

Leading the maintenance management industry for over 30 years

Investing in a CMMS helps you manage your maintenance better. Stay on top of work orders, track labor productivity and extend asset life cycle with preventive maintenance. In other words, you'll significantly trim your maintenance costs while increasing productivity.

MicroMain's CMMS/EAM software is loaded with powerful features you'll love.

Work order management

Schedule work orders manually or automatically and track parts used and time on task. Easily add notes and attachments to each work order.

Predictive maintenance

Predict upcoming maintenance needs and address problems before they occur using trends data stored in the CMMS.

Preventive maintenance

Improve the performance of your equipment by scheduling regular maintenance tasks instead of dealing with urgent, unexpected repairs.

Asset management

Track and organize an unlimited number of assets. Quickly duplicate asset records with our special cloning feature.

QR code and barcode-enabled

Generate a unique QR code for each asset. When an asset needs repairs, simply scan its QR code to request a work order.

Workforce tracking and management

Measure technician productivity and estimate the time needed to complete tasks using historical data of time spent on each task.

Parts & Inventory Management

Automatically record changes in parts inventory levels. Reduce inventory carrying costs and receive alerts when quantity drops below a set minimum.

Mobile maintenance

Manage maintenance on the go with our mobile app. You can even work offline to complete assigned tasks, such as recording time on tasks and parts used.

Additional features

Customize your CMMS

- ✓ Single or multi-site configurable
- ✓ User role permissions
- ✓ Event, metering and alarm triggering
- ✓ Service request portal

Get real-time data insights

- ✓ KPI tracking
- ✓ Maintenance history reporting
- ✓ Equipment downtime reporting
- ✓ Intelligent analytics

Manage everything from one place

- ✓ Compliance and safety audits
- ✓ Document storage
- ✓ API for easy integrations
- ✓ Mass data import/export
- ✓ Image attachments for work orders

Free technical support and software upgrades

Have questions about how to optimize your software or just need to talk shop with an expert? Your subscription comes with ongoing technical support and updates.

How do I implement my software?

We get it: software implementation can be complicated. At MicroMain, we can import all your data for you and help you go live with your new CMMS so you don't have to worry.

Prefer to migrate your data yourself? Our software comes with a built-in data implementation tool, which makes it easy. If you're switching from a different CMMS or simply have messy data (as many organizations do!), we can convert your data for you.

Here's how the process works:

1. BOOK A KICK-OFF CALL WITH US

Together, we'll set expectations for the project plan, timelines, deliverables and business requirements.

2. DATA IMPORT CONSULTATION

Input your data into the Excel templates we've provided, then a software specialist will determine the best method for data transfer and import.

3. REVIEW YOUR DATA

If you notice errors or need to make changes to your data, we'll take care of them for you.

4. TRAINING & ADDITIONAL CONSULTATION

We'll train your team for three days using a custom agenda according to user roles such as maintenance admin, planner, etc.

5. GO LIVE!

You're ready to go! The sky's the limit.

Choose from different tiers of software implementation, from a little hand-holding to a lot.

Importing your data is an extremely important process that determines how effective your CMMS will be. We can help convert your data and port it from a third-party system to our CMMS, or you can choose to do it yourself.

	Basic \$895	Professional \$1,895 (Recommended)	Advanced \$2,895
Pre-data import consultation			
Complete data import assistance			
Data conversion by a database engineer			
Post-data import consultation and data review			
Priority technical support and free software upgrades			

Pricing

When you use MicroMain Global, you only pay for what you need. We charge based on the number of admins and technicians using the platform. All software upgrades and customer support services are free. Don't use all your logins? Let us know and we'll adjust your bill in the next billing cycle. You'll receive one invoice from us once a year, and that's it!

Starting at \$89 per admin license and \$39 per technician license
