	Bus operator unit RMZ792 Series B	<b>P3113</b>

### Number of S-mode DPs

RMZ792, RMZ792B	
Inputs	5
Outputs	2

### Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

### Note

ETS configures all S-mode DPs after selecting the bus operator unit.

## 7.2 RMZ792, RMZ792B, S-mode data points

### RMZ792, RMZ792B: Inputs

Name in ETS	Flags					Data point type KNX			Format	Unit	Value range	RMZ... receives:
	C	R	W	T	U	ID	DPT_Name					
System time	1	0	1	0	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source, cycl.
Date	1	0	1	0	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source, cycl. 10 min.
Time	1	0	1	0	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source, cycl. 10 min.

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

Note on system time, date, time

- Contrary to Sync 700 control devices with master/slave function and input/output, the RMZ792, RMZ792B bus operator units can only receive system time, date and time, i.e. slave function, input only.

## RMZ792, RMZ792B: Inputs (continued)

Name in ETS	Flags					Data point type KNX			Format	Unit	Value range	RMZ... receives:
	C	R	W	T	U	ID	DPT_Name					
Confirm faults	1	0	1	0	1	1.016	_Ack		1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	1	0	1	0	1	1.003	_Enable		1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. "Disable" time-out monit 48 h.

## RMZ792, RMZ792B: Outputs

Name in ETS	Flags					Data point type KNX			Format	Unit	Value range	RMZ... sends:
	C	R	W	T	U	ID	DPT_Name					
Fault information	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>		6 bytes struct.	---	[0]...255 = Log no.[RMZ = 0] [0...2]...255 = Alarm priority [0...10]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	1	0	0	1	0	1.005	_Alarm		1 bit B <sub>1</sub>	---	0 = No alarm / normal (default) 1 = Alarm / faulty	Event, heart-beat 30 min.

<sup>2)</sup> See Section 1.4.3, page 14.

# 8 OZW771 Central communication unit

## 8.1 Overview

### Brief description

The central communication unit OZW771 is used to remote control and supervise HVAC plants and Synco 700 devices in KNX networks (for 4, 10, or 64 devices depending on the type of OZW771.xx).

### Documentation

Data sheet	Central communication unit OZW771.xx	N3117
Basic documentation	Central communication unit OZW771.xx	P3117

### Number of S-mode DPs

	OZW771.xx
Inputs / Outputs	3
Inputs	1
Outputs	4

### Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

### Note

ETS configures all S-mode DPs after selecting the central communication unit.

## 8.2 OZW771, S-mode data points

### OZW771: Inputs / Outputs

Name in ETS	Flags					Data point type KNX				Value range		OZW receives or sends:
	C	R	W	T	U	ID	DPT_Name	Format	Unit			
System time (input)	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)												
Date (input)	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min
Date (output)												
Time of day (input)	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)												

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

## OZW771: Inputs

Name in ETS	Flags					Data point type KNX			Value range	OZW771 receives:	
	C	R	W	T	U	ID	DPT_Name	Format	Unit		
Fault transmission (enable/disable)	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 48 h.

## OZW771: Outputs

Name in ETS	Flags					Data point type KNX			Value range	OZW771 sends:	
	C	R	W	T	U	ID	DPT_Name	Format	Unit		
Fault information	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no.[OZW = 0] [0...2]...255 = Alarm priority [0...10]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heartbeat 30 min.
Fault 1	1	0	0	1	0	1.006	_BinaryValue	1 bit B <sub>1</sub>	---	0 = Low / no fault (default) 1 = High / fault	Event, heartbeat 30 min.
Fault 2	1	0	0	1	0	1.006	_BinaryValue	1 bit B <sub>1</sub>	---	0 = Low / no fault (default) 1 = High / fault	Event, heartbeat 30 min.

<sup>2)</sup> See Section 1.4.3, page 14.

### Fault 1 and Fault 2

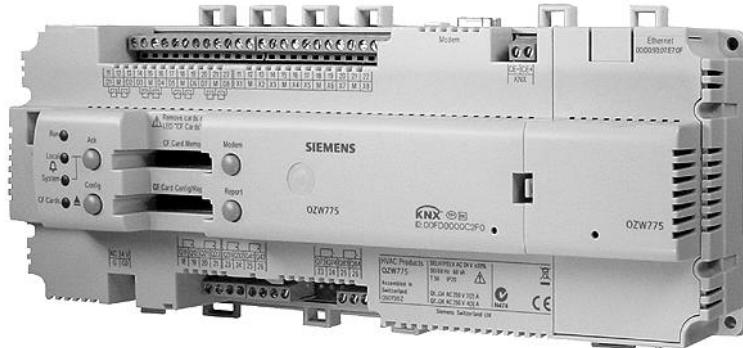

- The OZW771 central communication unit transmits the state pending at "Fault input 1" and "Fault input 2".

# 9 OZW775 Central communication unit

## 9.1 Overview

### Brief description

The OZW775 Central communication unit allows for remote operation and monitoring of HVAC plants comprising max. 250 Synco devices, and for operation using a web browser from Version 2.0.

### Documentation

Data sheet	Central communication unit OZW775	N5663
Commissioning instructions	Central communication unit OZW775	C5663

### Number of S-mode DPs

	OZW775	OZW775 from V2.0
Inputs / Outputs	3	3
Inputs	2	2
Outputs	2	2 (+26, see table on page 148)

### Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

### Note

ETS configures all S-mode DPs after selecting the central communication unit.

## 9.2 OZW775, S-mode data points

### OZW775: Inputs / Outputs

Name in ETS	Flags					Data point type KNX				Value range		OZW receives or sends:
	C	R	W	T	U	ID	DPT_Name	Format	Unit			
System time (input)	1	0	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD d hh mm ss ---	1900...2155 1...12 1...31 1...7 0...23 0...59 0...59 ---	= Year = Month = Day of month = Monday - Sunday = Hours = Minutes = Seconds Status bits <sup>1)</sup>	From KNX system time source or to KNX system time receiver cycl. 10 min.
System time (output)												
Date (input)	1	0	1	1	1	11.001	_Date	3 bytes struct.	DD MM YY	1...31 1...12 00...99	= Day of month = Month = Year <sup>4)</sup>	From KNX date source or to KNX date receiver cycl. 10 min.
Date (output)												
Time of day (input)	1	0	1	1	1	10.001	_TimeOfDay	3 bytes struct.	d hh mm ss	1...7 0...23 0...59 0...59	= Monday - Sunday = Hours = Minutes = Seconds	From KNX time source or to KNX time receiver cycl. 10 min.
Time of day (output)												

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

## OZW775: Inputs

Name in ETS	Flags					Data point type KNX				Value range	OZW775 receives:
	C	R	W	T	U	ID	DPT_Name	Format	Unit		
Confirm faults	1	0	1	0	1	1.016	_Ack	1 bit B <sub>1</sub>	---	0 = No action 1 = Acknowledge / confirm	Event from KNX contact. No timeout monitoring.
Fault transmission (enable/disable)	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact. “Disable” time-out monit 48 h.

## OZW775: Outputs

Name in ETS	Flags					Data point type KNX				Value range	OZW775 sends:
	C	R	W	T	U	ID	DPT_Name	Format	Unit		
Fault information	1	0	0	1	0	219.001	_AlarmInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no.[OZW = 0] [0...2]...255 = Alarm priority [0...10]...255 = Application area [0...4]...255 = Error class [0...15]...63 = Alarm attributes [0...7] = Fault state	Heartbeat 30 min.
Fault state (normal/faulty)	1	0	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm (default) 1 = Alarm / faulty	Event, heart-beat 30 min.

<sup>2)</sup> See Section 1.4.3, page 14.

## OZW775 from V2.0: Outputs

Input N.D1...8 and input N.X1...8 with S-mode function "Output"

- The S-mode DPs of OZW775 (new SW version) send the values pending at terminals D1...D8 (digital inputs [0/1]) and X1...X8 (analog inputs [C°], [% rH] etc.) via KNX (e.g. value transmission to an display unit).

Name in ETS	DP	Flags					Data point type KNX			Value range	OZW775 sends:
		C	R	W	T	U	ID	DPT_Name	Format		
Input N.D1...8	Digital input	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On
Input N.X1...8 [°C]	Temperature	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point
Input N.X1...8 [% rH]	Humidity	1	1	0	1	0	9.007	_Value_Humidity	2 bytes F <sub>16</sub>	%	[0...670760]
Input N.X1...8 [0...100%]	Percent	1	1	0	1	0	5.001	_Scaling	8 bit U <sub>8</sub>	%	[0...100] Resolution 0.4 %
Input N.X1...8 [0...255%]	Percent	1	1	0	1	0	5.004	_Percent	8 bit U <sub>8</sub>	%	[0...255] Resolution 1 %
Input N.X1...8 [m/s]	Speed	1	1	0	1	0	14.065	_Value_Speed	4 bytes F <sub>32</sub>	m/s	IEEE 754 floating [0...255].[0...8388607]
Input N.X1...8 [m/s]	Speed	1	1	0	1	0	9.005	_Value_Wsp	2 bytes F <sub>16</sub>	m/s	[0...670760]
Input N.X1...8 [Pa]	Pressure	1	1	0	1	0	14.058	_Value_Pressure	4 bytes F <sub>32</sub>	Pa = N/m <sup>2</sup>	IEEE 754 floating [0...255].[0...8388607]
Input N.X1...8 [Pa]	Pressure	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]
Input N.X1...8 [ppm]	Air quality	1	1	0	1	0	9.008	_Value_AirQuality	2 bytes F <sub>16</sub>	ppm	[0...670760]
Input N.X1...8 [0/1]	Digital input	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On
Output N.Q1...4, N.Q7, N.Q8	Digital output	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On
[Time switch 1...4] State	Digital output	1	0	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On

# 10 OZW772 Web server

## 10.1 Overview

### Brief description

Web server OZW772 can connect 1 to 250 devices from the product ranges: Synco 700, Synco RXB/RXL, Synco room thermostats RDD/RDF/RDU/RDG, and Synco living QAX9... central apartment units.

Web servers OZW772 allows local operation/monitoring as well as remote operation/monitoring of Synco devices in a KNX network via web browser, smartphone and/or ACS operator station (PC/Laptop with ACS Commissioning and plant operating software).

### Documentation

Data sheet

Web server OZW772...

**N5701**

Commissioning instructions

Web server OZW772...

**C5701**

### Number of S-mode DPs

	OZW772... V1 to V4	OZW772.01 V5 or higher	OZW772.04 OZW772.16 OZW772.250 V5 or higher
Inputs / Outputs	3	3	43
Inputs	2	2	122
Outputs	2	2	72
Total	7	7	237

### Parameterization

The 7 Standard S-mode DPs are available in all OZW772, see cap. 10.2.

The additional 230 S-mode DPs are available after parameterization with the Tool ETS, see cap. 10.3.

## 10.2 OZW772... S-mode data points

### OZW772..: ETS4 time-datapoints

All Devices	Number	Name	Object Function	Length	R	W	T	U	Data Type	Priority
Dynamic Folders	1	System time	Receive / Transmit	8 Byte	C	R	W	T	date time	High
OZW772 Web Server	2	Date	Receive / Transmit	3 Byte	C	R	W	T	date	Low
	3	Time of day	Receive / Transmit	3 Byte	C	R	W	T	time of day	Low

### OZW772..: Datapoint description of Time

Name in ETS	Send Recv.	Datapoint activated	Flags C R W T U	Data point type KNX		Format	Unit	Value range		OZW receives or sends:
				ID	DPT_Name			1900...2155	= Year	
System time <sup>5)</sup>	S / R	Always	1 1 1 1 1	19.001	_DateTime	8 bytes struct. 								1.008	DPTUpDown	1 bit	B <sub>1</sub>	---	0 = Up / 1 = Down		
								1.009	DPT_OpenClose	1 bit	B <sub>1</sub>	---	0 = Open / 1 = Closed		
								1.018	DPT_Occupancy	1 bit	B <sub>1</sub>	---	0 = Unoccupied / 1 = Occupied		
.....														.....	
Value 39 (Change)														0x32F01027, 0	
Value 40 (Display)														0x32F01028, 0	

## OZW772..: ETS4 Parameters for 1 Bit Value Change

The screenshot shows the ETS4 software interface with the following details:

- Left Panel (Device Tree):**
  - All Devices
  - Dynamic Folders
  - OZW772 Web Server (selected)
- Central Panel (Device Configuration):**
  - Device: OZW772 Web Server
  - Web server pages
  - 1 Bit Objects (selected)
    - 1 Bit Value Change/Display (selected)
    - 1 Bit Value Change
    - 1 Bit Blind
    - 1 Bit Value Display
  - 2 Bit Objects
  - 1 Byte Objects
  - 2 Byte Objects
  - 4 Byte Objects
- Right Panel (Parameter Configuration):**

Value 1 (Change)	Yes
Data point type	1.001 Off/On
Data point name 1	1 Bit Value Change 1
Web server page	Page 1
Value 2 (Change)	No
Value 3 (Change)	No

## OZW772..: Datapoint description of 1 Bit Value Change

Name in ETS	Send Recv.	Datapoint actived	Flags					Data point type KNX (selectable)				Value range	Web API Address, DpSubKey	Comment	
			C	R	W	T	U	ID	DPT_Name	Format	Unit				
Value 1 (Change)	S	Yes	1	0	0	1	0	1.001	DPT_Switch	1 bit	B <sub>1</sub>	---	0 = Off / 1 = On	0x32F01029, 0	OZW sends on Event
								1.002	DPT_Bool	1 bit	B <sub>1</sub>	---	0 = False / 1 = True		
								1.003	DPT_Enable	1 bit	B <sub>1</sub>	---	0 = Disable / 1 = Enable		
								1.005	DPT_Alarm	1 bit	B <sub>1</sub>	---	0 = No alarm / 1 = Alarm		
								1.006	DPT_BinaryValue	1 bit	B <sub>1</sub>	---	0 = Low / 1 = High		
								1.007	DPT_Step	1 bit	B <sub>1</sub>	---	0 = Decrease / 1 = Increase		
								1.008	DPT_UpDown	1 bit	B <sub>1</sub>	---	0 = Up / 1 = Down

## OZW772..: ETS4 Parameters for 1 Byte Scene

The screenshot shows the ETS4 software interface. On the left, there is a tree view under 'All Devices' with 'Dynamic Folders' and 'OZW772 Web Server' selected. The main panel is titled 'Device: --- OZW772 Web Server'. It shows a list of object types: 'Web server pages', '1 Bit Objects', '2 Bit Objects', '1 Byte Objects', '2 Byte Objects', and '4 Byte Objects'. '1 Byte Objects' is expanded, and '1 Byte Scene' is selected. To the right of this list are several configuration fields:

- 'Value 1 (Change)': Yes
- 'Data point type': 18.001 Scene Control
- 'Data point name 1': 1 Byte Scene 1
- 'Web server page': Page 1
- 'Scene Number': 1
- 'Value 2 (Change)': No
- 'Value 3 (Change)': No
- 'Value 4 (Change)': No
- 'Value 5 (Change)': No

## OZW772..: ETS4 Parameters for 2 Byte Value Display

The screenshot shows the ETS4 software interface with the following configuration details:

- Device:** OZW772 Web Server
- Value 1 (Display):** Yes
- Data point type:** 7.001 Value (0..65535)
- Data point name 1:** 2 Byte Value Display 1
- Web server page:** Page 1
- Value 2 (Display):** No

The left sidebar shows the navigation tree with the path: All Devices > Dynamic Folders > OZW772 Web Server > 2 Bit Objects > 2 Byte Objects > 2 Byte Value Display.

# 11 QAW740 Room unit

## 11.1 Overview

### Brief description

The QAW740 room unit is a digital, multifunctional room unit. It has an LCD to display room temperature, operating mode or room setpoint adjustments.

The operating elements on the room unit allow remote intervention in the control functions of the Syncro 700 controllers. Both remote intervention and acquired room temperature are transmitted to the same-zone controller via KNX.

Note: The QAW740 room unit is not suited for use with the RXB room controllers.

### Documentation

Data sheet  
Installation and operating instructions  
Room unit QAW740 **N1633**  
Room unit QAW740 **B1633**  
(multilingual, enclosed with unit)

### Number of S-mode DPs

- Outputs 2

### Parameterization

An S-mode DP must be configured in ETS and the Syncro device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

### Note

ETS configures all S-mode DPs after selecting the room unit.

## 11.2 QAW740, S-mode data points

### QAW740: Outputs

Name in ETS	Flags					Data point type KNX				Value range	QAW740 sends:
	C	R	W	T	U	ID	DPT_Name	Format	Unit		
Room temperature	1	0	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point <sup>*)</sup>	COV, heart-beat 15 min.
Room temperature: Setpoint relative	1	0	0	1	0	9.002	_Value_Tempd	2 bytes F <sub>16</sub>	K	-670760.00...+670760.00 Floating point <sup>**) </sup>	COV, heart-beat 15 min.

<sup>\*)</sup> For the QAW740 room unit, the value range is limited to measuring range 0...45 °C.

<sup>\*\*)</sup>  For the QAW740 room unit, the value range is limited to a setpoint readjustment of ± 3 K (relative to setpoint).

# 12 RDF301, RDF301.50, RDF301.50H, RDF600KN, RDF800KN, RDF800KN/NF Room thermostats

## 12.1 Overview

### Brief description

Room thermostat RDF301, RDF301.50, RDF600KN and RDF800KN/NF are used for applications with fan coils and heat pumps. Type RDF301.50 also has buttons for lighting and blinds control via KNX. Type RDF301.50H has buttons for hotel applications (make up room, do not disturb) via KNX.

The room thermostats have an LCD to display (depending on operating function) room temperature, room setpoint, outside air temperature, operating mode, fan speed, alarm state and time.

The operating elements on the room unit allow intervention in the control functions.

RDF301 / RDF600KN

RDF301.50

RDF301.50H

RDF800KN,  
RDF800KN/NF

### Documentation

Room thermostats RDF301.., RDF600KN	Data sheet Operating instructions Basic documentation	Room thermostats RDF301.. / RDF600KN Room thermostats RDF301.. / RDF600KN Room thermostats RDF301.. / RDF600KN	N3171 B3171 P3171
Room thermostats RDF800KN, RDF800KN/NF	Data sheet Operating instructions Basic documentation	Room thermostats RDF800KN / RDF800KN/NF Room thermostats RDF800KN / RDF800KN/NF Room thermostats RDF800KN / RDF800KN/NF	N3174 B3174 P3174

## Number of S-mode DPs

	RDF600KN RDF800KN RDF800KN/NF	RDF301	RDF301.50 RDF301.50H
Inputs and outputs <sup>1)</sup>	2	2	2
Outputs and inputs (Synchronization inputs) <sup>2)</sup>	---	---	4
Inputs	22	19	19
Output	20	20	32

<sup>1)</sup> Input and Output      S-mode DP receives a value, e.g. the setpoint from an external setpoint default  
                                   S-mode DP sends a value, e.g. the setpoint to another (third-party) device.

<sup>2)</sup> Output and Input      S-mode DP sends primarily one value.  
                                   S-mode DP receives a value, if the parameter setting:  
                                   → Function button ... = Toggle  
                                   is selected, i.e. the button is used as toggle (switch), e.g. lighting control. The input is synchronized with the output (of another device). An input with this function is identified as "synchronization input".

## Column "DP visible in ETS"

The data in column "DP visible in ETS" (see table below) refers to parameter settings where the S-mode DP is visible in the ETS.

## Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

## 12.2 RDF301, RDF301.50.., RDF600KN, RDF800KN.., S-mode data points

### RDF301.., RDF600KN, RDF800KN..: Inputs and outputs

# 13 RDD810KN/NF Room thermostat

## 13.1 Overview

### Brief description

Room thermostat RDD810KN/NF is used for heating applications.

The room thermostat has an LCD to display (depending on operating function) room temperature, room setpoint, outside air temperature, operating mode, alarm state and time.

The operating elements on the room unit allow intervention in the control functions.

RDF810KN/NF

### Documentation

Data sheet	Room thermostats RDD810KN/NF	N3175
Operating instructions	Room thermostats RDD810KN/NF	B3174
Basic documentation	Room thermostats RDD810KN/NF	P3174

### Number of S-mode DPs

	RDD810KN/NF
Inputs and outputs <sup>1)</sup>	2
Outputs and inputs (Synchronization inputs) <sup>2)</sup>	---
Inputs	17
Output	13

<sup>1)</sup> Input and Output      S-mode DP receives a value, e.g. the setpoint from an external setpoint default  
                                  S-mode DP sends a value, e.g. the setpoint to another (third-party) device.

<sup>2)</sup> Output and Input      S-mode DP sends primarily one value.  
                                  S-mode DP receives a value, if the parameter setting:  
                                  → Function button ... = Toggle  
                                  is selected, i.e. the button is used as toggle (switch), e.g. lighting control. The input is synchronized with the output (of another device). An input with this function is identified as "synchronization input".

### Column "DP visible in ETS"

The data in column "DP visible in ETS" (see table below) refers to parameter settings where the S-mode DP is visible in the ETS.

### Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

## 13.2 RDD810KN/NF, S-mode data points

### RDD810KN/NF: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Format	Unit	Value range	RDD receives, sends:

# 14 RDU341 Room thermostat

## 14.1 Overview

### Brief description

Room thermostat RDU341 is used for VAV applications. It has an LCD to display (depending on operating function) room temperature, room setpoint, outside air temperature, operating mode, alarm state and time.

The operating elements on the room unit allow intervention in the control functions.

### Documentation

Data sheet	Room thermostat RDU341	N3172
Operating instructions	Room thermostat RDU341	B3172
Basic documentation	Room thermostat RDU341	P3172

### Number of S-mode DPs

	RDU341
Inputs and outputs	2
Inputs	17
Outputs	14

### Parameterization

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values. See Section 1.5 on workflows.

## 14.2 RDU341, S-mode data points

### RDU341: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Format	Unit	Value range	RDU receives, sends:
		C	R	W	T	U	ID	DPT_Name					
Room operating mode: Preselection	①	1	0	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort, mapped in 1 or 3 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve		Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room temperature: Comfort setpoint	②	1	0	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point LCD display 5...40 °C		Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).

① Preselection reception: Group object type = 1 byte (Enumeration)

② Room temperature: Comfort setpoint = Yes

## RDU341: Inputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Format	Unit	Value range	RDU receives:
		C	R	W	T	U	ID	DPT_Name					
System time	Always <sup>5)</sup>	1	0	1	0	1	19.001	_DateTime	8 bytes struct. # 15 RDG100KN, RDG160KN, RDG165KN Room thermostats

## 15.1 Overview

### Brief description

Room thermostats RDG100KN, RDG160KN and RDG165KN are used for applications with fan coils and heating/cooling systems.

The room thermostats have an LCD to display (depending on the operating function) room temperature, room setpoint, outside air temperature, operating mode, fan speed, alarm state and time.

The operating elements on the room unit allow intervention in the control functions.

### Documentation

Operating instructions	Room thermostats	RDG100KN RDG160KN RDG165KN	B3191
Basic documentation	Room thermostats	RDG100KN RDG160KN RDG165KN	P3191

### Number of S-mode DPs

	RDG100KN RDG160KN	RDG165KN
Inputs and outputs	2	4
Inputs	19	24
Outputs	22	24

### Column "DP visible in ETS"

The data in column "DP visible in ETS" (see table below) refers to parameter settings where the S-mode DP is visible in the ETS.

### Parameterization

An S-mode DP must be configured in ETS and the thermostat to ensure that the S-mode DP transmits valid values.

## 15.2 RDG100KN, RDG160KN, RDG165KN, S-mode data points

### RDG100KN / RDG160KN: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Format	Unit	Value range	RDG receives, sends:
		C	R	W	T	U	ID	DPT_Name					
Room operating mode: Preselection	①	1	0	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort, mapped in 1 or 3 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).	
Room temp: Comfort setpoint	②	0	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point LCD display 5...40 °C	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).	

① Preselection reception: Group object type = 1 byte (Enumeration)

② Room temperature: Comfort setpoint = Yes

## RDG165KN: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Value range		RDG receives, sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Room operating mode: Preselection	①	1	0	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort, mapped in 1 or 3 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room temp: Comfort setpoint	②	0	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point LCD display 5...40 °C	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room temperature	③	1	1	0	1	0	9.001	_Value_Temp	2 bytes	°C	-273.00...+670760,00 Floating point LCD display 5...40 °C	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room relative humidity	④	1	1	0	1	0	9.007	_Value_Humidity	2 bytes	%	0...+670760,00 Floating point LCD display 0...100 %	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).

① Preselection reception: Group object type = 1 byte (Enumeration)

② Room temperature: Comfort setpoint = Yes

③ Room temperature: Can only work as either input or output but not input-and-output at the same time

④ Room relative humidity: Can only work as either input or output but not input-and-output at the same time

# 16 RDG400KN, RDG405KN Room thermostats

## 16.1 Overview

### Brief description

Room thermostats RDG400KN and RDG405KN are used for VAV applications. They have an LCD to display (depending on operating function) room temperature, room setpoint, outside air temperature, operating mode and alarm state.

The operating elements on the room unit allow intervention in the control functions.

### Documentation

Data sheet	Room thermostat RDG400KN, RDG405KN	N3192
Operating instructions	Room thermostat RDG400KN	B3192
	Room thermostat RDG405KN	A6V10733816
Basic documentation	Room thermostat RDG400KN, RDG405KN	P3192

### Number of S-mode DPs

	RDG400KN	RDG405KN
Inputs and outputs	2	4
Inputs	18	22
Outputs	15	14

### Column "DP visible in ETS"

The data in column "DP visible in ETS" (see table below) refers to parameter settings where the S-mode DP is visible in the ETS.

### Parameterization

An S-mode DP must be configured in ETS and the thermostat to ensure that the S-mode DP transmits valid values.

## 16.2 RDG400KN, RDG405KN, S-mode data points

### RDG400KN: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Value range	RDG receives, sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit	
Room operating mode: Preselection	①	1	0	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort, mapped in 1 or 3 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve
Room temp: Comfort setpoint	②	1	0	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point LCD display 5...40 °C

① Preselection reception: Group object type = 1 byte (Enumeration)

② Room temperature: Comfort setpoint = Yes

## RDG405KN: Inputs and outputs

Name in ETS	DP visible in ETS	Flags					Data point type KNX			Value range		RDG receives, sends:
		C	R	W	T	U	ID	DPT_Name	Format	Unit		
Room operating mode: Preselection	①	1	0	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort, mapped in 1 or 3 3 = Economy 4 = Protection (BldgProtect) 5...255 Reserve	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room temp: Comfort setpoint	②	1	0	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point LCD display 5...40 °C	Receives event from KNX preselect operation (device/progr). Sends at local change (local operation).
Room temperature	③	1	1	0	1	0	9.001	_Value_Temp	2 bytes	°C	-273.00...+670760,00 Floating point LCD display 5...40 °C	Receives event from KNX room temperature sensor. Sends local room temperature.
IAQ.CO2 concentration	④	1	0	1	1	1	9.008	AQ Room	2 bytes	ppm	0...5000ppm Floating point LCD display 0...5000ppm	Receives event from KNX CO2 sensor. Sends local CO2 value.

① Preselection reception: Group object type = 1 byte (Enumeration)

② Room temperature: Comfort setpoint = Yes

③ Room temperature: Can only work as either input or output but not input-and-output at the same time

④ IAQ.CO2 concentration: Can only work as either input or output but not input-and-output at the same time

## RDG400KN: Inputs

# 17 QAX910 Central apartment unit

## 17.1 Overview

### Brief description

The QAX910 Central apartment unit (Syncro living) controls heating, cooling, ventilation and DHW in an apartment with max. 12 rooms. The function for absence is used to implement heat and security-related functionality such as reduced heat generation (heating, DHW), lighting control, door and window contact monitoring and smoke detection.

### Documentation

Data sheet	Central apartment unit QAX910	N2707
Instructions	Mounting and commissioning	C2707
Operating instructions		B2707

### Overview of series for versions

	Software version QAX910 Central apartment unit	Product data import file *.vd3 / *.vd5 ETS Program version
Series A	V1.00 and V1.01	1.0
Series B	V2.00	1.1
Series C	V3.00 and V3.01	3.0
Series C	V3.02	3.1

### Note

Note the interdependence of software and program version listed in the above table if you want to add new devices to a line or area in ETS via [Add Devices](#).

### Number of S-mode DPs

Number of S-mode DPs	Series A, V1.xx	Series B, V2.00	Series C, V3.xx
Visible in ETS	182	195	252
In group address table	50	250	250
In association table	50	250	250

### Parameterization

See Section 16.1.1 to parameterize the central apartment unit QAX910. See also Section 1.5 for a principal workflow.

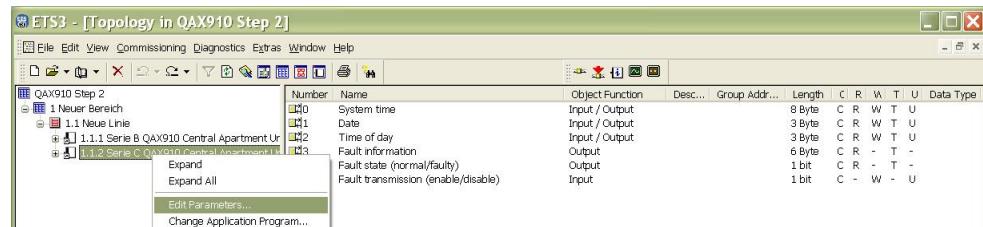

The central apartment unit QAX910 series A allows you to connect max. 50 S-mode DPs via group addresses; QAX910 series B and C allows for max. 250.

An S-mode DP must be configured in ETS and the Syncro device to ensure that the S-mode DP transmits valid values.

## 17.1.1 Parameterizing QAX910 series A, B and C

### Start parameterization

Start parameterization via view "All Devices" in ETS (screenshots ETS3).

Select the QAX910 central apartment unit and right-click to open the context menu.

Select **Edit Parameters...** to open the following dialog box.

### Dialog box (series C)

Select a parameter group in the dialog box to start parameterization. This configures or makes visible the corresponding parameters, allowing you to set the parameter values.

Parameter group	<b>Fault inputs</b>
Parameter	<b>Fault input 1: State</b>
	...
	<b>Fault input 8: State</b>
Parameter value	<b>No (default)</b> <b>Receive</b>

### Differences between series A, B, and C

- Some values of parameters with identical names in series A, B, and C differ.  
See below: 1. Parameter values.
- The **contents** of the dialog boxes differ depending on the parameter group.
- Number and order** of S-mode DPs or DP numbers differ depending on the parameter group.
- Configuration** of the S-mode DPs depends on the set parameter values.  
See below: 4. Configuration.

## 1. Parameter values

### Series A

Fault inputs → Fault input 1: State → No communication / Receive

No communication  
→ Receive

When you set parameter value **No communication** (default) to **Receive** and click [OK], ETS configures the S-mode DP **Fault input 1: State**.

### Series B and C

Fault inputs → Fault input 1: State → No / Receive

No → Receive

When you set parameter value **No** (default) to **Receive** and click [OK], ETS also configures the S-mode DP **Fault input 1: State**.

Number, Object Function  
columns

From an QAX910 viewpoint, parameter value **Receive** configures S-mode DP 8 (see **Number** column) with **Object Function = Input** (see **Object Function** column).

Number	Name	Object Function	Desc...	Group Addr...	Length	C	R	W	T	U	Data Type
#0	System time	Input / Output			8 Byte	C	R	W	T	U	
#1	Date	Input / Output			3 Byte	C	R	W	T	U	
#2	Time of day	Input / Output			3 Byte	C	R	W	T	U	
#3	Fault information	Output			6 Byte	C	R	-	T	-	
#6	Fault state (normal/faulty)	Output			1 bit	C	R	-	T	-	
#7	Fault transmission (enable/disable)	Input			1 bit	C	-	W	-	U	
#8	Fault input 1: State	Input			1 bit	C	-	W	-	U	

1.1.2 Serie C QAX910 Central Apartment Unit

Fault Inputs		Fault Inputs
Status Outputs Central Apartment Unit		Fault input 1: State
Outside/Meteo Sensors		Receive
Switching Groups [1 ... 8]		No
Light Status Indication		No
Apartment Functions		No
Ventilation		No
Temperature Display		No
Rooms [1 ... 12]		No

Fault inputs 1...4

You can parameterize Fault input 1...4 as needed by changing the parameter value **No communication** (series A) or **No** (series B and C) to **Receive**. In this case, the S-mode DPs 8...11 are configured.

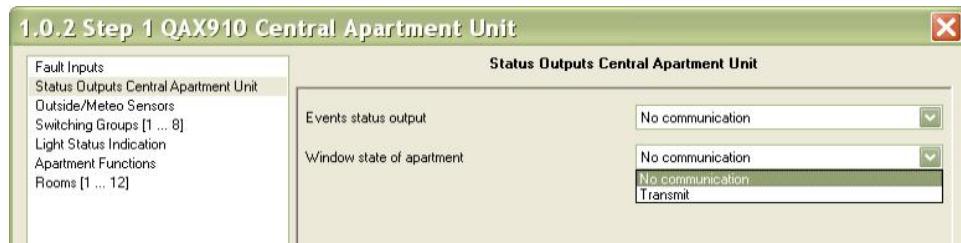

Series C

Fault inputs 5...8

In the QAX910 series C, Fault inputs 5...8 additionally can be configured with S-mode DPs 12...15.

## 2. Contents

### Series A

	Parameter group	Status Outputs Central Apartment Unit
	Parameter	Events status output
	Parameter value	Window state of apartment
		No communication
		Transmit
Events status output	No communication	→ Event status output not used (default)
	Transmit	→ DP 16, output
Window state of apartment	No communication	→ Window state for apartment not used (default)
	Transmit	→ DP 17, output

### Series B and C

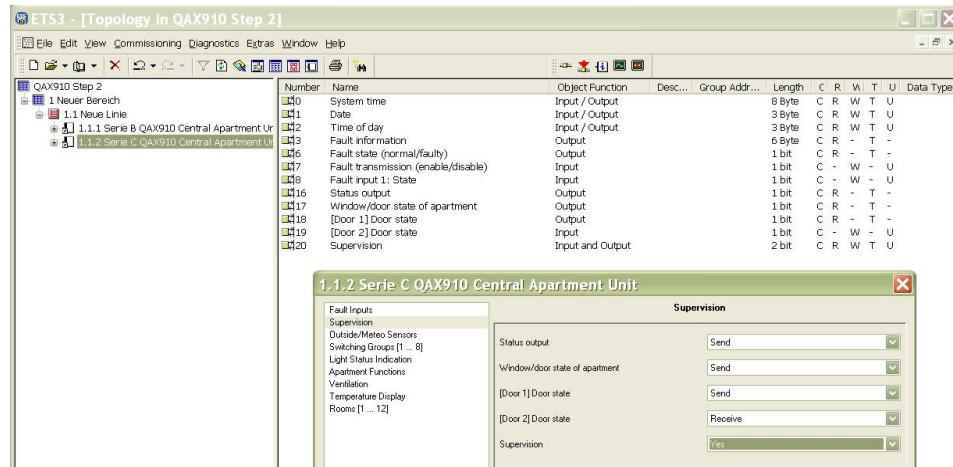

#### Parameter group Supervision (series A Status Outputs Central Apartment Unit)

Events status output	No	→ Events status output not used (default)
	Send	→ DP 12 (series B), DP 16 (series C), output
Window/door state of apartment	No	→ Window/door state of apartment not used (default)
	Send	→ DP 13 (B), DP 17 (C), output
[Door 1] Door state	No	→ [Door 1] Door state not used (default)
	Send	→ DP 14 (B), DP 18 (C), output
	Receive	→ DP 14 (B), DP 18 (C), input
[Door 2] Door state	No	→ [Door 2] Door state not used (default)
	Send	→ DP 15 (B), DP 19 (C), output
	Receive	→ DP 15 (B), DP 19 (C), input
Supervision	No	→ Supervision not used (default)
	Yes	→ DP 16 (B), 20 (C), output and input <sup>1)</sup>

<sup>1)</sup> S-mode DP number 16 (B) and 20 (C) and other S-mode DP are configured as input and output; see screenshot "S-mode DP in ETS" on the following page.

Parameter values **Transmit / Send** (series A / B+C), **Receive** and **Yes** configure the S-mode DPs in ETS.

### 3. Number and order

#### Series A

Parameter group **Outside/Meteo sensors** with three parameters.

Outside temperature	No communication	→ Outside temperature not used (default)
	Transmit	→ DP 18, <b>Outside temperature</b> , <b>Output</b>
	Receive	→ DP 19, <b>Outside temperature</b> , <b>Input</b>
Atmospheric pressure	No communication	→ Atmospheric pressure (measurement) not used (default)
	Transmit	→ DP 20, <b>Atmospheric pressure</b> , <b>Output</b>
Twilight switch	No communication	→ Twilight switch not used (default)
	Receive	→ DP 21, <b>Twilight switch</b> , <b>Input</b>

#### Series B and C

Parameter group **Outside/Meteo sensors** with three parameters (same as series A).

Number and order of the configurable S-mode DPs differ between series A (see above) and series B and C (see below).

Outside temperature	No	→ Outside temperature not used (default)
	Send	→ DP 17 (B), 21 (C), <b>Meteo sensor: Outside temperature</b> , <b>Output</b>
	Receive	→ DP 18 (B), 22 (C), <b>Outside temperature</b> , <b>Input</b>
Atmospheric pressure	No	→ Atmospheric pressure not used (default)
	Send	→ DP 19 (B), 23 (C), <b>Meteo sensor: Atmospheric pressure measured value</b> , <b>Output</b>
		→ DP 20 (B), 24 (C), <b>Meteo sensor: Atmospheric pressure on sea level</b> , <b>Output</b>
Twilight switch	No	→ Twilight switch not used (default)
	Receive	→ DP 21 (B), 25 (C), <b>Twilight switch</b> , <b>Input</b>

## 4. Configuration

### Series B and C

Name	Object Function	Desc...	Group Addr...	Length	C	R	W	T	U
System time	Input / Output			8 Byte	C	R	W	T	U
Date	Input / Output			3 Byte	C	R	W	T	U
Time of day	Input / Output			3 Byte	C	R	W	T	U
Fault information	Output			6 Byte	C	R	-	T	-
Fault state (normal/faulty)	Output			1 bit	C	R	-	T	-
Fault transmission (enable/disable)	Input			1 bit	C	-	W	-	U
Fault input 1: State	Input			1 bit	C	-	W	-	U
Status output	Output			1 bit	C	R	-	T	-
Window/door state of apartment	Output			1 bit	C	R	-	T	-
[Door 1] Door state	Output			1 bit	C	R	-	T	-
[Door 2] Door state	Input			1 bit	C	-	W	-	U
Supervision	Input and Output			2 bit	C	R	W	T	U

The following configuration information pertain to S-mode DPs of QAX910 series B and C. The following applies:

**Parameter group and Parameter** See information in margin.

**Parameter value** Receive, Send, Yes, ...

**Name** See column Name in ETS.

**Object Function** See column Object function in ETS.

	Parameter value	Name	Object Function
<b>Fault inputs</b>			
Fault input 1...4 (B)	Receive	Fault input X: State	Input
Fault input 1...8 (C)			
<b>Supervision</b>			
Status output	Send	Status output	Output
Window/door state of apartment	Send	Window/door state of apartment	Output

**Tables with S-mode DP** The tables in Section 16.2 are sorted by application (not inputs/outputs as for the Syncro 700 devices). The S-mode DPs refer to the central apartment unit QAX910 series B and C.

**Notes** In the tables, "Always" in column "DP active" means that it is standard S-mode DP that is always configured in the ETS tool when the central apartment unit is selected. "[Swi grp. X] = Yes" in column "DP active" means that parameter "[Switching group 1] = Yes" must be set.

## 17.2 QAX910, S-mode data points

### QAX910: Time

Name in ETS	Input Output	DP active	Flags					Data point type KNX		Format	Unit	Value range	QAX910 receives or sends:	
			C	R	W	T	U	ID	DPT_Name					
System time <sup>5)</sup>	I / O	Always	1	1	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD  d  hh mm ss ---	1900...2155 1...12 1...31  0, 1...7 0...23 0...59 0...59 Status bits <sup>1)</sup>	= Year = Month = Day of Month = Any day, Monday...Sunday = Hours = Minutes = Seconds = Status bits <sup>1)</sup>	From KNX system time source, receive timeout of 21 min. <u>or</u> to KNX system time receiver, heartbeat 10 min. or for system time adjustment.
Date <sup>5)</sup>	I / O	Always	1	1	1	1	1	11.001	_Date	3 bytes struct.	YY MM DD	00...99 1...12 1...31	= Year <sup>4)</sup> = Month = Day of Month	From KNX date source, receive timeout of 21 min. <u>or</u> to KNX date receiver, heartbeat 10 min. or for date adjustment.
Time of day <sup>5)</sup>	I / O	Always	1	1	1	1	1	10.001	_Time	3 bytes struct.	hh d  mm ss	0...23 1...7  0...59 0...59	= Hours = Monday...Sunday = Minutes = Seconds	From KNX time source, receive timeout of 21 min. <u>or</u> to KNX time receiver, heartbeat 10 min. or for time of day adjustment.

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## QAX910: Fault

Name in ETS	Input Output	DP active	Flags					ID	DPT_Name	Format	Unit	Value range	QAX910 rec. (I), sends (O)
			C	R	W	T	U						
Fault information <sup>5)</sup>	O	Always	1	1	0	1	0	219.001	_Alarmlnfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [0...2]...255 = Alarm priority [0...14]...255 = Application area [0...4]...255 = Error class [0...15]...255 = Alarm attributes [0...7]...255 = Fault state	Heartbeat 30 min. or when an error occurs.
Fault state (normal/faulty) <sup>5)</sup>	O	Always	1	1	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm / normal (default) 1 = Alarm / faulty	Heartbeat 30 min. and for change.
Fault transmission (enable/disable) <sup>5)</sup>	I	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact, set automatically to 1 without receipt after 48 hours.

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## QAX910: Fault inputs

Name in ETS	Input Output	DP active	Flags					ID	DPT_Name	Format	Unit	Value range	QAX910 receives:
			C	R	W	T	U						
Fault input 1...4: State <b>From series C</b> Fault input 1...8: State	I	Receive	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On (settable)	Event, no receive timeout.

- You can freely select Fault input 1...4 or Fault input 1...8, i.e. you can first configure e.g. Fault input 2.

## QAX910: Supervision

Name in ETS	Input Output	DP active	Flags C R W T U					Data point type KNX		Format	Unit	Value range	QAX910 rec. (I), sends (O)
			C	R	W	T	U	ID	DPT_Name				
Events status output	O	Send	1	1	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	For change.
Door/window state of apartment	O	Send	1	1	0	1	0	1.019	_Window_Door	1 bit B <sub>1</sub>	---	0 = Closed 1 = Open	Heartbeat 15 min. and for change.
[Door 1..2] Door state	O	Send	1	1	0	1	0	1.019	_Window_Door	1 bit B <sub>1</sub>	---	0 = Closed 1 = Open	For change.
[Door 1..2] Door state	I	Receive	1	0	1	0	1	1.019	_Window_Door	1 bit B <sub>1</sub>	---	0 = Closed 1 = Open	Event from KNX contact, no receive timeout.
Supervision	I and O	Superv. = Yes	1	1	1	1	1	2.005	_Alarm_Control	2 bit B <sub>2</sub>	---	v   c 0   0 = Inactive 0   1 = Inactive 1   0 = Partially monit. 1   1 = All monitored	No receive timeout or heartbeat 15 min. and for change.

- You can freely select [Door 1...2], i.e. you can first configure e.g. [Door 2].

## QAX910: Outside/Meteo sensors

Name in ETS	Input Output	DP active	Flags C R W T U					Data point type KNX		Format	Unit	Value range	QAX910 rec. (I), sends (O)
			C	R	W	T	U	ID	DPT_Name				
Meteo sensor: Outside temperature	O	Send	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >0.2 °C.
Outside temperature	I	Receive	1	0	1	0	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Meteo sensor: Atmospheric pressure measured value	O	Send	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Heartbeat 15 min. and for change >20 Pa.
Meteo sensor: Atmospheric pressure on sea level	O	Send	1	1	0	1	0	9.006	_Value_Pres	2 bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Heartbeat 15 min. and for change >20 Pa.
Twilight switch	I	Receive	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Dark 1 = Bright	Event from KNX twilight switch.

## QAX910: Switching groups [1...8]

Name in ETS	Input Output	DP active	Flags C R W T U					Data point type KNX ID	DPT_Name	Format	Unit	Value range	QAX910 rec. (I), sends (O)
[Switching group 1...8] Switch	O	[Swi grp. X] = Yes, Fct. = Switch	1	0	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event
[Switching group 1...8] Trigger On/Off	I	[Swi grp. X] = Yes, Fct. = Switch	1	0	1	0	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	From KNX switch, no receive timeout.
[Switching group 1...4] Switch	O	[Swi grp. X] = Yes, Fct. = Dim	1	0	0	1	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	Event
[Switching group 1...4] Dim	O	[Swi grp. X] = Yes, Fct. = Dim	1	0	0	1	0	3.007	_Control_Dimming	4 bit U <sub>4</sub>	---	On/Off via switching U <sub>4</sub>   U <sub>3</sub>   U <sub>2</sub>   U <sub>1</sub> 0   0   0   1 = Darker 1   0   0   1 = Brighter 0   0   0   0 = Stop	Event
[Switching group 1...4] Trigger On/Off	I	[Swi grp. X] = Yes, Fct. = Dim	1	0	1	0	0	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	From KNX switch, no receive timeout.
[Switching group 1...4] Blind Step/Stop	O	[Swi grp. X] = Yes, Fct. = Blind	1	0	0	1	0	1.007	_Step	1 bit B <sub>1</sub>	---	0 = Step up 1 = Step down	Event
[Switching group 1...8] Blind Up/Down	O	[Swi grp. X] = Yes, Fct. = Blind	1	0	0	1	0	1.008	_UpDown	1 bit B <sub>1</sub>	---	0 = Up 1 = Down	Event
[Switching group 1...8] Trigger Up/Down	I	[Swi grp. X] = Yes, Fct. = Blind	1	0	1	0	0	1.008	_Switch	1 bit B <sub>1</sub>	---	0 = Up 1 = Down	From KNX switch, no receive timeout.
[Switching group 1...8] Scene	O	[Swi grp. X] = Yes, Fct. = Scene	1	0	0	1	0	18.001	_SceneControl	1 byte B <sub>1</sub> r <sub>1</sub> U <sub>6</sub>	---	B <sub>1</sub> 0 = Activate scene 1 = Learn scene r <sub>1</sub> (Reserve) U <sub>6</sub> Scene number 0...63	Event
[Switching group 1...8] Trigger (0=Scene A, 1=Scene B)	I	[Swi grp. X] = Yes, Fct. = Scene	1	0	1	0	0	1.022	_Scene_AB	1 bit B <sub>1</sub>	---	0 = Activate scene A 1 = Activate scene B	From KNX switch, no receive timeout.

- You can freely select [Switching group 1...8], i.e. you can first configure e.g. [Switching group 4].

## QAX910: Light status indication

Name in ETS	Input Output	DP active	Flags C R W T U					Data point type KNX ID DPT_Name		Format	Unit	Value range	QAX910 receives:
Light status indication Lamp 1...4	I	Lamp X = Yes	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On	From KNX light actor, no receive timeout.

- You can freely select Lamp 1...4, i.e. you can first configure e.g. Lamp 3.

## QAX910: Apartment functions

Name in ETS	Input Output	DP active	Flags C R W T U					Data point type KNX ID DPT_Name		Format	Unit	Value range	QAX910 rec. (I), sends (O)
Domestic hot water: Forced charging	I	DHW = Yes	1	0	1	0	0	1.017	_Trigger	1 bit B <sub>1</sub>	---	0 = No action 1 = Forced charging	Event from KNX contact, no receive timeout.
Domestic hot water operating mode: Preselection	I and O	DHW = Yes	1	1	1	1	1	20.103	_DHWMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Legionella protection 2 = Normal temp. 3 = Reduced temp. 4 = Protection mode	No receive timeout or heartbeat 15 min. and for change.
Domestic hot water operating mode: State	O	DHW = Yes	1	1	0	1	0	20.103	_DHWMode	1 byte N <sub>8</sub>	Enum.	1 = Legionella protection 2 = Normal temp. 3 = Reduced temp. 4 = Protection mode	Heartbeat 15 min. and for change.
Domestic hot water storage tank temp: Setpoint	I and O	DHW = Yes	1	1	1	1	1	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	No receive timeout or heartbeat 15 min. and for change.
Domestic hot water storage tank temp: Actual value	O	DHW = Yes	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >2 °C.

**QAX910: Apartment functions (continued)**

Name in ETS	Input Output	DP active	Flags					ID	Data point type KNX	Format	Unit	Value range	QAX910 rec. (I), sends (O)
			C	R	W	T	U	DPT_Name					
Absence: Contact	I	Absence = Yes	1	0	1	0	1	1.018	_Occupancy	1 bit B <sub>1</sub>	---	0 = Not occupied / absent 1 = Occupied / present	From KNX contact, no receive timeout.
Absence: State	O	Absence = Yes	1	1	0	1	0	1.018	_Occupancy	1 bit B <sub>1</sub>	---	0 = Not occupied / absent 1 = Occupied / present	Heartbeat 15 min. and for change.
Apartment operating mode: Preselection	I and O	Ap op mode = Yes	1	1	1	1	1	20.102	_HVACMode	1 byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection mode (Building protection)	No receive timeout or for change.
Apartment operating mode: Comfort release	I	Ap op mode = Yes	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Receive timeout 31 min.
Heating summer operation: State	O	Send	1	1	0	1	0	1.002	_Bool	1 bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	Heartbeat 15 min. and for change.
Heating summer operation: Preselection	I	Receive	1	0	1	0	1	1.002	_Bool	1 bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	From KNX contact, receive timeout 31 min.
Heating/cooling changeover	I	2-pipe = Yes	1	0	1	0	1	1.002	_Bool	1 bit B <sub>1</sub>	---	0 = Cooling mode 1 = Heating mode (default)	From KNX contact, receive timeout 31 min.
Heat demand absolute	O	Heat dem = Yes	1	1	0	1	0	9.001	_Value_Temp	2 bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >2 °C.
<b>From series C</b> Exhaust hood: Release	O	Exh hood = Yes	1	1	0	1	0	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable 1 = Enable	Heartbeat 15 min. and for change.

## QAX910: Ventilation

### From series C Parameter group Ventilation

Name in ETS	Input Output	DP active	Flags C   R   W   T   U					Data point type KNX ID	DPT_Name	Format	Unit	Value range	QAX910 rec. (I), sends (O)
[Ventilation] Stage selection	I and O	Vent. = Yes	1   1   1   1   1					20.60172	_StepSelectorSwitch	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Off 2 = Stage 1 3 = Stage 2 4 = Stage 3	No receive timeout or heartbeat 15 min. and for change.
[Ventilation] Ventilation stage	O	Vent. = Yes	1   1   0   1   0					5.010	_Value_1_Ucount	1 Byte U <sub>8</sub>	Enum.	0 = Off 1 = Stage 1 2 = Stage 2 3 = Stage 3	Heartbeat 15 min. and for change.

# 18 QAX903, QAX913 Central apartment units

## 18.1 Overview

### Note

See Section 16.2 for S-mode DPs of the QAX910 central apartment unit.

### Brief description

The QAX903 and QAX913 central apartment units (both Syncro living) control heating, cooling, ventilation in an apartment with max.12 rooms, while QAX913 additionally controls DHW. The absence function is used to implement heating and security-related functions (QAX913 only) such as reduced heat generation (heating, DHW), lighting control, door and window contact monitoring. The consumption values of the connected meters are used to bill heating costs.

QAX903

QAX913

### Documentation

Data sheet	Central apartment unit QAX903	N2741
Data sheet	Central apartment unit QAX913	N2740
Instructions	Mounting and commissioning	C2740
Operating instructions		B2740

### Overview of series for versions

	Software version Central apartment unit	Product data import-File *.vd5 ETS Program version
QAX903	V1.00	1.0
QAX913	V1.01 and 1.02	1.0

### Note

Note the interdependence of software and program version listed in the above table if you want to add new devices to a line or area in ETS via **Add Devices**.

<b>Number of S-mode DPs</b>	<b>Number of S-mode DPs</b>	<b>QAX903, V1.xx</b>	<b>QAX913, V1.xx</b>
Visible in ETS		278	362
In group address table		370	370
In association table		370	370

## Parameterization

See Section 17.1.1 to parameterize the central apartment units QAX903 and QAX913.  
See also Section 1.5 for a principal workflow.

The central apartment units QAX903 and QAX913 allows you to connect max. 370 S-mode DPs via group addresses.

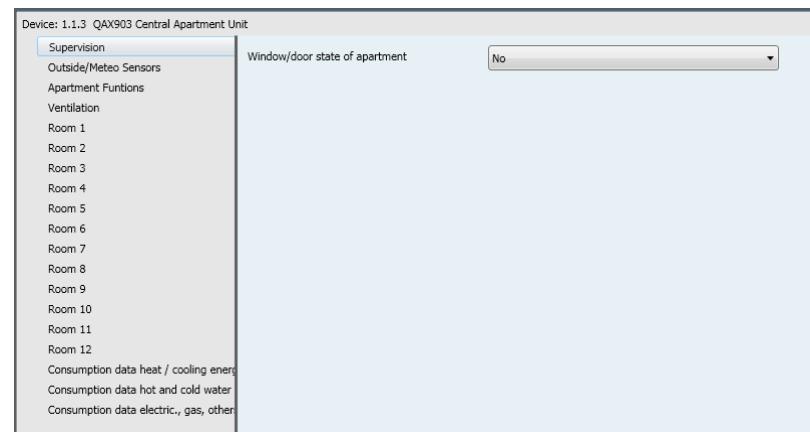

An S-mode DP must be configured in ETS and the Synco device to ensure that the S-mode DP transmits valid values.

### 18.1.1 Parameterizing QAX9x3

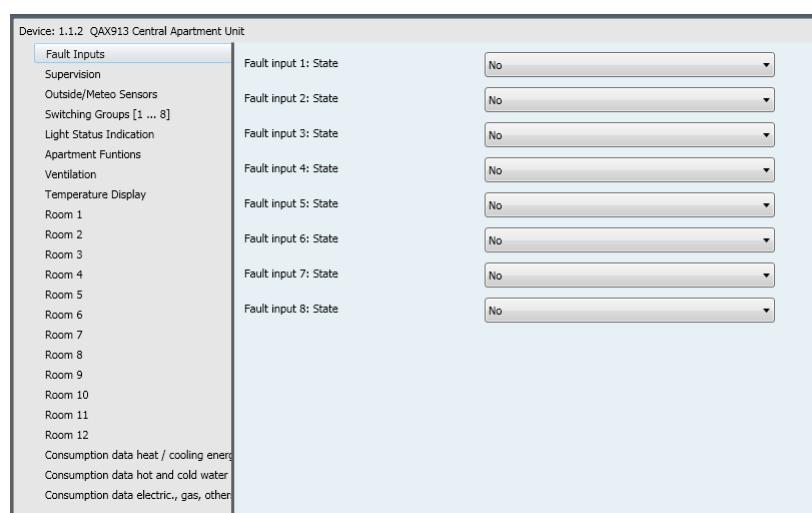

#### Start parameterization

Start parameterization in ETS3 or ETS4 (screenshots ETS4).

#### Parameter groups

QAX903

QAX913

Device: 1.1.2 QAX913 Central Apartment Unit	
Fault Inputs	Supervision: contact
Supervision	Receive

Room 11	No
Room 12	No
Consumption data heat / cooling energy	No
Consumption data hot and cold water	No
Consumption data electric., gas, other	Yes

### Parameters and Parameter values

Configuration

S-mode DP in ETS

Parameter values **Receive**, **Transmit** and **Yes** (and depending on parameter also other values) configure the S-mode DPs in ETS.

**Supervision: Contact**

- |         |                                                          |
|---------|----------------------------------------------------------|
| No      | → Supervision contact not used (default)                 |
| Receive | → DP 17, <b>Supervision: Contact</b> (configured in ETS) |
|         | → Object Function: <b>Receive</b> (input)                |

**Supervision: State**

- |          |                                                        |
|----------|--------------------------------------------------------|
| No       | → Supervision state not used (default)                 |
| Transmit | → DP 18, <b>Supervision: State</b> (configured in ETS) |
|          | → Object Function: <b>Transmit</b> (output)            |

**Supervision (enable/disable)**

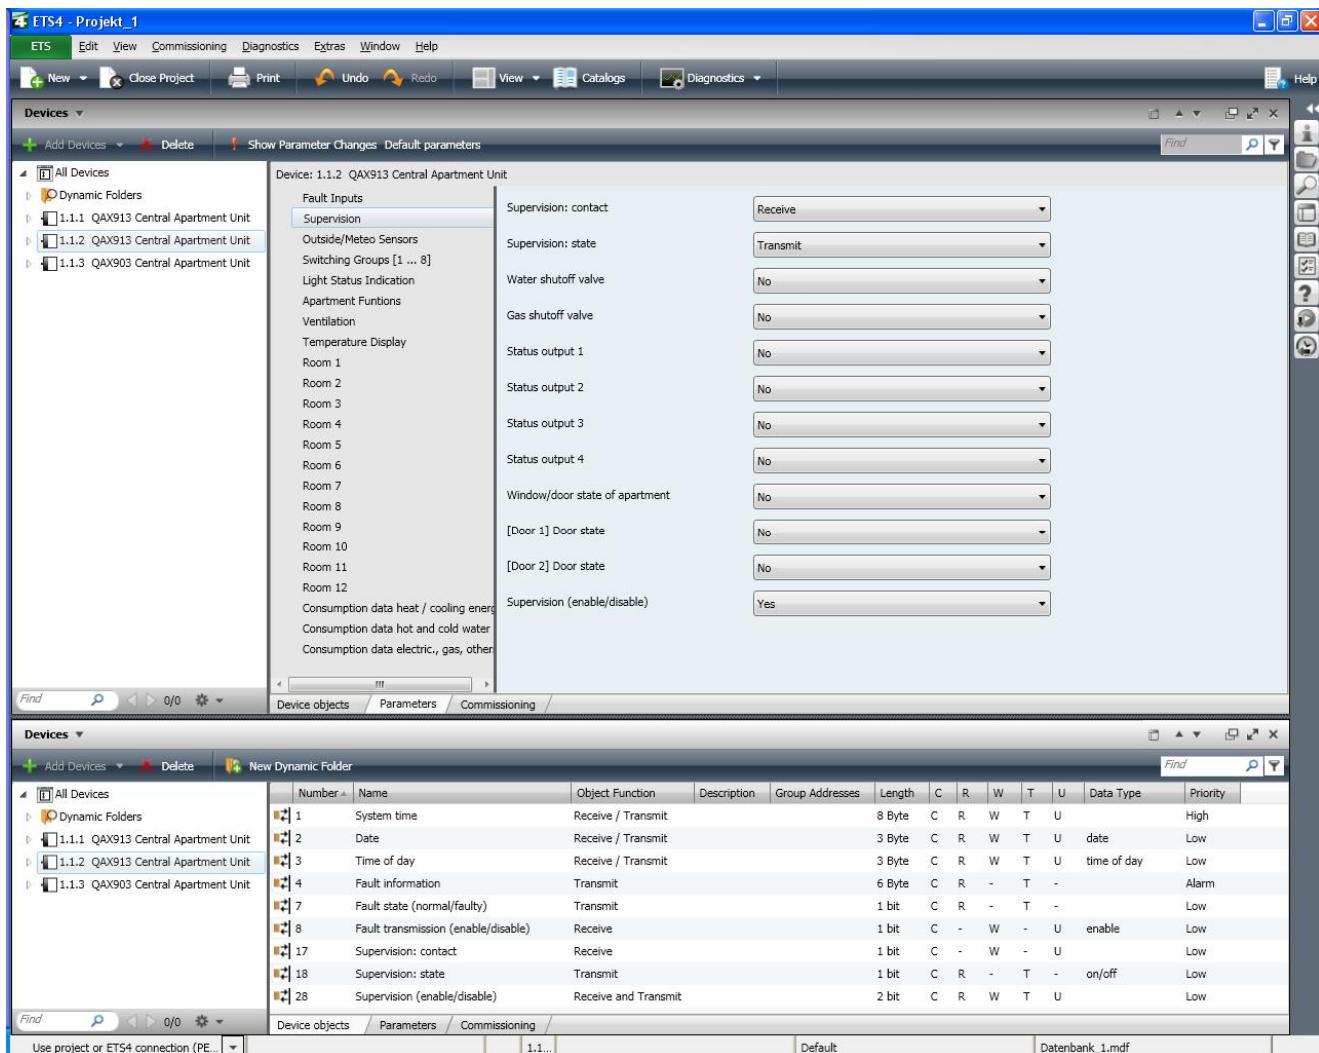

- |     |                                                                                 |
|-----|---------------------------------------------------------------------------------|
| No  | → Supervision not used (default)                                                |
| Yes | → DP 28, <b>Supervision (enable/disable)</b> (configured in ETS)                |
|     | → Object Function: <b>Receive and Transmit</b> (input and output) <sup>1)</sup> |

<sup>1)</sup> S-mode DP number 28 (and other S-mode DP) are configured as input and output. The "Object Function" column indicates this through Receive and Transmit (see below).

Number	Name	Object Function	Description	Group Addresses	Length	C	R	W	T	U	Data Type	Priority
1	System time	Receive / Transmit			8 Byte	C	R	W	T	U		High
2	Date	Receive / Transmit			3 Byte	C	R	W	T	U	date	Low
3	Time of day	Receive / Transmit			3 Byte	C	R	W	T	U	time of day	Low
4	Fault information	Transmit			6 Byte	C	R	-	T	-	Alarm	
7	Fault state (normal/faulty)	Transmit			1 bit	C	R	-	T	-		Low
8	Fault transmission (enable/disable)	Receive			1 bit	C	-	W	-	U	enable	Low
17	Supervision: contact	Receive			1 bit	C	-	W	-	U		Low
18	Supervision: state	Transmit			1 bit	C	R	-	T	-	on/off	Low
28	Supervision (enable/disable)	Receive and Transmit			2 bit	C	R	W	T	U		Low

Note

S-mode data points numbers 1 to 4 and 7, 8 are standard S-mode data points that are always configured automatically when a central apartment unit is selected in ETS.

### S-mode data points: Numbers and names in ETS

#### Note

The configured S-mode data points are displayed following the standard S-mode data points (Number 1 to 4 and 7, 8).

#### Parameter group Fault inputs

<b>Fault input 1...8: State</b>	<b>No</b>	→ Fault input X not used (default)
	<b>Receive</b>	→ DP 9...16, Fault input 1...8: State

#### Parameter group Supervision

<b>Supervision: Contact</b>	<b>No</b>	→ Supervision contact not used (default)
	<b>Receive</b>	→ DP 17, Supervision: Contact

<b>Supervision: State</b>	<b>No</b>	→ Supervision state not used (default)
	<b>Transmit</b>	→ DP 18, Supervision: State

<b>Water shutoff valve</b>	<b>No</b>	→ Water shutoff valve not used (default)
	<b>Transmit</b>	→ DP 19, Water shutoff valve

<b>Gas shutoff valve</b>	<b>No</b>	→ Gas shutoff valve not used (default)
--------------------------	-----------	----------------------------------------

	Transmit	→ DP 20, Gas shutoff valve
Status output 1...4	No Transmit	→ Status output X not used (default) → DP 21...24, Status output 1...4
Window/door state of apartment	No Transmit	→ Window/door state of apartment not used (default) → DP 25, Window/door state of apartment
[Door 1] Door state	No Transmit Receive	→ [Door 1] Door state not used (default) → DP 26, [Door 1] Door state (Transmit = Output) → DP 26, [Door 1] Door state (Receive = Input)
[Door 2] Door state	No Transmit Receive	→ [Door 2] Door state not used (default) → DP 27, [Door 2] Door state (Transmit = Output) → DP 27, [Door 2] Door state (Receive = Input)
Supervision (enable/disable)	No Yes	→ Supervision not used (default) → DP 28, Supervision (enable/disable) (Input and Output)

#### Parameter group Outside/Meteo sensors

Outside temperature	No Transmit Receive	→ Outside temperature not used (default) → DP 29, Outside temperature (Transmit = Output) → DP 30, Outside temperature (Receive = Input)
Atmospheric pressure	No Transmit	→ Atmospheric pressure not used (default) → DP 31, Meteo sensor: Atmospheric pressure measured value → DP 32, Meteo sensor: Atmospheric pressure on sea level
Twilight switch	No Receive	→ Twilight switch not used (default) → DP 33, Twilight switch (0=Dark; 1=Bright)

#### Example

Standard S-mode data points and some configured S-mode data points for parameter groups: Fault inputs, Supervision, Outside/Meteo sensors.

Number	Name	Object Function	Description	Group Addresses	Length	C	R	W	T	U	Data Type	Priority
1	System time	Receive / Transmit			8 Byte	C	R	W	T	U		High
2	Date	Receive / Transmit			3 Byte	C	R	W	T	U	date	Low
3	Time of day	Receive / Transmit			3 Byte	C	R	W	T	U	time of day	Low
4	Fault information	Transmit			6 Byte	C	R	-	T	-		Alarm
7	Fault state (normal/faulty)	Transmit			1 bit	C	R	-	T	-		Low
8	Fault transmission (enable/disable)	Receive			1 bit	C	-	W	-	U	enable	Low
9	Fault input 1: State	Receive			1 bit	C	-	W	-	U	on/off	Low
16	Fault input 8: State	Receive			1 bit	C	-	W	-	U	on/off	Low
17	Supervision: contact	Receive			1 bit	C	-	W	-	U		Low
18	Supervision: state	Transmit			1 bit	C	R	-	T	-	on/off	Low
28	Supervision (enable/disable)	Receive and Transmit			2 bit	C	R	W	T	U		Low
29	Outside temperature	Transmit			2 Byte	C	R	-	T	-	temperature (°C)	Low

<b>Configuration information</b>	The following configuration information pertain to S-mode DPs of QAX903 and QAX913 central apartment units. The following applies:		
<b>Parameter group</b> and Parameter	See information in margin.		
Parameter value	Receive, Transmit, Yes, ...		
Name	See column Name in ETS.

Others 1...2	Yes	[Others X] Meter reading current	Transmit

**Tables with S-mode DP** The tables in Section 17.2 are sorted by application (not inputs/outputs as for the Syncro 700 devices).

**Notes** In the tables, "Always" in column "DP active" means that it is standard S-mode DP that is always configured in the ETS tool when the central apartment unit is selected.  
"S'vis: cont. = Receive" in column "DP active" means that the parameter "Supervision: Contact = Receive" must be set.

**Important note** With QAX903 and QAX913 central apartment units and in contrast to all other Synco devices, the following applies under **Function** (ETS3) or **Object Function** (ETS4) in place of:

Input	Receive	Recv (I)
Input / Output	Receive / Transmit	Recv / Trns
Input and Output	Receive and Transmit	Recv and Trns
Output	Transmit	Trns (O)

The meaning of **Receive**, **Transmit** for the QAX9x3 central apartment units is the same as that for **Input**, **Output** in all other Synco devices. For more information, see Section 1.3.2.

## 18.2 QAX903, QAX913, S-mode data points

### QAX9x3: Time

Name in ETS	Receive Transmit	DP active	Flags					Data point type KNX		Format	Unit	Value range	QAX9x3 receives or sends:
			C	R	W	T	U	ID	DPT_Name				
System time <sup>5)</sup>	Recv / Trns	Always	1	1	1	1	1	19.001	_DateTime	8 bytes struct.	YYYY MM DD  d  hh mm ss ---	1900...2155 = Year 1...12 = Month 1...31 = Day of Month 0, 1...7 = Any day, Monday...Sunday 0...23 = Hours 0...59 = Minutes 0...59 = Seconds --- Status bits <sup>1)</sup>	From KNX system time source, receive timeout of 21 min. or to KNX system time receiver, heartbeat 10 min. or for system time adjustment.
Date <sup>5)</sup>	Recv / Trns	Always	1	1	1	1	1	11.001	_Date	3 bytes struct.	YY MM DD	00...99 = Year <sup>4)</sup> 1...12 = Month 1...31 = Day of Month	From KNX date source, receive timeout of 21 min. or to KNX date receiver, heartbeat 10 min. or for date adjustment.
Time of day <sup>5)</sup>	Recv / Trns	Always	1	1	1	1	1	10.001	_Time	3 bytes struct.	hh d  mm ss	0...23 = Hours 1...7 = Monday...Sunday 0...59 = Minutes 0...59 = Seconds	From KNX time source, receive timeout of 21 min. or to KNX time receiver, heartbeat 10 min. or for time of day adjustment.

<sup>1)</sup> See Section 1.4.3, page 13.

<sup>4)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## QAX9x3: Fault

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
Fault information <sup>5)</sup>	Trns (O)	Always	1	1	0	1	0	219.001	_AlarmlInfo <sup>2)</sup>	6 bytes struct.	---	[0]...255 = Log no. [0..2]...255 = Alarm priority [0..14]...255 = Application area [0..4]...255 = Error class [0..15]...255 = Alarm attributes [0..7]...255 = Fault state	Heartbeat 30 min. or when an error occurs.
Fault state (normal/faulty) <sup>5)</sup>	Trns (O)	Always	1	1	0	1	0	1.005	_Alarm	1 bit B <sub>1</sub>	---	0 = No alarm / normal (default) 1 = Alarm / faulty	Heartbeat 30 min. and for change.
Fault transmission (enable/disable) <sup>5)</sup>	Recv (I)	Always	1	0	1	0	1	1.003	_Enable	1 bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Event from KNX contact, set automatically to 1 without receipt after 48 hours.

<sup>2)</sup> See Section 1.4.3, page 14.

<sup>5)</sup> See Section 1.5.1, page 16, Standard S-mode DP.

## QAX913: Fault inputs

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX913 receives:
Fault input 1...8: State	Recv (I)	Fault inp X = Receive	1	0	1	0	1	1.001	_Switch	1 bit B <sub>1</sub>	---	0 = Off 1 = On (settable)	Event, no receive timeout.

- You can freely select Fault input 1...8, i.e. you can first configure e.g. Fault input 2.

## QAX913: Supervision

Name in ETS	Receive Transmit	DP active	Flags					Data point type KNX		Value range	QAX913 receives (I), transmits (O)		
			C	R	W	T	U	ID	DPT_Name	Format	Unit		
Supervision: Contact	Recv (I)	S'vis: cont. = Receive	1	0	1	0	1	1.017	_Trigger	1 Bit B <sub>1</sub>	---	0 = No action 1 = Toggle supervi-sion state	Event from KNX contact, no receive timeout.
Supervision: State	Trns (O)	S'vis: state = Transmit	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Not monitored 1 = Monitored	Heartbeat 15 min. and for change.
Water shutoff valve	Trns (O)	W s'off v. = Transmit	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Open 1 = Closed	Heartbeat 15 min. and for change.
Gas shutoff valve	Trns (O)	Gas s'off v. = Transmit	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Open 1 = Closed	Heartbeat 15 min. and for change.
Status output [1...4]	Trns (O)	Sta outp X = Transmit	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Heartbeat 15 min. and for change.
Window/door state of apartment (also QAX903)	Trns (O)	Window/ door sta = Transmit	1	1	0	1	0	1.019	_Window_Door	1 Bit B <sub>1</sub>	---	0 = Closed 1 = Open	Heartbeat 15 min. and for change.
[Door 1..2] Door state	Trns (O)	Door sta X = Transmit	1	1	0	1	0	1.019	_Window_Door	1 Bit B <sub>1</sub>	---	0 = Closed 1 = Open	For change.
[Door 1..2] Door state	Recv (I)	Door sta X = Receive	1	0	1	0	1	1.019	_Window_Door	1 Bit B <sub>1</sub>	---	0 = Closed 1 = Open	Event from KNX contact, no receive timeout.
Supervision (enable/disable)	Recv and Trns	Supervis = Yes	1	1	1	1	1	2.005	_Alarm_Control	2 Bit B <sub>2</sub>	---	v   c 0   0 = Inactive 0   1 = Inactive 1   0 = Partially monit. 1   1 = All monitored	No receive timeout or heartbeat 15 min. and for change.

- You can freely select [Door 1...2], i.e. you can first configure e.g. [Door 2].

### QAX9x3: Outside/Meteo sensors

Name in ETS	Receive Transmit	DP active	Flags					Data point type KNX		Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
			C	R	W	T	U	ID	DPT_Name				
Outside temperature	Trns (O)	Outs temp = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >0.2 °C.
	Recv (I)	Outs temp = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	COV from KNX sensor.
Meteo sensor: Atmospheric pressure measured	Trns (O)	Atmosph pressure = Transmit	1	1	0	1	0	9.006	_Value_Pres	2 Bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Heartbeat 15 min. and for change >20 Pa.
Meteo sensor: Atmospheric pressure on sea level	Trns (O)		1	1	0	1	0	9.006	_Value_Pres	2 Bytes F <sub>16</sub>	Pa = N/m <sup>2</sup>	[0...670760]	Heartbeat 15 min. and for change >20 Pa.
Twilight switch (0=Dark; 1=Bright) (QAX913 only)	Recv (I)	Twilight swi = Receive	1	0	1	0	1	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Dark 1 = Bright	Event from KNX twilight switch.

## QAX913: Switching groups [1...8]

Name in ETS	Receive Transmit	DP active	Flags					Data point type KNX		Value range		QAX913 receives (I), transmits (O)	
			C	R	W	T	U	ID	DPT_Name	Format	Unit		
[Switching group 1...8] Switch	Trns (O)	Swi grp X: Function = Switch	1	0	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event
[Switching group 1...8] Trigger On/Off	Recv (I)		1	0	1	0	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	From KNX switch, no receive timeout.
[Switching group 1...4] Switch	Trns (O)	Swi grp X: Function = Dim	1	0	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event
[Switching group 1...4] Dim	Trns (O)		1	0	0	1	0	3.007	_Control_Dimming	4 Bit U <sub>4</sub>	---	On/Off via switching U <sub>4</sub>   U <sub>3</sub>   U <sub>2</sub>   U <sub>1</sub> 0   0   0   1 = Darker 1   0   0   1 = Brighter 0   0   0   0 = Stop	Event
[Switching group 1...4] Trigger On/Off	Recv (I)	Swi grp X: Function = Blind	1	0	1	0	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	From KNX switch, no receive timeout.
[Switching group 1...4] Blind Step/Stop	Trns (O)		1	0	0	1	0	1.007	_Step	1 Bit B <sub>1</sub>	---	0 = Step up 1 = Step down	Event
[Switching group 1...8] Blind Up/Down	Trns (O)	Swi grp X: Function = Scene	1	0	0	1	0	1.008	_UpDown	1 Bit B <sub>1</sub>	---	0 = Up 1 = Down	Event
[Switching group 1...8] Trigger Up/Down	Recv (I)		1	0	1	0	0	1.008	_Switch	1 Bit B <sub>1</sub>	---	0 = Up 1 = Down	From KNX switch, no receive timeout.
[Switching group 1...8] Scene	Trns (O)	Swi grp X: Function = Scene	1	0	0	1	0	18.001	_SceneControl	1 Byte B <sub>1</sub> r <sub>1</sub> U <sub>6</sub>	---	B <sub>1</sub> 0 = Activate Scene 1 = Learn Scene r <sub>1</sub> (Reserve) U <sub>6</sub> Scene number 0...63	Event
[Switching group 1...8] Trigger (0=Scene A, 1=Scene B)	Recv (I)		1	0	1	0	0	1.022	_Scene_AB	1 Bit B <sub>1</sub>	---	0 = Activate Scene A 1 = Activate Scene B	From KNX switch, no receive timeout.

- You can freely select [Switching group 1...8], i.e. you can first configure e.g. [Switching group 4].

## QAX913: Light status indication

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX913 receives
Light status indication Lamp 1...4	Recv (I)	Lamp X = Receive	1	0	1	0	1	1.001	_Switch	1 Bit B1	---	0 = Off 1 = On	From KNX light actor, no receive timeout.

- You can freely select Lamp 1...4, i.e. you can first configure e.g. Lamp 3.

## QAX9x3: Apartment functions

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
[Domestic hot water] Forced charging (QAX913 only)	Recv (I)	Domestic hot water = Yes	1	0	1	0	0	1.017	_Trigger	1 Bit B1	---	0 = No action 1 = Forced charging	Event from KNX contact, no receive timeout.
[Domestic hot water] Operating mode: Preselection (QAX913 only)	Recv and Trns		1	1	1	1	1	20.103	_DHWMode	1 Byte N8	Enum.	0 = Auto 1 = Legionella protection 2 = Normal temp. 3 = Reduced temp. 4 = Protection mode	No receive timeout or heartbeat 15 min. and for change.
[Domestic hot water] Operating mode: State (QAX913 only)	Trns (O)		1	1	0	1	0	20.103	_DHWMode	1 Byte N8	Enum.	1 = Legionella protection 2 = Normal temp. 3 = Reduced temp. 4 = Protection mode	Heartbeat 15 min. and for change.
[Domestic hot water] Storage tank temp: Setpoint (QAX913 only)	Recv and Trns		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F16	°C	-273.00...+670760.00 Floating point	No receive timeout or heartbeat 15 min. and for change.
[Domestic hot water] Storage tank temp: Curr value (QAX913 only)	Trns (O)		1	1	0	1	0	9.001	_Value_Temp	2 Bytes F16	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >2 °C.
Absence: Contact	Recv (I)	Absence = Yes	1	0	1	0	1	1.018	_Occupancy	1 Bit B1	---	0 = Not occupied / absent 1 = Occupied / present	From KNX contact, no receive timeout.
Absence: State	Trns (O)		1	1	0	1	0	1.018	_Occupancy	1 Bit B1	---	0 = Not occupied / absent 1 = Occupied / present	Heartbeat 15 min. and for change.

**QAX9x3: Apartment functions (continued)**

Name in ETS	Receive Transmit	DP active	Flags					ID	Data point type KNX DPT_Name	Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
			C	R	W	T	U						
Apartment operating mode: Preselection	Recv and Trns	Apartment operating mode = Yes	1	1	1	1	1	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection mode (Building protection)	No receive timeout or change of value
Apartment operating mode: Comfort release	Recv (I)		1	0	1	0	1	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable 1 = Enable (default)	Receive timeout 31 min.
Heating summer operation: State	Trns (O)	Heating sum. oper = Transmit	1	1	0	1	0	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	Heartbeat 15 min. and for change.
Heating summer operation: Preselection	Recv (I)	Heating sum. oper = Receive	1	0	1	0	1	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	From KNX contact, receive timeout 31 min.
Cooling release: Preselection	Recv (I)	Cooling release = Yes	1	1	0	1	0	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	From KNX contact, receive timeout 31 min.
Cooling release: State	Trns (O)		1	0	1	0	1	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = No preselection (default) 1 = Summer mode	Heartbeat 15 min. and for change.
Heating/cooling changeover	Recv (I)	2-pipe H/C system = Receive	1	0	1	0	1	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = Cooling mode 1 = Heating mode (default)	From KNX contact, receive timeout 31 min.
Dew point	Recv (I)	Dew point = Receive	1	0	1	0	1	1.002	_Bool	1 Bit B <sub>1</sub>	---	0 = inactive (default) 1 = active	From KNX contact, receive timeout 31 min.
Heat demand absolute [°C]	Trns (O)	Heat demand = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >2 °C.
Refrigeration demand absolute [°C]	Trns (O)	Refrig. demand = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >2 °C.
Exhaust hood: Release	Trns (O)	Exhaust hood = Transmit	1	1	0	1	0	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable 1 = Enable	Heartbeat 15 min. and for change.

## QAX9x3: Ventilation

Name in ETS	Receive Transmit	DP active	Flags					ID	Data point type KNX		Value range	QAX9x3 receives (I), transmits (O)	
			C	R	W	T	U	DPT_Name	Format	Unit			
[Ventilation] Stage selection	Recv and Tms	Ventilation stage = Yes	1	1	1	1	1	20.601 72	_StepSelectorSwitc h	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Off 2 = Stage 1 3 = Stage 2 4 = Stage 3	No receive timeout or Heartbeat 15 min. and for change.
[Ventilation] Ventilation stage	Trns (O)		1	1	0	1	0	20.601 90	_StepSelectorSwitc h2	1 Byte U <sub>8</sub>	Enum.	0 = Off 1 = Stage 1 2 = Stage 2 3 = Stage 3	Heartbeat 15 min. and for change.
[Ventilation] Ventilation stage [%]	Trns (O)		1	1	0	1	0	5.001	_Scaling	1 Byte U <sub>8</sub>	%	[0...100] Resolution 1 %	Heartbeat 15 min. and for change.
[Ventilation] Contact 1...2	Recv (I)	Vent cont X = Receive	1	0	1	0	1	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no receive timeout
Air quality	Trns (O)	Air quality = Transmit	1	1	0	1	0	9.008	_Value_AirQuality	2 Bytes F <sub>16</sub>	ppm	[0...670760]	Heartbeat 15 min. and for change >10 ppm.
	Recv (I)	Air quality = Receive	1	0	1	0	1	9.008	_Value_AirQuality	2 Bytes F <sub>16</sub>	ppm	[0...670760]	Event, no receive timeout
Air humidity	Trns (O)	Air humidity = Transmit	1	1	0	1	0	9.007	_Value_Humidity	2 Bytes F <sub>16</sub>	%	[0...670760]	Heartbeat 15 min. and for change >5 %.
	Recv (I)	Air humidity = Receive	1	0	1	0	1	9.007	_Value_Humidity	2 Bytes F <sub>16</sub>	%	[0...670760]	Event, no receive timeout
Fireplace mode	Trns (O)	Firepl mode = Transmit	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Heartbeat 15 min. and for change.
	Recv (I)	Firepl mode = Receive	1	0	1	0	1	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Event, no receive timeout

## QAX913: Temperature display

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX913 receives (I), transmits (O)
[Temperature display] Sensor 1...3	Trns (O)	Sensor X = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >0.2 °C.
	Recv (I)	Sensor X = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Event, no receive timeout

- You can freely select [Temperature display] Sensor 1...3, i.e. you can first configure e.g. [Temperature display] Sensor 3.

## QAX9x3: Rooms [1...12]

Name in ETS	Receive Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name		Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
[Room 1...12] Room temperature: Current value	Trns (O)	Rm temp.: Current val = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >0.04 °C.
	Recv (I)	Rm temp.: Current val = Receive	1	0	1	0	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	From KNX sensor, receive timeout 31 min.
[Room 1...12] Room temperature: Current setpoint	Trns (O)	Rm temp.: Curr. setp = Transmit	1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	Heartbeat 15 min. and for change >0.04 °C.
[Room 1...12] Operating mode: Preselection	Recv and Trns	Room control (heating) = Yes	1	1	1	1	1	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection mode (Building protection)	Event from KNX mode preselection (device/program), no receive timeout or for change.
[Room 1...12] Operating mode: State	Trns (O)		1	1	0	1	0	20.102	_HVACMode	1 Byte N <sub>8</sub>	Enum.	1 = Comfort 2 = Precomfort (Standby) 3 = Economy 4 = Protection mode (Building protection)	Heartbeat 15 min. and for change.

**QAX9x3: Rooms [1...12] (continued)**

Name in ETS	Receive Transmit	DP active	Flags C R W T U					Data point type KNX ID DPT_Name		Format	Unit	Value range	QAX9x3 receives (I), transmits (O)
[Room 1...12] Room temperature: Economy heating setpoint	Recv and Trns	Room control (heating) = Yes	1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	From KNX setpoint source, no receive timeout or for change.
[Room 1...12] Room temperature: Precomfort heating setpoint	Recv and Trns		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	From KNX setpoint source, no receive timeout or for change.
[Room 1...12] Room temperature: Comfort heating setpoint	Recv and Trns		1	1	1	1	1	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	From KNX setpoint source, no receive timeout or for change.
[Room 1...12] Valve position	Trns (O)	Valve pos = Transmit	1	1	0	1	0	5.001	_Scaling	1 Byte U <sub>8</sub>	%	[0...100] Resolution 1 %	Heartbeat 15 min. and for change >5 %.
[Room 1...12] Cooling: Release	Trns (O)	Cool / Rm controller = With cool release	1	1	0	1	0	1.003	_Enable	1 Bit B <sub>1</sub>	---	0 = Disable 1 = Enable	Heartbeat 15 min. and for change.
[Room 1...12] Air conditioner: On/Off	Trns (O)	Cool / Rm controller = With air conditioner	1	1	0	1	0	1.001	_Switch	1 Bit B <sub>1</sub>	---	0 = Off 1 = On	Upon a change of one of the three DPs, all three DPs are sent (e.g. to ZN1CL-IRSC by Zennio).
<b>Series A</b> [Room 1...12] Air conditioner: Operating mode <sup>1)</sup>	Trns (O)		1	1	0	1	0	20.60174	_SPUCOpMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Heating 4 = Cooling	
<b>From series B</b> [Room 1...12] Air conditioner: Operating mode <sup>2)</sup>	Trns (O)		1	1	0	1	0	20.105	_HVCCContrMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Heating 3 = Cooling 6 = Off	
[Room 1...12] Air conditioner: Room temp. curr. setp.	Trns (O)		1	1	0	1	0	9.001	_Value_Temp	2 Bytes F <sub>16</sub>	°C	-273.00...+670760.00 Floating point	
[Room 1...12] Room controller: Application mode	Trns (O)	Cool / Rm controller = With room controller	1	1	0	1	0	20.105	_HVCCContrMode	1 Byte N <sub>8</sub>	Enum.	0 = Auto 1 = Heating 3 = Cooling 6 = Off	Heartbeat 15 min. and for change.

<sup>1)</sup> Compatible with Zennio IRSC Plus **V4.xx**

Name in ETS	Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Value range		QAX9x3 transmits (O)	
[Hot water 1...4] Meter reading current	Trns (O)	Hot water X = Yes	1	1	0	1	0	13.001   _Value_4_Count			4 Bytes V <sub>32</sub>	---	-2 <sup>31</sup> ...+(2 <sup>31</sup> -1)	For change.
[Cold water 1...4] Meter reading current	Trns (O)	Cold w X = Yes	1	1	0	1	0	13.001	_Value_4_Count		4 Bytes V <sub>32</sub>	---	-2 <sup>31</sup> ...+(2 <sup>31</sup> -1)	For change.

### QAX9x3: Consumption data electricity, gas, others

Name in ETS	Transmit	DP active	Flags C   R   W   T   U					Data point type KNX ID   DPT_Name			Value range		QAX9x3 transmits (O)	
[Electricity 1...3] Meter reading current	Trns (O)	Electricity X = Yes	1	1	0	1	0	13.001   _Value_4_Count			4 Bytes V <sub>32</sub>	---	-2 <sup>31</sup> ...+(2 <sup>31</sup> -1)	For change.
[Gas 1...3] Meter reading current	Trns (O)	Gas X = Yes	1	1	0	1	0	13.001	_Value_4_Count		4 Bytes V <sub>32</sub>	---	-2 <sup>31</sup> ...+(2 <sup>31</sup> -1)	For change.
[Others 1...2] Meter reading current	Trns (O)	Others X = Yes	1	1	0	1	0	13.001	_Value_4_Count		4 Bytes V <sub>32</sub>	---	-2 <sup>31</sup> ...+(2 <sup>31</sup> -1)	For change.
